For this current academic year, tuition and other costs at Harvard are an estimated \$22,160; at Yale, \$22,520; at Princeton, \$22,400; and at MIT, \$22,994.

And the 1990-91 estimated tuition cost alone at Georgetown University in Washington is \$14,440.

Even at some state-supported universities, prices are climbing, with Maryland's basic in-state tuition this year at \$2,269, while Virginia residents face tuition of \$2,966 at Charlottesville.

In effect, the costs of one year of college at America's premier institutions of higher education are being priced out of the reach of many middle- and moderate-income American families.

Fortunately, within commuting distance of most West Virginians, West Virginia's state-supported universities, four-year colleges, and community colleges offer among the best educational values available anywhere to West Virginians of all

ages.

Annual in-state tuition for the 1990-91 school year at West Virginia and Marshall Universities is under \$1,800; and for the two-year West Virginia University programs at Parkersburg and Potomac State, the annual tuition averages \$1,250 or less. In-state tuition for our State's four-year programs at Bluefield, Concord, Fairmont, Glenville, Shepherd, West Liberty, West Virginia Tech and West Virginia State averages under \$1,500 a year. Annual in-state tuition for two-year programs at Southern West Virginia and West Virginia Northern Community Colleges is under \$1,000.

Likewise, West Virginia boasts several excellent private universities (University of Charleston and Salem-Teikyo University) and colleges that are endeavoring both to keep tuitions reasonable and to offer up-to-date academic and job-oriented programs.

West Virginia's economy is changing, with new business enterprises and job opportunities on the horizon.

But most of those enterprises and jobs will demand increased levels of education, training, and skill.

I hope that West Virginians young and old will avail themselves of the advantages presented by the excellent education possibilities that are open to them, and of the preparation for the coming job market that can be ours in West Virginia.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Battling the Recession

The current recession has hit West Virginia and a number of other states particularly hard.

According to the West Virginia Bureau of Employment Programs, January-February 1991 unemployment claims in our state have increased by 30 percent and unemployment payments by 40 percent when compared with the first two months of last year.

As a result of the increased demand for unemployment assistance, West Virginia has been forced to curtail unemployment services, and, nationwide, the federal unemployment insurance program is reporting increased errors, longer waiting lines, and processing backlogs.

Against that background, I recently won Senate Appropriations Committee approval of a \$150 million emergency appropriation to speed the processing of unemployment claims throughout the nation -- which, of course, will be helpful to West Virginia.

Many economists have predicted that this recession will not be as long or as deep as some past slumps.

Nonetheless, to men and women out of work, or to communities beset by economic slowdowns, that prediction is of little solace.

Historically, West Virginia has been harder hit and slower to recover from depressions, recessions, and other economic slides.

To alleviate such chronic problems, I am

working on a number of long-term projects and initiatives to lay broader economic foundations in West Virginia -- foundations that will create more jobs and opportunities to help our state weather the course of national and international economic downturns.

Among these efforts are: the relocation of the FBI's Identification Division to West Virginia, which will bring with it an estimated annual payroll of \$75 million and employment for approximately 2,500 people, 80 percent of whom will be hired locally; completion of Appalachian Corridor Highways G, H, and D, for which I have added \$212 million to appropriations bills over the past two years as a means of speeding construction, so that more of our state will be linked directly to national markets; rebuilding of several locks and dams along the Ohio, Kanawha, and Monongahela rivers to move West Virginia products more efficiently and competitively to market; and the replacement of the National Radio Telescope at Green Bank in Pocahontas County, for which I added \$75 million in appropriations to help enhance West Virginia's role in science and high-technology research.

The twenty-first century is less than ten years away. My vision is to lay new foundations of enterprise and job opportunities that will free West Virginia from chronic unemployment and recession in the years ahead.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Benefits From the New FBI Identification Division

The relocation to West Virginia of the FBI's Identification Division will be a vital boost to our state's economy.

With an estimated annual payroll of \$75 million, and a projected workforce of approximately 2,500, the new Identification Division center is the largest Federal facility ever to be built in West Virginia.

But also important for West Virginia, as well as for the whole United States, are the crime-fighting and personnel-identification advantages that the new facility will afford.

Since its inception, the FBI's Identification Division has earned a legendary reputation for fighting crime. Today, however, the FBI's identification technology is antiquated and inefficient.

For example, the FBI regularly experiences a backlog of up to 500,000 fingerprint requests, and delays up to five or six weeks in responding to state and local police inquiries.

Moreover, tens of thousands of new fingerprint sets are left unfiled every year because the FBI lacks the means to receive them from state and local law-enforcement units.

Currently, more than 62,000 agencies--including police departments, Federal agencies, and licensing

agencies overseeing employment in such businesses as day-care centers, banks, and stock exchanges --use the FBI's Identification Division to run criminal background checks on potential employees.

The new Identification Division will feature a state-of-the-art system for fingerprints and other means of identification that will link the state systems, expand the national fingerprint files, allow the processing of as many as 600,000 inquiries per day, and slash identification time from weeks to hours or even minutes.

FBI authorities have stated that the move of the Identification Division to West Virginia will rejuvenate a national system that is close to collapse. Further, West Virginia's lower cost of living, strong work ethic, low crime rates, scenic beauty, and strong family values promise to provide the FBI with a more cost-effective operation, a more stable workforce, and an improved quality of life for its Identification Division employees.

We are involved in a massive national war against crime, and West Virginia's new FBI Identification Division will be an immense resource toward helping to win that war.

Federal Agency Consolidates Operations In West Virginia

Approximately 20 years ago, I helped to obtain Federal funding to enable the Bureau of Public Debt--the agency responsible for the sale and redemption of U.S. Bonds and for administering all regulations pertaining to the public debt--to consolidate its Chicago operations in Parkersburg.

More recently, I have been urging the Bureau of Public Debt to examine the feasibility of taking similar action with regard to its Washington, D.C., operations.

Now, following a meeting I had with Treasury Secretary Nicholas Brady in my U.S. Capitol office, I am able to report the good news that the Bureau of Public Debt plans to consolidate most of its Washington operations--including 700 employees--in Parkersburg.

This action stems from language that I, as Chairman of the Senate Appropriations Committee, added to reports accompanying appropriations bills, urging the Bureau of Public Debt to review the relationship between the operations of the Parkersburg and Washington facilities with a view toward locating more Washington-based functions in Parkersburg.

This new consolidation will begin next year

and is projected to be complete in 1995.

With 1,187 employees in Parkersburg, the current budget at the Bureau's Parkersburg facility is \$39 million annually.

The added employees will bring the number of the Bureau's full-time Parkersburg employees to nearly 1,900, with a total Parkersburg budget of \$71 million annually, including approximately \$63 million for salaries and benefits, and the remainder for local purchases, utilities, and other overhead costs.

Included among those employees to be relocated to Parkersburg will be data processing specialists, computer analysts and programmers, accountants and accounting technicians, securities examiners and analysts, administrative service personnel, and general managers.

The Bureau of Public Debt has determined that this consolidation of services and operations from Washington to Parkersburg is a sound and cost-effective move, and will provide productivity savings and improved customer service.

The consolidation of further operations of the Bureau of Public Debt in Parkersburg is another step forward in my efforts to open our state to increased high-technology challenges and opportunities.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

West Virginia: An Attractive Alternative for Federal Agencies

In recent months, I have been working with the FBI to update and relocate its Identification Division to the Clarksburg area; with the U.S. Fish and Wildlife Service to establish a training center in West Virginia's Eastern Panhandle; and with the Treasury Department to consolidate most of its Washington, D.C., operations of the Bureau of Public Debt at that agency's Parkersburg location.

Just a few weeks ago, I participated in swearing-in ceremonies for three new employees of the FBI's Identification Division--the first of the 2,500 workers who will eventually staff that facility.

Only days prior to that event, I announced, following a conversation in my office with Treasury Secretary James Brady, that the Bureau of Public Debt plans to relocate 700 employees from its Washington facility to Parkersburg.

Throughout my negotiations with these various agencies, I have been able to point out that West Virginia enjoys a number of advantages that make our state particularly attractive to Federal agencies looking toward upgrading

or relocating.

For example, West Virginia's lower cost of living, competitive and skilled workforce, low crime rate, low-density traffic, scenic beauty, and strong family values offer agencies such as the FBI a more cost-effective operation, a lower rate of employee turnover, and an improved quality of life for their employees.

A paramount advantage important to Federal agencies is the availability in West Virginia of one of the most comprehensive high-technology fiber optics telecommunications systems anywhere in the nation.

This communications technology means that a Federal agency can maintain headquarters in Washington and communicate instantaneously with so-called "back office" operations in West Virginia--and as easily as if they were next door.

West Virginia offers everything that an employer could want, and is an ideal option for Federal agencies contemplating relocation or diversification of their operations outside the congested Washington, D.C., metropolitan area.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

1991 National Teacher of the Year

West Virginia recently shared the national spotlight that fell on Mrs. Rae McKee, a reading disabilities teacher at the Slanesville Elementary School in Hampshire County, who has been named America's 1991 National Teacher of the Year.

Ceremonies at which Mrs. McKee was formally presented her award were held at the Slanesville School, with both President Bush and Secretary of Education Lamar Alexander in attendance.

A graduate of Shepherd College with a master's degree from West Virginia University, Mrs. McKee was at one point accepted to attend law school. Fortunately for West Virginia, however, her love of teaching prevailed over her inclinations toward the law.

I know that I speak for all West Virginians in congratulating Mrs. McKee on this exceptional honor, and in expressing to her an admiration for her accomplishments and an appreciation for the dedication and sacrifice that she has brought to her chosen vocation.

Author and historian Henry Adams wrote, "A teacher affects eternity; he can never tell where his influence stops."

For generations, thoughtful people have recognized the imperative

role of the teacher to the intellectual, emotional, and moral growth and development of our children and to the progress and prosperity of our country.

In this era of increasing technological and commercial competition among the world's trading and manufacturing powers, the quality of our schools and the teachers who staff them are perhaps more crucial to America's future economic strength and national security than at any previous time in our history.

To compete effectively in the world market and to maintain America's competitive technological edge, our country must have an increasingly skilled, experienced, disciplined, and knowledgeable workforce.

The best means for ensuring such a workforce is to provide our children with good schools and with dedicated, capable teachers equipped to educate and train students in the skills and disciplines demanded by our changing world.

West Virginia can be justly proud that one of its own teachers has earned such a high distinction in her chosen career.

We are grateful to Mrs. McKee and all of her colleagues for the efforts they are making to prepare West Virginia's young people to forge their futures against the challenges that lie ahead.

April 17, 1991

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Jobs of the Future

According to a survey conducted by a commission of business leaders and educators, about 1.7 million American manufacturing jobs--so-called "blue-collar jobs"--disappeared between 1979 and 1985.

Economists predict that this trend will continue, with a parallel growth in jobs requiring high-technology and computer-related training even at the entry level.

A Library of Congress study indicates that, by the year 2000, more than half of all U.S. jobs will require some education beyond the secondary level, including completion of college, vocational school, and/or computer school.

Recognizing the changes sweeping our nation's economy, and the implications for job preparation, I have been working to lay foundations to broaden and diversify West Virginia's economy, and to create more opportunities for West Virginians in this changing economic and job world.

For example, to help West Virginia develop computer-related businesses, I was instrumental in launching the Software Valley movement in Morgantown in 1985. Today, Software Valley has grown into a statewide movement with active chapters throughout West Virginia.

More recently, I appropriated monies to bring the FBI's new Identifica-

tion Division to West Virginia. This facility, to be located in Harrison County, will offer high-tech job opportunities to about 2,500 men and women, and will link our state to a nationwide high-technology network of unparalleled scope and sophistication.

The Bureau of Public Debt will also consolidate its Washington activities in Parkersburg, bringing with it approximately 700 employees.

To prepare more West Virginians to take advantage of the opportunities opening in high-technology careers and industries, I have added federal funding to appropriations bills for a variety of initiatives at West Virginia colleges and universities, including NASA's National Technology Transfer Center at Wheeling Jesuit College and the Robert C. Byrd Institute for Flexible Manufacturing at Marshall University.

Sophisticated communications networks have removed the barriers to locating high-tech jobs outside of major metropolitan areas, and West Virginia is ideally positioned to attract such jobs. My efforts are designed to ensure that West Virginians are able to compete in the dawning high-technology industrial world and to share in the new opportunities for jobs and prosperity, which that world will offer.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Proposed Federal Highway Plan Inadequate for West Virginia's Needs

The Administration recently proposed a highway plan that would designate 150,000 miles of U.S. roads as "highways of national significance."

Unfortunately, under this program, only 1,307 miles of West Virginia highways would be covered. By contrast, the West Virginia Division of Highways has recommended that approximately 2,200 miles of West Virginia highways be included in the "highways of national significance" program.

Also under the Administration's plan, West Virginia would face a 48 percent increase in state matching funds to gain only about 2 percent more in federal funds than the current federal-state fund-sharing formula provides.

West Virginia cannot hope to meet its basic road-building needs under the Administration's proposal, which shortchanges our state in mileage and would prohibitively raise West Virginia's matching-fund share.

This program is supposed to be a national highway plan, but by requiring the states to bear such an increased heavy financial burden for fun-

ding road building and repair, the Administration proposal will create a "rich man-poor man" nightmare.

Wealthier states that can afford the increased matching fund requirements will build their roads and bridges; states that cannot afford the match--states like West Virginia--will be forced to watch their roads and bridges deteriorate.

Thus, the United States will end up with a patchwork highway system that flies in the face of our national need to repair and rebuild our vital transportation infrastructure.

Historically, one of West Virginia's most pressing problems has always been the need for better roads.

As Chairman of the Senate Appropriations Committee, I intend to do everything that I can to increase the highway mileage under the Administration's proposal, and to improve the federal-state matching fund formula in order that West Virginia will be better able to build the highways that our state needs for increased economic growth and development and the creation of new job opportunities in the years ahead.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Space Age Groundbreaking in West Virginia

In November 1988, the National Radio Telescope at Green Bank, Pocahontas County, suddenly collapsed.

One of the largest radio telescopes in the world, that instrument had been used by the scientific community for 26 years to monitor naturally emitted radio signals from outer space -- providing astronomers with information that could not be gleaned from optical astronomy alone -- and was able to detect radio beams from distances as great as 10 billion light years away.

As Chairman of the Senate Appropriations Committee, and recognizing the importance of the collapsed radio telescope to our country and to West Virginia, I added \$75 million to the 1989 supplemental appropriations bill to replace the destroyed instrument with a new, state-of-the-art radio telescope. Just recently, I participated in groundbreaking ceremonies at Green Bank for the construction of the replacement telescope.

When finished, this new telescope will be the largest fully steerable radio telescope in the world. The giant dish, which can be pointed anywhere in the sky, will be bigger than two football fields, yet it will be so precise that deviations in shape will average less than the thickness of a piece of

paper anywhere over the telescope's two-and-one-third-acre surface. This capability will allow us to look farther into space than ever before.

The new telescope will have 7,000 individual structural elements, and will stand more than 475 feet high.

Further, this one-of-a-kind radio telescope will be complete with super-accurate laser-aiming capacities, and will ensure America's leadership in this aspect of space research for decades into the twenty-first century.

The telescope will be located in the midst of the National Radio Quiet Zone, an area uniquely protected from the radio emissions that might interfere with the operation of a radio telescope.

Not only will this telescope reaffirm West Virginia's place as one of the world's foremost research centers for radio astronomy, but it will also serve to attract and stimulate the interest of young people in science.

In addition to its benefits for America and the world, I look forward to the stimulus that this telescope can provide in West Virginia for developing science and technology -- fields that promise to create new opportunities for economic growth throughout our state.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Memorial Day 1991

Following the Civil War, patriotic citizens North and South began decorating the graves of fallen soldiers.

In 1868, U.S. General John A. Logan, then president of the Grand Army of the Republic, the Union veterans' organization, declared May 30 the Union day of remembrance, a precedent for today's Memorial Day placement.

On May 27 this year, we will again honor the memories of deceased loved ones, but most particularly of those Americans who have made the ultimate sacrifice of their lives in defense of our country's liberties and of our way of life.

In that defense, West Virginia has played a role far outweighing its proportions among the states.

In the recent Persian Gulf conflict, West Virginians again took a significant part in defending our national interests.

Thousands of West Virginia military personnel were active in the Gulf war theater, including approximately 2,500 West Virginia National Guardsmen and reservists from all services.

Appropriate to West

Virginia's defense heritage, in 1867, one of our country's first national cemeteries was opened at Grafton.

Long West Virginia's only national veterans' cemetery, the Grafton National Cemetery was closed to new interments in 1961.

Realizing the inordinate contribution of West Virginia's veterans to our national security and defense, in 1985 I earmarked funding for the establishment of a new national veterans' cemetery at Pruntytown--the West Virginia National Cemetery.

When fully developed, this new cemetery will provide approximately 6,400 gravesites. As part of an improvement of the Pruntytown cemetery, I will dedicate a \$1.1 million administrative/maintenance building and committal service shelter complex in early June.

On this Memorial Day, as we honor our revered dead, I find comfort in knowing that, once again, West Virginia veterans, their spouses, and their dependents can be laid to rest in a national veterans' cemetery in our state.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The 1991 Robert C. Byrd Honors Scholarships

As a result of legislation that I authored in the U.S. Senate in 1985, Robert C. Byrd Honors Scholarships for 1991 were awarded to 43 graduating West Virginia high school students at a recent ceremony in Charleston.

Based on nominations received from high schools across West Virginia, these "Byrd Scholars" were selected by state education officials to receive \$1,500 first-year college scholarships.

Awarded solely for outstanding academic performance, the 1991 West Virginia Byrd Honors Scholarships are among 5,561 being awarded to high school graduates nationwide.

Under the provisions of the legislation establishing the program, the number of scholarships allotted for each state is based on that state's student population.

Since the inception of the program, \$321,000 worth of Byrd Honors Scholarships have been awarded to a total of 214 West Virginians.

As I conceived this program, these scholarships are intended to encourage excellence in education by giving motivated students assistance in pursuing their college educations.

Believing that educa-

tion can open doors of opportunity to young people that might otherwise be closed to them, I have always been interested in education and scholastic achievement.

For that reason, since 1969, under the Robert C. Byrd Scholastic Recognition Awards program funded from a private trust that I established, I have provided U.S. Savings Bonds to more than 5,730 valedictorians of West Virginia public, parochial, private, and Schools for the Deaf and Blind graduating classes, with approximately 290 more Scholastic Recognition Awards to be presented to this year's valedictorians.

The success of the Robert C. Byrd Scholastic Recognition Awards prompted me to initiate the national Robert C. Byrd Honors Scholarship Program.

The young West Virginians and other Americans winning the Byrd Honors Scholarships are exceptional students, and they deserve our admiration and encouragement.

Indeed, these students represent great promise for West Virginia's and America's future, and I hope that my interest in them will help them realize challenging and fulfilling careers in the years ahead.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

High-Technology Enterprise Growing in West Virginia

Recently, I participated in dedicating the Robert C. Byrd Technology Center at Alderson-Broaddus College in Philippi, West Virginia.

Launched with a \$432,000 Economic Development Administration grant that I helped secure -- and as a cooperative venture of the statewide Software Valley movement, Alderson-Broaddus College, and private industry -- the new Technology Center will house private firms oriented toward establishing West Virginia as a national center for computerized data conversion.

Currently, the Technology Center hosts one enterprise employing 55 people under contracts with two out-of-state companies.

Some years ago, I realized that the changing global marketplace and the worldwide high-technology revolution would have a drastic impact on West Virginia and that, if we were to provide real job options for young West Virginians, West Virginia's economy would have to diversify.

As a step toward that diversification, I launched the nonprofit Software Valley movement in 1985.

Hundreds of West Virginians from business and industry, academia, and government participating in the Software Valley network statewide have helped to create a

positive environment in West Virginia for high-tech research and development. Across our state, software companies are enjoying successes and creating opportunities that had not been dreamt of even ten years ago.

Just recently, for example, the giant Boeing Company recognized a 27-employee Huntington firm and Software Valley member as one of its outstanding suppliers of 1990.

Another West Virginia software company located in Wheeling has just been awarded a three-month Martin Marietta Corporation defense sub-contract to design computer software for the U.S. Air Force's robotics and flexible manufacturing program.

Private enterprise endeavors such as these are economic engines that can help to power West Virginia's future growth and development and provide increased job opportunities in our state.

The future is an open door for West Virginians willing to pioneer in the advanced high-technology era that we are entering.

Through our state's human and natural resources and through developments already underway or in the planning, West Virginia has the potential to become more prosperous than at any time in its history.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Special Considerations For West Virginia Highways

Currently, several new approaches are being examined toward meeting America's surface transportation construction needs as a prelude to reauthorizing the federal highway program.

In this legislative process, to meet our state's unique terrain and use demands, I have proposed that West Virginia and other mountainous states be given special consideration in the funding of federal highway construction programs.

The combination of West Virginia's rugged mountains, drainage problems, unstable highway-site foundations, and short construction season conditioned by severe weather, makes road building in our state extraordinarily difficult. This difficulty factor needs to be considered in the distribution of federal highway construction funds.

For example, while the Appalachian Regional Commission (ARC) estimates that corridor construction per mile in the other twelve states of the Appalachian region is about \$11 million, the cost of building corridors in West Virginia averages \$18.5 million per mile.

Another factor that should qualify West Virginia for a higher pro-

portion of federal highway funds is the impact of the Clean Air Act of 1990 on our state's highway system, particularly in southern West Virginia.

While expected to hurt the demand for high-sulfur coal, the Clean Air Act will have a counter effect of increasing the demand for low-sulfur coal, the quality most prevalent in our state's southern counties. The expanded coal truck use in those counties will mean additional heavy truck traffic, new traffic patterns, and greater wear and tear on existing highways, many of which were constructed decades ago for lighter vehicles and a smaller volume of traffic.

One of the keystones to West Virginia's future development and prosperity is an improved, modern highway network, especially the completion of the ARC corridor highway system, of which 135 miles remain to be finished in our state.

The apportionment of funds under any new federal highway program should take into account new factors that reflect the contemporary needs of our national highway system in general, but that particularly recognize the unique circumstances confronting highway needs in West Virginia.

June 5, 1991

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Filling the Energy Policy Vacuum

The recent Persian Gulf conflict again underlined America's energy weaknesses.

Though less than eleven percent of our country's oil was coming from the Persian Gulf at the time, Iraq's aggression temporarily forced American gasoline prices up in some cases by twenty-five percent.

At one time, America took energy abundance for granted.

But twice during the 1970's--first, during the Yom Kippur War and, later, during the Iranian Revolution--Americans learned how fragile our energy lifelines are.

When I was Senate Majority Leader in the late 1970's, I spearheaded Congressional efforts to put into place federal programs to promote energy independence by encouraging the full development of our national energy resources, especially emphasizing abundant coal supplies such as we possess in West Virginia.

Unfortunately, the Reagan administration dismantled those programs.

The fruits of the subsequent energy-policy vacuum have become all too clear.

Where, in 1973, America was importing about 35 percent of its annual oil consumption, we are today importing nearly

50 percent of our national oil supplies.

World and domestic energy demands and prices are likely to keep rising, and energy shortages could recur.

Here in America--and particularly in West Virginia--we are sitting on mountains of recoverable coal reserves. The United States is the Saudi Arabia of coal.

Fortunately, I have won broad support for my own Clean Coal Technology Program--an effort to develop technologies to utilize our massive coal reserves in technologically advanced and environmentally compatible ways.

But, as I have urged since the energy crises of the 1970's, America must have a comprehensive national energy policy that fully capitalizes on our coal reserves, as well as our oil, natural gas, and other energy resources. Through both private and public commitments, such an energy policy could free us from our vulnerabilities to the political instabilities inherent in the Middle East.

With visionary leadership, America possesses the scientific and technological expertise to achieve energy self-sufficiency. I urge that we mobilize our energy potential before another energy crisis wreaks its toll in economic distress and hardship on our country.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

New Funding for Vital West Virginia Projects

I recently added \$68 million in federal funding to a Senate appropriation bill for continued construction of West Virginia's Appalachian Corridor Highways G and H.

Specifically, my funding includes \$47 million for construction of Corridor H, which will link Central West Virginia to western Virginia and to East Coast markets.

Additionally, I earmarked \$21 million for work on Corridor G, a 79-mile route running through Mingo, Logan, Boone, and Kanawha Counties, and connecting Charleston more directly to eastern Kentucky.

A dearth of modern highways has historically been one of the factors most seriously hindering the economic growth and development of our state. In the past, poor transportation in, out of, and across our state has been a major obstacle to our goods' reaching their markets and our state's attaining the prosperity that it deserves.

Completion of Corridors G and H is essential to the realization of West Virginia's economic potential, and as Chairman of the Senate Appropriations Committee, I will continue doing all that I can to ac-

celerate the further construction of these highways.

Over the past three years, I have added \$255 million in federal funds for construction of Corridors G, H, and D and the Weirton Bypass, and the additional \$68 million that I put into the 1992 Energy and Water Appropriation bill will be another significant boost to West Virginia highway construction.

Additionally, the Energy and Water bill includes an extra \$22.6 million that I added to further the work on the Tug Fork flood control project in southwestern West Virginia.

The Energy and Water bill also provides funding for a number of other flood control and navigation projects in West Virginia, including the following: \$38 million for the Gallipolis Locks and Dam on the Ohio River; \$15 million for the Winfield Lock and Dam on the Kanawha River; \$34.5 million for Monongahela Lock and Dam No. 7, and \$30 million for Monongahela Lock and Dam No. 8; \$550,000 for the Petersburg flood protection project in Grant County; and \$950,000 for the Moorefield flood protection project in Hardy County.

June 19, 1991

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Federal Highway Bonus For West Virginia

Recently, I won U.S. Senate approval of my amendment to the new federal highway bill that would provide West Virginia with approximately \$222 million in additional federal highway funds over a four-year period.

This funding is money over and above the total five-year funding of \$915 million that West Virginia is due to receive under the regular provisions of the federal highway bill as approved by the Senate.

With the Byrd Amendment, West Virginia stands to receive a total of \$1.137 billion in federal highway funds over five years.

Specifically, my amendment provides bonus highway funds to all states that impose a state gasoline tax that is above the national average.

In addition, if states that impose a gasoline tax above the national average also have a per capita disposable income below the national average--as in West Virginia--those states would be eligible for an additional bonus.

The purpose of my amendment is to encourage and reward states like West Virginia that are doing all that they can to come up with the tax revenues necessary to make vital infrastructure improvements and repairs within their own boundaries.

My amendment infuses an extra \$8.2 billion into our nation's transportation system--an invest-

ment in America's infrastructure that is essential if we are to strengthen our national economy and become more competitive and productive against our trade rivals.

This money will not be taken from education or other compelling domestic programs, but from funds already collected from American taxpayers specifically for the Highway Trust Fund. Indeed, unless we build up our national infrastructure, we are not going to be able to compete internationally, to accelerate our national growth, to improve our productivity, or to afford to upgrade our educational system or solve other domestic problems facing us.

West Virginia has a great need for improved roads and bridges. As Chairman of the Senate Appropriations Committee, I have been able to add \$323 million to federal funding bills over the past three years to accelerate construction on Appalachian Corridors G, H, and D, and the Weirton Bypass of Route 22. This funding has been in addition to West Virginia's allocations under the Highway Trust Fund.

My amendment to the highway bill, earmarking bonus Highway Trust Fund monies for West Virginia, is another way that I am working to bring new roads, and new economic vitality, to our state.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Two More Federal Agencies Plan Relocations to West Virginia

Recently, I have been successful in persuading two more federal agencies -- the Central Intelligence Agency (CIA) and the Bureau of Alcohol, Tobacco and Firearms -- to relocate facilities and employees to West Virginia.

At my urging, the CIA proposes to move between 2,000 and 3,000 employees -- involved primarily in a variety of light-industrial functions, such as printing, storage, and possibly data-processing activities -- to a new office compound to be built in Jefferson County.

This action would be a partial consolidation of facilities currently located at 21 different sites in the suburban Washington, D.C., area, and would result in a net savings of millions in taxpayers' dollars by the early part of the next century.

This projected action must now be reviewed by the Intelligence Oversight Committees and the Appropriations Committees of both the Senate and the House of Representatives.

Further, when the federal Bureau of Alcohol, Tobacco and Firearms learned that it would be forced to relinquish its computer operations quarters in Washington because of planned renovations to the building, I added a pro-

vision to a Senate appropriations report authorizing the Bureau to study the feasibility of relocating its computer center outside of Washington, and I encouraged the agency to look at West Virginia.

As a result, the Bureau has announced plans to relocate a number of its computer operations and as many as 90 employees to West Virginia's Eastern Panhandle, with an annual estimated impact of \$5 million to \$6 million on the area's economy.

In the past two years, I have brought a number of federal agencies to West Virginia, including the FBI's new Identification Division, which will bring 2,500 jobs to the Clarksburg area, and an expansion of the Bureau of Public Debt's Parkersburg facility, which will result in 700 additional employees at that site.

As the CIA; the Bureau of Alcohol, Tobacco and Firearms; the FBI; and the Bureau of Public Debt have discovered, West Virginia -- which has lower land and construction costs, a competitive workforce, and attractive working and living conditions -- is an ideal location for many federal agency operations.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Senate, 1789-1989, Volume II

In early 1989, the first volume of my comprehensive history of the United States Senate, The Senate, 1789-1989, was published.

Just recently, the second volume of this work was published.

When I was sworn in as a new Senator in January 1959, I gradually became aware that the Senate is more than just four walls of brick and marble, handsome mahogany desks, luxurious draperies and carpets, an ornate chamber in which elevated rhetoric is rendered and laws are made.

It became something far more majestic; something that had a life of its own, larger than the totality of all its members. There was something about the Senate that was far nobler than these mundane and tangible things -- something imperishable. It had a soul!

Therefore, composing these volumes of history has been a labor of love.

Volume I of my Senate history was received positively by the public as a work of both popular history and serious scholarship. I appreciate that reception, and have been touched by such a response.

Volume II takes a closer look at the Senate as an institution than does Volume I.

From my standpoint, the primary purpose of this new volume is to instill into current and future members of the Senate a greater sense of institutional memory.

Similarly, I hope that general readers of my latest volume will gain a greater insight into the unique role that the Senate fulfills in our constitutional system of government.

Volume II will be available to the public after mid-July through the Government Printing Office. I receive no royalties, or any other income, from the sale of this book or the previous volume.

By U.S. Senator Robert C. Byrd

Appropriations for High Technology Development in West Virginia

To advance high-technology frontiers in West Virginia, and to help broaden our state's economic base, I recently added \$29.5 million to a Senate appropriation bill.

The purpose of these funds is to build three facilities in West Virginia sponsored by the National Aeronautics and Space Administration (NASA), including \$10 million to establish a center in Fairmont, Marion County, to test computer software used by NASA aerospace programs.

This center, to be built for NASA by West Virginia University, would be used by contractors to consolidate testing and verification of vital software used by NASA.

The work to be conducted at this new facility, called an Independent Verification and Validation (IV&V) center, would help to ensure that the software produced for NASA by contractors will function accurately on the ground and in flight, with the goal of improving the efficiency of the national aerospace program.

When completed, the proposed 41,000-square-foot NASA facility would house up to 200 contractor employees.

In addition, I have

added \$19.5 million for two ongoing NASA projects at Wheeling Jesuit College.

This sum includes \$13.5 million to construct and equip the National Technology Transfer Center and \$6 million to construct, equip, and link students at Wheeling Jesuit College to the NASA Classroom of the Future.

These two projects are designed "to bring NASA technology down to earth."

The Technology Transfer Center is intended to improve the competitive capabilities of U.S. and West Virginia businesses by affording them access to the latest developments in high technology, while the purpose of the Classroom of the Future is to use NASA technology and development to promote and teach mathematics, science, and engineering.

These three NASA-related programs advance my goal of promoting high-technology opportunities in West Virginia--opportunities that can put our state on the cutting edge of twenty-first century economic growth and create broad new job and career possibilities for young West Virginians in the years ahead.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

More Funds for West Virginia FBI Identification Division Facility

Recently, I added \$48 million to a Senate appropriation bill to develop a prototype automation system for the Federal Bureau of Investigation's (FBI) Fingerprint Identification Division to be located in West Virginia.

I also added \$12.5 million to that bill to enable the FBI to hire additional employees to reduce backlogs in the FBI's current fingerprint identification records. Some of those jobs will be in West Virginia, where the FBI expects to hire 200 employees by the end of this year, and another 200 or more employees next year.

These appropriations follow up the \$185 million that I added to an appropriation bill last year to finance the automation and relocation to West Virginia of the FBI's Fingerprint Identification Division, which will bring approximately 2,500 jobs to the Clarksburg area.

My \$48 million appropriation, with \$40 million provided to develop an Automated Fingerprint Identification System and \$8 million to develop a pilot Image Transmission Network System, will keep

the Fingerprint Identification Division's relocation to West Virginia on schedule.

This is essential because, according to the FBI, each one-year delay in the automation and relocation project would increase costs by \$12 million due to inflation and other factors, add to the existing backlog of fingerprint files, and push back the implementation of the automated system beyond the target date of June 1995.

Particularly against the background of the drug-related crime crisis facing our country, this new automated fingerprint identification system will provide law enforcement officers nationwide with a powerful and effective new tool in their struggle against crime, and as such, we need to get this high-technology system into operation without delay.

The FBI's automated fingerprint identification system is urgently needed for America's war against crime. Therefore, the new Fingerprint Identification Division's headquarters in West Virginia must be completed and made operational as quickly as possible.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Math Scores: A Chilling Portent for America's Future

Recently, the results of a national study of the mathematics skills of American students were made public, carrying chilling portents for America's future technological superiority.

According to the congressionally mandated National Assessment of Educational Progress tests, most American students in those grades tested have not mastered more than basic mathematics in this age of computers and expanding high technology.

Worse, this study indicates that, on average, no state's students met the levels of performance expected of their grade levels.

Out of a possible top score of 500, 54 percent of the twelfth graders scored below 300--the acceptable level for eighth graders--and only 5 percent scored 350 or better.

For eighth graders, the average nationwide score was 265, while fourth graders nationwide scored 216.

For more than a century, Americans have prided themselves on this nation's technological superiority and achievement.

But without qualified future engineers, scientists, and technicians, how do we maintain our space pro-

gram, our innovations in industry and manufacturing, our complex defense systems, or our vast technology-dependent health-care sector?

Among my continuing efforts is enhancement of mathematics and science education in our state so that young West Virginians will be better able to compete for twenty-first century jobs.

To promote that goal, I have added \$10 million in federal appropriations to funding bills over the past two years to construct and equip, in cooperation with the National Aeronautics and Space Administration, a 'Classroom of the Future' at Wheeling Jesuit College. This model program will provide on-campus training opportunities for teachers and students from throughout West Virginia and surrounding areas to study space-age mathematics and science, and to enhance technological education across our state.

Adequate education in mathematics and science is vital to West Virginia's economic development and America's national security. We cannot afford to skimp in providing our young people with these invaluable keys to their futures.

July 31, 1991

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Strengthening the Hand of an Important Environmental Ally

In the effort to protect some of America's most precious natural resources, one of our strongest allies is the U.S. Fish and Wildlife Service.

This federal agency has broad responsibilities to protect and conserve an array of fish and wildlife and their habitats, including migratory birds, endangered species, inland sport fish, and wild animals.

As growth and development have exerted more and more pressure over the years on America's fish and wildlife resources, the mission of the Fish and Wildlife Service has likewise increased in importance.

For this reason, I have been working with the Fish and Wildlife Service over the past several years to establish a new, state-of-the-art National Education and Training Center in West Virginia.

Recently, as Chairman of the Senate Appropriations Committee, I added \$15.7 million to the 1992 Interior Appropriation Bill to keep this important project on track. This is in addition to monies that I have added to appropriation bills over the past three years for planning, design, initial construction, and related expenses for the training center.

This facility, to be located at Harpers Ferry, will be a national asset that will provide com-

prehensive environmental education and training for employees of the Fish and Wildlife Service as well as fish and wildlife professionals from a number of other federal agencies, including the Armed Services, the Forest Service, the National Park Service, the National Marine Fisheries Service, the Bureau of Land Management, and the Bureau of Indian Affairs.

Currently, the Fish and Wildlife Service has no up-to-date central training facility. Yet, the agency, through internal management studies, has documented the need for such a facility time and again over the past decade. The Service currently conducts its training activities in a piecemeal fashion at locations scattered throughout the country, and the result is a training program that is too fragmented and too limited in scope to meet the agency's growing responsibilities.

The Education and Training Center is needed by the federal government to better protect our environment and our natural resources. And West Virginia, with its proximity to the nation's capital, its abundance of fish and wildlife species and habitats, and its cost-saving advantages for the American taxpayers, is the ideal location for such a facility.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Strengthening West Virginia's Guard and Reserve Resources

West Virginians are known for their patriotism and dedication to America's national security. Consequently, West Virginians are strong supporters of, and participants in, the National Guard and Reserves.

In an effort to strengthen Guard and Reserve facilities in West Virginia, I recently won authorization of several new military construction projects in West Virginia, including \$25.1 million for construction of a new Navy Reserve facility in the Eastern Panhandle.

The Navy Reserve facility, which is to be located in Martinsburg, is a major new defense initiative for West Virginia where the Navy could house C-130 aircraft, the workhorse aircraft of the military capable of transporting large numbers of troop and oversize cargo.

Other new military construction projects for which I won authorization include \$9.6 million for a Combined Armed Forces Reserve Center and Organizational Maintenance Shop in Huntington to serve five Guard and Reserve units; \$4 million for new facilities for the Air National Guard in Martinsburg; and \$650,000 for an Air National Guard security police facility in Charleston.

These projects are among my on-going efforts to increase the presence of

the military in West Virginia.

Of equal importance to the military construction projects is the Senate's approval of language that I added to the Defense Authorization Bill to prevent the Pentagon-sponsored wholesale reduction of Army National Guard personnel.

I have repeatedly urged the Administration not to cut National Guard forces in West Virginia and elsewhere because of the increased importance of the Guard and Reserves at a time when proposals are being made for significant reductions in the active duty military forces.

My provision calls for maintaining Army National Guard forces at an end-strength of 425,450 nationwide for Fiscal Year 1993, instead of the Administration-recommended target of 366,300. The figures I have recommended would force the Pentagon to revise its blueprint for cutting Army National Guard forces, and, I hope, would convince the Defense Department to abandon its plans to eliminate certain West Virginia units.

The Guard and Reserves are important to America's national security, and they are a vital part of West Virginia's heritage. They deserve our continued support and encouragement.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Expanding Tourism Opportunities In West Virginia

To capitalize more aggressively on West Virginia's developing tourism potential, I have added more than \$15 million to a 1992 appropriation bill for an array of Fish and Wildlife Service, national parks, and forest-related projects in our state.

West Virginia's long-time motto, "Wild, Wonderful West Virginia," has struck a chord among an increasing number of vacationing Americans who have visited our state in recent years.

My amendments to the 1992 Interior Appropriation Bill will enhance West Virginia's tourism potential by building on the National Park Service presence in the state, by financing the expansion of the West Virginia Wildlife Refuge, and by providing better facilities for visitors to the Monongahela National Forest, one of West Virginia's premier natural assets.

As Chairman of the Senate Interior Appropriations Subcommittee, I added \$5.6 million for planning and construction projects at the New River Gorge National River; \$5.6 million for planning and construction at Harpers Ferry National Historical Park, including a conservation laboratory for park service artifacts; and nearly \$2 million for planning and design of the Wheeling National Heritage Area,

which will be the newest National Park unit in West Virginia, launched in the past two years through my initiative.

Also, my amendments included \$1.24 million for construction of tourist-related improvements in the Monongahela National Forest. Further, I added \$1 million to this bill to purchase additional Ohio River Islands to expand West Virginia's only National Wildlife Refuge. This is in addition to the \$2.1 million in federal funds that I have secured over the past two years to establish the Wildlife Refuge and acquire approximately 21 islands.

In a separate appropriation bill, which has already been approved by Congress and signed into law by the President, I added \$400,000 to the Appalachian Regional Commission budget to continue operations of the Appalachian Tourism Development Center at Concord College in Mercer County.

West Virginia is America's sleeping tourism giant. I believe that the improvements and projects contemplated by my amendments and related efforts that I am working on to make our state more appealing for tourism, will go far toward creating more jobs for West Virginians and developing a more viable and prosperous tourism industry in scenic West Virginia.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

FBI Identification Division Groundbreaking

Recently, I participated in formal groundbreaking ceremonies for construction of the Federal Bureau of Investigation's (FBI) new Fingerprint Identification Division facility at Clarksburg.

Scheduled to be completed by late 1994, the initial construction includes the first phase of a facility that will eventually accommodate approximately 2,500 employees -- of whom 80 percent are expected to be West Virginians hired locally -- with an annual payroll of approximately \$75 million.

The relocation of the FBI's Fingerprint Identification Division to West Virginia is a major development for our state's economy and for West Virginia's future participation in the expanding high-technology revolution.

More importantly, the new automated fingerprint identification system to be headquartered at this facility will offer a quantum leap forward in law enforcement nationwide by slashing criminal identification time from the current three to five weeks down to hours or even minutes.

When completed, the new Identification Division will feature a state-of-the-art system for fingerprint and other types of iden-

tification. Through high-technology electronics and equipment, this system will link state criminal-records systems nationwide, expand the FBI's national fingerprint files, allow the processing of as many as 600,000 inquiries per day, and permit a positive fingerprint identification within a matter of hours.

Recognizing the urgency of this initiative, I have added a total of \$245.5 million to federal funding bills over the past two years to revitalize the FBI's antiquated fingerprint identification system and relocate the Fingerprint Identification Division to West Virginia.

Earlier this year, I took part in a swearing-in ceremony for the first of 200 new employees the FBI plans to hire this year for its Clarksburg facility. These employees will begin work to process a backlog of nearly 2.9 million arrest dispositions and to convert 8.8 million manual criminal history records to an automated data base.

With all West Virginians, I welcome the FBI's Fingerprint Identification Division to our state. I look forward to the benefits that this new facility will bring to West Virginia, and to our entire country in the war against crime.

Latest Report Card on American Schools

Recently, American education received more bad news.

Results of the Scholastic Aptitude Tests (SAT) for the Class of 1991 were issued by the College Board in Princeton, New Jersey.

The SAT exam is the primary yardstick used by more than 2,800 colleges and universities to measure the academic promise of applicants for admission.

Unfortunately, according to the SAT scores, the English language skills of the 1991 high school seniors tested sank to an all-time low, while math scores took their first dip since 1980.

Nationally, on the verbal portion of the test, the students averaged only 419 out of a possible 800 points, 7 points lower than the 1990 average.

The 1991 math average was 473, compared with 476 last year.

To their credit, West Virginia students outperformed the national averages on both sections, but dropped below the scores of last year's West Virginia examinees.

With 17 percent of its high school graduates taking the 1991 SAT examination, West Virginia's average verbal score was 441 versus 443 last year, with a 1991 math score of 485 against 490 for the 1990 average.

Significantly, College Board officials attributed the lower scores to the in-

creasingly widespread use of television and video tapes in the classroom, tools that have reduced the amount of time students spend reading and analyzing and solving problems.

In addition, the College Board found that schools are demanding less homework of their students.

Other education analysts also attribute declining academic performance to too much home television viewing.

Over the past decade, more and more attention has been focused on the need for solid improvements in our schools. Ad hoc commissions have been convened to study the problems of primary and secondary education in our country, and impressive reports and recommendations have been published.

In spite of those efforts, as the 1991 SAT scores demonstrate, the math and verbal skills of our high school graduates are still a disappointment.

Our youth are the future of our state and our country.

Learning is not easy, and few shortcuts have ever been found to achieving genuine knowledge and mastery of the basic skills that classical schooling should provide.

Let us hope that the 1991 SAT scores will spur a greater commitment to solid and disciplined learning in the years ahead.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Vital Highway Appropriations For West Virginia

In accordance with my commitment to advance completion of the Appalachian Regional Commission (ARC) corridor highway system in West Virginia, I recently added \$165 million to a transportation appropriation bill to construct a crucial stretch of ARC Corridor G.

This funding will finance the northern 9.1 miles of Corridor G from Chapmanville to Holden, in Logan County.

One of the most congested strips of highway in West Virginia, this heavily traveled segment of the Corridor G route is narrow, twisting, and treacherous, as well as being an important transportation link in the highway network in the southwestern part of our state.

The funding in this bill will be particularly helpful to West Virginia because it is 100 percent federal funding, requiring no state matching funds.

Construction of this stretch of highway will bring Corridor G within 2.89 miles of final completion.

In addition to the \$165 million appropriation for Corridor G, I added \$12.9 million for design and environmental studies and for

construction of a new interchange and access road on Interstate 79 at Clarksburg to serve the new FBI Identification Division complex.

Further, I also added funding for location and design studies, and environmental assessments, for several major highway projects in West Virginia, including \$1.3 million for West Virginia Route 9 in the Eastern Panhandle; \$2.6 million for Route 2 in the Huntington area; and \$1 million for U.S. Route 52 in southern West Virginia.

In an appropriation bill already signed into law earlier this year, I added \$58 million to provide the 80-percent federal share of funding for construction of the Logan Connector on Corridor G and the Elkins Bypass of Corridor H.

These and other highway construction projects for the funding of which I am working are vital to West Virginia's future economic development and progress. As Chairman of the Senate Appropriations Committee, I shall continue doing all that I can, within federal budget constraints, to make their completion possible.

September 18, 1991

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Maintaining and Improving Air Transportation in West Virginia

Particularly in a largely rural state like West Virginia, modern, safe, and reliable air transportation is a vital component of future economic growth and progress.

For that reason, I supported funding in a recent transportation appropriation bill to assure continued service at a number of airports in our state under the Essential Air Service (EAS) program. This bill contains \$38.6 million for the nationwide EAS program, which ensures continued air service to the Beckley, Bluefield/Princeton, Clarksburg/Fairmont, Elkins, and Morgantown areas.

I also added \$14 million to complete the installation of a new regional radar system at the Eastern West Virginia Regional Airport at Martinsburg, making a total of \$21 million for the system. I included initial funding of \$7 million in an appropriation bill last year.

In addition, I included language in the report accompanying this bill urging the Federal Aviation Administration (FAA) to give priority consideration in the allocation of airport improvement grant funds to several other West Virginia airports, including paving and lights at the Logan County Airport; funding initial costs related to

the establishment of a new Pocahontas County airport at Marlinton; and funds for a proposed new airport in Roane County at Spencer to stimulate economic development in the area.

Further, I added report language urging the FAA to work with the National Guard and Reserve to facilitate an airport runway extension project at Benedum Airport in Harrison County, and directing the FAA to give priority to the application of Benedum Airport for discretionary airport improvement program funds.

West Virginia enterprises and industries are seeking trade opportunities in distant markets and around the world. Finding new domestic and foreign customers and clients, as well as attracting new businesses, industries, and jobs to our state, requires that we continue to ensure and improve air transportation into and out of West Virginia's cities and communities.

My amendments to this recent transportation appropriation bill will help to provide continued and improved air service to West Virginians seeking to find new opportunities abroad and to non-West Virginians contemplating launching new economic projects in West Virginia.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Perspective on Christopher Columbus

"In 1492, Columbus sailed the ocean blue."

For generations, that epigram has been used to assist American school children to remember one of the watershed events in human history, and to help them celebrate an adventure that opened for untold millions an abundance of freedom and plenty unparalleled in mankind's prior experience.

Once again this year, October 12 will be observed as Columbus Day.

Interestingly, however, some self-styled historians are currently attempting to rewrite long chapters of American history, and to them, Christopher Columbus has become a target of vilification.

The historical revisionism to which Columbus and much more in American history are being subjected is not an attempt at greater truth or factuality, but an effort to denigrate and besmirch the American saga itself.

These current attacks on Christopher Columbus illustrate a dangerous and irresponsible effort by some historians to rewrite history to suit their own personal ideological and sociological biases.

How ironic that, while the Soviet Union is currently attempting to render their history books more

accurate and to cleanse historical accounts of that nation to eradicate the warpings introduced by Communist ideologists, some historical revisionists in the United States are attempting to make American history texts serve the cause of narrow and eccentric sociological viewpoints.

Whatever failings Columbus may have suffered, his feats in 1492 and later were the achievements of a brave, even heroic man. His stumbling onto the New World, moreover, opened vast, underpopulated territories to settlement and development by many people burdened by centuries of feudal privilege, serfdom, and tyranny.

In turn, the freedoms and opportunities that those liberty-seeking pioneers established in this hemisphere released the most creative, energetic, and idealistic forces for good and progress in recorded history.

As Americans, we are partners in the legacy that Christopher Columbus bequeathed to history.

With the 500th anniversary of Columbus' 1492 expedition approaching next year, I salute Christopher Columbus as one of history's indisputable heroes.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Congress Acts to Extend Unemployment Benefits

Recently, the United States Senate passed legislation, which I cosponsored, to extend emergency benefits to long-term unemployed workers in West Virginia and other high-unemployment states by an additional 20 weeks.

As a result of the current recession, unemployment in our country has climbed to the highest levels in the past five years. And yet, West Virginia, which has the highest unemployment rate in the nation, has not been eligible for extended unemployment benefits.

Consequently, three out of four jobless workers in our state are not receiving any unemployment benefits, and are being left to fend for themselves and their families on the brink of impending winter weather.

In spite of optimistic predictions of an early end to the current recession, millions of Americans are today suffering, and will continue to suffer, hardships brought on by lost jobs, reduced market demands, foreign competition, layoffs, and production cutbacks.

In West Virginia and across the country, these jobless workers and their families are living from day

to day in an ongoing, seemingly endless crisis and nightmare, with their homes and very health often at stake.

Traditionally, wherever in the world a disaster has struck, our country has extended its aid and resources to the victims.

For example, in recent months, Congress was called on by the Bush administration to pass emergency legislation to provide economic assistance to Kurdish refugees in Iraq and Turkey, and to needy people in such disparate locations as the Sudan, Angola, Bangladesh, and Ethiopia.

I believe that our jobless neighbors in West Virginia and unemployed fellow Americans throughout the nation deserve at least the same helping hand as people living halfway around the world.

Despite the President's pledge to veto this legislation, I believe that Congress acted responsibly, wisely, and compassionately in voting to extend emergency unemployment benefits to the long-term jobless in West Virginia, and in providing assistance to Americans grappling with economic setbacks and job losses.

Clean Up Television Programs!

Television is today probably the single most pervasive and powerful influence affecting our children.

Experts estimate that, by the time children reach age 18, they have individually watched, on average, 15,000 hours of television programming.

For many children, the television screen has displaced the authority of mothers and fathers, ministers and priests, school teachers, and other positive authority figures on whom our society has long depended to impart values and create conscientious attitudes in the young.

Alarming, a study issued last year by the Universities of Pennsylvania and Delaware revealed that the average hour of children's programming -- cartoons, adventure shows, and such -- contains 26 acts of violence. That is up from 18 acts of violence per hour in 1980.

One particularly troubling television influence on increasing numbers of children is "music video" programming.

Currently occupying as many as three exclusive channels on some cable systems, music videos are

aimed directly at teenagers and pre-teens, but are watched by children as young as four and five.

In such videos, schools, jobs, home life, traditional families, marriage, patriotism, religion, fathers and mothers, self-discipline, policemen, and other conventional figures -- most of the people, values, and institutions on whom we depend daily for the smooth, just, and orderly conduct of affairs -- are portrayed as oppressive, square, boring, fascist, hypocritical, outdated, and "uncool."

The central message of these music videos is clear: Human happiness and fulfillment are experienced by rejecting responsibility and authority.

As the poet William Blake wrote, "Degrade first the arts if you'd mankind degrade."

The quality and content of television programming being aimed at children and young people are too important to be ignored by parents, teachers, clergymen, and others concerned about the values and future of our society.

The time has come to clean up television programming!

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Continuing U.S. Education Crisis

In spite of a growing concern nationally in recent years, achievement test scores, graduation statistics, and America's comparative international ratings continue to underscore our country's crisis in education.

For example, according to the U.S. Department of Education, as much as 13 percent of our country's population is functionally illiterate, with even 8 percent of those who graduate from high school falling into that category.

The Department of Education notes further that an average of up to 30 percent of those entering high school nationally do not graduate with their entering class, with dropout rates in some urban areas running as high as 50 percent.

Additionally, while more than half of U.S. high school graduates do not go on to college immediately after graduation, and significant numbers of college entrants drop out before graduation, little effort is focused on equipping these students for jobs that do not require college degrees.

Even in this high-technology era, fewer than one-quarter of one percent of American high school students go on to earn degrees in advanced science or engineering.

Sadly, U.S. students at all grade levels continue to score well below their counterparts in Europe and Japan in math and science proficiency, a recognized key to future research and development dominance in

world technology and product development.

For example, the Department of Education asserts that the average Japanese high school senior scores higher on college preparatory mathematics examinations than do the top 5 percent of U.S. high school seniors.

This may be explained in part by the fact that the average Japanese high school senior has, during his or her school experience, spent as many hours in class as has an American college graduate.

Education is an indivisible element of our country's economic and security infrastructure.

Around the world, millions are working to elevate their nations to higher statuses of economic prosperity and international importance. Never before has world market competition been so fierce -- or promised to become more fierce.

In West Virginia and across America, our schools are the training grounds in which our children and grandchildren must prepare themselves for that competition, or be brushed aside as inadequate or unproductive.

Education is the key to the futures of West Virginia and America. We owe to our children and grandchildren a renewed commitment to excellence in education that will solve many of the problems that I have noted and that will give our country the educational quality needed to compete effectively in the world marketplace.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

New Technology to Advance West Virginia's Steel Industry

In an effort to strengthen our domestic steel industry, I recently added \$3 million to an appropriation bill to assist Weirton Steel in developing a model computerized management information system.

The Weirton Integrated Management Information System program -- also known as IMIS -- is being developed to tackle the day-to-day challenges of steel production, by using an automated system to monitor the steelmaking process and manage inventory.

The IMIS program, which is to be jointly financed by the public and private sectors, is being designed to be transferable upon successful development to other domestic steel manufacturers. IMIS is expected to enhance efficiency, cut costs, and save energy, rendering steel produced by Weirton and other companies more competitive in the world steel market.

Indeed, Weirton Steel estimates that IMIS will save its company \$15 million annually, and could ultimately generate industry-wide savings of approximately \$400 million per year.

In the past decade, foreign competition has

severely impacted the steel industry in West Virginia and other heavy-industrial states. Such competition has cost jobs, not only in the steel industry, but also in related industries such as metallurgical coal.

According to Weirton Steel, since 1982, more than 200,000 jobs have been lost as U.S. steel production fell by 40 million tons of steelmaking capacity per year.

Through the development and application of new steelmaking technologies and wise management-worker decisions, companies like Weirton Steel have been able to survive and prosper.

Technology, however, is not static, and even the most progressive manufacturers cannot rest on current success if they are to remain competitive in the years ahead.

The long-range goal of the IMIS initiative, for which I have won a total of \$6 million in federal funds over the past two years, is to further enhance the production capabilities of West Virginia's and America's steel industry, helping this vital part of our economy to meet foreign competition and to save jobs in our steel and coal industries.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Disturbing Trend In School Textbooks

Americans are increasingly concerned about the quality of education in our country, and are searching for explanations for poor student performance in some of our schools.

One problem might be some of the schoolbooks that are used today.

In an earlier time, for example, reading textbooks taught a love of literature as well as reading.

Thus, the famous McGuffey's Eclectic Readers offered selections from the best classic literature and poetry to tantalize children into mastering basic reading skills and wanting to read more.

According to a noted historian of education, the McGuffey readers were the most popular series ever used in America, introducing students to the best authors and poets, and challenging them with high ideals and patriotic values.

Some years ago, however, certain experts decided that reading speed and easiness should be the goal of the schools, not teaching appreciation of good literature, inculcating values and patriotism, or preparing young people for citizenship.

In attempts to make textbooks easier, "readability" displaced quality, with the result that -- according to The Washington Post -- one popular history book of-

fered in the early 1980's carried six pages on Marilyn Monroe but only three brief references to George Washington. Current literature anthologies regularly feature vapid tales of contemporary teenagers wrestling with problems concerning dating, their parents, or their automobiles, in preference to the Gettysburg Address, Irving's Rip Van Winkle, or Robert Frost's poems. Too often, when classic stories are used, they are rewritten in dull vocabulary and choppy, childish sentences.

In defense of these practices, textbook editors claim that serious literature is too difficult for many children and teenagers, that students might lose interest in school or sink in their own self-esteem if the books are too advanced, and that various special interest groups might be offended by classic writings.

Growing up in southern West Virginia, I was fortunate to have dedicated teachers and challenging textbooks that awakened in me a love of learning that has never been quenched.

I cherish the hope of that same experience for the children of West Virginia today. Perhaps the McGuffey readers and other classic anthologies and textbooks are models by which we can promote excellence in education even today.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Third Deficit

In recent years, in addition to Federal budget deficits and America's growing trade deficit, another deficit has been developing that is potentially more dangerous than either of the other deficits.

This is the "infrastructure deficit" -- an increasing failure to invest in those assets and resources on which our future national wealth, security, and competitiveness will depend -- highways, bridges, rail systems, schools and education, and health care, to name a few examples.

At the same time that such investments were not being made, Americans were borrowing from foreign countries and running up massive debts to pay for short-term consumption.

As just one example, at the beginning of 1980, the Federal government had an outstanding debt of \$852 billion.

Ten years later, the Federal debt had more than tripled, to \$2.97 trillion, an increase of more than \$2.1 trillion.

Prior to World War I, America was a debtor nation, but that debt had been mounted to finance an infrastructure that eventually made our economy the world's envy.

Unfortunately, neither on the public nor private levels were such long-term investments made in the 1980's. Instead, they were drastically reduced.

According to a recent government report, of 41 major airports in our country, 23 are suffering ground congestion and 16 are operating at or near airspace capacity. The Federal Aviation Administration reports that each of 21 airports already experiences 20,000 hours or more of delay annually, and that the number of airports experiencing such delays is expected to climb to 33 by 1997.

The Federal Highway Administration reports that 238,000 of the 578,000 bridges in the country eligible for Federal assistance are either structurally deficient or functionally obsolete, and that 40 percent of the total pavement in the Federal highway system is in "fair" to "poor" condition.

The budgetary policies of the 1980's have left us with a mountain of debt and a molehill of productive investment.

West Virginia and her sister states are facing international competition in the marketplace unknown in prior eras.

The vital challenge for our entire nation in the 1990's will be to restore fiscal responsibility across the board, while at the same time generating a new surge of public and private investment in the infrastructure necessary for renewed economic growth and prosperity in our country and state.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

An Independent Endorsement of the Clarksburg FBI Project

Recently, an independent report was issued, confirming my original reasons for urging the Federal Bureau of Investigation (FBI) to consider West Virginia as a location for its planned high-technology Fingerprint Identification Division.

A study undertaken by the Congressional Office of Technology Assessment (OTA) underscores the urgent need for a nationwide automated fingerprint identification system, and endorses the soundness of the FBI's plan to automate its Fingerprint Identification Division and to locate the division in West Virginia.

According to the OTA, the new system is a top priority among the nation's law enforcement personnel, and is vitally needed for a successful national crackdown on crime.

With specific reference to the Identification Division's move to Clarksburg, the OTA cites the advantages of a stable, high-quality workforce in West Virginia, the state's lower cost of living, and the shorter commutes that will be possible in the area of the Identification Division's headquarters.

The OTA also contrasts the advantages of locating the fingerprint identification operation in West Virginia with the disadvantages of the FBI's

current location in Washington, D.C., including the inadequacy of space for the needed updating of technology and services at the J. Edgar Hoover Building, the high employee turnover rate in Washington, the inability of the FBI to match competitive salaries in the national capital area, and the long commutes and increasing traffic into and out of the District of Columbia.

Since early September, more than 7,000 persons have applied for the initial 200 positions to be filled at the FBI Identification Division's satellite office opening in Clarksburg. Based on FBI projections, by the year 2000 as many as 3,000 or more employees may be needed at the new facility.

Ground has already been broken for the FBI's new Clarksburg Identification Division facility, and the Bureau recently awarded the first of six construction contracts -- an \$18 million award for site preparation and utilities construction -- for the new complex. The remaining construction contracts are expected to be awarded next year.

With all West Virginians, I look forward to the completion and full staffing of the FBI's Fingerprint Identification Division, and to the wider benefits that it will mean for our state and for the nation.

November 20, 1991

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Balancing Economic Development and Conservation

As West Virginians, we are particularly blessed with some of our country's most beautiful terrain, abundant wildlife and forests, and free-flowing streams and rivers. West Virginia is indeed a natural wonderland worthy of conserving.

At the same time, West Virginia needs development and growth that will produce income and job opportunities.

According to some, economic development and the conservation of natural assets are mutually exclusive; they believe that the promotion of development necessarily means the destruction and loss of the beauties and riches of nature.

Throughout my career in Washington, I have supported programs and policies that endeavor to strike a balance between the requirements of economic development and the goals of conservation.

I believe that mankind and nature can and must live in harmony, and that intelligent people can properly husband nature's resources wisely, responsibly, and prudently, for the benefit of this and future generations.

For those reasons, I am working to improve the economy of West Virginia and to open up for development increased areas of our state through the completion of the Appalachian Regional Commission corridor highway system.

At the same time, I am working to establish facilities in West Virginia that

will promote sound conservation of our natural resources, not only in our state but also across the nation.

As Chairman of the Senate Appropriations Committee, I have added a total of \$44.5 million for the planning, designing, and initial construction of the proposed \$125 million U.S. Fish and Wildlife Service National Education and Training Center, which is to be located at Harpers Ferry. The Center will provide our country with a state-of-the-art facility in which federal and state agencies, as well as private groups on a reimbursement basis, can meet environmental-training needs for their personnel.

Similarly, over the past three years, I have obtained \$3.1 million to acquire approximately 25 Ohio River islands to establish West Virginia's first National Wildlife Refuge, a promising boon both for wildlife and tourism in our state.

Too often, economic development and environmental stewardship are presented as an either/or dilemma.

However, there is an alternative path.

I am convinced that in West Virginia we can serve as a model to our sister states, charting a middle course that, at the same time, wisely uses and intelligently conserves our natural resources.

That course bodes well for both West Virginia's natural heritage and the future economic progress of our state.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

CIA Consolidation Proposal Advances Through Congress

Recently, Congress approved funds that I had added to a defense appropriation bill to implement the consolidation of 21 scattered offices of the Central Intelligence Agency (CIA) into two locations, one of which is in Jefferson County, West Virginia.

This appropriation bill provides an initial \$10 million -- and up to a total of \$30 million -- to acquire land for the consolidation of 21 CIA leased offices into two sites, once the CIA has satisfied requirements for land acquisition and other procedures prescribed in the bill at my request.

I am confident that the required certifications will be met, that the consolidation will go forward, and that the selection of the West Virginia site for one of the office complexes will be confirmed.

In 1987, the CIA recognized the economic and security drawbacks to having leased office space scattered across the Washington area. In an attempt to address concerns about costs, security, and greater efficiency, the CIA initiated efforts to consolidate these offices and to meet future Agency needs.

As a result of those efforts, a site in Jefferson

County was identified as being suitable for consolidation and relocation.

According to current plans, the CIA estimates that approximately 2,200 employees would ultimately be consolidated into the proposed West Virginia facility.

In addition to the benefits that this move of employees to West Virginia will afford the CIA, including improved security, greater operating efficiency, and enhanced intelligence-gathering abilities, the consolidation will provide significant savings to American taxpayers.

Moreover, West Virginia offers a great deal to CIA employees who choose to move with their jobs, such as a lower cost of living, one of the lowest crime rates in the nation, affordable housing, and attractive real estate prices.

Further, West Virginia's Eastern Panhandle is a rapidly growing area of our state that offers significant opportunities of education, employment, and recreation for its residents.

Above all, West Virginians are renowned for their friendliness and solid values, and those qualities make West Virginia an ideal location for living and for rearing a family.

December 4, 1991

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Welcome Tonic For Highways and Jobs in West Virginia

West Virginia recently received a much-needed economic boost in the form of a federal allocation of \$1.323 billion over six years for highway construction in the state.

This funding, which was provided for in the national transportation authorization bill, will help to expand the growing network of modern highways in West Virginia, as well as create more jobs in the construction industry.

At my request, this bill provides \$160 million for two projects in West Virginia -- \$110 million for upgrading and four-laning Route 9 between Martinsburg and Charles Town and to the Virginia state line in the Eastern Panhandle; and \$50 million to begin work on the proposed Coalfields Expressway from Beckley southwest to the Virginia line.

Of equal importance, I was able to win authorization for the first time for funding needed to complete construction of the Appalachian corridor highways and for upgrading and four-laning U.S. Route 52 between Bluefield and Huntington.

The transportation bill brings a double dose of good news to West Virginia regarding highway construction because, earlier in the year, as Chairman of the Senate Appropriations

Committee, I was able to add \$221 million in appropriation bills for highway projects in West Virginia.

My amendments to the appropriation bills include \$206.5 million for construction on Appalachian corridor highways G and H in West Virginia; \$10.32 million for construction of a new Interstate-79 interchange to accommodate the FBI Fingerprint Identification Division facility at Clarksburg; \$1.04 million for location and design studies for Route 9; \$2.08 million for similar studies for Route 2 in the Huntington area; and \$800,000 for environmental studies on Route 52.

The six-year transportation authorization bill not only emphasizes the importance of investing in our nation's roads, bridges, and transportation network, but it also creates needed jobs. In fact, this legislation may be just the tonic needed to begin to pull our economy out of the nosedive it has taken.

A modern, efficient highway network is one of West Virginia's most pressing needs for promoting economic development and job creation in our state, and the funds that I have added to transportation appropriation and authorization bills this year will go far toward achieving that goal.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Improving Health Care in West Virginia

The cost and availability of health care are becoming major concerns for increasing numbers of West Virginians.

According to a recent insurance company study, West Virginia ranks 49th among the states in access to health care. The American Cancer Society estimates that cancer deaths in West Virginia run roughly 6 percent higher than the national average.

To the extent that the federal government provides health care services and resources to the states, I have succeeded in obtaining funding for a number of health care programs to give West Virginians readier access to important health care services. My efforts include the establishment and upgrading of Veterans Medical Centers in Beckley, Clarksburg, Huntington, and Martinsburg; funding for black lung clinics and community health centers in West Virginia; and enhanced federal funding for rural health care grants.

In addition, to provide West Virginians with state-of-the-art cancer treatment, I obtained a total of \$13.3 million a few years ago to establish West Virginia's first statewide cancer research and treatment center, located in Morgantown. Prior to the establishment of this center, many seriously ill cancer patients were forced to go out of state to seek treatment.

Further, I have se-

cured approximately \$4 million annually to fund a statewide program in West Virginia for screening, education, and early detection of cervical and breast cancer.

In addition, I added \$14.2 million to appropriations bills last year for Alzheimer's disease research and services in West Virginia to be conducted by the West Virginia University and Marshall University medical schools. This year, I added \$700,000 for an Alzheimer's disease center in Parkersburg and \$500,000 for a rural health care clinic in McDowell County.

Moreover, I added report language to an appropriation bill requesting up to \$1 million annually for five years to establish a trauma treatment demonstration program at WVU, and \$800,000 to establish a statewide telecommunications system linking the WVU Health Sciences Center and rural hospitals across West Virginia. In the area of occupational health, I have obtained a total of \$49.6 million to establish a national occupational safety and health laboratory in Morgantown that is intended to research ways to improve health and safety in the workplace.

Rural states like West Virginia deserve the best health care possible, and I shall continue working to improve health care in our state in every way that I can.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Preserving West Virginia Values

One of my top priorities in the U.S. Senate is to bring improvements and opportunities to West Virginia that will create jobs and promote new businesses and industries in the years ahead.

For example, I have succeeded in attracting a number of federal operations and thousands of new jobs to West Virginia, including the FBI Fingerprint Identification Division and approximately 2,500 jobs to Clarksburg, the Bureau of Public Debt expansion in Parkersburg with 700 new jobs, and the proposed CIA facility that will bring 2,200 jobs to Jefferson County.

My goal is to lay the foundations for an era of economic expansion in which our state's standard of living will rise, and that will offer West Virginia's young people job opportunities and the promise of rewarding, fulfilling futures that will enable them to stay in our state and rear their families here.

As this new era takes shape, however, I hope that West Virginians will maintain and promote the values and the heritage that make our state unique.

West Virginia continues to enjoy one of the lowest crime rates in the country. Incidents of drug trafficking and AIDS cases are well below national averages. The work ethic, family life, religious faith, patriotism, a personal sense of responsibility, and neighborhood and community pride are inherent in the West Virginia way of life.

In sharp contrast to West Virginia's lifestyle are the murder rates, drug addictions, conflicts, and breakdowns in personal and public life that characterize so many of our large metropolitan centers.

In the years ahead, I hope that concerned West Virginians, their families, churches, civic and fraternal organizations, and educators will reflect on the challenges that may be presented by numbers of new residents moving into our state.

Our goal should be to preserve our values and heritage, and to celebrate and promote the qualities that make West Virginia the finest place in the country in which to live, work, and rear children.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Term Limits: An Infringement Of Voters' Rights

Recently, discussion has mounted concerning limiting the terms of members of Congress.

However, a close look at Congressional term limits raises a number of serious reservations.

Experience and skill are prerequisites for effective and judicious government. I am concerned that with term limits, long-staying bureaucrats in the Executive Branch would have an advantage over the people's elected representatives in Congress. Members of the bureaucracy are necessary to our system of government, but under mandated term limits, these bureaucrats -- who never have to answer to the voters at the polls for their actions or decisions -- would become the most powerful and influential group in Washington.

By forcing seasoned lawmakers out of office, term limits would also result in a shift of power and influence to unelected Congressional staff people, whose expertise and institutional memory would be in high demand due to the constant turnover of novice officeholders.

As in the Federal bureaucracy, these staff people -- who would be unaccountable to the voters of any state or district -- would then have a much greater opportunity and ability to influence the

legislative agenda, mold the laws, and guide inexperienced and unwary new members of Congress toward priorities that the staff most favored.

One of the most frequently heard arguments for limiting Congressional terms is that the current members of Congress have become entrenched in office. However, the fact is that over half the current members of the U.S. Senate have served less than two full terms, and over one-fourth of these have served less than one full term. Instead of advocating Congressional term limits, thoughtful citizens should remember that Americans already have the most effective possible means of limiting Congressional terms, simply by exercising their right to vote on election day.

It is a sad commentary on the American political system that the national voter turnout in the 1990 Congressional elections was only 36 percent.

An informed American public can be trusted to make the right judgment if citizens will only go to the polls on election day and exercise their privilege to vote. As Pericles said, in his eulogy to the Athenians who had fallen in the Peloponnesian War, "Our ordinary citizens, though occupied with the pursuits of industry, are still fair judges of public matters."

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Investing in America's Future

Since the attack on Pearl Harbor in 1941, America has been in an almost continuous state of defense and military alert.

The collapse of communism and the sweeping changes taking place in the former Soviet Union and Eastern Europe have, however, drastically altered the conditions that made America's massive defense posture necessary.

While recognizing the continuing need to maintain an adequate national defense in a changed world, the time has come for America to adjust to the new challenges to our national security and standard of living posed by our trade competitors overseas.

Above all, we must begin shifting our limited financial resources from the defense budget to the domestic budget so that we can restore, repair, reconstruct, and modernize our long-neglected and crumbling national infrastructure -- our highways, bridges, rail networks, manufacturing plants, water and sewer systems, airports, and other civic facilities, as well as our schools, research and technology programs, and health care services -- on which America's productivity and competitive ability depend.

One reason that some of our foreign trade competitors have enjoyed so much economic success has been their ability to invest more money in research,

technological development, transportation improvements, modernization, and domestic public services while depending on the U.S. defense shield to protect them against foreign attack.

By contrast, American investments in our own vital infrastructure have dwindled in recent years to less than 1 percent per year of our gross national product, compared to 3 percent for Germany and 5 percent for Japan.

In part, that explains the lost jobs, closed factories, and declining populations that have beset so many West Virginia communities, and that have forced so many of West Virginia's young people to leave our state to look for opportunities elsewhere.

Good transportation and highways, technological development, product research, a well-trained workforce, updated plants and machinery, a good educational system, and adequate health care boost productivity, cut costs, and make countries more competitive in world markets.

America met and faced down the threat of foreign military aggression.

The time has come to meet the challenge of foreign economic aggression by shifting our spending priorities, strengthening our own country, and investing more in our own future and the future of our children.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

New Directions for Television

In the 1950's, television became America's mass media of choice, with viewers transfixed by every image that crossed the screen, no matter how inconsequential or banal. But, in the main, the mass of television programming has become, as commentators often reflect, "bubble gum for the mind." Hour after hour,

Notwithstanding, a few optimists predicted a television-spawned cultural renaissance, with the best of our culture flooding millions of living rooms nightly, and a revolution in education as school children nationwide daily audited the nation's best teachers and scholars. one of the marvels of human invention has been reduced to a purveyor of violence, bad taste, and locker-room humor.

Certainly, some of those rosier predictions have been borne out. For those interested, public television and certain cable channels provide for millions some of the world's best drama, musical performances, documentaries, and public affairs programming. Last year's Public Broadcasting System's (PBS) monumental *Civil War* series drew record PBS audiences and quickly earned plaudits as an example of the quality programming to which all television should aspire. I am particularly concerned about the impact of this continuing diet of inarties and violence on the minds and imaginations of children and young people.

Unfortunately, prime opportunities are being lost for introducing our youth to exciting and challenging dramatizations of the best of our cultural and national classics -- classics that convey our highest values and ideals.

As it has so often proved, television's potential for broadening human understanding and for showcasing the best of our cultural heritage is nearly limitless.

Quality programming does not have to be boring, elitist, or stuffy.

No one can contest that television at its best -- the American astronauts' walk on the Moon, the dismantling of the Berlin Wall, and the coverage of the Persian Gulf War, to name a few instances -- can be compelling, vital, and life-and history-viewers will challenge the television industry to explore positive new directions in programming and content, and that responsible television producers will help their medium to live up to its promise in our culture and society.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Gun Violence in Our Schools

Last year, homicides accounted for roughly 487 deaths in Washington, D.C.; 1,006 in Los Angeles; and more than 2,080 in New York City -- most of these gun-related.

Unfortunately, such violence is not limited to the streets.

Increasingly, thoughtful Americans are alarmed by the rising rate of violence in our schools, and the growing number of gun-related incidents being reported there.

A recent report from the federal Centers for Disease Control in Atlanta, entitled *1990 Youth Risk Behavior Study*, revealed that, at some time during the preceding year, one in 20 of today's youth in grades 9-12 carried a firearm, usually a handgun, for self-protection or use in a fight.

This same study reported that nearly 24 percent of West Virginia students, grades 9-12, carried a gun, knife, or other weapon on some occasion for the same reasons.

During the 1990-91 school year, the Kanawha County School Board expelled 14 students in gun-related incidents -- brandishing, displaying, selling, passing, or possessing guns -- on school property. In just the first two months of the 1991-92 school year, the Kanawha Board expelled 10 students in gun-

related incidents on school property.

Fortunately, Kanawha County school officials acted expeditiously in these cases. Unfortunately, throughout the country, news reports of disturbed youngsters who use guns at school to take out their grievances against others are becoming more common.

Violence at school reflects violence and unhappiness at home, in the workplace, and in the streets -- and certainly, television murders that desensitize children to the value of human life.

Schools are no place for guns. Teachers and students should not have to fear for their lives and safety.

Schools officials can, of course, confiscate guns brought onto school premises.

But a surer approach might begin at home, with parents keeping firearms and ammunition locked away from children, emphasizing to children the potential consequences of gun-carrying, and imbuing our children with a respect for law and the rights of other people, and a sense of responsibility and duty as American citizens.

Our schools are vital and precious institutions. Let us keep them safe for our children and those who teach them.

January 22, 1992

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Keeping the FBI and CIA On Track for West Virginia

To keep on schedule the relocation of the FBI's Fingerprint Identification Division to Harrison County and a number of Central Intelligence Agency (CIA) offices to Jefferson County, I have urged the President to earmark \$117 million in the 1993 Federal budget.

The relocation of these facilities to West Virginia is important to the future of our state and nation, and must be kept on schedule to save money for American taxpayers and to increase the efficiency of both the FBI and the CIA.

As Chairman of the Senate Appropriations Committee, I have added a total of \$245.5 million in appropriations over the past two years to initiate the relocation to West Virginia, and the automation, of the FBI's Fingerprint Division.

The Automated Fingerprint Identification System being planned and developed for the Harrison County facility is a major step forward in our national war against crime and drugs, and is urgently needed to permit the FBI to provide law enforcement personnel throughout the nation with state-of-the-art technology.

To keep this automation project on course, the

FBI needs \$100 million in Fiscal Year 1993 -- \$50 million to acquire the computer hardware and software needed to start production of this advanced system, and another \$50 million to convert the FBI's existing fingerprint cards from the current manual format to an electronic image format. Any delay in this process -- by even as little as one year -- could mean higher costs to the taxpayer.

Last year, to acquire land for the CIA's plan to consolidate 21 leased offices in the Washington, D.C., area into two new compounds, including one in Jefferson County, I added \$30 million to a defense appropriation bill.

The \$17 million for the CIA project that I am now urging for the new Federal budget includes second-year funding for architectural and engineering studies, and for community and environmental impact assessments.

Together, the FBI and CIA facilities being relocated to West Virginia are projected to bring an estimated 4,700 jobs to our state. Maintaining their planned construction schedules will benefit our country as well as the economy of West Virginia.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Excellence: The Key To America's Competitiveness

Recently, a ranking Japanese government official raised hackles in this country by criticizing American workers as lazy and illiterate.

Conversely, on our shores a lament has risen nationwide that, by taking advantage of America's freer trade policies without allowing American products to compete fairly in their own markets, Japan and some other countries have stolen American jobs and markets and have reduced our standard of living.

These examples underline the tension that the chronic trade deficit has caused between the U.S. and some of her trading partners.

Though accusing American workers of laziness and illiteracy is unfair and simplistic, and though there is much truth in the charge of unfair practices on the part of Japan, there is another factor behind the popularity of some foreign-made products.

At one time, "Made in America" meant the highest quality possible. Around the world, American exports to other countries, including numerous products manufactured or mined in West Virginia, outstripped our imports from overseas by billions of dollars.

But, in time, a number of foreign companies learned that consistent quality is a potent weapon

in trade competition, while some American companies became complacent about our success and prosperity.

Somewhere along the line, America's priorities seem to have gotten turned upside down. For example, last year, 34 major league baseball players were paid salaries of \$1 million or more. Some American rock and movie stars are estimated to have amassed fortunes ranging up to \$100 million or more.

Compare those figures with the salaries paid to teachers, scientists, shop foremen, miners, steelworkers, chemists, engineers, or inventors.

Historically, American greatness has rested on American excellence. West Virginians, for example, are still noted for their "work ethic," pride of workmanship, ingenuity, inventiveness, and spirit of achievement.

Some critics have recommended that, to regain competitive power, Americans should imitate Japanese labor and management policies.

Instead, perhaps America needs to reorder its priorities and recapture the values embodied by West Virginia workers, whose pride of craft and dedication represent standards that helped to make America the greatest nation in the world.

Excellence -- not imitation -- is the key to success in the marketplace or in life.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

America's Survival as a World Economic Power

Having won the Cold War, America currently finds itself embroiled in a struggle to maintain its position as a world economic power.

Across our country and throughout West Virginia, one sees the casualties in this new struggle, struck down in the longest recession since the 1930's: 8.9 million unemployed, 6.3 million working only part-time for economic reasons, and 1.1 million so discouraged that they have simply dropped out of the labor force -- 16.3 million in all -- 13 percent of the national work force.

Other marks of this recession are closed mines, factories, and mills in West Virginia and elsewhere; nearly 1 in 10 Americans now enrolled in the Food Stamp Program; more than 73,000 business bankruptcies and nearly 919,000 personal bankruptcies filed in Fiscal Year 1991; and massive layoffs, including 74,000 announced by General Motors and 29,000 by IBM.

For many of our neighbors and fellow citizens, the American Dream is fading out of reach.

Although the inflexibility of some of our trading partners is partially to blame for the current economic crisis, much of that blame lies here at home.

Over the past decade, deliberate political decisions by White House policymakers starved our national infrastructure -- those projects and programs, physical and human, that are

the backbone and foundation of economic growth and expansion: highways, bridges, airports, water and sewer facilities, education and vocational training, health care, nonmilitary research and development, ports and waterways, anti-crime and antidrug programs, and environmental cleanup. Such investments were cut \$395 billion below inflation for the decade.

At the same time, \$624 billion above inflation was pumped into the defense budget, and mandatory and entitlement programs were increased \$776 billion above inflation.

But as we are so painfully learning today, a nation that does not invest adequately in its human and physical infrastructure will lose its ability to compete economically. In addition, its standard of living will drop in comparison to those more competitive nations that have kept their transportation systems, production facilities, schools and training programs, health-care systems, and research and development up to date and relevant to world market challenges.

Starting immediately, we need to invest more in our neglected infrastructure to make us more competitive in the long run, and to create new jobs for millions of unemployed and underemployed Americans and for the young Americans who will want to enjoy the American Dream for themselves in the years ahead.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The President's Budget: Mixed News for West Virginia

The President's recently proposed 1993 Federal budget contains a mixture of good and bad news for West Virginia.

On the plus side, the budget proposes funding of a number of important West Virginia projects, including several that I initiated and for which I requested funding.

For example, the budget contains \$100 million that I requested to continue work on the FBI's Fingerprint Identification Division facility in Harrison County, and \$17 million in second-year funding for the Central Intelligence Agency's (CIA) consolidation, which includes a proposed facility in Jefferson County.

Inclusion of these funds in the budget signifies important Presidential endorsement of my initiatives.

Other funds in this proposed budget for ongoing West Virginia projects and programs on which I am working are: \$25 million for the Gallipolis Locks and Dam on the Ohio River; \$23.6 million for West Virginia segments of the Tug Fork flood-control project; \$38.5 million for the Winfield Lock and Dam on the Kanawha River; \$26 million for the Point Marion Lock and Dam below Morgantown on the Monongahela River; \$30 million for the Grays Landing Lock and Dam on the Monongahela; \$900,000 for the Petersburg local flood protection project along the South Branch of the Potomac River in Grant

County; \$32 million for Environmental Protection Agency sewerage treatment programs in our state; and \$38.6 million for continuation of the Essential Air Service program in West Virginia, which provides air transportation to the Clarksburg/Fairmont, Elkins, Beckley, Morgantown, and Bluefield/Princeton areas.

On the negative side, however, the President proposes cutting funding for the Appalachian Regional Commission (ARC) from the \$190 million appropriated in the current fiscal year to \$100 million next year; reducing funding for the Community Development Block Grant program from \$3.4 billion to \$2.9 billion; and slashing funding for Amtrak from \$651 million to \$243 million.

Worse yet, the proposed budget calls for completely eliminating the Economic Development Administration, an essential tool for economic progress in financially strapped rural states such as West Virginia.

All of these projects and programs promise to create new job opportunities and expand West Virginia's economic base, and they deserve strong Federal support. For my part, as Chairman of the Senate Appropriations Committee, I shall continue doing all that I can, within Federal budget constraints, to safeguard these programs and to protect the jobs and investments that I am bringing into our state.

Confronting the New Threats To America's National Security

Throughout the course of roughly four decades of the Cold War, I have been a "national defense superhawk" -- a supporter of the strongest military forces that America could afford against the threat of world communism.

However, since 1990, the world has changed drastically. The Soviet Union is no more. America won the Cold War. The Soviet threat is gone.

Unfortunately, current Administration policy makers seem to be behind the times, continuing to push Cold War military budgets to protect against a U.S.S.R. threat that no longer exists and ignoring the economic threats to our security that exist now.

I believe that we should be using this opportunity to boost the confidence of the American people by proposing substantial cuts in defense spending and using the savings to increase spending in those domestic areas in which it is most needed -- for physical infrastructure such as bridges, highways, rail systems, airports, public water and sewerage systems, and river and harbor improvements, as well as for human infrastructure, such as education, job training, child and health care, and nutrition.

In past decades, against the threat of Soviet might and fanaticism, we

were correct to invest substantially in sophisticated weapons systems as a deterrent to communist aggression.

But now, the Soviet military threat has collapsed, while millions of Americans, including thousands of West Virginians, are jobless as a result of our faltering domestic economy.

Instead of new superweapons and megabombs to blast open military bunkers, we need "economic smartbombs" to open new world markets. Instead of sustaining a massive standing army of Cold War proportions, we should reduce our active duty forces to a size that is sufficient to effectively function in a post-Cold War environment, while at the same time strengthening and upgrading our National Guard and Reserve units for flexibility in future crises. We also need to pour additional resources into training brigades of skilled, disciplined working men and women for new industries and enterprises.

Now is the time to renew our investments in our nation's physical and human infrastructure and to regain our stature as the world's mightiest economic and industrial power. We cannot afford to remain a military superpower at the price of becoming an economic superpauper.

Latest International Report Card In Science and Mathematics

In a clear portent of continued difficulty in competing in future world markets and high-technology development, the Educational Testing Service (ETS) of Princeton, New Jersey -- the nation's premier standardized testing organization -- recently released the results of an international mathematics and science test.

Despite several years of growing concern about the relative ability of American school children to compete against their foreign counterparts, the ETS examination results demonstrate that U.S. students are still performing below the international average in mathematics and science.

On the examinations administered internationally to roughly 175,000 students aged 9 years and 13 years, American students averaged well behind students in such countries as Korea, Taiwan, Switzerland, the former Soviet Union, Hungary, Canada, and even Slovenia. Japan and Germany declined to participate in this effort.

The American students tested were a cross section of their age groups, representing middle-class and suburban children as well as inner-city and lower-income examinees.

Throughout my career, I have strongly supported programs and efforts to improve and expand educational opportunities for our young

people. Investments in developing the minds and intellects of future generations are among the wisest, most farseeing that we can make. Indeed, affording our children the best education possible is one of the most important contributions that we can make to the future security, strength, and prosperity of West Virginia and the nation, and I shall continue my efforts to promote better schools and improved education.

Interestingly, ETS officials emphasized that those students watching the most television daily on average performed worse than those who watched only moderately or not at all.

Also, while most competing countries abroad honor bright students and celebrate academic achievement, ETS officials said that a national American attitude that holds bright students in popular contempt as "nerds" or "dweebs," while lionizing athletic prowess and winning beauty contests, discourages better scholastic achievement by many American students.

The destiny of our state and nation rests on the quality of our schools and the education that they offer. Our schools are our front line in the ongoing battle for future success in the world economy, and the struggle for continued American economic power and international political influence begins at the door of our schoolhouses.

Robert C. Byrd Honors Scholarships Expanded to Four-Year Awards

Recently, as part of the passage of the 1992 Higher Education Act, I won approval by the United States Senate of my request to expand awards conferred under the national Robert C. Byrd Honors Scholarships Program from the current one year to four years.

In 1991, Robert C. Byrd Honors Scholarships were awarded to 43 graduating West Virginia high school students. That brought to 214 the total number of graduating, college-bound West Virginia high school students who have been awarded these one-year, \$1,500 first-year college scholarships, for a total value of \$321,000, since the beginning of this national program in 1987.

Awarded by state education officials solely for outstanding academic performance, the 43 West Virginia Byrd Honors Scholarships were among 5,561 awarded in 1991 to high school graduates across the country, bringing to more than 25,000 the number of these scholarships granted nationally since this program's inception.

Unfortunately, the soaring cost of a college education is straining the finances of increasing numbers of families.

If our country is to retain its position as a world leader in science, engineering, marketing, economic, and research and develop-

ment, we must encourage our best young minds to make the sacrifices necessary to achieve that goal.

My aim in expanding the Byrd Honors Scholarships from one-year to four-year awards is to provide added incentives for advancement for academically promising, hard-working young men and women to pursue college and university degrees.

The expansion of the Byrd Honors Scholarships will provide scholarship payments of \$1,500 annually for four years per student, or a total of \$6,000, applicable only toward costs associated with attendance at a college or university.

Believing that education can open doors of opportunity to young people that might otherwise be closed to them, I have always been a strong advocate of education and scholastic achievement.

The young West Virginians and other Americans who have won the Byrd Honors Scholarships are exceptional students, and they deserve our admiration and encouragement.

Indeed, these students represent great promise for West Virginia's and America's future, and I hope that the Byrd Honors Scholarships will help them to realize fulfilling, rewarding careers in the years ahead.

Television: A New Medium for Child Abuse?

Since the early 1950's, our society has treated television as a friendly, electronic baby sitter that can be depended upon to benignly amuse and even educate the millions of children who watch it daily.

Current findings suggest, however, that the television industry has betrayed the trust once placed in it.

A recent report released by the American Psychological Association (APA) calls into question television's benign influence on children, suggesting even that television may be a malignant force in the development of young children, exposing them to a gratuitous violence, while teaching them antisocial attitudes toward others.

In particular, the APA charges, television is bombarding children with images of death, injury, and human destruction at rates unparalleled in previous generations.

For instance, by the time an American child watching the average of three hours of commercial television programming per day has attained the seventh-grade level, he or she has already witnessed on average 8,000 television murders and been exposed to more than 100,000 other assorted acts of violence.

Any parent or teacher

feeding children a similar intellectual diet should be found guilty of child abuse.

Worse than such abuse, the nine professional psychologists who conducted the study concluded that the average child's viewing menu influences children to use violence to resolve conflicts in real life and to be more acceptive of sexual violence and rape.

Our society is enduring a plague of violence.

Last year, seventeen major U.S. cities set new homicide records. Between them, New York and Los Angeles alone -- our two largest metropolitan centers -- chalked up more than 3,000 murders.

Though West Virginia still enjoys crime rates generally lower than most other states, one wonders how long such a luxury can continue even in West Virginia when examples of violence as a resolution to conflicts are being imported from beyond our borders, day after day, by television.

Television is now a major factor in shaping the values of children growing up in this culture.

The time has come for the television industry to take seriously its responsibility to our country and to cease poisoning the minds and consciences of our children.

Line-Item Veto Is No Solution For the National Deficit

Reducing the national debt and cutting federal deficits are among my major concerns.

Unfortunately, one remedy suggested most often -- a **Presidential line-item veto** -- would do little or nothing to solve either problem.

For example, in 1988, President Reagan published a list of federal spending items whose termination by a line-item veto, he claimed, would have allowed him to cut the deficit and reduce the national debt, which, by then, was nearly \$2.68 trillion.

However, the sum of those vetoed items would have amounted only to two-tenths of 1 percent of 1988's total discretionary federal appropriations.

If the White House were given a line-item veto over **domestic discretionary appropriations**, the President could, for example, threaten to veto programs or projects for West Virginia unless I and other members of the West Virginia delegation would agree to vote as the White House wanted on some other piece of legislation (or nomination or treaty), regardless of the merits of the legislation in question. Therefore, West Virginia projects for which I have been able to secure appropriations -- such as Appalachian Corridors G, H, and D; Route 9 in the Eastern Panhandle; the Coalfields Expressway; the FBI Identification Division; the New River Gorge National River project, etc. -- would be vulnerable targets for Presidential line-item vetoes.

In fact, the budget items most often mentioned by line-item veto proponents -- domestic discretionary items, such as highways, bridges, water and sewer projects, health services, etc. -- are not themselves the cause of the national debt

(currently standing at \$3.694 trillion) or of the federal budget deficits.

In reality, most disbursements of federal funds are made through mandatory spending allocations or "entitlements" -- i.e., backdoor spending. These programs, created in years gone by, and their funding -- which do not require action by the Appropriations Committees of Congress -- are determined by formulas established in the laws that created them. Such mandatory and entitlement programs have become the main cause contributing to the deficits and the debt.

The entitlement and mandatory programs which have been put into place in years past must still continue annually to be automatically funded, and no Presidential line-item veto can touch them. They can only be ended or reduced by repealing or amending the original laws that created them.

Achieving those ends would require the unified will of Congress, the President, and the millions of citizens who benefit most from those backdoor spending programs. It would require national courage to reduce the rate of growth of such entitlements and mandatory programs for the sake of the country's economic health.

Certainly, the national debt must be reduced and budget deficits cut. But the line-item veto argument should come under the heading of political gimmickry. A line-item veto would destroy the Separation of Powers doctrine enshrined in the U.S. Constitution, thus resulting in an all-powerful Chief Executive. Moreover, its impact on reducing the debt and cutting deficits would be infinitesimal.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Need for Maintaining A Strong National Guard and Reserves

Against the background of the collapse of the old Soviet Union and lessened threats to America's national security, I favor many of the efforts suggested by the Department of Defense to shift our military priorities and to cut defense costs.

However, at a time when we are making significant reductions in our active-duty forces, the policy of cutting deeply the numbers of our National Guardsmen and Reservists seems shortsighted.

I am opposed to these massive cuts, particularly to National Guard and Reserve units in West Virginia, where we have a strong tradition of service in our nation's Armed Forces. Moreover, I have repeatedly called upon Defense Secretary Richard Cheney to reconsider these ill-advised proposals.

In West Virginia and across the country, our National Guard and Reserve units fulfill an important mission in our national defense efforts, as the efficient and effective participation of many of these units in Operation Desert Storm proved.

Instead of disbanding Guard and Reserve units, a more enlightened and realistic approach might be to concentrate more specialized training at the local level to

create even more capable and expert military forces ready to convert from civilian life to active military service with even greater speed and dispatch.

Moreover, the National Guard also has vital state missions, particularly in response to domestic emergencies, that must not be ignored.

For example, in the past six years, the West Virginia National Guard has served 26 times during periods of state disasters or emergencies. Most recently, last year the West Virginia National Guard was called out to suppress the devastating forest fires that, between October and December, burned more than 350,000 acres of West Virginia timberland.

I am concerned about the cost to public and national safety that could result from severe cuts in Guard and Reserve forces and closures of armories.

I have urged the Department of Defense to take a better look at the impacts such cuts will have on the National Guard and the Reserves, and the effect that these cuts might have in reducing the ability of these vital military resources to fulfill their duties to our domestic safety and national security.

By U.S. Senator Robert C. Byrd

More New Rural Bridges For West Virginia

Nearly four years ago, I initiated a national program to use one of West Virginia's most abundant natural resources -- hardwood timber -- to replace rapidly deteriorating bridges on important but less-travelled highways and roads.

Highway engineers have discovered that treated hardwood timber bridges have a life span of roughly 70 years, which is more than that of conventional concrete and steel structures, whose exposure to salt, freezing, and wear renders them extremely susceptible to deterioration and costly to maintain.

Specifically for this program, I added \$2.6 million in federal funds over the past four years for timber bridge construction in West Virginia, on a shared federal-state funding agreement.

Recently, I succeeded in earmarking an additional \$190,000 in an appropriations bill to build four more of these unique timber bridges in West Virginia, bringing to 56 the number of bridges in our state being built under this program.

The four bridges to be built under this funding will be located in rural areas of Harrison, Lewis, Pleasants, and Webster Counties.

Of particular interest is the Webster County bridge,

in the Town of Addison, which will serve pedestrian and light truck traffic, and which suggests an entirely new market for West Virginia hardwoods in building such durable, attractive bridges in cities, suburbs, and parks.

As with the previous 52 West Virginia bridges selected for timber bridge replacement, the construction of these four bridges will improve commercial, school bus, and emergency vehicle service available to the communities dependent on these bridges for their transportation needs.

I am gratified to report that officials of the Timber Bridge Program maintain that national enthusiasm for this effort is spreading, and that West Virginia's leadership role in providing demonstration examples and technology is widely recognized.

The benefits of the Timber Bridge Initiative promise to be multiple for West Virginia. In addition to obvious advantages for rural transportation in our state, a growing new industry is rising on West Virginia's economic horizon, with the promise of expanding markets, a renewable resource as its raw material, and new job opportunities for young West Virginians in the years ahead.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Congress-Bashing

Recently, newspapers and news broadcasts nationwide have overflowed with complaints against Congress, with special emphasis on the sensationalizing of "perks," while ignoring the real problems facing our country.

From my experience, I know of few institutions that are beyond criticism or that cannot benefit from sincere reform efforts.

Throughout my career in the United States Senate, I have worked continuously for reform to streamline the committee system, to open the Senate to public scrutiny through radio and television broadcasts, and to bring about greater public accountability.

Insofar as perks may stand between the members of Congress and the people they are elected to represent, such perks should be done away with. White House perks should go, too.

But simply doing away with perks is a far cry from addressing the serious challenges that face this nation.

Currently, we are faced with a \$3.8 trillion national debt, continuing federal deficits, the foreign trade gap, the decline of our schools, the crumbling of our highways and transpor-

tation systems, the prodigious cost of health care, and chronic unemployment.

In the next few weeks, the Senate will again be considering, for final passage, campaign finance reform legislation.

I have long advocated the need for campaign finance reform, and I have repeatedly cosponsored legislation to address needed changes in the campaign financing system. Members of Congress devote too much attention to the "money chase" -- the raising of funds to conduct political campaigns. There is too much pandering to the special interest groups that pour money into political campaigns. Members of Congress spend too much time away from Capitol Hill and out on the fundraising circuit.

I hope that sincere efforts will be made by both the White House and Congress to institute this and other substantive reforms so that needed attention can be turned to finding ways to reduce the deficit and the national debt, rebuild the nation's crumbling infrastructure, educate our children, and put our unemployed people to work.

Dawning Economic Light in West Virginia

My top priorities are creating new job opportunities in West Virginia and laying lasting economic foundations that will produce greater prosperity throughout our state.

By continuing to add funds to federal appropriations bills for construction of the Appalachian Regional Commission (ARC) corridor highway system, I hope to open more areas to economic development.

By locating vital new federal facilities and agencies such as the FBI's Fingerprint Identification Division's headquarters in Harrison County and the consolidation of the Bureau of Public Debt in Parkersburg, and by developing an expanding high-technology base statewide, and helping to lay foundations for new hardwood products enterprises, I am working to make our state more attractive to outside investors and to set the stage for increased economic and manufacturing growth in West Virginia.

In addition, I am seeking to create new jobs by enhancing and promoting West Virginia's tourism potential, assisting West Virginia companies to learn how to take greater advantage of federal contracting opportunities, and upgrading our airports

as the twenty first century approaches.

Statistics released on April 6 by a leading business publisher indicate that these efforts are apparently paying off.

According to Harris Publishing Company, a key business and economic monitor of ten Midwestern states including West Virginia, more than 500 new business enterprises have been launched in West Virginia in just the past two years, an increase of more than 17 percent when compared with previous years. Conversely, during that same period, with the exception of only one state, all other states in the group surveyed showed significant declines in business startups.

This is, indeed, good and encouraging news for West Virginians -- particularly for young West Virginians hoping to cast their futures at home.

The word is getting around that West Virginia is a good place to live and work, and a state with an increasingly promising economic future.

I shall continue to do all that I can to attract new facilities and enterprises to our state, and to create a brighter economic future for West Virginia.

April 22, 1992

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Tourism Industry Developments In West Virginia

I have long believed that West Virginia is a prime site for the development of a viable and productive tourism industry.

In that conviction, I have worked consistently to lay foundations for a growth-oriented tourism industry in West Virginia by adding funds toward completing the Appalachian Regional Commission (ARC) corridor highway system, for the development of the New River Gorge National River and the Harpers Ferry Historical Park, for tourism-related improvements in the Monogahela National Forest, and for purchase of the Ohio River Islands National Wildlife Refuge.

According to recent statistics published by the West Virginia Division of Tourism and Parks, these efforts are paying dividends, and increasing numbers of American vacationers are taking advantage of West Virginia as a tourism mecca.

In March, the Division's hotline registered nearly 106,000 telephone calls from people inquiring about tourism and vacation opportunities in West Virginia, up 139 percent compared to last year.

Incidentally, in 1991, 57 percent of those who called the hotline eventually made reservations at one or more of our state's tourist facilities.

These statistics are encouraging endorsements of West Virginia's tourism-industry potential.

But to take fuller advantage of that potential, and to expand the tourism industry in West Virginia, I added funds to appropriation bills to establish and operate the Appalachian Tourism Research and Development Center (ATRDC) at Concord College in Mercer County, in cooperation with West Virginia University.

Since success in the tourism and hospitality industries is not automatic, ATRDC offers a range of services to communities and entrepreneurs interested in developing area or individual tourism facilities throughout West Virginia and the other Appalachian states. These services include training workshops for those hoping to launch tourism in their own communities. Persons seeking more information on the scope of ATRDC's services can contact the Center at telephone number (304) 384-6032.

West Virginia is a sleeping tourism industry giant. I shall continue promoting our state's tourism potential as a means of creating new job opportunities and greater prosperity throughout West Virginia.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Let Congressional Reform Begin Here!

The Senate, with my support, has just passed a very important piece of legislation -- a Campaign-Finance Reform Bill -- and has sent it to the President for his signature. Unfortunately, the President has repeatedly indicated his intention to veto this bill.

The American people deserve better than such a rejection out of hand. This landmark legislation would begin to address the corrupting influence that the current election process, with its constant pressure to raise political campaign funds, is having on our system of government and political institutions.

As a long-standing leader in the effort to enact meaningful campaign financing reform, I am encouraged that Congress has passed this bill. Escalating campaign costs, special interest group influence, and negative political advertising -- which are all fueled by our current system of financing political campaigns -- are tearing at the heart of the political process. This legislation, I believe, is the most important action that Congress can take to restore leadership, decency, and integrity to the democratic process.

Our democratic system of government is based on public trust.

Nothing alienates that trust faster and more completely than the taint -- or

the suggestion of taint -- connected with big money. Where once, individual election campaigns for the Senate cost a few thousands of dollars, such campaigns currently cost millions.

In 1958, I ran for the first time for a full term as a U.S. Senator from West Virginia, together with now-retired Senator Jennings Randolph, who was running for the Senate to fill the unexpired term of the late Senator M.M. Neely of West Virginia.

The combined costs of that campaign for two U.S. Senate seats amounted to, roughly, \$50,000.

By contrast, winning a Senate seat costs an average of \$4 million today -- and sometimes much more.

The legislation just passed would, among other things, place voluntary caps on campaigns for election to the House of Representatives and U.S. Senate, further limit contributions by political action committees (PAC's) and special interest groups, and curb personal spending by wealthy candidates.

The bill passed by Congress is not perfect, but its enactment into law would set our feet on the path of vital Congressional reform and would keep political office open to more than just the wealthiest candidates, thus encouraging more talented men and women to seek public service.

West Virginia's 1992 Robert C. Byrd Honors Scholarship Winners

Benjamin Disraeli, Prime Minister of Great Britain in the latter part of the 19th century, in a speech to the British House of Commons, said, "Upon the education of the people of this country, the fate of this country depends."

I firmly believe that Disraeli's statement is as applicable to our own country in the late 20th century as it was to Great Britain in the 19th century.

There is no question but that educational achievement is a key factor in lifetime and career success.

Therefore, to encourage talented young West Virginia high school graduates, as well as those across our country, to further their formal education beyond high school, I authored legislation several years ago to establish \$1,500 first-year college scholarships to academically outstanding college-bound high school graduates.

Subsequently, the United States Senate voted to name these scholarships in my honor: the Robert C. Byrd Honors Scholarships. These scholarships are awarded solely on the basis of scholastic achievement to students nationwide, with the number of scholarships awarded in each state based on student population.

This year, Robert C.

Byrd Honors Scholarships are being awarded to 42 graduating West Virginia high school students, bringing to 256 the total number of West Virginians who have been awarded these scholarships since 1987, for a total value of \$384,000.

Also, to assist with the soaring costs of a college education, I recently won approval by the full Senate of my request to expand the program to offer four-year scholarships, in place of the one-year stipends currently awarded.

My legislation, which is now pending in a Senate-House conference committee, would provide scholarship payments of \$1,500 annually for four years per student, or a total of \$6,000, applicable only toward costs associated with attendance at a college or university.

I congratulate all of this year's Robert C. Byrd Honors Scholarship winners in West Virginia, and I wish them every success in the pursuit of their destinies in the years ahead.

I hope also that these young college-bound students will cast their futures in our state, joining in making West Virginia an ever more prosperous, dynamic place in which to work, rear families, and live in the century ahead

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Support for the Congressional Pay Raise Amendment

Recently, the 27th Article of Amendment to the U.S. Constitution -- called "the Madison amendment" for its author, James Madison -- was ratified by the requisite number of states to become official.

This amendment, originally submitted more than 200 years ago, would solve the chronic dilemma of requiring Members of Congress to vote on their own salaries by prohibiting a Congressional pay raise from taking effect until after an intervening election for the House of Representatives.

Thus, a pay increase enacted in one Congress could not become effective until the next Congress, thereby giving the American voters a chance to register their opinions on the raise during the intervening national election.

A total of 40 states have ratified the amendment since 1789, including West Virginia in 1988.

Though more than two centuries have elapsed since this Congressional pay raise amendment was introduced, I believe that the amendment itself is sound.

Certain Constitutional experts have, however, questioned the validity of the ratification process when such a lengthy period

of time has elapsed between the proposal of the amendment and the ratification thereof by the requisite number of states.

Indeed, the Supreme Court has stated that, under Article V of the Constitution, ratification of a proposed constitutional amendment should be sufficiently contemporaneous with the proposal of the amendment so as to reflect the will of the people in all sections of the country and in relatively the same time period.

All prior amendments have been ratified in less than four years from the time of proposal. Moreover, in this century, the Congress has seen fit to require amendments to be ratified within a short period, generally of no more than seven years.

But I believe that the 27th Amendment responds to a concern, wisely identified by James Madison, about potential conflict of interest and the appearance of conflict of interest, that remains as valid today as it was the day that Madison drafted it.

Therefore, I authored a resolution -- which was adopted by a 99 to 0 vote of the Senate -- declaring this amendment to be a valid part of the Constitution.

Revitalizing America's Cities: Violence is Not the Answer

The Senate recently approved a wide-ranging package of emergency assistance to deal with the problems of poverty, unemployment, and economic deterioration in this nation's urban areas.

There is no question that America's big cities are suffering from economic blight and lack of opportunity, but it is unfortunate that the legislation acted on by the Senate was, in large measure, precipitated by the recent riots in Los Angeles.

Many cities and towns in West Virginia and across this nation have serious economic problems, and yet the people of those communities have not resorted to violence and riots to solve their problems.

Los Angeles needs economic assistance to begin the task of rebuilding after the riots, but there should be no misunderstanding about the intention of Congress: We are addressing a long-standing nationwide problem; we are not attempting to reward criminal behavior. Rioting and violence solve nothing and must not be tolerated.

Like most Americans,

I was shocked and dismayed by the verdict in the Rodney King trial, and like most Americans, I was stunned by the violence that followed that verdict. Just as we as a nation must not tolerate police brutality, we also must not tolerate looting, rioting, murder, and other acts of violence.

In reality, the end result of the violence in Los Angeles has been the deepening of that city's problems. Lives and livelihoods were lost, and homes and businesses were destroyed.

If there is a lesson to be learned from the Los Angeles riots, it is that violence is not the answer. Instead of tearing down our cities, we must work together to build them up.

The goal of the legislation passed by the Senate is to help communities throughout the country by creating jobs and opportunities, combating crime and drug abuse, and providing economic incentives to businesses. These are the measures that we must take if this nation is ever to revitalize its economy, re-energize its cities, and regain its competitive edge.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A New Facility and More Jobs For the FBI in West Virginia

Recently, I announced that the Federal Bureau of Investigation (FBI) selected a location in Marion County as the site of the second West Virginia satellite office for the Bureau's Fingerprint Identification Division.

This is another milestone in the establishment of the FBI project, for which I have added a total of \$245.5 million in federal funds to appropriation bills since becoming Chairman of the Senate Appropriations Committee.

When completed in 1995, the fingerprint identification facility being constructed in Harrison County will employ approximately 2,500 people -- 80 percent of whom are expected to be West Virginians -- with an annual payroll estimated at \$75 million.

In the meantime, the two satellite offices are bringing immediate employment opportunities to West Virginia, as well as allowing the FBI to move quickly on the vitally important task of updating the nation's fingerprint files.

The FBI expects to have 300 employees on board at the original satellite facility in Clarksburg by year's end. Those jobs, combined with the 1,000 positions to be filled within the next two years at the

second satellite office, will fuel continued economic growth in West Virginia.

These employees will form the core of the workforce that will be consolidated at the developing \$211 million Fingerprint Identification facility.

In addition to the \$30 million annual economic impact to West Virginia from the 1,300 salaries, the increase in staff will enable the FBI to more quickly transfer backlogged criminal history records and fingerprint cards onto computer files for the state-of-the-art automated system expected to be among the nation's most effective pieces of crime-fighting weaponry.

Although law enforcement offices in many states currently have computerized record keeping, for the most part, they are incompatible and, thus, incapable of adequately communicating with each other and with the federal government.

This West Virginia FBI complex and the automated identification system it is intended to house will link all levels of law enforcement with quick, efficient communication and a sharper tool to identify, track, and prosecute criminals.

Progress Update on Rebuilding the Green Bank Telescope

In late 1988, the National Radio Telescope, located at Green Bank, Pocahontas County, collapsed.

The loss of this instrument, which was used to study the universe and explore deep reaches of outer space, dealt a severe blow to the international scientific community.

Recognizing the scientific importance of the National Radio Telescope to our country and the overall significance of this Space Age tool to West Virginia, I added \$75 million to a 1989 appropriation bill to replace the destroyed telescope. This was one of the first actions that I took when I became Chairman of the Senate Appropriations Committee.

Last year, I participated in groundbreaking ceremonies at the National Radio Astronomy Observatory at Green Bank for the construction of the replacement telescope. Work on the new telescope -- which will be the world's largest steerable radio telescope -- is well underway.

The project construction contractor, Radiation Systems, Inc., has completed the foundation for the telescope and has completed the final design for a number of the major components from which the telescope is to be built. Further, the Ob-

servatory staff has completed the design of, and ordered the component parts for, the actual surface of the telescope dish.

In addition, the contractor reports that shipment to Green Bank of vital segments of the telescope reflector are scheduled to begin soon.

The target date for completion and resumption of radio telescope operations at Green Bank is 1995.

To be 330 feet in diameter, the new telescope will have a reflecting surface of 100,000 square feet -- two-and-one-third acres -- which is larger than two football fields. Standing more than 475 feet high, this state-of-the-art instrument will ensure America's leadership in this aspect of space research for decades into the twenty-first century.

In recent years, I have been working to bring new high-technology, computer-oriented industrial and educational initiatives to West Virginia, and to establish new, more competitive enterprises and create jobs. The radio telescope currently under construction at Green Bank is a promising complement to those efforts, and a symbol of a new era in our state's economic development.

West Virginia can be proud to be the home of this vital national resource.

West Virginia's First National Wildlife Refuge

Recently, I participated in dedication ceremonies for West Virginia's first National Wildlife Refuge, a project I initiated in 1989 and for which I have added nearly \$3.4 million over the past three years.

The Ohio River Islands National Wildlife Refuge is planned to encompass the chain of 38 islands stretching from north of Hancock County south to beyond Mason County where the Ohio River turns westward.

Since their formation, these islands, scattered along a river that has been a magnet for industrial activity and urban growth, have remained a relatively undisturbed haven for dozens of species of birds, plants, and wildlife, including many considered to be endangered.

Over 50 species of fish have been found in waters surrounding the islands. The shallow water areas against the islands, especially the back channels, are important nursery areas for game fish such as freshwater drum, channel catfish, bluegill, largemouth bass and spotted bass.

Beaver, cottontail rabbit, mink, muskrat, opossum, raccoon, woodchuck, and whitetail deer are com-

mon inhabitants. Transient bald eagles and peregrine falcons also can be spotted on and around these islands. In addition to lush foliage, trees, and shrubs common to West Virginia and Ohio, several varieties of more unusual plant life appear on the islands.

The preservation of these plants and animals for the enjoyment and education of future generations requires the protection of the unique habitat provided by these islands.

In order that the public may realize the full benefit of the refuge, a delicate balance between human activity and conservation must be maintained. The Fish and Wildlife Service expects to be able to provide opportunities for boating, hiking, fishing, hunting, and other tourism and educational activities for West Virginians and other visitors, while ensuring the protection of the islands and the creatures to which they are home.

The Ohio River Islands National Wildlife Refuge will preserve a part of our natural, biological, environmental, and historical heritages that will enrich the lives of our children and grandchildren.

1992 Robert C. Byrd Scholastic Recognition Awards

Each year since 1969, through the Robert C. Byrd Scholastic Recognition Awards program funded from a private trust that I established, I have provided U.S. Savings Bonds to the valedictorians of the graduating classes of West Virginia's public, parochial, and private high schools, and the Schools for the Deaf and Blind at Romney.

This year, another 284 valedictorians from 205 West Virginia high schools have been named Robert C. Byrd Scholastic Recognition Award winners, bringing to 6,303 the total number of valedictorians so honored since 1969.

The Scholastic Recognition Award -- currently, a \$50 U.S. Savings Bond -- is a way that I have chosen to emphasize to our state's valedictorians the pride that we have in their academic achievements.

In our society, too much emphasis is often placed on, and recognition given to, less noble accomplishments than good and responsible performance in

school.

For example, many rock musicians and others in the entertainment field are paid individually millions of dollars annually. Unfortunately, society receives little in return for this generosity in terms of diseases cured, real problems solved, new inventions developed, or jobs created.

West Virginia's high school valedictorians are among our state's most valuable assets and finest potential human resources. Through the Robert C. Byrd Scholastic Recognition Awards, I hope that these bright young men and women will realize how much we appreciate the records that they carved out in school, that they will be encouraged to go on to higher levels of education and training, and that they will cast their futures in West Virginia.

I congratulate this year's Award winners, and I wish them every success in decades to come.

Is America Entering a New Dark Age?

The historical period in Western Europe following the fall of the Roman Empire -- a time in which barbarians overran and destroyed cities and morality seemed to collapse everywhere -- is popularly called the "Dark Ages."

Across this country today, we witness mounting rates of murders and violence in America's major cities; rampant drug abuse; deterioration of educational achievement and civility in our schools; the rise of pornography, obscenity, and vulgarity on television and radio and in music and the movies; and a decline of real patriotism and civic-mindedness among increasing numbers of people.

In this disturbing scenario, we are verging dangerously close to a cultural twilight in our own civilization -- to a New Dark Age.

From the letters written to me by West Virginians, I know that many in our state share my concern.

Though in most West Virginia communities the majority of people are still living by the old values that made this nation strong, in many other places in this country, we are facing a spiritual problem -- a prob-

lem of lost faith in the eternal values on which this country was built; of family life disrupted by an unwillingness of parents to rear their children for self-disciplined, constructive lives, and of children more interested in being "cool" and "hip" than in growing up to become responsible adults; and of too many people of too little moral courage to care about reversing the decline of neighborhoods and whole communities.

Unfortunately, many people seem to have forgotten God.

The time is long past for concerned, decent Americans to take back our streets, our schools, our culture, and our country from those forces and interests bent only on self-promotion and personal fortune with no regard to public well-being and the future.

I hope that conscientious, patriotic men and women will enter the lists of local government and organizations dedicated to building our country up instead of allowing it to decay from neglect or to be destroyed by selfish, irresponsible people.

We owe this to our children and to the future.

The Nation's Report Card: Reading and Television

More than 30 years ago, Congress mandated a periodic National Assessment of Educational Progress report -- subsequently dubbed "The Nation's Report Card" -- on academic achievement among our nation's school children.

Recently, the reading-achievement portion of the latest National Assessment of Educational Progress, which covers 1990, was published, and showed an intriguing relationship between reading, academic achievement, and television viewing among students.

Interestingly, those 4th-, 8th-, and 12th-grade students who watched less than two hours of television daily earned higher marks in their studies than did those who watched more television daily.

In 1990, 62 percent of 4th graders surveyed admitted that they spent three hours or more daily watching television, down from the 69 percent of this same age group owning up to such viewing times in 1988.

Similarly, 64 percent of 8th graders reported watching three hours or more of television daily compared with 71 percent from this group in 1988. Of the 12th graders, 40 percent watched three hours or more of television daily in 1990, versus 49 percent in 1988.

Alarmingly, however, of the 4th graders surveyed, one-quarter -- 25 percent --

reported watching six or more hours of television daily.

On another front, 63 percent of the 8th graders and 59 percent of the 12th graders said that they read 10 or fewer pages each day for their school work, while one-third of the 8th and 12th graders confessed to reading fewer than five pages per day in preparation for their school work in 1990.

Significantly, this report found that students from homes in which reading material is readily available -- where children see their parents reading, and where parents read to their children and even listen to their children's reading -- performed measurably better at reading than did students from homes in which those activities were not encouraged.

Reading is a key to a good education, and a good education is the key to a more successful economic future for our children in West Virginia and across the country.

Television offers a number of worthwhile programs, but television viewing, per se, is no substitute for reading good literature. Above all, television should never be allowed to interfere with schoolwork, because a good education is a proven key to success in a child's future.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Another Revolution on College Campuses

Not long ago, I participated in commencement ceremonies at the University of Charleston.

Of a *graduating* class of approximately 270 students, nearly 200 degree recipients were "nontraditional" or "returning" students — that is, students more than 25 years old, many employed full- or part-time, and many parents or grandparents.

This trend of older men and women going to college to complete their undergraduate degrees, or to pursue degrees for the first time, is not limited to the University of Charleston.

According to West Virginia University officials, 1,068 of the undergraduate students on the University's Morgantown campuses during the 1991-92 academic year — roughly 7 percent of total undergraduate enrollment — were age 25 or more.

Marshall University officials report that of 1,900 undergraduate degrees awarded this spring, nearly one half went to older or returning students.

These West Virginia statistics reflect national trends.

The U.S. Department of Education reports that in 1986 — the latest year fully measured — of 11 million undergraduates registered in U.S. colleges and universities, only 4.8 million, or 43 percent, were "traditional" students — that is, 24 years of age or younger, dependent on their parents for

support, attending class full-time, unmarried, and holders of high school diplomas or equivalents.

The Department of Education projects that the trend toward nontraditional college populations will increase as the year 2000 approaches.

This "graying" of college students suggests that more people are taking advantage of higher education options available to them to upgrade their skills, seek degrees for career advancement, launch later or mid-life careers, finish educations once left uncompleted, or meet increasing competition from others in the work place.

Whatever their motives, I commend these nontraditional college students. As America's and West Virginia's economies continue to change, we will need the best-educated, most skilled work force that we can achieve. Indeed, new enterprises looking at our state for expansion should be impressed by the numbers of older adults pursuing college degrees.

Men and women contemplating such a course for themselves will find significant and vital advice awaiting them on nearby campuses, including information on available financial assistance for loans and grants.

Learning is a lifelong necessity, and it is never too late to take on the challenge of education.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Is America Becoming an Atheist Nation?

With millions of other concerned Americans, I was disturbed by a recent U.S. Supreme Court ruling that nonsectarian invocations and benedictions at public school graduations are unconstitutional.

Since Colonial days, religion has been a vital element in our society, and an important dimension of school life.

The First Amendment states, "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof...."

That passage was explicitly written into our Bill of Rights at the insistence of James Madison, based on direct appeals to Madison by Baptist ministers in Virginia who had been forced to support the official Anglican state church during the Colonial Era.

But from that understandable safeguard in the Bill of Rights, opponents of all religion seem determined today to drive any expression of religious faith out of American public life.

How ironic that, as re-

ligion makes a public resurgence in the long atheistic former Soviet Union, the Supreme Court has succeeded in erecting another pillar of state atheism in the United States!

How ironic, also, that after declaring obscenity, pornography, flag-burning, and the public funding of anti-religious art to be constitutionally protected, the Supreme Court rules that public prayer in schools is harmful and unconstitutional.

Perhaps the Supreme Court should examine its own biases and determine whether or not it is guilty, by its lopsided rulings, of oppressing the free exercise of religion, even in the least offensive cases to come before it.

I hope that the Supreme Court's twisted logic on state-church questions will cease before the United States of America, once founded on principles of religion and by largely religious immigrants, evolves by court order into the world's most intolerant of-
ficially atheistic state.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Curbing Indecency On Television and Radio

For many years, I have been concerned about the corrupting effect, particularly on children and young people, of profanity, vulgarity, violence, obscenity, and crudeness on much television and radio programming.

Consequently, I recently succeeded in winning adoption by the Senate of an amendment to expand the already existing power of the Federal Communications Commission (FCC) to ban the airing of television and radio programs that meet the definition of indecency until after midnight, unless a station goes off the air at that time, in which case it could not broadcast such programs before 10 p.m.

Television has been called "bubble gum for the mind." Unfortunately, too much television programming today is nothing but packaged corruption for the soul. If our television programs are a mirror of our society, we are in serious trouble.

According to the U.S. Department of Education, a majority of children and teenagers watch between three to six hours of television per day, and the portability of so many radios allows young people to monitor programs nearly everywhere they go.

Unfortunately, too many examples of adult and children's behavior alike and the lyrics of music and themes of many stories presented on these media too often teach children that sophistication is a matter of being foulmouthed, disrespectful of the rights of others, drug-wise, and cynical. Similarly, exposed to thousands of individual portrayals of murder, rape, robbery, and other violent behaviors, children are vulnerable to becoming insensitive to such heinous conduct.

Personally, I would prefer that the FCC ban indecent programming around the clock. However, in a declared defense of First Amendment freedom of speech and expression, the courts have already overturned a law passed by Congress that had directed the Federal Communications Commission to prohibit indecent broadcasts 24 hours a day.

Nevertheless, my amendment is a small step toward getting corrupting, unfit, mental "junk food" off the air when many of our children are likely to be listening or watching. I hope that this move will inspire entertainment producers to use better judgment in the future in deciding the content of their programming.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Highway Construction Progress in West Virginia

Recently, I added another \$185 million to Senate appropriation bills for continued construction of vital Appalachian Regional Commission (ARC) corridor highways in West Virginia.

With this funding, since becoming *Chairman* of the Senate Appropriations Committee in 1989, I have added a total of \$825 million to federal funding bills for construction of ARC corridor routes and other highway projects in West Virginia.

Of the most recent appropriations, \$80 million will go toward the completion of Corridor G, which runs from Charleston southwest to the Kentucky border at Williamson, bringing to \$328.7 million the funding that I have added for Corridor G.

The remaining \$105 million that I added will be used to accelerate the four-laning of ARC Corridor L -- U.S. Route 19 -- a vital connector between Interstates 79 and 77 from near Sutton in Braxton County to Beckley.

In addition, last month I participated in a ceremony near Buckhannon to announce the awarding of a \$10.7 million contract for construction of another 2.43-mile segment of ARC Corridor H, which is planned to run from the Buckhannon area to Elkins and east into Virginia, a route for which I have added federal funds to-

talling \$160.7 million since 1989.

Transportation has always presented special and costly challenges in West Virginia, and a first-rate, modern highway system has been the dream of West Virginians for generations.

The ARC corridor highways represent a fulfillment of that dream. Indeed, coupled with West Virginia's Interstate routes, the ARC corridor highways comprise the framework on which much of our state's future economic development will depend. The establishment of new businesses and industries and creation of new job opportunities in West Virginia require safe, efficient, and accessible highways.

Completing West Virginia's ARC corridor highways is critically important to our state's future and to the future possibilities available to West Virginia's young people -- men and women who hope to live and work in their home state and to provide richer, fuller lives for their own children.

Against the constraints of increasingly limited federal funding, I am committed to doing all that I can to ensure continued progress toward completing West Virginia's ARC corridor highway system.

By U.S. Senator Robert C. Byrd

Encouraging Moral Responsibility in The Entertainment Industry

Recently, I co-authored a Senate resolution urging corporations to be more aware of their responsibilities to the public.

This effort was in response to the release by Time-Warner, Inc., of an inflammatory and obscene "rap" music album.

Indeed, last month, during the annual stockholders' meeting of Time-Warner, one of the world's largest and wealthiest media conglomerates, certain stockholders charged the management with releasing the album before weighing the negative influence that it would have, thus placing profits above moral and social responsibility.

Included on the album was one song that encouraged the killing of police officers and other songs with lyrics so obscene and vicious that they could not be printed in reputable publications or uttered in polite company.

In spite of such tastelessness, this album and thousands like it are being sold across the counter and listened to by millions of American children and teenagers.

Under notable pressure, Time-Warner agreed to remove the copkiller song from the album and to recall copies of the album still in stores.

But much of the potential damage of this album has already been done and cannot be undone.

Equally to be deplored, other elements of the record and entertainment industry are daily bombarding young Americans with pornography, vulgarity, violence, promiscuity, drug propaganda, profanity, and barbarism, without any apparent sense of guilt or responsibility.

In this age of instant and all-pervading communication, cultural influences outside the home have largely supplanted the traditional family and church influences for many children, insidiously infecting their consciences and corrupting their values.

When I think about the lyrics I read from this rap album, and when I reflect on the contents of so many television programs and movies, I fear for the quality of life that we are going to bequeath to our children and grandchildren.

The executives and management of the entertainment media have a responsibility to stop degrading our culture and to critically assess the impact of their products on American society, particularly on children and teenagers.

But the flood of filth and garbage polluting our society will only cease when more outraged Americans call the entertainment industry to task by not buying trashy records and books or watching vulgar shows and movies.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

New Military Construction For West Virginia

With the collapse of the old Soviet Union and the worldwide retreat of communism, the United States should be able to meet its defense and security requirements with a reduced national defense and military budget.

However, we must guard against reducing our defenses so drastically that we render the country vulnerable to unforeseen threats, or tempt tyrants like Iraq's Saddam Hussein to mistake reduced defense spending for weakness or a failure of national will.

Particularly, I believe that, with current cutbacks in our active-duty and reserve military forces, the role of remaining National Guard and Reserve units has become even more crucial to our national security than in the past.

We must ensure that these units have adequate facilities and maintain their defense readiness.

For those reasons, I recently added \$36.3 million to a Senate appropriation bill to fund several Army Reserve and National Guard construction and planning projects across West Virginia.

I also added \$930,000 to the Military Construction Appropriation Bill to build new military housing at West Virginia's only active duty military base, the U.S. Naval Radio Station at Sugar Grove, Pendleton County.

Included in my amendment for funding for Army Reserve Centers are:

- * \$5.4 million for Clarksburg, Harrison County;
- * \$3.5 million for Weirton, Hancock County;
- * \$6.8 million for Wheeling, Ohio County;
- * \$1.6 million for Jane Lew, Lewis County;
- * \$2.8 million for Grantsville, Calhoun County;
- * \$1.9 million for Bluefield, Mercer County; and
- * \$1.6 million for Lewisburg, Greenbrier County.

In addition, I added \$5.3 million to the bill for site development costs associated with planning Army Reserve Centers at Beckley, Elkins, Morgantown, Rainelle, and Kingwood.

Also, I included \$5.5 million to build a hangar facility at Benedum Airport in Harrison County to accommodate the new Army National Guard Fixed Wing Training Detachment locating there, and \$2 million in planning funds for the possible establishment in West Virginia of a proposed National Guard regional maintenance depot and data center.

These military construction projects for which I am working will help our reservists and National Guard personnel to maintain their training edge and contribute to the national security challenges that America might confront in the years ahead.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Update on West Virginia's FBI Fingerprint Identification Facility

Recently, the Senate approved \$103.4 million in funding that I had sought for the Federal Bureau of Investigation's (FBI) Fingerprint Identification Division headquarters in West Virginia.

This funding brings to nearly \$350 million the total amount of money that my Appropriation Committee has appropriated for this project since I put in the first \$185 million in 1990 to automate and relocate the Fingerprint Identification Division from Washington, D.C., to West Virginia.

The latest round of funding includes \$50 million for a prototype system for transmitting fingerprints electronically between the FBI and local law enforcement agencies nationwide, \$50 million to convert from a manual to an electronic fingerprint file, and \$3.4 million to upgrade the FBI's Interstate Identification Index.

This funding is necessary to keep the automation and relocation of the Fingerprint Identification Division to Harrison County on schedule and to avoid needless delays and cost increases.

The automation of the Fingerprint Identification Division is of immense importance to bringing state-of-the-art technology to law enforcement nationally, and keeping this project on track is essential to our country and state in fighting crime throughout the United States.

Last year, a Congressional Office of Technology Assessment study cited the advantages of moving the Fingerprint Identification Division to West Virginia because of the state's stable, high-quality workforce, as well as the lower cost of living, and the shorter commutes that will be possible in North Central West Virginia.

The new Fingerprint Identification facility is projected to be in full operation in 1995 and will bring an estimated 2,500 new jobs to our state.

Most significantly, the Fingerprint Identification Division's new technology will vastly increase the resources available for local law enforcement across America as well as in West Virginia, and will be a revolutionary asset in the battle against crime.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Assisting Tourism and Natural Resource Development In West Virginia

With its splendid scenic beauty and wide range of outdoor activities and resources, West Virginia holds the promise of being a tourist mecca.

As part of my ongoing efforts to spur economic development and create more jobs for West Virginians, I recently added \$48 million to a federal appropriation bill for tourism and natural resources initiatives in our state.

For example, I added \$20 million to initiate construction of the U.S. Fish and Wildlife Service (FWS) National Education and Training Center at Shepherdstown, Jefferson County.

This brings to \$64.5 million the sum that I have added to appropriation bills for this facility, which the FWS will use to provide training for its workers nationwide, as well as for the staffs of other federal agencies that conduct land management activities.

I also added \$8.4 million to the bill for projects at the New River Gorge National River, one of West Virginia's leading tourist attractions. Included among these projects are additional river access for whitewater rafters, planning and design of the Kaymoor mine site, and trails throughout the park for hikers and campers.

For construction and improvements in the

Monongahela National Forest, I added \$1.3 million, including \$325,000 to design a new visitors center at Seneca Rocks to replace the one destroyed by fire earlier this year.

I also included in this bill \$7.5 million for planning, design, and construction at Harpers Ferry National Historical Park, and \$2.3 million for further development of the Wheeling Heritage area.

Besides funding for tourism industry initiatives, I added an extra \$2.3 million to continue my Timber Bridge Initiative in West Virginia and to promote the use of hardwoods, such as those found in abundance in West Virginia, in the replacement of deteriorating rural bridges across the country.

I also added \$4.6 million to continue a model automation project at Weirton Steel, which will use computerization to track the entire steelmaking process, including managing the inventory. This system is expected to save the company \$15 million annually, and to save as much as \$400 million annually industry-wide.

In addition, I added \$1.5 million to continue two ongoing alternative fuel programs at West Virginia University.

The funding that I added to this bill will help to strengthen and diversify West Virginia's economy.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Another Forward Step In Coal Mine Safety

Coal remains America's most abundant fuel source and, based on affordability, supply, source stability, and improved technologies for more efficient and environmentally safe consumption, some coal experts predict rising coal consumption for the foreseeable future.

For example, since 1970, coal-generated electric power has increased from 46 percent to 55 percent of total U.S. electricity production, with Department of Energy projections of further rises in coal-generated electricity production in coming years.

Though such statistics brighten West Virginia's economic future, they similarly underline the need for heightened safety education in the coal industry.

Paralleling firefighting, coal mining continues to be one of the most hazardous occupations in our country.

Throughout my career in public office, mine safety and health have been among my top priorities.

In 1969, I secured the initial funding to establish the National Mine Health and Safety Academy at Beckley in Raleigh County, and in subsequent years, I have added more than \$23.4 million in federal funds to build, equip, and expand the facilities, services, and programs of the Academy.

In early September, I

participated in the dedication of a new mine disaster simulation laboratory at the Academy, an advanced facility for which I had added approximately \$1.5 million to an appropriation bill.

This new disaster simulation laboratory will enable miners and rescue workers to train in realistic conditions simulating actual mine disasters. Mining personnel will be able to practice safety reactions, escapes, and rescue techniques that can save lives in the event of real mine accidents in the field.

In 1968, the year before my initial appropriation establishing the Academy, the United States recorded 311 coal mine deaths.

By 1980 -- just twelve years later -- U.S. coal mine deaths had been cut to 133.

Last year, we suffered 62 coal mine deaths in this country.

So far this year, 27 U.S. coal mine deaths have been reported.

In no small measure, those declining figures are a tribute to the work of the National Mine Health and Safety Academy.

But even one miner's death is one death too many.

I shall not relent in my commitment to work for increased safety and improved health for the miners of America and West Virginia.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Election Day 1992

Throughout West Virginia and across America, Tuesday, November 3, is Election Day 1992.

In a republic like the United States, every election is vitally important. In a representative democracy, voters help to decide issues of great significance for our nation, state, and local communities through the quality of the individual men and women whom we choose at the polls on election days.

Nationally, this year's election will determine whom we want to lead us for the next four years as our president and, indeed, the man who will guide this nation as we prepare to enter the twenty-first century.

In West Virginia, we will be electing a governor and three Congressmen, as well as hundreds of state and local officials.

Voting is one of the most important responsibilities that our citizenship in this country regularly requires of us.

Unfortunately, among the industrial democracies, the United States suffers a shameful voting record.

Among Presidential election years, for example, in 1960, 62.77 percent of age-eligible Americans voted; in 1964, 61.92 per-

cent; in 1972, 55.21 percent; in 1980, 52.56 percent; and in 1988, only 50.11 percent.

Recent West Virginia turnouts of age-eligible voters provide even more fuel for concern.

In 1982, the number of West Virginians going to the polls represented 39.8 percent of the age-eligible voters in our state; in 1984, 51.7 percent; in 1986, 27.6 percent; in 1988, 46.7 percent; and in 1990, 31.9 percent.

How ironic that, as millions in foreign countries struggled and won the right to choose their own leaders and form of government in stated imitation of America's example, fewer and fewer Americans have counted their right to vote as worthy of being exercised.

West Virginians have until October 4 to register to vote in the upcoming general election.

I hope that all West Virginians of voting age will avail themselves of the opportunity to register for this year's election, and that all registered West Virginians of whatever party or persuasion will take advantage of the blood-bought and sacrifice-paid right to vote in the 1992 elections.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Still One of the Safest Places In Which to Live

Recently, a young suburban Washington, D.C., mother was dragged for nearly two miles along a highway to her death when her automobile was "carjacked" by a couple of young hoodlums.

That brutal murder graphically brings home the alarming rise in, and nature of, crime in our country.

The Federal Bureau of Investigation has reported that 1991 was the bloodiest year in U.S. crime history, with nearly 25,000 people murdered nationwide last year. Similarly, more than 100,000 rapes were recorded in 1991.

Conversely, for the nineteenth consecutive year, West Virginia registered one of the lowest crime rates in the nation.

Though West Virginia's crime rate rose slightly last year, our state's crime rate remains less than half the national average.

While being concerned about even a small rise in our state's crime statistics, West Virginians can be justly proud of our state's low-crime tradition.

Indeed, ingrained personal and community values -- long characteristic among West Virginians -- largely explain the law-abiding nature of most of

our state's people.

Those values represent intangible assets that increasing numbers of people and enterprises are weighing in their decisions to live and locate in West Virginia.

My top priority in the Senate has been, and will continue to be, to help to create a favorable economic climate and other circumstances that will attract new industries, businesses, and job opportunities to West Virginia.

As improved transportation and economic momentum produce growth in our state, I hope that native West Virginians will hold firmly to the values and conduct that make West Virginia such an outstanding place in which to live and work.

West Virginia's institutions -- churches, schools, civic clubs, professional groups, fraternal organizations, and, not least, strong family structure -- are the source of the most admirable way of life on earth -- a way of life in which we can take genuine pride, and which is worthy of continued respect and support.

And that may explain why West Virginia deserves a reputation as one of the safest places in America in which to live.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Outrageous!

I am outraged that an Administration agency is using taxpayers' money to encourage U.S. companies to close domestic plants and to move their facilities to foreign countries.

This policy is costing jobs in West Virginia and throughout our country, and to help put a stop to this practice, I recently cosponsored an amendment to that effect in Senate legislation.

Laudably, in recent decades, U.S. foreign policy has aimed to bolster the economies of underdeveloped countries as a means to raise the standards of living of the citizens of those countries, and eradicate those economic conditions that have led to instability and communist subversion.

Unfortunately, the U.S. Agency for International Development (AID) has been actively pushing investment incentives -- tax write-offs, tariff advantages, lending benefits, and plant construction and worker-training deductions -- to induce American companies to close U.S. factories and operations and to set up new facilities overseas.

The amendment that I cosponsored would prohibit federal agencies from spending any funds to lure U.S.

manufacturers into moving their operations to any foreign country if that move might result in the loss of U.S. jobs.

In too many instances, such operations have proved to be sweatshops that pay as little as 70 cents an hour, observe few if any worker-safety standards, and violate the simplest environmental regulations.

Manufacturing out of such facilities and under such working and pay conditions, the induced companies are able to undercut their own domestic operations in world and American markets, thus costing countless jobs in our state and country.

I find absolutely absurd a policy of spending U.S. tax dollars and using tax incentives to siphon off American investments to improve foreign economies while refusing to offer similar advantages to build or improve factories in this country and to preserve or create jobs for West Virginians and other Americans.

We must put a stop to exporting West Virginia and U.S. jobs and, instead, create policies that will promote American products and produce new jobs for our own people.

Building Highways for West Virginia's Future

My top priority is -- and will continue to be -- laying foundations for West Virginia's economic renewal and the creation of job opportunities for the people of our state.

Toward that end, I added \$151 million to two federal appropriations bills this year for vital West Virginia highway projects. Those bills have now been signed into law.

The monies I added include \$80 million to complete Appalachian Regional Commission (ARC) Corridor Highway G from Charleston to Logan and Williamson. Completion of the route is expected in 1995.

In addition, I added a total of \$71 million to the two bills for improvements to ARC Corridor L, including \$47 million for the four-laning of an 11-mile segment of the route between Hico, Fayette County, and Mount Nebo, Nicholas County, and \$24 million to begin upgrading a 25-mile segment of Corridor L between Summersville, Nicholas County, and I-79, near Sutton, Braxton County.

I also added \$400,000 this year to launch a study of the highway and bridge needs of a 10-county area of Central West Virginia -- the area comprising Wirt, Wood, Gilmer, Roane, Clay, Calhoun, Ritchie, Lewis, Braxton, and Jackson counties.

Since becoming Chairman of the Senate Appro-

priations Committee in 1989, I have added millions of dollars to federal appropriation bills to build a safer, more modern highway system in our state.

Included in the funds I have obtained in the past four years are \$160 million to build ARC Corridor H, a route that will run from I-79 near Weston, Lewis County, eastward toward Interstate 81, the Washington metropolitan area, and East Coast markets.

Last year, I secured authorization for the funding of all remaining miles of ARC Corridors in West Virginia and for the four-lane construction of U.S. 52 between Huntington and Bluefield.

Also last year, I added funding to four-lane State Route 9 in the Eastern Panhandle from Martinsburg through Charles Town and to the Virginia line. In addition, I added \$50 million to launch construction of the Coalfields Expressway between Beckley and Grundy, Virginia, and I provided funding for location and design studies to upgrade State Route 2 in the Ohio River Valley. Two years ago, I added \$42.5 million to a federal bill for the four-laning of the Weirton Bypass.

I intend to continue doing all that I can to bring federal dollars to our state for construction of a modern highway system that will serve as a foundation for West Virginia's future economic vitality.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Prescription for Better Health

West Virginians deserve a first-rate health care system.

In a state like ours, with cancer rates well above the national average, the need for readily available, top-notch health care is paramount.

For that reason, I have worked to enhance West Virginia's health-care system and to expand the reach of that system so that people in all areas of our state, both urban and rural, can have access to the best possible hospitals, doctors, and care.

My vision for a better health-care system in West Virginia is bearing fruit.

Recently, researchers at the Mary Babb Randolph Cancer Center located at West Virginia University (WVU) -- West Virginia's first statewide cancer research and treatment facility, which was established in part with \$13.3 million I was able to obtain in federal funding -- were selected to be part of a nationwide study of a promising new drug that may prevent breast cancer.

Researchers from the Charleston Area Medical Center (CAMC) will also join in that study, which will be conducted over the next five years with 16,000 participants nationwide, including West Virginians.

Another statewide program in which the Cancer Center will participate -- a program for which I have obtained approximately \$8 million in federal funding

since fiscal 1990 -- is West Virginia's breast and cervical cancer prevention, education, and screening project. This project offers breast and cervical cancer screening to West Virginians who otherwise might not have access to such tests.

The importance of early cancer detection and screening cannot be overstated. This year in West Virginia, 1,400 new cases of breast cancer will be detected. Add to that another sobering fact: West Virginia has the fourth highest rate of cervical cancer in the country.

My efforts on behalf of better West Virginia health care have not been focused on cancer alone, however. This year, for instance, I gained funding for a number of initiatives, including continuation of an Alzheimer's outreach program; a satellite network that will link specialists at WVU with rural hospitals throughout the state; a new rural health care clinic in Huntington, which will serve West Virginians in a twelve-county area; and a demonstration project at Wheeling Hospital to promote community health services across West Virginia.

The prescription for better health in West Virginia is a quality health-care system that is available to all West Virginians, and developing such a system will continue to be one of my top goals.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Spotlighting West Virginia

West Virginia is gaining a reputation as a haven for "back-office operations."

This type of operation --which includes data processors, computer software and systems developers, researchers, telemarketers, claims processors, customer service representatives, and people who make various types of reservations--means jobs for West Virginians, expansion of the state's economy, and new opportunities for the future.

For some time now, I have promoted West Virginia as the ideal location for companies to establish these telecommunications and computer operations.

A recent study, entitled "West Virginia: The Location for Your Office of the Future," underscores my contention that West Virginia has a great deal to offer the nation's businesses.

The study showcases the many qualities that have made our state a prime location for back-office operations: an able workforce known for high productivity; our low cost of living; and our outstanding quality of life, including a low crime rate, good schools, and the kind of values upon which this country was founded.

What has this meant for West Virginia?

C&P Telephone estimates that in the past two years, almost 5,000 tele-

communications jobs have been attracted to West Virginia.

The growth of this industry in West Virginia has gone hand-in-hand with my efforts to acquaint federal agencies with West Virginia's vast potential.

I have had success in this area.

For instance, the Federal Bureau of Investigation (FBI) is now in the process of locating its Fingerprint Identification Division headquarters in Harrison County, bringing with it an estimated 2,500 jobs. A new center under construction in Fairmont will serve as a test-site for NASA computer software. The Bureau of Public Debt is expanding by 700 employees its operations in Parkersburg. Through my initiative, Martinsburg is the new home of the U.S. Coast Guard's operations systems center.

I am proud that I was able not only to match West Virginia's attributes with the needs of these operations, but also that I was able to obtain the federal funding to help locate these facilities in our state.

I will keep working to spotlight West Virginia and to make certain that our state's many advantages are well known to federal agencies and private industries that are looking for new locations for their operations and for able employees to run them.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

On the Cutting-Edge of Workplace Safety

Maximizing productivity is key to strengthening U.S. industrial standings in the ever-broadening international economic competition.

Recognizing that maximum productivity depends on a strong, healthy workforce -- industry's most precious resource -- I have worked to steer federal investment to programs for protecting the health and safety of U.S. workers.

From the earliest years of my political career, I have worked for improved working conditions for West Virginia's coal miners. My efforts have brought about programs that have led to fewer coal mine accidents and have lessened miners' risk of developing lung diseases.

Recently, I participated in groundbreaking ceremonies for a new facility in West Virginia, being established with nearly \$60 million I have added to federal appropriations bills, that will house research programs aimed at giving American workers safer, healthier workplaces.

This new National Institute for Occupational Safety and Health (NIOSH) facility, to be administered by the Centers for Disease Control in conjunction with

the Appalachian Laboratory on Occupational Safety and Health, will be a world-class laboratory for the study of workplace environments with the goal of reducing the number of work-related injuries and diseases.

In recent years, exposure to cancer-causing agents has become one of the more prevalent concerns of workers. Identifying ways to reduce the risk of exposure that could lead to lung cancer is one of the goals of this laboratory.

The chemists, radiologists, microbiologists, engineers, toxicologists and other specialists who will staff this facility will also study, among other fields, the prevention of diseases and injury in agriculture and construction, methods of respiratory protection, and prevention of chronic occupational diseases.

Location of this laboratory in Morgantown, which is adding 300 jobs to the economy, will make the state the international headquarters for this area of study.

When completed in 1994, this lab will be a one-of-a-kind center for research into improving the health of U.S. workers and, in turn, the health of the U.S. economy.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Laying Twenty-First Century Foundations in West Virginia

My eyes are on West Virginia's future, and my top priority is laying foundations to help West Virginia take advantage of new business, industrial, and job opportunities in the twenty-first century.

We are living in an era of accelerated change.

New world trade patterns, new technologies, revolutionary political changes worldwide, and heated industrial competition from former Third World countries have wrought unimaginable transformations in our economy.

By helping to modernize West Virginia's physical and human infrastructure -- pushing the completion of the Appalachian Regional Commission corridor highway system; promoting high-technology research, development, and education in our state in both the private sector and in West Virginia's colleges and universities; developing new tourism possibilities; and persuading more federal agencies to take advantage of our state's benefits by moving support facilities into West Virginia -- I am seeking to make West Virginia more attractive to new industries and enterprises and create new jobs in the years ahead for West Virginians.

Recently, for example, I participated in the dedication of a new replacement lock in the Gallipolis locks and dam system on the Ohio River at Hogsett, Mason County.

Last year, the Gallipolis locks and dam system handled 42.7 million tons of commodities.

While coal accounted for the largest segment of that traffic, large quantities of petroleum fuels, stone, chemicals, and iron and steel also were counted in the Gallipolis traffic.

Significantly, roughly one quarter of West Virginia's annual coal production is barged through the Gallipolis system.

Made possible through \$277 million in federal funds that I helped to secure, the modernized Gallipolis Locks and Dam will save shippers millions of dollars in annual shipping delays, contributing to the overall competitive strength of the United States in the emerging global economy.

From West Virginia's perspective, those savings can translate into lower costs and increased demands for goods produced, mined, or manufactured in West Virginia, meaning more jobs and greater economic prosperity for our state.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Flood Control: Protection For West Virginia's Investments

Recently, I participated in several West Virginia groundbreaking and dedications for a number of projects that will pay big dividends in years ahead.

These projects include dams, streambank stabilization programs, and other flood-prevention projects targeted to protect homes, businesses, and community treasures from the ravages of streams and rivers swollen by rain and snow.

West Virginians know well the dangers of unremitting rains and rampaging waters. I will never forget the devastation I witnessed in West Virginia following the tragic 1985 floods, nor will I forget previous floods in our state that have caused millions of dollars in damage. Following the 1985 floods, I obtained nearly \$325 million in federal funding to help West Virginians recover and rebuild.

West Virginians deserve protection from such flood damage. For that reason, I believe the money I have added to federal appropriations bills for West Virginia flood-prevention projects will be money well invested.

For instance, \$4.25 million I was able to add to a federal funding bill will underwrite the first phase of a project on Howard Creek in Greenbrier County. I recently participated in groundbreaking ceremonies for this project, which will protect more than 450 residences and businesses in the downstream White Sulphur Springs area.

I also participated in

groundbreaking ceremonies for a new dam on Grant County's Mill Creek upstream from Petersburg--made possible by \$10.25 million that I added to another appropriation bill--that will afford flood protection for downtown Petersburg and provide a 50-acre lake for recreational purposes.

And I was touched by the sense of relief exhibited by residents of Hardy, Hampshire, Mineral, Grant, and Pendleton Counties who will be protected from the capricious nature of the Potomac River's South Branch by a series of streambank stabilization projects financed by \$2.5 million I added to a federal spending measure.

From the largest flood-control projects in the state--for example, Southern West Virginia's Tug Fork project, which is being built with millions of dollars in federal funding that I have added to appropriation bills over the years--to the smallest project, thousands of West Virginians have reaped a greater feeling of safety from the threat of flooding.

With every new flood-protection project launched and completed in West Virginia, I rest easier when the rains begin to fall and the rivers and streams begin to rise. Flood protection is vital to West Virginia and, against the constraints of the national debt and the imperative to reduce deficit spending, flood protection in our state will continue to be a focus of my efforts in the years ahead.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

West Virginia's Window into Space

In a few short years, West Virginia will be home to America's most sophisticated and scientifically advanced radio telescope--the Green Bank Telescope now under construction at the National Radio Astronomy Observatory in Pocahontas County.

When it is completed sometime in 1994, the Green Bank Telescope--which will be the nation's most sensitive listening device--will be trained on deep outer space, giving the nation a new window on the universe.

The presence of this sophisticated equipment in West Virginia puts our state on the cutting-edge of space technology, as scientists from across the country and around the world look to Green Bank for the latest in astronomical research.

The new Green Bank Telescope literally is growing out of the rubble of the old Green Bank Telescope, a smaller and less precise instrument that collapsed in November, 1988. Following the loss of the original telescope, I added \$75 million to a supplemental appropriation bill to construct replacement equipment.

The Green Bank Telescope will be mammoth in

size--more than 475 feet tall and 330 feet in diameter--but will have pinpoint accuracy, thanks to its laser-aiming capabilities.

I am encouraged by the progress that has been made on this project to date. Since groundbreaking ceremonies last year, which I attended, the foundation for the new telescope has been completed and the steel superstructure is underway.

Officials at the National Science Foundation (NSF), the funding agency for operations at Green Bank, estimate that the new telescope will begin monitoring the skies as early as 1995.

Space often has been called one of the last frontiers--a mysterious, mostly unknown universe whose vastness can hardly be fathomed by the human mind.

The Green Bank Telescope in Pocahontas County represents a major investment in our country's scientific future, as well as a vital commitment to mankind's future beyond earth.

The scientific work at Green Bank undoubtedly will unlock some of the secrets of space, giving West Virginia a preeminent role in America's exploration of the universe.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Give Us Back Our Heroes

Recently, I discovered that one of my heroes was missing.

Glancing through a modern American history textbook for an account of Nathan Hale, I found that the textbook made no mention of him (or many others, such as John Paul Jones).

Nathan Hale, as all American school children used to know, when he was about to be hanged by the British as a spy during the American Revolution, declared that he regretted that he had "but one life to give" for his country.

Over several generations, Nathan Hale has inspired millions of American children, teaching them the sacrifices that many patriots have made for America's liberty.

Unfortunately, the authors of the textbook in question apparently decided that Nathan Hale is not worth remembering.

That is not the only revision affecting some modern history textbooks.

In efforts ostensibly to make reading and learning less difficult, many school textbooks have been "dumbed down" -- that is, details are left out, characters and events excluded, complex ideas ignored, and colorful pictures have been substituted for the time-honored substantive narrative, lest students become bored from trying to read the texts.

In the wake of Thanks-

giving 1992, I suggest that we not lose touch with our incomparable heritage -- the Pilgrim fathers at Plymouth, the landing at Jamestown, or George Washington, for example, whose faith gave inspiration to our tradition of annual late November Thanksgiving Days.

The saga of the founding of the United States is one of the most dramatic accounts in human history. Indeed, America's story has inspired millions of people around the world to seek representative democracy and a better life for themselves.

Our children need to know the story of the founding and development of their country -- the story of the price paid by our forefathers and mothers in carving out of an untamed wilderness the greatest single nation on earth.

Similarly, young West Virginians need to know the dramatic story of the foundation of our state, complete with the names, places, and events that shaped modern West Virginia.

As with Nathan Hale, history can and should be inspiring. Our children need to be challenged by America's history.

Above all, our children need to be taught to love our country.

I hope textbook writers will remember this the next time they are tempted to leave some of our heroes out of a history book.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

New Directions for Software Valley

West Virginia's Software Valley movement, which began in 1985, has moved past its infancy and into adolescence -- growth that was clearly evident at the Software Valley XI conference held recently in the Eastern Panhandle.

As one of the founders of Software Valley, I take great pride in the steady maturation of this movement. Little more than an idea just seven years ago, Software Valley has developed into a high-tech network of state educational institutions, entrepreneurs, and government officials who are working together to give the state's economy a new dimension.

Software Valley XI was a showcase of the accomplishments of the movement over the past seven years and a preview of Software Valley's future.

At my invitation, National Aeronautics and Space Administration (NASA) Administrator Daniel Goldin addressed the conference, telling the nearly 300 participants that West Virginia is poised to play an enlarged role in the nation's space exploration efforts.

In fact, during the conference I announced a \$1.65 million NASA grant to test new space-related computer

software, a joint project to be undertaken by West Virginia University and the Independent Verification and Validation (IV&V) Center in Fairmont.

The IV&V Center -- which is being located in West Virginia with \$12 million I was able to add to a federal appropriations bill -- is one of a number of high-tech-related facilities that have arisen in West Virginia since the birth of the Software Valley movement.

The success of Software Valley goes hand in hand with the development of a modern, responsive infrastructure network in West Virginia, which is the reason I have made it a top priority to initiate and fund such projects: transportation systems that make West Virginia accessible; decent public services that ensure a higher standard of living; and improved public facilities and educational institutions, all of which contribute to making West Virginia an ideal place in which to work and live.

As the Software Valley movement matures, and as more and more pieces of the movement take shape, these high-technology enterprises promise to become increasingly beneficial to West Virginia's economy.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Joining the Front Lines in Law Enforcement

West Virginians will benefit from a recent realization on the part of Federal Bureau of Prisons officials that sometimes more is less.

More, in this case, is a decision by that agency to increase the capacity of its planned medium security prison in Beckley by an estimated 50 percent. And less represents the savings in federal tax dollars that the Bureau of Prisons will realize by enlarging the Beckley prison instead of building a new facility elsewhere in order to gain the additional prison space that it desperately needs.

Expanding the scope of the Raleigh County federal prison project is an excellent way for federal prison officials to meet the challenge of maintaining or improving the level of service they offer while working under increasingly tight budgetary constraints.

The Beckley prison, being built on land donated by Raleigh County with funds I added to a 1990 appropriation bill as part of a nationwide crime-fighting and anti-drug package, originally was to be staffed by 250 personnel and to accommodate 1,000 inmates.

Prison officials advised me recently that they have revised their plans and will expand the facility to accommodate a total of 1,536 inmates (1,152 medium security and 384 minimum security), with a staff of 325 personnel.

While construction costs will be higher than originally anticipated--an

exact figure has not been released by the Bureau of Prisons--and operating costs will increase, the price tag on enlarging the new Beckley prison is significantly lower than the cost of building a separate facility at another location.

That kind of planning makes sense, and I am pleased that West Virginia will directly benefit from the Bureau of Prison's cost-saving move.

In addition to the new federal prison, West Virginia, with my help, has recently become home to two additional elements of the nation's crime-fighting system: the Clarksburg FBI Fingerprint Identification Division and the U.S. Coast Guard Operations System Center in the Eastern Panhandle.

The Fingerprint Identification Division--with an estimated 2,500 employees and an annual payroll of \$75 million--will give law enforcement personnel throughout the nation state-of-the-art crime solving technology.

And the Coast Guard's new center in Martinsburg--with its staff of 90 civilian and military personnel--will play a crucial role in efforts against drug smuggling into this country, in addition to supporting other Coast Guard law-enforcement activities worldwide.

As never before, these three facilities place West Virginia in the front lines of the fight against crime, and, in so doing, add an extra dimension to our state's economic picture.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Issues Likely to Confront The 103rd Congress

Facing a new year, I am sharpening my focus on the challenges that will confront Congress in the coming months.

The national economy will be our top priority.

Among the many suggestions made for strengthening the U.S. economy, the most frequently mentioned are those aimed at "growing" our way into greater prosperity -- long-term investments in our national infrastructure that promise to create jobs, increase our productivity, and prepare Americans to take advantage of new technologies and careers.

High on the agenda of most Americans is the hope that some solutions can be found to the health-care crisis.

Reportedly, more than 35 million Americans have no health insurance, and millions more are underinsured.

Currently, health care accounts for approximately 13 percent of the gross national product, while health-care prices are rising three times the rate of general inflation, causing widespread hardships for those needing medical care, as countless West Virginia families know from experience.

Another prominent concern facing Congress will be the need for better resources to stem the growing tide of violent crime nationwide.

Further, rapid-pace changes abroad will also demand new assessments of America's role in world affairs, with decisions required on balancing our domestic needs against our international responsibilities, especially as those responsibilities affect our country's global interests.

All of these pressing concerns will be clamoring for attention against the need to bring under control massive deficits and the national debt.

American voters have sent a message to the president-elect and to members of the new Congress that these should be priorities in 1993, and that the gridlock of recent years will not be tolerated further.

That message has been received, and during this period of transition, I am heartened by signs that the new administration and Congress are coming together to tackle the difficult challenges facing our country, and to move forward into a new era of accomplishment and prosperity.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Blending Conservation and Economic Development

One of the challenges facing West Virginians, who are blessed with a state of breathtaking beauty, is preserving West Virginia's natural assets while working to promote economic development -- an age-old struggle that sometimes results in clashes between those competing goals.

From time to time, however, opportunities come along that seem almost custom-made for West Virginia's diverse interests, and, whenever possible, I have worked to take advantage of those situations.

One such opportunity came to my attention in 1989 when the U.S. Fish and Wildlife Service, the agency charged with protecting and managing the nation's natural resources, decided to establish a consolidated national training facility.

In seeking a home for this center, agency officials looked for a setting that would allow the new state-of-the-art facility to be a working model for their conservation theories and practices. West Virginia seemed made-to-order.

The Fish and Wildlife Service's \$125 million National Training and Education Center, being built with federal monies I have added to appropriation bills, will be located at a Jefferson County site with open fields, mature hardwood forests, wildlife habitats, and a beautiful view of the Potomac River Valley. This 538-acre site fulfills the agency's desire for a campus-like setting where man-made structures can blend

with nature.

As envisioned, the new complex will feature low-lying buildings tucked into groves of trees with connecting trails in an effort to preserve the site's natural beauty.

Plans call for construction of an administrative and instructional area with classrooms, an auditorium, and biomedical, biology and chemistry laboratories. As a center intended to provide training for land management professionals from several federal agencies across the country, the campus will include large, cabin-style student living quarters, with generous windows, balconies, and courtyards that allow maximum contact with the outdoors.

As part of the agency's mission to educate the public, the new center also will provide facilities for conservation instruction to school groups, environmentalists, and civic organizations.

In view of the constrained federal budget and the desire of the agency to improve services in preparation for future environmental challenges, it makes sense that the Fish and Wildlife Service will be consolidating its many scattered training offices, and I have already added \$59.5 million -- in other words, almost half of the \$125 million price-tag -- for this project.

It also is fitting that the training facility for the nation's leading environmental conservation agency has found a home in West Virginia, a state of nationally renowned natural beauty.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

An Ill-Advised Plan

The Army Corps of Engineers recently put forth an ill-advised reorganization plan that would spell bad news for West Virginia and the nation--a plan that I intend to fight.

Under the proposal, 2,600 Army Corps employees nationwide would lose their jobs, and district offices in nine states--including West Virginia's district office in Huntington--would see reductions in staff. In Huntington's case, staff would be reduced from 970 to 615, and some of the functions of that office would be transferred to a proposed technical center to be located in Pittsburgh.

It does not make sense to propose staff reductions in Huntington, a district that is responsible for implementing one of the largest civil works programs in the country, including the Tug Fork flood control project and other flood protection projects across the state; port and riverfront development along the Ohio and Kanawha Rivers; environmental protection and wetlands preservation; and clean-up of the hazardous wastes at the Winfield Lock and Dam site.

The Army Corps plan--which requires Congressional approval--is unwise and unwarranted, and I have wasted no time in letting Army Corps officials know that the proposal does not

have my support.

Within 24 hours of learning of the plan, I met with both Deputy Secretary of the Army Donald Atwood and Chief of Engineers Gen. Arthur E. Williams to express my strong opposition to the proposed reorganization.

I have also relayed my concern to President-elect Clinton, advising him that the proposal could have a crippling effect on the Army Corps at a time when it already has a backlog of construction projects.

At the current time, the military services, defense agencies, and reserve components have 1,178 construction projects that have not been started, for which \$6.2 billion in federal funding has been previously appropriated. Army Corps officials estimate that these projects--two-thirds of which would be administered by the Army Corps--would result in 291,000 new jobs and \$43.4 billion in economic activity.

That could provide a much-needed jolt to our struggling economy, and I fear that the Army Corps reorganization plan could severely hinder the execution of the projects now on the drawing board.

The Army Corps needs to rethink its reorganization plans, and I will continue working to see that it does.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Old Values in a New Age

As the twentieth century wanes, and against the background of the sweeping changes worldwide, we hear much about a "New World Order," "New Age" values, "new morality," and new religious insights, to name but a few such novelties.

Like many West Virginians, experience has taught me to beware of the word "new," especially when used to suggest that the novelty in question is superior to all that has preceded it.

Further, any "new world order" that does not operate in the best interests of our country, or that implies that somehow American patriotism or traditional values are outdated or pernicious will never earn my allegiance.

For example, the idea that society should tolerate music whose lyrics promote the murder of policemen or should tolerate increased public displays of pornography on television or in movies is repugnant and debases, rather than improves, our culture.

Most particularly, however, I am concerned that West Virginians not lose touch with the character-shaping values that have made our state unique and that have made West Virginians such remarkable people.

The traditional values of most West Virginians have been forged in the crucible of real life -- a crucible in which faith in God; love of country and state; self-discipline, sobriety, and frugality in personal life; respect for the law; and diligent, committed labor have proved themselves, generation after generation.

Indeed, what will it profit West Virginia to become more prosperous if spiritual poverty is the price exacted for that prosperity?

As new highways, new businesses and industries, and new technologies create new opportunities for West Virginians in the years ahead, I hope that we will continue to hold precious those lasting "old values" that make West Virginians unique.

January 13, ~~1992~~ 1993

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Heeding the Warning Bells

A majority of West Virginians, according to a recent poll, view Japan as this country's greatest economic threat.

That viewpoint mirrors a study recently released by the U.S. General Accounting Office (GAO) that indicates that the United States, though presently in a strong position to compete effectively in the global marketplace, is losing ground to Japan, our nation's foremost competitor in international high-technology trade.

One of the most significant pieces of data in the GAO report indicates that spending in Japan for high-tech research and development, or R&D, as a percentage of gross national product (GNP), has more than doubled over the past three decades. This increase has left the U.S. lagging behind Japan in nonmilitary R&D expenditures.

In other words, Japan's investment in developing products like computers, facsimile machines, and robotics is outpacing U.S. investment.

The study indicates that Japan's practice of investing in private-sector R&D is producing gains in its international market share in several high-tech consumer product categories. In some fields, Japan already leads the U.S.

Although the U.S. can use technology developed by other countries, the GAO study indicates that reliance on second-hand research -- instead of using technology created in our own country --

would put the U.S. at a sharp disadvantage, especially considering that research in one field often provides important innovations that can be used in other fields, leading to new products and processes. Clearly, the ability to be first in developing innovations provides important lead time that can be vital in a highly competitive marketplace.

For a number of years, I have worked to increase federal investment in our national domestic infrastructure -- both physical and human -- to ensure that the U.S. maintains a leadership position in the global marketplace.

As part of those efforts, I have worked to foster high-technology development in West Virginia. By adding monies to federal appropriation bills, I have secured such projects as the National Technology Transfer Center in Wheeling and the Institute for Flexible Manufacturing Systems in Huntington to help ensure that the U.S. can continue to perform research and development in the high-technology arena and that domestic businesses can have ready access to the latest cutting-edge innovations.

I will continue to promote investment in our nation's infrastructure in the belief that the economic leadership of the U.S. is too vital to our domestic well-being and national security to ignore the warning bells now sounding.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A New Growth Trend In West Virginia?

During the recent holiday season, some people may have missed a bit of good news for West Virginia.

According to the U.S. Census Bureau, during 1992, for the second year in a row, West Virginia's population grew.

After three decades of consistent population losses, a trend that accelerated during the 1980's, current census figures indicate that both 1991 and 1992 saw population growth in West Virginia, raising West Virginia's population from 1.79 million in 1990 to 1.81 million in 1992.

Significantly, two thirds of that increase represented migration into West Virginia, as opposed to increases in births over deaths.

Further, West Virginia University's Regional Research Institute predicts that, through the mid-1990's, 35 of our state's 55 counties will experience population growth, compared with population growth in only 11 counties during the 1980's.

I am encouraged by these real and projected population increases in West Virginia. As a U.S. Senator from West Virginia and as Chairman of the Senate Appropriations Commit-

tee, my primary focus has been to launch and complete programs and infrastructure improvements in West Virginia that will lay foundations for greater progress and prosperity in our state -- to put into place foundations for attracting new businesses and enterprises in West Virginia that will create increased job opportunities for West Virginians and reverse the outmigration that has robbed our state of so many of its bright young people.

I continue to believe that through the completion of a modern highway network, the construction of improved tourism facilities, the promotion of high-technology industries, the expansion of research-oriented programs, the modernization of our state's air and water transportation structures, improved and extended health-care services, and renewed investments in our state's institutions of higher education and in our students, West Virginia will enjoy economic growth and prosperity in the approaching twenty-first century.

That is my vision for West Virginia, and I shall keep working toward a more abundant, more promising future for our state and her people in the years ahead.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Keeping Agriculture Department Offices Open in West Virginia

One of my continuing tasks is to keep reminding government officials and bureaucrats in Washington, D.C., of the unique needs of West Virginia.

Recently, for example, the outgoing Secretary of Agriculture issued a reorganization plan closing or merging 1,200 Department of Agriculture field offices nationwide, including 48 in West Virginia. Among offices proposed to be closed in our state were 26 Agricultural Stabilization and Conservation Service (ASCS) offices, 10 Farmers Home Administration (FmHA) offices, and 12 Soil Conservation Service offices.

Given West Virginia's rugged terrain, its mining and timbering industries, and its large rural, agriculturally related population, the closure of 48 field offices in our state could impact thousands of West Virginians negatively and inconveniently.

Currently, all of West Virginia's 55 counties are served by a Department of Agriculture field office. Under the proposed reorganization plan, 22 of our counties would lose their field offices.

Following issuance of the final reorganization plan, I promptly requested

a meeting in my office with incoming Secretary of Agriculture Mike Espy.

I informed the new Secretary of Agriculture of my concern that the large number of West Virginians dependent on his department's services not be left without assistance. I further reported that my office was receiving calls from West Virginians throughout our state upset about the loss of vital agriculture services in their areas.

I am glad that Secretary Espy has decided to temporarily shelve the office-closing proposal.

The Secretary wisely determined that any reorganization of the department should begin at the top, in Washington, and that the local communities served by field offices should have a voice in determining the nature of the reorganization.

Further, at my request, Secretary Espy agreed to take particular care to consider West Virginia's special needs in any future reorganization plan.

This is important for the multitudes of West Virginians who depend on Department of Agriculture field offices in their counties for necessary services and assistance in managing their lands, their farms, and their businesses.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The End of Another American Tradition

Recently, across the country -- and particularly in rural states like West Virginia -- people were dismayed by the announcement that, after roughly a century, Sears, Roebuck and Company would cease issuing its catalogues.

For generations, West Virginians depended on the Sears catalogue to link them, not only to a wide merchandise distribution network, but also to a national culture of mutual tastes, styles, technologies, and convenience.

Indeed, in the pre-television era, the Sears catalogue, as well as those of other mail-order retailers, served rural residents as a window into the urbane and sophisticated worlds of our big cities.

The story of the 1886 origins of Sears, Roebuck is a legendary element within the mythology of the American Dream -- the story of railroad telegrapher Richard Warren Sears' taking possession of an unclaimed box of watches; marketing the watches through messages sent up and down the railroad telegraph line; bringing in young Alvah Roebuck, a watch repairman, to service the watches when they needed maintenance or

repair; and finally developing a complete line of merchandise to market by mail order.

That was the beginning of the great Sears, Roebuck company.

In the past century, Americans have bought from the Sears catalogue whole houses ready for assembly; a Post-World War II Allstate automobile; their annual union suits; beds and couches; corsets and high-button shoes; tractors and hay wagons; patent medicines and washing machines; toys and bathtubs; their first radios and television sets -- just about anything that could be bought, sold, and shipped, the Sears catalogue carried at one time or another.

Little wonder that people everywhere called the Sears catalogue "the Wish Book."

Next year will see no new Sears catalogue, and with its failure to appear on our doorsteps after a century, another cherished American tradition will have vanished.

Nevertheless, few of us will be able to soon forget the passing of a good and comfortable old friend -- the Sears catalogue.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Revitalizing a Traditional West Virginia Art and Enterprise

I long ago lost patience with the fashion in which some federal agencies seem mindlessly to exploit our country's assets to the advantage of foreign interests.

Recently, I was able, in part, to help alter that process.

Since the Colonial era, quilting has been an American art, particularly in rural states like West Virginia, where quilting skills have been handed down through families for generations.

Last year, the Smithsonian Institution, one of our country's premier cultural agencies, entered into a three-year agreement that led to the production of several thousand quilts -- reproductions of classic American designs -- by Chinese manufacturers.

Under this agreement, the Chinese were to produce between 30,000 to 90,000 quilts for sale in the United States by domestic companies, including retail stores and direct-mail firms such as Land's End.

This contract set off a firestorm of protest among American quilters, and prompted me to contact Smithsonian officials to urge them to identify ways to ensure that American quilts are produced by American quilters.

At my request, representatives from the

Smithsonian and from Land's End met in my Charleston office with representatives from Cabin Creek Quilts Cooperative of Malden, West Virginia, to explore ways for utilizing the talents of West Virginia quilters.

As a result, Cabin Creek Quilts signed a \$40,000 contract to produce 100 reproduction quilts for Land's End. With fifty percent of the quilts sold out ten days after the release of the Land's End catalogue featuring the quilts, Land's End has extended Cabin Creek Quilts' contract for 1993 and has expanded the project to a minimum of five different quilt patterns, plus small-product development.

Further, I have requested the U.S. Department of Commerce to work with Cabin Creek Quilts to explore even more marketing possibilities.

Quilting is a West Virginia art that Cabin Creek Quilts is developing into a "cottage industry."

I commend the quilters of this industrious West Virginia cooperative. West Virginians can be genuinely proud of these neighbors who are helping to recapture American markets for goods created in our state by our own people, and earning a well-deserved remuneration for their efforts.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Another New Health Effort For West Virginia.

Throughout my career, I have been concerned about the health problems of the people of our state. To provide state-of-the-art cancer treatment, I added \$13.3 million to federal funding bills for construction of a cancer treatment facility at the West Virginia University (WVU) Medical Center in Morgantown.

Further, I added funding for a statewide program for screening, education, and early detection of cervical and breast cancer; to provide for Alzheimer's disease research at the WVU and Marshall University medical schools; to establish an injury control center at the WVU trauma center; and to establish a statewide telecommunications system linking the WVU Health Sciences Center and rural hospitals across West Virginia.

Recently, I became associated with a private-sector effort to improve the health of West Virginia teenagers.

Privately funded, "Project Hope" is a worldwide multi-dimensional health-education organization currently providing health-education assistance in thirty-six countries.

Project Hope has been asked to establish "peer-

helper" pilot training programs in two West Virginia counties -- Pendleton and Lincoln -- to equip numbers of teenagers to understand the potential health problems of, and offer wise counsel to, other West Virginia teenagers at health risk.

For example, one study has shown that 23 percent of West Virginia high school seniors drive after drinking, and 50 percent have been passengers in vehicles while drinking. Further, our state ranks seventh nationwide in the number of teenagers giving birth. Studies also suggest that increasing numbers of young West Virginians suffer from depression, suicide, anorexia, obesity, bulimia, stress, malnutrition, and hopelessness, denying them satisfying and full lives.

Tied to the schools, and realizing the powerful influence that teenagers exercise on one another, Project Hope aims to educate a corps of teenagers to recognize problems among their peers, to understand and advocate healthy behaviors, and to refer their peers to community-based professionals when necessary.

These are laudable goals.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

End the Backlog of Black Lung Claims

For more than a decade, I have worked to help black lung sufferers receive the benefits to which they are entitled in the most expeditious manner possible.

My efforts have required constant vigilance in the face of Administrations that demonstrated little compassion for miners forced to wait years for final decisions on their black lung claims.

That was certainly not the intention of the Black Lung program, which was established in 1969 by legislation that I co-sponsored. By 1984, the backlog of claims had grown to the point that it was not unusual, if a claim was appealed through the Benefits Review Board, for a claimant to wait up to seven years for a final decision.

In past years, I met with Labor Secretary Raymond Donovan and Labor Secretary William Brock to hammer out plans to eliminate the black lung claim backlog. Additionally, over the years, I have added federal funding to appropriations bills to expand the Benefits Review Board and to increase the budget of the Office of Administrative Law Judges, both key links in the processing of black lung claims. Also, since 1981 I have blocked Administration efforts to close West Virginia's six black lung field offices--in Beckley, Bluefield, Elkins, Logan, Madison, and Morgantown--which over the years have

provided vital services to black lung claimants.

As a result of these efforts, backlogs have been reduced, but claimants still face waits of several years before receiving a final decision.

My long-held suspicion that the black lung claims bottleneck is at the Benefits Review Board was confirmed recently by an Inspector General report that found that the current Board is ineffective and suffers from low morale, and that individual board members are not performing the duties for which they were hired.

The change of Administration offers another opportunity to break the logjam of black lung claims and to help the people for whom this program was created. Toward that end, I recently urged Labor Secretary Robert Reich to replace the members of the Black Lung Benefits Review Board with qualified individuals who have experience in the black lung claims judicial process.

Every day that the current Board members continue to sit is another day that black lung claimants are shortchanged, and this situation ought not be allowed to continue.

Black lung victims deserve quick action and effective relief, and I believe the appointment of a responsive, dedicated Benefits Review Board is a step in that direction.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Meeting West Virginia's Future High-Technology Career Demands

According to a recent survey, young West Virginians wanting future career success would do well to consider the growing possibilities in high-technology-related enterprises developing in our state.

That is the opinion of 74 West Virginia company executives recently polled.

However, these executives expressed concern that our state's rising workforce might be deficient in high-technology career skills, and urged greater student preparation in computers, mathematics, engineering, chemistry, and other disciplines required by high-tech businesses and industries.

With the goal of creating new job opportunities, I have initiated several efforts to ensure West Virginia's participation in the worldwide, burgeoning high-technology revolution.

For example, among the many high-technology facilities and programs that I have helped bring to West Virginia in recent years are: the FBI's Fingerprint Identification Division headquarters in Harrison County; the national Centers for Disease Control's occupational safety and health laboratory at Morgantown; the Coast Guard Computer Operations Systems Center at Martinsburg; the NASA National Technology Transfer Center at Wheeling Jesuit College; the NASA In-

dependent Verification and Validation Center in Fairmont; and the rebuilt National Radio Telescope at Green Bank in Pocahontas County.

In addition, to help ensure that West Virginia workers are taught the skills needed to fill these high-tech jobs, several of my initiatives include job-training elements.

For example, the Institute for Flexible Manufacturing Systems in Huntington includes a "teaching factory" to train local business representatives and their employees in the use of automated equipment, and the Hardwoods Technology Center being established in Princeton will provide training to West Virginia woodworkers on computerized manufacturing machines.

My aim is to forge new job opportunities for young West Virginians in high-technology-related businesses. But the success of that goal relies on the presence in West Virginia of a skilled and capable workforce.

I hope that increased numbers of young West Virginians will discern the high-technology doorways that are opening for them on the horizon, and prepare themselves to take advantage of 21st century career possibilities that can be theirs in West Virginia in the future.

March 10, 1993

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Glimpsing the Future

A recent story in *The New York Times* offered a glimpse at the future -- an examination of a West Virginia resource center that is helping to revolutionize U.S. manufacturing.

Since initiating this project in 1989, I have added \$13.8 million to federal appropriation bills for implementation and operation of this center to train small-business enterprises and manufacturers in the "hands-on" use of state-of-the-art advanced technology.

Operated in conjunction with Marshall University, this facility was subsequently named the Robert C. Byrd Institute for Advanced Flexible Manufacturing Systems. This facility is developing computer-designed and computer-aided manufacturing processes to help private industries in West Virginia and neighboring states become more internationally competitive through the use of robotic manufacturing.

Throughout West Virginia and in the surrounding region, for decades skilled employees have been producing excellent goods and finished products, using long-dependable machine tools and trustworthy equipment.

However, around the world, constantly evolving high technologies are rendering older technologies obsolete, cutting into tradi-

tional markets with lower-priced products and inflicting serious injury on industries here in our state that are wedded to outdated methods and processes.

Virtually a model "factory of the future," the Institute at Marshall University places West Virginia in the forefront of flexible computer-integrated manufacturing and related initiatives, and its success serves as an inspiration for the new Administration's announced intention of establishing similar centers in other areas.

In this facility, West Virginia business and industrial leaders are able to see and operate the latest computer-guided machinery, and to learn means of creating new job opportunities through the adaptation of flexible-manufacturing techniques.

I have a vision for West Virginia's future -- a vision in which West Virginians play a broader role in worldwide economic competition; have greater opportunities to pursue lasting, better-paying jobs; and enjoy a rising standard of living.

Not only do I have that vision, which I know is shared by many West Virginians, but by initiating projects such as the Institute for Flexible Manufacturing Systems, I am laying a foundation that will enable us to build the West Virginia that we imagine.

March 17, 1993

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

West Virginia's Outlet to the Sea

Landlocked West Virginia might seem an unlikely site for a major naval communications facility, but in 1989, in response to my urgings, the U.S. Coast Guard designated our Eastern Panhandle as the site for its Operations Systems Center, a base with worldwide responsibilities.

Subsequently, I added \$4.7 million in federal funds to appropriations bills to construct a new, state-of-the-art facility in Martinsburg for Coast Guard use, which I helped to dedicate in the fall of 1991.

Currently employing 100 military and civilian personnel and funneling approximately \$7 million annually into our state's economy, the Coast Guard Center operates 24 hours a day, 365 days a year.

Among its multiple duties, the Center supports the Coast Guard and other organizations in around-the-world oceanic search-and-rescue missions, as well as assisting U.S. and international law-enforcement agencies to combat international drug trafficking and other criminal activities.

Perhaps the most crucial function of this Martinsburg facility is the Automated Mutual Assistance Vessel Rescue System (AMVER), which tracks thousands of merchant vessels on all of the world's

oceans, and is ready to relay information to rescue teams from any country, friend or foe. Currently, AMVER serves roughly 8,000 merchant vessels in its computerized database, representing 40 percent of world shipping, including some of the most popular cruise liners.

Whenever one of those ships experiences trouble, it radios one of 130 coastal radio stations around the world, which, in turn, relays that information directly to Martinsburg. The Martinsburg Center's computers then pinpoint any tabulated vessels within the vicinity of the stricken ship. In about 20 seconds, the Martinsburg Center dispatches to the nearest ships the distressed vessel's name, call numbers, distance and estimated time of each ship from the stricken carrier, and that carrier's medical capabilities.

Further, the Center can predict ocean currents, help locate drug-transporting craft, and furnish information helpful in tracking smugglers.

The Coast Guard's Operations Systems Center is further evidence of ways in which high technology and state-of-the-art computer science are fostering a career revolution in West Virginia and fulfilling my vision for our state's future.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

New Poll Evinces Growing Concern About Television Violence

A major television network executive has announced plans to cut back on violence in his fall lineup because television violence may be hurting society.

I commend that decision.

For some time, I have decried the quality of much commercial programming.

I have no authority over the content of commercial television programming, and criticism of culture by an elected official often elicits outcries against censorship.

But my criticism of television violence is finding widespread echoes among the public.

A recent nationwide Harris Poll indicates that roughly 80 percent of the American people believe that gratuitous television violence is harmful to our country, and those polled are increasingly disturbed by such programming.

Understandably, people aged 50 and more were the most concerned about televised violence and the most infrequent viewers of violence-prone programs, while viewers under age 30 were more tolerant of such violence.

Interestingly, one group least concerned about television violence was teenagers, who were also among the heaviest viewers of

"real-life" crime shows that feature violent real-life film footage.

Unfortunately, according to a recent Centers for Disease Control and Prevention (CDC) report, in 1990, a total of 4,173 teenagers were victims of firearms-related violence -- random murders, gang clashes, etc. -- the highest firearm death rate among 15- to 19-year-olds ever recorded in America.

Reared on television as an electronic babysitter from the cradle, many of those who perpetrated these murders grew up unable to differentiate between the make-believe on the television screen and real life, leading to the acting-out of engrained disvalues learned alike from crime shows and fictitious "shoot-em-ups."

I have no desire to be a television critic, per se. My concern is for the future quality of life in West Virginia and across our country.

I hope that decreased violence on one television network is the harbinger of a trend toward renewed responsibility in the media.

I hope that others in the entertainment field will follow suit.

At stake is the spiritual and moral well-being of our state and nation.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Launching Young West Virginians Into the Space Age

Whenever reflecting upon my Southern West Virginia childhood, I think fondly, and with gratitude, of teachers who taught me to love learning for the sake of learning itself. Still today, I will pore over a book simply for the pleasure of learning.

Inspiring young people to love learning is a key goal of the Classroom of the Future at Wheeling Jesuit College, for which I recently announced the award of a construction contract.

A project conceptualized by the National Aeronautics and Space Administration (NASA), begun with initial funding appropriated by Congressman Alan Mollohan, and being built with federal funding I have added to appropriation bills, this facility is designed to stir the imagination of youth.

Envision, if you will, an opportunity to experience the look and feeling of a trip into outer space. The Classroom will include a spacecraft simulator and a mission control simulator to enable students to execute mock space missions.

Multimedia computer classrooms in the building are planned to be centers of activity in which young people and teachers can work and learn on computer terminals. NASA is betting on the enthusiasm that young people exhibit for such high-tech equipment, a phenomenon nearly everyone with a child or grandchild and a home computer, a television computer game, or a local video

arcade has witnessed.

Located in Wheeling, the Classroom is designed to attract students from throughout West Virginia and the tri-state Northern Panhandle region, and to reach out to young people and their teachers across America.

The facility will also house a center in which software and multimedia resources will be developed for use by teachers and schools throughout the country. A satellite learning facility will be operated to share with students and teachers nationwide -- through satellite transmission and television reception -- the resources offered at the Classroom of the Future.

The expectation is that by exposing students to the discoveries, inventions, and possibilities presented through the use and mastery of math and science, they will be inspired to study those fields, which are so important to the future economic development of our country.

Ensuring the education of our young people, who will inherit the leadership of this nation, is a necessity. As a U.S. Senator and Chairman of the Senate Appropriations Committee, I am working to develop educational opportunities, like the NASA Classroom of the Future at Wheeling Jesuit College, that will enable our children to be ably prepared to take the helm of West Virginia and America in the decades ahead.

Defense-Conversion Workshop At Oglebay Park

Assisting West Virginia businesses and enterprises to pursue federal-government contracts has long been a priority effort on my agenda to strengthen our state's economy and to expand job opportunities for West Virginians.

The virtual collapse of the old Soviet Union has made possible a broad recasting of our country's defense requirements, at the same time foreclosing many of the federal-contracting opportunities available to the private sector.

To assist West Virginia business people to take advantage of the new possibilities presented by the need to convert from defense-related contracting to expanded domestic requirements, I am cooperating in the convening of a special workshop at Wheeling's Oglebay Park on May 5.

This workshop is being sponsored by the nonprofit Software Valley Corporation, which I helped to launch in an effort to promote high-technology business and job opportunities throughout our state.

Through the Defense-Conversion Reinvestment Act of Fiscal Year 1992, the Department of Defense has been provided nearly \$600 million to be invested in the development, deployment,

and stimulation of nondefense technologies -- in effect, an interagency federal effort to facilitate the conversion of previously defense-oriented enterprises to new domestic endeavors through eight competitive-bidding programs.

The purpose of this one-day Oglebay Park workshop will be to provide West Virginia enterprises with a detailed presentation of opportunities opening to them in this conversion effort; to allow West Virginia companies to learn about conversion proposals currently being developed in our state; and to permit attendees to coordinate, and not duplicate, their efforts in competing for the available funds. Federal agency officials will be present to supply information and to explain the full scope of the defense-conversion program.

I commend the Software Valley Corporation for conducting this advanced-technology workshop for West Virginia entrepreneurs and business people, and I encourage anyone interested in this workshop to contact Software Valley's Morgantown offices at telephone number (304) 594-9844 prior to April 30 to make workshop reservations, or for further information.

April 14, 1993

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Gracious Honor from West Virginia University

The people of West Virginia--from her youngest citizens to her oldest--merit the best possible health care, and that conviction has been uppermost in my mind as I have worked over the years to improve our state's health-care infrastructure.

Because health care is so important to me, I am deeply touched by a recent decision by West Virginia University and the University of West Virginia System Board of Trustees to honor my commitment to health care by naming the complex of health-related facilities in Morgantown "The Robert C. Byrd Health Sciences Center."

Included in that complex is an important facility for which I have added \$13.3 million in federal funding: The Mary Babb Randolph Cancer Center, which is West Virginia's first state-of-the-art facility dedicated to battling cancer. Also included is the Jon Michael Moore Trauma Center, a facility specializing in the care of accident victims. These facilities were named by WVU, respectively, in memory of Senator Jennings Randolph's late wife and for my late grandson.

Though sources of distinctiveness and pride, the remoteness and ruggedness of much of West Virginia have too long also meant inaccessible health care for many, as well as long journeys to distant, out-of-state medical facilities whenever acute illness demanded intensive, specialized treatments.

Consequently, two critical elements of any health-care infrastructure in West Virginia -- in addition

to first-rate treatment facilities--are outreach and training programs, both of which serve to expand health care far beyond the walls of such facilities as the Health Sciences Center.

The Trauma Center, for instance, not only offers training for local officials on quickly responding to trauma victims, but also enables distant West Virginia hospitals to better treat trauma victims by connecting them with trauma specialists at the Center via a two-way telecommunications network.

Other outreach programs for which I have been able to add federal funding and which benefit West Virginians in all areas of our state are the Breast and Cervical Cancer screening project, and the Alzheimer's screening project, operated jointly by WVU and Marshall University.

In addition, Marshall University is also administering the Southern West Virginia Center for Rural Health, an undertaking for which I added \$4.5 million in federal funding last year and which will augment health-care services to West Virginians in Cabell, Wayne, Lincoln, Mingo, Mason, Logan, Roane, Boone, Putnam, Jackson, McDowell, and Wyoming Counties.

A modern program of health care is important to West Virginia's future growth and development. Grateful for WVU's recognition of my contributions to our state's health-care infrastructure, I shall continue my efforts to give substance to my vision of better health care for all West Virginians.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

FBI Fingerprint Identification Center Funding Update

In the face of rising crime rates, I am gratified that President Clinton has included in the Fiscal Year 1994 budget \$75.4 million that I have sought to continue the automation and revitalization of the Federal Bureau of Investigation's (FBI) fingerprint identification system, which is being relocated to its new West Virginia headquarters.

Unfortunately, for roughly the past dozen years, federal investment in our criminal-justice system -- and in other vital elements of our national infrastructure -- was too often ignored or neglected.

Rising rates of murder, robbery, drug trafficking, assaults, and other felonies are one of the prices that we are now paying for that neglect.

I welcome the Administration's support of my initiative to equip the FBI with a high-technology advantage in the fight against crime.

When the new Fingerprint Identification Division facility is completed near Clarksburg, it will provide our country's law enforcement agencies -- local, state, and federal -- with a rapid, ultra-modern, state-of-the-art, computerized system for checking fingerprints, confirming criminal identities, and tracking lawbreakers.

Since 1989, as Chairman of the Senate Appropriations Committee, I have succeeded in adding a total of nearly \$350 million in federal funds to appropriations bills for the relocation of the FBI Fingerprint Identification system to West Virginia.

Also in recent weeks, to "keep on the fast track" the establishment of this vital facility in Harrison County, I urged Office of Management and Budget Director Leon Panetta to include in President Clinton's Supplemental budget request another \$16.7 million to support the staffing of temporary satellite offices in Clarksburg and Fairmont with a total of an estimated 500 employees from FBI headquarters. This has now been done.

Congress is expected to act on this measure in the near future.

The FBI Fingerprint Identification Division's new Harrison County facility will place West Virginia in the forefront of America's war on crime.

I look forward to 1995 when this new West Virginia facility is projected to be in operation, and when the employees there will be working at full capacity to make the homes, shops, and streets of our country safer for law-abiding citizens.

April 28, 1993

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Channel for Better Health Care

Rural West Virginians have a new ally in the quest for better health care.

That ally is Mountaineer Doctor Television--MDTV for short--a two-way, televised medical service linking specialists at West Virginia University's (WVU) Health Sciences Center with several rural medical facilities in West Virginia.

As Chairman of the Senate Appropriations Committee, I succeeded in adding \$800,000 to a 1992 appropriations bill to establish this pilot program in West Virginia, and I look forward to the day when MDTV is expanded into other areas of our state.

The potential of this system for a largely rural state like West Virginia, with its hilly terrain and its many remote communities, is self-evident.

Consider a sequence of events in which an accident victim, many miles away from trauma specialists at WVU, is aided by the nearly instantaneous transmission of X-rays or by a long-distance examination, all compliments of MDTV.

For a trauma victim, the first 60 minutes after an ac-

cident is make-or-break time, a small window during which immediate treatment can mean the difference between life and death. Doctors in rural hospitals gain an extra helping hand in more effectively treating accident victims by allowing WVU trauma specialists to actually view the patient's injuries via MDTV's network of television cameras and monitors linked by fiber optic cables.

Trauma victims are not the only patients who can benefit from MDTV. With the flick of a switch, a physician miles from Morgantown can put a patient--perhaps one who is exhibiting baffling or unusual symptoms--on television and consult with doctors at the Health Sciences Center on the best treatment, or to determine whether that patient should be transferred to another facility for care.

MDTV is an exciting new health-care tool--a wonderful blend of medicine and high technology that promises to play an important role in enhancing the quality of life for countless West Virginians of rising generations.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Drawing the Line on Terrorism

A recent poll indicates that the vast majority of West Virginians are concerned about terrorist activities in this nation.

Sharing that concern, I am cosponsoring legislation aimed at correcting a flaw in the political asylum portion of federal immigration laws that is threatening the safety and security of Americans.

The U.S. has thus far largely avoided the waves of horrible terrorist acts that have plagued many other nations, and, if we wish to continue that pattern, we must take steps to ensure that our borders are more secure.

The bill that I am cosponsoring is intended to tighten the political asylum loophole through which, for example, Mir Aimal Kansi slipped. Kansi is the alleged gunman in the February shooting that took place near the Central Intelligence Agency (CIA) headquarters, which claimed the lives of two CIA employees.

Mir Aimal Kansi, who is now the subject of an international manhunt, had

applied for asylum almost a year prior to the shooting rampage and had not yet had his hearing when this tragedy occurred.

Upon making his claim of asylum, he received a work authorization document, which allowed him to obtain a Social Security card and then a Virginia driver's license. With that he was then able to purchase the AK-47 assault rifle with which he is believed to have carried out this heinous crime.

I am proud of the role that early immigrants have played in the shaping of this great nation. But, unfortunately, we have made it all too easy for unscrupulous individuals to take advantage of our goodwill by using asylum procedures to circumvent the regular immigration process.

By working for passage of this bill, I am attempting to help make our state and our nation more safe and secure by making it easier for Federal immigration officials to curb abuse of immigration laws.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Reaching Out to Alzheimer's Victims

With millions of Americans, I have long been concerned about Alzheimer's disease and the devastating effects that this tragic condition can wreak on its victims.

Named for the German medical researcher who originally diagnosed the syndrome, Alzheimer's disease is characterized by a progressive deterioration of brain cells that eventually terminates in dementia and, finally, death. Previously considered an affliction only of the elderly, Alzheimer's has been found to strike as early as age 40. An estimated 4 million Americans are currently suffering from Alzheimer's, 33,000 of those being West Virginians.

Realizing the impact of Alzheimer's disease in West Virginia, as well as our state's dearth of resources to cope with this growing scourge, I succeeded in 1990 in adding more than \$9.9 million in federal funds to an appropriations bill to develop the Center for Nuclear Research in Alzheimer's Disease and Related Disorders at West Virginia University (WVU).

In addition, I added \$1 million to a federal funding bill to initiate an outreach and screening program being conducted by the hospitals and medical schools at WVU in Morgantown and

Marshall University in Huntington. The purpose of this program is to pursue research on Alzheimer's disease in rural areas of our state in an effort to fill gaps in our knowledge about this intractable disease.

Subsequently, I also added funds to help launch a pilot adult day-care program in Parkersburg to aid Alzheimer's victims and their caregivers. Further, the federal Department of Health and Human Services is conducting a trial, Medicare-sponsored, community-based program of expanded medical care and services for Alzheimer's patients, which is centered in Wood and Ohio Counties, but extends its services into Hancock, Brooke, Marshall, Wetzel, Tyler, Pleasants, Ritchie, Wirt, and Jackson Counties, as well.

Alzheimer's disease is a cruel and debilitating affliction that can cripple its victims, disrupt the lives of families, and physically and financially exhaust the patient's caregivers.

Through the efforts that I have summarized, I hope to have put into place programs that will help us to struggle more successfully against Alzheimer's disease in West Virginia, and to ensure a better quality of life, both for Alzheimer's patients in our state and their families.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Seeing the Forest for the Trees

The old expression "You can't see the forest for the trees" has met its polar opposite in West Virginia.

Not only do we see the forest in West Virginia, but we also recognize the role that trees can play in our state's economic future and are moving forward on initiatives to make better use of our abundant timber resources.

Several years ago, for instance, I authored and won Senate approval for my timber bridge initiative, a program under which the nation's aging and deteriorating bridges are being replaced with strong, economical wooden bridges.

Since 1987, when I earmarked \$3.3 million to establish the Timber Bridge Resource Center at the U.S. Forestry Sciences Laboratory in Morgantown, 57 decaying West Virginia bridges have been replaced under the timber bridge program.

Plans are now underway to broaden my original program by seeking uses for timber in other transportation-related areas, including guard rails, sign posts, sound barriers, and retaining walls.

Another key component in my effort to promote West Virginia's timber industry--and the nation's--is the Hardwood Technology Center near Princeton, Mercer County, launched by \$9 million in federal funding that I added to appropria-

tions bills and dedicated to researching and developing new techniques, markets, and training programs for the nation's wood products industry.

For too long, West Virginia's fine hardwoods have been exported to other states, where their workers transformed our timber into furniture and other wood products. Through initiatives like the Hardwood Technology Center, we are aiming to keep those jobs in West Virginia by training our workers in advanced hardwood-products manufacturing techniques.

Some of those techniques will be on display at Appalachian Hardwood Expo '93, a two-day event June 18 and 19 in Princeton, to advance the wood products industry and the efforts that are underway in West Virginia.

My support for West Virginia's timber industry is longstanding, dating back to my successful efforts to gain federal funding for the Forestry Sciences Laboratories in Morgantown, Princeton, and Parsons.

These laboratories--and my other timber initiatives--have given West Virginia a role in providing future generations with healthier forests, an enhanced timber industry, and increased job opportunities in the wood manufacturing, conservation, and natural resource industries.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Dawning of a New Millennium

The year 2001 A.D. -- the beginning of a new century and, indeed, of a new millennium -- is less than eight years away.

At this salient point in our history and, particularly, in the history of West Virginia, I have been reflecting on the future and on the possibilities that might be put in place to ensure a better future for our state's children and young men and women -- a future that holds the promise of new opportunities for all West Virginians.

My hope for West Virginia is that our state will enter the 21st century with sufficient jobs and opportunities for West Virginia's young people to earn a living wage so that they will not have to leave West Virginia. My vision is that, in the next century, because we in our generation have invested and built for the future, our state will be a better, more promising place in which our children and grandchildren can live and provide for their own offspring.

One of the tragedies of the 1980's was that, particularly on the national level, from a mountain of public debt, we invested a mere

molehill in our children's future -- in the public infrastructure on which much of our country's productivity, competitive edge, and prosperity will depend in the decades ahead.

Not since the tenth century -- 901 to 1000 A.D. -- has our world experienced the dawning of a new millennium. Psychologically and spiritually, the remaining years of the 1990's can be for us an exciting time -- a time to dream, to plan, to work, and to lay the groundwork for an abundant, prosperous, and opportunity-filled new era in West Virginia's history.

As Chairman of the Senate Appropriations Committee, I have had the unique opportunity to provide federal funding for infrastructure improvements nationwide and to match West Virginia potentialities and advantages with national requirements -- to the benefit of both America and West Virginia.

Against the constraints of the national debt and the imperative to reduce federal deficits, I shall continue doing everything feasible to promote West Virginia's economic growth and future statewide prosperity.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Celebrating Tourism in West Virginia

With its river rapids, beautiful mountains, and splendid recreational parks, West Virginia has established itself as a prime location for the development of a prosperous tourism industry.

I have long been a proponent of the tourism industry in West Virginia, adding funding to federal bills to encourage development of the Wheeling Heritage area, the New River Gorge National River, Monongahela National Forest, the riverfront park in Charleston, the Ohio River Islands National Wildlife Refuge, the Appalachian Regional Commission Tourism and Development Center at Concord College in Athens, and Harpers Ferry National Historical Park.

In the last three years, I added \$9.9 million to federal appropriations bills for planning, design, and construction at Harpers Ferry, funding that will be used to help prepare the Park for its 50th anniversary celebration next June. With this, Park authorities hope to continue restoration of the buildings within the lower town, the area of the Park first seen by visitors.

Founded on June 30, 1944, Harpers Ferry National Historical Park began as a small project, accommodating fewer than 100,000 visitors in its first year of operation.

Subsequently, Harpers Ferry National Historical Park was officially provided its land-base from the State of West Virginia in 1955, a move that permitted the

Park to develop into the prosperous area seen today.

Following this provision, the Park has grown by strides and dashes. Last year, the Park accommodated nearly 500,000 visitors, many of whom were visiting West Virginia for the first time.

These new visitors, along with the many repeat visitors, are learning something that West Virginians have always known--not only is West Virginia a state blessed by rivers, mountains, and wildlife, but it is also a state rich in history and heritage.

Harpers Ferry National Historical Park is a perfect blend of these two elements. Located at the confluence of the Potomac and Shenandoah Rivers, the mountainous town boasts of the important role it played during the Civil War, a role that has contributed many tales regarding the area's history, most notably accounts of John Brown's raid in 1859.

As West Virginia's tourism-industry potential expands, each of its many attractions grows more important. Harpers Ferry National Historical Park has accepted the challenge, and, with my assistance, is preparing for its 50th anniversary gala celebration.

The tourism industry in West Virginia has the potential of providing both job opportunities and investment throughout the state, and I shall continue working to help realize that potential.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

West Virginia's 130th Birthday

On June 20th--West Virginia Day-- our state celebrated its 130th birthday as the thirty-fifth state to join the Union.

This event did not occur easily. Through the strength and fortitude of many loyal northwestern Virginians, the area that we now call West Virginia began its break from the Confederacy in 1861.

Under the leadership of Governor Francis Pierpont and Waitman T. Willey of Morgantown and John Carlile of Clarksburg, the two U.S. Senators officially representing Virginia's nonsecessionist counties, West Virginia began its long road to establishment.

As a result of the undying efforts of Sen. Willey, West Virginia's petition for statehood was passed by the U.S. Senate by a vote of 23-17.

Ultimately, through Willey's relentless pursuit, and the urgings of Lincoln's cabinet, West Virginia was officially admitted to the Union on June 20, 1863.

The drive and dedication that Willey displayed during West Virginia's birth are characteristics that have never been forgotten by West Virginians, even today.

Throughout the last 130 years, West Virginians have drawn upon this self-sufficiency and desire to succeed, and have created new opportunities for their future.

In this regard, West Virginia has pledged itself to the development of new infrastructure, a move that not only benefits the state economy, but also contrib-

utes to the improvement of the nation. As chairman of the Senate Appropriations Committee, I have had the opportunity to help shepherd much of this development.

Among my projects that are marking a true "coming of age" for our state are the National Technology Transfer Center at Wheeling Jesuit College, the FBI Fingerprint Identification Division facility in Clarksburg, and the Robert C. Byrd Institute for Flexible Manufacturing Systems in Huntington.

These three projects will use the newest and most efficient research and technology to further enable West Virginia to compete in the global market and to provide the nation and the world with essential services.

These facilities, in addition to the U.S. Fish and Wildlife National Education and Training Center in Shepherdstown, the National Institute for Occupational Safety and Health Laboratory in Morgantown, the Robert C. Byrd Center for Hardwoods Training and Manufacturing near Princeton, and countless others on the horizon, will provide for the West Virginians of tomorrow.

West Virginians should take pride that they have laid the necessary foundations to provide for both their present and their future, and that they have had the strength and fortitude to advance our state for generations to come.

Happy Birthday, West Virginia!

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Congratulations, West Virginia Scholars!

An article published recently in West Virginia newspapers gave me encouragement about our state's future: standardized test scores of West Virginia's students are on the rise.

Specifically, basic skills tests administered to the state's 3rd- and 6th-grade students to measure math, language, and reading proficiency improved by at least eight percentage points over the scores of last year's examinees.

These statistics follow on the heels of test scores released earlier this year for 9th- and 11th-graders on basic skills, which showed similar improvement over the previous year's scores.

The improvement in test scores of our West Virginia students strengthens my conviction that we must continue to encourage our young people to take full advantage of the educational opportunities that are available to them, and it helps to justify my optimism about the role they can play in the future of our state.

That optimism was reinforced recently when I announced the West Virginia recipients of the 1993 Robert C. Byrd Honors Scholarships.

The 45 West Virginia students named as this year's Byrd Scholars join 256 other young West Virginians who have received scholarships since the program was established seven years ago.

I authored legislation to create this scholarship program in order to encour-

age West Virginia high school graduates--and graduates from across the country--to further their educations. I was touched when my colleagues subsequently voted to name the scholarship program in my honor.

Under the guidelines of the program, scholarships are awarded on the basis of merit to students that have been accepted for enrollment at institutions of higher learning.

Originally a one-year scholarship, the program was expanded last year by Congress, at my request, to encompass four years, enabling this year's students to receive first-year scholarships of \$1,500 and to re-apply for the same amount for each of the following three years of their educations.

The scholarships, which are awarded to students in all 50 states, the District of Columbia, and Puerto Rico, have been given to nearly 37,500 students nationwide.

I salute this year's Robert C. Byrd Scholars as they prepare to embark upon another important leg in their academic journeys.

Indeed, these students have embraced the notion that education is one of the cornerstones upon which their future economic prosperity--and the prosperity of our state and nation--rests, and my efforts to build upon our educational foundations will continue to be a foremost priority in the coming years.

Celebrating Independence Keeping a Covenant

The freedoms that we as Americans currently enjoy and that we celebrate on Independence Day each year are the result of sacrifices of millions upon millions of Americans -- including thousands of our fellow West Virginians -- who surrendered their convenience, customary daily lives, and personal safety to place their lives on the line for all of us.

As Americans, we have an ongoing covenant with the veterans who have stood as vanguards against the forces of totalitarianism and dictatorship.

In my estimation, one seal of that covenant is our Department of Veterans Affairs (VA) medical facilities.

In recent years, I have helped to obtain federal funds for better access and improved medical services for veterans throughout the state.

While in West Virginia recently, I participated in the dedication of a new Clinical Addition at the Huntington VA Medical Center, a facility for which I helped to obtain more than \$50 million in federal monies. The addition will provide state-of-the-art medical care to West Virginia veterans and other veterans of the tri-state region.

The Robert C. Byrd Clinical Addition, which nearly doubles the total size of the Huntington VA Medical Center, providing upgraded space for expanded cardiac services, and for the relocation of surgery, radiology, nuclear medicine, and intensive care, is the latest completed

of the four West Virginia veterans medical care facilities, for which I have helped to obtain federal funds.

I helped to secure more than \$75 million for the Martinsburg VA Medical Center replacement, which was activated in 1984, to bring to veterans in that area an upgraded facility for health care.

Through my efforts, additions were opened in 1989 at the Clarksburg VA Hospital. The construction provided expanded, upgraded space for inpatient and outpatient care. Since 1991, I have also added \$1.5 million to appropriation bills to launch and operate a pilot program, cooperatively conducted by the Clarksburg VA Medical Center and West Virginia University School of Medicine and Ruby Memorial Hospital. Through that program, West Virginia veterans, who otherwise would be sent to out-of-state facilities, are receiving specialized treatment, such as cataract surgery, closer to home and family.

A new addition to the Beckley VA Medical Center, currently under construction with federal money I helped to secure, will provide needed space for dental laboratories, a nuclear medicine unit, an outpatient psychiatry unit and various other services.

I shall continue to work for improved and accessible health care for the men and women who have fought to preserve for this nation the freedoms that we now enjoy. I salute our veterans.

Coal: The Contributions, The Challenges

Coal--and the raw power that it represents--is a common vein that runs through America's history, carrying blood to our nation's economic heart.

Of the many resources with which our country has been endowed, none has played a greater role in the development of America than the tremendous reserves of coal that lie beneath its surface.

Coal fueled America's transformation from an agrarian economy to an industrial powerhouse, supplying almost 80 percent of our nation's energy from the mid-19th century to the 1920's. Today, coal generates 56 percent of the electricity consumed in the United States.

Our nation turned to coal to power it through two world wars, and in the 1970's, when our country faced an oil embargo imposed by the Organization of Petroleum Exporting Countries, we looked to coal to help break our dependence on foreign energy.

Coal has a proud heritage and a bright future. I have every confidence that as we move into the 21st century, coal will continue to be used as the primary fuel for domestic power generation.

But coal faces challenges in the years ahead--challenges that I recently outlined for national coal industry officials during their annual meeting held in White Sulphur Springs, West Virginia.

A growing concern

about the environment has made efforts to develop clean coal technologies--a move I spearheaded when I authored and obtained funding for the Clean Coal Technology program--a top priority. In fact, the future of coal use in America depends upon the development of new, cleaner methods of using fossil fuels.

I remain committed to seeking federal investment in programs to burn coal cleanly, but I caution that our budget deficits--now standing at more than \$4 trillion--will make efforts to find federal dollars for important initiatives, such as the clean coal technology program, increasingly difficult.

I am encouraged, however, by the remarks of Energy Secretary Hazel O'Leary, who, during a recent Senate Appropriations subcommittee hearing that I chaired, assured me of her own commitment for the continued use and development of coal as a vital energy resource.

Secretary O'Leary described herself as a champion and a proponent of coal research and development programs, and I welcome her support in the endeavor to increase coal use.

Through the effort to provide federal resources for fossil fuel and clean coal programs--an undertaking to which I remain committed--coal can continue to play a major role in our economic future and in our quest for energy independence.

Investing in West Virginia's Future

Recently, while participating in groundbreaking ceremonies for Charleston's Haddad Riverfront Park, I was struck by the contrast of the tranquil Kanawha River and the televised news accounts of the raging Mississippi River hundreds of miles to the west.

The heart-wrenching pictures of the devastating floods along the Mississippi basin—where thousands of acres of farmland have been rendered virtually useless, and towns and businesses have been left under muddy water—are a poignant reminder of nature's fury and the havoc that can be wrought when steps are not taken to tame her.

Along the peaceful Kanawha, as the assembled audience prepared for the construction of a beautiful new recreation area, I was reminded, too, that investments in the nation's infrastructure are multi-faceted and far-reaching, and that their original cost is often dwarfed by the future dividends that they pay.

Consider, for example, the towns of Rock Island, Illinois, and Davenport, Iowa. Rock Island's community leaders chose to erect floodwalls to protect their town against a raging Mississippi. As a result, damage there has been minimal. Davenport took the opposite course, and the lack of flood protection in that community has resulted in massive damage to the town's waterfront neighborhoods and business district.

Now consider West Virginia. Through the foresight of an earlier generation, a flood-control dam was built on the New River above Charleston—the Blue-

stone Dam at Hinton—and other dams were built on the Elk River at Sutton and on the Gauley River near Summersville. These projects tamed the Kanawha River, just as other infrastructure investments south of Charleston tamed the Guyandotte and are helping channel into peacefulness the Tug Fork River.

I believe in investing in our future through such infrastructure projects, and I have steered federal funds to West Virginia to make those kinds of investments. Indeed, public investments in better facilities and services are investments not only in our future, but also in the futures of our children.

For instance, through the Appalachian Corridor network and other highway projects, West Virginia is being opened to new economic possibilities and to an improved life for West Virginians in all corners of our state.

Through other federally funded initiatives that I have helped to gain -- improvements to airports, waterways, and public facilities and services; and projects to expand business, industry, and the federal government's presence in West Virginia -- I am working with West Virginians to plant the seeds for future growth in our state.

Together, West Virginians have joined hands to make the journey into the future, and we can all be justifiably proud of the steps we have taken to prepare West Virginia to meet the challenges that lie in the years ahead for us and for our children.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Meeting the "ChalleNGe"

A unique program that holds great promise for a group of young people too often ignored--our high school dropouts--will soon be underway in West Virginia.

Beginning this fall, Preston County's Camp Dawson will be the site of a remarkable undertaking known as the West Virginia Mountaineer "ChalleNGe" program--an initiative to provide young West Virginians who have given up on their high school educations a second chance to earn a diploma.

At my urging, the National Guard Bureau two years ago developed the "ChalleNGe" program, which was financed in part by \$2 million that I added to a federal appropriation bill. The program has been expanded this year and will operate in ten locations across the country, including Camp Dawson.

In addition to being given a chance to earn a GED/high school equivalency diploma, the 16- to 18-year-old cadets, as they will be called, will undergo a rigorous, 5-month resident program to help them gain vital job and life skills.

The resident program will be followed by a year-long mentoring relationship with a specially trained Guard member from each youth's community.

Participants in the Camp Dawson program must be legal U.S. residents as well as residents of West Virginia, and they must be drug-free and free of felony conviction.

Two "ChalleNGe" sessions are planned at Camp Dawson, with 68 cadets taking part in each session. Potential cadets must be nominated by a member of their local community and must then be selected for the program by a state-appointed committee.

The National Guard has set up a toll-free number--1-800-79-GUARD--for those interested in receiving additional information on the "ChalleNGe" program.

The potential of all of West Virginia's young people is too worthwhile to be lost. The Camp Dawson "ChalleNGe" program affords one more opportunity to help a group of West Virginia teenagers who might otherwise "slip through the cracks" by cultivating their talents and equipping them with necessary life skills.

The twenty-first century is almost upon us. The Camp Dawson "ChalleNGe" program will provide a promising new source of young leaders another chance to create even more opportunities for themselves and for West Virginia as the new century dawns.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A First Step Toward More Civilized TV Programming

In a tardy admission that television viewing might impact children negatively, and in response to growing outcries against gratuitous sensationalism and violence, ABC, NBC, CBS, and Fox television networks have agreed to air parental warnings before programs featuring excessive mayhem, and to issue similar advisories in printed program guides.

For years, the networks denied that television violence affected the behavior of young viewers — this in spite of a 1982 report by the National Institutes of Health stating, "After 10 years of research, the consensus among most of the research community is that violence does lead to aggressive behavior by children and teenagers who watch the programs."

In fact, television is no neutral eye peering out into reality and transmitting back to its viewers an objective picture of that reality.

All television pro-

grams, producers, writers, and directors have a point of view that they are trying to convey to their audiences. Unfortunately, too many artisans in the television industry substitute their own jaundiced and sensationalized versions of life for reality, all in the name of higher ratings and higher profits.

For many young people, life as presented over the television tube is as real as the lives they perceive in their homes and local communities.

I commend the television networks on their decision to give parents more warning about upcoming program violence.

But that gesture is just the first step toward more civilized television airways — channels that belong to the American people, not to any of the networks.

I urge television programmers to pursue additional avenues to purge from the airwaves gratuitously violent programming.

Immigration Reform Now!

The United States is a nation that was founded by immigrants.

Men and women seeking a way of life free of religious, political, and personal persecution and oppression have been central to American history since the Pilgrims landed at Plymouth Rock.

Unfortunately, the United States can no longer extend open arms to all those who seek entrance into our country in search of the opportunities that this nation once afforded all who made it to our shores.

Any regular viewer of television newscasts is familiar with the spectacle of thousands upon thousands of illegal immigrants streaming across the ill-policed Mexican border or pathetically seeking to swim ashore by the hundreds from leaking, rusting vessels launched from China by criminal extortionists.

In addition, the United States has endured an unprecedented explosion of legal immigration in recent years.

In 1988, for example, legal immigrants admitted to the U.S. numbered approximately 600,000, while in 1991, more than 1.8 million legal immigrants were admitted, more than tripling the 1988 total.

Against that background, particularly in this era of continuing economic hardship for our own native citizens, the government's failure to stem the tide of hundreds of thousands of

immigrants is both unfair and irresponsible.

This irresponsibility is particularly acute when one considers that the segment of our citizens who suffer most from this inpouring are those Americans at the lower end of our economic scale -- unemployed, unskilled, semi-skilled, and sometimes poorly educated men and women who are now in danger of becoming a permanent underclass in our society.

As a first step toward reversing these trends, the Senate recently passed a federal appropriation bill that funds increased border patrols and detention centers, and new positions that will help to expedite and improve the processing of immigrants. Moreover, I am also cosponsoring legislation aimed at closing the asylum loophole through which have slipped untold numbers of immigrants, some of whom have reportedly conducted illegal terrorist activities against American citizens on our own shores.

In addition, the President has recently unveiled a proposal to tighten enforcement of immigration laws.

These measures mark an excellent start toward correcting and reversing some of our out-of-control immigration problems. Further, they represent a positive step toward bolstering our security against terrorists seeking bogus asylum here and toward protecting jobs for Americans.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Carving Out Our Future

Work is now underway for the first phase of construction of the Robert C. Byrd Hardwood Technology Center, placing West Virginia's state-of-the-art wood-products research and training facility on the fast track toward operation.

A West Virginia site was recommended as the location for this new center in 1990, based on the findings of feasibility studies, which concluded that the property near Gardner, Mercer County, was central to the spectrum of wood-products businesses that would benefit from the facility.

The hardwood center is a natural extension of work I have been conducting on several fronts to help provide for West Virginians the opportunities and resources to compete successfully for a greater share of national and international business in this era of the global marketplace.

The twofold aim of this new facility is to help our state and national wood-working industry apply the most advanced hardwood-products manufacturing techniques and to develop a pool of U.S. workers trained in the use of new, high-technology machinery.

Southern West Virginia rests squarely in the center of one of the earth's most

abundant, productive, and renewable timber-producing areas. Recognizing our state's historic advantages as a producer of quality hardwood trees, I added \$9 million to appropriations bills to construct and develop this center, and to equip it with the latest advanced flexible manufacturing technology -- robotics.

The Byrd Center will stand on a 3-acre site adjacent to the U.S. Forest Service Advanced Hardwood Resource Center.

The first construction phase will consist of a 22,000-square-foot, one-story structure to provide laboratory and workshop space and initial room for offices and training.

Long range plans call for a multi-purpose complex that will house a time-shared manufacturing operation, classrooms, and dormitories to accommodate training and education, advanced-technology research, and industry seminars.

Through wise, balanced, farsighted investments, such as the hardwood center, I hope to ensure that West Virginians can carve out new and expanded job opportunities, and an improved standard of living and higher quality of life.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Joining the National Park Service and the Community in a New Way

The Wheeling area has played a significant part in the history of West Virginia and in the history of the nation. In the early 1800's, Wheeling served as West Virginia's first state capital, as well as the western terminus of the National Road, playing an important role in the westward journey of nineteenth-century settlers.

Wheeling continued its service to the expansion of the United States through its role as an inland port, where many of the region's major products, including iron, steel, textiles, boats, glass, cigars, and chewing tobacco, could be shipped along the Ohio River. This port helped the state of West Virginia to increase its industrial development and its economic capabilities by impressive amounts.

It is because Wheeling has played such an integral part in the development and economic prosperity of our state that I recently introduced legislation to authorize the National Park Service to establish the Wheeling National Heritage Area. Since 1989, I have added \$4.8 million to appropriation bills to aid in the development of the Wheeling National Heritage Area.

This proposal creates a unique and mutually beneficial relationship between the Wheeling community and the National Park Ser-

vice. It will allow the community to play a significant and leading role in the establishment, development, and ultimate success of this national heritage area.

The Wheeling National Heritage Area, once approved, will be a self-sustaining unit managed by the local community. Through the financial assistance of federal, state, local, and private sources, the Area will not only contribute to the expansion of the National Park system, but will also enhance West Virginia development.

I have always acknowledged the importance of investment in West Virginia, as well as the development and expansion of our industry and tourism potential. But at the same time, the success of such developments relies on the willingness and ability of my fellow West Virginians to build on the foundations, which I have helped to lay.

I will continue to work toward the realization of this investment and toward the establishment of the Wheeling National Heritage Area. It is a program, and a concept, which will enable this nation to recognize the importance of local history while still granting the local community the ability to steer the Heritage Area in the direction most beneficial to the community and the nation.

Hotline Help

West Virginians often have questions about Federal programs and services, and about regulations and opportunities that may affect them directly. Sometimes help is just a phone call away, and I have found that the following list of toll-free Federal hotlines can help West Virginians find answers to some of their questions.

Retired Army Pay Problems	1-800-428-2290
Cancer Hotline (National)	1-800-4-CANCER
Department of Health and Human Services (HHS)	
Medicare Information	1-800-638-6833
Medical Scholarship Information	1-800-638-0824
National Runaway Switchboard	1-800-621-4000
(For parents and runaways to leave messages)	
Consumer Product Safety Commission ...	1-800-638-CPSC
(Product recall, complaints, fact sheets)	
Financial Aid for College Students (National)	
Department of Education	1-800-433-3243
National Guard "ChalleNGe" Program	1-800-529-7700
AIDS Hotline (National)	1-800-342-AIDS
(HIV and Acquired Immune Deficiency Syndrome Information)	
Pesticide Emergency Information Clearinghouse ...	1-800-858-PEST
National Health Information Center	1-800-336-4797
Hill-Burton Free Hospital Care Hotline	1-800-638-0742
Small Business Administration	1-800-827-5722
Social Security Administration	1-800-772-1213
West Virginia Veterans Affairs Office	1-800-827-1000
Partnership for a Drug-Free America	1-800-662-HELP
(Drug-abuse help and information)	
Safe Drinking Water Hotline	1-800-426-4791

Pioneering a High-Tech Process To Benefit West Virginia Steel

During a recent trip to West Virginia, I participated in a ceremony at Weirton Steel in Hancock County that was an example of my efforts to help our state's industries become more competitive through the use of high-technology.

At that ceremony, I joined Weirton Steel officials and employees in launching an advanced steel-making process known as the Logistics and Integrated Scheduling--or L&IS--system.

This computerized system--for which I have added nearly \$9 million to federal appropriation bills--will allow Weirton Steel to schedule and track orders, raw materials, inventory levels, production, equipment status and availability, work in progress, shipments, and customer feedback.

The L&IS system will enable the company to dramatically reduce waste, saving the steel industry energy and money and making Weirton Steel more competitive in world markets.

I salute the men and women at Weirton Steel who are pioneering the development of this pilot project, which is being watched throughout the American steel industry with the hope that reduced costs realized through Weirton's new process will translate into production-

cost reductions industry-wide. These cost savings could help give American steel producers advantages in the global market, thus creating and preserving more American steelworkers' jobs.

The exciting developments at Weirton Steel are evidence of one important law of practical science: Technology never stands still.

Indeed, across our country, many businesses have gone under because of their inability to keep up with the cutthroat competition of foreign companies that use the newest technologies.

The computerized manufacturing system that has been set in place at Weirton will help give that company an advance-guard position in twenty-first century steel-making, and put West Virginia in the front ranks of a changing American steel industry.

Encouragingly, long-time West Virginia industries like Weirton Steel are taking their place as pioneers of emerging new technologies that promise to preserve and create good-paying jobs in West Virginia. I will continue doing all that I can to help our state's industries to achieve greater competitive expertise in the years ahead.

Showcasing West Virginia's Wildlife

West Virginia's rugged beauty and abundant wildlife have long attracted visitors to our state.

With the establishment of the Canaan Valley National Wildlife Refuge, West Virginia will soon be home to a second area specially set aside to showcase and preserve her natural riches.

The establishment of West Virginia's first wildlife refuge -- the Ohio River Islands National Wildlife Refuge -- was set into motion when I added \$850,000 to a fiscal 1990 federal appropriations bill to begin the purchase of 13 islands to serve as the core of the refuge. Since that time, I have added an additional \$2.25 million to expand the refuge's reach.

Recently, to help initiate the Canaan Valley National Wildlife Refuge, West Virginia's second refuge, I secured \$2 million in federal funding in a pending appropriations bill, including \$1 million I added above the House-approved funding level of \$1 million.

The formation of these refuges is an important step toward ensuring the protection of our state's wildlife for generations to come.

When land acquisition is completed, our Ohio River refuge is expected to consist of more than 25 islands along a 362-mile stretch of the Ohio River, extending from the tip of West Virginia's Northern

Panhandle south to Mason County.

Rich in biological significance, the islands represent a mosaic of bottomland hardwoods, wetlands, and various life forms rare to the area. The islands also serve as home to migratory birds such as the black duck and the king rail, as well as to the endangered pink musket mussel.

The Canaan Valley National Wildlife Refuge is also an area of great biological importance, both to West Virginia and to the nation as a whole.

The valley's 6,700 acres of wetlands host an ecosystem that is usually native to areas much farther north, with more than 580 different species of plants and more than 280 kinds of mammals, birds, reptiles, amphibians, and fishes.

Preserving nature while taking advantage of the rich natural resources that nature boasts is often a balancing act.

The establishment of the Ohio River Islands and Canaan Valley National Wildlife Refuges, which are to serve as protected areas that will also contribute to the tourism industry, will stand as tangible evidence that West Virginians have a deep reverence for protecting the unique character of our land, even as we strive to make responsible use of our natural resources to further West Virginia's economic development.

Breaking Ground for the Future

I recently took part in groundbreaking ceremonies in Wheeling for a pair of high-technology projects that I helped initiate in order to open up a new avenue of prosperity in West Virginia.

The ceremonies marked another step in providing facilities for the National Technology Transfer Center (NTTC) and the Classroom of the Future, NASA-related projects that will be headquartered at Wheeling Jesuit College but that will extend their reach throughout West Virginia and far beyond our borders.

As I stood on the ground that will be the future home of these two facilities, I shared with gathered West Virginians my belief that high-technology education and applications will become an increasingly important part of West Virginia's economic future.

The NTTC--for which I added \$13.5 million in construction funding to an appropriation bill--will give the private sector access to the new technologies spinning out of our space program and other federal projects.

Through the NTTC's rapid transfer of advanced technology from the public to the private sector, our companies will have a better shot at gaining a competitive edge in the world marketplace.

Another critical element in our country's ability to compete worldwide is education, particularly in the

high-tech disciplines.

Long a champion of a formal education in the so-called "basics," I also hold the firm conviction that, in this era of high-technology and world markets, being educationally literate in the traditional sense is no longer a guarantee of job readiness. Indeed, many of today's students must emerge from school at least computer literate if they are to avoid being passed by the competition.

The Classroom of the Future--which was initiated with funding obtained by Congressman Alan Mollohan and which will be built with \$10 million that I added to federal appropriations bills--will be charged with devising methods to improve the way in which young Americans learn mathematics, science, and aerospace studies.

By applying the technologies gleaned from the space program to math and science teaching, the Classroom of the Future will better prepare the teachers of tomorrow's scientists, technologists, and technicians to impart the knowledge that will be critical to the future success of our young Americans.

The NTTC and the Classroom of the Future hold great promise for the West Virginians of today and tomorrow, and I am gratified that in breaking ground for these two projects, we are continuing to take steps to meet the challenges of the future.

Crime Fighting In West Virginia

Two spokes in the nation's criminal justice wheel--inextricably linked--were on display in West Virginia recently when ground was broken for the new Raleigh County Federal Prison and when the final bolt was installed on the steel super-structure for the new FBI facility in Harrison County.

I was on hand for both ceremonies, and I took pride in seeing two of my initiatives for our state moving forward toward completion. Both projects will mean a safer future for the citizens in our state and across the nation.

The Raleigh County Federal prison, which will house 1,152 medium-security beds and 384 minimum-security beds, is being built with \$80 million in federal funding that I added to an appropriations bill. When completed, the new prison will provide an estimated 325 jobs and an annual economic impact of \$22 million in payroll and local purchases.

In spite of the positive impact that this federal prison will make on the economy of southern West Virginia, no one can rejoice that our society is being forced to build more and more prisons to house more and more criminals and law-

breakers.

But until our society finds a way to bring the escalating crime rate under control, facilities like the new federal prison in Beckley will be essential to ensure the security and safety of millions of Americans.

Essential, too, will be facilities like the FBI's new automated Fingerprint Identification Division, which is on its way to completion in Harrison County and which will bring with it an estimated 2,500 jobs and an annual payroll of \$75 million.

The new FBI facility, for which I have added more than \$400 million to federal appropriations bills, will provide police with a rapid-fire, electronic method of checking fingerprints of suspected law-breakers.

With this state-of-the-art capability, our law enforcement personnel will enjoy a new level of identification and tracking that will help to more easily place dangerous criminals behind bars.

West Virginia is poised to make a unique contribution to our nation's criminal justice system, and I look forward to completion of both the FBI facility and Raleigh County's new federal prison.

By U.S. Senator Robert C. Byrd

The Crown Jewel Of American Democracy

Recently, I participated in a celebration of the 200th anniversary of the laying of the cornerstone of the U.S. Capitol Building in Washington, D.C.

Perhaps no other structure in our country is more revered than is our national capitol.

From its beginning, the U.S. Capitol Building has been both a practical facility and the symbol of the living institution that physically resides here -- the United States Congress -- the so-called "people's branch of government" under our Constitution.

How ironic, however, that some Americans -- even those elected to serve in Congress -- can so vehemently attack the one institution in our system of government in which the voters themselves enjoy and exercise their greatest influence -- the Congress.

In particular, I shudder at the misdirected attacks that advocate the weakening of Congress to the favor of the executive branch.

Democracy is a living form of government that must constantly adjust to the demands placed upon it by a changing society, and Congress is the one institution in our democracy through which American citizens reshape our coun-

try to meet rising challenges and to take advantage of emerging opportunities.

Since becoming a member of Congress, I have supported a number of reforms, such as televised Senate debates.

But some so-called "reforms" recently suggested -- for example, giving the President a line-item veto, which would have the effect of diminishing the strength and influence of Senators from small states like West Virginia -- cut at the very heart of the intentions of the Founding Fathers in establishing Congress as an independent center of power in a system of governmental "checks and balances."

Indeed, Congress is the jewel in America's governmental and constitutional crown. Congress is the institution established by the Constitution in which the regularly elected representatives of the American people can wrestle, struggle, debate, and decide the destiny of our country.

In celebrating the 200th anniversary of a sacred American building, let us not forget to celebrate the even greater sacredness of that branch of government that performs its appointed democratic duties in that building.

The Coming of Age of Software Valley

Among a parent's proudest moments are those events that mark a "coming of age" in lives of their children--a graduation ceremony, a wedding, the birth of a grandchild. During such times, a parent often reflects on the years of preparation and activity that have preceded the milestone event.

Such was my experience recently when the Software Valley Corporation Board of Directors voted to act as a business entity and compete for federal contracts, a decision that made it necessary for me to sever my official ties with Software Valley.

As one of the original founders of the non-profit Software Valley movement more than eight years ago, I viewed the Corporation's decision to embark upon this new course with a mixture of pride and excitement.

In 1985, West Virginia's Software Valley movement was a kernel of an idea--a vision that with a coordinated effort, West Virginia could be home to a high-tech infrastructure that would bring jobs to the state and diversity to West Virginia's economic base.

By gathering together fledgling high-tech businesses and academicians under a single umbrella known as Software Valley--and with donations from interested large businesses--the Software Valley Corporation grew into the state's clearinghouse for inquiries on West Virginia's high-

tech capabilities.

Software Valley's reach grew beyond that, however, as it launched a series of statewide conferences--which I have hosted--to help West Virginians plug into the world of high-tech, and to assist our small businesses in their efforts to obtain federal contracts. The twelfth in that series of Software Valley conferences will be held October 20 and 21 in Huntington, and will give West Virginians yet another opportunity to benefit from the gathered expertise of the Software Valley Corporation.

Software Valley also has supported efforts by state universities and colleges to sharpen their high-tech focus in terms of curricula and research in order to better prepare West Virginia students for the high-tech challenges of the future.

Software Valley is now poised to take a giant step forward by entering the competition for federal contracts, and while my position as chairman of the Senate Appropriations Committee makes it necessary for me to step down from an official role with Software Valley, I will continue to enthusiastically support the Corporation and its goals.

Software Valley is, indeed, coming of age, and as I look back in pride to the part I played in launching West Virginia's Software Valley movement, I wish the Corporation the best of luck in its future endeavors.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Placing Blame Where It Belongs

Growing up as I did in the coal fields of Southern West Virginia during the 1920's and 1930's, I learned the value -- indeed, the imperative -- of self-discipline, particularly in the face of adversity and hardship, as well as the values of hard work, perseverance, integrity, conscience, and numerous other qualities on which America was built by our forbearers.

For those reasons, I am especially concerned about a growing trend in our society -- a trend that, perhaps more than any outside foe or foreign aggressor, threatens the future of our country.

As nightly viewing of television newscasts illustrates, we are currently enduring a nearly unprecedented crime epidemic in our country.

Unfortunately, under a pseudo-scientific guise, some self-anointed experts seem bent on excusing every criminal for the most heinous of crimes and blaming "society" for the acts of every flawed personality, psychopath, rapist, or murderer.

Before it is too late, I appeal for a return to yardsticks by which individual men and women are judged by their own conduct, and by which criminals are

judged by their behavior.

I appeal for the rejection of pseudo-sciences that blame the police for the actions of murderers and thieves, and that blame society for the outrages of punks and ruffians against peaceful citizens and lawful institutions.

West Virginia and America were not built on excuses, and no society can survive by excusing those who will not conform their conduct to standards of conscience available to all rational people.

Further, I appeal for the restoration of values that teach children right from wrong; that teach respect for the lives and property of others; that teach citizenship in our communities; that teach love of our state and country; that teach the importance of hard work and honesty; that teach self-discipline and one's responsibility for one's own actions, one's own choices, and one's own conscience; and, most important, that teach a respect for the deep spiritual values and religious faith on which all of our rights and laws are ultimately based.

To do less is to betray the foundations that have made this the greatest nation in history.

New Stations in West Virginia's Life-Saving Network

I recently announced the expansion of a medical program that is telecasting health services for thousands of West Virginians living primarily in rural areas -- the Mountaineer Doctor Television network (MDTV).

Already operating at hospitals in New Martinsville, Wetzel County; Petersburg, Grant County; and Elkins, Randolph County, the MDTV network is adding two new "stations" -- St. Joseph's Hospital in Buckhannon, Upshur County; and Boone Memorial Hospital in Madison, Boone County.

Since 1991, I have added more than \$2.4 million to federal funding bills -- including \$800,000 in fiscal 1994 legislation -- to develop and expand this life-saving network.

This two-way televised system links physicians and other health-care providers in rural settings with medical and technological resources at the Robert C. Byrd Health Sciences Center at West Virginia University in Morgantown and in Charleston.

MDTV transmits audio and video signals across our state over telephone lines. Cameras and television monitors at each connected

site permit 24-hour-a-day communications for patient medical consultations, emergency assistance, continuing medical-education programs, student and resident educational programs, and other services.

I have vivid memories from my childhood in the coalfields of Southern West Virginia of serious disfiguring injuries and fatalities resulting from coal mine accidents and of deaths brought on by illnesses that might have been successfully treated with adequate medical services.

These early experiences spurred my commitment to help improve the quality and accessibility of health care for all West Virginians, particularly West Virginians living long distances from hospitals and medical centers that offer specialized treatment.

I am excited about the possibilities for more accessible care that the revolutionary MDTV system affords thousands of West Virginians living in our state's rural areas, enabling medical specialists and local physicians to examine patients and consult on treatment across wide distances, and I look forward to the further expansion of this network.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

West Virginia Identified As Low-Crime Leader

For the twentieth year in a row, West Virginia has achieved the distinction of having the nation's lowest overall crime rate.

West Virginians should take pride in the fact that for two decades our state has been recognized nationally as America's most crime-free place in which to live, according to statistics compiled by the Federal Bureau of Investigation (FBI).

This distinction has been one of the factors--coupled with our talented work force, low cost of living, and outstanding quality of life--that I have used to help promote West Virginia to federal agencies as a location for some of their operations.

Interestingly, the lowest crime state in the nation will soon be home to a federal facility that promises to revolutionize the national war against crime--the FBI's Fingerprint Identification Division, now under construction in Harrison County.

As this new facility takes shape on the Clarksburg horizon--being developed with the more than \$400 million that I have obtained in federal funding bills since 1989--I am thinking ahead to the day when the building will be ready for the installation of the heart and arteries of the identification division: the technologically advanced computer network that will modernize the way

that law enforcement personnel track criminals.

For that reason, I sought \$84.4 million in federal funding this year for the development of the equipment and programming that will give crime fighters nearly instant access to criminal identification information, and I am pleased to report that this funding was included in a bill that has received final congressional approval and has been signed into law.

When completed and fully occupied, the Identification Division's new complex, according to the FBI, will house approximately 2,500 employees--80 percent of whom are expected to be West Virginians--with an annual estimated impact on the economy of North Central West Virginia of roughly \$75 million.

Already, the FBI is operating two satellite facilities in Clarksburg and Fairmont which are staffed by more than 350 employees, of whom about 285 have been hired locally. The main complex will be completed in mid-1995, according to FBI estimates.

With all West Virginians, I anticipate that completion with enthusiasm, and I look forward to the numerous contributions that the FBI's Identification Division and its employees will make to West Virginia's economy, culture, and community life in the years ahead.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

New Outcries Against Television Violence

A recent incident in which a mother accused an MTV cartoon series of inspiring her young son to set fire to the family's mobile home, killing her infant daughter, has reignited the perennial debate about the impact of television violence on American society.

In this instance, none less than the U.S. Attorney General and a Senate panel chairman have suggested government intervention unless television executives police themselves with regard to the violence in television programming.

Not unexpectedly, self-serving voices from within the television industry have been raised, protesting the outcry against gratuitous television violence as contrary to constitutional guarantees of freedom of speech and artistic expression.

Other defenders of the status quo in television go so far as to assert that the graphic depiction of violence on television has no influence on violence and crime in society at large.

I disagree with that position.

In fact, I assert that be-

ing exposed regularly to violence, pornography, and perversion builds in viewers a greater acceptance of such behaviors, and too often ends in such once unacceptable activities' becoming normal for many people, in spite of their consequences on the quality of life in local communities.

Unfortunately, television -- perhaps the most powerful medium of communication ever developed -- is gnawing away at the moral fabric of our society and culture, numbing our sense of morality, and rotting the quality of our day-to-day speech and manners.

If the television industry does not relish censorship and criticism, let the decisionmakers in that industry learn self-restraint and conscience, or let them risk the imposition of restraints from the outside.

For the television industry to act less responsibly is to gamble with America's moral future and the lives of millions whose destiny will be largely determined by the values cultivated by television programming.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Paving the Way to Prosperity

For generations, we West Virginians have looked to our coal-filled, forested Appalachias Mountains as the chief source of our livelihoods. Those same mountains--that wrap around us like a fortress of beauty and tranquility--have provided us comfortable harbor over the years.

But, for all the wonders they have brought us, our mountain guardians have sometimes obstructed the path to economic expansion, both in West Virginia and throughout the Appalachian states.

In 1965, with the establishment of the Appalachian Regional Commission (ARC), our nation embarked on an effort to conquer poverty in the mountains of Appalachia.

The cornerstone of that program was the ARC Corridor Highway system, a network of modern roadways that was intended literally to pave the way to greater economic opportunity throughout the 13-state Appalachian region.

I believe that the ARC's mission--begun nearly three decades ago when a Blue Ribbon Commission was appointed to map out the Appalachian corridor highways--is as important today as it was back in 1965. For that reason, I have dedicated myself to adding millions to federal funding bills to ensure that construction of West Virginia's ARC highways, with costs averaging \$10 million to \$12 million per mile, moves forward.

As a result, West Virginia's corridor highways are becoming a reality. Last year, I added the

final chunk of federal funding needed--\$80 million--to complete Corridor G, a vital link between Charleston and Logan and Williamson. In total, I added more than \$328 million to federal bills over four years for Corridor G.

And in the past two years, I have added a total of \$175 million to appropriations bills to complete the federal government's portion of four-laning Route 19, or Corridor L, from Sutton in Braxton County to Beckley in Raleigh County.

Since 1989, I have also added \$10 million for initial work on the Parkersburg Bypass of Corridor D and over \$160 million for sections of Corridor H, from Buckhannon, Upshur County, to east of Elkins.

I believe in the Appalachian Corridor highway network and the promise that it holds for West Virginia. With better roads, West Virginia products can be moved to market more economically. Lower transportation costs can attract business and industry to the state.

But the benefits of good roads do not stop there. Improved transportation also invites tourists across our borders, bringing tourism dollars into our economy. And better, more modern roads save lives.

As every new piece of West Virginia's corridor system is put into place, I become increasingly convinced of the importance of finishing this network, not only to West Virginia and the twelve other Appalachian states, but also to the entire nation.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Signs of West Virginia's Economic Spring

Like a farmer surveying his field for signs of sprouting seed, I regularly look for evidence that my initiatives for West Virginia's economic growth are taking root.

One such sign recently appeared in an issue of U.S. News and World Report.

The magazine published a list ranking all 50 states in order of their economic performance since early 1991. The list was intended to provide a glimpse at which states are best managing their recovery from the recession and how they are doing it.

How did West Virginia stack up? Our state was listed as having the 11th strongest overall performance.

While this ranking does not suggest that West Virginia's economic crop is mature or that our seedlings are without need of further nurturing, it does provide a clear indication that we are headed in the right direction, and that is encouraging news.

In explaining West Virginia's standing, the magazine pointed to a broadening of the state's economic base, mentioning growth in construction and government jobs. Special note was made of the jobs

that will come with the FBI Fingerprint Identification Complex and the NASA facilities that I am shepherding to West Virginia.

While these facilities--and many of my other projects for West Virginia--are in the early stages of development, they serve as visible signs that the cultivation of our economic fields is well underway.

Just as a plant spreads by sending out runners, my ongoing initiatives in West Virginia are spurring growth beyond the facilities they occupy and the towns they call home.

For instance, when the FBI's Fingerprint Identification Division in Clarksburg is fully operational--sometime in 1998--an estimated \$75 million will be pumped into the economy of north central West Virginia each year, translating into an economic boost for area businesses--from automobile dealerships to gasoline stations, barbershops to butchershops, grocery stores to area restaurants.

I am encouraged by the signs of economic growth we are seeing in our state, and I will continue tending my West Virginia "crops" that are beginning to bear fruit.

November 17, 1993

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Another Building Block for 21st Century West Virginia

For more than a century, West Virginia's economy -- the engine that created jobs for our parents and grandparents and underwrote the way of solid family life and spiritual values that distinguish our state nationwide -- has rested on heavy manufacturing and natural-resource extraction.

Since the 1950's, however, a number of factors -- increased international competition, emerging high technologies, changing energy demands, and automation, to name a few -- have combined to reduce job opportunities in our state and forever alter West Virginia's industrial base.

Sensing such changes, some years ago, I conceived the vision of a 21st century West Virginia that would enjoy the dividends of a 21st century economy.

My vision for West Virginia comprises a diversified economy that frees us from the perennial boom-or-bust dilemmas of the past -- a diversified economy that includes improved highways, increased opportunities in tourism, improved education, better health care for our citizens, expanding high-technology and research enterprises, and broader job prospects for our young people.

In pursuing that goal, for example, I am helping to put into place in north central West Virginia an important aerospace community that will tie our

state's future into the dawning, international space age, and that will make West Virginia a leader among the Middle Atlantic states in the aerospace industry.

Toward that end, I added approximately \$5.1 million in federal funds to make possible the construction of the National Aerospace Education Center at Benedum Airport in Harrison County, which I recently helped to formally dedicate.

Operated under the auspices of Fairmont State College, this facility will instruct up to 120 students per year in airplane maintenance and repair, making West Virginia the training nucleus of an occupation in which a reported 4,000 positions go unfilled each year.

Further, I worked with Congressman Alan Mollohan in recruiting the Grumman Corporation's fabrication and assembly plant to join in an expanding complex of such corporate neighbors as Pratt and Whitney, the Lockheed plant in Clarksburg, and others who have caught, or will catch, the vision of West Virginia's growing future in the aerospace industry.

In the years ahead, I shall continue working to diversify West Virginia's economy, to assure a more abundant future for people in all sections of our state.

November 24, 1993

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Added Resources for the War on Crime

According to a 1992 FBI survey, 29 percent of Americans have been either victims of crime or have had a family member who was a victim of crime in the three years prior to the survey; 55 percent of Americans fear that they will be crime victims in the future; and 86 percent list their falling victim to crime as an important personal fear.

Such concern is not academic.

Recent FBI statistics indicate that, while America's population has increased roughly 41 percent in 31 years, the national violent crime rate has leapt more than 500 percent in that same period, and the overall crime rate has jumped more than 300 percent.

Further, though West Virginia perennially enjoys the lowest overall crime rate in the nation, West Virginia's crime rate is rising along with the national rate.

In the face of escalating crime nationwide, I recently offered an amendment to a national anti-crime bill. My amendment, which the Senate adopted, establishes a \$22 billion trust fund to fight crime on a large-scale national basis.

My amendment nearly doubled the original size of the package, enabling the Senate to pass the largest comprehensive crime-fighting bill in our nation's history. The Senate bill must

still be reconciled with a House version.

The new trust fund would be made up of savings accrued over a five-year period from anticipated federal personnel reductions. The monies provided by my amendment are to be used to build additional regional federal prisons, jails, "boot camps," and other state and local facilities to lock up criminals.

In addition, my amendment will put 100,000 new police officers on the streets of our communities, where the war on crime is being waged.

Of course, the only lasting crime remedy is a restoration across our nation of real family and religious values, and the re-elevation of family life to the position it has traditionally served in the history of our country in shaping values and personalities and instilling a sense of responsibility in our children.

But our nation cannot merely wait until that day arrives to do something about the daily threat posed by the criminal element in America. We must act now, and the measures prescribed through my amendment are the kinds of steps we can take nationally to stem the growing tide of violent crime and to help free our citizens from the fear of becoming the next crime statistic.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Getting Back to Family Values

During November and December--as family members travel across the miles to share a Thanksgiving meal or to celebrate the December holidays with one another--the family unit takes its place on center stage.

The family is the matrix in which children are intended to be shaped into considerate, productive participants in the larger society--indeed, the first and most enduring lessons are those learned at home.

But sadly--and to the detriment of our society as a whole--the preeminence of the family is taking a back seat to lifestyles in which fast food substitutes for the family meal, and in which discussions around the dinner table are becoming a relic of the past.

Recently, Education Secretary Richard Riley echoed my sentiments when he urged American parents to spend more time with their children--to turn off the television set and talk with their sons and daughters.

The importance of maintaining strong families cannot be overstated, for it is here that consciences--the compass which steers men and women through the shoals of moral choice--are shaped and girls and boys are taught to respect others and to live in harmony with their neighbors.

In 1940, public school teachers across the nation listed the following as the chief violations of student behavior standards: talking out of turn, chewing gum in class, making noise, running

in the hallways, cutting into lines, dress code violations, and thoughtless littering.

In 1990, the most pressing behavioral concerns of our public school teachers across the country included drug abuse, alcohol abuse, teenage pregnancy, suicide, rape, robbery, and assault.

In these shocking comparisons, the schools are but reflecting the overall moral deterioration in our society at large, and as violent crime increases in our country, the calls for tougher anti-crime measures have escalated.

Certainly, legislators have demonstrated their willingness to pass crime-fighting measures, as the Senate recently did. But people seriously concerned about stemming the tides of crime and murder in this country must realize that stricter laws are but substitutes for the real remedy for our crime epidemic.

If the decline of the family continues--and if our family structure fails to reassert responsibility for molding our children into thoughtful, law-abiding adults--no amount of laws will turn around the horrors that we now witness in our city streets, in the hallways of our school buildings, and in once peaceful communities across this nation.

Let us make 1994--and every year thereafter--the year of the family, and let us redouble our efforts to teach our children the cherished values upon which responsible adulthood is built.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

An Ear to the Skies

Sometime during the next several weeks, motors in the base of the Green Bank Telescope will be activated, providing the first test of the equipment that will rotate the 15-million-pound listening device as it searches the skies in its quest to unravel the mysteries of deep outer space.

The upcoming test will mark an important milestone in the rebirth of the Pocahontas County telescope, an ultra-modern instrument which replaces a smaller, less technologically advanced device that collapsed in November, 1988.

The loss of the 300-foot radio telescope at Green Bank five years ago was felt far beyond its remote eastern West Virginia home. Scientists across the country gleaned valuable data from the depths of outer space for more than 25 years, thanks to the telescope.

But from that loss, West Virginia soon will gain a state-of-the-art radio telescope that will give our state a continuing and larger role in the scientific community's effort to learn about the universe.

Shortly after the radio telescope collapsed, I added \$75 million to a federal funding bill to build a new telescope. The new telescope will be equipped with an innovative laser ranging system--now being devel-

oped at the National Radio Astronomy Observatory at Green Bank--that will be able to detect any sag in the telescope structure caused by gravity or wind.

Although the telescope dish is the size of two football fields, it will have the precision of a fine watch. For example, if or when the sensors detect that some part of the telescope is out of alignment by even the thickness of a human hair, motors on the surface of the telescope--some 2,300 of them--will move it back to the correct position.

Another key element of the Green Bank Telescope--sensitive radio receivers that will amplify the faint radio signals collected by the telescope--is now being designed and built at Green Bank. Tests on the first of the many radio receivers that will be included on the telescope have been successfully completed.

According to the National Science Foundation, which serves as the funding agency for Green Bank operations, the new telescope should be completed sometime in 1995.

With its completion, the new Green Bank Telescope will begin scanning the skies for clues to the universe, giving West Virginia a unique place in mankind's continuing search for knowledge in the stars.

Sober Thoughts for the Holiday Season

According to a recent poll testing opinions of the people of our state, 73 percent of West Virginians are concerned about drug and alcohol abuse in our society, while 97 percent of those interviewed by the poll cited drug and alcohol abuse as contributing factors to our nation's increasing crime rate.

Based on those statistics, a majority of West Virginians should be particularly on their guard as we confront the approaching New Year's Weekend.

For most Americans, this New Year's Weekend will be somewhat routine--the usual football bowl games, family and friends enjoying warm fellowship, and then back to work on January 3.

But, unfortunately, again this year, a regrettable number of Americans will never be able to forget the tragedy that New Year's 1994 will become.

Those people will forever remember this New Year's holiday as the weekend on which they lost some loved one in a traffic death.

During New Year's Weekend 1993, scores of Americans lost their lives in traffic accidents.

New Year's Weekend 1990 -- the last year such national statistics were compiled -- 289 automobile deaths were tallied nationally.

In 1989, the New Year's automobile death total was 317.

In 1988, that figure was 375.

Unfortunately, if previous years' statistics are any guide, alcohol will again be involved in more than 50 percent of this New Year's automobile accident deaths.

The National Safety Council estimates that, in the past dozen years, more than a quarter-million Americans have lost their lives as a result of alcohol- and drug-related automobile accidents.

My hope is that these grim statistics will give pause to anyone who reads them and contemplates celebrating New Year's Eve away from their homes or who plans to be on the highway the night of December 31.

On New Year's Weekend 1993, West Virginia suffered 2 highway fatalities, while New Year's Weekend 1992 saw 4 West Virginia highway deaths, 3 of those alcohol-related.

In spite of those relatively low figures, those 6 deaths over two New Year's Weekends represent deep grief and loss for the families involved.

For New Year's 1994, stay alive.

As some would say, don't drink and drive.

As I would say, don't drink--period.

The grief you will avoid will be that of those you love the most, and who cherish your life above all others.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Year of Promise for West Virginia's Future

As 1993 draws to a close, I am looking back at the events of the year, gauging the progress of my work, and planning my next steps for putting into place foundations for West Virginia's economic growth and prosperity in the years ahead.

Over the past five years, as chairman of the Senate Appropriations Committee, I have been providing the building materials to help make West Virginia more competitive in the area of high-technology, thus more capable of successfully answering the challenges of the next century.

This year, I concentrated my appropriations efforts on ensuring that the many projects and programs that I have in the pipeline for West Virginia remain on track so that their benefits to West Virginia and the nation can be realized as soon and as fully as possible.

All told, 1993 was another very good year for West Virginia. My efforts this year included:

-- Adding \$104 million to two bills to complete the four-laning of the whole length of Corridor L, stretching from I-77 near Beckley, Raleigh County, to I-79 near Sutton, Braxton County;

-- Gaining another \$84.4 million for a state-of-the-art computer system to be housed at the FBI's new Fingerprint Identification Division complex -- under construction in Harrison County -- bringing to more than \$400 million the total

funding I have obtained for this national crime-fighting project;

-- Obtaining \$20 million for staff and equipment to keep up the pace of progress on the National Institute for Occupational Safety and Health Laboratory in Morgantown, bringing to nearly \$80 million the total monies I have secured for this facility;

-- Adding new funding to bolster West Virginia's high-technology capabilities, including \$4 million to continue the cutting-edge work of the Robert C. Byrd Institute for Flexible Manufacturing Systems at Huntington and \$21.4 million for the 3-M Metal Matrix Composite Model Factory at Middleway, Jefferson County;

-- Adding \$13.8 million for further development of the Wheeling National Heritage Area, including \$8.5 million for construction of a new transit facility; and

-- Adding \$1 million, making a total of \$2 million in funding approved this year, to begin the establishment of the Canaan Valley National Wildlife Refuge.

Looking over this sampling of my 1993 endeavors, I feel a sense of accomplishment, seeing that my work is helping West Virginia progress toward a broader, more diverse economy.

Now, as I stand at the edge of a new year, I intend to continue to pursue every opportunity for a brighter future for all West Virginians.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A New Century -- A New Millennium

Today, we are less than seven years away from the year 2001 A.D. -- the first year of the 3rd Millennium.

In the 2nd Millennium A.D., West Virginia witnessed the end of the American Indian civilization, the westward migration of pioneers, and the full force of the Industrial Revolution, during which industrial titans developed our state's coal, timber, natural gas, and other natural resources.

As we verge on both a new century and a new millennium, I am concentrating my efforts on putting into place practical and far-sighted foundations for West Virginia's future, while, at the same time, being committed to preserving a heritage that is the matrix from which flow those qualities and strengths that render West Virginians genuinely unique among all other Americans.

Looking ahead, I believe that West Virginia's immediate future depends on continuing to modernize and extend our highway system and other modes of transportation to help overcome geographic obstacles that have sometimes deterred America's twentieth-century economic opportunities from coming to West Virginia.

Further, I believe that continued capitalization on

West Virginia's natural beauty offers us a rich opportunity through a developing tourism industry to accumulate resources that we will need to further improve life in our state.

Again, through promotion of high-technology initiatives like Software Valley, increased research at our colleges and universities, improved health care across our state, expanded flood control and water and sewer service, and upgraded river transportation facilities, my hope is to help develop a twenty-first century infrastructure upon which rising generations of young West Virginians can build more abundant, fuller lives.

But I offer one caveat.

The Scriptures caution, "For what shall it profit a man, if he shall gain the whole world, and lose his own soul?"

Throughout its history, West Virginia has served as a model for the values, patriotism, and faith that have nourished our national life and sustained our souls.

Whatever the approaching new century and new millennium promise materially, my hope is that increased prosperity and enriched opportunities do not undercut those basic family and religious values that make West Virginians truly unique and great.

By U.S. Senator Robert C. Byrd

Space Age Opportunities For West Virginia

West Virginia is standing on the threshold of the nation's space program, poised to play a part in the future of that important effort.

Through Fairmont's Independent Verification and Validation (IV&V) facility--for which I added \$10 million to a federal spending bill--our state is linking up with the National Aeronautics and Space Administration (NASA) on a high-tech initiative to test and validate computer software used in the space program.

Two recent NASA contracts--portions of which will be undertaken in Fairmont--underscore the promise and potential of the IV&V facility.

The first of those--a \$172 million contract that NASA is negotiating with TRW, Inc.--calls for the IV&V to perform an archiving function for NASA's Earth Observing System (EOS), providing researchers nationwide and worldwide with quick and easy access to data retrieved from outer space concerning environmental changes here on earth.

According to NASA, this \$172 million contract calls on TRW to develop, install, and test this on-ground system that will process, distribute, and store data from space for use by NASA and other research agencies. Much of this system itself will be housed at the IV&V facility, with

about two-thirds of the EOS Data and Operations Systems (EDOS) work being conducted in Fairmont.

The second NASA contract--for an estimated \$81 million--was awarded to a Virginia-based company, Intermetrics, Inc. Under the contract, staff at the IV&V facility will perform approximately \$30 million worth of work as it verifies and validates the EOS data and information network.

NASA officials tell me that this contract will mark the first time that it has selected an independent contractor to test, design, and evaluate ground system software development and overall system performance.

As many as 96 employees are expected to be in place at the IV&V facility by the end of 1994, with another 100-plus workers expected to be on the job there by fiscal 1998.

Together with high-technology research and development programs that I have helped attract to Wheeling, Martinsburg, Huntington, Morgantown, Clarksburg, Bluefield-Princeton, Weirton, and other West Virginia communities, the IV&V facility in Fairmont will more firmly tie West Virginia into the rising global and twenty-first century economy, as well as offering increased numbers of West Virginians professions, vocations, and jobs in high-technology, high-paying fields.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

West Virginia's Role in the Search For Energy Alternatives

Power outages and calls for energy conservation accompanying the recent sub-zero temperatures in West Virginia and across the nation serve as reminders of the value of our energy resources and their importance to U.S. energy independence, domestic well-being, and national security.

Efforts to strengthen our energy independence, which have typically entailed exploration for new domestic fuel deposits, have grown to include studies for new, more efficient uses of existing energy resources found within our national borders.

In recent years, the call to shore up that independence while practicing environmentally kinder ways to harness energy has led to renewed and expanded research and development initiatives.

Among those initiatives is the national Clean Coal Technology program, which I established in 1984 to develop new methods for the clean burning of coal -- our nation's most abundant energy resource. Since its beginning, I have gained more than \$2.7 billion for the clean coal program.

Other innovative energy-expanding initiatives include programs for the development of alternatives to traditional petroleum-based transportation fuels. Methane, methanol, and propane, for example, are all being studied as possible alternative power sources for the automotive industry.

With \$1.5 million I added to a fiscal 1992 federal appropriations bill, West Virginia University (WVU) has established one such program, the first

phase of which is aimed at developing a model program and teaching materials for training technicians in vehicle conversion, maintenance, safety, and emissions testing procedures.

Any car owner can appreciate the value of having a well-trained auto technician available at the local garage.

The challenge of developing a viable broad-based alternative fuels vehicle industry relies, in part, on ensuring ready access to technicians trained to service these revolutionary vehicles.

According to WVU officials, the second phase of the program will implement the model, providing specialized training -- through classroom lectures and hands-on laboratory experience -- to educators at community colleges, vocational schools, and other institutions with auto technician programs. In other words, WVU will train the trainers.

In the long term, this program is intended to ensure that the pool of skilled trainers and technicians across the nation can keep up with the increasing demand for alternative fuel vehicles spurred by the implementation of the Clean Air Act and energy regulations requiring greater use of clean fuels.

Through initiatives such as the WVU-based alternative fuels vehicle training program and the national Clean Coal Technology program, I am working to power-up West Virginia's role in our nation's quest for energy independence.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Training Ground for West Virginia's Future

My efforts to put more education and training programs into place in West Virginia moved a giant step ahead recently with the release of nearly \$9 million that I added to a 1993 appropriations bill for a trio of education-related projects in our state.

These projects represent my continuing commitment to developing in West Virginia a network of training and education programs aimed at preparing West Virginians for the employment opportunities of tomorrow.

The first of these projects -- a new science and computer center at Shepherd College in Jefferson County -- will move forward with the release of \$4 million in construction monies that I added to the fiscal 1993 VA/ HUD appropriations bill.

This center will house facilities to train undergraduates in science programs such as chemistry, biology, and computer sciences to meet demands for trained applicants for several high-tech operations that I have attracted to the Eastern Panhandle recently, such as new computer facilities for the Internal Revenue Service, the U.S. Coast Guard, and the Bureau of Alcohol, Tobacco, and Firearms.

A second chunk of funding -- in the amount of \$1.8 million -- was released for further development of the National Aerospace Education Center at the Benedum Airport complex in Bridgeport, Harrison County. This brings to \$5.1

million the total funding that I have added for this facility, which will serve as a training center for avionics and aviation maintenance personnel and which will be operated by Fairmont State College.

The Bridgeport facility will include classrooms, laboratories, and administrative and faculty offices to accommodate as many as 250 students and to host state, regional, and national conferences, workshops, and seminars on aviation-industry concerns.

The third West Virginia project for which my funding has just been made available is the renovation of existing facilities at Davis and Elkins College in Randolph County.

Approximately \$3.2 million that I added to the fiscal 1993 VA/ HUD appropriations bill will allow the college to establish an economic development and education center to offer expanded programs to train students entering the travel and tourism industries. All told, I have added \$4.1 million to federal funding bills to help Davis and Elkins College in its efforts to serve the training needs of West Virginia's growing tourism industry.

The completion of these three new West Virginia facilities will further broaden education and training opportunities in our state, and will help supply qualified men and women to meet the growing demands of promising and expanding industries in a fast-approaching 21st century West Virginia economy.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Immigration Reform Needed

For more than two centuries, the United States has been a haven for those seeking asylum from persecution in other lands.

Indeed, throughout our history, many refugees fleeing oppression at home have made vital contributions to, and played significant roles in, America's history.

Partly in response to that heritage, in 1980, for the first time, Congress codified U.S. asylum laws to provide a safe haven for those legitimately fearing for their lives under communist dictatorships and other totalitarian states abroad.

Unfortunately, in America's desire to aid those who legitimately fear for their lives under repressive regimes, Congress made it too easy for unscrupulous persons, primarily seeking a more convenient life, to falsify their situations and take advantage of America's good will by claiming unwarranted asylum privileges to circumvent regular U.S. immigration procedures.

In too many such cases, individuals under no threat at home have lied about their political, ethnic, or religious circumstances, claiming persecution or oppression, only to sneak through normal immigration routes with minimal processing, then to disappear into our population, never to be officially heard from again.

Our country no longer

enjoys limitless resources and unbounded acres ripe for unplanned settlement. More and more, immigration is placing ever-increasing pressures and demands on our already overburdened environment and economy, and on our health, welfare, and education systems.

Consequently, I recently cosponsored, and the Senate adopted, a proposal that our immigration laws be amended to stop the rampant abuse of our asylum laws.

However, I believe the time has come for review of more than just asylum procedures; all aspects of U.S. immigration law should be reexamined.

The Cold War is over, and democracy is replacing dictatorship in much of the world.

America does not have the resources to solve all of the problems facing people living in substandard conditions worldwide, nor to accept all those who wish to come to America for a better life. With a population of roughly 260 million people, growing national needs across the spectrum, and an anticipated federal budget deficit in this fiscal year of \$223 billion, we no longer enjoy the luxury of being able to take care of the requirements of our own population and, at the same time, keep our doors open for the rest of the world to move to our shores.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Free Exercise of Religion

The First Amendment to the Constitution declares, "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof;...."

Most Constitutional historians understand exactly the intent of the Founding Fathers in placing those words in the Bill of Rights. Under America's Colonial experience, some of the Original Thirteen Colonies had maintained tax-supported state churches. Likewise, the Founding Fathers knew that large numbers of Americans had come to this land to practice their faith free of persecution.

The religion clause of the First Amendment was meant to protect religion against government, not government against religion. Government neutrality in religion, which is what the First Amendment requires, is one thing; but hostility to religion by the government is quite another.

In recent decades, some people have turned the Bill of Rights on its head -- prayer excluded from schools, voluntary prayer by students excluded from commencement exercises, Christmas trees and menorahs prohibited from public property, all references to religion expunged from textbooks in public

schools. How does one classify those actions but as efforts "to prohibit the free exercise" of religion?

Indeed, ongoing efforts to exclude all expressions of religious faith from American public and civic life amount to nothing less than "a tyranny of the minority" -- an attempt by a small element of our population to deny to the vast majority of Americans the rights we are guaranteed under our Constitution.

Certainly, public funds should not be used to build church properties or to underwrite the cost of religious ceremonies.

But do silent prayers in the classroom, a child saying grace over her meal in a school cafeteria, or a Nativ-ity scene or a menorah on a courthouse square equate to "an establishment of religion?"

In truth, if our country is to significantly turn around the contemporary plague of murders in our streets, violence in our schools, soaring illegitimate birth rates nationwide, epidemic drug abuse by all ages, and the alarming decay of our society, then we would do well to allow religious values to assume anew the place of honor and significance that the Founding Fathers intended.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Returning to Basics

During the recent Senate debate on the Goals 2000: Educate America bill, I added an amendment, which the Senate adopted, calling for renewed classroom emphasis on such "core" subjects as English, mathematics, science, U.S. history, civics, and geography.

The aim of this piece of legislation is to put America's public school system back on track -- a goal that nobody can guarantee reaching, but an effort on which much of the future of our country depends.

Throughout my career, I have been, and remain, a strong believer in the value and necessity of a good education.

But I am, and have long been, frustrated with the condition of public education in America.

And all across our country and -- as indicated by much of my mail -- throughout West Virginia, as well, parents, teachers, and business and civic leaders are also expressing a growing dissatisfaction with our public schools.

All too often, mediocrity has replaced excellence, with the "dumbing down" of textbooks and the desperate pursuit, too often, of

educational fads and false panaceas that bore and cheat students of the fruits of real education.

Teachers who want to teach and children who want to learn are being physically threatened, assaulted, and having their very lives endangered by thugs and punks who arrive at school armed with guns and knives.

How can dedicated teachers teach, and how can motivated children learn, under such circumstances and in such conditions?

Public education is obviously not what it should be. More to the point, public education is not what it must be if our country is to maintain its position of political and economic leadership in the world and if future generations of Americans are to have any hope of enjoying the standard of living that most Americans experience today.

We need to fix America's public education system, and one way to reach that goal is to get back to basics -- courses and disciplines of study that will challenge and excite young minds, and that will better outfit our children to meet the demands that their careers, the workplace, and the real world will place on them in the years ahead.

February 16, 1994

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A New Order of the Ages

These words, **Novus Ordo Seclorum**, are found on the reverse side of the Great Seal of the United States and on the back of every U.S. one dollar bill.

Translated from the Latin, "Novus Ordo Seclorum" means "A New Order of the Ages."

In fact, these words indicate the confidence of our Founding Fathers that the establishment of the new "United States of America" was the beginning not only of a new nation, but of a new era in human history, as well.

Indeed, the American Revolution did signify the beginning of a new political dispensation in world politics.

The words of the Declaration of Independence flew in the face of the dominant philosophy of government in Europe at the time: "The Divine Right of Kings."

According to the theory on which rested the monarchies of Britain, France, Austria, Spain, and the other European kingdoms, as well as the tsardom of the Russian empire, a monarch was divinely ordained to rule in any manner that he saw fit. To oppose the monarch was to sin, because the monarch was the deputy of the Lord.

And to oppose the monarch's will was to oppose the Lord's Will.

Thus, by asserting the right of the governed to determine their own form of government, the Founding Fathers declared as "a divine right" the power of a free people to govern themselves.

Little wonder that "A New Order of the Ages" became one of the mottoes of the new United States of America.

Moreover, the example of the citizens of our country in determining their own form of government, electing their executive and legislative representatives, and charting their destiny as a people and a nation has inspired other peoples and nations ever since 1776.

Today, the United States represents the very essence of self-government and democracy to millions around the world.

As we pass through the last years of the twentieth century and stand on the threshold of the dawning twenty-first century, I hope that all Americans will grasp the significance of our incomparable heritage and exercise their duties as American citizens with a deeper appreciation and responsibility.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Balanced Budget Amendment To the Constitution (Part I)

Recently, the U.S. Senate rejected Senate Joint Resolution 41, a balanced budget amendment to our Constitution. Its demise was a victory for the American people, who deserve real leadership and responsible action to reduce the national debt.

By opposing the constitutional amendment, I am not suggesting that we should not bring our budget deficits under control. We must and we are.

However, a constitutional amendment to balance the budget would not accomplish that goal. It was not a substitute for responsible leadership, nor would it have been a catalyst for reasoned action.

That amendment, which called for annual balanced budgets beginning in the year 2001, was classic legerdemain--declaring, on the one hand, that the budget be balanced annually, and, on the other, that that mandate could be violated. Therefore, it constituted a false promise to the people.

Over the past dozen years the country has been on a national credit card binge. This is not the fault of the appropriations committees. Over the past half-century, 1945 to 1993, total congressional appropriations amounted to \$220 billion less than the total budget requests of all Presidents during that period.

The massive tax cuts of the early 1980's, which benefited the wealthy, and the huge defense build-up--together with spiraling entitlements, the S&L bail-out,

and the recession of the early 1990's--all resulted in a quadrupling of the national debt.

In other words, the borrow-and-spend mentality of the Reagan-Bush years added more than \$3 trillion to the nearly \$1 trillion of debt that had accumulated during the preceding 182 years of Republican and Democratic administrations.

To get control over budget deficits, debt, and interest on the debt will require tough and painful choices, including cuts in entitlements and increases in revenues--not gimmickry.

Pollsters often ask the American people a simplistic question that carries strong political appeal: "Do you favor a constitutional amendment to balance the budget?" The pollsters do not ask, "Do you favor increased taxes? Or cutting social security, veterans compensation and pensions, or military pay? Or cutting funds for education, law enforcement, or the war on drugs?"

We must not risk seriously crippling our economy with a "feel-good" constitutional amendment that would defile the Constitution and fool the American people, only to enhance the reelection of national politicians.

The 1993 budget deficit reduction package, passed by Congress, was a solid start. We must continue to build upon that effort.

I shall have more to say on this subject in subsequent columns.

March 2, 1994

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Balanced Budget Amendment To The Constitution (Part II)

I voted for a balanced budget Constitutional amendment in 1982, but by 1986, having carefully researched U.S. history, the Constitution, and other authorities while writing my book on Senate history, I had changed my mind. I voted against the amendment in 1986.

I support efforts to reduce budget deficits, but a Constitutional amendment, standing alone, is an empty promise. It is political demagoguery to tell the American people that all we need in order to balance the Federal budget is to adopt a Constitutional amendment. The amendment, recently rejected by the Senate, does not explain how the budget is to be balanced, what taxes must be raised, or what spending programs must be cut. The American people are being fooled.

We often hear the argument, "The states balance their budgets; why shouldn't the Federal Government be required to balance its budget?" Sounds good. But to compare state constitutions with the Federal Constitution is like comparing apples with oranges.

For instance, states are not required to "raise and support armies", or "provide and maintain a Navy", or "provide for the common defense and general welfare of the United States," or deal with international crises, or manage a national economy.

Additionally, the states operate on two budgets: an

operating budget, which they strive to balance annually; and a capital budget, in which they borrow money for construction of highways, bridges, prisons, hospitals, schools, and so on, with bonds that mature in ten, twenty, or even fifty years. The states are in debt. How, then, can one say that the states balance their budgets?

Some states avoid operating deficits through such gimmicks as borrowing money from off-budget funds -- for example, pension funds. Other states shift state programs off budget, or onto county and municipal governments and independent agencies. As another gimmick, the cost of the highway patrol may be removed from the general fund and charged against a fund that receives revenues dedicated for highways.

This is not to say that states do not make hard choices. They do. The point is, the states are in debt, and if a Constitutional amendment to balance the budget were adopted, the Federal Government would shift programs onto the states and cities, and mandate that they fund them -- thus helping to balance the Federal budget, but greatly increasing the burden on state and local governments.

A Constitutional amendment to balance the budget is quack medicine. I shall have more to say on this subject in a subsequent column.

March 9, 1994

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Balanced Budget Amendment To The Constitution (Part III)

The Senate recently defeated a Constitutional amendment to require a balanced budget, beginning in the year 2001. As Senate Appropriations Committee Chairman, I conducted hearings on that amendment.

During those hearings, Secretary of HHS, Donna Shalala, testified that, "in the year 2000, if all programs are reduced across the board, the balanced budget amendment would require \$52 billion in cuts to Social Security." She added, "if Social Security were exempted, then the Medicare program would have to be cut that much deeper to achieve a balanced budget." Whether Social Security would be exempted from budget cuts, and whether all programs would be reduced across the board, would depend upon Congress's decisions in 2001. Of course, if Congress decided to exempt Social Security, other government programs would take deeper cuts than would otherwise result from an across-the-board cut.

Secretary of Veterans Affairs, Jesse Brown, testified that the Constitutional amendment to balance the budget would be "devastating" to VA programs. Veterans compensation and veterans pension benefits would be cut, many VA hospitals would close, and thousands of VA employees would lose jobs. "We could be forced to default on our commitments to those whose service has kept our Nation free and strong and to the survivors of those who made the ultimate sacrifice," Secretary Brown said.

Likewise, Defense Secretary William Perry expressed concern, saying, "the balanced budget amendment could severely jeopardize America's national security," deplete force structure, cut the National Guard and Reserves, "and the ripple effect both of those cuts and the attendant civilian jobs associated with them would have a substantial effect on the general economy."

Other department secretaries testified to severe cuts in vital programs in the year 2001 if the balanced budget amendment were adopted. Education and health care; highways, bridges and waterways; water and sewer projects; civilian research, environmental programs, job training, military pay and retirement benefits; law enforcement programs, border patrols, the war on drugs -- all these, and hundreds of other programs necessary to the Nation's health, safety, and well-being would be drastically cut when the Constitutional amendment became effective seven years from now. Its traumatic effects upon the economy would be felt nationwide.

The budget deficits must be brought under control, but a Constitutional amendment is not the answer. The more orderly approach was begun with the passage of the 1993 budget deficit reduction legislation. Congress and the President, working together, made a solid start. We must continue on that road and build upon the foundation that was laid. More on this subject later.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Balanced Budget Amendment to the Constitution (Part IV)

The recently rejected Constitutional amendment to balance the budget would have been bad economics. The federal deficit depends, in great measure, on the state of the economy. The deficit increases automatically whenever the economy weakens because tax revenues fall and federal payments from the Treasury, like unemployment compensation, rise. Therefore, these same rising deficits act as economic stabilizers in periods of recession. In such situations, expenditures for unemployment compensation, food stamps, and other assistance programs sustain private incomes and keep sales, employment, and production at higher levels than they otherwise would be.

A balanced budget amendment would force us to raise taxes and cut expenditures even when the economy is weak--exactly the opposite of what is needed in a failing economy to keep it from sliding into a recession or even a depression. Such a course should not even be considered as a temporary policy during times of recession, much less enshrined permanently, in our Constitution.

Last year, we enacted a law, for which I voted, to reduce the deficit by around \$500 billion dollars over five years--according to the Office of Management and Budget (OMB). That budget deficit reduction law established a hard freeze on discretionary spending for the next five fiscal years,

which means that not even increases for inflation will be permitted, under the discretionary spending limits. Mandatory spending targets were also set; these are programs which, by law, are required to be funded. The vote on last year's deficit reduction package showed that, though real deficit reduction is not easy, it can be done.

Perhaps the best measure of the seriousness of the proposed balanced budget Constitutional amendment is that most of its sponsors in both the House and Senate voted against last year's budget reduction package. In other words, they opposed real deficit reduction when it was on their plates! Of course, these members of Congress are the same members who cannot wait to tell their constituents that they voted for a balanced budget amendment.

To those who support a balanced budget amendment to the Constitution, I say: "What specific taxes would you raise, and what specific entitlements and other mandatory funding programs would you cut, in order to balance the budget?" When it comes to the specifics, the silence is deafening.

A Constitutional amendment to balance the budget would be bad for the economy and bad for the Constitution.

I shall have one more column on this subject.

March 23, 1994

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Balanced Budget Amendment to the Constitution (Part V)

The proposed Constitutional amendment, recently rejected by Congress, promised a balanced budget without providing any mechanism to enforce that goal. It simply declared that "total outlays for any fiscal year shall not exceed total receipts for that fiscal year."

If the amendment were not enforced, the American people's faith in the Constitution would be greatly undermined. On the other hand, the likelihood is that the amendment would be enforced, and, therefore, by Constitutionalizing the budget process, an extraordinary expansion of executive and judicial authority would appear to be mandated. Both state and Federal judges might well be required to make decisions about taxing and spending -- issues that the courts clearly lack the institutional capacity to resolve in any satisfactory manner.

The Constitution and its previous amendments are a charter of government and of individual liberties. It is decidedly not a charter of economic policy. Hence, the amendment would alter the Constitution by introducing matter irrelevant to its fundamental and traditional purposes.

Furthermore, its adoption would open the possibility that tax increases or spending cuts would be ordered by the courts, whose members are not elected by the people but who serve under lifetime appointments.

Some may say that the courts would consider such questions to be "political" and, thus, beyond their

scope. However, the most recent decisions by the U.S. Supreme Court suggest that the Court would be inclined to review those questions that might once have been considered political.

Moreover, if the amendment were adopted, no longer would the people's branch -- Congress -- have control over the power of the purse, the supreme balance wheel in our Constitutional system of checks and balances.

Madison stated in *Federalist # 58*: "This power over the purse may, in fact, be regarded as the most complete and effectual weapon with which any Constitution can arm the immediate representatives of the people for obtaining a redress of every grievance and for carrying into effect every just and salutary measure."

We should ask ourselves whether a balanced budget amendment appropriately fits with the underlying purposes of our Constitution. We should question whether this amendment is enforceable, or whether it would become a broken promise, thus furthering the public's disillusionment and distrust. Most importantly, while the amendment sounds like a simple little plan to balance the budget, it would permanently damage our Constitutional system of separation of powers.

Although Congress has rejected the amendment for this year, it will be back again and again as politicians seek to milk it for votes. We should beware of this poisoned pill.

Clean Coal Technology Program Makes the Grade

The U.S. Department of Energy (DOE) recently released a midterm report on the impact of the Clean Coal Technology program, and the initiative received glowing marks.

In fact, the DOE reports that the clean coal program, which I authored and pushed through Congress in 1985 to expand coal use and protect coal mining jobs, has enjoyed major success in terms of creating new coal technologies and associated jobs.

I firmly believe that the Clean Coal Technology program is a necessary investment in our nation's energy and economic future, and the DOE report confirms that the program has made major inroads in the development of innovative emissions control and power generation technologies to expand coal use, protect mining jobs, and create new market opportunities at home and in the international marketplace.

DOE's report, entitled, "Clean Coal Technology--The Investment Pays Off," spotlights 23 projects that are in operation or have completed test runs, and another 13 scheduled to come on-line by the end of 1995. In all, 45 clean coal projects in 21 states are underway, representing a federal investment of \$2.5 billion and a private sector match of more than \$4 billion.

The first group of suc-

cessful projects are aimed at modernizing existing coal-fired plants with advanced pollution-control technologies, helping them to meet future environmental challenges while continuing to utilize our abundant coal reserves.

A second batch of projects, scheduled to be up and running between now and the year 2000, will focus on the development of cleaner and more efficient power generating systems for use in the years ahead.

The new coal technologies being developed under the clean coal program also offer the United States a competitive edge in world markets, where the demand for clean coal technologies is skyrocketing.

DOE officials predict that by the year 2010, the global demand for clean energy technologies will create a \$200 billion export market. The early success of the clean coal program puts our country in an excellent position to capture a significant share of that market.

The Clean Coal Technology program is fulfilling the promise that I envisioned when I created the initiative in mid-1985: that through a working partnership between government and private industry, we can strengthen our economy and achieve a greater measure of energy independence by maximizing the use of coal in the 21st Century.

Confronting the No. 1 Drug Abuse Problem of America's Youth

If asked, most Americans might guess that the drug most commonly abused by America's youth is marijuana, "crack," cocaine, or heroin.

However, according to statistics compiled by the National Association of State Alcohol and Drug Abuse Directors, alcohol remains the Number One drug problem among young Americans.

Just as with illicit drugs, alcohol impairs one's judgment, causes people to drive recklessly, contributes to highway accidents and fatalities, and is often a contributing factor in assaults and murders. Alcohol can also lead to the gradual death of habitual drinkers.

According to 1988 data, alcoholism and related problems annually cost the nation \$85.8 billion -- \$27.5 billion more than the cost of the illicit use of other drugs.

Less than ten years ago -- 1985 -- approximately 4.6 million teenagers, ages 14-17, experienced "negative consequences" (automobile accidents, arrests for intoxication, and such) as a result of the consumption of alcohol.

Worse, in 1988 alone, 800 children up to age 14, and more than 8,000 young

Americans ages 15-24, died in alcohol-related highway accidents.

Again, while automobile drivers age 16 to 24 comprise but 17 percent of our total of licensed drivers, this age group is involved in about 36 percent of all fatal, alcohol-related automobile crashes.

Further, a recent survey indicated that nearly one third of high school seniors believe that no risk is involved in imbibing four or five alcoholic drinks almost every day!

Against this background, I succeeded in adding an amendment to the "Goals 2000: Educate America Bill," recently signed into law, calling for every school in the United States to be alcohol-free, as well as drug-free.

The aim of my amendment is to ensure that alcohol abuse receives as much corrective attention as that directed toward the elimination of other dangerous drugs.

We must not ignore alcohol and drug abuse by teenagers. Our schools should demand of our children greater self-discipline and personal responsibility, and insist on a drug-free, alcohol-free educational environment.

West Virginia's Sylvan Treasure

Recently, I helped dedicate the newly completed "Falls of Hills Creek Trail," a scenic 114-acre delight located near Richwood, Nicholas County, in the Monongahela National Forest. I added more than \$800,000 in federal funds to make this site more accessible and tourist friendly. This is money well spent.

Included in this development are three waterfalls, one of them -- at 63 feet -- the second highest in our state, as well as a series of improved pathways, boardwalks, and stairs to better accommodate hikers and other visitors.

The nearly one-million-acre Monongahela National Forest serves multiple uses as a massive watershed for the Ohio and Potomac Rivers, as one of the world's finest timber stands, and as the site for great outdoor recreation areas for camping, hunting, fishing, and tourism.

Annually, an estimated 2.2 million people visit sites in the Monongahela National Forest and surrounding areas, such as Spruce Knob -- the highest elevation in West Virginia -- Seneca Rocks, Cranberry Glades, the Canaan Valley, Blackwater Falls, Dolly Sods, and Smokehole Canyon.

Significantly, these visitors -- many from outside West Virginia -- add

dollars to West Virginia's economy through motels and hotels, restaurants, and other tourist-oriented enterprises.

Recognizing the value of tourism to our state's economy, throughout my Senate career, I have promoted efforts to strike a balance between enhancing the Monongahela National Forest as a tourism resource and protecting its natural beauty and tranquility.

In the past 2 years, I provided \$3.4 million to initiate replacement of the busy Seneca Rocks Visitors Center, which had been destroyed by fire in 1992.

In 1989 alone, an estimated 144,000 tourists visited Seneca Rocks, while authorities estimate that more than 10,000 climbers annually attempt to scale this unique rock formation.

In response to such popularity, in 1990, I helped dedicate a new Seneca Shadows Campground, for which I had provided more than \$2 million in federal funds to replace a prior facility destroyed by flooding. This camping facility can accommodate 550 campers and contains a 200-seat amphitheater.

My aim is that the Monongahela National Forest will play an important role in our state -- combining the preservation of natural wonders with the benefits of tourism dollars.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Battling the Backlog

For many coal miners, the diagnosis of black lung disease--or pneumoconiosis--confers a lifetime sentence. Lungs clogged after years of breathing fine coal dust can eventually shut down, forcing sufferers to rely on equipment for every breath they take.

In 1970, the federal government took significant steps with respect to pneumoconiosis with the approval of new federal standards to cut down on the amount of coal dust inhaled by miners. A year earlier, in 1969, I was a co-sponsor of legislation to create a federal benefits program to help those who suffer from black lung disease.

Three different Administrations have, for more than a decade, recommended the closing of black lung field offices. During that time, I have worked to keep black lung field offices open and to unplug the black lung claim backlog and afford claimants the quickest possible decision. Among my efforts has been the addition of money to federal appropriations bills to provide extra resources to the Black Lung Benefits Review Board (BRB), the entity that makes the final decisions on black lung appeals.

During Senate hearings last year, incoming Labor

Secretary Robert Reich--at my urging--agreed to make every effort to clear up the backlog of black lung claims at the appeals level. After Executive Branch foot-dragging on the claims backlog since the early 1980's, Secretary Reich's willingness to work on this problem was welcome news.

Just recently, Secretary Reich reported to me that significant progress has been made in whittling down the claims backlog. In fact, since appointing new leadership at the BRB last July, Secretary Reich told me that the average time between receipt of a black lung appeal and its disposition has been reduced by 30 percent.

In addition to my efforts to eliminate claims backlogs and to keep clinics and black lung offices in operation, I recently co-sponsored legislation to reform the black lung program and to make the process for determining eligibility for black lung benefits more equitable.

Black lung sufferers deserve the benefits to which they are entitled, and they deserve a speedy decision on their claims. I, for one, will continue my efforts to help ensure that that happens.

Opening the Book on Reading

In a recent survey, the A.C. Nielsen polling company discovered that American children ages 6 through 11 watch television nearly 24 hours each week.

The same survey revealed that this trend continues into the teenage years, during which American youth watch television an average of nearly 22 hours a week.

Indeed, the American Psychological Association (APA) suggests that television may exert a malignant influence on young children, exposing them to gratuitous violence and teaching them antisocial attitudes toward others.

In particular, the APA reports that, by the time an American child, watching the average of three hours of commercial television programming per day, has attained the seventh-grade level, he or she has already witnessed an average of 8,000 television murders and been exposed to more than 100,000 other assorted acts of violence.

Since its widespread introduction into American homes in the 1950's, television has usurped undeserved numbers of precious hours in which children might be otherwise occupied with one of life's most rewarding activities: Reading.

Reading enjoys a special place in our heritage.

In generations past, children were schooled primarily to equip them to read the Bible. The young Abraham Lincoln was so hungry for the written word that, after all of his daily chores were completed, he curled up with books beside the fireplace to read long into the night. Many immigrants coming to this country arrived desperate to learn to read, a skill that their peasant origins in some parts of Europe had denied them.

Our American heritage -- indeed, our West Virginia heritage -- has traditionally placed a high premium on reading skills. Good reading ability, as well as an acquaintance with the rich corpus of American and English literature, is an entree to a wealth of wisdom, knowledge, and pleasure that can lend priceless joy to any life.

I hope that more adults will introduce their children to the rewards of reading by first reading to their children, and then by encouraging their children to read for themselves.

Any child who grows to maturity with a love of reading will eternally bless those who introduced him or her to that magical appetite.

So, turn off that television set, and hand your child a book!

West Virginia's Economic Warming Trend

Although there is still much work ahead and many gains to be made, I am encouraged this spring by the recent release of studies indicating an "economic warming trend" in West Virginia.

A study by Georgia State University (GSU), released earlier this year, reports that economic growth in the southeastern U.S., including West Virginia, outpaced the rest of the nation during the last quarter of 1993. Of West Virginia, the study says that "solid economic expansion is occurring in this coal state."

The GSU study highlights construction, retail trade, and convention lodging as West Virginia growth areas, finding particularly that an increase in federal employment, which I have helped bring to West Virginia, is boosting our state's economy.

Further, a January Kiplinger Washington Letter predicted that during 1994, "Government projects will give West Virginia a lift..." noting especially some of my initiatives for our state, including the new NASA Independent Verification and Validation Center at Fairmont, the FBI Fingerprint Center at

Clarksburg, and the Coast Guard and IRS facilities near Martinsburg.

The increased federal presence that I am shepherding to our state is bringing construction jobs and long-term employment, while also supplying an economic transfusion for communities and private-sector businesses that provide supplies, equipment, and support services to new enterprises and their employees.

In addition, better highways, for which I have added federal funding to appropriations bills, are helping to attract new enterprises into our state and providing easier, less-costly transport of goods for our businesses, while opening West Virginia to expanded tourism -- the state's fastest-growing industry.

The studies cited above indicate that my efforts to lay a sturdy foundation for economic growth in West Virginia are paying off. The work of erecting a superstructure on that foundation lies ahead, and that is the responsibility of all West Virginians. Together, we should seize every opportunity to add to the current momentum of economic growth and to continue forging our state's future.

Extending Health Care To Rural West Virginia

On my most recent trip through Southern West Virginia, I travelled to Northfork in McDowell County to participate in dedication ceremonies for a new health care facility that will serve local residents.

The drive to McDowell County underscores one of the key elements of health care delivery in our state: access to doctors, nurses, and medical facilities.

For a state like West Virginia--with many small communities nestled in mountainous terrain--the ability to get to a doctor or to a medical facility is crucial to those seeking health care.

In my ongoing effort to improve and expand health care in West Virginia, I have concentrated my energies in two areas: outreach programs, and health care delivery on the local level, such as the new Northfork clinic, a satellite facility of the Tug River Health Association, Inc., located in Gary.

The new health care center, for which I added \$500,000 in funds to the federal budget, will afford close-in primary dental and basic health services to people in the Northfork area, without the need first to travel to distant hospitals and clinics.

The Northfork facility--which also required local matching funds and which is operated, in part, by local volunteers--demonstrates the importance that many rural West Virginians attach

to having primary health care near at hand.

Outreach programs are also critical to health care in West Virginia, which will be the primary mission of the Southern West Virginia Center for Rural Health, a Huntington-based facility for which I added \$4.5 million in federal funds to a 1993 appropriations bill.

The new facility in Huntington--for which ground will be broken soon--will serve the health needs of a dozen West Virginia counties: Cabell, Wayne, Lincoln, Mingo, Logan, Boone, McDowell, Wyoming, Mason, Roane, Putnam, and Jackson.

To further meet the health needs of West Virginia's rural population, I have supported the establishment of the Mountaineer Doctor Television (MDTV) network.

Since 1991, I have added more than \$2.8 million to federal funding bills for MDTV, which affords physicians in a growing number of rural health facilities access to expert assistance from the West Virginia University Medical Center and the Charleston Area Medical Center via two-way, interactive television hook-ups.

These innovative health programs promise genuine improvements in rural health care in our state, and should make important contributions to the health of thousands of West Virginians in the years ahead.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Haitian Refugee Crisis

Like other Americans, I am moved by the multiple problems besetting the people of Haiti.

A country with no democratic tradition, Haiti has suffered a succession of dictatorial regimes, interrupted at points by U.S. interventions.

Worse, Haiti has ranked for decades as one of the world's poorest countries.

Disastrously, since 1992, thousands of Haitians have taken to the sea in flimsy craft, headed for the United States in a quixotic dash for economic opportunity.

In late 1992, an estimated 500,000 Haitians were prepared to exodus their country to seek asylum in the United States.

During the 1992 election, now President Clinton criticized the Administration policy of repatriating Haitian economic refugees intercepted at sea, while advising genuine political refugees to seek U.S. asylum at processing centers in Haiti.

But, facing reality, President Clinton later declared his intention to continue the policy initiated by the previous administration.

Recently however, President Clinton reversed himself, announcing the processing of would-be Haitian asylum-seekers at sea or in third countries, if possible.

This is a return to a policy that had to be abandoned when 10,000 Haitian refugees were intercepted in May 1992 alone, with 12,000 Haitian refugees living in tents at Guantanamo

Bay, Cuba.

While Americans empathize with Haitians' desire for a better life, the United States cannot solve the economic problems of the world by opening our country, piecemeal, to millions wanting a better standard of living.

Thousands of Americans are currently struggling with long-term unemployment or underemployment, seeking to forestall their own plunge into poverty and hopelessness.

Moreover, particularly at this time, the states in the Southeast and Southwest are not equipped -- nor is the Federal government equipped -- to absorb tens of thousands of economic refugees flooding into our borders with few, if any, employable skills and little knowledge of English or any means of survival other than by becoming wards of the state.

Our schools, hospitals, and social service agencies are already stretched to meet the needs of our own citizens. The further burden placed on these agencies by the additional needs of thousands upon thousand of immigrants threatens to strain them to the breaking point.

We cannot afford to permit a political crisis to become the cover for an influx of economic refugees seeking a better life in the United States.

Better, we should continue pressuring Haiti to institute a legal, democratic government that will begin to meet the real needs, political and economic, of the Haitian people.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Well Done, West Virginians

West Virginia's outstanding workforce is a key pillar in the state's economic foundation and a crucial component in my effort to expand and diversify our state's economy.

Two recent events in West Virginia in which I participated underscored just how valuable our West Virginia workers are, and how they serve as one of our state's strongest selling points to federal agencies and private-sector firms looking to expand or relocate.

Most recently, I attended an awards ceremony in Parkersburg in which eight public service employees were honored for their community service activities. At an earlier gathering in Charleston, I joined with AT&T employees to celebrate their company's decision to retain its Kanawha County Customer Sales and Service (CSS) office--a decision largely based on the remarkable productivity and high quality of work performed by the men and women who staff that facility.

Both functions allowed me to shine the spotlight on the contributions of our workers to West Virginia's economic prosperity.

A case in point is the expansion of the Bureau of Public Debt operation in Parkersburg. In response to my repeated urgings, the Bureau of Public Debt, in 1991, began the process of consolidating its offices at its Parkersburg facility, which boasted exceptionally high productivity and low turnover.

The Bureau explained its decision this way: "Our

[Parkersburg] computer center is highly regarded as a modern, efficient, and well managed installation. A primary reason for that is because of our well-trained and experienced staff....Two-thirds of our employees have more than 15 years of service with the Bureau. This is a very unusual and desirable level of data processing experience....Our employment and retention experience in Parkersburg has been very positive and is one of the most dramatic differences between our Parkersburg and Washington locations."

Employee excellence was also cited as a key factor in AT&T's reversal of an earlier decision to close its Charleston CSS office. After AT&T announced plans to eliminate its Charleston operation, the employees there refused to quit. In fact, they put their shoulders to the wheel and increased the facility's productivity--and their high sense of dedication was rewarded with a decision by AT&T to remain in Charleston. Such a reversal does not come easily to a large national company, but AT&T officials demonstrated that they understand that a firm is only as good as its employees.

The experiences of AT&T and the Bureau of Public Debt are just two examples of the numerous success stories attributed to West Virginia's strong work ethic. West Virginians understand the meaning of hard work and a job well done, and the rewards of that attitude are being felt across our state.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Good Program Run Amok

A letter I received recently from a West Virginia teacher touched a deep chord and compelled me to call into question the operation of a federal entitlement program that reportedly is creating problems in our nation's classrooms.

Let me share a portion of that teacher's letter that describes a situation she believes has been created by abuses of the Supplemental Security Income (SSI) children's disability program, which provides monthly cash benefits to students who have been tagged medically or behaviorally disabled.

"I want to talk to you about an issue which is probably the most insurmountable obstacle I have to face as a teacher....students now are rewarded monetarily for disruptive behavior and lack of any effort by SSI payments," the teacher wrote.

"The resulting situation is that many students know the 'racket' and deliberately try to fail so they can test into special education. Students who are placed in a special education program at school can apply for these benefits and receive over \$400 a month," she said.

Armed with these words--and with several news stories which detailed reported abuses of the SSI program--I recently questioned top federal officials during a Senate Appropriations Subcommittee hearing about the operation of the program, which falls under the jurisdiction of the Social Security Administration (SSA).

The officials acknowledged "shortcomings" in the program, which channels benefits to nearly 600,000 children nationwide, and agreed to provide the Senate Appropriations Committee with a detailed report aimed at correcting the program's flaws.

No one wants to deprive children of needed benefits, but reports of parents "coaching" their children to disrupt class and disobey their teachers in order to qualify for SSI benefits raises serious concerns about the operation of this program.

I was particularly disturbed when, during subcommittee testimony, federal officials admitted that the SSA had not included provisions in the disability program regulations to guard against fraud because they had not contemplated possible abuse of the program.

I am also troubled that the program guidelines do not require that the monthly disability checks be spent on services to help the recipients.

Unfortunately, the SSI children's disability program is a prime example of a well-intentioned federal program running amok, and the warning bells that have been sounded about its operation need to be answered.

The goal of the program--to provide assistance for disabled children--is one that I support, and I hope that SSA officials will take immediate steps to get this program back on track.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

West Virginia's 131st Birthday

On June 20, 1863, West Virginia was officially admitted to the Union as the Thirty-Fifth State.

West Virginia was born at a crucial time in American history, recognizing its responsibility to remain loyal to the Union, but accepting that its borders were lined with a large aggregate of Confederate loyalists, some of whom later served in high public office in the newly formed state of West Virginia.

But the history of West Virginia did not begin in 1863.

Long before European explorers came to America, numerous Indian tribes inhabited parts of West Virginia, and during the Colonial Era, much of current Southern West Virginia was claimed by the Cherokee nation.

In 1763, following the French and Indian War, the British Crown sought to limit settlement in present-day West Virginia, all to naught.

Into West Virginia poured the vanguard of the great American pioneer expansion westward toward the Pacific.

Into the vacancy of then western Virginia came such pioneers as Christopher Gist, Thomas Decker, Morgan Morgan, Andrew

Lewis, Daniel Boone, Lewis Wetzel, and "Mad Anne" Bailey.

Many of those whose plans included traveling toward the riches of western gold and silver found the natural beauty of West Virginia too great to abandon and settled in the Mountain State, recognizing the value West Virginia provided in raising a family and establishing one's place in society.

Today, many West Virginians have kept alive those pioneer values and the spirit of individual responsibility and personal achievement on which our nation and our state were originally founded.

West Virginia is a unique place, and West Virginians are possessed of a rare heritage that blends religious faith, an innate patriotism, a love of liberty, family loyalty, personal integrity and self-discipline, and an appreciation for the natural beauties that continue to surround them in their lives.

On this, West Virginia's 131st birthday, we all should embrace the pioneering mindset of our forefathers as we bring West Virginia into the 21st century.

Happy birthday, wild, wonderful West Virginia!

June 15, 1994

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Working for Working West Virginians

In approaching the new millennium, West Virginia, as the rest of the country, must meet the challenges of a global economy by continuing our efforts to maximize our productivity. Honing this competitive edge has been, and will continue to be, inextricably tied to the health and safety of our work force.

Growing up in West Virginia's coal fields made me acutely aware of the health and safety needs of the worker. Consequently, much of my public service career has been aimed at improving the working conditions of West Virginia's workers.

In 1969, I secured the first funding for the National Mine Health and Safety Academy in Beckley, and I have continued to support this critical facility by adding more than \$23 million, over the years, to build, equip, and operate it. In 1992, I dedicated a new disaster simulation laboratory there. This lab gives disaster-relief workers realistic experience in responding to mine emergencies.

In the early 1960's, I pioneered efforts toward improved worker safety by establishing the Appalachian Laboratory on Occupational Safety and Health (ALOSH) in Morgantown. Subsequently, recognizing increased needs and the commendable work taking place at the ALOSH facility, I added nearly \$60 million to appropriations bills, beginning in fiscal 1990, to construct and equip a new ultra-modern laboratory at Morgantown -- the National Institute for Occupational Safety and Health (NIOSH).

NIOSH, construction of which is slated for completion in early 1995, is planned to be a world-class center for research into workplace health and safety. The work at NIOSH is intended to put worker safety and health considerations at the forefront of the planning stage of any workplace construction or design project.

As a complement to these efforts, I recently announced that the Occupational Safety and Health Administration (OSHA) has chosen to designate West Virginia University (WVU) as the location of its Region III OSHA Training Center.

This initiative, which will be a collaborative endeavor between WVU and the AFL-CIO -- serving West Virginia, Maryland, Delaware, Pennsylvania, and the District of Columbia -- will offer public training classes targeted to safety administrators, industry officials, and others interested in worker safety.

From the steel mills in our northern panhandle, to the chemical plants in the Kanawha Valley, to our southern coalfields, West Virginia's industries -- which, by their very nature, entail hazardous activities for our workers -- are realizing the competitive bonuses of promoting a safe and healthy work force.

Indeed, West Virginia's pioneering efforts with the National Mine Safety and Health Academy, ALOSH, NIOSH, and the new OSHA Training Center will help to put West Virginia in the forefront of the study and promotion of a safe, healthy workplace.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Preparing for the Challenges of Tomorrow

Less than a generation ago, a young West Virginia teenager might leave school at the legal age; find work in the mines, steel mills, chemical plants, or other industries in our state; and carve out a lifelong occupation at decent wages.

Today, we live in a vastly changed economic landscape.

Our coal mines are increasingly mechanized; those steel mills still operating against foreign competition are more and more specialized in both products and employees; and the chemical industry is similarly an international proposition, with many once American jobs now located outside the United States.

Cosmically, we are in the vestibule of the Space Age, and yet, many American school children have little inkling of even how to locate their home states on a map of the United States!

In too many of our schools, more energy is expended in behalf of athletic competition than in classroom competition. Star athletes carry more prestige than chemistry and math geniuses, and, too often, more money is expended on athletic equipment or driver education than on computers and laboratory equipment.

Simultaneously, across the Pacific Ocean, year af-

ter year, young Japanese students fix their sights on academic achievement, suffering pangs of deep anxiety as they prepare for examinations to determine their educational and professional futures. The competition for places in top-ranking Japanese universities and professional schools is intense.

And across the Atlantic Ocean, in Germany, 50 percent of high school students spend two or more hours daily on homework, and only 7 or 8 percent watch television for five or more hours daily.

By contrast, only 29 percent of U.S. students expend a similar amount of time daily on homework, while between 21 and 24 percent waste as much as five hours daily in front of the television tube.

Those Japanese and German young people are the future economic competitors that our American youth will be confronting in the world marketplace.

That is the future.

Our children are our most precious assets.

Our schools are the institutions charged with preparing our children to meet the challenges of the future.

Will young Americans be prepared to compete on the economic playing fields of the 21st century?

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

“Back to Basics”

An old song about 19th century schooling begins, “School days, school days, dear old Golden Rule days! Reading and writing and ‘rithmetic,”

Unfortunately, though our schools were originally established to educate our youth in the essential disciplines vital to making a living or advancing academically in a serious and competitive society, increasing demands have come to burden teachers and the school day with activities and options that too often crowd out serious academic subjects.

Today, academic subjects too often must compete for time in our schools with pep rallies, sports, driver’s training, and various clubs and other non-academic activities, all in a school day the length of six hours or less.

This is not to say that some such activities are not valuable in themselves, or that our students should not strive for a well-rounded education. But this smorgasbord of non-academic choices confronting our students leaves too little time for the “core” academic subjects that are increasingly vital for success in world competition.

Recently, a distinguished group of Ameri-

cans -- the National Education Commission on Time and Learning -- recommended both to the Federal government and the National Governors’ Association that the bulk of schooltime should be refocused on subjects such as English, mathematics, geography, the sciences, algebra, history, geometry, physics, chemistry, economics, foreign languages, civics, and the arts.

Throughout their years of pre-university schooling, German students spend an average of 3,528 hours in such “core” subjects, French students 3,280 hours, and Japanese students 3,170 hours.

Alarmingly, U.S. students average only 1,460 hours in comparable subjects during the same period.

Today, Western Europe and Eastern Asia are competing head to head with the United States in nearly every field of production and business.

As a nation and as a people, we have an obligation to prepare our children for the realities of the future.

Let us allow the schools to do what schools can do best: Teach serious academic subjects in a serious educational atmosphere.

July 6, 1994

By U.S. Senator Robert C. Byrd

Resisting the Tide Of Illegal Immigration

Recently, I presided over a Senate Appropriations Committee hearing to explore the problems -- including the increasing costs -- associated with illegal immigration in the United States.

Illegal immigrants have forced heavy financial burdens on this nation as a whole, and our border states, such as California and Florida, have been especially pinched. Several states have recently taken legal action, claiming that federal mandates have caused them undue financial hardship. These states have all but completely tried to exempt themselves from any of the blame for illegal immigration, pointing the finger of responsibility solely at the federal government.

In their testimony before the Senate Appropriations Committee, the governors of Arizona, California, and Florida decried the problems of illegal immigration and called for more federal funding to reimburse their states for the costs of addressing these growing problems.

The Federal government does have a legitimate responsibility to re-analyze and modify its immigration policies. But the problems of illegal immigration are not limited to federal laws and mandates. It is time to realize that border states, as well as the Federal government, bear the burden for helping to stem the swelling ranks of illegal immigrants.

In my study of the issue, I found evidence that California, to some extent, encourages immigrants to enter its borders illegally. In a 1993 brochure, the California Department of

Health Services promoted a state-administered program entitled "Baby-Cal." The brochure invites illegal immigrants to receive pre-natal and maternity care and promises, "If you are not lawfully in the U.S. or have applied for amnesty, Medi-Cal will not report you to the INS" (Immigration and Naturalization Service). The care is free to the illegal immigrants, but is paid for by the tax dollars of legal U.S. citizens.

Regrettably, programs such as "Baby-Cal" act like magnets to attract illegals across our borders, making it even more difficult to barricade against illegal immigration. As long as immigrants know that the states will provide free medical care and citizenship for their newborn children, they will continue to be encouraged to enter U.S. borders illegally and take advantage of the hospitality of generous state-administered welfare programs such as California's "Baby-Cal."

While solutions to the problem of illegal immigration are far from fruition, it is clear that we need to refocus our priorities. Illegal immigration is a problem that affects all levels of government and threatens government's ability to adequately serve our own citizens.

Issuing a blank federal check is no solution to the problem. That is not a responsible or comprehensive answer.

It is clear that our country needs to refocus its priorities. Employers, state and local employees, and officials at all levels of government must get serious about the problem of illegal aliens if progress on this front is ever to be made.

Investments In Tomorrow

Recently, at a ceremony at Shepherd College at which I formally recognized the 1993 and 1994 West Virginia recipients of the national Robert C. Byrd Honors Scholarships, I challenged today's young students, saying, "Never stop growing; never cease wondering; never end your search for knowledge."

I have long believed that West Virginia's bright young men and women are among our state's most valuable assets, and I am deeply proud of the young scholars whom I met at Shepherd College.

As a means of encouraging such promising high school students to continue their educations, I initiated a national program in 1987 -- subsequently named by my Senate colleagues the "Robert C. Byrd Honors Scholarship" program -- to provide \$1,500 scholarships to talented graduating high school seniors who have been accepted for enrollment at an institution of higher education.

This program was expanded in 1993 to allow qualified recipients to apply for the same amount in each of the following three years of education.

These "Byrd Scholarships" are awarded to students in all 50 states, the District of Columbia, and Puerto Rico.

This year, 44 young West Virginians were named Byrd Scholars, bringing to a total of 345 the number of West Virginians who have been so hon-

ored since the beginning of the program, and to \$517,500 the amount awarded to these young West Virginians since 1987.

In West Virginia, Byrd Scholars are selected by a five-member panel composed of representatives from the West Virginia Department of Education and the Central Office of the State College and University System. The awards are based entirely on scholastic excellence -- not on extracurricular activities.

In addition, this year, 301 West Virginia high school valedictorians received the Robert C. Byrd Scholastic Recognition Award, which includes a \$50 U.S. Savings Bond, and is presented annually to valedictorians of each of West Virginia's public, private, and parochial high schools, as well as the West Virginia Schools for the Deaf and the Blind.

Since its beginning in 1969, this award, funded from a private trust, has been presented to 6,898 graduating West Virginia high school seniors, totaling awards valued at more than \$155,000 since its inception.

These young men and women are the future of West Virginia.

Believing as I do that hard work and genuine achievement merit our encouragement and reward, these recognitions of scholastic excellence are important investments in tomorrow.

National Gems

West Virginia's Harpers Ferry National Historical Park is celebrating an important anniversary this year -- its 50th birthday.

To mark that event, I participated in a dedication ceremony early this summer for the Park's latest additions -- namely, the John Brown Museum and the Industrial Museum.

As I spoke that day in Harpers Ferry, I was struck by the number of families who had gathered to enjoy the celebration and the park's many exhibits, and I felt gratified that the renovations and improvements at the Harpers Ferry facility had been made possible by nearly \$30 million in federal funding that I had obtained over the past 15 years.

In a larger sense, Harpers Ferry -- which, according to National Park Service officials, last year drew 375,000 visitors who pumped over \$30 million into the local economy -- is one in a strand of National Park pearls that stretches across our country, standing as a prime example of the benefits offered by our system of federally supported parks.

American writer Wallace Stegner said, "National Parks are the best idea we ever had. Absolutely American -- absolutely democratic. They reflect us at our best...."

Our National Parks represent much of what is great in our country: They preserve our natural wonders, provide a place for recreation and peaceful reflection away from the stresses of

our daily lives, and educate us about our history, advancing our understanding of the past in order to prepare us for the future.

Indeed, investments in our park system are investments in the future, and if we want the benefits which we derive from the parks to be available to our children, our children's children, and generations beyond, we must continue to preserve and protect these valuable resources.

In addition to Harpers Ferry, West Virginia is blessed with a number of park system units and facilities -- among them the New River Gorge National River, the Ohio River Islands National Wildlife Refuge, and the proposed Wheeling National Heritage Area and Canaan Valley National Wildlife Refuge -- that bring to our state hundreds of thousands of visitors each year. These facilities not only enrich the lives of people who visit them, but they also expand economic opportunities in the communities in which they are located.

As chairman of the Senate Appropriations Committee, I have worked hard to maintain and improve not only West Virginia's national parks and facilities, but also the park areas across our nation which annually draw millions of men, women, and children.

Our National Parks are gems that merit careful polishing, and I am committed to continuing my efforts to make needed investments in our National Park system.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Challenge to Young Americans

Recently, I hosted a luncheon at the U.S. Capitol for participants in the 1994 National Youth Science Camp, an assembly of some of America's most promising young high school scientists, selected from every state in the Union, including West Virginia.

Conducted for more than three decades annually at the Pocahontas County 4-H Camp near Bartow, the National Youth Science Camp aims to bring some of our nation's brightest young men and women together for several days' exposure to outstanding scientists, national leaders, and the beauties of West Virginia, in hopes of inspiring these young people to pursue careers in science and related fields, as well as to introduce them to the natural wonders and hospitality of our state.

At the Capitol luncheon, I reminded the Youth Science Campers that, just as past generations faced prodigious challenges and triumphed, their generation, too, would face obstacles ahead, and that into their hands would likewise be delivered the duty of preserving, strengthening, and improving our country.

In West Virginia and

across the nation, our most precious assets are, indeed, our children -- boys and girls who will be tomorrow's parents, leaders, and decision-makers.

Some of the challenges that I issued at the Youth Science Camp luncheon are appropriate for all of the young people of West Virginia, as well.

In 1994, and as the beginning of the Third Millennium approaches, our youth are confronting a rapidly changing world.

Unfortunately, those who are not prepared to work and perform in such a world will find themselves in marginal or peripheral occupations.

To make the most of their promise, today's young men and women must not accept easy paths. Further, they must learn to accept only the best from themselves. To do otherwise will be to cheat themselves.

That is the primary challenge facing the rising generation.

For my own part, and with my eyes on the future, I shall continue working to lay foundations on which young West Virginians can depend in their efforts to meet the future with optimism and courage.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Taking Aim at School Violence

For the sake of our children's future, I am deeply concerned about our schools. Schools should be sacred precincts, in which students should be free to learn, search, and expand their minds, without fear for their very lives.

I am frankly alarmed that American school children daily face increasing crime and violence. Some of America's schools have become "war zones," with teachers living in fear for their lives and innocent children becoming casualties.

We have come to a sad state of affairs when metal detectors have to be installed at the schoolhouse door, and unless we take deliberate steps now to halt the violence in our schools, I fear for the future of our country.

This is not a problem restricted to urban settings. Regrettably, weapons and violence are turning up even in the small rural schools in our own state.

For that reason, I recently offered two amendments -- which the Senate adopted -- to the "Improving America's School Act," my amendments being aimed at addressing the problem of violence increasingly infecting our schools.

Many educational systems choose to address the problem of students bringing weapons to school through their own disciplinary process: taking the weapons away; sending students home; giving them detention; or reporting them

to their parents. These amount to little more than "slap-on-the-wrist" punishments that circumvent local law enforcement.

Possession of a gun on school property is a felony, and the police should be notified.

Accordingly, I offered an amendment -- which the Senate adopted -- directing every local educational agency to require school officials to refer to the criminal justice system any student bringing a weapon to school.

The Senate also approved my amendment to require the U.S. Secretary of Education to conduct the first major study of violence in schools since 1978. As a gauge of the extent of the problem and the scope and success of ongoing efforts to counter school violence, this study would be an initial step toward developing a national plan of action for combating this insidious problem.

One of the most basic lessons that history teaches is that unless each generation is initiated into disciplines that past generations have mastered, a civilization cannot expect to survive.

In West Virginia and across America, our schools are the forges of our future.

For the sake of our children, for the sake of our culture, for the sake of the continued promise of our country, let us give the attention required to make our schools safe and free from weapons.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protecting the Wild in Wonderful West Virginia

Throughout my career in the Senate, I have worked for modern development across our state -- highway construction, recreational and flood-control dams, water and sewer improvements, energy development, improved locks on our major rivers, and other projects aimed at creating jobs and raising the standards of living of all West Virginians.

In these efforts, however, I have likewise been concerned to preserve and enhance one of West Virginia's most unique assets -- the natural wonders that are precious elements in our state's heritage.

Toward that end, in 1990, as a result of \$850,000 in funding that I added to an appropriations bill, the first eight islands were acquired to establish the Ohio River Islands National Wildlife Refuge, our state's first such natural reservation.

More recently, I helped to obtain \$2 million in a fiscal 1994 appropriations bill to initiate land purchase for the formation of the Canaan Valley Wildlife Refuge in Tucker County.

This summer, the U.S. Fish and Wildlife Service acquired the first 86-acre portion of this new wildlife refuge, in an area of the Canaan Valley known as Balsam Swamp.

This acreage comprises the cornerstone of West Virginia's second -- and the

nation's 500th -- National Wildlife Refuge.

Subsequent to the initial allocation, I supported another \$2 million in a fiscal 1995 appropriations bill, now making its way through Congress, toward the eventual acquisition of approximately 24,000 acres for the Canaan Valley refuge.

The Canaan Valley has long been recognized as one of West Virginia's most extraordinary natural features, hosting a wide array of animal species and more than 500 varieties of plants, including several found elsewhere only in some Canadian tundra regions.

The establishment of the Canaan Valley Wildlife Refuge represents a vital investment in the future -- especially, the future of our children and grandchildren -- by preserving for rising generations thousands of West Virginia acres of unique wetlands, and botanical and wildlife species almost exclusive to West Virginia.

I believe intensely in economic development, but I also believe profoundly in our stewardship of those invaluable natural assets that set West Virginia apart among the States.

The new Canaan Valley National Wildlife Refuge will help to ensure that rising generations of West Virginians enjoy ageless resources that make our state a natural wonderland.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Erma Byrd Scholars

Recently, Marshall University announced the first six West Virginia recipients of a new scholarship named in honor of my wife, Erma Byrd.

Established by Marshall University in May, the Erma Byrd Scholarship Program will offer six \$1,500 scholarships annually to West Virginia high school graduates. The scholarships can be renewed each year based on collegiate academic performance.

The 1994-1995 Erma Byrd Scholars include Kimberly Elaine Adams of Barbourville, Cabell County; Kelley T. Burns of Logan, Logan County; Littia C. Chaowadee of South Charleston, Kanawha County; Leann Renee Haines of Parkersburg, Wood County; Joseph E. Remias of Wheeling, Ohio County; and Serena Lynn Starcher of Buffalo, Putnam County.

Under the program, two recipients will be selected annually from each of the state's three congressional districts. Selections will be made by an advisory board appointed by the president of Marshall University and consisting of a chairperson, a representative from each of the state's congressional districts, and two Marshall

University faculty members.

In addition to the scholarship funds, Erma Byrd Scholars will be automatically enrolled in the Marshall University Honors Program and will participate in an annual trip to Washington, D.C., to learn more about the workings of government.

Ensuring that higher education is available to our state's scholars is a goal I have worked toward for years, and the Erma Byrd Scholars Program offers West Virginians yet another college-funding option.

Together with the Robert C. Byrd Scholastic Recognition Awards and the national Robert C. Byrd Honors Scholarship Program, the Erma Byrd Scholarship Program will help some of the future leaders of our nation to receive the training and education they will need to lead us in the next millennium, and I am deeply touched that this program has been named in my wife Erma's honor.

Erma joins me in congratulating these outstanding students, who have demonstrated a commitment to learning in their high school careers, and we wish them well as they continue their educations at Marshall University.

Progress Report on Education

I have long been an advocate of better schools and improved academic performance by students.

Both in West Virginia and across the nation, our children are our future. Their standards of living in the years ahead and the performance of the United States on the world scene will, in large measure, depend on the quality of the teaching and learning that take place in our elementary and secondary schools.

Thus, I have been, and will continue to be, a firm supporter of policies and programs that promise and deliver the mastery of so-called "basic subjects" -- classical disciplines such as mathematics, science, English grammar, history, and geography, for example.

Understandably, I am somewhat encouraged by a report just released by the U.S. Department of Education regarding the program "the National Assessment of Progress," instituted following a 1983 report, "Nation at Risk."

According to the most recent report, students are generally taking more rigorous math and science courses than they did 20 years ago.

Further, in 1992, 78 percent of 9-year-olds understood simple scientific principles and knew some basic facts about plants and

animals, up from a reported 68 percent in 1977.

In math, in 1992, 28 percent of 9-year-olds were able to add, subtract, multiply, and divide using whole numbers, up from only 20 percent in 1978. Even better, 17-year-olds made gains in the same area, with a reported 97 percent in 1992, compared with 92 percent in 1978.

Unfortunately, in 1992, 60 percent of 9-year-olds, 64 percent of 13-year-olds, and 47 percent of 17-year-olds reported watching television three or more hours daily.

Worse, about one-third of the 17-year-olds reported having no homework in 1992, or having homework that they did not do.

And, interestingly, this recent study determined that the more time a 17-year-old spent on homework, the better his or her reading proficiency became.

Certainly, some students are on the right track.

But, for more American children, learning must become their primary task during their childhood and teenage years.

And, as their parents and role models, we must not be satisfied until every West Virginia school child is performing academically to his or her highest level.

Our future depends largely on that achievement.

By U.S. Senator Robert C. Byrd

West Virginia's High-tech Arsenal

As West Virginia stands on the threshold of the next millennium, it faces 21st century challenges with a new weapon in its economic arsenal--high technology.

I have long recognized the importance of high tech to West Virginia and the role that our state can play in our national quest to compete in increasingly technical world markets.

As I have worked to bring a number of high-tech initiatives into our state, the advantages they offer in terms of greater economic opportunities and increased job prospects have begun to be realized throughout West Virginia.

First and foremost, high-technology development in West Virginia is affording our mainstay industries the opportunity to take advantage of the latest high-tech advances. By applying cutting-edge techniques to their traditional manufacturing processes, our private sector will be better armed for the increasingly competitive world trade arena.

In that regard, I have worked to promote many technology transfer initiatives in West Virginia, including the Robert C. Byrd Institute for Flexible Manufacturing Systems in Huntington, the Robert C. Byrd Hardwood Technology Center in Princeton, the National Technology Transfer Center in Wheeling, and the revolutionary computerized manufacturing system, known as L&IS, at Weirton Steel.

Training West Virginians for work in this rapidly growing environment is a second critical component

of my high-tech game plan for West Virginia.

That is why I have worked to establish the Classroom of the Future at Wheeling Jesuit College, a new science and technology facility at Shepherd College in Shepherdstown, and the ADAnet computer language project at West Virginia University in Morgantown--all of which are aimed at providing the skills necessary for the high-tech jobs of the future.

Finally, with one of the most extensive, technologically advanced fiber-optics networks in the nation, West Virginia is a perfect location for many of our nation's high-technology government facilities and their back offices.

As West Virginia's high-tech network has grown, so has our state's ability to attract public and private state-of-the-art facilities. To that end, I have succeeded in bringing the FBI Fingerprint Identification Facility to Clarksburg; the IRS Computing Center, the U.S. Coast Guard Operations Systems Center, and the Bureau of Alcohol, Tobacco, and Firearms Computer Center to Martinsburg; and the NASA Independent Verification and Validation facility to Fairmont.

These federal facilities, coupled with private-sector development and a growing cadre of workers trained in high-tech disciplines, are placing West Virginia squarely on the plateau of 21st century high technology and are offering our state new economic opportunities in the coming years.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Life-saving Health Services for West Virginia Women

In 1991, 336 women in our state died of breast cancer--the second leading cause of death among West Virginia women.

In that same year, nearly one-third of West Virginia women aged 40 and over had never had a mammogram--the most effective means to detect breast cancer in its early stages.

These are disturbing statistics since, in many cases, early diagnosis and treatment of breast cancer can greatly improve breast cancer survival rates.

Throughout my career of public service, I have worked to put into place new facilities and programs that can provide West Virginians with health-care services close to home, including specialized services required to combat cancer.

One such facility is the Mary Babb Randolph Cancer Center on the campus of West Virginia University. This state-of-the-art facility for the diagnosis and treatment of all forms of cancer was constructed with \$13.3 million I obtained in federal funding.

In 1991, the Mary Babb Randolph Cancer Center, the medical clinic on the campus of Marshall University, and Women and Children's Hospital of the Charleston Area Medical Center were selected as three of the first sites in the country for a unique Center for Disease Control and Prevention (CDC) program, designed to deliver breast and cervical cancer diagnoses, prevention, and education to at-risk women.

Made possible by approximately \$5 million in federal funding that I added to an appropriations bill, CDC's Breast and Cervical Cancer Screening Program (BCCSP) now has been expanded throughout West Virginia. With 126 screening sites, this program, administered by the West Virginia Bureau of Public Health, has made significant strides since its inception.

Between April 1991 and April 1994, more than 48,000 screenings had been conducted, serving approximately 30,000 West Virginia women through the BCCSP.

Enough emphasis cannot be placed on the fact that early intervention is critical to saving the lives of women with breast cancer. The commendable goal of this program is to ensure that at least 80 percent of West Virginia women, aged 40 and over, receive a clinical breast examination and mammogram by the year 2000.

To reach this goal, the Mary Babb Randolph Cancer Center, in conjunction with the state Bureau of Public Health, has developed and disseminated educational materials that have supplemented the program's statewide public information and outreach campaign.

The three-pronged approach of the BCCSP--education, early diagnosis, and state-of-the-art treatment--now conducted throughout West Virginia exemplifies my vision of promoting accessible health care for West Virginians.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Schools at Risk

More than 30 years ago, Congress mandated a periodic National Assessment of Educational Progress (NAEP) report -- subsequently dubbed "The Nation's Report Card" -- on academic achievement among our nation's school children.

Subsequently, in 1983, the U.S. Department of Education released a NAEP report entitled "A Nation at Risk," which warned that not enough time was being spent in schools on academic subjects -- "the Basics" -- for example, English, mathematics, science, history, and geography.

Unfortunately, many in educational "ivory towers" have apparently ignored that warning.

Currently, in more than 30 states, followers of educational fads are committed to a school-reform process called "Outcome-Based Education" -- "OBE," for short.

The goals of OBE are not academic, but psychological and sociological: tolerance; intra- and inter-group communication; self-esteem; environmentalism; and group-centered problem-solving. Mastery of subject matter is apparently considered secondary; grades and achievement measurement are ignored; curriculum and textbooks are "dumbed down"; mathematical and spelling accuracy are de-emphasized; testing and competition are shunned; and children are increasingly being treated as educational guinea pigs in obedience to "scholastic political correctness."

The OBE fad is being

served at the expense of scholastic performance, to the detriment of our children, and at the risk of producing public school graduates unfit for collegiate-level work and -- worse -- the job market, nationally and internationally.

Grades and achievement measurement are very important, and, when a student demonstrates mastery of subject matter, self-esteem will follow. Competition in scholastic activities is desirable, because when students go out into the real world, they are going to come face to face with real competition. To deemphasize mathematical and spelling accuracy and to "dumb-down" our textbooks are not only ridiculous but just plain foolish.

Overwhelmingly, parents, elected officials, and taxpayers who underwrite our schools are demanding that educators spend time, money, and resources on guaranteeing achievement in the classic, basic disciplines. If the proponents of scholastic fads do not heed this demand, reform will be imposed from outside the educational establishment.

No one should expect that the public schools can solve all of society's problems, personal or social. But we do have a right to expect our schools to prepare our children to master a predetermined body of disciplines needed for jobs, careers, and achievement in a modern economy.

Before it is too late, both for our country and for our children, let us hope that academic excellence is reinstated as the primary goal of our schools nationwide.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Reaching Out With West Virginia's Scientific "Ear"

In November 1988, the old National Radio Telescope at Green Bank, Pocahontas County, collapsed.

Understandably, the collapse of the telescope brought a cry of dismay from the Nation's scientific community, with calls for an early replacement.

Subsequently, to replace this vital scientific instrument, I added \$75 million to a supplemental appropriations bill in 1989.

Since then, construction at the Green Bank site has moved forward rapidly, with planned construction currently approximately 50 percent finished, and completion scheduled for autumn of 1996.

When fully operational, the National Radio Astronomy Observatory (NRAO) will place West Virginia firmly in the front ranks of international space research.

In spite of the 1988 calamity, the Green Bank scientific installation has nevertheless continued to host numerous educational activities, in anticipation of fully resumed research and training in the future.

For example, a series of Science Teachers Training programs, conducted by NRAO in partnership with West Virginia University (WVU), has been offered regularly since 1987, with support from both the National Science and Benedum Foundations. Since their inception, these programs have involved more than 350 teachers from across the country in exhaustive two-week summer courses that feature lectures on astronomy, actual scientific research using a 40-foot-diameter radio telescope, de-

tailed seminars about science education, and construction of scientific instruments for classroom use.

Since 1987, these seminar-trained teachers have conducted workshops in their own school districts, sharing their knowledge and training with an estimated 15,000 other science teachers across the nation.

This year, the Teachers Training program was redesigned to concentrate on West Virginia teachers, as well as college students attending WVU and Glenville State, West Liberty, and Fairmont State Colleges who are training to be teachers. As part of the redesigned Green Bank program, which will continue through 1996, the college student participants will be assigned to "student-teach" in schools near their colleges. Through this redesigned program, West Virginia teachers, schools, and students will be further enriched by the expertise available at Green Bank.

Additionally, the Observatory staff conducts workshops for small college science faculties nationwide; provides summer jobs for undergraduate science, engineering, and computer students; conducts tours for interested visitors; and, in cooperation with Glenville State, provides an "elder-hostel" program that allows the senior citizen participants to operate the 40-foot-diameter radio telescope.

Certainly, the Green Bank facility is proving its value as an educational tool, and I look forward to the completion and dedication of the new massive telescope and fully resumed activities two years hence.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Promise of Corridor H

Economic prosperity flows along concrete rivers.

For nearly thirty years, the people of West Virginia and the other twelve Appalachian States have been promised interconnected streams of asphalt -- the Appalachian Regional Commission (ARC) Corridor Highways -- that would serve as inlets for economic opportunities.

But, since 1965, when the ARC Corridors were roughly mapped out in legislation to authorize the Commission, the promise of a completed ARC Corridor Highway system has remained unfulfilled.

I am working to remedy that.

As chairman of the Senate Appropriations Committee, I have increased the federal share of funding for Corridor Highway construction, recognizing that industry and jobs would otherwise find only limited passage into the mountains and valleys of Appalachia.

Further, I was able to include the entire Corridor Highway System, as well as U.S. 52 in Southern West Virginia, as part of the 1991 Intermodal Surface Transportation Efficiency Act (ISTEA).

As a result of my efforts, West Virginia -- the only state entirely within the region identified as Appalachia -- has seen reenergized progress on Corridor Highway construction in recent years. Since 1989, I have added to appropriations bills the full federal share needed to complete

construction of Corridor G from Charleston, to Logan, to Williamson, and the total federal portion of funds required to upgrade to four lanes the full length of Corridor L, which runs from I-79 near Sutton to I-64 near Beckley.

In addition, over recent years, I have added \$10 million to a bill for planning and design of the Parkersburg Bypass of Corridor D and \$160.5 million to several bills for construction on Corridor H.

This year, based on the West Virginia Division of Highways' decision that work could begin next year on additional sections of Corridor H, I added \$110 million to two federal appropriations bills, which have been signed into law, to enable the project to move forward without delay.

This new funding brings to \$270.5 million the total monies I have added to federal appropriations bills to help ensure that the dotted lines that now signify Corridor H on West Virginia road maps will be filled in over the coming years.

In the meantime, the federal government must continue to make good on its nearly 30-year-old promise to the people of West Virginia, and I will keep fighting to see that Corridor H from Weston to Wardensville is eventually completed, opening Central West Virginia to further economic growth.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The War on Crime Begins at Home

Crime is a terrible problem in our country. Parents fear for the safety of their children. People are being terrorized in their own neighborhoods. Even in West Virginia, which has consistently reported crime rates among the very lowest in the nation, criminal activity is growing.

Congress recently passed, and the President signed into law, the Fiscal 1995 Commerce/Justice/State Appropriations Bill, which will provide the money to initiate community policing programs, construct prisons, strengthen efforts to prevent illegal immigration, and support other crime-combating initiatives.

The bill includes \$84.4 million I sought for continued development of the Federal Bureau of Investigation's (FBI) computerized fingerprint identification system that will be housed at the new FBI center at Clarksburg, a project for which I have obtained more than \$500 million.

The ultra-modern computerized system will provide law enforcement officers at every level with nearly instant access to fingerprint information and criminal history files, thus helping to identify, track, and catch law-breakers.

Also in the appropriations bill is \$19.6 million I

sought to provide start-up costs and initial staffing for the \$60 million Beckley Federal Prison, now under construction in Raleigh County with funding I provided as part of a 1990 anti-crime, anti-drug package.

The Beckley prison will help to ensure that prison cells are available in which to lock up the climbing numbers of criminals and hold them for the duration of their sentences.

These measures, though important, are only a small part of the solution to crime in our country. To a large extent, crime must be fought at the local level, by the officers on the beat, prosecutors, judges, and community members.

But most importantly, crime prevention begins at home, fostered by parents who instill in their children a strong sense of family and religious values -- the kind of traditional values still alive today in West Virginia.

At every opportunity, I speak on the Senate floor and in West Virginia about the need to return to those "old values," and I will continue to do so, recognizing that no amount of laws can replace the home-grown foundation of religious faith and family values in the fight against crime.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Time to Turn Back the "Values Clock"

Like most West Virginians, I am increasingly concerned about the deterioration that I witness in public morals, entertainment, and personal values in our national life.

For most of this century, mass communications -- movies, radio, and television, in particular -- have increasingly glamorized the values, preferences, and lifestyles of immoral, and even criminal, elements of our society, to the point of displacing responsible behavior.

Day in and day out, television and movies trivialize adultery, drug use, juvenile delinquency, rape, violence, murder, profanity, cheating, and a variety of perversions.

Indeed, the words of some popular rock and "rap" songs are not fit for utterance in decent company.

Responsible behavior, lawfulness, religion, patriotism, industriousness, fidelity, honesty, hard work, self discipline, and other values that render civilized life possible are routinely ridiculed, satirized, and denigrated.

No society or culture can hope to survive and flourish if it flouts the values and traditions on which civilization depends universally, and America, which is the paramount embodiment of mankind's highest

aspirations, is no exception.

From the beginning of American history, the family has been the primary promoter of our value system. From one generation to the next, American families have instilled in their offspring a respect for the Ten Commandments and other great religious principles, and have imbued them with a strong sense of right and wrong, of duty to country, and respect for authority and the law -- values that are primary building blocks for character and citizenship, and precepts without which societies and nations cannot survive.

Similarly, religious faith has been a well-spring, nourishing the highest ideals of personal and public morality, as well as citizenship and public responsibility.

For too long, however, both the family and religion have suffered undeserved assaults.

The philosophy of "do your own thing" is a cancer eating away at the soul of our country.

The time has come to reverse this immorality, and to turn back the "values clock" in our country.

In the name of national survival and community preservation, the traditional family and religious values must be restored to positions of primacy in American life.

Caring For Our National Treasures

It was fitting that the groundbreaking ceremonies for the new U.S. Fish and Wildlife Service National Education and Training Center (NETC) in the Eastern Panhandle took place on a dazzling day that showcased West Virginia's impending fall glory.

As we assembled to herald the beginnings of this new, state-of-the-art facility, I was struck by the appropriate choice of West Virginia as the location for the national center, which is being built with more than \$103 million that I obtained in federal appropriations bills.

Indeed, West Virginia's abundant assets and its close proximity to Washington, D.C., made it the logical site for the NETC, which will become the national training headquarters for the men and women who will protect and manage our country's precious natural resources.

When the National Education and Training Center is fully operational -- sometime in late 1996 -- it will be staffed by approximately 200 permanent and contract personnel and will provide training to as many as 250 federal and state conservation professionals at a time.

This new center is not only a symbol of our nation's commitment to protecting America's bounty,

but it also serves to remind us that each generation has a sacred covenant with the generations that follow to preserve our natural heritage so that it might be enjoyed in the years ahead.

The NETC -- a 16-building complex being built on a 538-acre Jefferson County site along the Potomac River -- will include classrooms, laboratories, administrative space, and living quarters for those who will train there. The facility also will be available for conservation instruction to environmentalists, civic organizations, and school groups.

Because the future of America's growing awareness of environmental issues rests with our youth, I am particularly encouraged that our young people, who will be the next millennium's caretakers of the land, will have access to the training center and to the professionals who stand on the front lines of the effort to maintain our country's natural treasures.

With all West Virginians, I look forward to the opening of the National Education and Training Center, both to share the glories of West Virginia with natural resources professionals from across the country and to provide those professionals with the most up-to-date facilities in which to train.

An Update on the Idea Of American Citizenship

Too often in our contemporary era, we use the word "citizen" without realizing its deep meaning.

In the Book of Acts, in the New Testament, as the Apostle Paul is about to be scourged like a commoner, he startled the authorities in Jerusalem by declaring that he was legally a Roman citizen, and demanded that he be tried in Rome.

That demand -- the legal right of a Roman citizen to be tried in Rome -- set the local officials into a panic, for Roman citizenship in the Ancient World bore with it a value of which few of us today can conceive.

Perhaps only one other citizenship in world history can parallel the prestige of Roman citizenship, and that is American citizenship.

Indeed, in many ways today, American citizenship is the equivalent of Ancient Roman citizenship.

Because of its value, annually, thousands seek illegal entrance into the United States, largely because of the Privileges that they perceive as belonging to Americans.

Unfortunately, most people do not grasp that American citizenship is not only about Privilege, but even more so about responsibility.

To some people,

American citizenship means being able to do whatever one wants to do.

But as perhaps no men have in human history, our Founding Fathers understood that there was a price that could be exacted for the political creation that they had brought into existence. They stated that price in the Declaration of Independence: "...We mutually pledge to each other our lives, our fortunes, and our sacred honor."

Based on that model, American citizenship is not doing what one wants to do, but doing what one ought to do.

Best understood, the essence of American citizenship is responsibility -- responsibility for one's own behavior, responsibility for one's own family, responsibility for one's own community, and responsibility for one's own country.

As we move toward the close of this century and further into the third century of our life as a nation, I hope that increasing numbers of West Virginians and their fellow Americans will actively nurture an inner sense of citizen responsibility, commitment, and dedication, without which this "last, best hope of earth" -- as Abraham Lincoln described our Nation -- might be lost.

Handy Hotlines

West Virginians often have questions about Federal programs and services, and about regulations and opportunities that may affect them directly. Sometimes help is just a phone call away, and I have found that the following list of toll-free Federal hotlines can help West Virginians find answers to some of their questions.

Retired Army Pay Problems	1-800-428-2290
Cancer Hotline (National)	1-800-422-6237
Department of Health and Human Services (HHS)	
Medicare Information	1-800-638-6833
Medical Scholarship Information	1-800-638-0824
National Runaway Switchboard	1-800-621-4000
(For parents and runaways to leave messages)	
Consumer Product Safety Commission	1-800-638-2772
(Product recall, complaints, fact sheets)	
Financial Aid for College Students (National)	
Department of Education	1-800-433-3243
National Guard "ChalleNGe" Program	1-800-529-7700
AIDS Hotline (National)	1-800-342-2437
(HIV and Acquired Immune Deficiency Syndrome Information)	
Pesticide Emergency Information	1-800-858-7378
National Health Information Center	1-800-336-4797
Energy Conservation Hotline	1-800-428-2525
Hill-Burton Free Hospital Care Hotline ...	1-800-638-0742
Small Business Administration	1-800-827-5722
Social Security Administration	1-800-772-1213
West Virginia Veterans Affairs Office	1-800-827-1000
National Drug Hotline	1-800-662-4357
(Drug-abuse help and information)	
Safe Drinking Water Hotline	1-800-426-4791
Hazardous Waste and Superfund	
Information	1-800-424-9346

Expanding the MDTV Network

West Virginia's revolutionary health-care tool -- Mountaineer Doctor Television (MDTV) -- is poised to add a new channel to its growing network.

Beginning next month, the Clarksburg Veterans Affairs (VA) Medical Center will become part of the MDTV system, a two-way, interactive television hookup that allows doctors and patients in the state's rural hospitals to consult with specialists at medical hub centers at West Virginia University (WVU) Medical Center in Morgantown and the Charleston Area Medical Center (CAMC).

In the past several years, I have added more than \$5 million to federal appropriations bills to establish MDTV in West Virginia and to expand it into rural corners of our state where health care is not readily accessible.

MDTV is an exciting medical outreach program that promises genuine improvement in rural health care in our state. I expect that MDTV will make important contributions to the health of thousands of West Virginians in the years ahead.

Currently, MDTV connects its two major hub sites -- at WVU in Morgantown and CAMC in Charleston -- to six sites across West Virginia: Wetzel County Hos-

pital, New Martinsville; Davis Memorial, Elkins; Grant Memorial, Petersburg; Boone Memorial, Madison; St. Joseph's, Buckhannon; and the Cabin Creek Clinic, Kanawha County.

The Clarksburg VA Medical Center will be the seventh West Virginia medical facility connected to the MDTV hub sites, and is expected to be in operation next month.

In addition, I added report language to the Fiscal 1995 Labor/HHS Appropriations Bill to establish two more MDTV hub sites in the state -- at Marshall University in Huntington and the West Virginia School of Osteopathic Medicine in Lewisburg. My language also calls for the addition of three new community health centers in West Virginia to the MDTV network, bringing to ten the total number of MDTV remote sites across our state.

Access to modern health care and expert medical specialists will be essential for the people of our state in the years ahead.

Thankfully, West Virginia's growing MDTV network will afford much of that access, and will ensure vital services and necessary help to widespread patients through the miracle of an expanding communications system.

1994 Progress Report

For the past six years -- my sixth term as a U.S. Senator from West Virginia -- my sights have been set on laying deeper and broader foundations for our state's economic future, both for the remaining years of the 1990's and well into the dawning 21st century, little more than a half-dozen years ahead.

Through my appropriations efforts, federal funding for Appalachian Regional Commission (ARC) Corridor Highway G, from Charleston southwest toward Williamson at the Kentucky border, has been completed, as has federal funding for Corridor L, stretching roughly from I-77 near Beckley, Raleigh County, to I-79 near Sutton, Braxton County; more miles of Corridor H, from I-79 near Weston eastward toward Buckhannon and Elkins, have opened; and preliminary design and planning work is underway on upgrading U.S. 52 between Huntington and Bluefield (proposed I-73). In addition, I have added federal funding for the Robert C. Byrd Expressway in Weirton and for the upgrading and four-laning of Route 9 in the Eastern Panhandle.

Further, as Chairman of the Senate Appropriations Committee, I secured necessary federal funding to initiate construction of the new Internal Revenue Service computing center and to further equip the new, 130-person Bureau of Alcohol, Tobacco, and Firearms facility -- both in Martinsburg, Berkeley County. Additionally, through my efforts, another 400 new employees are being added to the consolidated Bureau of

Public Debt in Parkersburg, Wood County, which will eventually employ approximately 1,540 people.

In addition, in September, I broke ground for the U.S. Fish and Wildlife Service's new National Education and Training Center near Shepherdstown, Jefferson County, another facility for which I added funding to federal appropriations bills.

In crime fighting, my appropriations efforts advanced the continued construction of the Federal Bureau of Investigation's Fingerprint Identification Center near Clarksburg, Harrison County, which will eventually employ an estimated 2,500 people; and the construction of the new Federal Medium Security Prison at Beckley, Raleigh County, which will employ nearly 500 people and which is more than two-thirds complete.

Moreover, I was successful in adding funding for construction of new library facilities at Marshall University, Huntington, and the College of West Virginia, Beckley, as well as a new science and technology facility at Shepherd College, in the Eastern Panhandle.

These examples represent only a portion of the initiatives on which I have been working to provide new opportunities for economic growth for West Virginia and her people well into the next century.

During my seventh term in the Senate, I shall continue doing everything feasible to promote West Virginia's economic growth and future statewide prosperity.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Filling a National Need

The United States set a bleak new record recently: For the first time in American history, more than 1 million people are incarcerated in our nation's jails.

Given these figures and the escalating crime rate in our country, the need for adequate prison space becomes a national priority.

West Virginia is on the verge of playing an important role in helping to fulfill that national need with the soon-to-be-completed medium-security federal prison in Beckley, Raleigh County.

That facility -- being built with funding that I provided in a federal appropriations bill -- is almost seventy percent complete, and efforts to staff the new prison are already underway.

Nearly 500 employees will be required to run the new prison, which will house 1,536 inmates and which is expected to be in full operation in mid-1995.

According to the Federal Bureau of Prisons, nearly two-thirds of the Beckley Federal prison employees will be drawn from the West Virginia workforce, a process that is already underway.

Recently, Federal Bureau of Prisons Director Kathleen Hawk advised me

that a warden and two associate wardens -- both of whom have West Virginia connections -- have been appointed to run the Beckley prison.

In addition, the Federal Bureau of Prisons held a two-day job fair in Beckley at the beginning of November, and the response was overwhelming. More than 3,000 people attended the sessions, and job applications were requested by more than 2,800.

Federal officials tell me that correctional officer positions at the new prison will be the largest number filled, and positions also will be available in the medical, food service, educational, and clerical fields.

Federal Bureau of Prisons officials report that exceptionally well-qualified, experienced candidates were seen for all disciplines, and, based on this, they are optimistic that they will have no difficulty finding people for positions that traditionally have been hard to fill. This is a tribute to West Virginia and to the strong work ethic that is a hallmark of our West Virginia workforce.

With all West Virginians, I look forward to the completion of this new federal facility and to the jobs that it will bring.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

GATT

I recently voted to delay Senate consideration of the General Agreement on Tariffs and Trade (GATT) Uruguay Round, believing that this massive trade agreement deserved more time for study than the 20 hours allowed under the "fast track" process.

Further, I believe that an agreement with the potential to adversely impact our nation's economy and federal, state, and local laws should not be voted on by the lame-duck members of this Congress, who are retiring or were defeated in the recent elections. For these lame-duck members, this was a free vote. They will not have to face the voters and answer for their vote on GATT.

I do not believe that GATT, as currently crafted, will best serve the interests of West Virginia or the nation as a whole.

Too often in the past, I have seen our nation enter into "free-trade" agreements that are touted as a route to better economic times and increased job opportunities, only later to witness jobs moving overseas. Such has been the case in West Virginia, where many manufacturing industries have declined as foreign concerns have captured a greater share of the domestic and international markets.

One of the most disconcerting parts of the GATT agreement is the establishment of a secretive World Trade Organization -- a new body comprised of unelected, unaccountable,

international bureaucrats with extensive powers, which can be used in secretive ways against the U.S.

The WTO, in which the U.S. will have no veto, will have the leverage to influence elimination or modification of a staggering range of federal, state, and municipal laws and regulations dealing with labor issues, environmental protection, food labeling, meat inspection, and other consumer health and safety protections.

Further, if we refuse to change our laws to suit the WTO, our nation can be fined, thus imposing, in effect, taxes on the American people.

Additionally, the WTO can determine that one U.S. industry is in violation of GATT rules, but impose sanctions on another part of our economy. For example, sanctions could be imposed on the agricultural industry for failure to comply with a GATT ruling on the automobile industry.

Against my warnings and in spite of my procedural move to block consideration of GATT until the next Congress, the proponents of this agreement were successful in gaining Congressional approval.

Some suggest that if we dislike what we get as a member of GATT, we can simply withdraw, but the reality is that we will have limited opportunities to do so. Pulling out of this kind of agreement is never a quick and easy process.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

1994 Progress Report: Health Services

For the past several years, I have been working to expand and improve West Virginia's health care infrastructure -- those facilities and programs of outreach aimed at delivering education and treatment to meet pressing health problems in our state.

In continuing that effort, this year, for example, I added funds to an appropriations bill for two veterans-oriented health programs -- construction of a medical research addition at the Huntington Veterans Affairs (VA) Medical Center, and for continued operation of a veterans' health-services demonstration project being conducted cooperatively by the Clarksburg VA Medical Center and Ruby Memorial Hospital at West Virginia University (WVU) in Morgantown.

Additionally, I added monies to build a new health care clinic at the West Virginia School of Osteopathic Medicine in Lewisburg, a facility that will serve residents of Greenbrier, Monroe, Nicholas, Pocahontas, Raleigh, and Summers counties.

Specifically targeting West Virginia's unusually high incidence of heart and lung diseases, I added funds to the Labor/Health and Human Services Appropriations Bill to establish at the West Virginia University School of Medicine an ultra-modern facility to provide medical education and

treatment geared to the needs of cardiovascular and respiratory-disease patients.

Also this year, I added funds to the Labor/HHS bill for the further expansion of Mountaineer Doctor Television, a state-of-the-art medical outreach program for which I provided initial funding in fiscal 1992 to connect physicians at the WVU Health Sciences Center with rural areas, so that patients and doctors in outlying regions can have instant access to specialized medical expertise.

These recently funded initiatives join a list of other health care programs I have aided in putting into place in West Virginia in recent years.

The Mary Babb Randolph Cancer Center, for example, constructed with a total of \$13.3 million in federal funds which I added to bills beginning in fiscal 1986, is giving West Virginians close-to-home expert diagnosis and treatment of cancer. Also funded with my appropriations from prior years are a new rural health clinic taking shape at Marshall University in Huntington and a new Centers for Disease Control Laboratory in Morgantown for the study of workplace health and safety.

These and other programs and facilities in our state are helping to make top-of-the-line health care services more readily available to all West Virginians.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Joyous Season of Endings And New Beginnings

For generations, this season of the year -- those weeks preceding and following the Winter Solstice -- has played a significant role in Western civilization, in which America has assumed an ever-growing role.

The Christian Church has long celebrated December 25 as the birthday of Jesus Christ, with an added festival on January 6 to memorialize the visit of the Three Wise Men at the stable in Bethlehem.

Judaism has set aside an eight-day period in late November and early December to commemorate Hanukkah -- a remembrance of the recapture of the Temple in Jerusalem in 165 B.C. from Syrian Greeks after its defilement with pagan worship.

And from the Romans, we have the month of January, named after the god Janus, whose name meant "door," and who was the deity of beginnings.

Religious festivals of light and joy are particularly appropriate during a season of shortening days, lengthening shadows, and early darkness -- festivals for giving thanks to God for life, love, and blessings, and for sharing the warmth of our hearts with family and

friends.

Likewise, January, with New Year's Day, represents a logical season for starting anew, establishing fresh habits, resolving to work harder and to do better, and setting valuable goals.

At this time of year, I extend my own best wishes to all of the people of West Virginia, in a hope that their lives and homes will be filled with the real spirit of this special season, and that the dawning new year -- 1995 -- will be more fulfilling and rewarding than even the passing year has been.

More importantly, perhaps, I offer my hope that West Virginians will take special precautions on the highways of our state during this season.

Too often, these holidays have been occasions for indulgence in alcohol, with catastrophic consequences on our highways and tragic results for some travellers and their loved ones.

To everyone, then, I wish the most joyous of holiday seasons, accompanied by a sincere hope that the New Year will bring enlarged prosperity and enriching fulfillment.

Happy 1995, West Virginia!

December 21, 1994

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The West Virginia Spirit

One Sunday morning some weeks ago, leafing through The Washington Post, I noticed that West Virginia was the target of one of that newspaper's regular columns.

Each week, the Post sponsors a contest, asking readers to respond to a particular challenge.

The challenge that caught my eye that Sunday encouraged readers to come up with "good" things about West Virginia. That sounds innocent enough, and, as a matter of fact, the challenge was suggested by a West Virginian who was sincere in her desire for positive comments about our home state. The real purpose of this game, unfortunately, is to parody a given target, and in this case, abandoning better judgement, the writers of this column turned a good-natured suggestion into a "roast" of the state I love.

Consequently, after weeks of collecting contest entries, the Post printed the "winners." Readers from as far away as Houston, Texas, joined in the skewering, producing a list of some of the most snide, arrogant, crude, and offensive characterizations that I believe I have ever seen.

As West Virginians, this strikes us as nothing new. Over the years, our

state has perpetually been depicted in television and the movies as a backward state, filled with poverty-stricken, illiterate "hillbillies." Those depictions sting and anger, but it is especially infuriating to me when a major American newspaper encourages the perpetuation of mindless, misguided stereotypes.

West Virginia is a marvelous state, peopled by some of the warmest, most hardworking, charitable, patriotic, and God-fearing men and women in this nation. West Virginians have shared hard times, and perhaps it is these shared hardships and unjust put-downs from so many detractors that have helped to instill in us a fierce pride and loyalty toward our state.

At this time, as our nation faces difficult challenges at home and abroad, it is irresponsible for a newspaper or any individual to spread discord and disunity among our states. Instead, we should be making every effort to inspire among our citizens that combination of loyalty, pride, good will, and concern for neighbors and community that comprise the "West Virginia spirit" -- one of the numberless "good" things West Virginia has to offer.

December 28, 1994

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Caring for Our Children

With the increasing numbers of dual-income families, finding accessible, affordable, quality child care has become a priority concern for many people in our state and nation.

West Virginia is poised to play an important role in the national imperative to develop the best possible daytime care for our national treasures -- America's children.

Toward that end, I recently announced the award of a \$700,000 federal grant -- made possible by funding that I added to the Fiscal 1993 VA/HUD Appropriations Bill -- for construction of a new child care center in Upshur County.

That facility, known as the Child Development Center of Central West Virginia, will replace the existing child care center on the campus of West Virginia Wesleyan College in Buckhannon, which currently occupies a temporary structure built during World War II.

The new facility, construction of which should be underway during the summer of 1995, will have space for the children of approximately 85 families,

providing its young clients with a safe, modern environment.

The Child Development Center has a mission beyond its child care function, however -- a mission that will touch children across our state.

Upon its completion, the new center will not only serve as a training site for child care providers, but professionals at the center also will assist individuals in establishing and improving child care throughout West Virginia.

Unquestionably, our children are our nation's most precious assets, and their health and well-being are of paramount concern. With rising numbers of children in a patchwork of child care situations, we must search for ways to ensure their happiness, education, and safety while not in the care of their parents.

I am excited about the evolution of the Child Development Center in Upshur County and the promise it holds for our children, and I look forward to the completion of its new facility and the growth of the new child-care initiative that will take root there.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Caution: Fiscal Rapids Ahead!

Since earliest times, people have questioned the use of their taxes and have resisted tax increases.

Little wonder that any suggestion of the reduction, cancellation, or reformulation of any tax is generally greeted with an initial burst of enthusiasm.

The truth is, however, that, without revenues supplied by taxes, governments cannot afford the services virtually demanded by citizens -- national defense, law enforcement, schools, highways and transportation, Social Security benefits, many health services, and more.

In the early 1980's, in allegiance to so-called "supply-side" economic theories, a massive tax reduction was pushed through Congress by the administration then in power, without adequate attention to the overall impact of that tax reduction and without a parallel reduction in programs favored by most Americans. At the same time, the administration launched the most far-reaching defense buildup in American history.

Unfortunately, the result was the \$4.5-trillion-plus national debt that now plagues our country and threatens to burden rising generations of Americans for decades to come with heavy interest payments on the debt.

More ominously, currently, voices in both national political parties are attempting to outdo one another in promising tax cuts.

In order to pay for these tax cuts, the President has already put forward a plan, with few details, for federal program cuts.

I anticipate that, in coming weeks, the fever for a tax cut will generate a landslide in Congress of proposed spending cuts and program consolidations, with little thought given to either the impact that tax reductions will have on reducing the federal debt or the havoc that will be wrought on every program from defense and police protection to air-traffic safety and educational quality nationwide.

Wisdom suggests that, for the foreseeable future, money from any federal spending cuts ought to be applied to whittling down our crushing multi-trillion-dollar national debt. Wisdom also suggests that program cuts be made with a surgeon's scalpel instead of an ax, lest we literally cut off our noses to spite our faces in the process.

Certainly, the time has come to put our national fiscal house in order.

Such reordering, however, requires intelligence and vision, not demagoguery and mindlessness.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Restraining Hand of Congress

During 1994, conflicts in little-known areas of the world -- the Balkans, the Horn of Africa, central and southern Africa, southwest Asia, and in the former Soviet Union -- have created economic and humanitarian disasters for countless numbers of people.

Sadly, there are many more cauldrons of ethnic, religious, and ideological tensions brewing in areas around the globe than there are cooks capable of creating a recipe for peace.

In the past year, the United States committed some 48,000 of its men and women in uniform to United Nations (UN) multilateral or unilateral "peacekeeping" operations in Somalia, Haiti, Rwanda, the former Yugoslavia, the Sinai, Iraq, and Israel. The United States has provided transportation and financial support for many other UN operations.

U.S. military personnel are the best-equipped, best-organized, and most well-trained forces in the world, and they have the ability and resources to move quickly and effectively to meet any contingency. But the demand for their services is overwhelming, and it threatens to exhaust our personnel and equipment, as well as add considerably to our national budget deficit.

Further, while our hearts go out to those who are caught in the crossfire of warring factions, our best judgment tells us that U.S. military might cannot solve all of the world's problems.

A recent government estimate predicts that the

demand for international humanitarian aid and intervention will skyrocket in 1995. Thus, we can expect a swelling number of calls from around the globe for peacekeeping and humanitarian assistance -- calls that must be answered with a measured response which includes a careful examination of whether or not we can play a legitimate and helpful role in mitigating the conflict.

In the past year, Congressional efforts that I led resulted in the withdrawal of U.S. forces from questionable missions in Somalia and Rwanda.

It was through the much maligned "power of the purse" that the Congress was able to exercise a restraining hand on these military ventures. Absent that power to limit or cut off funding for military operations, the Congress would be impotent to check the President's power to interject our troops in ill-advised military missions.

Congress must continue to fulfill its role in decisions affecting the commitment of U.S. troops and humanitarian support. But in order to do so, the Congress must maintain a firm grasp on the federal purse strings.

I have been, and will continue to be, a steadfast voice for preserving the "power of the purse" for the Congress, the "People's Branch." That is where the framers of the Constitution placed it, and their wisdom has stood the test of time for 200 years.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

In Behalf of Voluntary School Prayer

The First Amendment of the Constitution of the United States of America -- part of our "Bill of Rights" -- declares, "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof...."

That passage was explicitly written into our Bill of Rights at the appeal of Baptist ministers in Virginia, whose own religious liberties had been officially penalized before the American Revolution by Colonial officials.

Unfortunately, since the early 1960's, opponents of all religion have turned that passage of the First Amendment on its head to prohibit the free exercise of religion in our public life and, particularly, to expunge any expression of religious faith from our public schools.

This movement has even gone so far as to deny students the opportunity of having prayer at their high school graduations.

Against that background, should we be surprised to witness nationwide rising drug abuse among our children, rampant teenage sexual promiscuity, children murdering children, gangs of teenage thugs terrorizing

their neighborhoods, and a pervading moral malaise among youth in both our inner cities and our suburbs?

In an effort to restore something of a spiritual balance to our public schools, I have introduced a joint Congressional resolution to propose an Amendment to the Constitution clarifying the intent of the Constitution with regard to public school prayer.

My amendment is not an effort to require or to deny voluntary prayer in schools. My amendment is an effort to make clear that the words that the Constitution uses with regard to religious freedom do not mean that voluntary prayer is prohibited from our public schools or public school activities.

In short, I hope to end a three-decades-long "tyranny of the minority" in denying to the majority of school children in our country the slightest vestige of the exercise of a liberty otherwise guaranteed by the Constitution -- the right of children in our public school system to voluntarily pray in our public schools and their right to voluntarily pray at public school activities.

By U.S. Senator Robert C. Byrd

Ushering in West Virginia's High-Tech Future

Two recent grant awards for West Virginia projects -- aimed at helping our industries take advantage of federally sponsored research and advanced technology and at furthering our student's science and math skills -- demonstrate the multi-faceted advantages offered by our state's blossoming high-technology initiatives.

When I began promoting high-tech ventures in West Virginia more than a decade ago, I envisioned the kind of practical application that both of these grants will make possible.

The first, a \$49 million, five-year cooperative agreement between the National Aeronautics and Space Administration (NASA) and Wheeling Jesuit College, will provide for operation of the National Technology Transfer Center (NTTC) in Wheeling.

That facility, which was built with \$13.5 million that I added to federal appropriations bills, will pioneer the transfer of federally sponsored high-tech research and advanced technology to the private sector, affording the nation's industries a leg-up in the increasingly competitive world trade arena.

Through the NTTC, West Virginia and U.S. companies will be able to access and leverage billions of dollars worth of federally funded research results,

scientific/engineering expertise, and technology -- high-tech know-how that might otherwise be beyond their reach.

The second grant that recently came West Virginia's way -- also from NASA -- is a five-year, \$10 million cooperative agreement for operation of the Classroom of the Future.

The Classroom, which is housed in the Center for Educational Technologies (CETC) on the Wheeling Jesuit campus, is not only providing students with cutting-edge math and science training, but is also spearheading an effort to produce and evaluate educational technology products and programs.

I was in Wheeling this past fall to dedicate the CETC -- construction of which was made possible by \$10 million in federal funding that I added to appropriations bills -- and I was impressed by the tremendous potential offered by this new undertaking, both to our students and to our educators.

Indeed, West Virginia has taken giant strides in the past decade with respect to high technology, and I am optimistic that these latest grant approvals will expand and extend the many benefits that high technology offers West Virginia and the nation.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Balanced Budget Amendment And the People's Right to Know

An informed and active citizenry is essential to the workings of a representative democracy.

Unfortunately, in the 104th Congress, the new leadership seems determined to ram legislation through the two houses with little or no opportunity for debate, the process by which challenges and solutions are hashed out in public view.

I am not a party to the so-called "Contract with America," that seems to be driving the federal legislative agenda. My contract is with the Constitution of the United States.

The American people have a right to know how their lives and livelihoods will be affected by new laws. They have a right to weigh in on the legislative process with their concerns about, or support for, legislative proposals, and they deserve to have the facts.

The public should be outraged by the actions of some members of the 104th Congress, who are attempting to hide, under a veil of secrecy, the whole truth about legislative proposals such as the proposed Constitutional amendment to balance the budget.

The members of Congress have a responsibility, a duty, to be straightforward with the people they represent. But the proponents of a balanced budget Constitutional amendment seem bent on trying to hustle the ill-conceived proposal through the Congress before the public has the chance to review it. These proponents apparently recognize, as recent polls illustrate, that the more the public learns about the potential effects of the amendment, the less they like it, and the more likely they are to oppose it.

I support reducing the deficits.

I am for the goal of balancing the budget. For those reasons, I voted for budget deficit reduction packages in 1990 and in 1993. Not a single Republican in the House or Senate voted for the 1993 bill that was calculated to shave the deficit by well in excess of \$500 billion over five years.

As the Founding Fathers created it, the United States Senate is an institution intended to foster careful reflection, caution, and considered debate.

As opposed to the House, where members are elected every two years and the legislation is often influenced by the passions sweeping the nation, the Senate was designed by the Constitutional framers as the body where steaming passions would be allowed to cool through thoughtful, thorough examination. It is the Senate's Constitutional role to deliberate, and to guard against hastily produced, poorly crafted, and ill-advised legislation.

To those who are impatient for quick action regardless of the quality of the legislation, this process may seem frustrating, but it is this process that protects the rights of the American public and ensures that legislators will be held accountable for their actions.

I hope that the proponents of the balanced budget amendment will abandon this tactic of denying the public's right to know and will live up to their responsibility to the Constitution and to posterity by participating in a thorough public debate on the proposed Constitutional amendment to balance the budget.

Through such debate, I believe the American public will recognize the pitfalls and the folly of enacting a Constitutional amendment to balance the budget.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Time to Lead

Without question, I am concerned about the burden that will be imposed on future generations if the federal budget deficits are not further reduced.

But I am equally concerned about the possibility that our children and our grandchildren will have to pay an even greater price for another deficit -- a deficit of leadership.

I fear that the members of Congress who favor the balanced budget constitutional amendment, claiming that it is required to force them to take decisive action to whittle down the deficit, are merely using the amendment as a clever dodge to disguise their lack of courage to do the job they were elected to do -- to lead.

A constitutional amendment will give the members of Congress no greater vision and no more power to craft and pass balanced budgets than they already possess.

To the contrary, it will result in a massive shift of power out of the hands of the Congress -- the people's directly elected representatives -- and into the hands of the executive and judiciary branches.

The proposed amendment, if adopted, would drastically change the system of government under which this nation has flourished for over 200 years. It would irreparably damage the Constitution, which, with its carefully weighted checks and balances, its guarantees of liberty, its eloquent preamble, and its flex-

ibility, has inspired, guided, and protected this nation for generations.

I am not opposed to amending the Constitution. In fact, I have voted for constitutional amendments five times in the past. However, I am opposed to attempts to write fiscal policy into the basic charter of our nation, and that is what this amendment would do.

The constitutional framers, believing that fiscal decisions should be left to elected representatives, never intended fiscal policy to be contained in that document. Welding fiscal policy into the Constitution would exclude the kind of flexibility required to respond to changes in the economy, such as recessions, and the result could be even higher deficits, higher unemployment, and a disabled economy.

The budget deficits must be reduced, and I have supported two measures -- one in 1990 and another in 1993 -- that have put the deficits on a downward slope. Like those measures, any future effective plan to balance the budget will require tough, painful choices. It will require courage and leadership, but it can be done.

If the proponents can produce the two-thirds supermajority needed to pass a constitutional amendment, why not begin with an actual plan to further reduce the deficits? Such legislation would only require a simple majority of votes to pass both houses.

COPS: Fighting Crime on the Local Level

Thanks to a new federal initiative -- the Community Oriented Policing Services (COPS) program -- 116 West Virginia communities recently received grants to help hire extra police officers to patrol their streets.

The COPS program -- established in the 1994 Omnibus Crime Bill to enable local communities to expand their police forces and fight crime on the local level -- was funded through my amendment to the Crime Bill that set up the Violent Crime Reduction Trust Fund.

Through the latest COPS grants -- a total of \$5,327,620 was awarded -- nearly all of the West Virginia recipients will be able to hire one additional officer, with the exception of Morgantown and Parkersburg, which will be able to hire two new officers.

These latest awards, intended for communities with populations of less than 50,000, are the second round of grants approved for West Virginia under the COPS program.

Under the initial round, Huntington, Morgantown, Clarksburg, and the Boone County Sheriff's Department shared a \$1.2 million grant to hire a total of sixteen new officers, including six each in Huntington and Clarksburg; three in Boone County; and one in Morgantown.

The grants, which are awarded on a competitive

basis, provide up to 75 percent of an officer's salary and benefits over a three-year period. The size of the grants is based, in part, on the salary levels in each community.

Clearly, the battle against crime -- the effort to reclaim our streets and to ensure that our communities are safe from those who would flaunt the laws of the land -- must begin at the grassroots level.

In our homes, parents must continue to teach their children the moral and spiritual values and respect for authority that will enable young Americans to grow into law-abiding adults.

In our schools, our young students must understand respect for their teachers and for their peers, and school authorities should impose the discipline necessary to make schools safe havens for learning and teaching.

In our towns and cities, local leaders must have the financial resources with which to maintain law and order.

The COPS program helps to provide those much-needed resources, and serves as a signal that the local fight against crime has support on the national level.

My hat is off to all of the West Virginia towns and cities that successfully competed for COPS grants, and, in so doing, will gain an extra measure of security in the years to come.

A Poignant Revelation

Recently, former President Ronald Reagan released a letter to the American media revealing that he is suffering from Alzheimer's Disease.

His revelation resulted in a nationwide outpouring of compassion and concern, and it brought renewed attention to this insidious disease.

Millions of Americans suffer from Alzheimer's Disease, most of them not on the national stage, but privately, in the bounds of their homes or nursing homes.

For all Alzheimer's patients and their loved ones, though, the battle against this disease is a lonely and difficult one, waged primarily within the confines of minds that progressively shut down.

Several years ago -- in the hope of establishing a network of services in West Virginia to assist the victims of Alzheimer's and their families -- I added \$9.9 million to a federal appropriations bill to develop the Center for Nuclear Research in Alzheimer's Disease and Related Disorders at West Virginia University (WVU) in Morgantown.

Since that time, I have been successful in adding additional funding to a number of other appropria-

tions measures to expand the Alzheimer's research, treatment, and care network around the state through programs based at WVU and Marshall University in Huntington, as well as through a pilot Alzheimer's day-care facility in Parkersburg.

This past summer, I had the opportunity to dedicate the Parkersburg facility, which was launched by the Wood County Senior Citizens Association with the help of \$700,000 in federal funding that I had added to a fiscal 1992 appropriations bill.

I was struck by the outpouring of gratitude from those who have been touched by Alzheimer's, and that appreciation validated my efforts in West Virginia to help ease the burden of this tragic disease.

The latest statistics show that nearly 36,000 West Virginians suffer from Alzheimer's, a disease that counts among its victims an estimated four million men and women nationwide.

For all of its victims -- from former President Reagan to the millions of average Americans across our land -- we must not relent in our efforts to ease the suffering wrought by Alzheimer's Disease.

By U.S. Senator Robert C. Byrd

In Behalf of Public Broadcasting

It is unfortunate that, under the guise of budget economy, some in Congress have taken advantage of current debate on reducing the federal budget deficits to suggest the dismantling of the Public Broadcasting System (PBS), one of our nation's cultural gems.

Since the early years of television, thoughtful people have sought alternatives to the trash and vulgarity that have increasingly contaminated the television airwaves.

In time, "educational television" laid the foundations for today's public broadcasting stations.

Consequently, as the public television network grew, children in our inner cities and in rural states like West Virginia could be reached by television images that stretched their imaginations, taught them stories by great authors, exposed them to initial concepts in science and arithmetic, and challenged them with mainstream values such as telling the truth, respecting other children, obeying their parents, and becoming good citizens.

The Public Broadcasting System, the Corporation for Public Broadcasting, and National Public Radio have increasingly filled the voids left by the commercial networks when those networks appeared to turn their backs on good music, drama, public debates, documentaries, and

substance and challenge in entertainment.

Indeed, the Public Broadcasting System has evolved into a kind of cultural cutting edge -- the pioneering network -- that carved the frontiers and plowed the first fields that have provided the market that several other culturally oriented stations are now exploiting.

Lamentably, in commercial television, the bottom line is profit, and until certain kinds of programming prove themselves, most commercial networks are unwilling to take risks on most types of programming -- that is, until public television demonstrates the existence of a market for that kind of programming.

I hope that we will think long and sincerely before we punish, dismantle, or destroy one of the most valuable assets in our national cultural treasury, and risk reducing the Public Broadcasting System, the Corporation for Public Broadcasting, and National Public Radio to bad and ineffectual imitations of our commercial broadcasting networks.

To stifle, shut down, starve, emasculate, or cripple our Public Broadcasting System, by denying it the seed money that guarantees its very survival in some of our most isolated rural communities, would be to kill one of the finest golden-egg-laying geese on the American cultural scene.

FBI Fingerprint Center is Making its Mark

The Federal Bureau of Investigation (FBI) has attained another notable milestone on its way toward making its Clarksburg facility a keystone in America's crime-fighting infrastructure -- employee hiring has surpassed the 1,000 mark.

The FBI presence in the state has grown steadily since March of 1991, when thirteen men and women -- including 10 who transferred from FBI headquarters and three newly hired West Virginians—became the first staff members of the West Virginia Fingerprint Division, subsequently named the Criminal Justice Information Services Division (CJIS). With the addition of new employees in recent weeks, CJIS's staff has grown to more than 1,000. When fully operational, the FBI estimates it will employ a staff of approximately 2,500.

Indeed, the FBI facility promises to become a major source of jobs in the years ahead, providing quality job opportunities, not only for those directly working there but for collateral enterprises that will serve both the FBI and its broadening employee base -- department stores, health-care organizations, food suppliers, motels, and such. The growing CJIS will be a dy-

namo to power the economy of North Central West Virginia long into the next century.

In 1990, I was able to add \$185 million to a federal appropriations bill to launch the new ultra-modern fingerprint center. Since then, I have supported more than \$340 million in federal monies to keep the project on track and to develop its state-of-the-art computer system. Construction of the new facility is expected to be completed this summer.

In addition to the benefits to West Virginia's economy, CJIS will place West Virginia in the forefront of America's war on crime. It will provide our country's law enforcement agencies -- local, state, and federal -- with a rapid, advanced computer system for checking fingerprints, revolutionizing the way that law-enforcement personnel track and catch criminals.

I applaud all of those West Virginians who have sought and secured positions with CJIS, as well as those employees who have transferred from FBI headquarters. I renew my heartiest welcome to this exciting, vital, and imperative new crime-fighting institution that is finding a home in our state.

A Line-Item Veto Charade

Many years ago, when the British explorer George Mallory was asked why he wanted to climb Mount Everest, he replied, "Because it is there." In similar fashion, some members of the Senate appear committed to a strategy of despoiling the U.S. Constitution for no other apparent reason than because it is there.

Their latest charge is to enact a measure they claim gives the President line-item veto authority. Never mind that what they actually propose is not a line-item veto at all. Their strategy is to pass anything, in this case something called separate enrollment, and then pawn it off as line-item veto.

Their mutation works like this: Once the House and Senate pass an appropriations bill, every "item" in that bill would be stripped out and magically transformed into a separate bill. This means that, instead of sending the President one spending bill for, say, the Department of Defense, the Congress would actually send him more than a thousand little "billetes." The key problem here is that that process does not meet the requirements of the Constitution.

Article I, section 7, clause 2 of the Constitution requires that "Every Bill" must pass the House and Senate, and before "it" can

become a law "it" must be presented to the President. Under a separate enrollment process, though, several thousand little "its" will be created from the original bill without ever having been passed by the House and Senate. And, to add insult to injury, the sponsors of this legislative sleight of hand even admit the procedure is unconstitutional.

The Congress does not need to trample on the Constitution to achieve the goal that line-item veto proponents are trying to achieve. Senator Daschle, the Democratic Leader, offered a substitute amendment to allow the President to excise any spending. If the Daschle proposal were enacted, all the President would have to do is send a message to Congress and the Congress would be forced to vote on his proposed spending cuts in an expedited manner. If the Congress agreed, the money would not be spent.

Unlike the convoluted and unconstitutional separate enrollment measure, the Daschle amendment was a workable proposal. Moreover, it would not have shifted the balance of powers from the Congress -- the American people's directly elected representatives -- to the Executive Branch and scores of faceless bureaucrats.

By U.S. Senator Robert C. Byrd

Come Out from Behind The Balanced Budget Gimmick!

The United States can boast one of the world's oldest forms of government, with a Constitution that has functioned for more than two centuries, and that has, again and again, served as a model for other nations seeking to forge a more functional, rational system of self-government.

Since its creation in 1787, only 27 amendments have been added to the U.S. Constitution, the first ten of those as the Bill of Rights, adopted in 1791.

To their credit, our forefathers through many generations have declined to trivialize the basic law of the land with a plethora of alterations.

Most recently, a politically motivated effort to add a balanced budget amendment to our Constitution was defeated in the U.S. Senate, and I am glad to have led the charge against it.

I agree that we must make balancing the federal budget a major priority, and I am concerned about our crushing national debt.

We owe it to our children and grandchildren to come to grips with the debt, the deficits, and the rising interest on the debt. But we also owe it to our children to preserve the Constitution's incomparable system of mixed powers and of checks and balances.

Our Constitution has served us well. In no small measure, America has avoided the chaos and disruption that have too often convulsed other nations, and we owe this felicitous circumstance to the sanctity and reverence in which past generations have held our Constitution, and because of our forebears' reluctance to debase the Constitution with politically motivated amendments.

Thus, I have urged my colleagues to put the recent balanced budget amendment vote behind them and to forge bipartisan policies to solve our country's fiscal ills now.

As constructed by James Madison and the other Founding Fathers, the Constitution was never intended to include language promoting any particular fiscal theory or politically partisan policy.

For the sake of the future, let us indeed get on with reducing our federal deficits and paying down our national debt, in a spirit of genuine patriotism, sacrifice, and cooperation.

But let us not achieve those goals by corrupting the most effective instrument of self-government ever devised by human genius -- the Constitution of the United States of America.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Forging the Future on a Foundation of the Past

Nearly fifteen years ago, I began a written narrative of the history of the United States Senate, the fourth and final volume of which has just been published.

This most recently published volume of The Senate: 1789-1989 is a compilation of 46 speeches of enduring historical interest that have been delivered by U.S. Senators over the years.

The other volumes include a chronological overview of the Senate's first 200 years; a topical volume that touches on issues ranging broadly from the structure of the Senate to its role in treaties and impeachments; and a statistical volume that contains facts and figures on nearly every facet of the Senate's history.

My chief purpose in crafting this work, for which I receive no royalties or other income, has been to help instill in the members of the Senate and the American public, now and in the future, a greater awareness of the importance of the Senate's role in our government and the Senate's contributions to our nation's history.

After being sworn in as a new Senator in January 1959, I developed a keen interest in the rules, precedents, and history of the U.S. Senate. For me, the Senate came to mean something far more majestic than its grand halls of marble and its ornate chamber where speeches and laws are made.

There was something about the Senate that was far nobler than these tangible things -- something imperishable. It had a soul!

During my Senate service, particularly in recent years, I have witnessed a disconcerting change in the institution and its membership. Very few Senators today have a sense of history or an understanding of, and reverence for, the role of the institution as intended by the founders of our nation and as molded by the legions of distinguished men and women who have served in the Senate throughout its existence.

Lacking that historical foundation, I fear that many Senators today are ill-prepared to recognize and avoid the perils that have led to the downfall of past leaders, and, in some cases, of entire nations.

Even in recent weeks, as the Senate has considered such issues as the line-item veto and the balanced budget amendment to the Constitution, I have seen the disturbing signs of this lack of institutional memory and the threat it poses to our Constitution and our nation.

I hope that my multi-volumed work will serve as a warning beacon to elected leaders and the members of the American public, who might otherwise unwittingly allow a repeat of history's missteps.

We must recognize that it is on the foundation of the past that we forge our future.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Tax Favors vs. Deficit Reduction

During recent consideration of the 1995 Emergency Supplemental Appropriations Bill, the Senate approved my amendment -- by a vote of 99 to 0 -- to direct all the savings from spending cuts in the bill toward deficit reduction, a requirement that prevents the savings from being used to finance other spending programs or political tax favors.

The Supplemental Bill contains billions of dollars in spending cuts for a broad range of federal programs.

For example, the bill pares funding for agricultural programs, public housing, foreign aid, and airport improvements.

While I cannot agree with all of the rescissions, they are the kinds of painful choices that will be required if we are going to make a serious attempt to cut the budget deficits.

After the recent weeks of nationally televised hand-wringing and teeth-gnashing by members of Congress over the need to balance the federal budget, one would have expected these federal spending cuts to have been directed toward deficit reduction.

Instead, the original version of the Senate bill left these savings unfettered

by such a restriction, allowing them to be redirected toward other federal spending programs or toward offsetting the cost of proposed tax cuts, the lion's share of which, according to the U.S. Treasury Department, will benefit the wealthiest Americans.

It was to correct that glaring error that I offered, and the Senate adopted, my amendment.

However, even as the Senate was embroiled in the final hours of debate on the Supplemental Bill, the House passed a massive tax cut giveaway, which will cost \$189 billion over five years and approximately \$700 billion over ten years in lost revenues. That cut would irresponsibly add to the \$1.2 trillion in spending cuts already needed over the next seven years to bring the budget into balance.

This persistent movement to squander budget savings on tax cuts for the well-to-do and for big corporations is just plain crazy.

Voting for tax cuts is popular. It is an easy vote. But this is not the time for popular, easy votes. This is the time for leadership, for fiscal constraint, and for taking the difficult steps required to reduce the budget deficits.

By U.S. Senator Robert C. Byrd

In Recognition of 25 Years Of Safer Mining

Recently, the Mine Safety and Health Administration (MSHA) recognized the 25th anniversary of the Coal Mine Health and Safety Act of 1969, which has led to a quarter-century of effective life-saving health and safety regulations in mining.

Fueled in part by a mine explosion at Farmington in Marion County, West Virginia, in 1968, which resulted in the deaths of 78 miners, the Coal Mine Health and Safety Act was initiated to provide workers with regulated safety requirements and improved working conditions in the mines. The Act, which notably set the foundation for creating the Occupational Safety and Health Administration, has made a significant impact on the mining industry.

West Virginia's abundant coal resources, along with my upbringing in West Virginia's southern coal mining communities, have made mining safety and health issues a priority throughout my career in public office. In 1969, I secured the initial funding for the National Mine Health and Safety Academy in Raleigh County, a facility which is operated by MSHA. Subsequently, I have added more than \$23 million to appropriations bills to upgrade and expand the Academy's services and capabilities.

Further, in 1992, I added \$1.5 million to an appropriations bill to support the creation of a mine disaster simulation laboratory at the Academy. The technologically advanced laboratory realistically simulates mine-disaster conditions, enabling rescue personnel to train for real-life emergencies.

The Academy and its simulation lab are examples of the progress made possible by the Coal Mine Health and Safety Act -- progress evident in safety statistics. During the three-year period prior to passage of the Act, an average of more than 250 workers across the nation died annually in coal mining accidents. Between 1992 and 1994, the average number of annual coal mining deaths totalled fewer than 50.

Also, cases of black-lung disease, caused by inhalation of coal dust in the mines, have been reduced in the last 25 years by an average of 75 percent, and the prevalence of black lung disease among miners has declined by more than two-thirds.

I am thankful for the lives saved because of the passage of the Coal Mine Health and Safety Act 25 years ago, and I commend MSHA's efforts in improving mining safety conditions. Such efforts will continue to earn my support.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Cardinal's Twin Significance

The Cardinal holds special significance for West Virginians.

Since 1949, the brilliant scarlet male and his beautifully subtle mate have served as West Virginia's state bird. Often the only spot of brightness during gray winter months, the Cardinal is a promise of springtime and a sign of each year's renewal.

The "Cardinal" is also the Amtrak passenger train that three days a week stops in southern West Virginia on its runs between New York and Chicago.

For more than a decade, I have worked with Amtrak officials to keep the Cardinal operating through West Virginia, touting its importance to our state's blossoming tourism industry and promoting it as an important link between West Virginia and points beyond.

Earlier this year, Amtrak announced nationwide restructuring of its train routes, citing budget cutbacks as the impetus for its decision to streamline its passenger service. The Cardinal, which has been one of Amtrak's poorest financial performers, faced possible elimination absent the restructuring plan.

During a recent meeting in my office with Amtrak President Thomas M. Downs, I was advised that in September, the Car-

dinal will stop in West Virginia every Friday, Saturday, and Sunday, instead of its present Sunday-Wednesday-Friday timetable.

In addition, the train will make its eight West Virginia stops -- in White Sulphur Springs, Alderson, Hinton, Prince, Thurmond, Montgomery, Charleston, and Huntington -- during daylight hours, an improvement in the current schedule of nighttime stops in West Virginia during the New York-to-Chicago leg of the round-trip journey.

Amtrak has also decided to use its more reliable, modern "superliner" cars on the Cardinal route.

This new, daytime schedule, coupled with the fact that full-time weekend service will be offered, should boost ridership and tourism in scenic southern West Virginia.

The endpoints of the Cardinal route will be changed, terminating in Washington, D.C., to the east and Cincinnati to the west.

I am encouraged by Amtrak's plan to make the Cardinal and its entire system more efficient, competitive, and customer-oriented, and, like its avian namesake, I hope that the Cardinal passenger train will provide West Virginia a glimmer of economic springtime in the years to come.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Origins of Our Nation

Our U.S. Constitution and our system of government are deeply rooted in history.

The Framers of the U.S. Constitution were well acquainted with history and drew upon their knowledge of it as they formulated our governmental system.

Among the Framers' greatest influences was the French author-philosopher Montesquieu, whose political theories were significantly molded by a detailed understanding of the history of the ancient Roman republic and the history of England and the unwritten English constitution. Montesquieu asserted that the three governmental powers -- judicial, executive, and legislative -- should be kept separate and distinct from one another to ensure political freedom and to safeguard against tyrannical rule.

Thus, the Framers, guided by Montesquieu's insight and that of other political philosophers, together with their own knowledge of the classics and of English history and the colonial experience, instituted for the United States a governmental structure of mixed powers and checks and balances.

During my spare-time studies over a period of several years, I came to discover numerous parallels between Roman history and the history of our own republic, including the presence of such sociological

themes as a sense of manifest destiny, religious faith, and family values that instilled patriotism and reverence, self discipline, and respect for authority.

Subsequently, in 1993, I delivered a series of 14 Senate speeches on the history of the ancient Romans and their governmental system.

I used those talks to demonstrate, through the examples of Roman history, the threat to our form of government and our way of life that are posed by popular but ill-conceived proposals, like the line-item veto and the balanced budget Constitutional amendment, that would shift the power of the purse from the legislative to the executive branch, thus undermining the balance of powers.

The full texts of my 14 speeches are contained in a new publication, entitled The Senate of the Roman Republic, for which I receive no royalties or other compensation.

A copy of my book can be purchased, at a cost of \$17.00, including postage, by calling the U.S. Government Printing Office at (202) 512-1808, or by sending a check to the Superintendent of Documents at P.O. Box 371954, Pittsburgh, PA 15250-7954. Your check should be accompanied by a note indicating your name, address, the name of the book, and the stock number: 052-071-01072-6.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Memorial Day, 1995

From its humble beginnings during the Civil War, Memorial Day has grown to serve as our nation's official holiday to honor the patriotic men and women who have fought for our principles and freedoms.

Memorial Day -- or "Decoration Day" as it is often called -- was originally observed on May 30, a date that may have been chosen to correspond with France's "Day of the Ashes," which commemorates the return of Napoleon Bonaparte's remains to French soil. In its earliest years, Memorial Day was an occasion to decorate the graves of the Civil War dead -- both Union and Confederate -- with flowers.

Memorial Day is now officially celebrated on the last Monday of May, serving as one of the "holiday bookends" that mark the unofficial beginning and end of summer and characterized by flags, parades, and the flowers of springtime.

As we prepare to observe yet another Memorial Day, it is worth noting that on numerous occasions in the 20th Century, America's military might has been tapped to restore peace to the world or to save mankind from cruel tyrannies --

against German Imperialism in World War I, against Nazism in World War II, and against militant communism from 1945 until this decade, for instance.

In fact, 1995 marks the 50th Anniversary of V-E Day -- the day that commemorates "Victory in Europe" and the end of the Second World War. During that war -- as they had done in World War I and as they continued to do in subsequent world conflicts, thousands of West Virginians answered the call to duty.

West Virginians are a peace-loving people, but they stand tall when called upon to defend our country's rights and freedoms and to preserve the principles upon which America was founded.

They know, as do I, that a strong national defense is essential to maintaining our liberties -- a fact that has underscored my work in the United States Congress on behalf of a strong, viable defense.

On Memorial Day 1995, then, I join all West Virginians in paying tribute to the contributions of all of the loyal men and women who have served our state and nation with distinction.

Telescope Will Bring Universe Closer to Home

In the early 1600's, astronomer and mathematician Galileo fitted two glass lenses within a long tube and gave birth to the modern telescope -- a device with which man can gaze upon the stars and bring his world closer to the heavens.

Scientific discovery has advanced considerably since the 17th Century, and while Galileo surely marveled at what he saw through the crude lenses which he contrived, he had no way of knowing the level which technology would achieve, exemplified today through the powerful, state-of-the-art radio telescope currently under construction at the National Radio Astronomy Observatory at Green Bank in Pocahontas County.

It was in response to the collapse of the vintage 1962 telescope at Green Bank in 1988, coupled with the need for a sensitive and sophisticated device for research and development, that I added \$75 million to a 1989 federal appropriations bill for the construction of the new Green Bank Telescope.

When operational in late 1996, signals from the sun, planets, stars, and galaxies gathered by the telescope will be studied by astronomers to help provide a greater understanding of the evolution and workings of the universe.

The recent placement of a 336,000-pound, 148-foot axle marked the end of the initial phase of construction. The axle is a key component in the telescope's mov-

ing structure, which consists of two elements, a base that mechanically rolls on a circular track, and a tilting framework which allows for vertical positioning.

The second phase of construction will incorporate the tipping structure, which will weigh over 9 million pounds and include the reflecting surface, or dish, which will span 2.3 acres. The total height of the finished Green Bank Telescope will stretch more than 480 feet, twice the height of the Statue of Liberty.

Advanced computerization will perform a variety of functions, such as automatically compensating for the movement of the earth -- thus enhancing research capabilities by enabling scientists to study one specific point over an extended period of time.

Computerization will also monitor deformations in the surface of the dish caused by gravity and temperature changes. Minute changes will be corrected by the 2,000 automated adjusters assigned to the reflecting panels.

As the world's largest fully steerable, single-dish radio telescope, the Green Bank Telescope will also be the most precise telescope ever built for research with radio microwave frequencies. This scientific accomplishment will be a visible symbol of West Virginia's emergence into the high-technology world that will shape the 21st Century.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Car Wars

America's future economic strength relies, in great measure, on our ability to compete in the emerging global marketplace.

Although the United States, given a level playing field, possesses the wherewithal to lead in the international economic races, some of our trading partners erect trade barriers that unfairly tilt the playing field, forcing the U.S. to run uphill.

Japan's closed auto market provides, perhaps, the most egregious example of such unfair trade practices.

In 1994, the U.S. trade deficit with Japan reached a record high \$65.7 billion, and the greatest portion of that lopsided deficit was comprised of the automobile and auto parts industries. Overall, while Japanese automakers held some 22.5 percent of the American market, the share of the Japanese market held by the Big Three U.S. automakers was less than 1 percent.

Astoundingly, the U.S. automobile trade deficit with Japan last year accounted for 22 percent of our total trade deficit worldwide.

The impact of that deficit on the American economy is far-reaching, affecting some 700,000 employees of the Big Three automakers and more than 2.2 million Americans employed in the auto parts and supporting industries, including aluminum, steel, glass, rubber, electronics, and machine tool manufac-

turers.

So unwilling are the Japanese to open their borders to foreign-made autos and parts that they recently shut out any consideration of compromising on the matter, walking out of trade negotiations that were underway between their country and the U.S.

A new era in trade is upon us. Air travel, computerization, and telecommunications have led to an intertwining of nations and national economies unlike that witnessed by past generations. In this global environment, the economic woes and fortunes of one nation necessarily have some impact beyond its own borders.

In the interest of the future economic vitality of the U.S. and of domestic jobs, Japan cannot be permitted to continue rigging its markets against the U.S.

It was, therefore, in response to the Japanese trade impasse, that I recently offered, and the Senate overwhelmingly approved, a resolution supporting sanctions against Japan, unless the Japanese agree to work toward some middle ground on the auto trade issue.

Our nations have much to offer each other, but we must be able to work together. Time remains for the Japanese to return to the negotiating table, and I hope that my resolution will help spur them to do so. That act would be a good starting point in forging a more open and cooperative relationship of mutual benefit.

Timber Bridges Linking Wood Resources to Progress

The bridges which join this country together are an important part of our national infrastructure. But a surprising number of the bridges currently in use need to be repaired or replaced. Because of the efforts of my National Timber Bridge Initiative, upgrading these older steel and concrete bridges can be done by using treated hardwood.

Recent technological advancements have led to the development of chemically treated wood which is versatile enough to be used in a variety of construction projects, including noise barriers, box culverts, retaining walls, pedestrian bridges, railroad ties, marine facilities, and highway bridges.

More than 40 percent of the 578,000 highway bridges in the United States are considered structurally deficient or functionally obsolete. Responding to this decline, in 1988, I added \$3.3 million to a federal appropriations bill to create the National Timber Bridge Initiative, a nationwide program which is improving transportation networks. Since that time, I have added more than \$11 million to appropriations bills to continue the Initiative, which, along with research and development, technical assistance, and technology transfer, has funded construction of 349 bridges in 48 states. Sixty of these bridges have been con-

structed in West Virginia alone.

The most recent examples of timber bridges in West Virginia are currently being built in Monroe and Preston Counties. When completed, these bridges will carry a full range of highway traffic, including trucks, school buses, and emergency response vehicles.

The use of wood as a construction material makes sound economic sense. Timber bridges are made from hardwoods, native to West Virginia and other states, which last up to three times longer than steel or concrete in bridges because they do not rust and are not affected by de-icing chemicals. Also, timber bridges have lower material and construction costs and are easier to repair.

One of the principal objectives of the Timber Bridge Initiative is to stimulate West Virginia's timber industry, creating greater economic diversity and stability for our rural timber-producing communities. Timber bridges utilize wood resources from these communities and at the same time help to create local jobs and related services.

My National Timber Bridge Initiative is upgrading our nation's infrastructure while helping to create new markets for West Virginia's abundant hardwood resources -- a winning proposition on two important fronts.

West Virginia's 132nd Birthday

In 1863, West Virginia officially became the thirty-fifth state to join the Union. On June 20th of that year, the hardworking founders of the State of West Virginia watched their dreams become a reality, as the northwestern and western counties of Virginia finally were recognized by the U.S. Congress and President Lincoln.

As West Virginia celebrates its 132nd birthday, all of its citizens know that birthdays can be a reflective time. Usually, we take a moment to take a reflective gaze upon our past, and set our eyes on the horizons of the future.

Throughout my tenure in the Senate, I have worked to develop the infrastructure and economic opportunities of our state. One of my top priorities has been the construction of the Appalachian Regional Commission Corridor Highway System in West Virginia. Earlier this month, I participated in the ground-breaking for the final 3.1-mile section of Corridor G, reaching from Charleston to Williamson, a project for which I have added \$329 million to federal appropriations bills.

I have also added \$270.5 million to federal appropriations bills for construction of Corridor H, which will stretch from Weston, Lewis County, to Wardensville in Hardy County; and I have added \$175 million to federal appropriations bills for construction of Corridor L, which runs from Sutton, Braxton County, to Beckley.

New opportunities can be seen springing up in all areas of the state as a result of my efforts. The FBI Fin-

gerprint Identification Division facility taking shape in Clarksburg has already hired more than 1,000 employees, and expects to have a total of 2,500 people on the payroll once it is fully operational in 1998. In April, 450 employees began work in completed portions of this state-of-the-art facility, which will generate an annual economic impact of \$75 million.

Additionally, the new federal prison in Beckley, which is nearly completed, is expected to hire a total of 491 workers, with employees beginning to occupy the minimum security portion of the facility next month. When fully staffed, the prison will have an annual economic impact of about \$28 million.

The U.S. Fish and Wildlife Service National Education and Training Center now under construction in the Eastern Panhandle will help put West Virginia in the spotlight as a national training center for conservationists. And the Classroom of the Future and the National Technology Transfer Center in Wheeling will further efforts to train our young people for the industries of the future. These projects are only a few of the vast number of my initiatives that are contributing to our state's future.

So, as we celebrate our state's 132nd birthday, let us rededicate ourselves to the economic development of West Virginia to ensure that our children will be able to celebrate many more West Virginia Days in the next millennium.

Building West Virginia's "Field of Dreams"

In the movie "Field of Dreams," Kevin Costner answers the call, "If you build it, he will come," by constructing a baseball diamond in his cornfields. In doing so, Costner hopes to facilitate a relationship between himself and that which had previously been unreachable.

I, too, have heard the call that they will come if it is built, but West Virginia's "Field of Dreams" is not that of emerald green grass and perfectly laid chalk lines. Instead, this "field" is one of the four-lane highways of the Corridor Highway System that reach through Appalachia just as Costner's baseball field cut through Iowa. And once our field is completed, the jobs and industry that the people of West Virginia so richly deserve will come.

Thirty years ago, in 1965, Congress enacted the Appalachian Regional Development Act, thus promising the people of West Virginia and the entire Appalachian region a vast network of Appalachian Regional Commission (ARC) Corridor Highways. Since then, we have watched this vision slowly become reality, with new, modern, divided, four-lane highways replacing narrow, winding, unsafe roads throughout Appalachia.

Last week, I had the opportunity to participate in the ground-breaking for the final 3.1-mile section of Corridor G in West Virginia. Stretching from

Charleston, through Logan, to Williamson and the Kentucky border, this newest addition to the Corridor Highway System provides yet another building block in my goal of completing our ARC highway promise.

But the ARC highways cannot completely fulfill their objectives until Corridor H becomes a reality. To help assure this, I have added \$270.5 million to federal appropriations bills for Corridor H, and its potential benefits are easy to see.

Of the 399 counties that are part of the ARC, 110 counties lie on the ARC highway system. Research shows that, since 1969, those 110 counties grew 69 percent faster in income, 49 percent faster in earnings, and 32 percent faster in per capita income that their "twin" counties in areas not along major highways.

Corridor H will provide American travelers access into West Virginia, highlighting the natural beauty and economic opportunity available within our borders. In constructing Corridor H, we will provide West Virginia another inlet for the development of tourism, industry, and jobs.

Just as Costner's field soon brought a large number of visitors to his Iowa farm, the ARC Highway System is already bringing economic renewal to West Virginia. In West Virginia's "Field of Dreams," Corridor H signals the arrival of new possibilities to all the areas it touches.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Life-Saving Potential of Corridor H

The opportunity to help save lives has been one of my primary motivations in adding \$270.5 million to appropriations bills in recent years for construction of the Appalachian Regional Commission (ARC) Corridor Highway H in West Virginia.

Highway planners acknowledge that most West Virginia roads, including those in the region to be served by Corridor H, were constructed at a time when safety was not a primary consideration. Built where terrain permitted, primarily alongside riverbanks in narrow valleys and on twisting hill and mountain ledges, these outdated roads have not kept pace with the advances in automobiles or the growth in the volume of automobile travel.

These old roads are significant contributors to West Virginia's being ranked third among the fifty states in per-vehicle-mile fatalities.

Today's modern roads, including the divided, four-lane ARC Highways, are designed as much for safety as for convenience, efficiency, and ease of travel.

The West Virginia Division of Highways estimates that construction of Corridor H could reduce traffic fatalities in that area by 52 percent and accident rates by some 70 percent.

Highway planners point to a list of inadequacies in the existing roads throughout Grant, Hardy, Tucker, and Randolph counties that contribute to death and injury of auto travelers in that region.

Traffic entering and leaving those sharply winding, two-lane roads is unrestricted, causing drivers to unexpectedly encounter moving vehicles at crossroads and driveways, many of which are camouflaged by steep terrain or trees and plants that reach to the edges of the roadway.

To help avoid these dangerous conditions, Corridor H would be built with improved visibility of off-road zones and access limitations that, in some cases, would include construction of overpasses to allow the free-flow of cross traffic on main routes.

Corridor H would also be designed with better grading, gentler and fewer curves, and longer sight distances that would enhance safer passage for drivers who today must contend with creeping truck traffic on narrow, two-lane roads where passing is a high-risk proposition.

While many of us enjoy an occasional scenic drive along a country road, the residents of these Eastern West Virginia counties -- breadwinners driving to and from work, schoolchildren on buses, emergency personnel responding to calls for help -- have no choice but to drive daily on antiquated, black-topped deathtraps.

These citizens are just as deserving as their fellow West Virginians of modern, safer, four-lane highways that exist in other areas of the state. They should not be denied the lifesaving potential of a completed Corridor H.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Investing in Our Parks

As we enter the summer months, millions of visitors will stream into our country's National Parks. Those hikers, rafters, campers, and sightseers have realized that true relaxation and utter enjoyment can be experienced within the confines of our National Park System.

I, too, have witnessed the vast opportunities our parks provide, and I have recognized that investing in our National Park System yields more than just expanded trails and new welcoming centers. Directing federal funds to our parks has provided a boost to local and state economies, thus improving the area's tourism and recreation industries.

In West Virginia alone, hundreds of thousands of visitors arrive to admire the beauty of our state every year. They are taken in by the rugged allure and natural grandeur of areas such as Harpers Ferry National Historical Park, New River Gorge National River, the Ohio River Islands National Wildlife Refuge, and the developing Canaan Valley National Wildlife Refuge. These parks represent the pastoral elegance that will continue to bring travelers within our borders.

A few weeks ago, I had the opportunity to dedicate the restored railroad depot at Thurmond, on the New River Gorge National River. The dedication of the depot gave West Virginians another chance to recognize

the history, resources, and overall opportunities available in our National Park System. By investing in the National Parks of West Virginia, we are placing faith in our tourism industry and, in turn, making worthy contributions to the future of our state and our nation.

In that regard, I have added federal funding to assist the National Park Service in providing for its parks in West Virginia. As a result of this funding, areas such as the Eastern Panhandle have reaped the benefits of my efforts over the last 15 years, with Harpers Ferry National Historical Park's visitors contributing more than \$30 million to the local economy in 1993 alone.

Additionally, I have seen such promise in the Canaan Valley National Wildlife Refuge and in the past two years I have helped to obtain \$4 million in federal appropriations bills for the project. These monies are allowing the Fish and Wildlife Service to purchase the land necessary to develop the Refuge.

West Virginia's parks are an investment in the infrastructure of our state, providing a venture that eventually works toward an enhanced economic future for our children and our children's children. Our state's parks are a tribute to West Virginia's natural beauty and to our economic vitality in the coming millennium.

Byrd's-Eye View

Keeping Minds Open When School is Closed

The end of the school year symbolically marks the beginning of summer. Annually around this time, thousands of West Virginia children take a two-month break from their schoolwork, turning their thoughts to warm weather, visits with family and friends, and exploring West Virginia's many natural recreation areas.

While it is a rite of summer for students to have fun during this break, it is also important for them to continue developing their minds. A rewarding way for students to continue their education outside the classroom is through reading.

Astoundingly, a study recently released by the Department of Education, the National Assessment of Educational Progress, reports that 90 percent of third- and fourth-graders have not read a book or story at home in months. At the same time, about a quarter of those children were watching six or more hours of television a day.

These statistics are troubling because they indicate that our young people may be heading in the wrong direction. If our country is to maintain its position of political and economic leadership in the world, and if future generations of Americans are to have any hope of enjoying the standard of living that most Americans experience today, our youngsters must read and read voraciously.

Technology may swiftly be launching us into a worldwide network of information, but it is still important to read in order to master the "basic subjects" -- classical disciplines such as mathematics, science, grammar, history, and geography -- and to discover the wisdom which can be found in the great literature of the world. To operate the most sophisticated computer that technology yields still requires the fundamental ability to read and to comprehend what is being read.

Today's children are the foundation for tomorrow's future. We rely on education as a key element to ensure that this foundation is a solid one; and, as a nation, we must prepare our children for the realities of the worldwide competition which they will surely have to face.

Schools alone cannot fulfill every educational need. Parental involvement is a vital force for promoting good reading and good study habits, and for weeding out mindless and baneful influences. Reading at home can be a meaningful and cherished family activity, as well as an effective way for students to polish their learning skills.

Parents should be urged to read aloud to their children, and to encourage children to read on their own, and often. This summer, schools will be closed; but, through books, minds can stay open.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Striking a Blow against Underage Drinking

When it comes to substance abuse in this nation, alcohol is our biggest scourge. Almost 14 million Americans over the age of 18 are alcoholics.

As a nation that purports to care about the health, safety, and well-being of its people, the very least we can do is to try to address this alcohol plague by discouraging the early drinking that often results in later addiction or alcohol dependency.

With that in mind, I recently authored, and the Senate approved, an amendment requiring states to adopt a "zero-tolerance" standard for drivers under the nationwide legal drinking age of 21. That standard would make drivers 20 years old and younger who register blood-alcohol levels as low as 0.02 percent subject to state-imposed drunk-driving sanctions.

The zero-tolerance law -- already on the books in West Virginia and twenty-three other states -- corrects a glaring legal loophole that actually allows those under the age of 21 to drink and drive without fear of prosecution, as long as their blood-alcohol level is below the state's legal adult standard for drunk driving, most commonly 0.10 percent.

Where is the logic in telling teenagers it is illegal to drink, while overlooking alcohol in their systems when they get behind the wheel of a car?

In 1994, approximately 2,200 people were killed because of minors who were drinking and driving, and of that group, 1,600 were young people themselves.

My amendment will not only help save lives, but it will also send a message to our nation's youth that drinking and driving is wrong; that it is a violation of law; and that it will be appropriately punished according to the laws of each state.

Under my amendment, states that fail to adopt a zero-tolerance law will lose 5 percent of their federal highway construction funds in fiscal year 1998, and 10 percent of those funds every year thereafter.

I hope that my amendment will be successful in spurring the states without zero-tolerance laws to take the responsible step and enact them.

The simple fact is that alcohol mixed with teenage driving inexperience is a lethal combination. Zero tolerance will save lives, especially the lives of teenagers.

By U.S. Senator Robert C. Byrd

Re-emphasizing Education

Recently, a great deal of media attention has been applied to the deficiencies of the American educational system. Critics of our current system cite a lack of academic rigor, the need for increased remediation, and the practice of grade inflation as signs that American high school graduates are unprepared for the high-tech, high-demand world that is waiting for them beyond the schoolhouse doors.

In fact, in an article last month in The Washington Times, employers expressed "alarm and disgust" at our current educational system, stating that "one-fifth of American workers are not fully proficient in their jobs."

As we question the direction that our educational system is headed, it is important for us to recognize the importance of schooling and the need for our state's and our nation's youth to begin learning life's teachings at an early age. In reforming our system and in preparing our children for the jobs of the future, we must first instill the desire to perform in an exemplary manner.

True educational excellence can only be achieved if the student is willing to work for it; learning cannot be presented as a gift or forced upon a young person like unwelcome medicine. Education must be something embraced, sought after, and valued. Learning must be recognized for the

treasure that it is, and our nation's youth must understand that their futures lie in the quality, scope, and depth of the educations they gain today.

The lack of communication skills of today's youth and the inability of today's high school graduates to adequately handle the demands of their jobs can be traced in part to a lack of pride and an absence of self-respect. If today's youth do not seek out the opportunities available in their educational journeys, they will not be capable of exerting the type of creativity and hard work that they will later need as they confront the challenges of the workplace.

As educational critics begin to look for solutions to what ails the American educational system, they must certainly contemplate the traditional values evident in West Virginia. One way in which our nation's youth can begin to achieve academic excellence is for them to regain a sense of determination, dedication, and hard work.

It is time for parents, community leaders, and local officials to accept their societal responsibilities and teach our nation's youth the value of education. We must help our children to realize just how important education and learning truly are, not only for their own personal future but also for the future of our state and nation.

Study Results Are Encouraging For Corridor H

The President's Appalachian Regional Commission in its 1964 report to President Johnson said, "Developmental activity in Appalachia cannot proceed until the regional isolation has been overcome....by a transportation network which provides access to and from the rest of the nation and within the region itself....The remoteness and isolation of the region, lying directly adjacent to the greatest concentrations of people and wealth in the country, is the very basis of the Appalachian lag."

These words continue to ring true today due to the fact that the Appalachian Regional Commission (ARC) Corridor Highway System remains largely incomplete 30 years after it was promised to the people of Appalachia.

Construction of the ARC Corridor Highway System -- and most recently West Virginia's Corridor H -- has spurred a host of negative essays, based more on personal opinion than on actual attempts to measure the highways' impact.

However, a recent study, "The Economic Effects of the Appalachian Regional Commission" by Andrew Isserman and Terance Rephann of the Regional Research Institute at West Virginia University, provides an encouraging statistical analysis of the ARC and the Corridor Highway System.

That study, published in

the Journal of the American Planning Association, used a "control group" model that compared 391 ARC counties with "twin" counties in other parts of the country.

The study reached a persuasive conclusion with respect to the impact of Corridor Highways: The 110 counties on the Appalachian Corridor Highway System, when compared to their "twin" counties elsewhere in the nation not on a major highway, grew 69% faster in income, 49% faster in earnings, and 6% faster in population.

According to the study, the ARC highways do make a positive difference in the economic well-being of the counties they traverse.

And there is every reason to believe that the Corridor H counties and their business ventures -- including, for example, the expanding tourism, poultry, timber, and wood-products industries -- can expect the same kind of economic boost experienced in other Corridor Highway counties from construction of a safer more modern highway.

To argue against Corridor H is to advocate limited job and economic opportunities at the expense of the people of that region, as well as the state and the nation.

The statistics tell the story. Economic development does follow the paths of the ARC Corridor Highways and it will accompany the construction of Corridor H.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Recognizing Scholastic Excellence

Every year, many of our nation's top high school graduates take the summer months to prepare for the approaching college academic year. Recognizing the importance of education, these students arrange for student loans and grants and take on summer jobs to help offset the cost of a college education.

These students realize that the costs that come with pursuing a college degree are well worth the sacrifice. There is no greater mission than the continued pursuit of education, and, in order to ensure a sound future for our nation, those who desire to pursue their educations in the college or university setting should be given the means and encouragement to do so.

It is for that reason that I initiated a national scholarship program in 1985, a program that my Senate colleagues later named the "Robert C. Byrd Honors Scholarship Program." Through these scholarships, awarded on the basis of academic excellence, I sought to reward the brightest minds in West Virginia and throughout the nation for hard work throughout their high school careers.

When first started, the program awarded students across the nation a one-time \$1,500 scholarship for college. In 1993, Congress expanded the award, making the scholarship a renewable, annual payment of \$1,500 for up to four years, for a total of \$6,000. To continue receipt of the scholarship, Robert C. Byrd Honors Scholars are required to maintain the same academic excellence in the university or college setting that they exhibited in high school.

This year, 45 new Rob-

ert C. Byrd Honors Scholarships were awarded to West Virginia high school students. This brings to 390 the total number of West Virginians who have received this scholarship since the program's inception in 1985. These scholars are selected by a five-member panel comprised of representatives from the West Virginia Department of Education and the Central Office of the State College and University System. Education officials in the other states have established their own selection procedures.

Also this year, 313 high school valedictorians in West Virginia -- the top of the class in public, private, and parochial schools -- have been awarded a \$50 savings bond to be put toward their educations. Made possible through a private trust fund, the Robert C. Byrd Scholastic Recognition Award has, since its inception in 1969, signaled to our state's top high school students that education and hard work are, indeed, valued. To date, 7,211 West Virginians have received this recognition award.

As we approach the next millennium, I am confident, from looking at each year's crop of Robert C. Byrd Honors Scholarship and Robert C. Byrd Scholastic Recognition Award recipients, that hard work, dedication, and a thirst for learning are values that many of West Virginia's high school students continue to treasure. These and other investments in our children's academic dreams help to ensure that our nation is well prepared to answer the challenges of the future.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Recognizing ARC's Importance

In 1965, Congress established the Appalachian Regional Development Act, providing the residents of Appalachia with the means to develop their infrastructure and economic opportunities under the watch of the Appalachian Regional Commission.

As one of the original cosponsors of the legislation that created ARC, I continually worked to spare the program from threats of elimination during the Reagan Administration and have fought to avoid the drastic reductions in ARC funding proposed by the Bush and Clinton Administrations.

Over the last 30 years, ARC has been a good example of a federal program working to accomplish its goals without being burdened by the growing presence of a federal bureaucracy, while continuing to help Appalachian states advance economically. But ARC's work is still far from completion.

Recently, I led a bipartisan defeat of an amendment to a federal appropriations bill that would have stripped ARC of an additional \$40 million in funding, over and above the 35 percent reduction already made in this year's funding.

It is unfortunate that ARC funding has been cut 35 percent while funding for other non-military programs has only been tabbed for a 13 percent reduction.

It is deplorable that some Senators tried to slash ARC's funding by an addi-

tional \$40 million, especially after the Senate and the eight Republican and five Democratic governors who represent the region have voiced their support for ARC.

The \$40 million that was attacked was funding that the Senate Appropriations Committee approved at my request for further construction of the ARC Corridor Highway system in 13 Appalachian states. With only 75 percent of the system completed, now is not the time to divert our attentions from the Corridor highways. Fortunately, this ill-advised amendment was rejected, with 19 Republican Senators voting with me against the amendment.

ARC is not just another federal program "gone out of control." ARC is a well-managed program with a small staff and a smaller operating budget. In fact, only 4 percent of its budget goes for overhead, thus allowing the Commission to put its federal funding right into the communities it was designed to serve.

At a time when domestic spending is being drastically cut back, we must realize that positive, result-producing programs such as the Appalachian Regional Commission must continue to be a priority, both for the federal government and the Appalachian states. ARC must continue to work toward the goals it set 30 years ago, and I will continue to fight to aid ARC in fulfilling its mission.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Restoring Trust and Objectivity

On several recent occasions, I have spoken on the Senate floor about the large honoraria that some members of the press receive from private corporations and special interest groups.

Because of the public perception that highly paid lobbyists and special interest groups have undue influence over many legislators, the Senate adopted my amendment in 1991 prohibiting members of the Senate from accepting honoraria.

Ironically, we now hear reports of journalists and news commentators who receive thousands of dollars to speak to special interest groups whose issues they cover in their stories and news reports.

If the news media are to salvage their position of trust and authority in American society, they, too, should abide by the highest of ethical standards. The communications industry wields such enormous power that the media should be willing to take any reasonable step to help reassure the public about the accuracy and objectivity of what they report. With the hope that the Senate might help lead the way in this regard, I recently offered a resolution requiring journalists accredited to Senate galleries -- which are funded with tax dollars and staffed with Senate employees -- to disclose sources of honoraria and earned outside income.

The purpose of my

resolution is not to probe into the personal financial holdings or private lives of the members of the press, but to deal with a skeptical public perception concerning the impropriety of certain forms of outside earned income, such as speaking fees, and to address the possible doubts concerning the question of objectivity in reporting, when such reporting conceivably might be influenced by such fees.

Likewise, in order to deal with the people's flagging trust in our traditional institutions, I recently offered a "Sense of the Senate" amendment calling on the Judicial Conference of the United States to take a closer look at the judicial branch's regulations governing gifts and travel. This amendment was adopted by the Senate by a 75-23 vote.

These actions on my part were not intended to target or blame an individual or profession for past problems. Instead, they are intended to shore up the people's faith in our nation's time-honored institutions. Certainly, the news media's position as the interpreter and sole purveyor of the news brings with it an enormous responsibility to the public. My actions present the members of the media and the judiciary with the opportunity to remove the shadows of doubt and skepticism -- hopefully, voluntarily -- that have been cast across those professions.

Byrd's-Eye View

Paving the Road to the Future

Recently, the U.S. Senate passed the Fiscal Year 1996 Transportation Appropriations Bill. This bill embodies the congressional trend -- initiated this year -- of cutting nonmilitary domestic investments in infrastructure by slashing transportation appropriations more than \$1 billion below last year's level.

In its quest to reduce the overall budget, while, at the same time, increasing military spending by billions of dollars and providing tax breaks for the wealthy, Congress, under the new Republican leadership, is proceeding to deal devastating blows to almost all domestic infrastructure programs.

This year's transportation bill is an example of such discretionary domestic budget cuts, for the monies appropriated fall far short of meeting the growing needs of our nation.

During the six years that I was chairman of the Senate Appropriations Committee, from 1989 to 1994, inclusive, I recognized that our nation's economic prosperity depends heavily on the adequacy of our highways, airports, railroads, and transit systems. For that reason, I advocated increased and sustained funding for our nation's transportation infrastructure.

Currently, 70 percent of

our nation's interstate highways in metropolitan areas are congested during peak hours. Nearly a quarter of our nation's more than half-million bridges are structurally deficient, while another 14 percent are functionally obsolete. And the number of arrivals and departures at our airports is expected to grow 60 percent in the next decade.

But Congress is cutting its investment in transportation infrastructure. Some members of Congress have decided that unnecessary, unrequested, and outdated missile defense systems are more important than the roads, bridges, and airports that our citizens use on a regular basis.

Cuts, such as those made to the transportation bill, will leave the next generation with an unsafe and inefficient transportation system that will result in devastating repercussions on the economy, on private industry, and on public travel.

We must reverse this "slash-and-burn" budget mentality before its impact is irreversible. Our nation's spending practices must reflect the demands and priorities of its citizens. Our transportation infrastructure is a necessary and well directed investment in our nation's future.

Re-evaluating Military Spending

In the 1980's, the United States invested billions of dollars to develop high-tech weapons and missile defense systems. During those closing years of the Cold War, Congress rightly focused on strengthening our nation's military, and funded the projects and programs that could be effective in a confrontation with the former Soviet Union.

Just as the Soviet Union no longer exists, however, the need for massive increases in military spending is also a relic of the past. The end of the Cold War marks an important crossroads for federal defense spending, but unfortunately some members of Congress still scurry to cast their votes for bloated defense budgets.

I recently spoke in support of an amendment that would have cut \$7 billion that was added to the President's fiscal 1996 budget request for the Department of Defense -- \$7 billion over and above the funding sought by the President and the Department of Defense itself.

These increases in military spending have a greater impact than just providing another missile defense system or constructing more B-2 stealth bombers. We are paying for these unnecessary weapons with funds that should be used for much-needed domestic infrastructure programs.

Sadly, as some of my colleagues force this added funding on the Department of Defense, they are stripping education, law enforcement, transportation, and

other domestic programs by \$183 billion over a period of seven years.

Effects of these cuts will mean a further deterioration of the nation's infrastructure. These are not the dividends that the end of the Cold War promised. We are now crafting a defense budget that does not reflect the needs and demands of our nation. We are building some planes and weapons and defense systems, not because they are needed, but because we have failed to move beyond the mindset of the Cold War era. Like caged mice on an exercise wheel, we go round and round, buying weapons we do not need. These taxpayers' dollars could be better applied towards reducing the nation's deficits.

The time has come for us to recognize that the future of our nation does not lie in the expensive and seldom-used weapons systems of days gone by. Instead, investments in domestic infrastructure -- schools, police, roads, civilian research, environmental clean-up, water and sewer projects, and the like -- are the key to a productive future.

I recognized the wisdom of increased military spending during the Cold War. But the time has come for us to acknowledge that the Cold War has ended. While it is important that we maintain a credible and dependable military force, we will also be placing our nation's defense on a sound foundation by investing in our domestic fiscal and human infrastructure.

FBI Moving Forward in Harrison County

The Federal Bureau of Investigation's Fingerprint Identification Division is beginning to make its mark on West Virginia.

The new facility -- located in Harrison County and initiated by \$185 million that I added to a fiscal year 1990 appropriations bill and more than \$300 million in additional federal funding that I supported -- will serve as the nation's center to convert the FBI's antiquated fingerprint system into a state-of-the-art computerized network.

Recently, a ceremony was held in Clarksburg -- in which I participated -- to kick off work on the FBI's Fingerprint Image Conversion Operation (FICO) contract in Harrison County.

Through the FICO contract, some 32 million FBI fingerprint cards will be converted into computer-readable, digitized images, thereby providing law enforcement officials with a high-tech ally in the war against crime.

Until recently, the FBI operated two satellite facilities -- in Clarksburg and Fairmont -- to begin advance work in connection with the planned, ultra-modern computerized criminal history information network that will be housed at the Fingerprint Identification Division.

The 300 employees at the Clarksburg satellite operation, however, were transferred several weeks ago to the new Clarksburg FBI complex, bringing to more than 1,100 the employees on board there. Ac-

ording to FBI officials, those employees are handling a variety of tasks, including receipt and classification of criminal and civil fingerprint cards and records conversion and processing operations, as well as various policy, administrative, and liaison functions. Already, FBI employees in West Virginia have converted over 2 million criminal history records to an electronic format.

During my visit to Clarksburg, I was pleased to learn that construction on the main building is almost complete, and that employees are using portions of the entire building. When fully operational sometime in 1998, the facility is expected to employ approximately 2,500 personnel and pump an estimated \$75 million into the local economy annually.

In late August, I was advised that the FBI has now received its first electronically transmitted fingerprint images from the Boston Police Department's live-scan fingerprint device. This milestone, FBI officials advise, is the beginning of the end for manual, paper and ink fingerprint cards.

I am encouraged that the work on the FBI facility is proceeding smoothly, and that West Virginia and Harrison County will be home to the most technologically advanced, large-scale weapon ever developed in the age-old battle to curb crime and to help promote domestic tranquility.

The Coast Guard's West Virginia Connection

In 1789, when a young man named Alexander Hamilton was appointed Treasurer of the United States, he proposed a service of small, armed vessels intended to enforce the new revenue laws. With this proposal, the United States Coast Guard was born.

Most people do not connect Alexander Hamilton with the Coast Guard. He is usually thought of as one of the triumvirate who crafted The Federalist Papers and laid the framework for our Constitution, or remembered for his tragic duel with Aaron Burr.

In much the same way, few people connect the Coast Guard with West Virginia. But like Hamilton's new idea in 1789, innovation is paying off in West Virginia for the U.S. Coast Guard.

Recently, I was in Falling Waters in the state's Eastern Panhandle to dedicate the Coast Guard National Vessel Documentation Center, an 18,000-square-foot facility that will house about 100 personnel and have a \$5 million annual economic impact.

For some time, I had urged the Coast Guard to look at West Virginia--its low crime rate, moderate cost of living, strong workforce, and advanced telecommunications systems--as an ideal place to locate certain segments of its operations that do not require water ports. The Coast Guard Documentation Cen-

ter is one such operation.

Through a number of cost-benefit studies, the Coast Guard determined that it could consolidate its 14 vessel documentation offices and provide documentation to all of its customers, no matter where they were located, and save tax dollars each year in the process.

West Virginia appears to be a comfortable match for the Coast Guard. This latest Coast Guard venture joins my earlier effort to establish the Coast Guard Operations Systems Center in Martinsburg. The Systems Center--in operation since 1991--employs approximately 150 Coast Guard and contract personnel, with an annual economic impact of \$8 million. Together, the two facilities mean 250 jobs and a total economic impact of \$13 million for West Virginia.

The U.S. Coast Guard has had a tradition of doing more with less, and in these tight budgetary times, it is a tradition that other government entities should emulate. Technology affords new and innovative ways to accomplish needs, and consolidation is one proven way to promote efficiency and save tax dollars.

West Virginia and the Coast Guard have a bright future together, and I am pleased that many-fold advantages will be realized through the Coast Guard's expanded presence in our state.

The Lessons of "The Streak"

On two successive nights in early September, millions of baseball fans across the nation watched as Baltimore Orioles short-stop Cal Ripken, Jr., went into the record books.

On those two nights -- September 5 and 6 -- Ripken equalled and broke the record for playing in consecutive games, a record established in 1939 when baseball legend Lou Gehrig played in his 2,130th straight game.

But "The Streak", as it has become known, is about much more than showing up at the ballpark each night.

Ripken's determination and devotion to his job -- a job that he has not missed since May 30, 1982 -- sends a message to young and old alike that hard work is still revered and that persistence and perseverance are traits to be rewarded.

America's response to Ripken's accomplishment has underscored that message. In reporting the story, news organizations across the country have searched out hard-working Americans who have not missed a day of work in decades and students who have achieved perfect school at-

tendance records. Their stories have been told, and, basking in Ripken's reflected light, they, too, have earned the nation's respect and praise.

In accepting the accolades for his feat, Ripken had a simple explanation: He was just doing his job, he said.

In short, "The Streak" has seemingly revived the notion that "giving one's all" is something for which to strive and something that will win the nation's admiration.

I have long taken pride in the work ethic of West Virginians, who are known as a people who cleave to the notion that a day's salary deserves a day's work.

I hope that Ripken's achievement will inspire other Americans across the country to redouble their efforts to take pride in their work -- no matter what their occupation -- and to do a good job each day, every day.

Cal Ripken and his streak, and the nation's overwhelming positive response, have hit the right chord. It is music to my ears.

SOME BASIC ABC'S FOR A SOLID EDUCATION

A month ago, thousands of children in West Virginia, and millions nationwide, went back to school. Families returned to the routine of juggling the demands of daily life with homework and class projects, athletic and band practices, chess and debate clubs. All the while, our children have become acquainted with new teachers and new classmates.

Last year, Education Secretary Richard Riley launched an initiative that underscores time-tested "keys to success." This program, "Strong Families, Strong Schools," echoes some of my own thoughts on education by highlighting the importance of parental involvement in the education of children, and offering guidelines on what parents can do to raise a child's level of achievement. The following are some of those "keys to success."

- Read together. Research shows that the single most effective way to prepare children for future success in reading is to read aloud to them. Children who read at home with their parents perform better in school.

- Limit the amount of time that the television set is on at home. Parents should not only supervise the type of programs their children watch, but they should also limit the amount of time their children spend in front of the television.

- Make sure your children go to school every day. Set a regular time for homework each day, and provide a quiet place for your children to study. Be available for questions, and show your children that you are interested in their school work. Give children responsibility for chores, and hold them accountable for completing them.

- If you are employed, and your children are home alone after school, ensure that there is some way to monitor their activities. Talk to your children and their friends. Make certain they clearly understand the dangers of alcohol and drug use.

- Express high expectations for your children and praise achievement. Stress the importance of mastering the "basics." Encourage your children to take challenging math and science classes, as well as advanced courses in history and English. Foster an attitude of excellence whereby a child does not settle for doing less than his best. Encourage the child's academic interests with trips to the library.

- Keep track of your child's academic progress. Talk regularly to his teachers, and be a frequent visitor to his school. Show a personal interest in your child's education, and get involved with your PTA. Encourage the establishment of challenging standards in your school if they are not already in place.

There is no short cut to success. We as a nation must recognize the importance of old-fashioned hard work and study. Indeed, these are the keys that can help to unlock bright futures for our young people in the years ahead.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Reforming the Welfare System

The Senate recently passed, with bipartisan support, legislation providing for a major overhaul of our nation's social welfare policy.

The Senate welfare reform bill would abolish the current Aid to Families with Dependent Children (AFDC) program and the Job Opportunities and Basic Skills (JOBS) program, and would send welfare funds to the states in the form of block grants. States would have great flexibility to design their welfare programs to meet their own unique needs.

In order to end the perpetuation of welfare as a way of life, the bill imposes work participation rates and a five-year lifetime limit on an individual's ability to receive benefits. Under the bill, the work participation rates, the percentage of welfare recipients required to be working each year, would climb from 25 percent in 1996 to 50 percent in the year 2000. In addition, states are given the option of exempting 20 percent of their welfare caseload from the five-year lifetime limit on the receipt of welfare benefits.

The bill would also strengthen child-support enforcement to make sure that "deadbeat" parents are living up to their responsibilities to help support their children. Increased collection of child support eases the burden on our nation's welfare system.

Shortly before passage,

the Senate overwhelmingly approved a bipartisan amendment to provide additional funds for child care. Child care, though one of the more controversial elements of the welfare reform bill, is an important component of any serious effort to get people off welfare and into the workforce. Without such strong child-care provisions, a welfare mother could be put in the position of having to leave her child alone at home in order to meet the work requirements in the bill.

The Senate-passed bill also includes a contingency fund which state governments can access in times of economic downturn or other unforeseen circumstances when their block grant allocation may not be sufficient to meet their needs.

The House of Representatives passed its harsher version of welfare reform legislation last spring. Now that the Senate has passed its bill, a conference committee must meet to work out the differences between the House- and Senate-passed measures.

It is my hope that the Congress will soon be successful in overhauling our current, costly welfare system, and that the taxpayers' money will no longer be spent in a manner that encourages dependency but, rather, one that enables people who want to work to move off the welfare rolls and into the workforce.

Byrd's-Eye View

Paying for a Budget Face Lift With Medicare

The effort to bring the federal budget into balance within the next decade will require across-the-board pain and sacrifice. Even the most sensitive of domestic programs, including Medicare, can be expected to be trimmed in the budget-cutting exercise. Of that there is little disagreement. However, there is wide discrepancy as to how to implement those cuts and how deep they must go.

The Republican majority in Congress is claiming that some \$270 billion must be cut from Medicare in order to achieve a balanced budget and ensure the long-term solvency of the financially troubled program.

While it is true that steps need to be taken to make certain that Medicare remains solvent for future generations, a \$270 billion cut is, in fact, more than triple what is actually needed to stabilize the Medicare trust fund. Further, that cut is far beyond what the program can absorb without jeopardizing the quality and accessibility of care for millions of older and disabled Americans.

Disturbingly, under the Republican plan, that excessive cut is not being applied to the Medicare trust fund. It is actually going to be parceled out in the form of generous tax breaks -- some \$245 billion worth of them -- that will benefit the wealthy in our society. That

is a misguided tactic that benefits the rich at the expense of the elderly.

To make matters worse, the Republican leadership plans to wrap their Medicare proposal in the massive reconciliation bill, which must be considered on a fast track in the Senate that leaves little or no opportunity for debate or amendment. Thus, Medicare reform, already obscured by claims and counter-claims and waves of hype, oversimplification, and scare-tactics, is soon to be swept through Congress in a blind rush that will leave the American public wondering what hit them.

That is no way to lead.

The American people deserve to hear an honest, public debate on the matter of Medicare. They have a vital interest in the Medicare program and they deserve the opportunity to weigh in on any Congressional plan that affects it.

It is time for the Republican leadership to bring out into the light of day their plans to balance the budget, including such controversial and painful proposals as those that would cut Medicare and other popular programs. As for their current plan to drastically cut Medicare while handing out tax breaks to the rich, I believe that an informed public will see it for what it really is: a budget face lift being paid for with Medicare.

Early Adolescence: Easing the Transition

Nearly 20 million Americans are between the ages of ten and fourteen.

The parents of youngsters at these tender ages would most certainly bear testimony to the roller coaster of emotions evidenced in the pre- and early-teen years. Caught between childhood and adulthood, these years are spent striving for independence and making choices that set these children on the journey through the rest of their lives.

Too often, it seems, young Americans are set adrift during these crucial years to chart their own course to early adulthood, and with frightening results.

A decade-long study conducted by a blue-ribbon panel of scholars, scientists, former Cabinet officials, and members of Congress cautions that as many as fifty percent of youths ages ten to fourteen are making choices and pursuing activities that could jeopardize their future health, happiness, and productivity.

The recently issued report of the Carnegie Council on Adolescent Development -- entitled "Great Transitions" -- concludes that declining parental involvement in the lives of early adolescents has led to an increase in undesirable behavior -- experimentation with drinking, smoking, and drugs, for instance -- that can lead to lifelong problems.

Further, the report found a disturbing trend relative to after-school activities for this age group: The average 8th grader spends more than twenty hours a week in front of the television set. Time spent on homework was barely five hours a week, with even fewer number of hours -- an average of two -- spent on outside reading.

The solutions suggested by the Carnegie Council to counter these alarming tendencies are straightforward and simple: More parental involvement and interest in the lives of their adolescent children; more guidance from parents, schools, and communities on making the right choices; more emphasis in school on learning not only the basics, but also on the importance of maintaining healthy minds and bodies.

I propose an additional solution: That parents see to it that the time their children spend watching television be severely limited.

The Carnegie Council has sounded an important wake-up call. Our children -- our nation's most precious asset -- hold America's future in their hands, and it is incumbent upon us to ensure that through guidance, love, and support, they are armed with the education and moral underpinnings necessary to achieve happy, productive lives in the coming 21st century.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

An Unbalanced National Transportation Plan

One billion dollars for special mass transit projects, but not a drop for highway demonstration projects. That was the decree from the House Republican leadership on the fiscal 1996 Transportation Appropriations Bill, a decree that leaves West Virginia and other mostly rural states out in the cold.

Earlier this year, I had included \$9 million in the Senate version of the Transportation Bill for the 3.7-mile Merritt's Creek Connector on State Route 2 in Cabell County. By West Virginia construction standards -- where one mile of four-lane highway can cost as much as \$15-\$18 million -- that is a pittance. But it was also the largest chunk from a total of only \$39.5 million included in the Senate version of Transportation Bill this year for highway demonstration projects nationwide. That \$39.5 million figure, by the way, represents an 89-percent reduction from the more than \$350 million in last year's bill for such highways.

The House bill, however, in keeping with the House chairman's pledge to block any "earmarked" highway projects, contained not one thin dime for such roads. The House chairman reportedly called such earmarking "immoral," and House Republican committee members claimed that keeping the highway demonstration projects out of the bill was a move of fiscal responsibility. What they tried to brush under the rug, however, was the fact that the bill contains more than \$1 billion for earmarked mass transit projects, including \$333 million for 81 bus and

bus-related projects and \$666 million for 30 transit programs, such as commuter rail systems, in urban areas.

When the House and Senate versions of the bill came to an impasse recently at the House/Senate conference committee, the House Republicans refused to budge from their position, and they blocked the entire \$39.5 million from inclusion in the conference report. That is not only unfair; it is also unrealistic and unwise.

Highways are the lifeblood of West Virginia. They are sorely needed in our state and in many other states, which, like West Virginia, have very little mass transit and lack major airports and other transportation modes. In these states, highways are fundamental to economic development, and lack of adequate highways can spell economic stagnation. Highway demonstration projects are one of the few ways in which members of the House and Senate can address their states' and districts' special highway needs -- needs that are often ignored by federal agency bureaucrats and which are not properly addressed by the mathematical formulas generally used to distribute federal highway funds.

I have no qualms about earmarks for buses and transit projects. They answer a real need in high-population urban areas. But, clearly, by leaving highways out of the mix, the fiscal 1996 Transportation Appropriations Bill ignores a huge segment of America. That is no way to build a national transportation system.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

West Virginia's Blessings

On my recent visit to West Virginia to participate in ceremonies marking the anniversary of the disastrous 1985 flood, I was reminded of just how fortunate we in West Virginia are.

The 1985 flood ripped through 29 counties, put whole communities under water, and left thousands homeless. Without warning, its raging waters tore through West Virginia's hills and valleys, taking the lives of forty-three human beings.

The force of that flood twisted bridges, mangled roadways, and covered valleys so thoroughly with rocks and debris that, in some places, the land was left looking like a distant planet from a science fiction movie.

In 1985, just a few weeks before Thanksgiving, there seemed little to be thankful about for the victims of that terrible flood. And yet, so many who had lost everything stayed in West Virginia, dug what they could find of their belongings from the thick mud, and rebuilt their homes and their lives.

To most people, especially those from outside the borders of our state, that seems remarkable. It is almost inconceivable to some that families who had lost loved ones, witnessed the total destruction of their houses, and seen irreplaceable mementos swept away forever could put it all aside and stay in their flood-

stricken communities.

I am often asked why I think these people did not just pack up and move away.

What keeps them here?

I can only answer that question through the prism of my own experience and emotions about our state.

West Virginia is our home. We have roots here. We feel a special connection to the land. And we have a strong bond, a kinship, to one another.

Perhaps it is because West Virginia is a poor state, where most people have never had much in the way of material riches, that we have never lost sight of those things -- family, friends, community, faith in God, loyalty to country, and traditional values -- that are most important in life. And, perhaps it is disasters like the 1985 flood that keep us focused on those priorities, by reminding us of just how fleeting the kind of happiness is that comes from spacious homes, fancy cars, and expensive clothes.

This Thanksgiving, I hope that my fellow West Virginians will join with me in reflecting on all that we have for which to be thankful.

And I urge them to dedicate themselves to the preservation of our traditional values and -- through our churches, schools, and civic organizations -- to pass those spiritual and family values on to future generations.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

West Virginia's New Tool For Medical Diagnosis

The Robert C. Byrd Health Sciences Center at West Virginia University (WVU) in Morgantown recently unveiled the state's first Positron Emission Tomography (PET) scanner, making available to West Virginians one of the most advanced tools known to modern medicine.

The PET scanner, housed in a new PET center, which has been established with \$10 million that I added to a 1991 appropriations bill, will offer top-flight medical services to West Virginians right in their own back yard.

This new scanner, one of only 60 currently in operation around the nation, not only brings ultra-modern health care to our state, but it also provides an expanded opportunity for WVU personnel to conduct specialized scientific research. That, in turn, will help to make the University's Health Sciences Center a more attractive location for nationally prominent medical professionals.

To conduct a PET test, I am advised that medical personnel inject a small quantity of radioactive material into the patient. That material -- which, according to WVU physicians, produces no harmful side-effects in the patient -- is then carried through the bloodstream to the organ the doctor wishes to examine.

The PET scanner detects emissions produced by

the injected material, records data about the organ, and then produces a live color picture, which is examined and analyzed by the physician.

One of the great benefits to using the PET scanner is that it can provide a three-dimensional look at the organ in action.

Imagine the ability to watch the heart in motion, beat by beat, pumping blood throughout the body, or the chance to see a cross section of a working kidney, without having to make a single incision. What a departure from the one-dimensional, still picture provided by an X-ray!

To a physician, the PET scanner can mean the chance to catch a life-threatening ailment early and accurately without the need of an invasive procedure.

To the patient, it can mean the difference between the mild inconvenience of spending a few hours in the PET center and a long and costly hospital stay involving exploratory surgery, just for a diagnosis.

The opening of this new PET center is the latest stride in my long-running efforts to make health care more accessible to West Virginians. Along with the professionals at the Robert C. Byrd Health Sciences Center, I look forward to its successful long-term operation and to the many life-saving diagnoses it will make possible.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

MDTV Improving Rural Medicine

West Virginians cherish the freedom found in the mountains and valleys of our state. But while the rural landscape eloquently showcases nature's beauty, it can also make it difficult to deliver modern health care services to remote areas. That dilemma, which prompted the development in West Virginia of the televised medical service called Mountaineer Doctor Television, or MDTV, continues to drive the program's expansion.

In 1991, I added the initial federal appropriations to help establish MDTV in our state. Including that first funding, I have, over the years, added more than \$5 million in federal funds for the initiative; and in recent weeks, I have announced that four new sites -- Rainelle Medical Center, Roane General Hospital, Monroe Health Care Center, and Marshall University -- have been selected for inclusion in the MDTV network.

The four newest MDTV sites will join seven other remote sites: Boone Memorial Hospital; Braxton County Memorial Hospital; Davis Memorial Hospital in Elkins; Grant Memorial Hospital; St. Joseph's Hospital in Buckhannon; the Veterans Affairs Hospital/Clarksburg; and the Veterans Affairs Hospital/Martinsburg. Those will be connected to two major hub locations: the Robert C. Byrd Health Sciences Center in Morgan-town and the

Charleston Area Medical Center.

MDTV uses sophisticated, two-way video broadcasts to link physicians and other health care providers at the rural sites to the medical specialists and technological resources available at the two hub facilities.

The MDTV cameras capture images of patients at the remote sites and then transmit audio and video signals across telephone lines to screens at the hub sites, where specialists can consult on the patients' medical conditions and then provide advice to the local medical professionals.

In addition to the life-saving health benefits gained through the program, MDTV can save patients, their families, and the medical community time and money. Sparing patients of in person visits to medical specialists saves them -- and, in some cases, their caregiver family members -- the expense of travel and the loss of workdays. MDTV representatives estimate that the use of the network saves patients an average of \$2,500.

Residents of rural communities are receiving better health care through MDTV. To ensure that more West Virginians have access to it, I have included a provision in a fiscal 1996 appropriations bill to enable the further expansion in West Virginia of this modern medical outreach program.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Happy 10th Anniversary to Software Valley

I recently attended a celebration in West Virginia marking the 10-year anniversary of the Software Valley initiative.

It was in 1985 that I hosted the first Software Valley symposium, a gathering of representatives from government, academia, and business who came together to explore the possibility of founding West Virginia-based high-technology businesses, and of attracting out-of-state high-tech firms to locate in West Virginia.

Since its inception, Software Valley has been an assertive matchmaker, bringing federal agencies and their contractors together with West Virginia companies to forge promising business relationships. It has assisted in stringing "networking" lines that are providing for greater cooperation among West Virginia businesses. And it has served as an informational and educational resource, helping West Virginia firms to gain the know-how to become state-of-the-art competitors for the 21st century.

Four years after the launching of Software Valley, an opportunity opened for me and for West Virginia, when, for the first time, I was able to assume the Chairmanship of the Senate Appropriations Committee.

As Chairman, I added funds to appropriations bills to support the development of infrastructure that would provide a foundation upon which initiatives like Software Valley could build the private-sector framework for a

broader, more diversified West Virginia economy.

For example, as a result of my efforts, West Virginia is benefiting from construction of modern, safe, four-lane divided highways and renovation of river locks and dams that are providing for more cost-efficient transport of goods and services. My efforts have also included the establishment of high-tech federal facilities, such as the FBI Fingerprint Identification complex, that are creating an atmosphere conducive to new and greater private-sector investment. And I have added funding for the development of programs that provide training for the jobs of the future.

Much of this federally supported infrastructure is still taking shape, and as the current ranking member of the Appropriations Committee, I am continuing, within very severe federal budget constraints, to ensure that my various projects come to full fruition.

However, while federal funds can help to spur private-sector investment, long-term growth cannot be dependent on a constant influx of government assistance. A strong economic base requires a commitment from the private sector.

Therefore, although I no longer serve in an official capacity with the organization, like the proud parent of a child gone off to undertake a new challenge, I look forward to seeing greater achievements from Software Valley as it moves into its second decade.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Time for Bipartisanship

"All government -- indeed, every human benefit and enjoyment, every virtue, and every prudent act -- is founded on compromise." These, the words of Edmund Burke in an address to the British Parliament 220 years ago, bear repeating in the halls of Congress today.

In all my years of public service, I have never before witnessed such politically motivated and potentially disastrous intransigence as that which characterizes the current majority in Congress.

It was that partisan intransigence that forced the recent federal government shutdown, the longest in our nation's history, and that threatens future crisis. For if the current Congressional leadership remains wedded to its present "our way or no way" course, the workings of the federal government could again be brought to a standstill in the coming weeks. And, further, the chance to craft a thoughtful plan to move toward a balanced budget will be destined for failure.

Throughout the past year, the 13 appropriations bills -- traditionally rapidly moving measures by virtue of the fact that they must be passed every year -- have been weighted down by controversial pieces of the so-called "Contract with America."

Attaching the lopsided and ill-conceived elements of that contract -- for example, deep cuts in education, law enforcement, civilian research, Medicare, and

natural resources conservation, together with reduced discretionary funding for transportation infrastructure, coupled with a big build-up in military spending -- doomed the appropriations bills' enactment by the start of the new fiscal year and caused the federal government to stop operating for four business days. The cost of that shutdown is estimated at over \$700 million -- \$700 million in wasted federal tax dollars. That is the price of obstinacy.

Equally disconcerting and irresponsible was the calculated attempt by many members to attach partisan strings to the two temporary measures -- the continuing resolution and the debt limit extension -- that were necessary to end the federal shutdown and to keep the government operating until after all of the appropriations bills are completed and signed.

Now, with another possible shutdown looming just ahead, members of Congress and the Administration are engaged in negotiations intended to lead to a seven-year plan to bring the budget into balance. The test of their leadership will be whether or not the negotiators will put the good of the nation and the laudable goal of reasoned budget trimming ahead of political gamesmanship. If they turn a deaf ear to the advice of Edmund Burke and refuse to compromise, they will surely squander a real chance to bring the federal deficit down and to move toward a balanced budget.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Step Toward Peace on Earth

In the midst of this season of miracles, the world is poised on the brink of peace in the Balkans, a region which for the past four years has been battered by a brutal war.

Sadly, however, as the Bosnian peace agreement was being hammered out, the world paused to mourn the tragic assassination of Israeli Prime Minister Yitzhak Rabin, pointedly reminding us of the delicate nature of peacemaking and the tenacity and ugliness of those who would go to any lengths to sabotage it. The hope for Peace on Earth, then, however deeply felt and widely voiced, must be tempered with the reality that peace is a very fragile thing. It requires careful cultivation and diligent preservation.

In the case of the Balkans, peace is balanced on the narrow edge of an agreement made possible only by U.S. Diplomatic leadership and the conditions created by resolute U.S. and NATO military power. It is to that military might that the warring parties are looking to deter further war, to ensure stability, and to provide a chance to back away from conflict and begin anew in peace. The risks of not attempting to stabilize this fragile region, resulting in the spread of war, are substantial and troubling.

Against that background, after long consideration and deep personal reflection and concern, and underpinned by the recognition that all other alternatives for peace have been exhausted, I have given my

qualified support to a narrowly defined, one-year U.S. military mission in Bosnia.

Unfortunately, as with any military involvement, there are no guarantees that the Bosnian peace plan will proceed as the Administration currently proposes. There exists the possibility that the mission will not go well, or that it might be strained by efforts to expand the defined role.

Thankfully, in that event, the Congress, through the power of the purse, could force an end to the U.S. mission and bring our troops home again. It was my amendment to a fiscal 1994 Defense Appropriations Bill that set a deadline for the cutoff of funds for the U.S. mission in Somalia, thereby setting an enforceable end date to our involvement there. I have insisted on language in the Bosnian Resolution that sets up another deadline, thereby forcing the President to come back to Congress and justify the authorization and appropriations for any extension of our stay there.

In the meantime, U.S. troops, including service men and women from West Virginia, will join with NATO in a renewed effort to rebuild peace.

Thus, I stand behind our troops, and, in this season of hope, I join with the families of service men and women in offering up prayers for the safe return of their loved ones. May they be protected by the armor of what is right and just, and may their mission end in lasting peace.

By U.S. Senator Robert C. Byrd

Creating a Model for Classroom Reform

I have always believed that quality education is essential for molding a stronger nation. However, the deterioration of this nation's public schools and the lack of discipline in our classrooms impede the educational process. Disruptions in the schools, ranging from disorderliness to violence and gang-related murder, create a poor educational environment for teachers and students who are really striving to learn.

That is why I recently proposed an amendment to the District of Columbia Appropriations Bill to help return discipline to public classrooms in the District that could serve as a model for schools throughout the country.

My amendment would implement a two-year pilot project, requiring a study to determine the project's effectiveness in D.C. schools. If successful, schools across the country could follow its example.

My amendment would require community service for suspended students, propose a dress code, and make the Chief of the National Guard Bureau an ex-officio member of a new commission planned to oversee school reform.

Disciplinary suspension of a student is often looked upon as a vacation by the suspended individual. Students who are expelled and then left to their own devices tend to become bored and then, as a result, may get into further trouble. But

requiring them to perform public service will benefit the community, provide supervision for the time the student is out of the classroom, and demonstrate to the student that job opportunities will likely be limited without the benefit of an education.

Also, a dress code would keep obnoxious or inappropriate clothing out of the classroom. One reads newspaper articles about young people fighting and even murdering each other over articles of clothing. A dress code would minimize the differences between income levels among students, and remove the focus from clothes, brand names, and gang symbols, placing it, instead, on scholarship.

The third part of my amendment would include the Chief of the National Guard Bureau as an ex-officio member of the proposed Commission on Consensus Reform in the District of Columbia Public Schools, a commission intended to create and oversee reform goals. The National Guard is involved in youth programs throughout the United States and has a direct and positive impact on "at-risk" youth.

Our schools are a tremendous resource for our nation's future. It is important, therefore, to curb violence and restore sanity to our institutions of learning. We must reclaim the classroom.

Homecoming '96!

From the earliest days of my public service in our nation's capital, Erma and I have relished each and every opportunity to spend time in West Virginia. Like so many West Virginians whose jobs keep them stationed out of state, our hearts remain among good friends in the West Virginia hills.

Therefore, I was especially honored this past summer to be invited by Governor Gaston Caperton to serve as honorary co-chairman of Homecoming '96.

Although the post carries no official responsibilities, I look forward to this year-long celebration and to the chance to attend some of the festivities that will be staged in every corner of our state.

Those of us who call it home could easily pen a list of West Virginia's attributes, suitable for inclusion in a marketing pamphlet. It would contain the beautiful landscape and exciting tourist attractions, the numerous well-made products, the quality of life, and the presence of strong family values and abiding faith in God that can be found here.

But, beyond those traits that can adequately be described on paper, there exists, in West Virginia, a quality that defies simple

description. It is something that must be experienced first-hand, something that leads to a deep-seated attachment to this state. We West Virginians know quite well those wonderful feelings that well up in our souls as the visions of home sweet home settle in upon us. And, when we hear a homespun tale, or smell a fragrance that stirs a distant pleasant memory, or spot a familiar face in a crowd of strangers, there is nothing that stirs the depths of our hearts more.

Thus, West Virginia is engaging in a statewide celebration that not only beckons displaced West Virginians to come home again, but that also invites the whole nation to discover the West Virginia that we well know and cherish.

Homecoming '96 is an exciting venture, full of promise and possibilities. It is a tremendous chance to introduce newcomers to our state, and to showcase the progress being made here, including the renewed economic growth which I have worked so hard to help bring about. It is also, perhaps, a chance to entice some new enterprises to make West Virginia their home, too.

So, along with my fellow West Virginians at home and away, I look forward to a successful Homecoming '96!

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Call for Civility

It is with a measure of sadness and concern that I look back upon the year just ended, having witnessed a poison settle in upon the U.S. Senate that threatens to further undermine the public's trust in government.

During 1995, some members of the Senate, with growing frequency and severity, showed callous disregard for decorum and pummeled their colleagues with strident words better suited to tavern brawls than to debate in the world's greatest deliberative body.

Although the venom stopped short of the violent acts that have erupted on occasion throughout the Senate's existence, the past year's frequent outbursts of incivility could cause 1995 to be listed among the Senate's lowest years.

Most recently, for example, one member went so far as to label the President and other Senators "liars."

I cannot help but wonder what our young people think when they hear adults in the premiere upper body among the world's legislatures casting such rash aspersions upon other persons.

Such utterly reckless statements serve no constructive purpose in the legislative process. They only poison the waters of the well of mutual respect and co-

munity which must prevail in Congress -- particularly in the current, already bitter environment -- if our two political parties are to work together in the best interests of the people.

I do not intend to suggest that there is no room for disagreement in the Senate. The Senate is a deliberative body. It is a forum created to facilitate debate, including passionate argument. But when the American people are treated to such harsh words as have recently spewed forth on the Senate floor, it is no wonder that there is growing disrespect for the Congress throughout the country.

The members of the Senate have an enormously important responsibility, but the ability to carry out that responsibility is crippled when the people lose faith in, and respect for, their representatives and the institutions in which they serve.

I hope that in 1996 the members of Congress will exercise a greater restraint upon their passions and avoid making extreme statements that can only serve to further polarize the relationships between the two parties in the House and Senate and between the executive and legislative branches. The welfare of the country may depend upon it.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

High Goals, Wholesome Books, And Dreams

A recent survey found a pervasive fear of violence and of dying young among a large sector of our nation's youth.

The study, conducted by the child advocacy group Children Now and the health care provider Kaiser Permanente, found that 63 percent of 7- to 10-year-olds and 42 percent of 11- to 17-year-olds worry that they will die young.

Also, according to the study, 71 percent of respondents who were between the ages of 7 to 10 years worried that they would be shot or stabbed at school or at home.

Survey analysts noted that, in a great many cases, these children's awareness of their own mortality was validated by their own experiences. Not only have many of them seen unspeakable acts of violence on television and in the movies, but, all too often, these children have either witnessed a violent act or know someone who has been the victim of violence.

These findings are frightening, and they are made even more so when coupled with other recently reported facts about violence and youth in America. For example, an October special edition of The New York Times Magazine, devoted to "childhood in America", noted that an estimated 135,000 U.S. children take guns to school every day and that, despite a nationwide decline in violent crime in recent years, the arrest rates for violent

crimes committed by juveniles between the ages of 10 and 17 doubled between 1983 and 1992.

Also disturbing is the magazine's report of the finding that, in 1991, more teenagers and young adults died from suicide than from cancer, heart disease, HIV infection or AIDS, birth defects, pneumonia, influenza, stroke, and chronic lung disease combined.

Such numbers present a huge challenge to the future of our nation.

How can we prepare our young people to take the reins of leadership in the coming years when, fixated on the possibility of dying young, they focus more of their attention on their own funerals than on their graduation days?

I believe that we have an obligation to our nation to encourage our young people to envision a future in which they finish their educations, build careers, raise families, and reap the fruits of old age.

To accomplish that, we must raise our voices against violence on television, and crack down on violent crime in our schools and in our neighborhoods.

Government, parents, teachers, and civic leaders should join together to rid our children's daily lives of gangs and guns, replacing them, instead, with high goals, wholesome books, and dreams.

There is no more worthy resolution for this new year of 1996.

January 17, 1996

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

An Instrument for the Public Good

The growing prison population is an unfortunate fact of life in the 20th century.

In 1982, nearly 29,700 inmates were in Federal correctional institutions. As of November, 1995, the Federal prison population had risen to nearly 101,000. This rapid increase is due largely to more severe sentencing, longer terms, less liberal parole laws, and greater numbers of non-citizen inmates. Long-range forecasts project that the total Federal prison population will approach 136,000 by the year 2002.

We have to have adequate correctional facilities -- sufficient to accommodate the growth in the prison population -- and qualified, dedicated staff. Further, we must make the financial commitment to build those facilities and to support that kind of staff.

That is why I included language in a 1989 appropriations bill report recommending that the Bureau of Prisons review its expansion requirements in the Mid-Atlantic States in order to ensure that sufficient Federal prisons were provided in the region.

Subsequently, I authored a national anti-drug initiative, included in a fiscal year 1990 appropriations bill, which provided funding to help alleviate the

growing problem of overcrowding in the Federal prison system. Based on its review, conducted at my request, the Bureau of Prisons selected Beckley as the site for a new Federal prison.

That complex -- constructed with \$80 million made available through my anti-drug initiative -- is now formally named the Robert C. Byrd Federal Correctional Institution.

Standing on 283 acres near the Raleigh County Airport, the Byrd Federal Correctional Institution is designed to house 1,152 medium security and 384 minimum security inmates. When fully operational later this year, it is expected to generate an annual economic impact of approximately \$28 million and to employ a staff of 491, sixty percent of whom are expected to be local hires.

The new Robert C. Byrd Federal Correctional Institution, like other modern prisons, is intended to protect the public by confining offenders in a safe, humane, and secure environment; providing positive, self-improvement opportunities to inmates who want to follow a more constructive path in life; and establishing and maintaining a safe and supportive workplace for all employees.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Trail Blazing in the Age of Telecommunications

The age of telecommunications presents West Virginia with a wealth of opportunities for educational growth and economic development.

Telecommunications tools -- television sets, computers, satellite transmissions, and fiber-optic links -- can enable educational institutions to reach out to rural communities, helping to build a better educated citizenry. Recognizing the benefits that telecommunications can provide for West Virginia and its largely rural population, I have worked to put programs into place that are making "distance learning" available to greater numbers of West Virginians.

For example, I recently announced that by mid-year the National Guard will begin demonstrating telecommunications services in Huntington, Charleston, and Fairmont. In addition to providing a cost-effective means of training members of the National Guard and Army Reserve, the high-tech communications equipment will be made available to members of the local communities for a variety of purposes, including economic development and worker retraining.

Mountaineer Doctor Television (MDTV), an initiative developing in West Virginia through funds that I have added to federal appropriations bills, provides a wide array of distance learning experiences, in ad-

dition to the medical care that it extends to rural residents. Last year, the Morgantown-based MDTV provided over 500 hours of educational and videoconferencing services throughout the state, including medical conferences and programs for the West Virginia University College of Business and Economics.

The MDTV network is not only a cost-efficient vehicle for teaching over distance, but, in many instances, MDTV also provides residents of small communities with access to educational experiences, such as college-level lectures and conferences, that would not otherwise be available locally at any cost.

The Huntington-based Robert C. Byrd Institute for Advanced Flexible Manufacturing is another of my initiatives that is making use of teletechnology to boost education. The Byrd Institute provides small-business clients with a venue for interactive video conferencing and distance learning classes at sites throughout the state. For example, the Byrd Institute is one of 192 sites nationwide to host a monthly interactive teleconference series aimed at providing cutting-edge information and advice to small- and medium-sized businesses.

These initiatives serve as tangible evidence that West Virginia is already blazing trails in the age of telecommunications.

By U.S. Senator Robert C. Byrd

COPS

The 1994 Omnibus Crime Bill included an amendment that I authored to establish the \$22 billion Violent Crime Reduction Trust Fund, comprised of savings achieved by streamlining government. My amendment ensured that the bill's crime-fighting programs would be funded. And, in some cases, such as the Community Oriented Policing Services (COPS) program, my amendment enabled the expansion of major anti-crime initiatives.

Today, approximately 33,000 of the 100,000 new officers that the COPS program pledged to put on our nation's streets have been added to police forces across the nation. Because of COPS, well over 100 West Virginia communities have already been approved to receive grants to put more officers on the beat, and dozens more towns in our state could be awarded future COPS grants.

A recent *Time* magazine article about community policing reported that serious crime is on the retreat. Nationally, murders fell 12 percent in the first six months of 1995, and, in the suburbs, where the numbers of felonies have long been steadily rising, incidents of violent crime fell between four and five percent last year.

What has brought about this decline in crime? According to the *Time* report, community policing is a key part of the answer.

However, despite the COPS program's obvious success, and despite the fact

that it has the support of virtually every major law enforcement group in the country, the Republican Congressional leadership has been attempting to gut the COPS program.

For example, the recently enacted continuing resolution included funding for COPS, but at only 75 percent of last year's level, or about half the amount authorized by the Crime Bill.

In addition, the most recent version of the Fiscal 1996 Commerce/Justice/State Appropriations Bill proposed to distribute community policing funds by a complicated mathematical formula, based on the number of reported crimes in each state. That formula would strongly favor urban areas and put mostly rural states like West Virginia -- which has one of the nation's lowest crime rates -- at a significant disadvantage. Furthermore, under this block grant program, there would be no assurances that the funds would be used to hire more officers. It would, therefore, dramatically weaken the COPS program and make it much more difficult for West Virginia communities to win COPS grants.

Community policing is proving to be an effective strategy that reduces crime and helps citizens to feel safe in their own neighborhoods. Given its record of success, COPS should be maintained and allowed to fulfill its commitment to the American people, including the people of West Virginia.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Power of the People and the Duty to be Informed

Thomas Jefferson, who authored the Declaration of Independence, wrote, "The people are the only sure reliance for the preservation of our liberty."

Ours is a republican form of government, one in which the power is rooted in the people. Jefferson's words underscore the duty of every citizen to participate in our government.

The act of voting is at the heart of this duty. And, in order to ensure that our elected officials are the best suited for our nation, voters must be informed. But a recent article in The Washington Post found that millions of Americans cannot answer even basic questions about American politics.

The article reports that only 24 percent of citizens who were asked to name the two U.S. Senators from their state actually got both names correct. Further, 54 percent of those polled got both names incorrect.

Also, two-thirds of those interviewed could not name the person who serves in the U.S. House of Representatives from their congressional district.

Our republican form of government cannot operate without an informed citizenry. How can elected leaders properly represent a public which cannot even name the people who hold some of the country's most important leadership positions?

According to the article, four in ten Americans

could not name Al Gore as the vice president of the United States, while two out of three could not name the majority leader of the Senate, Robert Dole of Kansas, a Republican candidate for president.

It is not inconsequential that people across our country cannot name their elected leaders. A lack of political knowledge undermines our country's political system.

The Post article reports that Americans who are informed are more likely to vote, and they are more likely to see their vote as a remedy for what they believe is wrong with government. Those Americans who are less informed are less likely to vote and more likely to believe that their country is in decline.

It is through information that people form opinions and ideas concerning the direction in which they think the country should be headed. Every citizen's vote is his voice in our government. It is the duty of every citizen to be informed in order to vote wisely.

An informed knowledge of their government is a key that encourages people to get involved in the processes of government, to vote, and to participate in their government. When faced with disappointing facts like those contained in the recent Post article, it is important for Americans to remember the wisdom of Thomas Jefferson.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Reviving the Dream of the Challenger

Ten years ago, seven courageous Americans, including teacher Christa McAuliffe, boarded NASA's Challenger space shuttle, embarking on a mission designed to draw upon the wonders of space travel to inspire our nation's youth to strive for excellence.

Just 73 seconds into that flight, the Challenger mission ended in tragedy, taking the lives of those seven astronauts and suspending the Challenger's dream of helping young Americans to "reach for the stars."

In the years since that disaster, however, NASA and the families of the Challenger crew have worked together to bring renewed life to the aspirations of the Challenger astronauts.

Their efforts have resulted in the establishment across the country of more than two dozen Challenger Learning Centers (CLC), state-of-the-art facilities that combine cutting-edge technologies with the thrill of space exploration to spark students' interests in the study of math and science.

One of those Challenger Centers -- initiated by Congressman Alan B. Mollohan and housed in the Center for Educational Technologies, which was constructed and equipped with \$10 million I added to federal appropriations bills -- began operating at Wheeling Jesuit College in November of 1994.

The Wheeling Center gives young people and their teachers hands-on experiences that supplement classroom work and provide

them with access to a wealth of NASA technology.

Like the other CLC's scattered around the country, the Wheeling facility contains replicas of a space station and of NASA's mission control center that allow teachers and students to "fly" simulated space missions.

In its first year of operation, Wheeling Jesuit's Challenger Learning Center flew approximately 10,000 young Ohio Valley residents on mock NASA missions. Another 15,000 students have already made reservations for 1996.

In addition, the Wheeling staff is actively pursuing ways to take the Learning Center concept to new levels, experimenting with innovations that can make all CLC's more accessible to physically challenged students. For example, the Wheeling Center staff, working cooperatively with the West Virginia Schools for the Deaf and the Blind in Romney, Hampshire County, recently modified the facility to enable blind and hearing-impaired students to take CLC flights.

West Virginians can be proud of their Challenger Learning Center and its endeavors to keep the dream of the Challenger alive. In reaching out to West Virginia teachers and students, and in pursuing methods to extend the CLC experience to physically impaired youth, the Wheeling CLC epitomizes the kind of impact that the Challenger crew had hoped to make on young Americans.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

An Educated Workforce for West Virginia's Future

The most recent figures on the domestic labor force reported by the Bureau of Labor Statistics should serve as a guiding light in our efforts to build a stronger economic base for West Virginia in the 21st century.

Noteworthy among the Bureau's latest projections, which provide a glimpse of the U.S. job market trends from 1992 through the year 2005, are statistics that underscore the importance of education to job seekers of the next 10 years.

According to the Bureau, the level of educational attainment in the labor force has been steadily rising in recent years and is expected to continue to grow through the early years of the next millennium. Job opportunities for those with the highest levels of education are expected to grow at a much more rapid rate than for those who do not earn high school diplomas. Additionally, individuals who cannot read and write will find, with growing frequency, that they are not even being considered for job openings.

In fact, 75 percent of the fastest growing occupational groups are predicted to be executive, administrative, managerial, professional specialty, technical, and related support occupations.

The brightest spot in the job market spectrum is projected to be the service industry. Already the largest employment sector, ser-

vice-producing industries -- health care services, the social and educational fields, and the wholesale and retail trades, for example -- are expected to account for almost two-thirds of all new jobs in the coming years.

Although that service industry growth is projected to translate into the creation of millions of new low-wage jobs, the fastest percentage growth will, again, be in the highest paying positions, those requiring the most formal education. Meanwhile, medium-wage employment opportunities will show little change, meaning that, for the most part, those who start out on the lowest rungs will find it extremely difficult to work their way up the economic ladder unless they attain at least a college education.

All of this serves as convincing evidence that the surest path to a stable, well-paying career of tomorrow is through education, and further, that building a well-educated population is fundamental to ensuring a strong economy for West Virginia's future.

If our state is to have a real chance at successfully competing for new and expanded opportunities in this shifting economic atmosphere, future and current members of our West Virginia workforce must be prepared with education and training in the anticipated growth fields in order to fill the emerging job vacancies.

February 28, 1996

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Changing Channels

Recently, 31 top television executives came to Washington to meet with President Clinton to announce their intentions to voluntarily rate the programs their companies sponsor.

This meeting demonstrates, at long last, a recognition by the nation's broadcasters that there is a correlation between television programming and the state of violence and moral decay in our communities. I see this as a much needed first step in an effort to inject responsibility into programming, and I applaud this decision.

For years, I have spoken of the power of television and its overwhelming influence in our society, and in particular with our young people. The average child will watch 25,000 hours of programming by the time that child reaches the age of 18.

For many young people, television is more than just entertainment. Often it serves as a babysitter, companion, and friend. Demands on the modern family, often comprised of two parents who must both work, leave little time for closely monitoring what each child watches on TV. This, coupled with the increase in prime-time programs which peddle sex and violence, means that we must give parents the necessary tools to help ensure that the time youngsters spend in front of the television is as wholesome and

enriching as possible. Even this new rating system can never take the place of the careful guidance which parents must give to their children. However, it can be a helpful tool.

This new commitment from the networks demonstrates a proper recognition that they are indeed responsible for their broadcast product. With this action, the networks appear to have realized that there is much more involved in television programming than popularity ratings and advertising dollars. These executives now acknowledge that they have an obligation to viewers, and parents in particular, to provide a means for screening what children are exposed to on a day-to-day basis.

In the past, the television industry has stridently resisted such efforts and has hidden behind a distorted view of the Constitutional protection of freedom of speech.

While we all are concerned about protecting the precious rights set forth in the Constitution, certainly parents have not only the right, but also the obligation to keep what they may view as objectionable material away from young impressionable children. In the long run, having the networks work in cooperation with parents may serve to help reverse the cycle of violence and vulgarity in which this country seems to find itself so mired today.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

In Support of the West Virginia Guard and Reserve

West Virginians have a long and distinguished history of supporting U.S. military missions around the globe.

Most recently, as part of the international effort in Bosnia, National Guard units from West Virginia have been, or are being, deployed to that troubled region.

Prior to the recent peace agreement, which was signed last December, the 167th Airlift Wing in Martinsburg was deployed on three occasions -- once in the summer of 1992, and twice in 1993 -- in support of Operation Provide Promise, the predecessor to the current mission, known as Operation Joint Endeavor. On the third occasion, they were joined by the Charleston-based 130th Airlift Wing.

Now, both the Martinsburg and Charleston Airlift wings are again in line to be called to serve in support of the current Bosnian peacekeeping effort.

When deployed, sometime in the April-to-June time frame, these two Air Guard units will join the 152nd Prisoner of War Information unit from Moundsville, the first West Virginia Army National Guard unit to be deployed as part of Operation Joint Endeavor.

Throughout my years in Congress, I have obtained federal funds to ensure that West Virginia's reserve components are well trained, equipped, and ready to respond to assigned missions. Modernization

projects in many communities throughout West Virginia for which I have obtained federal funds include the building of armories, reserve centers, and hangars; upgrades to airfields; renovations of maintenance centers; and acquisition of new equipment. The benefits of these investments are best realized, and best appreciated, during times of local or international crisis.

For example, over the last decade, as a member of both the Senate Appropriations Committee and the Armed Services Committee, I have pushed for modernization of facilities at the Charleston and Martinsburg Air National Guard bases. Also, as part of that effort, I included language in the FY 1995 Defense Authorization and Appropriations bills to provide the Martinsburg Air Wing with 12 new C-130 aircraft, eight of which recently have been delivered to the unit. The repeated and continuing involvement of the 130th and the 167th units in Bosnia confirms the need for, and value of, these peacetime investments.

While I have given my qualified support to a narrowly defined U.S. involvement in Bosnia for the period of one year, I stand ready to join in taking action to bring our troops home if the U.S. mission there begins to broaden beyond Congressional intent.

In the meantime, I remain steadfastly behind the men and women of the Guard and Reserve, and I commend them for their dedication, service, and patriotism.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Walk Down My Hall of Memories

It was in 1946 that I first tossed my hat into the political ring, running for, and winning, a seat in the West Virginia House of Delegates. Since that time, I have been privileged to serve in both houses of the West Virginia State Legislature and both houses of the U.S. Congress.

Recently, while reflecting upon my fifty years of public service, I was struck by the enormous changes which have come about in West Virginia since the beginning of my career.

In 1946, West Virginia's lot was believed to be inextricably linked to coal. That year, approximately 144 million tons of coal were mined by a force of 122,200 workers.

Physical infrastructure was scant. Only one major flood control dam -- the Tygart -- stood in the interior of our state. The Gallipolis Locks and Dam was the only major navigational structure on the Ohio River along our state's border. Fewer than 10 miles of four-lane highway existed in our state. Most of the rest were tortuous, two-lane roads that made driving anywhere a long and dangerous undertaking.

In 1996, ours is no longer the narrowly defined economy of fifty years ago. While coal and steel remain respected members of our industrial base, they represent a much smaller segment of the economic spectrum than they did fifty years ago. In 1994, just 27,000 West Virginia mine workers produced 164 million tons of coal. During the

last decade, the "information age" has dotted our landscape with numerous high-tech firms.

Additionally, several new, ultra-modern federal offices, offering thousands of jobs, have located to West Virginia as a result of my efforts.

Today, 871 miles of four-lane divided highways traverse our hills and valleys, making for faster, safer travel. Ten major flood control dams now stand within our borders, and several navigational locks and dams, including a greatly updated Gallipolis Locks and Dam -- today renamed the Robert C. Byrd Locks and Dam -- have modernized the Ohio River navigational system, saving shippers hundreds of millions of dollars annually.

Since 1946, we have taken a war-time industrial base and transformed it into a technology-rich economy that rivals any in the nation. We have upgraded our physical infrastructure, improved our schools, and expanded the reach of modern medical services.

Throughout this era of change, we have also managed to preserve those precious old values that set West Virginians apart, an accomplishment for which we should be equally proud and thankful.

Reflecting on this walk along the path of my "hall of memories," I am heartened by the advances we have made in West Virginia, and I am convinced that we are on the right track as we prepare to enter the next millennium.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Combating Crimes of Violence Against Women

Rising with the escalating numbers of violent crimes in America are the crimes of brutality committed against women.

Recognizing that disturbing trend, Congress, in 1994, passed landmark anti-crime legislation that included provisions specifically targeting violence against women as a category of crime deserving special attention by law enforcement.

The statistics are compelling. For example, according to the FBI's Uniform Crime Reports, every six minutes in the United States a woman is raped. In addition, the FBI reports that domestic violence is the leading cause of injury to American women between the ages of 15 and 44, greater than the combined total of car accidents, muggings, and rapes.

To address these crimes, the 1994 Omnibus Crime Bill set aside \$1.6 billion -- funding made possible through the Violent Crime Reduction Trust Fund, created by my amendment to that bill -- for police, prosecutors, prevention programs, and victim assistance initiatives to address sexual violence or domestic abuse.

In addition to providing funding that is supporting the establishment of resources such as women's shelters and domestic violence hotlines, the bill instituted tough new penalties for sex offenses.

It also included a provision which makes it a federal offense with additional

penalties to cross state lines to continue abusing a spouse or a partner, an important step toward protecting those women who suffer repeated batterings and who finally gather the courage to leave their abuser.

Beyond the actions the law has spurred at the federal level, it is aiding state level efforts to combat violence against women.

Last year, West Virginia received \$426,000 as its first installment of federal funding under that new program. The state is expected to receive at least four more annual grants.

Our state's initial steps to advance the goals of the law include the establishment of the "West Virginians Against Violence Committee," which will administer federal funds and oversee the development of programs throughout West Virginia to combat rape and abuse.

The fallout from these crimes reaches far beyond those women who are themselves the victims of rape or assault. It touches every woman who finds herself afraid to walk to her car after work, or reluctant to stop at the grocery store in the dark, and it affects every man who worries about the safety of his wife, daughter, coworker, or friend.

It is, then, in all our best interests to turn back the rising tide of violence against women. Ensuring that the objectives of the violence-against-women provisions of the anti-crime law are realized is a logical starting point.

"Read To Me" Day

From the time I was a young lad growing up in the coalfields of Southern West Virginia, I was a lover of books and learning. I coveted books the way some children might covet a friend's new toy.

Looking back on those early years, I recall that one day when I was in the third grade, attending a two-room school, I noticed a geography book which belonged to a student in a higher grade. That very night I went home and told my dad that I wanted this fourth-grade geography book. I can still clearly remember that book -- Frye's Geography -- with its pretty-colored maps.

My dad was a poor coal miner with little schooling, but he understood the value of a good education. So, on the very next Saturday he took me to town, where he bought me a brand-new Frye's Geography book.

The following Monday, I proudly carried my new book to school, showed it to my teacher, and insisted on studying from it. In that way, I advanced myself to the fourth-grade geography class before I had actually achieved that higher station.

I was fortunate that my parents recognized the value of books and that they supported and encouraged my interest in them. I have carried that fascination with

books and their mysteries throughout my entire life.

Reading is a key to success. Books can open up new worlds. They can transport the reader through time and space. They can introduce new and different ideas and empower their readers with knowledge.

As my parents did, all parents have the ability to stimulate a lifelong interest in reading and to nurture a love of books. They can do so simply by reading aloud to their children.

It was in recognition of the connection between reading to a child, and the development by that child of an attachment to books, that Governor Gaston Caperton recently declared April 17, "Read to Me" Day in West Virginia, an event promoted by West Virginia Public Television.

I commend Governor Caperton on his declaration. A one-day observance of this kind is valuable in directing the public's attention to the issue of reading. But this message is so important that I believe that it deserves year-round recognition.

Therefore, I urge parents to make every day "Read to Me" Day by reading to their children. It will be one of the greatest gifts that a child will ever receive.

A Terrible Blow to the Constitution

The Republican leadership recently pushed through Congress an extreme brand of presidential line-item veto, and with it, a monumental change in our constitutional system of checks and balances and separation of powers.

Proponents of this so-called line-item veto power promote it as a cure for much of our nation's fiscal ills, arguing that it will give the president a knife with which to cut "pork" from congressionally approved spending bills.

In reality, this authority will do little to trim the federal budget, because it will affect, almost exclusively, discretionary spending, the portion of the budget that has already been cut to the bone in recent years.

Meanwhile, the real culprits in the growth of the deficits -- entitlements and tax giveaways -- will be allowed to continue to swell, immune from this new authority.

The recent legislation actually gives the president incredible rescission power to first sign a bill into law and then strike any money items from it. It will also give the president the ability to reach into the accompanying conference report, the statement of the House and Senate managers, and even charts and tables, and cancel any money items mentioned therein. This is truly a radical change from the qualified veto power given to the president by the Framers of the Constitution.

Supporters also claim that the Congress, with a simple majority in both houses, could, at a future date, repeal the law. That claim, however, ignores the fact that a president could block such a repeal with a

veto. It would require a two-thirds vote of both bodies to override the president's veto, which would be very unlikely. As a matter of fact, during the past two centuries in the life of the Republic, presidents, beginning with George Washington, have vetoed -- not counting pocket vetoes -- 1,460 bills, and only 105 (or seven percent) of such vetoes have been overridden by Congress.

This power over the purse, once surrendered to the president, will probably never be retrieved by Congress. Although the recent legislation contains a sunset provision that would terminate the law on January 1, 2005, it remains to be seen whether Congress, at the end of those eight years, will vote to extend this surrender of control of the purse.

In this recent legislation, Congress has initiated an unprecedented and massive shift of power from the legislative branch -- the people's directly elected representatives -- to the executive. It has given the president a club which he can hold over the head of every member of the House and Senate to impose his own will on legislation, treaties, and nominations.

In instituting such an enormous change in our constitutional system, the members of the current Congress have demonstrated a reckless lack of regard for both the intent of the Framers of the Constitution and for future generations.

I believe that this change is unconstitutional, and I hope that, as many constitutional scholars predict, it will be overturned by the courts.

By U.S. Senator Robert C. Byrd

Protecting Children From a Bad Influence

Modern telecommunications technology offers a seemingly unlimited variety of channels available to today's television viewer. But along with a growing number of choices comes the responsibility of ensuring that the television is tuned to programs that are suitable for everyone who is watching.

A good step in that direction was taken recently, when Congress passed -- with my support -- legislation that requires manufacturers to install in all new television sets a device known as the "V" Chip (V for Violence), which can electronically block shows labeled for violent or other questionable content.

Also, recently, the television industry commendably agreed to devise a rating system, allowing the "V" Chip to read rating codes and zap out those programs labeled unsuitable for children's viewing.

Television has a strong influence on a child's perception. Studies cited in Congressional hearings indicate that the average American child watches 25 hours of television each week. That same child will be exposed to an estimated 8,000 murders and 100,000 acts of violence on television by the time he or she completes elementary school.

These studies have also found that children exposed to violent programming at a young age have a higher tendency for violent and aggressive behavior later in life than children who are not exposed.

Also, children exposed to violent programs have shown to be more prone to assume that acts of violence are acceptable social behavior.

For many years, I have been concerned about the corrupting effects, particularly on children, of violence and crudeness on much of television, recognizing that as long as broadcasters navigate by the compass of economic gain, questionable programming will persist.

The amount of time that children are exposed to the bombardment of violent television shows, coupled with the damaging long-term effects of such exposure, makes it more important than ever for parents to arm their families against these negative influences. Parents have a responsibility to strictly limit the amount of time their children watch television, and to censor televised material which could have damaging effects on their youngsters. The "V" Chip will be a useful tool in helping to combat television violence.

Caring for West Virginia's Children

Today's families are finding it increasingly difficult to make ends meet without the incomes of two working parents. As a result, growing numbers of families are facing the emotionally and financially difficult dilemma of finding professional day care for their children.

In response to the modern child care needs of West Virginia families, I added \$700,000 to a federal appropriations bill in 1992 for the construction of a facility, which, in addition to providing space for day care, would accommodate the training of child care workers and assist working parents in coping with the competing demands of work and family.

I recently attended the dedication of that new facility--the Child Development Center of Central West Virginia--which is located in Buckhannon, Upshur County.

This new Center provides quality care for preschoolers while their parents work. The Center's child care program combines generous portions of play and imagination with education, helping to ensure that children have a chance to be children while preparing to move on to grade school.

In addition, the Child Development Center (CDC) offers a program of educa-

tion and instruction for child care providers and college students interested in pursuing careers in the child development field. Students and providers who are enrolled in apprenticeships at the CDC facility learn how to best teach and encourage young children, gaining valuable hands-on experience which they can take back to their own communities and use to enhance their own careers. Also, through an outreach program, the CDC is taking child care know-how to seventeen West Virginia counties, so that the need for professional day care can be answered with effective, quality programs throughout the state.

In addition, as part of its comprehensive program, the CDC offers advice and guidance to parents so that they are equipped to make the most of their limited hours at home with their children.

Our children are our future. Therefore, ensuring that they can grow and develop in warm, happy, nurturing environments is a society-wide concern. In a commendable fashion, the Child Development Center of Central West Virginia is addressing that concern, and I am glad to have had a hand in helping its important work grow.

The False Promise of Term Limits

Once again, the ill-conceived issue of term limits has been thrust into the political spotlight, only to be wisely rejected by both the U.S. Senate and the House of Representatives.

Proponents of the issue have recently tried to tap into election-year voter anger to peddle term limits as an avenue to better government. They claim that limiting Congressional terms -- or, in actuality, limiting the tenure, or years of service, of members -- will help the public to exercise greater control over their elected federal representatives.

What the advocates of term limits conveniently ignore is that the public already has the power to limit the service of their representatives in Congress and, thus, to influence the quality of their representation, simply by exercising their right to vote.

Term limits would dramatically weaken the public's voting power -- the constitutionally provided vehicle for returning to office effective representatives or removing those who perform poorly -- diminishing the people's ability to influence the actions and votes of lawmakers and, thereby, the quality of representation.

Limiting the tenure of Congressional members -- for example, to two six-year terms for Senators, as a recently proposed Constitutional Amendment would have mandated -- would create individuals accountable to no one in their final terms. Without having to fear the reprisal of the electorate, last-termers could vote any way they pleased,

cut any deal that benefitted them, or rip off the public treasury with wild abandon. It would constitute a free ride for those who might wish to use it as such.

For anyone concerned that the current system fails to attract new ideas and fresh talent, consider the fact that 51 of the current 100 Senators have served less than two terms, and nearly half of the members of the House of Representatives have served fewer than four years.

Another problem with limiting Congressional terms, of particular concern to West Virginia, is the disadvantage at which such a proposal places small states, which garner power in Congress not through the size of their delegations but through the ability of senior members to earn powerful chairmanships of key committees from long service.

Without seniority, small states like West Virginia cannot hope to stand up to the voting power of large delegations from populous states.

Further, there is the matter of experience. It takes years to master the difficult issues with which this country must contend. We all benefit from the guidance of Congressmen who have gained insight through years of experience in office, just as we benefit from members of other professions who have gained hands-on experience in their fields.

Unlike the proponents of term limits, I believe the public has the wisdom to choose their own representatives and the good sense to see through the false promise of term limits.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

New Responsibilities in the Computer Age

The Internet is rapidly becoming widely available at public facilities and private locations throughout West Virginia, paralleling its growth across the nation and around the world.

This network of computer sites is an incredible resource. The potential scope of its influence is immense. With a few keystrokes, one can, for example, learn about current events around the globe, conduct research at distant libraries, find up-to-the-minute data on nearly any conceivable topic, and view art exhibits or hear live concerts being staged at far-away venues.

While the Internet, in these and other ways, provides a remarkable conduit for retrieving information available on the "World Wide Web," it also provides an unprecedented opportunity to disseminate information, a prospect that is both exciting and troubling.

Many users seem to forget that the Internet, or "Net", is far from private. Messages, even those addressed to a specific individual at a private computer, are not necessarily secure from prying eyes.

As the Internet has expanded, there have been numerous accounts of individuals naively sending messages that have fallen into unintended hands. These intercepted messages have, in some cases, resulted in personal disgrace or legal troubles for the writer, or others named in the messages.

Even more disturbing have been the accounts of individuals knowingly using the Internet in menacing

ways.

Numerous computer sites have been created by purveyors of sexually explicit and violence-filled material. Information on how to build bombs, for example, has been distributed over the Net. In one reported case, Internet-provided bomb-making information was used by a group of young people in the Midwest for a spree of dangerous mail-box pranks.

Even more distressing are the reports of some individuals using the Net to prey upon young children. For example, pedophiles have been known to locate victims over the Net via electronic mail. They accomplish this by entering into two-way computer conversations with youngsters. They gain the children's trust, and entice them to provide personal information, often including photographs and home addresses, that can be used to lure the youngsters into danger.

Obviously, the Internet can be a tool for tremendous good. But, like other innovations intended to benefit society, if used irresponsibly, the Net can be equally destructive.

As it becomes more broadly accessible, I urge West Virginians to act responsibly when communicating on the Internet. I also urge parents to take an active interest in their child's use of the computer. In this age, with the dangers that lurk on the World Wide Web, parental supervision of a child's computer activity is at least as important as monitoring their television viewing habits.

Illegal Immigration Enforcement Help for West Virginia

According to the Immigration and Naturalization Service (INS), approximately 4 million illegal immigrants are residing in this nation today, and that number is growing by nearly 300,000 per year.

Although illegal immigration is not as prominent a problem in West Virginia as it is in border states like California, Florida, and Texas, our state is not immune from the difficulties associated with the influx of illegal immigrants.

The most powerful magnet for illegal immigrants is jobs. Foreign citizens regularly cross our borders in droves for a chance at employment and a better way of life.

All Americans suffer when illegal immigrants, through honest oversight or willful intent to skirt the law, are allowed to fill jobs in our country. In addition, when illegals or their children subsist on welfare and other government-supported services, it is U.S. taxpayers who get stuck with the bill.

To address these problems, the Senate recently passed, with my support, legislation intended to establish a coherent national policy aimed at stemming the tide of illegal immigration.

That bill makes much-needed and substantive reforms in the current law by focusing on the problem of illegal immigration without unfairly punishing law-abiding employers and those who come to this country and play by the rules.

It provides for expedited deportation of aliens

who commit crimes, imposes new restrictions on the use of welfare by immigrants, and makes it tougher for immigrants to falsely seek asylum protection.

Also, because laws can do little good without a means for enforcing them, the bill contains several measures for improving enforcement, including increasing the number of Border Patrol agents and INS officers.

Further, recognizing that a cohesive national immigration policy requires every state to have the necessary resources to participate in enforcing that policy, I co-sponsored an amendment to the Illegal Immigration Bill to place a minimum of 10 full-time INS agents in each state, including West Virginia, one of only three states which currently have no permanent INS presence.

A full-time INS staff in West Virginia will help state and local law enforcement deal with immigration problems and provide employers with the administrative guidance required to comply with federal immigration procedures. It will also help legal immigrants process paperwork more efficiently.

The Senate-passed Illegal Immigration Reform Bill is a positive step in the nation's overall effort to improve U.S. immigration policies, and with the new INS agents provided for by my amendment, West Virginia will be better able to address the challenges of the expanding immigrant population.

Tapping the Potential of Corridor Highways

The Appalachian Regional Commission (ARC) is charged with helping the Appalachian states identify and implement strategies for reversing the region's history of economic adversity.

Central to that mission is the construction of the 13-state ARC Corridor Highway System. Simply put, the presence of a more modern, safer highway helps to make communities along its path more attractive to business.

But, such a highway, in and of itself, does not guarantee prosperity to its adjacent communities. Also required are the efforts of local governments, residents, and businesses working together to capitalize on the economy-boosting potential that accompanies a new, up-to-date highway.

Recognizing the importance of local participation in nurturing that potential, I added \$300,000 to a federal appropriations bill to fund an initiative that would assist Corridor communities in plotting their economic futures.

The first step of that initiative, intended to serve as a model for use throughout Appalachia, focuses on helping communities along Corridor L -- which runs from I-79 near Sutton to I-64/77 near Beckley -- to form a comprehensive economic development program.

Although other communities which later use the model may concentrate on different areas of economic growth, in the case of Corridor L, the program focuses on further enhancing tourist activities along the route, since the four counties traversed by Corridor L -- Braxton, Nicholas, Fayette, and Raleigh -- have recently

seen impressive growth in the tourism industry.

In this model program, ARC has been working with residents, businesses, academia, and government entities from the Corridor L communities to identify the tourist attractions that already exist along the route, discern the tourism-related needs of the region, and develop and implement an overarching strategy for increasing tourism jobs and income throughout the area.

Recently, the Corridor L Tourism Enhancement Steering Committee, the governing board for the project, selected 22 local entities to receive grants from the funding I added to an appropriations bill. Among the broad range of selected projects -- all of which fit under the umbrella strategy for growing Corridor L tourist activity -- are several to help inform tourists about area attractions through signs, maps, guides, and videotapes, and others to assist businesses in marketing locally made goods.

Concord College, West Virginia University, and Davis and Elkins College, educational institutions with expertise in tourism, are also pitching in by providing technical assistance to project participants in implementing the master plan.

Along with local participants, I look forward to the long-term success of the Corridor L Tourism Enhancement Project, and in turn, to the benefits that it can afford throughout Appalachia as other Corridor communities use this model to write their own economic development success stories.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Wrong Blueprint for America

Recently, the Senate passed its version of the federal budget. I voted against this legislation because it continues the unwarranted onslaught against our country's human and physical infrastructure. This budget shows a lack of commitment to the basic needs of our people. It severely shortchanges our nation's future. That is why I offered two amendments to restore critical funding to infrastructure needs over the next six years.

While I agree that achieving a balanced budget is an important and laudable goal, to do so at all costs would be unwise. The list of current domestic unmet needs for transportation, education, clean water and clean air, water and sewerage systems, research, law enforcement, our nation's parks, and housing is extensive and alarming.

For example, a status report on our surface transportation system indicates that it would require annual investments of roughly \$15 billion to adequately maintain our transportation infrastructure.

In the area of safe drinking water, in West Virginia alone, a recent study reported that it would take \$162 million to clean up and provide potable water to approximately 79,000 West Virginians. It would take another \$405 million to

meet the worsening drinking water supply of some 476,000 West Virginians.

While some persist in slashing the very programs that would address these demands, they continue to ignore the unchecked growth of corporate welfare and tax expenditures -- special exemptions that cost the U.S. taxpayer \$500 billion per year -- that are eating away at the very foundation of our national economy.

In order to avoid a further increase in the deficit, my amendments would have paid for critical improvements in our sewer and water systems through a combination of closing corporate loopholes and elimination of, or modifications of, tax expenditures.

While I well understand the gravity of our budget deficits and believe they need to be brought under control, there is another deficit looming on the horizon which in many ways is far more serious. That is the infrastructure deficit. I close with the question I asked my colleagues in the Senate. Once we allow America to fall into total disrepair, how will we ever afford the trillions of dollars it will take to put it right? My amendments failed in the Senate, but I will continue to try to raise the funding levels for America's important infrastructure needs before it is too late.

A Debut for West Virginia

On June 20, West Virginia will celebrate its 133rd birthday, and, while many of us who call West Virginia our home take a few minutes each year to reflect on this notable date in history, this year's birthday celebration will be made especially memorable by another statewide observance -- Homecoming '96.

The creation of Governor Gaston Caperton, Homecoming '96 is, in many respects, a "debut" for West Virginia. While it may be uncommon to be staging a "coming out party" for an honoree at the ripe age of 133, Homecoming '96 is an exceptional opportunity to reintroduce the grace and beauty of our state to the entire nation. At the same time, it serves as an appropriate venue for impressing potential business suitors with the many economic attributes that make her exceptional.

June 20 has logically been chosen as a centerpiece occasion in the list of official Homecoming '96 events being staged throughout the year. As such, a number of activities have been scheduled for that day in communities around West Virginia.

The day's anchor events are slated for Charleston, the high points of which include a reunion on the Capitol grounds of the knights and ladies of the Golden Horseshoe, those individuals who, as teenagers, earned the highest marks among those who were

given a statewide exam to measure their knowledge of West Virginia history.

Including family members, organizers expect more than 1,500 participants to attend the Golden Horseshoe reunion, including winners from the 1930's -- the earliest years of the contest -- and individuals now residing in other states, some from as far away as the West Coast. As one who places great importance on reading and studying history, I commend this show of support for learning about our West Virginia heritage.

In addition to the Golden Horseshoe reunion, that evening, my Homecoming '96 honorary cochairperson, country music star Kathy Mattea, will headline a birthday concert in Charleston which will include a number of West Virginia artists. This spectacular show will feature an array of music from across West Virginia, reflecting the variety of sounds and talent found throughout our state.

I take this opportunity to invite everyone wishing to help honor West Virginia to join in on the birthday celebrations that will be staged around our state on June 20.

In addition, I urge West Virginia residents, faraway West Virginia natives, and individuals from out of state to participate in the host of Homecoming events slated to take place throughout the rest of the year. Together, we can make Homecoming '96 a shining success!

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Window to the Stars

The National Radio Astronomy Observatory in Green Bank has aided in the discovery of a bright new star, which can be found right in West Virginia.

This "star" is not a celestial body, but a gifted young lady named Naomi Sue Bates from Pendleton County.

Naomi, a high school senior, was selected as a finalist in the 55th annual national Westinghouse Science Talent Search competition, which recognizes the nation's most accomplished high school science students. Her project is a study of the rotation of the Milky Way Galaxy, which she tracks using a radio telescope at the Green Bank Observatory.

In 1989, I added \$75 million to a federal appropriations bill for the construction of a 330-foot ultramodern radio telescope at the Observatory. Although the main focus of the Observatory is to provide state-of-the-art research facilities to astronomers from around the country, it also offers educational programs for teachers and students.

Each year, hundreds of high school teachers are invited to Green Bank for intensive programs, including lectures, astronomy classes, and hands-on research opportunities. In recent years, these programs have benefitted teachers from West

Virginia high schools, and student teachers from West Virginia University and Glenville State College. After visiting Green Bank, these teachers are encouraged to return to the Observatory to introduce their own students to the experience.

Naomi is one of the many students who benefit from the educational opportunities at the Green Bank site. Her first visit was during her freshman year, and after returning several times on her own, she set up a mentorship program between her school and the Observatory to spend more time pursuing her own projects.

In addition, numerous groups visit the Observatory annually to learn about the universe. In conjunction with the 30th birthday celebration for a giant, 140-foot telescope last September, more than 1,150 West Virginia students, between the ages of 5 and 18, toured the Observatory and participated in educational programs and demonstrations.

Students from West Virginia and across the country are getting a unique educational opportunity through this hands-on experience in astronomy. The Observatory at Green Bank is more than a research facility. For students like Naomi, it is a window to the stars.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Benefiting from the Lessons of Nature

West Virginians are proud of the relationship they have with nature throughout our state. The preservation of our natural resources, along with the benefits of West Virginia's growing tourist industry, are important reasons for maintaining our wilderness areas.

The Ohio River Islands National Wildlife Refuge, headquartered in Parkersburg, is one of the richest and most diverse natural areas in West Virginia. In 1989, I added \$850,000 to an appropriations bill to establish the area as the state's first national wildlife refuge. Since that time, I have added another \$2.25 million to appropriations bills for its land acquisition.

The Ohio River Islands Refuge consists of a series of islands, stretching from the Northern Panhandle county of Hancock to south of Point Pleasant in Mason County. This habitat is ecologically sensitive and is an important migratory route for many birds. It contains a rich mosaic of bottomland hardwoods, wetlands, and life forms which are rare to the area, including many species of songbirds and waterfowl, and at least 20 species of plants and animals which are on West Virginia's rare species list.

One West Virginian who knows about the wonders of the Ohio River Islands Refuge is Bonnie C. Welcker, a senior at Parkersburg South High School. Bonnie has volunteered at the Refuge for the past three years, where she studies mollusks and their impact on inland waterways.

Bonnie's research, which focuses on the reproduction of Asian freshwater clams and zebra mussels, recently earned her a finalist position in the 55th annual Westinghouse Science Talent Search. She is currently pursuing population control solutions for zebra mussel reproduction that could save millions of dollars each year in mussel population management.

The rapidly reproducing zebra mussels, which migrated from Lake Erie and spread throughout many of the nation's waterways, including the Ohio River, have been a nuisance to some forms of native stream life, as well as to humans, who have discovered large numbers of the mollusks attached to ship hulls and canal locks. Zebra mussels have also clogged industrial pipelines, forcing temporary shutdowns and the expenditure of vast sums of money to remove the clinging creatures. Bonnie is researching ways to suppress the mass reproduction of zebra mussels without causing harm to other forms of life in the island habitats.

Preserving wildlife in areas such as the Ohio River Island Wildlife Refuge is an investment in ensuring that future generations will also benefit from the beauty and lessons of nature. I am proud to have played a role in the creation of the Refuge for our children and grandchildren, and I am encouraged by young people like Bonnie who recognize the value in understanding and improving our environment.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Investments in West Virginia Tourism

According to a study conducted for the West Virginia Division of Tourism, our state's tourism industry has grown consistently over the last six years, with tourism sales increasing 26.2 percent since 1989.

The study reports that in 1995 tourism in our state generated \$3.82 billion in economic impact and employed 72,605 individuals with a combined payroll of \$1.37 billion.

Recognizing that West Virginia is blessed with remarkable resources, I have worked to lay foundations for a robust tourism industry in West Virginia, bringing federal investment to our state to enhance our natural resources and to preserve our historic sites.

For example, in the last 15 years, I have obtained more than \$30 million in federal funds for the Harpers Ferry National Historical Park, a place of magnificent natural beauty and significant historic interest.

Likewise, since 1979, I have obtained \$101.1 million in appropriations for operations and construction of facilities at the New River Gorge National River that have made the Gorge safer and more accessible to visitors, while preserving its natural qualities.

The Ohio River Islands National Wildlife Refuge is comprised of a mosaic of bottomland hardwoods, wetlands, and many species of songbirds and waterfowl, with at least 20 species of plants and animals on the state's endangered species

list. Since 1989, I have added \$3.1 million to appropriations bills to establish this rich and diverse natural habitat as the state's first national wildlife refuge.

In addition to those examples, I have been able to invest in numerous other parks and recreational areas across our state.

The Haddad Riverfront Park in Charleston is a centerpiece of leisure-time activity, for which I have obtained \$4.5 million in federal funds.

Since 1990, I have added a total of \$1.9 million to appropriations bills to expand facilities at the Harris Riverfront Park in Huntington in response to a growing interest in boating, picnicking, and other recreational activities there.

I have also helped to obtain \$6 million for land acquisition for the Canaan Valley National Wildlife Refuge, which hosts a wide array of animal species and more than 500 varieties of plants.

These areas enrich the lives of people who visit them and expand economic opportunities for the communities in which they are located.

In these ways, the federal investments I have steered to our state, along with the considerable contributions of the State, local communities, and private-sector enterprises, are paying dividends not only in a strong tourist trade, but also in a healthier economy and a better quality of life.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Striving for Completion Of the ARC Highways

For 32 years, the people of Appalachia have awaited the completion of the Appalachian Regional Commission (ARC) Corridor Highways, a network of modern roads intended to increase the safety of travel and attract jobs and economic opportunities into our Appalachian communities.

During that time, Appalachian residents witnessed the completion of the Interstate system, a national network of up-to-date highways that avoided vast sections of the 13 Appalachian states, routing many of their accompanying benefits away from the mountainous, economically strapped region.

Meanwhile, lacking a consistent source of funding of the magnitude needed to build roads through the rugged Appalachians, the ARC Highways progressed slowly. Today they remain nearly 24 percent incomplete. That is, of the 3,025 miles that comprise the ARC system, roughly 725 miles are unfinished.

To help address this inequity, in recent years, I have secured authorization for the entire ARC Highway System and added funds to appropriations bills to ensure that construction of these important roads would continue. But, the ARC Highways need and deserve a focused and comprehensive effort at the federal level to expedite their completion.

For that reason, I recently introduced a bill in the Senate to ensure that sufficient funding would be set aside in the next major highway bill to complete the ARC Corridors by the year 2003.

The rationale behind the ARC Highways is no less sound today than it was in 1964 when the President's Appalachian Regional Commission's report stated, "Development activities in Appalachia cannot proceed until the regional isolation has been overcome by a transportation network which provides access to and from the rest of the nation and within the region itself."

In those areas where the ARC Highways have been constructed, there have been impressive economic successes. The Appalachian Regional Commission has conducted studies that indicate that, of the hundreds of thousands of jobs that have been created in the Appalachian region over recent decades, more than 80 percent of these jobs have been located along either the ARC Highways or the Interstates.

By ensuring, through my amendment, that sufficient federal funds would be directed specifically at completing construction of the ARC Highway System, I am aiming to see to it that the promise made 32 years ago to the people of Appalachia is, at long last, fulfilled.

“Campaign Grease”

Despite all of its clamoring for change, the Republicans' much-touted Contract with America failed to mention a word about one of the root problems plaguing Congress today: excessive campaign fund-raising.

The need for members of Congress to constantly focus on raising the huge sums necessary to remain in public service has taken a heavy toll, yet many of those who trumpeted the glories of the Contract with America decided that putting an end to our current grotesque and out-of-control campaign spending system was just not worthy of attention.

As Senate Majority Leader, I tried eight times in 1987 and 1988 to get cloture on campaign finance reform legislation, but my attempts were blocked eight times by the Republican Party in the Senate. Those failed attempts constituted real losses to the American people. The public deserves Congressional representatives whose attention is not fractured by the need to raise campaign funds, and who are not beholden to special interest groups out of the onerous need to fill campaign coffers.

But, once again, despite an increase of public concern, the Senate recently blocked attempts to put a stop to the noxious system currently in place for the financing of senatorial campaigns.

How unfortunate! I believe that until members of Congress come to grips with the simple fact that exorbitant campaign spending is a serious concern, the Congress will continue to be perceived as being owned

by special interests.

Countless times, action on the Senate floor has been slowed or delayed because Senators are elsewhere raising huge sums of money -- money essential for running for reelection. The traveling; the time away from the Senate; the time away from talking with constituents; the time robbed from reading and reflection; and the siphoning off of energies to the demands of collecting what has been called “campaign grease” is making us all less able to be good public servants.

If I were starting out in politics today, with a background like mine -- grocer, welder, butcher, just common ordinary trades -- I could not even hope to raise the huge sums of money needed to hire costly political campaign consultants, or to pay for the high-priced television advertisements required for a contemporary campaign.

According to data from the Congressional Research Service, the average cost of a winning senatorial campaign rose from \$600,000 in 1976 to more than \$4 million in 1994. Four million dollars! And that, of course, is just the average.

That kind of system sends the clear message to the American people that it is money, not ideas and not principles, that reigns supreme in our political system.

We must bring into check the obscene spending that occurs in pursuit of public office. We must act, once again, to put the United States Senate within the reach of anyone with the desire, the spirit, the brains, and the spunk to serve.

Irresponsible Advertising

In a time when our nation is working to curb alcohol abuse, I am troubled by a disturbing "step backward" by at least one member of the alcohol industry, an act that I consider a significant threat to our society.

Last month, the Joseph E. Seagram and Sons Corporation began airing commercials for whiskey on a television station in Texas, violating the liquor industry's 48-year-old Code of Good Practice, a self-imposed decision not to advertise distilled spirits products on television.

The Seagram commercial is doubly disturbing because it not only defies the industry's own long-term agreement, but it also aims to appeal to a young audience. The advertisement portrays two dogs graduating from obedience school. One holds a "mere" newspaper. The other carries a bottle of whiskey. The canine with the newspaper is labeled simply "graduate," while the dog with the whiskey is titled the "valedictorian."

I find it preposterous that the Seagram Corporation would associate academic achievement with hard liquor.

Alcohol is the number one drug problem among young Americans. Drinking impairs one's judgement, and alcohol mixed with

teenage driving is a lethal combination. That is why, earlier this year, I authored an amendment that requires states to pass "zero tolerance" laws which would make it illegal for a person under the age of 21 to drive a car with a blood alcohol level greater than .02 percent.

An individual of legal drinking age makes his or her own decision to drink, but surely it is careless to impose messages relating valedictorian status with alcohol, and to broadcast these messages through the seducing medium of television.

It is dangerously irresponsible for liquor companies to merchandise their vices using the influential power and looming ubiquity of television.

The overwhelming influences of television on our nation have contributed mightily to the moral decay in our communities. And since the broadcasting brew is already being polluted by commercials from the beer and wine industries, it is even more important to guard against mixing hard liquor ads into the caldron.

The health, well-being, and moral character of our nation far outweigh the profit that might be generated from broadcast advertisements peddling hard liquor.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Caring for Some of War's Most Innocent Victims

Sergeant Paul Hanson of Wheeling served in the Persian Gulf War. Subsequently, his son, Jayce, was born with crippling birth defects.

The Department of Defense recently acknowledged that some Gulf War veterans may have been exposed to chemical warfare agents, including mustard gas and sarin, that have been linked to central and peripheral nervous system problems, as well as possible birth defects in children born to exposure victims.

The Hansons are one among a number of military families with children born with birth defects that may have been caused by the exposure of a parent to chemical warfare agents in the Persian Gulf.

Medical research is needed to determine if the exposure of these military parents to chemical warfare agents has caused the birth defects and catastrophic illnesses with which their children are afflicted.

To investigate that possible connection, I offered amendments to both the Fiscal Year 1997 Department of Defense Authorization and Appropriations Bills that will provide \$10 million for independent medical research into this problem area.

My amendment to the Defense Authorization Bill also ensures that appropriate medical care for Jayce, and children like him, is available through the military health care system, or through the CHAMPUS health care program with

civilian physicians, if these physicians are required for the kinds of specialized care many of these children need. Also, because the costs of multiple operations or expensive medical treatments commonly needed by these children can easily reach \$100,000, my amendment waives the CHAMPUS program's required 20-percent co-payment.

Further, because these children, due to their "pre-existing conditions," are often denied coverage by private insurers, my amendment ensures that their medical care continues to be covered by the military even if their parents have left the service.

The number of children affected is not large, according to the Department of Defense, but these children are in truly desperate straits. For example, until research can prove that Jayce's maladies are not linked to Sergeant Hanson's service in the Gulf War, the child should be given the benefit of the doubt.

President Clinton last month announced that he would seek legislation to provide benefits for children of Vietnam veterans born with spina bifida as a result of their parents' exposure to Agent Orange. Jayce and the other children like him should not have to wait twenty years before it is acknowledged that the incalculable difficulties they face may have resulted from their parents' service to our country.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Balancing Global Competition

A number of West Virginia companies have recently been feeling the squeeze created by unfair overseas competition.

For example, this spring, two Ritchie County textile manufacturers, Hodges Apparel and Safety Stitch, were notified that their primary client needed to move its work offshore in order to regain profitability. Unless these firms can garner other orders, the talented and dedicated employees at these companies will be out of work.

These potential job losses, and similar situations throughout the country, are not occurring because the quality of clothing produced in the United States is poor; quite the contrary. The design and quality of U.S.-made clothing and textiles are competitive with the design and quality of overseas products. But U.S. production costs must include pension and health care payments for workers, and the expenses of meeting workplace safety and environmental standards. Since many overseas manufacturers are not required to cover these costs and meet these standards, they overwork and underpay their workers, forcing them to labor in unsafe factories that pollute the air and water around them.

Job losses on this scale constitute more than a minor unraveling of the economic fabric of Ritchie County -- they are a tear in the very fabric of American society.

That is why I recently cosponsored a bill which

would provide protections for U.S. textile and apparel producers from unfair competition caused by overseas producers seeking to exceed U.S. quotas.

The Textile and Apparel Global Competitiveness Act, which I cosponsored, requires more even-handed trade negotiations on textile and apparel goods, helping, among other things, to provide U.S. firms greater access to foreign markets. This legislation increases enforcement of existing trade laws and imposes higher fines on quota-breaking foreign firms. These fines provide additional revenue for trade adjustment assistance to U.S. textile and apparel makers.

The United States is proud of its laws that protect workers and the environment. Nobody wants to reduce our standard of living by giving up workplace safety or clean air and water in order to "compete" with inexpensive goods produced by workers paid just pennies a day before they return to squalid homes under skies laden with pollutants.

Attempts by these overseas producers to evade U.S. trade laws and treaties must be firmly and effectively halted. Companies in West Virginia and across the United States which produce quality goods should not have to compete on an uneven playing field against foreign firms. The Textile and Apparel Global Competitiveness Act targets this problem and aims to level the playing field and protect U.S. jobs.

Reforming our Welfare System

The Congress recently approved comprehensive welfare reform legislation that marks a sharp break from the last 60 years of federal welfare policy.

While there exists significant disagreement over how to reform the welfare system, there is also widespread acknowledgment that the current system has failed.

Under the new policy, many existing federal welfare programs will be combined into block grants, obligating states to provide services to poverty-stricken families with children.

States will be given the responsibility of designing their own particular programs and setting rules for eligibility. In order to receive their full block grant, states will have to enforce rigid work requirements for welfare recipients and provide adequate child care resources to families with children.

During Senate consideration of this legislation, I supported amendments to preserve the "safety net" provided by the food stamp program, and to ensure that eligibility for Medicaid would not be adversely affected by any provisions in the bill.

At the conclusion of the debate, I supported the welfare reform initiative because I believe it represents a much-needed improvement over our current welfare system, which is ridden with misguided incentives that too often discour-

age work.

For example, one of welfare's primary cash programs, Aid to Families with Dependent Children (AFDC), was originally intended to help widows care for their children. But AFDC has since been expanded to assist divorced and never-married individuals and their children. Many AFDC mothers had their first child as an unmarried teenager, and dropped out of high school. Too often, these eligible recipients have collected AFDC assistance for many years, far beyond the temporary "safety net" intended by the program. Clearly, we must do something to reverse such perilous trends of illegitimacy and dependence.

The Welfare Reform Bill will also ban most legal immigrants from receiving general welfare assistance for their first five years of residence in this country, the reason being that immigrants are frequently required to have a sponsor who bears responsibility for their financial support. Furthermore, illegal immigrants will be permanently banned from most forms of assistance.

The new measure aims to correct the ever-deepening cycles of dependence that have developed in the last 60 years. While this legislation is not a panacea for the welfare problems in our country, I believe it is headed in the right direction.

Education and Preserving Liberty

Meeting young people from West Virginia and throughout the nation is one of the most enjoyable aspects of my job as a United States Senator. I recently had the opportunity to again host a luncheon for the National Youth Science Camp. Each year, the nation's most outstanding math and science students meet for three weeks at Bartow in Pocahontas County, to participate in recreational and educational activities, including a trip to the nation's capital. It was inspiring to see the glow of energetic hope on the faces of these students, and the sparkle of youthful ambition in their eyes.

Indeed, these qualities could also be found in the ideas of the early leaders of our nation. The hope for a brighter future, coupled with the ambition to create a government promising liberty for all of its people, guided our forefathers more than two centuries ago when they set out to write the framework for governing our Republic.

One idea I tried to set in the minds of these National Youth Science campers and other young people I meet -- people who will grow up to comprise the future of our nation -- is to learn more about, and to understand the importance of, the Constitutional liberties enjoyed in this country.

It is a responsibility of today's youth to preserve the sacred freedoms set forth in our Constitution more than 200 years ago. The constitutional checks and balances envisioned by the Framers need to be learned and then learned again by each succeeding generation in order to safeguard these liberties.

The Constitution was meant to be a living document, but without an understanding of its pearls of genius, its subtle tensions and counter tensions, its sublime encouragement toward consensus building, it is as dead and dry as the parchment upon which it is written. We have rights as citizens of this Republic, but the flip side of that coin is our very serious responsibility to understand what makes our system work.

I encourage people of all ages to set a goal of striving for a real understanding of the marvelous institutions of this Republic which are our birthright. Free societies are only sustained by hard work, and liberty does not come without a price. The currency with which it is purchased is an informed citizenry -- and informed citizens are made, not born.

Only by learning about the tools that provide our freedoms, can we preserve the precious liberties which make the United States the greatest nation on earth.

Safe Drinking Water

Most Americans take safe drinking water for granted. They assume that when they turn on the faucet, clean water will automatically flow out.

Last year, however, the U.S. Department of Agriculture (USDA) completed "Water 2000," a study about safe drinking water needs of communities throughout the United States. The findings of that study paint a disappointing picture about the quality and availability of water throughout our nation.

According to Water 2000, nearly three million U.S. families, representing eight million people, do not have access to safe drinking water.

Disturbingly, the study ranked West Virginia among the five worst states in the nation in terms of the availability of safe drinking water. The study found that it would require \$162 million to clean up and provide potable water to approximately 79,000 citizens in West Virginia, and another \$405 million to meet the worsening drinking water supply situation of 476,000 West Virginians, nearly half the population of the state! Several other states are facing similar circumstances.

For citizens of the United States, the world's most advanced and industrialized nation, to confidently use water for drinking, cooking, and recreation ought to be a birthright.

American parents ought to be able to offer their children a drink of tap water without fear that the glass contains health-threatening bacteria.

Unfortunately, however, the Republican-led Congress

has shown little interest in addressing this serious situation, carelessly axing off domestic infrastructure investment at every turn.

During recent debate on the budget resolution, I made two attempts to restore some of the funding cut from our national infrastructure.

I offered an amendment that would restore \$65 billion to the federal budget to support a broad range of domestic infrastructure programs, including highways, bridges, education, and modern water and sewer systems. I then offered an amendment to include \$6.5 billion for federal water and sewer programs, and to meet operating and maintenance needs at our national parks. Regrettably, both of these amendments were defeated.

Subsequent to passage of the budget resolution, I met with Secretary of Agriculture Dan Glickman to urge him to use part of the \$100 million in discretionary funds provided to him as part of the 1996 Farm Bill to creatively address some of this nation's most pressing water resources needs. Further, with my support, the Fiscal 1997 Agriculture Appropriations Bill contained almost \$100 million more for basic water and sewer needs than the Fiscal 1996 Bill.

These steps are moving us in the right direction, but they are just small steps, and we need to go further. In the most prosperous and powerful nation on the face of the earth, there ought never to be any question about government's doing all that it can to ensure that Americans have safe drinking water.

By U.S. Senator Robert C. Byrd

A Fresh Start for Learning

In a recent survey released by the Horatio Alger Association, American youth cited "friends," "sports," and "social activities" as the top three reasons for attending school. "Learning" ranked seventh in the survey. While social interaction is an important aspect of school, this survey provides evidence of the extent to which our students are failing to embrace the primary purpose of our educational system and the value of learning.

Too often, particularly during their summer vacations, students neglect reading, writing, and other essential skills, in favor of athletics and social activities. Unfortunately, that summertime mode of fun and play also carries over into the school year, causing young people to neglect their studies.

I believe it is never too late to readjust one's attitude toward learning, and the beginning of the school year presents a timely opportunity to return to the classroom with a fresh enthusiasm.

There are clearly long-term, measurable benefits to making the most of one's education. For example, the U.S. Department of Education has reported that the median income for year-round, full-time workers who are 25 years old and have a high school diploma is \$19,963. In comparison, the median income of those who do not finish high school is just \$15,386.

Such statistics serve as compelling evidence that those who commit themselves to their studies can benefit from greater economic stability. Furthermore, beyond increased earning power, an education can instill one with a feeling of self-worth and accomplishment unmatched by other endeavors.

The value of education, however, extends beyond the individual. Our public educational system is available to all because, as a nation, we recognize that learning improves our citizenry and establishes a foundation for a strong country.

Autumn, the traditional beginning of the school year, is a good time for a new start for our students. I urge all students to take this time to recommit and rededicate themselves to their studies.

In addition, I call on parents to help their children recognize the wealth of opportunities that can be gained only through education. Parents should encourage their children to strive to learn, to take challenging courses in school, and to practice healthy study habits at home. Parents should monitor their children's progress by looking over their homework and their test scores, and by communicating with their children's teachers.

I believe that learning is a life-long endeavor, and that it is never too early, or too late, to begin.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Old Values are Slipping Away

Recently, I attended a ceremony at Stotesbury, Raleigh County, to dedicate a historical marker at the former site of the Mark Twain High School, my alma mater. From 1921 to 1965, children would hike from nearby coal towns to attend Mark Twain. I remember my teachers encouraging me to learn there, and I recall absorbing every book I could lay my hands on. In 1934, at the age of 16, I graduated from Mark Twain as valedictorian of my class, an event which marked an important early step in the journey that has led me to the United States Senate.

Attending that recent event at Stotesbury caused me to reflect on those early years in West Virginia and to contemplate the kind of change that has taken place in our nation since I was at Mark Twain. This nation has lost some of the old values that were present during my school days.

All across America in the days of my childhood, there was more of a sense of personal belonging -- to family, to community, to country -- than can generally be found today. We, as a nation, valued simpler things: a phone call from an old friend; a country fair with time to admire the neighbor's prize cow; a chat with the children on the back porch during a balmy summer evening; a home-cooked meal with family seated around the same dinner table; a Sunday morning church service where you knew everybody in the congregation and took the time to talk with them all before leaving the church.

Instead, America today has become a place obsessed with speed. We rush

to eat, we rush to work, we rush to sleep, we rush to get from one place to another. How could we get by without fast food, instant coffee, high-speed elevators, microwaves, quick-stop food markets, and drive-through banks? Why, there are even drive-through funeral parlors, so that you can catch a quick look at the dearly departed, shed a tear, and be merrily on your way.

It seems that most of America hardly stops to take a breath anymore, much less to take time to talk quietly with children, commiserate with a friend about a problem, or pause to reflect on the events of the day.

But, change is inevitable, and much of the change which has occurred in the last 50 years has been, and will continue to be, beneficial for all of us. Still, I think that America hungers and thirsts for the richness of those earlier days. As a society we are trying to find a way in the midst of all the turmoil to turn back at least part of our lives and find something like what I remember from my days at Mark Twain.

The historical marker which preserves the memory of my alma mater also serves as a reminder of the values which still live in the valleys and hills of West Virginia. These are the same ideas for which so many Americans are yearning today.

Let us, in West Virginia, recognize what a valuable commodity we have in these values, and let us collectively dedicate our energies to preserving and perpetuating them for our children and our children's children.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Defending the Institution of Marriage

Recently, I cosponsored, and the Senate overwhelmingly approved, the Defense of Marriage Act (DOMA), a bill to protect the institution of marriage, and in turn, the values and spiritual beliefs of the majority of West Virginians.

The DOMA bill responds to the drive spearheaded by a small segment of society for legal recognition of same-sex marriages. Quite simply, DOMA defines the word "marriage" as the legal union between one man and one woman as husband and wife, and the term "spouse" as a husband or wife of the opposite sex.

It is almost incomprehensible to me that the Congress should have to be considering a matter such as this, but we live in an era in which "tolerance" has progressed beyond a mere call for acceptance and crossed over to become a demand for the rest of us to give up beliefs that we hold dear in order to prove our collective purity. This push for legal recognition of same-sex marriages reflects a demand for "political correctness" gone berserk.

The suggestion that relationships between members of the same gender should be accorded the status of marriage flies in the face of thousands of years of human experience.

The marriage bond, as recognized in the Judeo-Christian tradition, is the

cornerstone on which society itself depends for its moral and spiritual regeneration.

During my childhood in Southern West Virginia, my family looked to the Bible as a moral compass. I still read the Bible and look to it for guidance. In preparing to debate this issue, I found a number of relevant passages, including one from the first Chapter of Genesis which reads, "So God created man in his own image, in the image of God created he him; male and female created he them. And God blessed them, and God said unto them, Be fruitful and multiply, and replenish the earth....."

On a more pragmatic level, DOMA provides that no state shall be required to recognize a same-sex marriage sanctioned by another state. Further, it helps to protect federal aid programs that provide benefits to spouses from the potentially exorbitant costs that could result from a change in the broadly accepted definition of "spouse."

In passing the Defense of Marriage Act, the Congress took a stand for American values by defending the oldest institution -- the institution of marriage between male and female as set forth in the Holy Bible.

I am proud to have been a cosponsor of this important legislation.

Byrd's-Eye View

Looking Out for the Safety of Our Miners

I recently delivered the keynote address at the 20th Anniversary Celebration for the Mine Health and Safety Academy, located in Beckley.

One of those in attendance was Mrs. Sarah Kaznoski, who lost her husband Pete in the 1968 Farmington mine explosion. This horrific mine explosion, in which 78 miners were killed, was the catalyst for the passage of the Federal Coal Mine Health and Safety Act of 1969, which provided for the construction of facilities and the financing of a program to help prevent accidents and unsafe working conditions in our nation's coal mines.

The tragic loss suffered by Mrs. Kaznoski was shared by the families of thousands of other miners prior to the establishment of the Academy. In the 1960's there was an annual average of more than 430 deaths in the nation's mines.

I know first-hand the misery in the mines. I have seen the crushed limbs, felt the heartache of the aftermath of the explosions, and carried the coffins up the steep hillsides. For me, easing the lot of the miner and his family is much, much more than an exercise on paper. It is a visceral responsibility and an absolute moral obligation.

In 1969, I proposed that a Mine Safety and Health Institute be established and located in West Virginia, and in 1972, I secured \$13 million for construction of the facility. I continued to push for funding in Congress for the next four years. Finally, on August 19, 1976, and at a total cost of \$20.9 million, the Beckley Mine Health and Safety Academy became a reality.

The Mine Academy has played a prominent role in the reduction of mining deaths and injuries during the past 20 years by serving as the central training facility for Federal mine inspectors and mine safety professionals from other government agencies, the mining industry, and labor. Since its founding, the average number of annual mining fatalities has been reduced by over 75 percent.

The U.S. sits atop coal reserves equivalent to all of the world's known oil reserves of approximately one trillion barrels. Our miners will be toiling to extract coal to power our nation for many years to come, and they deserve our commitment to do all that we can to make their jobs safe. I shall not relent in my determination to work for increased safety and improved health for our miners.

Aquaculture -- West Virginia's Emerging New Industry

In today's competitive economy, staying at the forefront of emerging businesses is essential to creating and retaining jobs. I have long made it one of my priorities to help West Virginia achieve the kind of business climate that is conducive to such cutting-edge enterprises and the jobs that they provide.

For example, in 1987, recognizing the increasing consumption of fish and seafood in the United States and around the world, I began efforts to explore opportunities for West Virginia in the emerging aquaculture industry through federal funding of aquaculture studies and demonstration projects. In 1990, I added \$50,000 to a federal appropriations bill to initiate a study of the possibilities of establishing a national aquaculture center in West Virginia.

While warm-water "catfish farming" has been successfully developed in the Southern states, the potential for a successful aquaculture industry in West Virginia is dependent upon establishing aquaculture systems that produce fish such as trout and salmon, species that prefer cold and cool water temperatures like those characteristic of West Virginia's lakes and streams.

That is why this year I added \$6 million in federal funds to begin construction of the National Center for Cool and Cold Water Aquaculture, which will be located on federal land at Leetown in Jefferson County.

This center will be unique because it will be the first such facility to focus on fish farming in the more moderate and chilly temperatures found in the Appalachian region. When completed, this facility will

quality, and health of cool and cold water fish species.

Currently, there are dozens of family-owned fish-farming operations in West Virginia, plus several high school vocational agriculture programs that teach aquaculture techniques.

The National Center for Cool and Cold Water Aquaculture is expected to provide information and technology to these aquaculture farmers to help them increase their production efficiency. The Center will also develop safer, more economical, and environmentally sustainable aquaculture practices to be used to establish new fish-farming operations across West Virginia.

A finding from a recent study conducted by the National Conservation Fund -- a national organization dedicated to natural resources conservation -- also bodes well for the establishment of a viable fish-farming industry in West Virginia. According to the Conservation Fund's study, active and abandoned mine sites make ideal locations for aquaculture production, providing the potential for West Virginia to become one of the largest trout producers in the U.S.

There are great possibilities for aquaculture growth in West Virginia. The lakes, streams, and mines across our state are exceptionally well suited for developing profitable fish-farming operations. It is my hope that the \$6 million I have added to the Fiscal Year 1997 Agriculture Appropriations Bill to build the National Center for Cool and Cold Water Aquaculture will help this up-and-coming industry to generate lasting and profitable economic opportunities for the future of West Virginia.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Healthier West Virginia

West Virginians should get active for the benefit of their health!

Evidence of the positive health effects of physical activity is plentiful. Recently, the Surgeon General of the U.S. Public Health Service released a report entitled "Physical Activity and Health." This report indicates that even moderate amounts of regular exercise are beneficial to our health. Further, as the intensity and duration of the physical activity increases, so do the benefits.

According to the Surgeon General's report, the benefits of physical activity are numerous. A lower risk of cardiovascular disease, colon cancer, and developing diabetes, as well as lower mortality rates, are just a few of the benefits associated with regular exercise.

Many Americans today are motivated to exercise because it helps to control body weight. Weight control is certainly one of the most important reasons to exercise, because excess weight can lead to the development of a number of diseases and other health complications.

One does not have to exercise in a gym, lift weights, or engage in a sport in order to enjoy the results of physical activity. Even moderate activities such as gardening, pushing a stroller, or raking leaves for thirty minutes or an hour are

healthful physical activities.

Unfortunately, the Surgeon General's report indicates that too many American adults, 60 percent, are not regularly engaging in physical activity. Even more disconcerting, 25 percent of Americans indicate that they do not participate in any form of physical activity at all. That is regrettable, since exercise can help to prevent the sufferings caused by ill health and the resulting costly medical bills.

The report also finds that seniors are more inactive than younger persons. This is especially significant for our state, where more than 20 percent of West Virginians are over 60 years of age (compared to the national average of 16 percent). The benefits of increased physical activity for older citizens, such as increased strength to aid in the prevention of falls, can be particularly important in helping the elderly to continue to live independently. The report cautions that, if previously inactive, the elderly should start off slowly and check with their doctors before embarking on a new physical activity routine.

An order form for the Surgeon General's report can be obtained by calling the Centers for Disease Control and Prevention's toll-free line at 1-888-CDC-4NRG.

Deregulation Clips West Virginia's Wings

On the day that I cast my 14,000th vote in the U.S. Senate, I observed that one of the votes I most regretted was one supporting airline deregulation.

At the time of the airline deregulation vote, I was told that the measure would lead to cheaper fares. It has, but only in some regions of the country and in large urban areas. Meanwhile, West Virginians sometimes pay hundreds of dollars more to fly than before.

I was also told that deregulation would lead to an increase in the number of flights, and make air service more convenient. Again, it has, but only for those fortunate enough to live at the centers of major markets.

Today, as compared with pre-deregulation days, West Virginians have far fewer flights to choose from, and, in many cases, must drive to another state in order to fly at a reasonable price. This is a far cry from convenience!

On October 3, 1996, the Senate passed the Federal Aviation Administration (FAA) reauthorization bill, containing a provision that directs the Secretary of Transportation to examine the impact of deregulation on small communities. The study is intended to determine if users of small community airports are paying "a disproportionately greater price" as compared with passengers using hub airports. It will, as well, attempt to discern the number of small communities that have lost air service as a result of the deregulation of commercial air carriers.

I strongly support this study, but must observe that, from the perspective of West Virginians, it is already evident that small communities are paying a disproportionately high price for air travel. For example, if

a West Virginian wants to fly from Charleston, West Virginia, to Washington, D.C., he will pay a one-way coach fare of \$332. To benefit from airline deregulation, he must spend over three hours driving to Columbus, Ohio, in order to fly for \$179. In other words, he must drive west, consuming gasoline and adding another automobile to the highways, in order to fly east at a reasonable fare.

Under deregulation, it is becoming increasingly difficult for small airports in West Virginia to continue to operate. Several of these airports benefit from Essential Air Service (EAS) support. Intended as a temporary subsidy to help small airports develop profitable service, EAS has become a permanent necessity to keep some small airports open due to the impact of deregulation. Essential air service, in recent years, has been repeatedly left out of the President's budget, only to be restored by my amendments to appropriations bills in order to keep our airline service alive in West Virginia and other rural states. Fortunately, EAS has been authorized to be funded at a level of \$50 million in the new FAA bill.

The FAA bill, with its required study of deregulation, is a positive step for our small airports. But it is not enough. It is my hope that the findings of that study will lead to ways to successfully reverse the deregulation-induced pattern of rising fares and declining service threatening West Virginia's small rural airports.

For West Virginia to continue to strengthen its economy, our state must have an adequate and cost-efficient transportation system. In this age, that means air service, as well as highways and waterways and rail service.

Help for Second Generation Victims Of the Vietnam War

After more than twenty years, the Department of Veterans Affairs (VA) has concluded that sufficient scientific evidence exists linking veterans' exposure to Agent Orange during the Vietnam conflict, in certain instances, to the tragic incidence of the birth defect spina bifida in the children of these veterans. This year, I cosponsored an amendment to the fiscal 1997 Veterans Affairs Appropriations Bill to provide needed authority for the VA to treat these children for their service-connected disabilities arising from their fathers' exposure to Agent Orange. This is an unprecedented but appropriate action, since scientific research is now sophisticated enough to allow an understanding of the effects of toxic exposures on ourselves and, also importantly, on future generations.

As a result of the Agent Orange Act of 1991, the Department of Veterans Affairs and the National Academy of Sciences have, at regular intervals, reviewed the ongoing research on Agent Orange exposure. As a result, Veterans' disability compensation has been awarded, in some instances, for several Agent Orange-related illnesses, including nonHodgkin's lymphoma, soft-tissue sarcoma, Hodgkin's disease, chlo-racne, respiratory cancers, multiple myeloma, prostate cancer, and acute and sub-acute peripheral neuropathy. The report update, issued last spring, also found "lim-

ited/suggestive evidence" linking the birth defect spina bifida to Agent Orange exposure. On the basis of this finding, VA Secretary Jesse Brown recommended that a service connection be granted to Vietnam veterans' children with spina bifida.

The research and the legislation are long overdue for families that have been struggling for over twenty years. Spina bifida is a serious neural tube defect, caused by the improper development of the vertebrae or spinal cord, and resulting in varying degrees of paralysis of the lower limbs. The damage is permanent and incurable, requiring surgery, medication, and assistive devices like braces, crutches, or wheelchairs.

This legislation will, beginning in 1998, provide health care through the Department of Veterans Affairs, two years of vocational training, and a small monthly stipend to these second-generation victims of the Vietnam conflict.

Someone once observed that "procrastination is the thief of time." These children and their families have already lost time, lost long years of doubt and wondering and of financial hardship that they bore alone because of delays in recognizing and investigating this tragedy. This legislation acknowledges responsibility for the tragic aftermath of our involvement in Vietnam, and takes care of these children.

Drafting Parents for the War on Drugs

In 1987 and 1988, the national Parents' Resource Institute for Drug Education (PRIDE) estimated that just over 28 percent of 12th graders throughout the nation had used drugs. This is a disturbing statistic, and such data have helped to prompt increased efforts at the local, state, and federal levels to wipe out illegal drugs in our communities.

Largely in response to the prevalence of drug use among young people in the last few decades, schools throughout the nation have introduced antidrug programs. With my support, criminal penalties for the sale and purchase of illegal drugs have been stiffened, and federal and state governments have funded the implementation and operation of drug-prevention programs.

Although many may have assumed that such efforts have led to a decline in the use of drugs by youth in recent years, a study recently released by PRIDE reports that the current rate of teenage drugs use is, regrettably, on the rise from what it was in 1987 and 1988.

According to PRIDE statistics, drug use in 1995 and 1996 reached a level of more than 40 percent among the nation's population of 12th graders, the highest recorded level since PRIDE started its annual survey in 1987.

Anyone with an interest in the youth of our nation and their future should view this statistic with alarm. But equally disturbing, especially to parents, should be the data provided by PRIDE and by the federal Office of National Drug

Control Policy (ONDCP) that identify the failure of parents to communicate with their children as one of the weakest links in the national chain of antidrug efforts.

According to studies by ONDCP, while 94 percent of parents claim to have discussed drugs with their children, only 64 percent of teenagers report that their parents have actually discussed the dangers of drug use with them.

Furthermore, that ONDCP study found that 40 percent of parents felt that they had little influence over their children's decision about whether or not to use drugs. But the PRIDE study found that while 35.5 percent of children who claim that their parents have never talked with them about drugs have tried drugs in the past year, among students who have actually heard warnings about drug use from their parents, that number fell to 26.6 percent.

Clearly, if our nation is to reverse the trend of increased drug use among youth, parents need to be full participants in the anti-drug campaign. Parents should make it a priority to sit down with their children and discuss the harmful effects of drugs. But I would go a step further. I believe that parents also need to warn their children about alcohol -- also a drug -- a drug which is dangerous both to the user and to innocent victims of alcohol-related automobile accidents.

If we do not address these concerns today, the consequences could be tragic for the future of our nation.

A Spirited Salute to Our Veterans

On the eleventh hour of the eleventh day of the eleventh month, 1918, the cease-fire that ended World War I brought silence to the muddy battlefields of Europe. Now, each year on the eleventh day of the eleventh month, we honor American veterans of all wars.

Almost 5 million Americans served during World War I, which was optimistically, if wrongly, called the "war to end all wars." Since that time, valiant American men and women have carried the U.S. flag into combat in other wars and smaller conflicts, from the globe-spanning battles of World War II to the recent Operation Desert Storm in the Persian Gulf. Almost 40 million Americans have answered their country's call to battle since the turn of this century. Just over 700,000 of those noble souls sacrificed their lives in the course of answering their call to duty.

As a nation, we owe an unquenchable debt of gratitude to these wartime veterans and to their families, who bear the pain and worry of separation from, or loss of, their loved ones. We also owe our thanks and commendation to those who serve in peacetime, maintaining the vigilance and skills needed to deter conflict. During the Cold War,

their unblinking presence kept at bay the largest army the world has ever seen, in the former Soviet Union.

Today, the Armed Forces of the United States are deployed across the globe, maintaining the watchful preparedness that keeps peace and stability in places like the Korean peninsula and the Persian Gulf, or supporting operations intended to reintroduce peace and stability into regions of conflict. While I may not always agree with the missions to which U.S. forces are deployed, the men and women of our military always have my unflinching support.

Active duty forces depend on the support of Reserve and National Guard units more than ever. The citizen-soldiers of the National Guard and Reserves carry the double burden of civilian jobs in addition to their military role. They, and the employers that support them so admirably, also deserve our appreciation.

Veterans Day is a day for remembrance, a day for prayers, and a day for thanks. To all who have so bravely faced the dangers of battle, to all who have lost their lives, and to all who stand watch over our nation today, I offer my heartfelt prayers and my sincere thanks.

One of the Best Investments Ever Made

On June 29, 1956, President Eisenhower signed the Federal Aid Highway Act, authorizing construction of the U.S. Interstate Highway System. In the forty years since its enactment, that law has made a profound positive difference for hundreds of millions of Americans by saving lives, reducing injuries, increasing business investment, expanding employment opportunities, and producing savings to the public and the private sector.

The Interstate System represents just over one percent of the nation's highway mileage, but it carries nearly one quarter of all roadway traffic.

According to Federal Highway Administration figures, 45 percent of the nation's trucking firms travel the Interstates, and the use of these modern highways is estimated to save those firms 17 percent on operations as compared to using other roads.

In addition, the higher speeds and reliability of travel times afforded by Interstate Highways have made "just-in-time" delivery of goods more feasible, reducing warehouse costs and adding to manufacturing efficiency. Further, the ease of travel on interstates has made it possible for many companies to expand the size of their markets. The resulting increase in competition among businesses coupled with the reduced manufacturing costs has helped to cut the prices of products regularly purchased by working families.

The Interstates have also improved mobility, mutually benefiting businesses and employees. Because workers are able to travel

greater distances in less time, they are also able to work at jobs farther from home. In turn, businesses can recruit from a geographically expanded pool of employees, thereby increasing the likelihood of matching the right employees with existing jobs, consequently, improving productivity.

In addition, being able to work at greater distances from home has, in many cases, allowed American families to purchase more affordable homes in more rural settings, providing for a better quality of life.

A study recently released by the American Highway Users Alliance -- a national organization comprised of individual, corporate, and association members -- estimates that, based on Federal Highway Administration data, the use of the Interstate Highway System over the last 40 years has saved 1,800 lives, reduced injuries by 89,000, and resulted in economic savings of \$3 billion in West Virginia alone. Moreover, nationwide, forty years of Interstate usage has provided between \$2.1 and \$2.5 trillion in economic benefits.

With the proliferation of shortsighted critics who haphazardly slap a "pork" label on a host of federal infrastructure programs, one wonders what chance the nation would have to construct the more than 45,500 miles of Interstate System if it were being proposed today. Thank goodness that in the 1950's, Congress and the President recognized the Interstate System for what it truly was -- one of the best investments that our nation could ever make.

Giving Thanks

This year, as in years past, West Virginians will celebrate Thanksgiving by bringing family and friends together for a communal meal rich in tradition.

It was in 1621, 375 years ago, that the Pilgrims, with faith in a Divine Providence, celebrated their first harvest with a feast which most Americans regard as "The First Thanksgiving."

Thanksgiving, as we now celebrate it each November, is a time for us to rejoice in the successful harvest, and to share with our neighbors the bounty of the land we inhabit. It is for many, a welcome day of relaxation and feasting before preparations continue for the cold winter ahead.

Like those early settlers, West Virginians look forward to spending a day with family and friends over a table groaning with delicious dishes, some likely prepared only on this one day each year. We feast not only on food, but also on the warmth of family caring, and on the richness of communion with our friends and neighbors. In a world which sometimes seems to be growing ever more splintered and divided, on this day we draw together in a way that is uniquely American. We are, indeed, fortunate that in West Virginia, that spirit of community still stands fast

against the inroads of modern life.

Some West Virginians will celebrate their Thanksgiving by sharing with the less fortunate. They will cook and serve meals for neighbors in their communities who otherwise would not be able to join in the spirit of the day. This kindness and thoughtfulness for those less fortunate than themselves is a laudable characteristic of West Virginians, borne perhaps from a history of making do in a state with an unforgiving, though beautiful, nature.

Raging floods, fires, deep snows, and mine collapses have always called forth an immediate and generous response from communities across our state. As fiercely independent as Mountaineers might be, in times of trouble they can be counted on to shoulder a sandbag, a shovel, or a pick to respond to the crisis and to assist the victims. This year, as in years past, neighbors and volunteers have responded magnificently to the challenge of repeated flooding throughout West Virginia.

So, on this day of Thanksgiving, as we give thanks for God's blessings on our wonderful families, let us also offer thanks for the spirit of community and caring that lives on in West Virginia.

By U.S. Senator Robert C. Byrd

A Streamlining Success

The recently completed consolidation of the Bureau of Public Debt office in Parkersburg is an impressive success story for both the federal government and West Virginia.

This most recent consolidation follows on an earlier consolidation, involving the Chicago Bureau of Public Debt office, which was undertaken with \$1 million in federal funding I helped to obtain in 1972, and furthered by my pressing to expedite the move and to provide facilities to accommodate the Bureau's growth in Parkersburg. That consolidation resulted in the relocation of functions and jobs from the Bureau's Chicago office to Parkersburg, and it has helped to make the Parkersburg office an even more valuable component of the U.S. Treasury Department.

Beginning in 1984, I added language to a series of appropriations bills urging the Treasury Department to transfer more of the Bureau of Public Debt's functions and jobs from Washington to the Bureau's Parkersburg office.

In 1991, I was able to announce that the Bureau would, in fact, consolidate most of its operations in Parkersburg.

At the beginning of that process, it was estimated that this consolidation would save the U.S. Treasury Department \$5.9 million annually. Now that the effort has been completed, savings attributable to the consolidation are estimated at an impressive \$15 million annually.

With the consolidation now finalized, the Bureau of Public Debt has gained significant improvements in productivity and reduced space costs that have resulted in savings to the American taxpayer far beyond those projected when the consolidation was initially proposed.

The merging of most of the Bureau of Public Debt's duties in the Parkersburg office and the transfer of 300 personnel to that office have also translated into benefits for West Virginia. Since the beginning of the streamlining, the economic impact by the Bureau on the Parkersburg community has doubled. In 1991, the Bureau's Parkersburg office employed about 1,100 workers, and provided an annual boost to the local economy of about \$40 million, including \$28 million for salaries and \$12 million for benefits, rent, utilities, and local purchases. Today, the facility houses about 1,400 full-time permanent employees with an estimated annual economic impact of \$80 million in salaries, benefits, rents, utilities, and local purchases.

Cost efficiencies and productivity improvements like those achieved at the Bureau of Public Debt in Parkersburg are demonstrative of the kinds of gains that are possible for the U.S. government and the American public from the consolidation of federal offices. The consolidation of the Parkersburg Bureau of Public Debt office is a real success story and I am proud that I helped to make it happen.

Television's Idle Jabber

A recent study conducted at the University of California, Los Angeles (UCLA), reports some encouraging news about what Americans are being offered as television viewing. Results of the study show that network executives, likely responding to growing criticism about the effects of television violence on children, took a small but important step in the right direction by curbing the number of violent programs appearing on television last year. More changes like this must be made in order for our society to free itself from the moral deterioration and spiritless idle caused by recurrent television viewing.

The UCLA study found that programming during the 1994-95 television season included fewer violent shows than the previous year. Based on 3,000 hours of programming, five series during the 1994-95 season contained violence in what the report calls "a large number" of episodes. The report says that figure is down from nine frequently violent series the season before.

Throughout my career, I have repeatedly cautioned about the detrimental effects of irresponsible television programming. In September, I cosponsored a Senate resolution urging the major networks to revive their traditional "Family Hour" and voluntarily reserve the first hour of prime time broadcasting for family-oriented programming. Last year, I voted for legislation requiring that a "V" Chip -- a device to help parents weed out programs labeled for violent or questionable content -- be placed in all new television sets.

While television execu-

tives are primarily responsible for the content of their broadcasts, a portion of the responsibility for improved television programming rests with the public -- the viewers who have the power to turn to alternative programming or simply turn off the set, and with parents who have the obligation to establish viewing rules for their own families.

In far too many homes, the television set has become the centerpiece of family activity. Where children once sat in front of the fireplace, their minds working, their imaginations fueled by the ideas expressed on the printed page, today they sit in dull mesmerization before the flickering screen of the "boob tube."

More enrichment can be found between the covers of a good book than between the opening and closing credits of any television show. More fulfillment can be cultivated by a family conversation than by the idle jabber spilling from the small screen.

Although the study at UCLA indicates an improvement in the quality of programming broadcast to the screens of millions of homes across the country, television networks can, and should, demonstrate much greater responsibility in strengthening the quality of their programming. And, as a nation, we are also compelled to improve the quality of our lives and the lives of our children by turning off the television set. We should make efforts to redirect precious time and energy away from television's allure, and toward more productive activities. The alternatives might be pleasantly surprising and positively worthwhile.

By U.S. Senator Robert C. Byrd

Improving the Safety of America's Workforce

Many American workers are subjected to serious hazards in the workplace. Job-related deaths and injuries exact a staggering emotional and financial toll on workers, family members, the legal system, employers, and the U.S. economy.

Having grown up in the Southern West Virginia coal fields, I have seen more than my share of broken bodies, devastated families, and men slowly choking to death from pneumoconiosis. These indelible memories have resulted in my determination to do all that I can to find funds to help address the problem of on-the-job dangers.

More than 30 years ago, I initiated efforts that established, funded, and constructed facilities for the Appalachian Laboratory on Occupational Safety and Health (ALOSH) in Morgantown. In 1989, in response to the continuing growth of staff and the expansion of research responsibilities at ALOSH, I redoubled my efforts to fund construction of a new laboratory that would answer the changing needs of workplace safety researchers.

Since that time, I have added more than \$90 million to appropriations bills for construction, equipment, and staffing of a new National Institute for Occupational Safety and Health (NIOSH) laboratory in Morgantown, and in October of this year, I helped to dedicate that state-of-the-art research laboratory.

There is no more appro-

priate place in the nation to be waging an assault on dangers in the American workplace than in West Virginia. From 1980 to 1989, the average annual rate of workplace fatalities in West Virginia was 15.7 per 100,000 workers -- more than double the national average. Dust-related lung diseases in West Virginia accounted for 8,350 deaths from 1968 to 1991. From 1989 through 1990, West Virginia's mortality rate for those diseases ranked first among the 50 states. These numbers are simply morally unacceptable.

The 300 people who will staff the new NIOSH facility when it becomes fully operational will develop lab techniques to further the understanding of occupational disease and to fortify the ability to prevent health damage in the workplace. They will examine ways to better address the relationship between hazardous substances and toxic reactions, and devise new methods for monitoring hazardous workplace agents with the aim of giving immediate notification of exposures as they occur.

In the American workplace, safety must be a forethought, not an afterthought. With this new West Virginia laboratory, our nation takes a step toward increasing the available knowledge about workplace hazards, with the hope of decreasing injury and loss of life to American workers. America's workforce deserves nothing less.

The Battle over Booze Ads

I find disconcerting the recently announced decision by the Distilled Spirits Council of the United States to lift its self-imposed, decades-old ban of hard liquor advertising on television and radio.

In view of the alcohol industry's disappointing decision, I was heartened to see that, according to press accounts, the four major networks have decided to continue to ban hard liquor advertisements. Unfortunately, that commendable stand by the networks does not resolve the matter. It merely shifts the burden of responsibility in broadcasting with respect to the negative impact of alcohol advertising to local affiliate stations, cable operators and programmers, and radio stations.

West Virginia's broadcasters have a vested interest in the future of the communities they serve. They understand that, and they have demonstrated their commitment to our communities by providing local news coverage and forums for the debate of local issues, granting free air time for public service announcements, warning the public of local emergencies, and airing information about community charitable functions.

Alcohol is a dangerous drug. For many years, I have

taken the opportunity when addressing groups of young West Virginians to warn them about the dangers of alcohol, and I have supported legislative efforts to discourage people -- particularly young people -- from drinking any alcohol. For example, earlier this year, I authored an amendment which requires states to pass "zero tolerance" laws that will make it illegal for persons under the age of 21 to drive a motor vehicle if they have a blood alcohol level greater than .02 percent.

More recently, I have written to West Virginia broadcasters and cable operators, urging them to put the health and well-being of West Virginians ahead of the profits that may be gained by accepting alcohol advertisements. I hope that they will follow the example set by the networks and refuse to air ads peddling intoxicating beverages.

Now, in addition, I call on West Virginians to act responsibly, and, particularly in the midst of this season when alcohol is so prevalent at holiday celebrations, to set a positive example for young people by abstaining from drinking intoxicating beverages. Genuine holiday cheer comes from the heart, not from a bottle.

Green Bank Telescope Update

As the constellations shift in West Virginia's winter sky, progress continues on the steady and intricate construction of the giant radio telescope being built at the National Radio Astronomy Observatory at Green Bank in Pocahontas County.

Expected to be completed in 1998, the Green Bank telescope is foreseen to be one of the most powerful instruments man has ever built in his pursuit to understand the heavens. This state-of-the-art device will be the world's largest steerable radio telescope, and, for its size, the most precise telescope ever constructed for research at microwave frequencies.

The new telescope -- for which I added \$75 million to an appropriation bill in 1989 -- responds to the need for a sensitive and sophisticated instrument for research and development in astronomy. It will replace an outdated radio telescope that collapsed at Green Bank in 1988.

Several important advancements in the development of the telescope have recently been completed. The elevation shaft has been welded and installed, and the elevation wheel has been assembled. When finished, these components will lift the massive dish more than 475 feet in the air, with two

20-story elevators providing access to the raised segment of the structure. Also, more than two-thirds of the 2,200 main antenna surface panels have been completed and are being painted. These surface panels, each with an area of 50 square feet, will comprise the surface of the dish. Thanks to sophisticated automation, this fully adjustable surface will never vary from an ideal shape by more than the thickness of a piece of paper.

While it will provide state-of-the-art research capabilities to scientists across the country and around the world, the telescope will also make a sizable contribution to West Virginia's high-tech educational offerings. Each year, hundreds of high school teachers visit Green Bank for hands-on educational programs that help them to teach their students about astronomy. In addition, the Observatory offers daily public tours, and special tours are provided to students and other groups.

I am glad to have made possible the funding for the construction of the Green Bank radio telescope in our state. This sophisticated instrument in West Virginia will have a lasting influence on man's understanding of God's handiwork in the heavens.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

12-25-96

A Good Year for West Virginia

As 1996 draws to a close, I am glad to report progress in my efforts to help lay a firm foundation for the growth of West Virginia's economy. Working within the narrowing federal budgetary constraints, I successfully added millions of dollars to appropriations bills to help bring to fruition several still-developing initiatives in West Virginia that offer benefits to our state and nation.

For example, in my ongoing effort to assist the fight against crime and provide greater peace of mind to American families, I helped to obtain \$92.2 million for continued development of the first-of-its-kind computer system that will be headquartered at the FBI Fingerprint Identification Division in Clarksburg.

Just this fall, the National Institute for Occupational Safety and Health (NIOSH) laboratory -- a facility built and equipped with a total of \$90 million I have added to past appropriations bills -- officially opened its doors in Morgantown. Another \$8 million I added this year will support operations of that cutting-edge facility.

Also, in keeping with my long-running interest in improving West Virginians' access to health care, I added \$800,000 to an appropriations bill for continued expansion of Mountaineer Doctor Television (MDTV), a televised service that helps medical specialists reach out to patients in rural communities.

To broaden the protection of West Virginia's precious natural resources, I obtained \$2 million so that the Canaan Valley National Wildlife Refuge can increase its holdings, and \$1 million for the expansion of the Ohio River Islands National Wildlife Refuge.

also added \$11.5 million for staffing and operations at the U.S. Fish and Wildlife Service's National Education and Training Center at Shepherdstown, bringing to \$138 million the total monies I have added to appropriations bills in recent years for that state-of-the-art facility.

Further, West Virginia's high-technology transformation will be assisted with \$14 million I obtained for operations of the NASA Independent Validation and Verification Facility at Fairmont, and a total of \$9.8 million I obtained for the NASA-sponsored Classroom of the Future and National Technology Transfer Center at Wheeling Jesuit University. Additionally, \$4 million I added will enable the business-outreach programs of the Robert C. Byrd Institute of Flexible Manufacturing in Huntington to continue.

Mass transit users in the Morgantown and Charleston areas will benefit from \$4.2 million I added to update automation of the Personal Rapid Transit System in Morgantown and \$3.2 million I added for the Kanawha Valley Regional Transportation Authority.

And, as a result of \$6 million I added to the Agriculture Appropriations Bill this year, Leetown in Jefferson County will be home to the nation's first Cool and Cold Water Aquaculture Center, placing West Virginia at the forefront of research in this new and expanding area of the fish-farming industry.

The future economic viability of our nation relies largely in its making wise investments in itself. These West Virginia initiatives, for which I have secured federal funding, are exactly that -- wise investments in the future of our

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Sugar Grove – A West Virginia Success Story

West Virginia has a long and proud tradition of military service to the United States, and the people of the Mountain State possess admirable qualities for serving and protecting the ideals of our American heritage. Citizens demonstrating honor, bravery, and a sense of responsibility and respect for country make West Virginia a natural home for a national defense presence.

The Naval Security Group Activity, located at Sugar Grove in Pendleton County, represents the value that such a presence can bring to our state.

In 1962, a decision by the Department of the Navy to abandon plans for construction at Sugar Grove of a 600-foot-diameter "Big Dish," a powerful new radio telescope, placed the future of that naval installation in jeopardy. Recognizing its value to the community, the state, and the military, I spoke with President Kennedy and met with Defense Secretary Robert MacNamara a number of times, successfully making a case for the continued Department of Defense presence at Sugar Grove.

Since that time, I have supported funding for the construction of an underground operations building, including \$7.4 million for a major expansion and renovation of that facility. I also helped to obtain funding for a post exchange and a community building. More recently, the small, outdated community building was replaced, using \$990,000 I added to an appropriations bill for a larger structure that now serves military personnel as well as local residents. I also helped to obtain \$400,000 for a new fire station and \$1.4 million for water and sewage systems.

Most recently, I added \$10.8 million to a federal appropriations bill for construction of a

73-person bachelor enlisted quarters with an attached dining facility at the Sugar Grove naval complex, and for 17 to 23 new family housing units to accommodate the influx of military personnel being added to the installation. As a result of my efforts to maintain the installation, and due to the facility's ideal location within the National Radio Quiet Zone, it today continues to render an important military service in fulfilling communications research and development needs for the Navy.

Nearly 100 personnel have been added to the installation since 1992, for a total of about 280, with staff levels expected to reach 300 in the next two years.

The unit has also contributed to growth outside the base. The annual economic impact on the local community is \$12.2 million, an increase of \$4.3 million since 1993.

The Sugar Grove command is proud of its participation in the community. Along with taking part in local events, the base has "adopted" a nearby nursing home and sponsored a special education olympics. It has also established an academic excellence partnership with a local elementary school, and is working to establish a similar program with the local high school.

The enlisted men and women from our state have always served this country with bravery, honor, and pride. The success that the naval installation has had with the community illustrates that the men and women who serve in the armed forces are not only an asset to the country which they protect, but also to the state in which they live. As a member of the Senate Appropriations Committee, I am proud that I could help along the way with funds for the National Security Group Activity at Sugar Grove.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Giving Wings to West Virginia's Poultry Industry

Boasting sales of more than \$195 million in 1995, poultry production is a leading contributor to West Virginia's economy. Chicken and turkey farms provide hundreds of jobs in many of West Virginia's most rural areas, and poultry processing is the fifth largest employer in our state. Broiler chickens are impressively distinguished as West Virginia's top agricultural commodity and one of our state's most successful exports.

Recognizing an opportunity to strengthen one of West Virginia's fastest growing industries, in 1987 I added \$375,000 in planning funds to a federal appropriations bill to launch a new poultry research initiative that would be administered by West Virginia University's (WVU) Division of Animal and Veterinary Sciences.

With those funds, WVU and members of the poultry industry, working together, drew up plans for a pair of modern facilities that would house research on poultry production.

Subsequently, to support construction of these facilities -- one at WVU's farm in Morgantown and the second at the University's Reymann Memorial Farm in Hardy County -- I added \$3.4 million to fiscal 1989 and 1990 appropriations bills.

The future success of poultry farming in our state is rooted in devising methods that increase the value and demand of West Virginia poultry products. Global competition for poultry and eggs is intensifying due, in part, to the escalation of consumer expectations for higher quality poultry products at

a low cost. With the investment of the federal funds that I have provided, the two poultry research laboratories are addressing these challenges and blazing new technological trails for West Virginia's poultry interests.

Currently under way at these two state-of-the-art facilities is research aimed at developing technology that will promote production efficiency and competitiveness, as well as studies aimed at identifying sustainable economical agricultural practices.

The development, commercialization, and use of these newly discovered technologies will have far-reaching benefits for West Virginia and the nation. In the years ahead, these technologies can help to create jobs and raise the standard of living for rural West Virginians.

Other research at the two labs is intended to produce safer and healthier food. For example, studies are now under way to develop methods of controlling salmonella, a potentially lethal bacteria that can infect poultry products and be passed on to human consumers.

Promoting innovation to ensure the future productivity of West Virginia's poultry farmlands, these two WVU-administered laboratories are helping to fulfill my vision for a broader economic base in West Virginia. The 21st century will demand the adoption of cutting-edge practices to sustain economic growth and job creation, and the technological infrastructure I have helped to put into place in West Virginia today will help to keep our state's poultry industry flying high, well into the future.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Balancing Preservation and Recreation

One of the challenges facing West Virginians, who are blessed with a state of breathtaking beauty, is that of preserving West Virginia's natural assets while working to promote economic development in our state. Nowhere is this more the case than in the nearly one-million-acre Monongahela National Forest. Annually, an estimated 2.2 million people visit sites in the Monongahela National Forest and its surrounding areas. Significantly, this large number of visitors -- thousands from outside West Virginia -- pours money into West Virginia's economy through the use of motels and hotels, restaurants, and other tourist-oriented enterprises.

I have long recognized the value and potential of tourism to our state's economy. Likewise, I have long recognized the incomparable natural legacy that is ours in our forests. Thus, throughout my Senate career, I have promoted efforts to strike a balance between enhancing the Monongahela National Forest as a tourism resource and, at the same time, protecting its natural beauty and tranquility.

For example, improvements to trails and picnic areas throughout the Forest have been undertaken with funds I have added to appropriations bills over the years.

In 1994, I helped to dedicate an upgraded Falls of Hills Creek Trail, which was improved with \$1.1 million, of which I had added \$800,000. Hidden away under the protection of the Forest Service, this 114-acre delight includes three waterfalls, with one of them -- at 63 feet in height -- the second highest in our state. The funds I obtained have allowed for the construction of a series of improved pathways, boardwalks, and stairs to make the trail more accessible to visitors.

Another of the beautiful attractions of the Monongahela National

Forest is Seneca Rocks, which annually draws more than 150,000 tourists, including campers, hikers, and picnickers. To help these visitors more fully enjoy the offerings of the Forest, and in an effort to replace a prior facility which was damaged by the severe flood of 1985, I added \$1.6 million for a new Seneca Shadows Campground and picnic area. These new facilities were completed and opened to the public in 1990.

Further, in the last five years, I have added \$7.1 million to replace the Seneca Rocks Visitors Center, which was destroyed by fire in 1992. The new center will provide needed services to those who climb, hike, or merely come to gaze at the unusual, towering rock formation.

The Cranberry Glades area is widely recognized as a unique and particularly environmentally sensitive portion of the Forest. With federal funds I obtained, two limestone treatment facilities began operating between 1988 and 1995 on the Cranberry River to treat acid mine drainage and improve the river's habitat, helping to ensure a healthy stock of fish for anglers. Also in an effort to allow visitation, but still preserve the area's natural character, in 1992, I added \$330,000 to an appropriations bill to upgrade the Cranberry Mountain Visitors Center. The upgrade of that center, which was originally constructed with \$100,000 I had added to a fiscal 1965 appropriations bill, has just recently been completed.

By obtaining federal funds for the development of its splendid scenic treasures and a wide range of outdoor activities and resources, I hope to preserve the Monongahela National Forest's scenic beauty, while expanding the outdoor activities that are available to the tourists who support a growing industry in our state.

Leaving a Larger Imprint on West Virginia

I recently announced that the Federal Bureau of Investigation (FBI) will be adding 1,100 new employees at its Fingerprint Identification Division complex in Clarksburg. Those employees, who will initially be offered two-year term appointments, will bring the number of staff at that facility to a total of 3,000 by the end of this September -- significantly more than the total staff number of 2,500 that the FBI had expected to employ upon the center's full implementation in 1999.

It was in response to the FBI's concern that its fingerprint system stood at the brink of collapse, a potential disaster for law enforcement, that I, in 1990, helped to launch the new Clarksburg complex and its computer system by adding \$185 million to a federal appropriations bill. Including that initial funding for construction and equipment, I have obtained more than \$600 million in appropriations bills for the Clarksburg fingerprint division.

The latest round of hiring responds to the growing numbers of inquiries from business interests and law enforcement agencies for the kinds of services that only this comprehensive, ultramodern fingerprint system can provide.

Fingerprint division assistance, for example, is regularly sought by schools, child-care services, and adoption agencies that check the backgrounds of prospective employees and

potential adoptive parents. In that way, the FBI helps to ensure that children are sheltered from child molesters and abusers and have safe environments in which to learn and live.

The ability of local police forces to have quick access to a comprehensive database of criminal fingerprint and identification information is of immense value and importance to every community.

Imagine the difference it will make when an individual is detained briefly for some minor offense on the East Coast, and, through this revolutionary fingerprint system, is identified within minutes as a fugitive murderer from the Pacific Northwest. This contribution to the security and the peace of mind of American families is inestimable.

Additionally, the FBI complex, as a major employer, is contributing to an economic revitalization of our state. Currently, the complex provides an annual economic impact on the local community estimated at \$50 million -- a figure that will rise as more employees come on board, resulting in the FBI's leaving an even larger imprint on our state. Therefore, the recent decision by the FBI to add another 1,100 employees -- most of whom are expected to be awarded permanent positions -- can be celebrated as a most welcome piece of economic news for West Virginia.

Good Grammar Makes a Comeback

For centuries, the written word has been one of the most useful tools for allowing man to communicate and record information. In recent decades, however, conveniences made by technological advances such as the telephone have, for many purposes, replaced traditional correspondence. Even more recently, though, an unanticipated development brought on by the growing popularity of the computer has helped writing begin to make a comeback, and electronic communication, including e-mail, is reacquainting people with the written word. This is good news for a society that has grown lackadaisical about the correct application of English and grammar. But, as we enjoy the benefits of the Electronic Age, it is also critical to be aware of proper grammar.

Among other elements, our culture is defined by the quality of our education and the caliber of our language. As a nation, we have a responsibility to maintain our language as a vigorous, vivid, and exact tool of communication. Whether it be for an e-mail message, a fax transmission, or an amendment to the U.S. Constitution, proper grammar reflects the organized thought that is necessary for clarity and accuracy.

Striving for correct English usage in writing is more than a courtesy to one's readers. In what condition would our nation be

today had our forefathers not made the effort to carefully craft the wording of documents like the Declaration of Independence and the Bill of Rights?

Throughout my career, I have stressed the importance of education and the employment of proper grammar, and I have always advocated the usage of proper English when meeting young people across West Virginia.

As keyboards and monitors unite with chalk and slate in the classroom, teachers and parents need to prepare students with the fundamentals of grammar in order to ready them for the challenges of the approaching new millennium. Good grammatical skills are essential for effective communication, and by equipping future generations with such knowledge, our nation, which is becoming more digitized and complex every day, will be able to continue to grow and prosper.

It is ironic that technology is bringing us back to the fundamentals of the English language. But, while use of the computer is encouraging people to write more frequently, we must be mindful of the fact that precision and clarity of thought in writing are fundamental to understanding written ideas. I hope that, as a society, we will work toward improving our grammatical skills, which will strengthen the way we communicate and enrich the way we live.

Recognizing a Sound Investment

The Bureau of Alcohol, Tobacco, and Firearms (ATF) National Tracing Center (NTC) in Berkeley County was recognized recently for its contributions to the effort to streamline government.

The NTC received a national Hammer Award for its work to improve the ATF's crime-fighting capabilities. The award recognizes successful efforts to improve the efficiency of government.

The NTC's effective use of technology and teamwork is an outstanding example of how thoughtful federal investment can contribute to more efficient production at a greater savings to taxpayers.

In 1990, I added language to an Appropriations Committee report initiating a study of the feasibility of relocating certain functions of the ATF from Washington, D.C., to proximate, lower-cost areas. Subsequently, I added report language to designate nearly \$3 million toward locating the Tracing Center in Berkeley County.

The NTC -- with a staff of 138 federal and contract personnel and an annual economic impact of approximately \$6 million -- traces the origin of firearms recovered in crimes and provides that information to ATF and other law enforcement agencies.

To conduct and complete searches, the NTC maintains microfilm records, but, due to a back-

log in transferring hard-copy files to microfilm, NTC staff also must routinely sort through stacks of paper files. In 1992, the NTC maintained a backlog of 28 million paper documents that had yet to be transferred to microfilm, a number that was increasing every day. The turnaround time for searching through this mound of documents and completing a firearms trace request consequently grew from a matter of hours or a few days to as many as 45 days, jeopardizing the mission of the Tracing Center.

An independent contractor, consulted by ATF management at the time, estimated that the cost of conversion to microfilm would be \$50 million over a 28-year period. To their credit, the NTC staff discovered new technologies and completed the conversion project in just 18 months at a cost of \$14.2 million. I have been advised that this achievement would not have been possible in the NTC's previous facility.

In winning the Hammer Award, the Berkeley County Tracing Center staff has received a well-deserved pat on the back. Their success in cutting government red tape to improve the operations of the ATF is commendable. But, even more importantly, the federal dollars saved by this facility are proof positive that the NTC's move to West Virginia was a sound federal investment.

A Court Challenge to the Line Item Veto

In March of last year, President Clinton, with great fanfare, signed into law the Line Item Veto Act of 1996. Although enacted in March, the measure did not take effect until January 1, 1997.

I have been a strong opponent of the line-item veto because of my grave concern that the power it confers on the President of the United States would upend the system of checks and balances and the separation of powers laid out in our Constitution by our Founding Fathers.

I am so opposed to the Act that, on January 2nd, I took the uncommon -- and for me, unprecedented -- step of initiating a legal action which challenges the constitutionality of the Act. This lawsuit, which was filed in the U.S. District Court, District of Columbia, is based on the simple principle that the plain words of the Constitution mean what they say.

Specifically, the very first provision of the Constitution mandates that "all legislative Powers herein granted shall be vested in a Congress of the United States." Under the Line Item Veto Act, though, the President will, for the first time in our history, have the power to selectively and unilaterally "cancel," or repeal, parts of legislation that he has just signed into law.

Clearly, the act of re-

pealing a law or part of a law, no less than enacting or amending a law, is an act of legislating which the Framers of the Constitution never envisioned for the executive.

In passing the Line Item Veto Act last year, the Congress chose to follow the same fateful path taken by the Senate of ancient Rome some 2,000 years ago, a path which ultimately led to the fall of that great republic. Julius Caesar did not seize power. The Roman Senate knowingly, willingly, and desiring to do so, ceded power to Caesar. Most importantly, this included the power over the purse. Once the Roman Senate gave away its control of the purse strings, it gave away its power to check the executive. This is what the Congress did last year; it voluntarily handed power over the purse -- a power belonging to the people and exercised by their directly elected representatives in Congress -- to the executive branch.

And so, for the preservation of our Constitution and our Constitutional form of government, I have taken the extraordinary step of going to court to challenge the new law. Let us hope that it is not too late to save our nation from the colossal mistake the Congress made in shifting the people's power over the purse to the President.

Planning for Your Trip Abroad

I am regularly called upon to assist West Virginians in planning their overseas vacations. Perhaps the single most important piece of guidance I offer is my advice to apply for a passport well in advance of travel abroad.

I suggest, for example, that West Virginians anticipating international travel this year during the peak vacation season for travel abroad, March through June, should apply now for a passport. It is a vital document of identification, and is required for travel between the United States and most foreign countries.

A first-time applicant 13 years of age or older must apply in person, and can do so at most post offices and courthouses by completing an application -- Form DSP-11. An applicant should have in hand a certified copy of his or her birth certificate, a valid form of identification, and two recent 2" by 2" front-view photographs. The application fee is \$65.00 for citizens over the age of 18, and \$40.00 for those under age 18. For persons born in West Virginia, a birth certificate can be obtained from the Vital Registration Office in Charleston at (304) 558-2931.

Applicants who are unable to obtain a copy of their birth certificate may submit other forms of identifica-

tion, such as a hospital birth record, school or family Bible records, or notarized affidavits of persons having knowledge of their birth.

Travelers departing within a two-week period from the date of application may request expedited service for an additional \$30.00 fee. Further, an expired passport may be renewed through the mail simply by completing a renewal application -- Form DSP-82 -- attaching a \$35.00 fee, and mailing it, along with the outdated passport and two photographs, to the address printed on the renewal form.

The Department of State has established the National Passport Information Center (NPIC), (900) 225-5674, to assist with passport inquiries. The charge for the 900 service is 35 cents per minute for automated information and \$1.05 per minute for operator-assisted calls. The credit card option, (888) 362-8668, is based on a flat rate of \$4.95 per call. The NPIC will take calls in English, Spanish, and TDD, a telecommunications system for the deaf.

With early planning, foreign travel can be a relaxing and enriching experience. I hope that this information helps to ensure smooth sailing for adventuring Mountaineers this year.

By U.S. Senator Robert C. Byrd

Fulfilling a 32-Year Quest

As my first piece of legislation in the 105th Congress, I have introduced a bill to provide sufficient funding by the year 2003 to complete the 13-state Appalachian Regional Commission (ARC) Corridor Highway System. I hope that, as a result of my bill, the people of Appalachia will finally see the beginning of the end of a 32-year quest for a system of more modern, safer roads that are needed to help end the cycle of poverty indigenous to the region.

For a number of years, I have worked against the political tide in my efforts to add funding to appropriations bills to make good on the federal government's promise to the people of Appalachia to build these highways. In total, I have added \$804 million, since 1989, for construction of ARC Highways in West Virginia.

However, without a reliable and steady source of annual federal funds, like that which has been available to the now complete Interstate Highway System, the pace of construction of the 3,025-mile ARC system has been unacceptably slow.

Under my bill, the Appalachian states would be eligible to receive annual construction funds on a matching basis, like those provided for the Interstate System. My legislation

would also ensure that the ARC Corridors would not have to compete with the states' other pressing highway needs for limited federal resources.

On December 16, 1996, I met with President Clinton in the Oval Office to urge his support for my approach to completing the ARC Highway program. In addition, I met with his Budget Director, Franklin D. Raines, and with the new Transportation Secretary, Rodney E. Slater.

Subsequently, as a result of my urging, the President included \$2.3 million for construction of the Corridor Highways in his recently released six-year budget. This is an important initial boost, providing 35 percent of the total cost of construction. However, as Congress takes up the highway reauthorization bill this year, I will continue to press for 100 percent of the federal funding required to complete the Corridors, together with state matching funds, as called for in my bill, to see to it that the long-awaited, and much-needed, Corridor Highways are finally finished.

The entire nation has benefited from the improvements brought about by the Appalachian Corridor Highway System. So, too, will we all benefit from its completion in the near future.

Preserving the Miracle of the Constitution

In May of 1787, a Constitutional Convention convened in Philadelphia for the purpose of breathing life into the promise of the Declaration of Independence. The result of that gathering was so extraordinary that George Washington described it as "little short of a miracle." In fact, I have often felt that the spirit of the Creator himself must have helped to guide those deliberations.

I find inconceivable the thinking of those who advocate marring the genius of our Constitution with a balanced budget amendment -- a proposal so riddled with flawed thinking that its effect would be to disrupt the carefully balanced powers of the three branches so assiduously planned by the Constitutional Framers.

Certainly, I agree that, for the good of our nation, we must work to bring the budget into balance, as we are doing. But I believe that we can meet that responsibility without resorting to the ruination of our Constitution and the disastrous encumbrance that would then be placed on future leaders, who will be charged with making decisions that will affect the security and economic strength of our nation.

For example, one of the key contributors to our current budget imbalance has been the heavy spending

that this nation undertook during the Cold War. Our nation ran up the deficit because there was a strong consensus in the nation as a whole that we needed to spend whatever it took to assure our survival as a nation, and to prevail over the "Evil Empire" that was the former Soviet Union.

It was a successful strategy, and the funds expended toward that goal constitute one of the best investments our nation has ever made. Yet, it could never have been done under the balanced budget amendment that was recently defeated in the U.S. Senate.

Balancing the budget is indeed a very difficult task that requires inflicting pain. It means making decisions that are not popular, and hurting some people by cutting programs that matter in their lives. We have all the constitutional power we need right now to balance the budget. All that we have to do now is don the "velvet cloak of responsibility," and we need to begin by telling the people the truth about the pain that will be felt.

If we do that, the balanced budget amendment will at last be relegated to the ash heap of bad ideas where it most assuredly belongs, and "the miracle at Philadelphia" may be preserved for yet a little longer.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Praying for Our Nation

Whenever I look back upon my early years growing up in West Virginia's southern coal communities, I am reminded of the central role that faith played in our lives.

I can still recall the sound of my mother's prayers being offered up each night in the soft glow of a kerosene lamp. It was faith, to a large degree, which helped men to endure the blackness of the deep mines day in and day out, and faith which wives clutched, white-knuckled with fear, as they waited and watched for their husbands to emerge from the mines in the wake of an explosion.

Throughout decades of enormous change, during the depths of the Great Depression, and in the aftermath of ruinous natural disasters, West Virginians have always turned to their faith for strength and guidance.

Faith is what has kept us going when hope has been in short supply.

I hesitate to imagine in what condition our state and our nation would be today were freedom of religion not among the basic tenets upon which our nation was founded.

Judging from the proliferation of examples of the current fragile state of our moral fabric, it is evident

that we need the anchor of faith today as much as we have ever needed it.

Yet, ironically, our nation in recent years has been embarked on a course to discourage voluntary prayer in schools and in commencement exercises -- a course that, in effect, denies religious freedom to many of our most vulnerable citizens at a time when they are struggling to chart their futures and searching for a moral compass.

I do not believe that the Constitutional Framers ever envisioned that their words would be so interpreted as to separate our young people from the practice of their religious faith in this way.

I, therefore, have proposed a clarifying amendment to the Constitution. My amendment would make it clear that the words the Constitution uses with regard to the establishment and the free exercise of religion do not mean that voluntary prayer is prohibited from our public schools or their extracurricular activities.

Just as we and our forefathers have found direction, strength, and inspiration in prayer, for the sake of our nation, our schoolchildren should not be denied the opportunity to voluntarily seek support and guidance from the Creator through prayer.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Colliding Values

I was astonished recently to read a newspaper article describing a movie entitled *Crash*, which is soon to be released to theaters throughout the country. This movie, which reportedly depicts characters perversely aroused by automobile accidents and their resultant physical mutilation, is beyond the pale. *Crash* appears to be yet another effort by the entertainment industry to shock and titillate in order to run up profits with a blatant disregard for moral decency. Unfortunately, it is just the latest nefarious example of how today's television and movie fare is detrimental to the moral fabric of our nation.

It is ironic that, at a time when a movie in the depraved vein of *Crash* is being released, the television industry, under pressure from Congress and the President, recently announced with great fanfare that it was taking steps to give parents more information about the programs their children watch. The television industry's solution is a "ratings system," not greatly unlike that which is currently used by the movie industry.

The ratings system, which took effect in January, relies on six age-based designations to assist par-

ents in determining the appropriateness of programs for their children. For example, shows with a TV-Y rating are said to be suitable for all children. At the other end of the spectrum, TV-M is intended to indicate that a program is suitable only for audiences seventeen and older.

I am concerned that an age-based system does not offer parents enough information. A better system would be content based. Rather than being forced to trust some television executive's determination about what kind of programming is appropriate for designated age groups, parents should be told more specifically whether a program on television contains violence, sex, or foul language.

Bowing to the pressure of public concern about the cultivation of our children's moral character, entertainment industry executives are trying to give the appearance of making some concessions. But, they need to display the courage to put our national well-being ahead of the "quick buck" by providing programs and films that put forth good examples for our young people and that celebrate the morals and values on which our nation was founded.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Returning Government to the Man on the Street

When I first ran for the United States Senate in 1958, I campaigned with Senator Jennings Randolph. Together, we shared a total campaign fund of about \$50,000. Today, the average cost of a U.S. Senate race is \$4.5 million, and some Senate campaigns have cost over \$20 million.

How, in the future, can a poor boy from the backwoods of West Virginia, or any other state, hope to run for the U.S. Senate? It is already beyond their means.

No longer do candidates' positions on the issues count most. No longer do experience and capabilities count most. Instead, Senate races are tilted to the advantage of the candidates who have the ability to raise the most money.

As each day dawns, the public is confronted with new and increasingly garish allegations concerning the campaign fundraising practices that have become a way of life in our nation. The incessant money chase that currently permeates every crevice of our political system is like an unending circular marathon. And it is a race that sends a clear message to the people that it is money, not ideas or principles, that reigns supreme in American politics.

Unfortunately, the Supreme Court has blocked attempts to set mandatory limits on campaign spending by equating such campaign expenditures with the Constitutional guarantee of free speech. A Constitutional Amendment, which I supported, was recently intro-

duced in Congress to nullify that decision, and to allow the Congress to reign in campaign spending. Unfortunately for the American people, that amendment was defeated.

I have long fought for reform of our campaign financing system. As Majority Leader in 1987 and 1988, I tried eight times to thwart a politically motivated filibuster blocking a campaign finance reform measure, but I was unsuccessful.

Money has become the great "unequalizer" in politics. Money talks, and a lot of money talks louder than a little money. Hence, the more money, the more "freedom of speech" a candidate has. This would seem to be the effect of the Supreme Court's decision if carried to its logical conclusion. Candidates with the most money have the most freedom of speech, because they can buy more television ads, more radio ads, and more newspaper space than their less-well-to-do opponents can buy.

We must put an end to the seemingly limitless escalation of campaign costs and the pervasive influence of the special interests and the wealthy. The Congress should not be allowed to dodge this issue. It should act now to put the United States Senate, the House of Representatives, and the presidency of the United States back within the reach of any candidate with the brains, the spirit, and the desire to want to serve.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Developing Alternative Sources of Oil

Our nation is far too dependent on the Middle East for oil. The involvement of the U.S. in the 1991 Persian Gulf War, for example, was driven as much by our need to maintain secure supplies of oil as it was to punish naked aggression.

Unfortunately, that region of the world is fraught with political tensions, and as long as the U.S. continues to be tied to the Gulf for a supply of oil, our own national defense and economic security will be vulnerable to the region's instability. For these reasons we must make reducing our dependence on Middle Eastern oil a priority.

Part of the solution is to find and develop alternative sources of oil. It so happens that a very important, world-class source of oil exists and awaits development at the crossroads of Europe and Asia in the Caspian Sea region of the former Soviet Union.

According to industry sources, approximately 42 billion barrels of proven oil reserves are available in that region for processing and transport to the West. If developed, some 2 to 4 million barrels of oil per day could be brought out of the Caspian Sea region, moved across Turkey by pipeline, and shipped to the U.S. market.

Not only could the de-

velopment of these reserves provide a new source of oil for the West, but it could also bring economic development and stability to the newly independent nations in the Caspian region, help to diversify the world oil suppliers, and stimulate price competition.

Azerbaijan is alone among the newly independent nations in the Caspian region in resisting Russian pressure to station troops on its soil. Russian interests would like to control the oil resources of their former territories. It would not be in the best interests of a competitive energy market or the American strategic position for Azerbaijan to be influenced by Russian factions.

To encourage independent development and cooperative economic activities in that region, Congress established a Caucasus Enterprise Fund to stimulate the development of free market economics in the Caspian region. I strongly support this strategic move.

A proactive American government program can help to stabilize these newly independent nations, while assuring competitive pricing for a resource on which we will rely well into the next century and, most importantly, easing our dependence on the potentially volatile Middle East.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Give the Gift of Reading

A study released recently by the publishers of Education Week reported that only 26 percent of West Virginia's fourth graders achieved a "proficient" reading score on the 1994 National Assessment of Educational Progress. In the words of Education Week, "74 percent scored below proficient, which means that they will have trouble doing challenging grade-level work." This is an embarrassingly poor showing that should spur a renewed commitment by West Virginians to promote the basics -- in particular, reading -- in our educational system.

The week of April 13th through the 19th has been designated National Library Week. During this week, parents are encouraged to promote the importance of reading by taking their children to the local library. Acquainting children with the resources of a library can develop a solid foundation upon which children can build stronger reading skills, and, in turn, explore the universe without ever having to leave their own back yards.

While National Library Week is a tremendous opportunity for parents to introduce their children to the library, I urge all parents to make the trip a regular practice for their children.

I am an ardent believer in the value of reading as the fundamental tool for enhancing one's education. Throughout my public career, I have read many vol-

umes of literature which have enabled me to continually strengthen my skills as an orator and as a representative of the people of West Virginia in the U.S. Senate.

My personal reading list -- one that I recommend to others -- includes the King James Version of the Holy Bible, Plutarch's Lives, Milton's Paradise Lost, Dante's Divine Comedy, Homer's The Iliad and The Odyssey, The Federalist Papers, The French Revolution by Thomas Carlyle, Emerson's essays, Shakespeare's thirty-seven plays, and any good dictionary. In addition, I have read and studied various works by Plato, Aristotle, Herodotus, Xenophon, Thucydides, and other histories, ancient and modern. While this is not my complete list of recommended reading, it does highlight a mix of literature, history, and philosophy from throughout the ages that I believe to be important for a well-rounded education.

Educators and parents must work together to ensure that their children utilize every possible resource, both inside and outside the classroom, to enhance their educational experience and to prepare them for the challenges of the 21st century. Exposure to great works of literature is one of the finest gifts that parents can provide to their children, and a trip to the library in honor of National Library Week is a good place to start.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Comforts of Home

Much of my work keeps me in Washington, and it seems that the more time I spend in the city, the more I yearn for the peaceful serenity of my home state. The time spent surrounded by the turmoil and clutter of our busy metropolitan areas brings on a new appreciation for the uncomplicated comforts of West Virginia's tranquil hills and valleys.

Ironically, rapid advancements in technology may help to contribute to a better quality of life for many West Virginians who presently undergo long-haul commutes each workday to and from their Washington-area offices by allowing them to work closer to home several days a week.

A new telecommuting center in Jefferson County, established with \$250,000 I added to a 1997 appropriations bill, will allow its users to "telecommute," or work at their regular jobs via computers some distance away from the physical location of their offices. Telecommuting provides all of the efficiency that a location in a modern, metropolitan business office affords, while retaining many of the advantages of a more rural setting.

The Jefferson County TeleCenter will afford telecommuters the freedom to spend more quality time with their loved ones and

also permit them to be more productive in their jobs.

Moreover, the center has been designed so that it can be used during evenings and weekends for education and training programs for the surrounding community. Potential uses include offering high school, college, professional, and vocational-level courses taught by on-site instructors or computer-based training programs.

The new TeleCenter will be equipped with state-of-the-art work stations furnished with dual telephone lines to accommodate voice and data links, personal computing systems, "smart telephone" capabilities, and video conferencing. In addition, users will have access to facsimile and copy machines and other essential office equipment.

It is a fact of life in today's world that urban pollution, high rent, and crowded highways all add up to lost time, wasted dollars, wear and tear, and less overall productivity. Telecommuting can help to solve those complex problems while also allowing our citizens to lead more fulfilling lives. This TeleCenter introduces a new approach to how West Virginians traditionally view working, and I look forward to the positive changes it will foster for our state in the years to come.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Cleaner Air and a Leaner Economy

Earlier this year, the Environmental Protection Agency (EPA) proposed strict new "clean air" rules that threaten to eliminate jobs and damage the economy of West Virginia.

West Virginia has already suffered job losses due to existing ambitious clean air standards, and -- in addition to the coal industry -- chemical manufacturers, construction firms, and steel and glass makers could be adversely impacted by these newly proposed rules on ozone and particulate matter. Furthermore, new economic development initiatives on a variety of fronts could be curtailed by the imposition of these rules.

There exists a number of unanswered questions about the newly proposed rules and their potential benefits, as well as their costs, that I believe must be answered prior to their implementation.

The EPA has conceded that the costs of implementing the ozone rule will exceed any expected benefits. But even then, the EPA may have badly underestimated the total annual national cost of the ozone rule, estimating it at \$2.5 billion. The President's Council of Economic Advisers, however, sharply disagrees with that estimate, projecting the annual cost at \$60 billion.

The Small Business Administration has called these proposed rules "one of the most expensive regulations, if not the most ex-

pensive regulation, faced by small businesses in ten or more years."

The EPA also readily admits that West Virginia and the nation have dramatically improved the air quality by moving toward compliance with already existing standards, leaving in question the necessity of implementing new tougher rules at this time. It only makes sense to allow the states to continue to develop and fully implement programs to comply with existing standards, and to measure the results of those changes before possibly hamstringing our economy with tougher standards, the benefits of which are in question.

I have long supported the cleanup of West Virginia's environment, and I consider the health and safety of West Virginians to be a very important matter. However, because of my many concerns about these new rules, I recently wrote to the EPA -- joined by Senators Rockefeller, Ford, Glenn, and Robb -- urging the agency to hold off on these new rules and to allow the states first to complete action on the ambitious clean air standards that are already in place.

Cleaner air is a universally popular goal. But for the EPA to insist on instituting new rules while their benefits are questionable and before their full costs -- including the costs to jobs and to the economy -- have been determined is unwise.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Time of Our Lives

With an understanding of history, we can learn from our ancestors, avoid many of the perils that befell them, and build upon their successes. But, without the ability to measure time and to make order out of the common and uncommon occurrences of the past, a useful understanding of history could prove elusive.

Modern society uses the birth of Jesus Christ as a primary reference point for recorded history. A.D., *anno Domini*, Latin for "in the year of our Lord", and B.C., "before Christ", mark the years following and years preceding the birth of Christ. Around 527 A.D., a monk residing in Rome calculated the year of Christ's birth, and instituted that date as the starting point for what is called the "Christian Era." By recognizing this reference point, we are able to better clarify when an historic event took place.

Prior to the establishment of the Christian Era, civilizations employed other methods to record history. The modern calendar is defined by unchanging numerical rules. For example, a calendar year is characterized by four seasons and 12 months. But ancient civilizations measured time with different

criteria, including astronomical, religious, or political influences. Early agricultural civilizations reckoned time by the passing of the seasons or by the blossoming of various plants. The Greeks measured time with Olympiads, which were intervals of four years that marked the span between their celebrated games. In some other ancient calendars, years were numbered according to the year of a ruler's reign.

The modern calendar is a solar calendar, based on the 365 days required for the earth to orbit the sun. It is modeled after the calendar introduced by Pope Gregory XIII more than 400 years ago and adapted from the calendar of Julius Caesar. The names of the months originate from names of Roman Gods, and, in fact, the term "calendar" derives from the word "kalendae," Latin for the first day of the Roman month.

Although the modern calendar has seen efficiency improvements since the age of Caesar, its roots lie in the calendar of ancient Rome. It is, therefore, as much a useful tool in today's hurried, time-conscious society as it is a link to the past and a reminder of the lessons of history.

By U.S. Senator Robert C. Byrd

Filling a Hole in U.S. Highway Investment

Nowhere do we pay a greater price for inadequate infrastructure investment than in our nation's highways. Our national highway system carries nearly 80 percent of U.S. interstate commerce and nearly 80 percent of intercity passenger and tourist traffic. Yet, we have allowed large segments of our National Highway System to fall into serious disrepair.

According to the Department of Transportation (DOT), only 39 percent of our entire national highway system is rated in good condition, and almost one in four of our nation's highway bridges are now categorized as either structurally deficient or functionally obsolete.

Unfortunately, the DOT has also reported that investment just to maintain the current inadequate condition of our nation's highways is a full \$15 billion short each year. And, while it is clear that the requirements we place on our national highway system are growing -- for example, the number of vehicle miles traveled annually has grown by roughly 40 percent in the last decade -- our investment in highways continues to decline. We are simply digging ourselves into a deeper and deeper hole.

In addition to the adverse economic impact of this infrastructure disinvestment, deteriorating highways take a huge toll in diminishing safety conditions

and resultant vehicle crashes and fatalities. Almost 42,000 people died on our nation's highways in 1996 alone, and the National Highway Traffic Safety Administration points to poor road conditions as a contributing factor to these fatal accidents. Obviously, our nation needs to put more resources into highways, but at this time of deficit reduction, federal funds are limited.

That is why I recently introduced a bill to provide additional federal funds for our nation's highways by redirecting to the Highway Trust Fund the 4.3-cent-per-gallon gas tax already being paid by consumers, but currently being used for deficit reduction.

By depositing this additional 4.3-cent gas tax into the Highway Trust Fund, the DOT will have greater resources to meet the true needs of our nation's transportation infrastructure, thereby improving safety and helping to deliver welcome economic benefits to the nation.

Only through investment here at home -- investment to maintain and renew our own physical plant -- can our economy grow and generate healthy wages for its citizens and increased revenues for the U.S. Treasury. The longer we delay increasing federal highway spending, the more expensive it will be to reverse this destructive trend, which costs our nation dearly.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

In Memory of Our Nation's Military Heros

On the last Monday of each May, our nation observes Memorial Day, a time for remembrance of the patriotic men and women who have given their lives defending the principles and freedoms that are so highly valued in our United States.

The modern Memorial Day, or "Decoration Day" as it was formerly called, follows on the post-Civil War practice of decorating the graves of the fallen soldiers of both the Union and Confederate armies.

Today, Memorial Day is casually considered one of the holiday "bookends" that mark the unofficial beginning and end of summer -- the other being Labor Day. I fear that, for too many, the real meaning of the holiday may have become blurred, and, for some, may mean, primarily, the day of the first family barbecue of the season, or of the opening of the community swimming pool.

Fortunately, there are still those veterans' organizations, patriotic individuals, and families who hang flags on front porches, plan and conduct memorial services, march in parades, and place flowers on the graves of fallen soldiers in recognition and undying appreciation of the sacrifices made to protect our nation and preserve our liberties.

In West Virginia, where patriotism runs deep, there is a tradition of standing tall when called upon to defend the rights and freedoms cherished in this country. In fact, throughout our state's history, West Virginia has played a role in the defense of our nation far outweighing its proportion among the 50 states. Our state's national defense heritage is, certainly, a badge of honor that West Virginians should wear with pride.

Through the Memorial Day ceremonies and symbolic remembrances of those occasions in the 20th century when America's might has been tapped to restore peace to the world, we are reminded not only of the need to be ever vigilant and always prepared to come to the defense of our nation, but also of the fragile nature and priceless value of peace.

I hope that on this Memorial Day, West Virginians will take time to reflect upon the sacrifices of those men and women to whom the ideals of this nation were dearer than life. One day of remembrance each year, one day of earnest gratitude and of rededicating ourselves to the tenets of patriotism is but a tiny bit of reparation on a debt that will never be repaid.

Down-to-Earth Space-Age Help for Business

Constructed at Wheeling Jesuit University with more than \$13 million I added to a federal appropriations bill in 1991, the NASA-sponsored Robert C. Byrd National Technology Transfer Center (NTTC) has been busy making its mark on the business community in West Virginia and throughout the nation.

In the few years of its operation, the NTTC can boast of successes on several fronts to help domestic businesses by providing them with access to cutting-edge technologies and expertise developed at federally funded research laboratories.

Since the beginning of its operations, the Center has answered more than 15,000 requests for assistance, including many from businesses looking for training to bolster their competitive position in the global marketplace. The Center has also engineered several successful partnerships between federal technology sources and private sector manufacturers, and has created and produced training programs for the U.S. Navy.

In addition, the NTTC has developed NASA's first CD ROM, NASA Solutions: Sharing Aerospace Technology with America, a computer disk offering U.S. businesses and industries creative solutions to technological problems.

In keeping with the mission of the NTTC, the new CD ROM, a full-color, video-based computer disk filled with NASA technological resources, is helping to bring space-age solutions within easy reach of 20th-

century businesses.

The new CD ROM contains information about 19,500 technologies available for commercialization; 600 technology transfer success stories; and 15,000 contracting opportunities.

Users can also retrieve information from the disk about the NASA Commercial Technology Network, comprised of NASA's 10 field centers, six regional technology transfer centers, and the NTTC.

NASA Administrator Daniel S. Goldin described the CD ROM project as "the result of many innovative efforts to make NASA technologies available to U.S. industry quickly and easily."

NTTC representatives report that the disk caused a stir at Technology 2006, NASA's commercial technologies trade show in Anaheim, California, where vendors stood in line to secure a copy. More than 5,000 promotional copies of the CD ROM were distributed by the NTTC to interested parties from across the U.S., and, in response to its positive reception, the NTTC is currently updating the disk in preparation to make it available for wider circulation.

As illustrated by the success of its CD ROM, the Robert C. Byrd National Technology Transfer Center is fulfilling its mission to provide useful assistance to domestic businesses to help make America more competitive in the world marketplace, to strengthen our national economy, and to help create jobs.

By U.S. Senator Robert C. Byrd

Addressing Military Misconduct

The extent of the scandals that have been unearthed at many of our military facilities indicates to me that the time has arrived for a thorough review of gender-integrated training in the armed forces.

This is a serious situation, involving very serious allegations with possible repercussions on our national security. As evidence of the depth of the problem, a 1995 survey found that 61 percent of the women in the Army reported incidents of unwanted sexual attention. Also, a hotline established by the Army last fall for women to report sexual harassment, misconduct, or abuse, received 7,000 calls in only a two-and-a-half-month period.

As this evidence indicates, there is a serious problem associated with gender-integrated training. That is why, pending a much-needed review of the problem, I think that the practice of gender-integrated recruit training in the military services should be suspended.

This is not just about sexual harassment among soldiers of equal rank. It is about that, but it is about much more. It is about the use of power and authority of sergeants and officers

who are put in charge of the recruits and junior personnel for whom they are responsible to train and look after. It leads one to ask a fundamental question: are women actually safe in the U.S. military?

The purpose of an army is to fight, and to win battles. If gender integration enhances the prospects of readiness and effectiveness in combat, then we should be all for it. But, if it reduces American effectiveness on the battlefield, should we be for gender integration purely on the general grounds of social equality?

The scandals which we are seeing in the training commands must be taken as a danger sign that gender integration complicates the military's fighting capabilities. We need to review the kinds of gender-integrated training that will work, and the kinds that will not work. In the special world of military life, where the ultimate mission of fighting and winning wars is uniquely different from all other environments and roles in civilian life, the real objective is the national security of our nation and how best to maintain it with the most effective fighting force.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protecting Our Rivers with Responsible Stewardship

Recently, American Rivers, a national environmental organization, ranked the Potomac River seventh on the group's annual list of the Ten Most Endangered Rivers in North America. In explaining this designation, American Rivers, based on a U.S. Department of Agriculture study that detected nutrient and bacterial contamination in the waters of the South Branch of the Potomac, cited agricultural production, and, most notably, poultry production, as the central threat to the river's future.

The North and South branches of the Potomac wind through several West Virginia counties in a region commonly called the Potomac Highlands, and later flow into the water supply of the Washington, D.C., area, and eventually into the Chesapeake Bay. The rich bottom land of the Highlands region is dotted with ancestral farms raising sheep, crops, and poultry -- one of West Virginia's fastest growing industries.

American Rivers' annual promotion of its top ten list is an effort to advance public awareness about the fragility of the nation's water resources, a laudable goal. Regrettably, however, absent from the recent media reports about the problems of the Potomac are details of the exemplary efforts of West Virginia family farmers to balance economic interests with environmental goals by voluntarily implementing the Potomac Headwaters Land Treatment Watershed Project.

I obtained \$2.3 million in the Agriculture Appropriations Bill last year to launch that project. Formally implemented in January, the initiative is providing farmers in the Potomac Highlands with federal and state funds and technical assistance to help improve farming practices. The program is helping West Virginia farmers, in particular poultry farmers, to implement new practices, such as the use of poultry composters and litter-storage sheds, that reduce threats to the Potomac River by improving the efficient use of farm land.

To date, 80 percent of the eligible farmers have enrolled in the seven-year project, and have agreed to assume forty percent of the costs. As a cooperative effort, the initiative exemplifies the realization that maintaining the health and integrity of our mountain streams and rivers is best achieved through a joint private/public commitment.

The Potomac Headwaters Land Treatment Watershed Project will achieve benefits for a broad base of interests, extending from our beautiful state to the Chesapeake Bay.

I am glad to be associated with this responsible and meritorious stewardship project, and I commend West Virginia farmers for their willingness to preserve the valuable resources of the Potomac Valley while simultaneously maintaining and expanding agricultural production.

Byrd's-Eye View

Inspiring Academic Excellence

The United States is a world leader in government funding of education. However, I routinely read reports indicating that U.S. students score lower than many countries on educational surveys. With so much being invested in learning in this country, why is it that the U.S. is not turning out better students?

Certainly, part of the reason that our students are not scoring higher is because academic excellence is not being given the kind of recognition it deserves. It is essential for students to recognize that there are myriad benefits resulting from hard work in the classroom. To help foster in children a deeper desire to learn, the nation, as a whole, needs to devote greater attention to stimulating excellence in education. The process must begin with parents and teachers who reject the trend toward lower standards, and, instead, set high goals and help young people to attain them.

Unfortunately, in today's world, with professional sports and entertainment figures earning millions, young students can be easily led to believe that their studies are secondary to athletics and other extracurricular activities. The glitz and glamour surrounding professional athletes and entertainers should not out-

shine the accomplishments of outstanding scientists, distinguished political leaders and religious figures, and experts in other fields who have attained their status by clearing the educational hurdles that have challenged them throughout their careers. The best way to attain a successful job is not by scoring touchdowns or shooting foul shots, but through the hard work of earning a solid education.

This nation must harness a new attitude toward the value of education if U.S. students are to understand its importance in the real world and be prepared to handle the responsibilities of adulthood.

As one who started out in a modest two-room schoolhouse, I know firsthand the challenges of earning a solid education. I did not have computers, or television sets, or videos, but I did have those things that make for a good education. I had teachers who inspired their students to learn. I had adoptive parents who reared me with strict but loving hands, and who instilled in me the need for self discipline and a strong sense of basic values that continue to guide me daily. These are the enduring hallmarks of a good education and the foundation of a solid perspective on life.

Confronting Immigration Problems in West Virginia

While West Virginia does not suffer the consequences associated with illegal immigration to the same degree as our nation's border states, I believe that a coherent national policy, directed at stopping the hiring of illegal aliens and swiftly deporting individuals who are here illegally, requires every state to be included in our enforcement efforts.

That is why last year I cosponsored an amendment to the Illegal Immigration Bill requiring at least 10 full-time Immigration and Naturalization Service (INS) agents to be stationed in every state.

West Virginia currently is one of three states with no permanent INS presence; yet, the problems of illegal immigration cross our state borders, as occasional arrests and deportation of illegals in our state illustrate.

As a result of my amendment, however, I was able to announce recently that two new INS offices will be located in Clarksburg and Charleston, placing 11 new agents in West Virginia. The presence of the INS will improve the state's ability to enforce national INS policy, while giving residents more direct access to INS services.

The Charleston office, which is to receive five new

agents, will provide services to the public and ensure effective enforcement of the nation's immigration laws in the state. The Clarksburg office, which will employ six agents, will be responsible for administrative duties and will also assist with the processing of fingerprints in coordination with the newly opened FBI Fingerprint Identification Complex in Clarksburg.

West Virginia's INS personnel will include detention and deportation enforcement officers who remove illegal immigrants, and special agents who will enforce immigration laws and conduct investigations.

These new offices will help prevent illegal aliens from filling jobs that rightfully should go to American citizens. Additionally, maintaining an INS presence throughout all 50 states will save taxpayer dollars by reducing travel time for agents and by expediting the deportation process.

Establishing these new INS offices in West Virginia represents a positive step in the nation's overall effort to enforce U.S. immigration policies, and furnishes West Virginia with the personnel and capabilities to meet the growing challenges confronting every state as a result of the influx of illegal immigrants into this country.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

New Age of Law Enforcement

With the recent dedication of the new FBI Fingerprint Identification complex in Clarksburg, the nation has officially entered a new era of fighting crime.

It was in 1989 that I began working to provide American families with a greater sense of security in their own neighborhoods by helping the FBI to establish this state-of-the-art complex and its automation that could put speedy identification of criminals within reach of officers at every level of law enforcement.

At that time, the FBI was experiencing increasing problems at its outdated fingerprint operations in downtown Washington, problems that placed the identification system in a state of near-collapse, severely handicapping the nation's ability to keep its law-abiding citizens safe from crime.

In 1990, I added \$185 million to an appropriations bill to begin construction of the complex in Harrison County. Since that time, \$600 million has been appropriated for the facility and the cutting-edge technology being headquartered there.

Having seen the new center when I participated recently in its dedication, I can say with assurance that it is a facility of which the citizens of West Virginia and the entire nation can be proud. Set on a wooded hill in a 986-acre reservation that boasts an array of na-

tive wildlife, the main building is an extraordinary structure with some creative innovations, including stonework appropriately featuring a unique fingerprint motif. Most importantly, the employees there, the majority of them West Virginians, are dedicated, hard-working people who take pride in their jobs and their significant contribution to a safer, more crime-free America.

The new capabilities at the FBI center will allow for a larger number of fingerprint checks to be made in a much shorter period of time, thus streamlining the work of the criminal justice system while helping to save countless lives.

The FBI complex is also making a huge contribution to the local economy with its annual economic impact of more than \$75 million. Presently, the FBI Fingerprint Division employs a staff of 2,700 in West Virginia, and expects to have some 3,000 employees on the payroll by the end of September.

The task of protecting law abiding citizens from those who would perpetrate crimes has never been more challenging than it is today. The new Clarksburg FBI Fingerprint Identification complex brings with it a new age of law enforcement and a renewed promise of safer streets for American families.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Bring Back Television's Family Hour

I find it troublesome that, in the United States, a nation offering more opportunity to learn and improve oneself than any other society in history, citizens waste so much time sitting idle in front of the television mired in the midst of a bombardment of broadcast bunk.

Disturbingly, the amount of inappropriate programming on television is growing at an alarming rate, and it is at the expense of families, children, and, ultimately, the future of this country.

For many years, virtually all of the content in television shows airing daily between 8 p.m. and 9 p.m. was deemed suitable for children. "Family Hour" was first established in 1975, when, responding to congressional complaints about increasing prime time television violence, the major networks agreed to set aside a slot each night for programming suitable for the entire family. Since that time, this mutually agreed upon Family Hour for all ages programming has been challenged on legal grounds, but the networks, abiding by the spirit of that understanding, continued to air wholesome shows for some time.

In more recent years, however, the amount of obscene and violent programming during the Family Hour has skyrocketed. The once "safe haven" Family Hour slot has been invaded by shows totally unsuitable for children, and, in large

measure, even unfit for adult consumption.

That is why I recently joined several of my colleagues in urging the presidents of the major broadcasting networks to again set aside the first hour of prime time broadcasting each night for family programming. In my view, even that step would be but a drop in the bucket. In fact, it is ridiculous that the American public should have to be begging for just one hour a day of decent broadcast programming, when television viewers -- especially children -- are floundering in a 24-hour sea of slime that showcases programs ranging from mind-numbing to shocking.

Network executives should demonstrate more responsibility in choosing the content of their programming. Surely there is enough talent in the television industry to produce quality shows that entertain and, hopefully educate, without assaulting and insulting the viewer with sexual messages and violent images.

Such an uncomplicated gesture could have a strong positive impact on countless viewers and families across the country.

I will continue to call for appropriate television programming. But, meanwhile, the best way that I know to avoid the detrimental effects of this problem is to simply turn off the television set and pick up a good book.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Keeping Our Global Boat Afloat

In December, the United States will participate in an international summit in Kyoto, Japan, where the world's developed nations are expected to sign a protocol to make legally binding the current voluntary air pollution reduction targets formerly agreed to in an international treaty known as the Rio Pact, negotiated in Rio de Janeiro, Brazil, in 1992. Developing nations, however, would be left off the mandatory hook.

The Rio Pact's aim was a reduction in the worldwide production of greenhouse gases, which scientists widely believe have contributed to a slow warming of the Earth's atmosphere. While it is difficult to forecast what the precise effects of global warming might be, it is projected to cause a rise in sea levels; shifts in temperatures, rainfall, and agricultural patterns and zones; and an increase in the severity of weather events.

The United States should address the problem of global warming in a serious fashion by taking environmentally and economically responsible steps which address climate change concerns and also help to preserve domestic jobs.

But the notion that developed nations, including the U.S., Japan, and the European nations, can solve global warming without the participation of the developing nations -- such as China, India, Brazil, and

Mexico -- is far-fetched.

Emissions of the developing nations are growing at a rapid pace and will, in a few years, overtake those of the developed nations. In fact, based upon current trends, China alone -- a developing nation -- will surpass the U.S. in carbon emissions by 2015.

Environmentally, we are all in the same global boat. It does no good for the developed nations to work feverishly to plug the holes in one end of the boat, if the developing nations are drilling holes at the other end as fast as we are plugging ours. All that such a strategy accomplishes is to assure us all of a long, long swim.

Because of my concerns about global warming, I recently introduced a Sense of the Senate Resolution, which 64 other Senators have joined me in co-sponsoring, that urges the Administration not to sign any agreement in Kyoto which would mandate new commitments to limit greenhouse gas emissions by developed nations, unless it also mandates binding commitments on developing nations.

If the United States is going to be a leader in the issue of global warming, we must do so by ensuring that China and the other developing nations do their part to keep our global boat afloat. To do otherwise is environmentally and economically unsound.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Stuck with the Tab for the Alcohol Industry

According to the National Institute on Alcohol Abuse and Alcoholism (NIAAA), more Americans use alcohol than any other drug, and the results are devastating.

It is estimated that 69.3 percent of children between the ages of 16 and 17 have, at one point in their lifetime, experimented with alcohol. Consider, on the other hand, that 26.1 percent of children in the same age group have tried marijuana and 5.3 percent have tried cocaine, drugs that receive a great deal of publicity and attention from government and the media. Meanwhile, the dangers of alcohol are essentially ignored.

Such alarming statistics recently led me to introduce an amendment in the Senate aimed at eliminating the tax deduction for alcoholic beverage advertising expenditures and directing the resultant savings toward increased funding for education and alcohol-abuse prevention programs that are targeted at our nation's youth.

Elimination of the deduction for alcohol advertising expenditures is not, as some might call it, the introduction of a "sin tax," but rather an end to a "sin subsidy" that has left American taxpayers subsidizing alcohol advertising and picking up the tab for the high costs imposed on society by alcohol consumption. Alcohol abuse and alcoholism cause more than

100,000 deaths each year in the U.S., and cost society approximately \$100 billion annually.

Our children are besieged with media messages that create the impression that alcohol can help to solve life's problems, lead to popularity, and enhance athletic skills. These messages are distortions that gloss over the all too prevalent and detrimental results of alcohol consumption -- the loss of productivity due to hangovers, the tragic deaths and injuries caused by drunk drivers, the hospital admissions for alcohol poisoning, the sad effects of cirrhosis of the liver, and the families torn apart by alcohol abuse. My amendment would have devoted much of the savings from closing the tax loophole to a far-reaching counter-advertisement campaign to educate youth about the dangers of alcohol consumption.

If we are truly concerned about drug abuse in this nation, we should not allow the alcohol industry's enticing and unrealistic messages to flow unchallenged.

This serious issue deserves greater attention, and although my amendment was defeated on the Senate Floor, I hope that it may have helped to focus the spotlight on the dangers of alcohol and its cost to our nation and our nation's greatest treasure -- our young people.

Unveiling the Mysteries of Science

In recent weeks, Americans have been marveling at the digital images beamed to Earth from NASA's Pathfinder mission to Mars. The robotic explorer, Sojourner, has taken us across the rocky surface of the red planet, sparking the curiosity of onlookers from across the nation and around the world. Back on Earth, in laboratories in Munich, Germany, researchers have extracted and studied fragments of DNA taken from the ancient bones of a Neanderthal skeleton, revealing that modern humans are not closely related to Neanderthals, as some theorists have believed.

These are recent examples that illustrate some of the many ways in which science can have profound effects on our society. From outer space to inner space, from the technical marvels of automation to the intricate chemical complexities of molecular biology, modern science is unveiling some of life's most intriguing mysteries.

That is why I am proud to support the goals of the National Youth Science Camp in Pocahontas County -- one of the nation's premier science education programs -- and to honor the delegates to the camp each year with a luncheon in our

nation's Capitol.

Since its inception in 1963, the National Youth Science Camp has offered an annual four-week summer program of educational and recreational activities to encourage scientific leadership in graduating high school seniors from the fifty states and the District of Columbia. These graduates, selected through a competitive process, have already demonstrated exceptional academic achievement, leadership, and an interest in the sciences. Encouragement of their further scientific growth is keenly important. In these camps may be found some of the great scientific leaders of tomorrow -- individuals who may break new ground in fields that could lead to discoveries about the nature of disease or the constitution of the universe.

By nurturing, encouraging, and sustaining such scientific curiosity, new generations will be able to discover thrilling scientific frontiers that will captivate and benefit all of mankind. The delegates to the National Youth Science Camp have tasted the excitement and the wonder of science, and through support of their enthusiasm, these young minds will lead us into a bright and promising future.

West Virginia: A Special Place to Call Home

To those of us who call it home, West Virginia is the ideal place in which to live and rear a family. Breathtaking landscapes, a low cost-of-living coupled with a low crime rate, and the presence of strong family and religious values create a quality of life that few places can match and that few people would trade.

As a matter of fact, Money magazine's recently published list of the best 300 places to live in the United States included four West Virginia cities -- Wheeling, Huntington, Parkersburg, and Charleston -- among the nation's top 200 most livable cities. To compile its list, the magazine polled its readers and collected data from government and private sector sources, including information about each community's performance in nine categories -- crime, economy, health, housing, education, weather, leisure, arts and culture, and transportation.

I am delighted, but not surprised, that these four West Virginia cities made Money magazine's coveted list. In our state, far-flung relatives still gather for large family reunions, where they feast on "old family recipes," trade photographs, and tell stories about revered ancestors,

passing along an oral family history that has been handed down through generations.

In West Virginia, it is still considered polite in most homes to turn off the television set when entertaining a visiting friend. Families dressed in their "Sunday best" still walk together to church services, and the custom of delivering a homemade meal to an ailing neighbor continues to be practiced today, as in years gone by.

In recent years, our state has made great strides in broadening its economy to ensure that job opportunities will abound for future generations, and I am glad to have helped in that endeavor. Those efforts are paying off with improved physical infrastructure and the expanded presence of federal offices and high-tech industries, as well as enhanced crime-fighting capabilities and greater accessibility to basic health care services. And while we in West Virginia have earned the right to boast of these accomplishments, we deserve to be equally proud of our ability to hold on to those old values and lifestyle qualities that make West Virginia such a special place to call home.

The Supreme Court and the Line Item Veto

In the final days of June, the U.S. Supreme Court handed down its ruling in the case of Raines v. Byrd, which I and five of my congressional colleagues brought in January of this year as a challenge to the constitutionality of the Line Item Veto Act.

Unfortunately, the Court side stepped the central question of the Act's constitutionality by deciding that my fellow plaintiffs and I did not have sufficient "standing" to bring the suit. In the opinion of the Court, we had not adequately demonstrated that we had been "deprived of something to which [we] personally [were] entitled." Thus, the effect of the Court's decision was to overturn a lower court ruling that had found the Line Item Veto Act to be an unconstitutional shift of lawmaking power from the Congress to the President.

Although I respect the Supreme Court's decision, I am disappointed with its finding in this particular case. The Constitution clearly places the function of lawmaking in the Con-

gress, not in the President. The Founding Fathers understood the abuses of power that would necessarily arise if one person were allowed to make, amend, or repeal law. That is why they created a three-branch government based on the principles of separated powers and checks and balances. The Line Item Veto Act flies in the face of those principles by giving to the President, for the first time in our history, the power unilaterally to repeal parts of a law as he sees fit.

As the Supreme Court noted, there will most certainly come a time when some state or local government, or some individual or group of individuals will feel the full brunt of the line item veto, and will then bring a case against it. At that time, I hope that the Supreme Court will address the heart of this matter and resoundingly conclude that Congress cannot, by simple statute, rearrange the basic structure of government as contained in the Constitution and confer upon the President the people's power of the purse.

Helpful Hotlines

Because of the vast number of regulations and options affecting federal programs and services, West Virginians often have questions regarding specific problems or concerns. In response, the federal government has established a system of toll-free phone numbers that can help West Virginians obtain answers to their questions and overall assistance with their concerns. With the thought that it might be helpful, I am listing some of the most commonly requested numbers.

Auto Safety Hotline	1-800-424-9393
Consumer Product Safety Commission ...	1-800-638-2772
Department of Health and Human Services (HHS)	
Cancer Hotline	1-800-422-6237
Energy Efficiency Clearinghouse	1-800-363-3737
Flood Insurance Information	1-800-638-6620
Food & Safety Tips on Meats and Poultry	1-800-535-4555
Hill-Burton Free Hospital Care Hotline ...	1-800-638-0742
Medical Scholarship Information	1-800-638-0824
Medicare Information	1-800-638-6833
National Health Information Center	1-800-336-4797
National Runaway Switchboard	1-800-621-4000
(for parents and runaways to leave messages)	
National Drug & Alcohol Treatment Referral	
Service	1-800-662-4357
Pesticide Emergency Information	1-800-858-7378
Safe Drinking Water Hotline	1-800-426-4791
Small Business Administration	1-800-827-5722
Social Security Administration	1-800-772-1213
Washington, D.C., Reservation Center	1-800-554-2220
(Information on lodging in the Nation's Capital)	
Veterans Benefits Information	1-800-827-1000

By U.S. Senator Robert C. Byrd

Labor Day, 1997

Labor Day -- the first Monday in September -- was first celebrated in 1882, and is one of this nation's oldest official observances. Labor Day has important meaning because it honors the enormous accomplishments of countless working Americans over the last 200 years, and celebrates the fruits of that labor which have provided the citizens of the United States with a higher standard of living in times of peace, and a powerful engine of energy in times of war.

Certainly, Labor Day is an especially important holiday in West Virginia. From the state's earliest days, man and beast toiled to clear the mountain fields of stump and stone. Men and machines have built smooth ribbons of highway, making possible the business opportunities that those early, isolated pioneers could never have imagined. The backbreaking and life-risking efforts of miners in the coal fields, struggling to support their families, provided a source of fuel for the nation's growing heavy industries, which have today spawned the high-tech businesses emerging around the state that enable us to compete in a worldwide marketplace. The brawn and brains of West Virginians have forged this place that we so lovingly call "Almost Heaven."

West Virginia's men and women have built and maintained a workforce to be proud of. Their ability and willingness to toil as hard as their pioneering forefathers contribute to attracting new businesses, just as the state's expanding infrastructure does. Communications networks and roadways draw businesses to the state, where a skilled labor force makes the mountains and valleys hum with the music of industry.

On this Labor Day, I hope that West Virginians across the state will take a renewed sense of pride in the value and quality of their work, and harbor a greater sense of satisfaction in the contributions that they are daily making to our state and to our nation.

In addition, I hope that young West Virginians will cultivate positive attitudes toward their future work and careers, and will prepare themselves to compete in the global workplace by holding their efforts to the highest standards of excellence.

I salute the working people of West Virginia, and I thank them for the quality of life that they are making possible for all of their families and their neighbors all across our nation.

The Criminal Connection to Alcohol

Too often I come across news reports about alcohol-related crimes. Examples of such disturbing accounts range from domestic violence and child abuse to maniacal homicides. Each time I learn about another of these news stories I am reminded that alcohol's connection to crime is yet another tragic aspect of the damage that this drug -- America's favorite -- inflicts on our nation.

Findings from several studies identify alcohol as a factor in a significant proportion of violent and aggressive crimes. According to the Center for Alcohol and Substance Abuse at Columbia University, alcohol -- not illegal drugs -- is the substance most commonly used in connection with murder, rape, and other violent crimes. And, in a nationwide survey of state prisons, more inmates reported being under the influence of alcohol than of illicit drugs when they committed their crimes. Among those in prison for homicide or assault, about 4 in 10 federal and state inmates were under the influence of alcohol at the time of the crime.

There is also a correlation between the rate of violent crime in an area and the number of nearby vendors of alcohol. That correlation probably evokes no surprise in anyone who has come across a crumbling, crime-ridden inner-city

neighborhood -- like many in Washington, D.C. -- where youths stand idly on street corners swilling from brown paper bags, or stagger around in drunken stupors shouting obscenities at passersby. Statistics indicate that there is likely to be a higher number of shops peddling alcohol in such neighborhoods than in crime-free locations.

It would seem, then, as some critics of alcohol have suggested, that one easy, common sense action that communities can take to help address violent crime would be that of better zoning to prevent a proliferation of liquor stores and bars and the easy availability of this "legal" drug.

West Virginia is consistently ranked as one of the nation's safest, most crime-free states. Thankfully, our state does not have violent crimes in the same high numbers as most states, or, unfortunately, as the nation's Capital. But we cannot be lulled into a false sense of security that we are immune from the problems of crime.

Clearly, if we wish to protect the high quality of life we enjoy in West Virginia, we should invest some thought and effort into holding back the rising tide of crime. Discouraging the use of alcohol in our communities would be a good place to start.

Fruit Research: At the Core of Better Quality Fruit

Most consumers, as they stand in their local market and pick through a bin of apples searching for perfect pieces of fruit, probably look at the color and size, check for bumps and bruises, and envision the apple's origin as part of a rolling orchard with rows of bountiful trees. Few are probably cognizant of the role that research laboratories play in providing them with large, firm, succulent specimens.

But, as the agriculture industry has become more competitive in recent years, scientific research, including a research program based in West Virginia, has played an increasingly important role in the production of quality fruits.

Recognizing the need to support our domestic fruit growers with modern technology, in 1962, I proposed the establishment of a regional fruit research station to serve the entire Appalachian region.

I envisioned the lab as a place of research aimed at benefitting fruit growers and consumers throughout the nation by enabling production of more profitable fruits for growers, and higher quality, lower cost fruits for consumers.

In 1963, I added an amendment to an appropriations bill that led to a study of the feasibility of an Appalachian fruit and berry laboratory.

Subsequently, in 1972, I secured \$200,000 in planning funds for a fruit and berry laboratory, and, in 1975, I obtained \$7.5 million for the construction of the Appalachian Fruit Research Station in the Eastern Panhandle of West Virginia.

The Kearneysville station -- with 72 full-time employees -- houses research into deciduous fruit production, protection, harvesting, and sorting that benefits the fruit industry from Maine to Georgia.

Among the greatest hurdles to answering the growing demand for high quality fruits is in finding ways to counter the ruinous effects of pests and disease. Recently, scientists at the Kearneysville Lab were instrumental in developing and commercializing the world's first two post-harvest biofungicides, *Aspire* and *Bio-Save*. These naturally occurring products enable growers to fight storage-related disease on apples, pears, and citrus without the use of chemicals.

By finding alternative methods to control disease in ways that also protect the environment, the Appalachian Fruit Research Station in West Virginia is proving the value of research in the modern agricultural industry.

Encouraging Education

I know firsthand the kinds of sacrifices -- both personal and financial -- that may be required in pursuit of a formal education. Because of my own experiences, I have had a special interest in finding ways to encourage others to make the necessary sacrifices to earn a coveted degree. Toward that end, I have initiated two programs that reward educational excellence.

The Robert C. Byrd Scholastic Recognition Award program annually confers a \$50 U.S. Savings Bond upon each valedictorian of the graduating classes of West Virginia's public, parochial, and private high schools, and the Schools for the Deaf and Blind at Romney. The Scholastic Recognition Award, funded by a private trust that I established, is one way that I have chosen to express my pride in our state's brightest students.

Through this program, 307 valedictorians received \$50 U.S. Savings Bonds at the end of the 1996-97 school year, bringing to 7,820 the total number of valedictorians so recognized since I established the program in 1969.

Another program I established to provide encouragement and financial assistance to studious young people is the national Robert C. Byrd Honors Scholarship program. Students of low-income families benefit from needs-based scholarship initiatives, and scholarships exist to recognize

student athletes. But these programs often overlook our nation's brightest students, because the reward of academic excellence is not the priority of such programs. I initiated the national scholarship program in 1985 for students who have demonstrated outstanding academic achievement and have been accepted at an institution of higher learning. My Senate colleagues later named this scholarship in my honor. In 1993, the program, initially a single-year stipend, was expanded to provide 4-year scholarships of \$1,500 annually for qualified students.

This year, 45 new Robert C. Byrd Honors Scholarships were awarded to West Virginia High School students, bringing to 480 the total number of West Virginians who have received this scholarship since the program's inception in 1985.

The Scholastic Recognition Awards and the Byrd Scholarships are not large in comparison to the high costs of a college education today, but their inspirational impact is inestimable. Over the years, I have heard frequently from students who have received these awards. Their words of thanks and their remarks about the positive influence that these honors have had on their appreciation of the lasting value of academic achievement are evidence enough that these programs are worthwhile endeavors.

By U.S. Senator Robert C. Byrd

A Critical Military Component

I recently had the opportunity to help dedicate a combined Army Reserve and Army National Guard complex in Huntington. The 89,968-square-foot complex, for which I added \$9.6 million in construction funds to a federal appropriations bill, will house 300 personnel from the Army Reserve and 220 from the Army National Guard, and will help to maintain a strong defense presence in West Virginia.

The new facility also serves as a symbol of the partnership between the Army Reserve and the Army National Guard that is necessary to ensure a solid total force defense structure comprised of active duty and civilian personnel. In West Virginia, the Army Reserve and the Army National Guard have always had a harmonious relationship, but more needs to be done to foster harmony at the highest levels of the military nationwide.

A fully cooperative and utilized National Guard is necessary in this country if we are to meet the changing needs of today's military within current budget constraints. But, in the Quadrennial Defense Review, a recently released broad assessment of our nation's future defense and manpower needs, defense planners called for cutting Army Reserve component forces -- including the National Guard -- by 45,000 troops. Such unbalanced force cuts would be unwise. The men

and women of the National Guard provide highly trained, specialized service at a fraction of the cost compared to their active duty counterparts. Further, the reduction of National Guard forces would greatly reduce the state's ability to respond to emergencies such as blizzards, forest fires, and heavy flooding.

In order to form a closer relationship between the Reserve and the National Guard, I recently cosponsored an amendment to change the status of the Chief of the National Guard to that of a four-star general and to include the position as a member of the Joint Chiefs of Staff.

This approach would go a long way toward correcting what I believe is a flaw in the structure of the Joint Chiefs, which does not fully include the National Guard in discussions and decisions on matters concerning force structure, force readiness, or the allocation of military funding.

Guaranteeing the Chief of the National Guard a seat at the Joint Chiefs' table would be one positive way to reduce friction and promote understanding and unity among the Guard, the Reserve, and the active duty forces, but surely there are others. In the interest of our national security, more steps should be taken to foster better coordination, cooperation, respect, and understanding among all of the critical components of our nation's fighting force.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Carding for Life

Both the tobacco and alcohol industries have received well-deserved criticism in recent years for a variety of questionable and unsavory practices, including what many critics have identified as the use of advertising campaigns specifically intended to entice young people to try, and then become hooked on, their products. In response, the tobacco industry has been attacked at both the state and federal levels, but, unfortunately, much less attention has been directed toward the alcohol industry.

According to statistics from the Centers for Disease Control's National Center for Health Statistics, the three leading causes of death for 15- to 24-year-olds -- accidents, homicides, and suicides -- often involve the use of alcohol. Efforts to curb the sale of alcohol, therefore, could be expected to yield high health payoffs to our society.

Tragedies like the recent alcohol-related death of a Louisiana State University student who reportedly had a blood alcohol level of .588 -- almost six times the level of legal intoxication -- further demonstrate that a national effort to save our young people from the destructive forces of alcohol is badly needed.

Such troubling incidents associated with youth

and alcohol prompted me recently to offer an amendment calling for coordinating the oversight of age identification checks for alcohol sales with those of tobacco-related age checks. The proposal would also increase the funding for supervision and enforcement of these provisions.

This amendment to the Agriculture Appropriations Bill will boost the ability of states to enforce age and identification requirements for the purchase of alcoholic beverages, as well as for the purchase of tobacco products. It only makes sense that store clerks who are already checking ID's for cigarettes should also check ID's for alcohol. The practice of "carding" -- checking identification cards to verify that the buyer is not under the legal age -- is such a simple step, but it can be instrumental in helping to prevent a teenager from drinking and getting behind the wheel of a car. I believe that my amendment will indeed be a constructive step in the fight to save our young people from the ravages of alcohol and make our highways measurably safer for us all. Carding underage drinkers before they get behind the wheel of a car by checking ID cards is "carding" for life.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Progress for Workplace Safety

In October 1996, I participated in the dedication of the National Institute for Occupational Safety and Health's (NIOSH) research laboratory in Morgantown. In its first year of operations, this state-of-the-art facility is already proving its value as a world-class center for innovative health sciences.

The new Morgantown NIOSH lab, or Health Effects Laboratory Division (HELD), is developing techniques to further the understanding and treatment of occupational injury and disease, and devising new methods for improving the safety of workers dealing with hazardous and toxic substances.

In 1962, I initiated efforts to establish the Appalachian Laboratory on Occupational Safety and Health (ALOSH) in Morgantown to provide a safer workplace for West Virginians. In 1989, responding to the growing success at ALOSH, I began to secure funds to construct, equip, and staff the new HELD facility. To date, I have added more than \$90 million to appropriations bills for that facility.

The HELD facility allows researchers to break new ground in the fight against long-time foes of miners. For example, HELD is advancing the understanding of black lung disease. Through the use of a state-of-the-art device -- the only one of its kind in the world

-- HELD is able to detect coal dust particles and conduct sensitive research never before possible. Until HELD opened, the government lacked the proper facilities for using this equipment, but this advanced capability may help to prevent future cases of the life-threatening disease that haunts so many West Virginia miners and their families.

Technicians at the Morgantown facility are also developing a prototype pocket-sized transmitter that could significantly improve the capability of scientists and technicians to detect whether workers are being exposed to harmful levels of gases or vapors at specific locations. The transmitter could also be adapted to identify the location of firefighters and hazardous materials response teams in emergency situations.

HELD's cutting-edge science will be instrumental in preventing the occupational illnesses and injuries that traditionally have burdened workers in West Virginia and have caused lost productivity and imposed high health care costs on society. By anticipating new concerns that will emerge as workplaces change, and by keeping occupational health in step with other advancements in science and medicine, this Morgantown facility will serve the health and safety of hard-working Americans.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Constitution 101

On September 17, 1787, the U.S. Constitution was signed by 38 of the delegates attending the Constitutional Convention in Philadelphia. This living document, thoughtfully crafted by our Founding Fathers 210 years ago, owes its enduring nature to one of its most basic, yet most ingenious and revolutionary ideas -- that the power and sovereignty of the United States government ultimately rest in the hands of its citizens.

However, a recent poll commissioned by the National Constitution Center, an organization established to better educate Americans about the Constitution, reveals that a shocking number of people in this country have little or no understanding as to how the Constitution affects their everyday lives.

In fact, according to the results of the survey, only 5 percent of Americans could correctly answer 10 rudimentary questions about the Constitution. That is an embarrassingly low percentage.

Only 66 percent of those surveyed knew that the first ten amendments to the Constitution are called the Bill of Rights. Some re-

spondents were so far off as to guess that they are called the Pledge of Allegiance.

Further, more than half of those surveyed did not know how many members comprise the U.S. Senate. About one in three did not know the number of branches of the federal government. And, almost one-quarter could not name a single right guaranteed by the First Amendment. Other questions were answered with equal error.

How can citizens be expected to meet their Constitutional responsibilities when they lack even basic knowledge about how our government operates?

If there is anything encouraging to be found in the dismal results of the National Constitution Center's poll, perhaps it is that 9 out of 10 people surveyed said that they were proud of the U.S. Constitution. I hope that more citizens will demonstrate that pride by taking it upon themselves to learn more about their Constitution and their government so that they can adequately perform the responsibilities which were conferred upon them in Philadelphia in 1787 by some of the greatest minds in history.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Derail Fast Track

Currently working its way through Congress is legislation intended to renew so-called "fast-track" procedures for U.S. trade agreements.

Under fast track, the Administration may engage in trade negotiations around the world -- giving a little here, taking a little there -- but the Congress is largely shut out of the process, being forced to vote up or down on implementing legislation for any trade agreement that comes before it, with little opportunity to debate it and no opportunity to amend it.

In order for the U.S. to be competitive in foreign markets, to protect American jobs, and to ensure a healthy domestic economy, the Administration should have flexibility to strike the best trade deals it can on behalf of American business and consumers. But, the Congress also has a legitimate role to play in trade negotiations, and, despite claims to the contrary, that Congressional role does not necessarily impede the Administration's ability to negotiate and strike deals that are in the best interest of the country.

In pressing for fast-track authority, however, the Administration mistakenly insists that it can only be effective in promoting U.S. trade if it is unencumbered by the input of Congress. The Administration seems to think that any

agreement it submits to the Congress will, in fact, be amended, forcing a return to the bargaining table, and thereby shredding the Administration's stature as a negotiator.

To my mind, that kind of thinking belies a staggering lack of confidence by the Administration in its own negotiating prowess.

One could just as easily argue that, if the Senate retained amending authority, our negotiators might just come up with a somewhat better product, because the fact that the entire agreement will be scrutinized and possibly amended by the elected representatives of the American people gives our negotiators more leverage at the bargaining table.

Despite claims to the contrary, there is no inconsistency between supporting free trade, or freer trade, and preserving the right of the Congress not only to scrutinize the agreements, but also to question, if necessary, parts of the agreement that might appear not to be in America's best overall interest.

Rather than expending energy trying to stamper the Senate's Constitutional powers, the Administration simply needs to do its job well and negotiate sound, strong trade agreements in the first place. After all, we all want the same result from trade negotiations -- agreements that well serve the American people.

Surf's Up

I recently launched a homepage on the World Wide Web, providing a new site and enhanced service for West Virginia's Internet "surfers."

My homepage -- which can be accessed at <http://www.senate.gov/~byrd> -- will enable computer users to more easily and efficiently access information that is frequently requested of me. For example, my Web site includes my biographical sketch, a list of the Senate Committees on which I serve, and details about books that I have authored. I have traditionally responded to the many requests for this type of information through the mail or by fax. But now, West Virginia computer users who seek to know more about my career of public service to West Virginia literally have that data at their fingertips.

In addition, I have provided tourism-related information for West Virginians who wish to visit our Nation's Capital. On my Web site can be found maps of the city and its metro system, in addition to information about museums, monuments, and other popular Washington tourist spots. With the particular aim of assisting visiting families, I have also provided a special section on points of interest to children.

As one of West Virginia's biggest boosters,

I also wanted my Web site to help promote our state. So, in addition to some of my personal reflections about West Virginia, which I hope will provide out-of-staters with a taste of the richness of our home state, I have included a list of West Virginia sites that can link interested Web surfers to educational institutions, recreational facilities, economic development initiatives, and media outlets in West Virginia.

I am regularly asked to intervene with agencies in behalf of my constituents who are having some difficulty with, or questions about, a federal program. To help cut through federal red tape, I have included on my Web page some of the most commonly requested federal agency phone numbers.

By no means a finished product, my homepage will be frequently updated to reflect new issues facing our nation, and will include direct links to legislative information, and statements that I deliver on the Senate Floor. It currently includes a selection of my past speeches, many of which have relevance to our current national debates.

With a note of excitement about the many possibilities accompanying the launching of my new Web page, I welcome West Virginians to catch the wave!

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Securing the Blessings of Liberty

The Preamble to the Constitution contains the brief phrase, "[to] secure the blessings of liberty to ourselves and our posterity," words that merely hint at the sometimes staggering costs entailed in preserving that liberty. "Freedom is not Free," etched into the dark stone of the Korean War Memorial two centuries later, begins to capture the price that Americans have always been prepared to pay to preserve freedom for themselves and future generations.

In 1938, before the world-wrenching struggle of World War II had turned the page on a new chapter of American history, Congress voted to rededicate Armistice Day -- marking the end of that "war to end all wars" that World War I sadly was not -- as Veterans Day to honor the sacrifices made by soldiers from all wars. Since that date, American soldiers, sailors, and airmen have fought in every quarter of the globe and have kept a vigilant watch from outposts at every latitude and longitude, guarding American interests and American citizens.

Throughout our nation's history, brave sons and daughters have left their homes prepared to fight and perhaps to die in foreign

lands. West Virginia has seen many of her young people march from her hills into the ranks of names on memorials in our nation's capital. These men and women came from big cities and small towns, from college campuses, factories, farms, and mines. Some were killed before they were old enough to vote. Some died not knowing the joys of falling in love, raising a family, or growing old.

They fought so that we would remain free. They fought so that their children and ours could grow to be doctors, farmers, school teachers, musicians. They answered the call of their country and they did not fail it, even in death.

Most Americans today have never seen war, and hopefully, they never will. This Veterans Day, I hope everyone will join in offering a prayer of thanks to the brave spirits who defended us with their lives, and offer their thoughts and their thanks to the men and women of today's military -- active, Guard, and reserves. May God bless all West Virginians who have fought and sacrificed for the preservation of our nation's freedom and our nation's interests throughout the world.

October 29, 1997

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Putting More Officers on the Beat

Recent statistics indicate that the violent crime rate in the U.S. is on a gradual decline. A new FBI study, for example, reports that the number of murders in this country last year was the lowest in decades. According to the Department of Justice, one initiative that is being credited with reducing the crime rate is the Community Oriented Policing Services (COPS) program.

The COPS program was established through the 1994 Omnibus Crime Bill to enable local communities to expand their police forces and to devise new ways of fighting crime on the local level. COPS and other anti-crime initiatives are funded through the Violent Crime Reduction Trust Fund, which was created by my amendment to the Omnibus Crime Bill.

The goal of the COPS program has been to increase the ranks of local police forces across the country by 20 percent, or 100,000 officers, over a six-year period.

Currently, at its three-year anniversary mark, COPS has put 65,000 new officers -- more than half its goal -- on the streets of communities across the nation.

While COPS provides an important initial boost, the expanded police forces

it is making possible are expected to be sustained for the long-term through local resources.

The success of the COPS program is largely attributable to the fact that it is geared toward law enforcement at the community level, enabling large cities and small towns to determine the best strategies for fighting and deterring crime on their own streets.

West Virginia has benefited significantly from COPS. Since the program's inception in 1994, more than \$18 million in grants have been awarded to West Virginia communities. In fact, in the last three years, 47 of our state's 55 counties have received COPS grants, putting a total of 355 new officers on the front line of defense against crime in West Virginia.

When I authored the amendment to fund COPS and other anti-crime programs in 1994, I did so to help ensure that our nation could better fight an escalating war against crime. Now, three years after the passage of the Omnibus Crime Bill that launched COPS, I am encouraged by reports that the rate of serious crime is declining, and I am gratified that COPS is being recognized as a positive factor in that decline.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Family Thanksgiving

It is time again to count our blessings, to sit together at a table surrounded by family and friends, and offer thanks to the Creator for seeing us through another year together. The busy schedules and conflicting timetables that comprise our lives make the Thanksgiving holiday one of the few times each year that every member of one's immediate family can actually eat together and share the bond of being a family. Too often during the rest of the year, the hum of the microwave replaces the hum of dinner table conversation, and too often the eerie glow of the television set replaces the warmth of family interaction.

Thanksgiving, therefore, can be one of the few times that generations have the chance to gather together around a crackling fire to ponder photographs from the past, to slice carrots and mash sweet potatoes, to hear the laughter of children and the gossip from the kitchen, and of course, to smell the sweet temptation of a juicy turkey slowly roasting. It is a time of gentle companionship around a sudsy sink. It is a chance to share stories of past Thanksgivings, that

time when everything was ready but the turkey, or when Mom used paprika instead of cinnamon in the pumpkin pie. These shared experiences are ties that bind families together.

I hope that this Thanksgiving, West Virginians will take the time to rediscover what it is that makes them a family. A shared address and a designated spot before the hypnotic television set do not make a family, but a group of loving individuals who share laughter, tears, chores, and fun together, as well as their common genetic bond, make a true family.

So, before devouring that lovingly prepared feast, families should take the time not only to show thanks for the bounty they are about to receive, but also to be thankful for the opportunity to gather in cheerful kinship. And, before anyone leaves the dirty china behind in a rush to settle into the soporific stupor of the football game, I hope that some consideration is given to grabbing a dishcloth, taking a long walk, reading some scripture together, or playing a board game for the simple pleasure of spending time with family.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Putting Gas Taxes to Work For Safer Roads

For many years, armed with U.S. Department of Transportation (DOT) statistics detailing the crumbling condition of our national highway system, I have argued for greater investment in America's infrastructure. Unfortunately, to the detriment of the nation, the dire needs of our infrastructure have been neglected for too long.

Our nation's highway system is in deplorable shape and getting worse. Currently, according to the DOT, fully 61 percent of our national highway system is rated in either "fair" or "poor" condition, and almost a quarter of our nation's bridges are rated as either structurally or functionally deficient.

Earlier this year, in an apparent awakening, the Congress passed a budget bill which included the transfer of the 4.3-cents-per-gallon gas tax from deficit reduction to the Highway Trust Fund, signaling to the American people that highway construction was being given a higher national priority.

That bill, however, in and of itself, did not authorize the funds to be spent for highway and bridge construction. It merely allowed the 4.3-cents in taxes that Americans pay at the gas pump to go into the Highway Trust Fund and accumulate. As a result, by

the end of 2003, the Trust Fund is expected to grow to an unprecedented \$72 billion and just sit there -- amounting to an empty promise to the American people.

In an attempt to end this deception, I recently authored an amendment to the six-year bill that authorizes funding levels for highway construction. My amendment would ensure that the 4.3-cents gas tax now accumulating in the Highway Trust Fund could be devoted to safer bridges, better roads, and other transportation needs. It would make available to every state in the nation sizable sums -- resulting from the public's own payment of gas taxes -- and, additionally, would direct much-needed funding specifically to the continued construction of the 13-state Appalachian Regional Commission Corridor Highway System.

Congressional consideration of a new highway reauthorization bill has been postponed until next year. But I expect to renew my efforts at that time, because, without my amendment, Americans will continue paying gas taxes under the false impression that those taxes are going to create better and safer roads, while, in reality, the highways and bridges on which they drive will continue to fall apart.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

An Award Winning Transportation System

West Virginia University's (WVU) Personal Rapid Transit System (PRT), an unmanned, electrically powered shuttle system, has safely and dependably ferried passengers between sites on WVU's two campuses and downtown Morgantown for the past 25 years. In honor of the PRT's outstanding record of service, the system was recently recognized by a national transportation publication as the "Best Overall Performer" in its class.

In its ninth annual competition among transit systems, The New Electric Railway Journal selected the PRT for best overall performance in its "People Mover" category. The publication remarked, "There are few transit systems of any type that out-perform it."

In addition to providing dependable transportation, the PRT serves as a leading example of how technology can be used to provide alternative modes of transportation in urban areas. Numerous engineers and other interested groups have visited Morgantown since the installation of the PRT to study the benefits of an electric transit system that does not require on-board operators and that also addresses pollution, traffic, and environmental concerns.

The 8.7-mile-long PRT utilizes more than 70 shuttles, accommodating about 20 passengers each.

It began operating in 1975, and was built to help demonstrate new transit technologies at a time when our nation was growing increasingly concerned about energy and the need for alternatives to traditional fuels and methods of transportation.

Even though the PRT was initiated in response to the pressures of the energy crisis of the 1970's, the need to develop alternative fuels and transportation systems like the PRT remains critical to our nation's energy independence and security today.

Recognizing that, and responding to a study that found much of the PRT's automation becoming obsolete after two decades of advancements in the computer industry, I added \$4.2 million to an appropriations bill last year to support an update of the PRT's computer technology.

This upgrade will ensure that the PRT's automation is compatible with modern software and hardware and will also allow the system to continue providing safe, efficient transportation well into the future. It will also ensure that the PRT -- recognized for its outstanding performance by The New Electric Railway Journal -- will continue to serve as a model for efficient, alternative fuel transit systems throughout the nation.

Internet Indecency

Recently, a member of my staff, attempting to secure information on White House tours through the Internet, inadvertently typed in three incorrect letters of the White House Internet address, and to her shock and disbelief, what appeared on the screen was not helpful information about White House tours, but cyber pornography.

A simple mistake of three keystrokes resulted in offensive trash appearing on the computer screen. Beyond being an affront to adults who inadvertently stumble across it, this web site and others like it present a danger to children. Young students performing research for a school project could just as easily call up this and similar sites by accident.

The Internet offers valuable information and can be a useful resource. Unfortunately, however, due to a lack of regulation of indecent material on the Internet -- the kind of regulation that exists for other media -- it can also be a free-wheeling vehicle for disseminating smut. It is, therefore, important that this new electronic medium, which is increasingly making its way into America's homes and schools, have safeguards to protect our children.

I was a strong supporter of federal legislation aimed at providing such safe-

guards. The Communications Decency Act, which was enacted in 1996, made it a crime to knowingly transmit indecent material to children via computer. That law would have helped to fill the gap between the rapid development of the Internet and the eruption of web sites that peddle pornography. The Supreme Court, however, struck down that law, leaving pornographers with nearly unrestricted access to our children via the Internet.

To my mind, the act of distributing pornographic materials over the Internet, especially when it is done in ways that lure unsuspecting computer users, particularly children, into these sites, is the height of irresponsibility and borders on abuse. Furthermore, some child abusers have gone so far as to use the Internet to draw vulnerable children into dangerous relationships.

Therefore, with legislative solutions currently blocked due to First Amendment concerns, I am glad to see that members of the technology industry are, at least, proposing voluntary measures to help protect our nation's children from obscenity, including plans to report instances of child pornography to appropriate law enforcement officials. This is a commendable, though overdue, step, and I hope that others will follow.

The National Conservation Training Center

From concerns of a gradually warming globe to the problem of waterborne bacterial diseases like *ptiesteria*, the challenges to man's ability to strike a balance between improving his existence and preserving his environment are enormous. In order for mankind to ensure long-term survival, it is essential to make our children and grandchildren sensitive to the fragile nature of our planet, and better aware of our dependence upon the efficacy and abundance of its resources.

Recognizing the need to prepare current and future generations for the difficult decisions concerning our environment, I added \$4.9 million to an appropriations bill in 1989 to initiate the National Conservation Training Center (NCTC) in Jefferson County. Including that initial funding, I have helped to obtain a total of \$138 million for this recently dedicated facility that is designed to strengthen the education and training programs offered by the U.S. Fish and Wildlife Service.

Set in a scenic wooded area overlooking the Potomac River, this spectacular center's 538-acre campus combines state-of-the-art technology with a natural setting to provide on-site training opportunities, as well as distance learning programs for use in

field locations. Campus housing accommodates about 150 students, and the facility also features 12 classrooms with advanced audiovisual systems, four laboratory classrooms, a 250-seat auditorium, a day-care center, and a library.

The NCTC is helping to educate not only Fish and Wildlife Service professionals, but also natural resource conservation professionals from all sectors of government and society, enabling a sharing of different perspectives, discussion and debate on difficult environmental subjects, and a search for common ground and common sense solutions to a growing list of environmental problems.

In West Virginia, where the natural environment has a large influence on its people -- from concerns about the danger of heavy flooding to interests in a growing eco-tourism industry -- this facility will prove to be a particularly valuable asset.

This new "home" for the Fish and Wildlife Service is providing students with knowledge that will enable mankind to progress while preserving the natural environment. It represents the kind of balanced approach our nation must take in order to ensure a healthy environment along with a healthy economy.

Resounding the Essence of Christmas

The sounds of Christmas are in the air, although it can be difficult to identify the spirit behind the melodies. Is it the celebration of the birth of Jesus sweetly caroled by the bells, or the crass jingling of a commercial pitch over the airwaves? The holidays are rich in many seasonal sounds, but I sometimes worry that the spirited messages of soft hymns drifting throughout a candle-lit church are obscured by the chorus of automobile horns fighting their way to the shopping malls.

All told, there is much to exalt about the Christmas tradition of gift giving.

Sharing the blessings of our own prosperity with those less fortunate is a laudable gesture that would be welcomed throughout the year. The holidays are also an occasion for each of us to spend time thinking about our loved ones and trying to surprise them with gifts that show our affection for them. And the anticipation of children, building as the mound of presents rises around the Christmas tree trimmed with cherished ornaments, is one of the warmest joys that the holiday season offers.

However, too often, the

simple pleasures of gift-giving are overpowered by the pressures and strains of the commercialization of Christmas. Too many people will overspend this season, striking a joyful chord with shopkeepers and credit card companies, but placing a heavy financial burden on families who will face big bills in January. Too many children, influenced by ubiquitous advertising campaigns, will demand over-priced clothes and shoes that bear a designer logo -- and nothing else will satisfy. And families will spend time trudging through department stores and waiting in long lines, rather than in the company of friends and neighbors or at church celebrating the true spirit of the season in prayer and song.

During this hurried holiday season, I suggest that West Virginians go back and read the gospels, particularly the books of Luke and Matthew, in order to enhance their recollection of the birth of Christ, for therein lies the true meaning of Christmas. By going back to the Book our fathers read, perhaps we will recapture that spirit of Christmas which prevailed in their time.

New Resolutions

The dawning of a new year is traditionally a time for making resolutions. Some New Year's resolutions, like old friends, are very reliable -- we make the same ones every year. We pledge to lose weight, to exercise more, to spend more time with our families, to manage our money better, to keep in touch with old friends. As a result, gyms are crowded during the month of January, diet books fly off bookstore shelves, and lots of walking shoes are sold. But every year, most people's resolve falters in fairly short order.

Failure should not, however, prevent us from trying again, and again, and again, to reach a worthy goal. Nor should we be discouraged from tackling big problems, even if progress is slow and incremental. A mountain can be reduced to rubble by a gentle breeze, given enough time.

I am an ardent believer in self-improvement, and am convinced that everyone can make a success of his or her life, given initiative and opportunity. During my career of public service, I have tried to help create those opportunities by working to attract new federal facilities and private-sector investments that are bringing jobs to West Virginia. I have assisted our state by adding funding to

federal appropriations bills to build roads and develop flood protection and water and sewer systems, the lack of which can be a hindrance to a community's economic prosperity. I have also strived to encourage educational achievement, scholarship, and vocational training to provide individuals with the tools to build their own success stories.

But, the essential ingredient for the improvement of the economy of our state and the well-being of our people lies in their own ability and willingness to take advantage of the evolving opportunities, to build upon them, and to tackle that task with drive, enthusiasm, and a strong sense of commitment.

As we ring in 1998, I hope that I will be joined by many, many West Virginians in resolving to do better in the coming year. Let us strive to improve ourselves -- our minds and our characters, as well as our physical well-being -- and to improve our families, our communities, our state, and our nation. Let us not dwell on the failures of the past, or allow ourselves to feel overwhelmed by large goals, but, instead, let us focus on doing our best day by day to make the most of ourselves and the possibilities of the future.

A Sobering Holiday Message

The following message, by an unknown author, is a sobering reminder of the tragic consequences of drinking. I hope that it will serve as a deterrent to readers who consider celebrating with alcohol and getting behind the wheel of a car this New Year's Eve.

D.U.I...A Daughter's Final Words

I went to a party, Mom,
I remember what you said;
You told me not to drink, Mom,
So I drank soda instead.

I felt really proud inside, Mom,
The way you said I would;
I didn't drink and drive, Mom,
Even though the others said I should.

I know I did the right thing, Mom,
I know you're always right.
Now, the party's finally ending, Mom;
Everyone drives out of sight.

As I got into my car, Mom,
I knew I'd get home in one piece,
Because of the way you raised me, Mom,
So responsible and so sweet.

I started to drive away, Mom,
But as I pulled onto the road;
The other car didn't see me, Mom,
And it hit me like a load.

As I lie here on the pavement, Mom,
I hear the policemen say,
The other guy is drunk, Mom,
And now I'm the one who'll pay.

I'm lying here dying, Mom,
I wish you could get here soon;
How come this happened to me, Mom,
My life burst like a balloon.

There's blood all around me, Mom,
Most of it is mine;
I hear the paramedics say, Mom,
I'll be dead in a short time.

I just wanted to tell you, Mom,
I swear I didn't drink;
It was the others, Mom,
The others didn't think.

He didn't know where he was going, Mom,
He was probably at the same party as I;
The only difference is, Mom,
He drank and I will die.

Why do people drink, Mom,
It can ruin your whole life;
I'm feeling sharp pains now, Mom,
Pains just like a knife.

The guy who hit me is walking, Mom,
I don't think it's fair,
I'm lying here dying, Mom,
While all he can do is stare.

Tell my brother not to cry, Mom,
Tell Daddy to be brave,
And when I get to Heaven, Mom,
Write "Daddy's Girl" on my grave.

Somebody should have told him, Mom,
Not to drink and drive,
If only they had taken the time, Mom,
I would still be alive.

My breath is getting shorter, Mom,
I'm becoming very scared;
Please don't cry for me, Mom,
'Cause when I needed you,
You were always there.

I have one last question, Mom,
Before I say goodbye,
I didn't ever drink, Mom,
So why am I to die?

This is the end, Mom,
I wish I could look you in the eye
To say these final words, Mom,
I Love You...Goodbye.

Pulling the Plug on Term-Paper Mills

In recent years, colleges and universities nationwide have been confronted with a new concern about term-paper fraud. As a result of the widening accessibility of the Internet, as well as the new medium's lack of regulation, a student today needs only to click a few buttons on his or her computer, and, in a matter of minutes, download a well-crafted term paper -- all without having to pick up a single book.

The problem of plagiarized research papers is an old one, but this new way to take credit for someone else's work is particularly alarming because of the ease with which research papers can be obtained and the rapid growth of web sites operated by money-hungry entrepreneurs willing to make a quick buck by promoting plagiarism.

Even a cursory search of the Internet reveals dozens of sites that offer "term-paper assistance." These sites -- with names like "Term Paper Emporium," "Recycled Papers," and "Cheat Factory"-- offer easy-to-download papers on thousands of research topics, which are available to anyone with a major credit card. In response to these "term-paper mills," as they

have been tagged by critics, some states have passed legislation aimed at prohibiting the marketing or sale of prefabricated term papers. Term-paper mills, however, attempt to circumvent such laws, contending that the information they provide is intended only for research purposes and not for classroom submission.

Ready-made term papers may be enticing to students seeking a lazy alternative to real work, but the knowledge and experience gained from the struggle to research and write a well-developed paper is an extremely valuable component of a solid education. Therefore, students who submit recycled term papers are not only plagiarizing the words and ideas of others, but they are also robbing themselves and their own intellect.

I hope educators will be vigilant and take a strong position against this kind of fraudulent activity. Moreover, students should resist the temptation of this easy way of writing a term paper. Learning is a lifelong journey, and writing a term paper is but one stop along the way. In the end, those who choose the more challenging path will reap the greater reward.

Parents Must Set High Expectations And Be Good Role Models

A recent study of more than 12,000 American adolescents found what many West Virginia parents have known for generations; namely, parents exert a powerful influence on their children's behavior, even through the challenging teenage years.

Contrary to the prevalent modern-day impression that teenagers are impervious to parental guidance and fall under the full sway of their peers after early adolescence, the survey's findings confirmed that parents can and should continue to expect good grades and good behavior from their children throughout their teenage years.

The University of Minnesota study, published in The Journal of the American Medical Association, found that parental expectations play a major role in determining adolescents' behavior through the twelfth grade, regardless of family income, race, or the number of parents in the home.

Researchers found that the more adolescents felt loved and cared for by their parents, the less likely the adolescents were to have sex, use tobacco, alcohol or drugs, or commit acts of violence.

As a boy growing up in southern West Virginia, I knew that my foster parents

and my teachers fully expected me to do my very best, in my personal life as well as in my schooling. I wanted to please them, and I worked hard to earn their praise. Today's youth yearn for the same high expectations, as the results of this study show. They, too, want parents and teachers to care enough to expect the best of them.

In an age when many families have two parents in the work force, there is a tendency to want to relax and avoid confrontations in the few hours that the whole family spends together. That tendency should be resisted. For the good of their children, parents need to employ discipline, confront bad behavior, and set limits and adhere to them. Now, as much as ever, parents need to employ the skills handed down through families for generations by setting clear expectations and being good role models. A stern word is every bit as important as a warm hug when it comes to good parenting.

In West Virginia, where the "old values" are still revered, the results of this study may seem like a dose of good old common sense. By instilling these cherished values in their children, parents help them to build a solid foundation for life.

The Senate's Advice and Consent Function

The nation recently has had a valuable lesson in Constitutional affairs, thanks to the debate between the President and Congress over the nomination of Bill Lann Lee to head the Justice Department's Civil Rights Division.

The Constitution gives the Senate the responsibility to approve all presidential nominations. This "advice and consent" function is a vital part of the system of checks and balances that the Constitutional Framers created. By requiring presidential nominees to receive Senate confirmation before appointment, the Framers provided the legislative branch with a way of checking the power of the executive. Thus, the Senate's failure to approve Mr. Lee's nomination last November should have ended the matter.

During Congress' winter recess, however, the White House hinted that it was considering putting Mr. Lee in the office as a "recess" appointment. The Constitution allows the President, on a temporary basis, to fill vacancies during congressional recesses in order to prevent important posts from being vacant when Congress is unable promptly to return to session -- during a *sine die* adjournment, for example. Concerned that the President might use this power when there was no emergency (an

emergency would occur, perhaps, if the office of Secretary of State were to be vacant), I wrote to him, advising against what I saw as a potential misuse of power.

The President, in turn, did not make a recess appointment. Instead, Mr. Lee was installed in an "acting" capacity. I believe that this is a development fraught with opportunities for abuse. With a recess appointment, at least Mr. Lee's tenure would have expired in late 1998. Now, however, Mr. Lee may be able to remain in office much longer, and without ever garnering Senate approval.

Prompted by what I see as an unwise end run around Congress, I have written to the Attorney General to express my concern about the acting appointment and to remind the Administration that, under law, temporary appointments are actually valid for no longer than 120 days.

In reality, Mr. Lee, against the will of the Senate, could serve through the end of President Clinton's tenure. If Presidents can put nominees in office by circumventing the Senate's Constitutional "advice and consent" role, an important check against executive power will have been effectively removed, weakening the "people's branch" and the people's only voice in selecting unelected government officials.

West Virginia: A Leader in High-Tech Crime Fighting

The FBI fingerprint identification complex, located in Harrison County, is the nation's largest and most sophisticated repository of fingerprint information. Beginning operations in April of 1995, this facility -- with more than 3,000 employees and a regional economic impact of more than \$90 million annually -- helps law enforcement agencies across the country to more effectively fight crime. Now, a new program being developed cooperatively by the FBI and West Virginia University (WVU) will further bolster the facility's mission by offering the world's first degree-granting program in forensic identification.

This new degree program will be offered at both the bachelor's and master's levels, and will enable students and law enforcement officials to expand their knowledge of fingerprint identification and other areas of forensic science, such as DNA testing. In fields such as computer science, electrical engineering, biology, medicine, dentistry, statistics, physics, mathematics, chemistry, and law, WVU faculty members have collaborated to create this one-of-a-kind program that will help make our state a forensic science leader.

In 1990, responding to growing problems at the FBI's fingerprint facility located in Washington, D.C., I added \$185 million to an appropriations bill for con-

struction of a new and improved FBI fingerprint center in Harrison County. In addition, I have helped to obtain more than \$600 million for development of the FBI's advanced automation system that is helping to speed the tracking and identification of criminals.

By instituting this new forensic science program, the FBI is answering a growing need of the law enforcement community. The International Association for Identification (IAI) recently announced that, beginning in 2005, it will require all persons employed as forensic identification specialists to hold bachelor's degrees. IAI's decision makes this new degree program especially valuable to anyone planning a law enforcement career specializing in forensic science.

WVU's establishment of this first-of-its-kind degree program serves as a good example of the kinds of spin-off opportunities available to West Virginians as a result of my work to bring federal investment to our state. While simultaneously bolstering the capabilities of the FBI's fingerprint identification complex, WVU, under the leadership of President David Hardesty, is also building a new area of educational expertise for itself and ensuring future job opportunities and a healthier economy for West Virginians.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

West Virginia Aquaculture: No Fish Story!

West Virginia-produced caviar and smoked salmon? These are not such far-fetched notions, due to nearly \$13 million that I have added to federal appropriations bills to launch programs aimed at developing a fish-farming industry in our state.

A reliable supply of cool and cold water is a primary resource for aquaculture production. According to the U.S. Geological and Economic Survey, West Virginia has an abundant supply of water resources, including tens of thousands of springs scattered throughout the state.

Recognizing the potential value of West Virginia waters for the farming of fish, I added \$6 million to the Agriculture Appropriations Bill in 1996 to initiate construction in West Virginia of the National Center for Cool and Cold Water Aquaculture. I added another \$6 million to an appropriations bill last year to complete construction of this ultramodern facility. I was also successful in adding \$250,000 for initial operations of the center.

It was in the mid-1980's that I began exploring aquaculture opportunities for West Virginia by obtaining federal funding for aquaculture studies and demonstration projects. These early initiatives proved fruitful, and, today, West Virginia is home to profitable trout- and char-

farming operations, as well as aquaculture training services in high schools and higher education institutions. West Virginia aquaculture operators, however, have only begun to realize the potential of the billion-dollar, worldwide fish market.

The National Center for Cool and Cold Water Aquaculture -- now under construction on federal lands at Leetown, Jefferson County -- will house the nation's most advanced research programs aimed at efficiently producing flavorful, nutritious, cool and cold water fish products. In conjunction with the center's research, West Virginia University will use the \$600,000 that I added to an appropriations bill last year to launch a program aimed at helping small family farmers to develop successful aquaculture operations.

A short time ago, the notion of a fish-farming industry in West Virginia may have seemed implausible. But, make no mistake, the potential for a thriving aquaculture industry in West Virginia is no fish story. I firmly believe that my efforts to tap into the economic potential of West Virginia's natural water resources will provide new opportunities for our state's farmers, and will generate jobs and greater prosperity for some of West Virginia's most rural communities.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Time to Act on the Highway Bill is Now

Our nation may be headed toward a type of "doomsday" scenario because of delay in Senate action on a bill to reauthorize funding for highway and bridge construction throughout the country.

The Intermodal Surface Transportation Efficiency Act (ISTEA), or highway bill, would reauthorize federal funding for highway construction, bridge construction, highway safety, and transit programs for six years (1998 - 2003). When the Senate found itself unable to complete action on ISTEA at the end of the session last year, a short-term extension bill was passed to continue these programs through May 1, 1998, with the understanding from the Senate leadership that the Senate would return to the six-year highway bill immediately following the President's State of the Union Address.

Now, however, the State of the Union Address has come and gone, and the Senate still has not taken up the highway bill. I am increasingly concerned about the possible impact on infrastructure construction and jobs that may result from the delay on this important legislation.

Delaying action on the highway bill places states and cities in a precarious

and uncertain position as they struggle to continue, without interruption, critically important transportation projects and programs. If the Senate does not act on ISTEA before midnight of May 1 -- the cutoff date for states to obligate new federal highway funding -- highway projects across the country may suffer disruption and delay, and in cases where some construction projects dealing with safety need to go forward, accidents, injury, and perhaps even highway fatalities may result.

Without action on ISTEA, highway departments throughout the nation will find it difficult to develop and implement long-term financing plans because they will not know the level of federal resources available to them in the next six years. The current course of inaction is not justified, and it threatens the economic well-being and safety of people nationwide.

I have repeatedly pressed the Senate leadership to move the ISTEA Bill as soon as possible. The disruption of transportation projects may occur across the nation as states have to slow down or put off work on critical highway programs unless Congress gets it's act together.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Line-Item Veto Revisited

Fewer than two years have passed since Congress recklessly handed the President the power to erase portions of a law with a "line-item veto." Now, thanks to a recent decision by a federal judge declaring the line-item veto unconstitutional, the carefully crafted balance of powers between our executive and legislative branches that the Constitution requires has been restored, subject to future action by the U.S. Supreme Court.

The recent court decision is only the latest chapter in a lengthy legal saga. That saga commenced last year when I brought suit in federal district court on behalf of myself and others, including Senators Patrick Moynihan, D-NY, and Carl Levin, D-MI, to have the 1996 Line-Item Veto Act declared unconstitutional. Although the federal district judge, Thomas P. Jackson, agreed with my view, the Supreme Court took a different approach. Rather than deciding on the Act's constitutionality, the Court decided that my fellow plaintiffs and I lacked "standing" to bring the suit because we were not "directly injured" by the Act.

This led to suits by persons who could claim injury when the President line-item vetoed projects favorable to them. Although I was not a party to these suits, I filed an "amicus" brief on behalf of myself and Senators Moynihan and Levin to direct the judge's attention to the important issues at stake.

I was particularly gratified to see that the judge -- Thomas Hogan -- fully

agreed with my analysis. As he noted in his opinion, the line-item veto "enables the President to pick and choose among portions of an enacted law to determine which ones will remain valid." By giving the President legislative powers that the Constitution assigns solely to Congress, the line-item veto disrupts the balance of powers that the Framers considered so vital between governmental branches. Under the Constitution, the President is required to faithfully execute the law. With the line-item veto, however, instead of faithfully executing a law that he has just signed, the President can turn around and unilaterally amend it.

I regret that Congress paid so little heed to these considerations when it passed the Line-Item Veto Act in 1996. Since then, however, it has become clear that my concerns about the Act were well-founded. Just as I feared, the President used his item veto as a device to intimidate Congress into letting him have his way on matters in which Congress might not otherwise be disposed to agree. By giving up a portion of its control over the purse, Congress allowed the executive to ride roughshod over the legislative branch.

Now, once again, the third branch -- the judiciary -- has stepped into the breach to save Congress from its folly. This time around, I hope that the U.S. Supreme Court will uphold Judge Hogan's decision and safeguard the balance of powers that the Framers intended.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

West Virginia -- An Ecotourism Gold Mine

According to a non-profit, travel-oriented organization -- the Travel Industry of America -- ecotourism, a term that broadly describes nearly any nature-based recreational activity such as hiking, skiing, and nature photography, is the fastest growing segment of the U.S. tourism market. This is good news for West Virginia, a state boasting spectacular opportunities for abundant outdoor recreational activities.

Furthermore, given the fact that the Mountain State is within 500 miles of most of the United States' population centers, it is no surprise that West Virginia is growing into a popular destination for ecotourists.

Between 1989 and 1996, West Virginia's tourism industry grew an impressive 33 percent, and, according to the West Virginia Division of Tourism, tourism contributed an estimated \$403 billion to the state's economy in 1996. These favorable dividends are due, in part, to the federal funding I have obtained for numerous tourism initiatives in West Virginia, including many that promote ecotourism.

The New River Gorge National River in Fayette County stands out as one notable example of the successes and dividends generated by federal investment in the expanding ecotourism industry in West Virginia.

In 1974, I authored an amendment providing \$150,000 for a study to ex-

amine the New River Gorge as a potential component of the National Park System. Subsequently, former Senator Jennings Randolph and I introduced legislation, which became law in 1978, that established the New River Gorge National River as a National Park System unit. Since that time, I have added millions of dollars to federal appropriations bills for land acquisition, facilities construction, site stabilization, trail development, rafting put-ins, and other improvements in the New River Gorge.

While renowned for its river-related activities, particularly whitewater rafting, the New River Gorge also attracts hikers, bird watchers, picnickers, and other visitors who seek a natural sanctuary from urban settings and modern day stresses. This breathtaking area has become a major attraction for ecotourists, and by drawing growing numbers of visitors to West Virginia, it helps to boost the tourism trade in other parts of our state.

West Virginians have long cherished the state's natural assets. But the true value of those assets is yet to be realized. As the ecotourism industry grows and visitors continue to frequent our hotels, motels, and inns; dine in our restaurants; patronize our shops; and partake of our services; our state's natural resources will continue to yield robust economic dividends for West Virginians well into the future.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Alcohol Advertising in College Athletics

Recently, Health and Human Services Secretary Donna Shalala urged members of the National Collegiate Athletic Association (NCAA) to sever their ties with the alcohol industry, and called on colleges to move to eliminate alcohol advertising from sporting events.

I second that motion. Advertising is the chief means by which the alcoholic beverage industry promotes itself and encourages the use of its products.

Confusion occurs when students, who should be focusing on academics and personal development, are surrounded by a tidal wave of promotions -- apparently sanctioned by some college and university officials -- that glamorize drinking. It is these kinds of mixed messages which overwhelm and distort the thinking of our nation's impressionable young people into believing that a rewarding and successful life somehow must include alcohol.

Increasingly, colleges and universities recognize alcohol abuse as among the most serious campus problems confronting students. According to recently reported statistics from the National Institute on Alcohol Abuse and Alcoholism, almost 90 percent of college students have used alcohol, and more than 40 percent binge-drink at one time or another. Just last year, the media reported several in-

cidents in which college students died due to alcohol poisoning or excessive inebriation. In Virginia alone, five college students died within a one-month time span in alcohol-related incidents.

Given these staggering statistics, I find it extremely disconcerting that the NCAA continues to depend upon the alcohol industry for sponsorship of intercollegiate athletics. Alcohol advertising at NCAA events, by inference, ties the consumption of alcohol to personal accomplishment, teamwork, and athletic competition. Colleges must not, on the one hand, encourage healthy bodies and wholesome minds, while, on the other hand, encouraging -- at least indirectly -- the use of alcohol. It is unequivocally evident that alcohol and sports do not mix, nor do alcohol and academics.

College should be a fulfilling experience -- an opportunity to learn and grow in preparation for one's future. The consumption of alcohol is counter to such goals, and I urge colleges and universities to explore other alternatives to the sponsorship and advertising of alcohol at sporting events and other campus activities, in order to preserve student lives and better encourage productive, enriching, academic pursuits. After all, universities and colleges are expected to be places of learning.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Rights vs. Responsibilities

Individual rights have always been important in this country. Parliament's refusal to recognize the rights of the American colonialists helped spark the American Revolution -- but, there is little actual precedent for the sense of "absoluteness" about personal rights that seems to have pervaded our country in recent years.

This current tunnel-vision focus on individual rights is contributing to a general misunderstanding about another equally important requirement of citizenship: responsibility. Responsibility is the all-essential partner to the exercise of one's individual rights. Just as mortar binds together the bricks of a building, responsibility must serve as the adhesive that supports a free society which, in turn, protects one's individual rights.

Children in this country must be taught that being a good citizen can never be just about being "free" and having rights. It is always equally about responsibility. Our nation is built on the principle of accountability and responsibility under our laws. A responsible citizen, therefore, is entitled to all of the rights given to him under the law.

An irresponsible citizen, however, who thwarts our laws may, in turn, experience a loss of some or even most of his freedoms.

Children are quick to learn by example that it is easier to shift blame than to

accept it, and that rights are, on the surface, more enjoyable than responsibilities. Parents must also understand that. While it may be easy to emphasize rights to their children, parents and teachers must also inculcate a sense of responsibility and accountability for personal actions in the young.

Responsibility includes using discretion and self-restraint in the conduct of one's rights. For example, while the First Amendment protects the right of citizens to express themselves, it does not also sanction language which endangers public safety.

Responsibility also means accepting blame and even punishment for one's unwise or illegal actions. It means taking charge of one's own life and contributing to one's community, one's nation, and one's family in a productive and beneficial way. Children must be taught that there is no free ride, and no substitute for the satisfaction and rewards that they will realize from setting high goals and working hard to accomplish them.

The concept of protected individual rights helped to make the United States unique among all of the world's nations. However, just as a building constructed of bricks without mortar cannot stand, a nation which emphasizes only rights, without stressing their corresponding responsibilities, will eventually topple.

By U.S. Senator Robert C. Byrd

Venipuncture and Home Health Services

Many West Virginians are concerned about a new federal provision that prohibits Medicare beneficiaries from qualifying for home health services based solely on their need for skilled nursing care for venipuncture (the drawing of blood).

On behalf of those West Virginians who may be affected by this provision, I have contacted the Health Care Financing Administration (HCFA), which administers the Medicare program, for clarification about the potential ramifications of this new provision. In response to my inquiry, HCFA has provided some guidance which may serve to allay some of the concerns of West Virginia's Medicare beneficiaries.

According to HCFA, Medicare enrollees should still qualify for at-home venipuncture services provided by a skilled nurse if they also qualify for skilled home care services other than the blood draws. Further, homebound patients who need to have blood drawn but who do not qualify for other home health services are entitled to the venipuncture services of laboratory technicians. Unfortunately, in rural West Virginia, the option of having a laboratory technician provide at-home services may not be a viable one.

Perhaps, as HCFA has indicated, many beneficiaries will still qualify for home blood testing. However, I am concerned that

many of those who truly depend upon these services may not receive the care they need, and that the health of those beneficiaries may consequently be jeopardized.

Recognizing the importance of home health care, the need for venipuncture services, and the difficulty for many elderly and disabled persons to travel to and from a physician's office, I have cosponsored a bill, S. 1580, that would reinstate, for a temporary period of 18 months, a beneficiary's right to qualify for home health services solely on the basis of needing skilled nursing care for venipuncture. That bill would also require a study of the impact on beneficiaries of eliminating the venipuncture provision and on potential fraud and abuse associated with the program.

I want assurances that patients, who are truly dependent on at home blood sampling, can receive that life-saving service.

In the meantime, Medicare beneficiaries who have questions about their home health benefits should contact their personal physician. Medicare requires the primary care doctor to determine the need for home health services and authorize a plan of care, which specifies the type of medical services required, the kind of health care professionals who will administer the care, and any home medical equipment needed.

The Senate's Role in Confirming Presidential Appointments

In devising our nation's constitutional system of checks and balances, the Framers specified that ambassadors, other public ministers and consuls, Supreme Court justices, and certain other officers of the U.S. would be appointed by the President "with the Advice and Consent of the Senate."

Over the years, the Senate's power to confirm or reject presidential nominees has given it an important means of checking presidential power. One of the most famous examples took place on March 3, 1843, when the Senate, in a single late-night session, rejected President Tyler's nominee for Secretary of the Treasury, Caleb Cushing, three times. While the first vote had been 19 to 27, the second was only 10 in favor to 27 against. Demonstrating dwindling support, the Senate concluded the matter in a third vote on that same evening, rejecting Cushing by a vote of 2 to 29.

In recent years, however, the executive branch has effectively undermined the Senate's "Advice and Consent" function by filling senior positions "temporarily" for months -- and sometimes years -- at a time. Presidents have been able to fill key positions with people who have not been considered, let alone approved, by the public's directly elected representatives in the Senate. This practice does not just short-change the Senate, it also allows unelected members of the executive branch to

escape the scrutiny of the American people.

There is a law on the books, the Vacancies Act, that limits such temporary appointments to no more than 120 days unless a nomination is made. This law, however, has been routinely ignored in recent years. Of the 320 federal departmental positions requiring confirmation, 59, or 18 percent, have been vacant or filled by "acting" officials for over 120 days without a nomination being made, in violation of the Vacancies Act. Some positions have been filled by "acting" officials for more than two years without anyone being nominated to fill them.

For these reasons, I recently introduced legislation that would strengthen the Vacancies Act. My bill would close the loophole through which federal agencies have avoided the 120-day time limit by mandating that the Vacancies Act supersedes all other provisions of law. Further, it would enforce the time limit by requiring that the pay for anyone temporarily occupying a position be cut off once the 120-day limit has expired.

It is time for Congress to state, in no uncertain terms, that no administration will be permitted to circumvent the Vacancies Act, or any other Act designed to safeguard our constitutional duties. If this legislation is enacted, I think we shall have struck a blow not only for the Constitution, but also for the people's liberties.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Giving New Life to Our Nation's Highways

The Senate recently passed the six-year highway bill, or ISTEA II, that authorizes federal spending for highway and bridge construction and transit systems across the country. This bill, which demonstrates a reversal in the federal government's chronic underinvestment in our national highway needs, may be the single most important piece of legislation that Congress will consider this year.

A total level of \$173 billion in formula funding for highways -- \$26 billion more than the level in the committee-reported bill -- was made possible by my amendment to the bill to authorize the spending of the portion of the gas tax which has been designated for highway needs, rather than allowing revenues from the 4.3-cent tax to sit idle, unused, in the Highway Trust Fund.

Thus, my amendment would ensure a higher level of transportation funding for every state in the nation. For West Virginia, it would mean more than \$1.5 billion in formula funding over the next six years -- approximately \$593 million more than the state received in the last ISTEA bill, enacted in 1991.

Also, with my amendment, the bill provides a total of \$2.19 billion for the 13-state ARC Highway system over the six years of the bill. West Virginia would receive \$330 million of that funding for ARC highways within the state.

By contrast, the committee-reported highway bill devoted just \$300 million over six years to the ARC system, or just \$7.6 million annually for West Virginia. At that rate, the system would not be completed until the closing years of the next century, if then. In addition, the highway bill -- because of my amendment -- helps to pave the way for eventual completion of the ARC Corridor Highway System. After years of working for a consistent approach to funding the 13-state Corridor Highway system, and having had to contend with a happenstance method that has left the system less than 78 percent complete 32 years after its approval by Congress in 1965, my amendment launches a reliable funding mechanism, making the ARC Highways eligible to draw down contract authority directly from the Highway Trust Fund.

By passing ISTEA II, the Senate has told the traveling public that the revenues collected at the gas pump from American highway users will be spent on the purposes for which they were collected; namely, the maintenance, upkeep, and expansion of our national highway and transit systems. Further, this bill will bring new life to our nation's highways, providing more money to improve safety, relieve congestion, reduce fatalities, and bolster commerce and economic opportunities throughout the nation.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Establishing a Commission to Study The Trade Deficit

Americans in recent years have been very focused on the federal budget deficit. Meanwhile, however, another deficit which should be of concern -- the worldwide trade deficit -- has grown dramatically with little notice.

Between 1970 and 1996, the U.S. merchandise trade balance shifted from a surplus of \$3.2 billion to a deficit of \$199 billion, and there are no indications that our trade deficit will decrease anytime soon. In fact, econometric forecasting firms indicate that the trade deficit will reach \$300 billion or more within the next ten years. By these estimates, unless something is done, our trade deficit will soon exceed the annual budget for the Department of Defense.

It is not clear what the particular reasons for this growing trade deficit may be, nor are the long-term effects of a persistently growing deficit well understood. Certainly, however, since the trade deficit reflects upon the ability of American businesses to compete abroad, the time for a detailed examination of the factors causing the trade deficit is long overdue. For that reason, I recently cosponsored legislation to establish a 12-member national commission to conduct a broad, thorough review of the growing U.S. trade deficit.

We need to understand the relationship between the

trade deficit and our overall economy. We need to find ways to accurately identify and quantify the effects of the trade deficit on our manufacturing capacity, the integrity of our industrial base, productivity, jobs, and wages.

This legislation, which I cosponsored with North Dakota Senator Byron Dorgan, requires the commission to make a detailed examination of the effects of the trade deficit and to identify alternative strategies for reducing the deficit, with a particular aim of retarding the migration of our manufacturing base abroad. The commission will be charged with recommending strategies necessary to the achievement of access to foreign markets -- strategies that will enhance the competitiveness and productivity of the U.S. and also improve the standard of living of our citizens.

It will only be when we truly understand the specific impacts of this large deficit on our economy that we will be able to formulate strategies to pursue the systematic reduction of the deficit. By establishing a commission to study the trade deficit, report its findings, and make recommendations based on its findings, the United States will take an important first step toward reducing the trade deficit and to better preparing our nation to compete in the emerging global economy of the next century.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Combating Underage Drinking

Underage drinking is one of our nation's most troublesome concerns, and it is a problem that too often leads to fatal consequences. According to the National Highway Traffic Safety Administration, 2,315 young people died in alcohol-related crashes in 1996.

A big hurdle which West Virginia and other states must overcome in their efforts to prevent the tragedies associated with underage drinking is the lack of available resources to ensure reliable and consistent identification checks for alcoholic beverage purchases. To help improve this important enforcement activity, I added an amendment to an appropriations bill last year to provide \$25 million to help enforce laws regarding sales of alcohol to youth, as well as laws concerning possession and consumption of alcohol by minors.

My amendment established the national Combating Underage Drinking Program, which is intended to help each of the 50 states to develop a comprehensive strategy to address underage drinking, including cooperation among states, communities, and private organizations, and coordination with other ongoing public and private efforts.

Under this newly initiated program, West Virginia and each of the other 49

states recently received \$360,000 to devote to efforts aimed at combating underage drinking. These federal funds can be used in a variety of ways in correlation to each state's own existing programs and particular needs. This funding, for example, could be used to crack down on establishments that are suspected of consistently selling alcohol to minors, to educate young people about the dangers of alcohol, or to generate greater public awareness about the legal issues surrounding consumption of alcohol by minors.

In too many communities around the country, young people are finding it all too easy to lay their hands on a bottle of booze. Children are walking into liquor shops and convenience stores with fake identification and walking out with real pints of pain and suffering.

This new program, which provides federal funding specifically to combat underage drinking, sends a clear message to the states that enforcement of underage drinking laws should be a priority. It is my hope that the new national Combating Underage Drinking Program, established through my amendment, will help spare families throughout the nation the kind of pain and misery that comes in pint-size bottles.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Crumbling Education

The Senate recently debated an education bill in which efforts were made to fund the rebuilding of our nation's dilapidated school buildings. This is an issue that merits attention and action since, according to the General Accounting Office (GAO), over fourteen-million students attend schools in need of major repair.

Crumbling school buildings are cause for concern. However, before the federal government takes on a new burden, that of providing massive amounts of scarce federal dollars for school construction, we should take a hard look at why our students are not performing well scholastically. Study after study has indicated that U.S. students perform below their peers internationally, and that their performance in all subject areas is substandard. That is deplorable. Reasons much more fundamental than aging school buildings underlie the poor academic performance by American students.

Despite the ever-increasing amounts of money being poured into education, we are losing the battle against mediocrity. I am 100 percent for education, but I want some confidence that my vote to spend additional hard-earned dollars of taxpayers will do the job of producing better students. As recent tests demonstrate, merely pouring more money

into education programs has not solved the problem of improving the quality of our nation's students. When I started out in a two-room schoolhouse, it lacked high technology, even indoor plumbing and electricity. Yet, we learned the education basics that carried this nation to its current economic prosperity and its status as a technological innovator.

I believe that something much more fundamental is at the root of our education problems. If America ever hopes to improve the quality of her students, we must correct the shallow, substandard, often poor quality of education offered to our nation's children today.

Schools need far better discipline than is the case today, especially in urban schools. We need quality teachers who receive pay that is commensurate with the important responsibilities they carry in the education of our children. And we need textbooks that inform and challenge, rather than the worthless amalgams of touchy-feely, politically correct twaddle that fill student backpacks today. Parents need to get informed and get involved. Many schools do need modernization or repair, but let no one believe that school construction programs alone will solve all that is wrong with education in America today.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

West Virginia's Crime Rate the Lowest in the Country

West Virginians have new evidence showing that our state's reputation for integrity and safety is fully deserved. That evidence comes from the recently released 1996 Uniform Crime Report, which, for the 24th year in a row, ranks West Virginia's crime rate as the lowest in the country.

According to the report, the incidence of murder, rape, robbery, and breaking and entering declined in West Virginia, while the total number of offenses statewide remained, at 2,485 per 100,000 residents, remarkably low. Still, the report does suggest some reasons for concern. West Virginia's crime rate is up slightly over the previous year, bucking a national trend of decreasing crime. Of particular concern is a 4-percent increase in West Virginia's violent crime rate, in the face of a 6-percent drop nationwide in violent crime.

While I applaud the latest statistics, we should do more to prevent criminals from making additional inroads into West Virginia. That is why I am a strong supporter of federal programs aimed at fighting crime. In fact, in 1994, when a massive anticrime bill came to a standstill due to a lack of sufficient funding, I created the Violent Crime Reduction Trust Fund. That trust fund supports many critical federal law enforce-

ment programs called for in the 1994 bill, ensuring a stronger arsenal for fighting crime in West Virginia and across the nation.

One of the notable successes of that bill was the establishment of the Community Oriented Policing Services (COPS) program -- an initiative intended to put an additional 100,000 police officers on the beat by the year 2000. As of March, the Department of Justice reports that 70,000 new police officers have been hired through COPS and claims that the program is largely responsible for measurable reductions in crime.

The trust fund also made possible the construction and operation of new prisons, drug enforcement programs, improved security at our nation's borders, and implementation of new programs aimed at combating violence against women.

While West Virginia has benefited from all of these programs, such initiatives could not succeed without a foundation of values that includes respect for law and order. West Virginians have traditionally been a law abiding people, resilient, honest, and God fearing. This is a tradition in which we should all take pride, and I expect that as long as it continues, West Virginia will continue to be the most crime-free state in the union.

By U.S. Senator Robert C. Byrd

High-Tech Protection From High Waters

Flooding can strike with unexpected ferocity in West Virginia's narrow river valleys, making every minute count in the race against Mother Nature's unbridled will. Entire West Virginia communities have been devastated by unrestrained floodwaters, and many citizens continue to live under an ever-present threat of flooding.

Concerned for the welfare of West Virginians who must contend with that threat, I have worked on the federal level to help communities throughout West Virginia protect themselves from flooding. One of the initiatives I have supported is the Integrated Flood Observation and Warning System, or IFLOWS, which is designed to monitor rainfall and give residents of flood-prone areas the additional warning time they may need to help save lives.

IFLOWS consists of a series of gages that measure the amount of rainfall in a given area. It was developed by the National Weather Service to help reduce the annual loss of life from flash floods, and limit property damage. The program began operations in 1981 with the installation of prototypes in Virginia, West Virginia, and Kentucky. While federal funding provides for the construction of the gages, system operation and maintenance are the responsibility of the state government.

Recently, I announced the completion of two new flood warning systems along the Cheat and Greenbrier Rivers. The addition of gages along these rivers -- a result of my addition of \$1 million to appropriations bills in 1995 and 1997 -- has allowed for the expansion of IFLOWS into the Automated Flood Warning System network. The network integrates and shares information from approximately 250 computers and 1,500 sensors in the 12 states where the technology is now in use.

The sophisticated signaling devices that make up the network allow for constant monitoring of rainfall and fluctuations in the level of water in streams and rivers. By providing timely and accurate information about rising waters, this system enhances the capability of the National Weather Service to predict floods, giving emergency personnel and residents critical lead time to prepare for evacuations. The Automated Flood Warning System network should provide a tremendous sense of relief to the residents of communities along the Cheat and Greenbrier Rivers and its tributaries that are vulnerable to rapidly rising floodwaters.

Thanks to high technology, mankind is finding ways to minimize the dangers posed by Mother Nature's wrath.

Thoughts on the Death of a Friend

With countless West Virginians, I am saddened by the recent death of my longtime friend and colleague, Senator Jennings Randolph.

Jennings Randolph was a man possessed of a deep love for West Virginia and our nation.

An educator, writer, public speaker, an aviation enthusiast, a corporate executive, a U.S. Representative, and a U.S. Senator, Jennings Randolph possessed many talents.

He was a man of seemingly boundless energy and limitless horizons. Both in government and in his several other fields of interest and expression, Senator Randolph seemed constantly to be looking for ways to assist other people to achieve their own potential, or for avenues by which others might attain a better life for themselves.

In 1932, Jennings Randolph was elected to the U.S. House of Representatives, where he served until January 3, 1947.

After twelve years, in 1958, he returned to national politics, winning election to complete the unexpired term of the late Senator Matthew Mansfield Neely.

West Virginians will long be indebted to Senator Randolph for the outstanding work that he did on the Senate Environment and

Public Works Committee and for projects that he pioneered through the Appalachian Regional Commission -- an effort of which he was a sponsor and a moving spirit.

Among his lesser known accomplishments was Senator Randolph's authorship of the legislation that created the National Air and Space Museum complex on the Mall in Washington -- noted today as one of the most popular tourist attractions in the Nation's Capital.

Jennings Randolph was responsible for numerous other types of important legislation as well -- legislation to aid the handicapped and black lung victims, to promote clean water and clean air, to provide vocational and career education, and to create the National Peace Academy in 1983.

In announcing his decision not to run for reelection to the Senate in the 1984 race, Jennings said, "It's been a happy road. I have no regrets....I believe the Bible says there is a season and a time for every purpose. It is time for me not to run for reelection."

Certainly, Jennings Randolph's career was a "happy road" for West Virginia, and I know that all of the people of our state join me in paying tribute to the memory of this great West Virginian.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Safe to Serve Food

Compared to the citizens of many other countries, American consumers enjoy a virtual smorgasbord of foods available in their local supermarkets. In recent years, however, outbreaks of food-borne illnesses have raised a number of alarming questions about the safety of the U.S. food supply. Not only are Americans getting sick from eating contaminated food, but an estimated 9,000 deaths also occur annually in this country as a result of food-borne illnesses.

Beyond the problems associated with domestic foods, the expanding importation of foreign-grown fruits and vegetables presents new and worrisome challenges for the U.S. food-safety system. For example, in 1996 and again in 1997, outbreaks of food-borne illnesses in the United States were traced to raspberries imported from Guatemala that had been contaminated with the parasite cyclospora. In another untoward case, radish seed sprouts from the Far East were found to be infected with a strain of *E. coli*, a bacterium that has gained notoriety in recent years as the cause of highly publicized and, in some instances, rather mysterious outbreaks of serious, and sometimes fatal, illness.

Over the last decade, importation of foreign foods has almost doubled in the

U.S., with nearly 40 percent of fruit consumed in this country coming from abroad, and imported vegetables accounting for 12 percent of U.S. vegetable consumption.

To help ensure the safety of American consumers, I recently cosponsored a bill that would provide the Food and Drug Administration (FDA) with new authority to strengthen its oversight of imported foods. Current efforts to prevent the importation of contaminated foods are concentrated at ports of entry, and only a small percentage of imported foods are inspected or tested. The new food safety bill would allow the FDA to take a more proactive approach, extending the focus of the agency to include consideration of the conditions under which imported food products are grown and processed. This would greatly enhance the FDA's ability to identify potential hazards before tainted food reaches our borders.

The bill I have cosponsored will help to ensure that as our fruit, vegetable, and other food imports increase, the health and safety of American consumers are not jeopardized by flawed food-safety systems in other countries. American consumers have a right to expect that the food they put on the family table is safe to serve.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Many Americans Lack Basic Reading Skills

Reading is one of the most important and rewarding human activities. It exercises the imagination, expands the mind, and enriches the soul.

Sadly, however, a recent report by the National Institute for Literacy found that as many as 44 million American adults perform at the lowest of five levels of literacy.

While persons scoring at this level can perform many tasks required to interpret basic documents, they typically have problems using the reading, writing, and computational skills that are considered essential in everyday life. Many are unable to perform such simple tasks as locating an intersection on a street map.

That study placed West Virginia sixteenth from the bottom in a ranking of states by literacy rates. Overall, it found that around one in every five West Virginia adults, or 20 percent, lack basic reading skills. Nationally, illiteracy rates ranged from 11 percent to 30 percent of the adult population in each of the 50 states.

The study also found a strong correlation between reading ability and economic status. Forty-three percent of U.S. adults with the lowest literacy skills live in poverty, compared to just four percent of those with

the most advanced literacy skills.

Clearly, in order to enhance the economy of our state and ensure the economic security of future generations, more attention must be directed toward the problem of illiteracy. The solution, however, will not be a simple one. Raising literacy rates throughout the nation will require commitment and great effort.

Parents need to read to their children. The love of reading is cultivated in the lap of a parent well before a child reaches school age.

Schools need to do their part, too. When college professors or high school teachers find students in their classrooms who lack the ability to read or write, obviously, something is terribly wrong with our schools.

I have always supported funding for education at the federal level, but the failure of students to demonstrate basic reading and writing skills makes me question the wisdom of putting more and more federal funding into an educational system that is producing a lower quality of students.

The high illiteracy rates reported by the National Institute for Literacy help to underscore my long-held contention that our schools need to get back to the basics! It is time for all parents to get informed and get involved.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

America's Children Are Flunking History

Cicero, a great Roman Senator, said: "To be ignorant of what occurred before you were born, is to remain always a child."

Recent studies suggest that we are failing in our efforts to teach our children history. If so, we may soon hand over the reins of leadership to a generation that is ill prepared to steer the nation to continued success.

Since time immemorial, individuals have entertained and instructed one another by passing on stories about past events and people. It has long been understood that knowledge of the mistakes and successes of the past enhances the ability to understand the present and set goals for the future.

According to a 1994 study, however, only 17 percent of fourth graders, 14 percent of eighth graders, and 11 percent of twelfth graders, nationwide, are proficient in U.S. history. Half of the twelfth graders surveyed lacked basic history skills, as did one in three of the fourth and eighth graders.

A more recent report by the Fordham Foundation may help to explain why so many American students know so little about history. According to that report, which graded states on the quality of their history standards, thirteen states appeared to have no standards at all, and nineteen more states earned an "F" for their

poor standards. West Virginia, with a "C" rating, was ranked among the 10 best states.

How can we ensure that our children learn history? First, we need to prevent history from being lumped into a mishmash of different disciplines and served up under the name "social studies."

Second, states need to develop intelligent and comprehensive standards for teaching history, and to ensure that sufficient resources are provided to attain those standards. Teachers, however dedicated, cannot be expected to teach history effectively without adequate resources and support.

Parents, too, can play a key role in ensuring that their children get a solid grounding in history by finding out whether their state has history standards, and, if so, whether those standards are up to the task. They should also monitor their children's textbooks. To my dismay, I have seen a great many history textbooks in recent years that are pure junk. The great heroes of our past are often relegated to mere footnotes, buried in the pages of books aimed at entertaining, rather than informing.

Children must know and understand the past, else they will never be able to lead this country successfully into the future.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Paving the Way for a Better Future

For too long, the federal government has underinvested in our nation's highways. Now, with enactment of a new highway reauthorization bill, known as TEA-21, an important step has been taken toward fixing past mistakes and assuring Americans of safer, more modern highways.

Thanks to an amendment I authored to the highway bill, a portion of the federal gas taxes which had previously been allowed to accumulate, unspent, in the Highway Trust Fund will now be spent on highways. As a result, all of the federal taxes Americans pay at the gas pump will now be spent for the purposes they are collected; namely, the upkeep and expansion of our national highway and transit systems.

Also as a result of my amendment, the Appalachian Regional Commission (ARC) Corridor Highway system stands to receive \$2.25 billion over the next six years. My amendment not only provides an infusion of funding to the Corridor Highways over the course of TEA-21, but it also serves as an all-important foot in the door to help ensure that a consistent and reliable source of funding will be available in future years to bring to completion the 13-state system. Of the total ARC funding, West Virginia will receive about \$345 million for continued

construction of Corridor H in Eastern West Virginia and Corridor D in the Parkersburg area.

The struggle to build the Corridor Highways, first authorized in 1965, has been as uphill as the mountains of Appalachia, but my amendment has given renewed momentum to the effort to complete the 3,025-mile ARC system.

Working with U.S. Representative Nick Rahall -- who, as the ranking member of the House Surface Transportation Subcommittee, was a driving force during conference negotiations on the bill -- I also pressed for the inclusion of funds for other important highways in West Virginia. These include \$22.69 million for the Coalfields Expressway; \$50 million for West Virginia Route 10 from Logan to Man; and others throughout the state.

In addition to highways, TEA-21 provides funds for transit programs in our state. For example, at my request, the bill contains \$10 million to improve bus service throughout the state and authorizes funding for the modernization of the Personal Rapid Transit (PRT) system at West Virginia University in Morgantown.

With enactment of the new highway bill, West Virginians can take comfort in the knowledge that the future promises better, safer travel.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Acknowledging Academic Excellence

Every year at this time, high schools across West Virginia and the nation hold graduation ceremonies, heralding the successful completion of many years of academic training for our students. Many of them are preparing to continue the journey in colleges and universities, building on the foundation of knowledge they have gained from kindergarten through the twelfth grade.

Because of my own experiences, I have a special interest in encouraging others to make the necessary sacrifices to earn a college diploma. Toward that end, I have initiated two programs that reward students who exhibit scholastic excellence.

The first of these programs reached an important milestone this year. The Robert C. Byrd Scholastic Recognition Award program annually confers a \$50 U.S. Savings Bond upon each valedictorian of the graduating classes of West Virginia's public, parochial, and private high schools, and the Schools for the Deaf and Blind at Romney.

This is the thirtieth year for the Robert C. Byrd Scholastic Recognition Award. In that time, I have awarded 8,133 West Virginia students more than \$186,000 from the private trust fund that I established.

Another program I established to provide encouragement and financial assistance to studious young people is the national Robert C. Byrd Honors Schol-

arship program. Too many scholarship programs often overlook our nation's brightest students, because the reward of academic excellence is not always the priority of such programs. When I started the program in 1985, it awarded one-year, \$1,500 scholarships to students who demonstrated outstanding academic achievement and who had been accepted for enrollment at an institution of higher learning. My Senate colleagues named this scholarship in my honor. In 1993, the program expanded to provide four-year scholarships, making students who receive the first-year scholarship eligible to apply for stipends for the following three years.

This year, 40 West Virginia high school seniors have been selected to receive the national scholarship, bringing to 520 the number of West Virginia students who have been awarded the scholarship since it was first established.

Too often, scholarships are awarded on the basis of excellence on a playing field, and not enough priority is given toward excellence in the classroom. Through the Byrd Scholarship and the Scholastic Recognition Award, students who succeed in the classroom receive the acknowledgment they deserve.

I congratulate all of this year's winners, and I wish them every success in the pursuit of their education in the years ahead.

Helping Business Reach the Cutting Edge

Many of America's factories have been slow to incorporate computers and robotics into their manufacturing processes, lagging behind some foreign competitors. Today, that is changing, as American industry increasingly goes high-tech. But, thus far, most efforts in that direction have come from the nation's big manufacturers. Smaller manufacturers, with an equal need to harness new technology, have not kept pace, lacking the resources to make the leap to cutting-edge production.

The Robert C. Byrd Institute (RCBI) for Advanced Flexible Manufacturing, a unique blend of academia and industry working together, is helping small-and medium-sized manufacturers to harness high-tech change.

Since it was launched at Marshall University in 1989 with \$2.9 million in funding I added to an appropriations bill, the RCBI has aided a growing list of companies in making the high-tech transition, with an emphasis on defense-related manufacturing.

Today, the Byrd Institute's four West Virginia locations are "teaching factories," where a manufacturer and its employees can obtain low-cost, hands-on experience and training with the automated equipment that they need to be competitive.

Now, in a dramatic step toward the future, the RCBI has invested \$11 million in funding I added to appropriations bills for new state-of-the-art equipment at its four locations, bringing cutting-edge technology within easy reach of more West Virginia

manufacturers.

The Byrd Institute's downtown Huntington facility is in the final stages of a \$1 million renovation and expansion.

The RCBI Charleston Technology Center, operated in partnership with the Marshall University Graduate College, serves manufacturers throughout the Kanawha Valley.

Meeting the needs of North-Central West Virginia's growing aerospace industry is the primary goal of the RCBI Bridgeport Technology Facility. With funding that I have provided through the federal appropriations process, Bridgeport has evolved into a center of aerospace and aviation activity, and the new RCBI facility is dedicated to helping promote that industry's continued growth in the region.

The Byrd Institute's Rocket Center Technology Facility in Mineral County addresses the needs of manufacturers in West Virginia's rapidly growing Eastern Panhandle. Housed at the Allegany Ballistics Laboratory -- a Navy-owned, contractor-operated plant -- this fourth RCBI location focuses on metals manufacturing and fabrication.

The future of our state and nation depends upon the ability of our private sector to compete economically in the global arena. The Robert C. Byrd Institute for Advanced Flexible Manufacturing exemplifies how government and academia can help industry to prepare our nation for the economic challenges of the approaching millennium.

Expanding Preventive Care for Seniors

Health care costs have risen sharply, often placing quality care out of the budget for senior citizens, delaying checkups and preventive care. To reverse this trend, I supported efforts in last summer's budget resolution to provide Medicare coverage for preventive care for the 331,000 West Virginians who rely on the program.

In January, Medicare started covering annual mammograms for women aged 40 and over. The program also expanded coverage for colorectal screening. Beginning this month, preventive coverage will include the cost of bone mass measurement screening for certain Medicare-eligible women at high risk for osteoporosis.

Also this month, Medicare will begin to pay for certain training, education, and testing services to help diabetics learn to manage their disease, and will extend its coverage of self-testing equipment, currently provided to juvenile diabetics, to include Type II diabetics.

This new step is especially important for the 100,000 West Virginians who have diabetes, of whom only about half have been diagnosed. Many learn of their diabetes only after developing one of its many devastating consequences.

That is why preventive care is so important. The American Diabetes Association reports that more than 4,000 West Virginians die every year from diabetes and its complications. If those cases were diagnosed

earlier, doctors might be able to save many lives. A diagnosis of cancer in an early stage of that disease also helps to increase the chances of survival.

Preventive Medicare coverage complements programs already in place in West Virginia. For example, the annual mammogram coverage is an excellent partner for the statewide breast and cervical cancer prevention, education, and screening project. This initiative, launched in 1990 with \$5 million I added to an appropriation bill, offers screenings to West Virginians who otherwise might not have access to such tests.

In addition, researchers at the Robert C. Byrd Cancer Research Laboratory, part of the Mary Babb Randolph Cancer Center at West Virginia University, are constantly looking for new cancer treatments. The Center is West Virginia's first statewide cancer research and treatment facility, and was established in part with \$13.3 million I added to appropriations bills in 1985, 1986, and 1987.

When medical problems are identified early, they can be handled more easily and usually at lower cost. However, if the problems are not diagnosed early, the treatment often becomes more costly and complex. By expanding Medicare's coverage of preventive care and treatment, we help to improve the health and quality of life of our citizens.

Be Aware When Rebuilding From Floods

Once again, West Virginians are cleaning up from a round of severe flooding that has exacted a heavy toll from our people and our state. I know from past disasters that as families begin to put their lives back together, they will need the support and assistance of their friends and neighbors throughout West Virginia, as well as individuals from across the country.

Unfortunately, sometimes there are unsavory individuals who offer help only to help themselves to the hard-earned money of unsuspecting people in need. Posing as skilled laborers, these scam artists will promise to repair damage to homes and businesses, but never deliver on those promises. Their only real skill is knowing how to bilk disaster victims in their time of trouble.

To protect yourself, as you hire a contractor to repair or rebuild your home, keep these thoughts in mind.

Check the contractor's background and reputation. Call the West Virginia Attorney General's Consumer Protection Hotline at 1-800-368-8808 to determine the contractor's complaint history. You can also contact your local builders' association or building trades council as sources of information.

Always ask for references. Contractors who want to work on your home should be willing to provide you with the names and phone numbers of previous

customers.

Make sure the contractor is insured. Be sure the contractor you hire has workers' compensation and disability insurance. You could be liable for accidents on your property if the contractor is not properly insured.

Ask for a written estimate. Make sure your request and the estimate include everything you expect the contractor to do.

Ask for a contract. It might be worthwhile to get legal advice before you sign.

Do not pay in advance. Hold all or a substantial portion of your payment until work is completed and accepted by you.

Having witnessed the devastation caused by numerous floods over the years, I have observed that flood protection and prevention are key priorities. In recent weeks, I have secured more than \$23 million for flood control and prevention initiatives throughout West Virginia. Ranging from dam repair to statewide flood prevention planning, these efforts will help to save lives and protect property for West Virginians living along flood-prone creeks and rivers.

It is my hope that, through these and other measures I have supported with federal funding, West Virginians will be better protected from flooding in the future.

Insuring Against Flood Losses

As West Virginia is heavily involved in rebuilding and recovering from this latest round of severe flooding, we are all reminded of the need for flood insurance. Homeowners' insurance policies do not cover flood damage. Too many people learn this fact only after the floodwaters have ripped through their homes, which is why it is so important to carry flood insurance.

In the spring of 1997, when heavy rains caused destruction in 16 West Virginia counties, more than 3,700 people applied for disaster assistance from the Federal Emergency Management Agency. Of those claimants, fewer than nine percent had flood insurance.

The National Flood Insurance Program (NFIP) licenses insurance agents and companies which then make flood insurance available to people living in communities that adopt and enforce flood plain management plans. In West Virginia, 262 communities participate in the NFIP. Residents can purchase flood coverage through any licensed property insurance agent who is in good standing with the West Virginia Department of Insurance.

Premiums vary according to the property's flood risk, the amount of coverage purchased, the deductible selected, and the type of building being insured. Across the country, the average premium is about

\$300 a year for about \$98,000 in coverage. The policies can cover homes, apartments, and other types of residential and commercial property.

Until the late 1960's, most property owners could not purchase insurance against flood damage. Private insurance firms, afraid of the potential for catastrophic losses, did not want to assume the financial risk alone. In 1968, Congress took steps to lift that burden by creating the NFIP to provide affordable insurance to people who live in areas with the greatest risk of flooding.

In 1996, the Flood Insurance Program almost ended. However, I cosponsored an amendment to a federal funding bill that extended the program's authorization. Since then, the NFIP has been able to move ahead and provide affordable insurance coverage to people living in high-risk areas.

I have seen the destruction caused by flooding in West Virginia. In many cases, victims never imagined that a flood would strike their home, and the damage is often not severe enough to warrant a federal disaster declaration. Flood insurance is the best way to ensure that you will be compensated for any losses that occur, no matter what the strength of the floodwaters.

Supreme Victory over the Line-Item Veto

All Americans should breathe a sigh of relief that the U.S. Supreme Court, in its recent ruling, has found the Line Item Veto Act unconstitutional, because the Court, in so finding, has spared an American birthright for yet awhile longer.

When the Framers of the Constitution met in Philadelphia in 1787, they painstakingly crafted one of the simplest, yet most enduring documents ever printed -- its central notion being that the power of the United States government ultimately rests in the hands of its citizens. Thanks to their familiarity with history and philosophy, the Framers knew that power concentrated in the hands of one individual or one branch of government poses a direct threat to personal liberty. Accordingly, they devised a complex system of divided powers in the expectation that future generations would understand and respect the intimate link between the organization of government and the protection of their own liberties.

Essential to that system of divided powers, the Framers realized, was the vesting in Congress -- the people's branch -- of the power over the purse. That power, they recognized, would provide the Congress, and through it the people, with an important check on the executive and judicial branches of government.

I believe that Justice Kennedy put it well when, in concurring with the majority opinion of the Court, he wrote, "By increasing the power of the President beyond what the Framers envisioned, the [line-item veto] statute compromises the liberty of our citizens, liberty which the separation of powers seeks to secure." His words echo those of the 18th century philosopher Montesquieu, who wrote, "When the legislative and executive powers are united in the same person, or in the same body of magistrates, there can be no liberty...."

The Framers took seriously the tyrannical threat posed by vesting too much power in one man or one body, and they took pains to guard against that threat.

Our Constitution embodies their vision, their dream of freedom, supported by the genius of practical structure which has come to be known as the checks and balances and separation of powers. If the fragile wings of that structure are ever impaired, then the dream can never again soar as high.

For me, a long, difficult journey is happily ended. The wisdom of the Framers has once again prevailed, and the slow undoing of the people's liberties has been halted, at least for now.

Bringing Families Back Together

Summer's glorious skies and longer days bring with them vacations, picnics, and that most American of traditions: the family reunion. Reunions provide an opportunity for family members to come together in celebration of their common roots and heritage and to preserve the traditions that make our state unique.

Throughout the summer months, legions of native West Virginians, many now residing out of state, journey back to the old home place, making the annual reunion the centerpiece of their family vacations. On almost any summer weekend, West Virginians perched on old porch swings witness the passing by of family cars, following familiar country roads, drawn to fellowship, fresh air, and down-home cooking.

From vans and trucks and cars pour giddy children, glad to be free, at last, to roam and romp in cool mountain air. Tables scattered under the graceful branches of old sycamore, oak, and maple trees overflow with lovingly prepared casseroles, steaming baked beans, creamy potato salads, flavorful home-grown tomatoes, and, of course, that favorite pie from the old family recipe, a closely guarded secret.

Before anyone lifts fork to lips, a family elder calls on the Creator, offering thanksgiving for the blessings of the past and asking for future blessings.

Well fed adults doze in the warm afternoon sun, while the unofficial family historian takes a seat on an old oak stump to tell once more the oft-repeated family tales. These shared stories, passed down from generation to generation, help to instill in the children a respect for their forebears and for the "old values" that are the cornerstones of a good and happy life.

Later, revived by the breeze and the spray of a cool brook, cousins choose sides for a baseball game. Sack races and water balloon tosses keep the youngest entertained. The sound of laughter and happiness echoes around the mountain.

When shadows grow long on the verdant hills, the packing begins for the journey home. Those gathered depart, each with the certain knowledge that, as West Virginians, they are specially blessed. Fond memories of the day spent reminiscing and rejoicing with kith and kin will linger throughout the year.

This summer, as hundreds of Mountain State families reunite to give thanks for their blessings and to share the stories of their forebears, let us also take time to reflect upon our own family's beginnings, and to celebrate the special way of life enjoyed by those who are fortunate to call West Virginia home.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Back to School

Classrooms around West Virginia soon will be buzzing with activities as another school year gets underway. In these waning days of summer vacation, it is a good time to take stock of the many achievements of our students and educators, and to consider the steps that may need to be taken to meet the challenges that lay ahead.

During the 1997-98 school year, West Virginia, for the second year in a row, posted the highest marks for education of any state in the nation in the "Quality Counts" report released annually by Education Week magazine. West Virginia tied only with Connecticut for top honors in the study, which grades states on standards and assessments, quality of teaching, school climate, and adequacy, equity, and allocation of resources. In another impressive achievement, West Virginia was one of just seven states reported to have made significant gains in the national fourth grade mathematics test.

The National Geographic Society, earlier this year, recognized West Virginia as a national model in geography education. National Geographic Chairman Gilbert Grosvenor hailed the state as "one of the best examples in the country of putting essential geography into a statewide system." Moreover, the Fordham Foundation, a private organization committed to quality-based school reform, recently listed West Virginia

as one of only six states to receive honor grades for adopting clear, comprehensive, and rigorous standards for geography education.

These are impressive successes that deserve high praise. But West Virginia, like every state, continues to face a number of challenges in the effort to provide the best possible education for our children.

In today's global environment -- where technology has bridged the once-imposing barriers between countries and continents -- students in Weirton, or Moorefield, or Spencer are not merely competing with students in neighboring counties or states. They are competing with students in Osaka, Japan, and in Stuttgart, Germany, and other cities around the world, and that means they need world-class educational programs.

Improving education is not a matter of throwing more money into the education pot, or trying the latest education gimmick, or lowering standards so that all students can devolve to the lowest common denominator. It is a matter of getting back to the basics, instituting real discipline, setting high standards, and encouraging excellence.

West Virginia's students and educators deserve a pat on the back for their recent achievements. Now they must take that progress and strive for even greater successes.

Cracking Down on Deadbeat Parents

Instead of the traditional two-parent, "Ozzie and Harriet" family of thirty years ago, many families today are often led by a single parent. In an age when divorce is far too prevalent, it is not uncommon to see a single parent struggling to raise children while working full time. Unfortunately, many of these single parents must bear an additional burden created by the other parent who has deserted his or her responsibility to contribute to the children's well-being.

In June, I supported legislation, which was recently signed into law, to crack down on delinquent parents. The Deadbeat Parents Punishment Act closes loopholes which had previously allowed parents to slip across state lines to avoid paying child support. Specifically, the new law creates a first-time felony offense for parents owing \$10,000 or more in child support payments, or being delinquent for two years. In addition, it is now a felony for a parent to cross a state border with the intent of evading child support when the amount owed is \$5,000 or more, or is more than one year past due.

The new law toughens legislation I supported that passed the Congress in 1992. The Child Support Recovery Act made it a misdemeanor to purposely avoid making child support

payments to a child in another state. In the five years since that law was enacted, child support collections have increased by nearly 50 percent.

Delinquent parents should not be allowed to neglect their responsibilities to their children. Too often, the lack of full and timely child support can place families in financial jeopardy. It can cause the responsible parent to have to choose between paying a month's health insurance premium or paying the rent. In many cases, it can leave the family in dire economic straits. On occasion, the parent raising the children is forced to work overtime hours or get a second job to make up for the financial shortfalls the family faces, only to forfeit the precious time needed to supervise children's activities and provide emotional support and moral guidance.

The Congress cannot force a person to be a loving, involved parent, but it can strengthen the government's ability to make parents fulfill their minimum legal responsibility to provide financial support for their children. The deliberate evasion of this basic obligation ought not to be tolerated. Delinquent parents, not their children, should be punished for the deplorable decision to avoid paying child support.

Political Incorrectness

America has always had an uncanny ability to absorb people of different races, religions, nationalities, and abilities, and to inspire them to embrace the ideals of freedom and work toward the common good of the nation, without destroying their individuality.

But today's trendy, misguided urge to vigorously emphasize in contemporary thought and speech, not the value and worth of individual differences, but the inoffensive security of "sameness," seems to me to be going against the time-honored grain that has fostered the successful development of a richly diverse, yet united, nation.

In order to avoid offending anyone in any way, we have come up with such linguistic acrobatics as Chair to replace the title of Chairman. I hear this expression repeatedly as people struggle in vain to find a politically correct way to address the person who chairs a committee or the person occupying the Senate President's chair at the front of the chamber. Carried to its logical conclusion, the absurdity of political correctness becomes abundantly apparent.

For instance, what, in perfectly politically correct phrasing, do we conjure up to replace such expressions as "manhole cover", "manhood", "man-hour", "manhunt", "man overboard",

"manhandle", or "fireman"?

We should all stop this unhealthy preoccupation with political correctness and seriously consider for a moment what effect it has had on the content of public dialogue in general. In order not to risk offending anyone, we tend to ignore all of the truly valuable and important aspects of each individual, such as brainpower, level of achievement, talent, or quality of character.

On a more subtle level, political correctness has encouraged us to become much less honest with one another and with ourselves and, as a result, much less willing and able to come to grips with the troubling problems which beset our land. Often, in our tortured efforts not to offend anybody, we in public life mentally partition our population, obscuring the inarguable fact that we are all citizens of the United States of America and that our fates -- and therefore the fate of the entire nation -- all hang together.

Personally, I hope that political correctness will soon go the way of high-button shoes or the lace-up corset. It is shopworn window dressing, far too constricting for a fast-moving, difficult age, crying out for courageous leaders, frank discussion, and innovative solutions.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Blessed Are the Hands of Toil!

Every September, Americans celebrate Labor Day, a homage to the working men and women who helped to build the United States into the economic powerhouse that it is today. We honor the backbreaking toil that laid the first railroad track, dug the harbors and the ports, channeled the rivers, welded the steel-girded backbone of skyscrapers, and constructed so many more marvels that have forever changed our lives.

In West Virginia, back-breaking toil and labor have never been strangers, whether in steel or glass production, logging, timbering, or manufacturing. The bedrock of West Virginia's economy has long been rooted deep in coal seams, reaching below the earth's surface where men toiled in hard and dangerous jobs. Labor unions were critical in helping to bring about humane working conditions in the deep abysses of these mines. Thanks largely to the efforts of labor organizations, the pay and benefits have come to more nearly reflect the skills and courage needed to perform the job.

West Virginia's past is written across the surface of her mountains as well, in the roads that wind through narrow hollows where the settlers scratched out small homesteads, in the wakes of laden barges coursing along her rivers, and in the rail lines that loop along steep valley walls. Quiet, deter-

mined men and women helped to make all this possible.

Technological advancements are shaping West Virginia as well. We do not have Silicon Valley, but we have Software Valley, an initiative aimed at helping West Virginia companies to better compete in the global high technology arena. Mountaineer Doctor Television enables doctors in rural areas to consult across the miles via computer links with medical specialists in Morgantown and Charleston. West Virginians are harnessing new manufacturing techniques, exploring alternative energy uses, and developing more efficient and environmentally friendly methods of producing the foods that Americans put on their tables.

I am proud to honor the workers of the United States and of West Virginia. By their sweat, skill, and intellect, they have helped to make this country a land of prosperity and of promise. Here, it is still possible for a good idea and sheer hard work to pay off, both for an individual and for the economy. That possibility, that opportunity, has kept the flame of optimism alive through good times and bad, and is at the core of our national belief that any problem, any challenge, can be met and overcome by hard work.

Hanging Up on Telemarketing Scams

For many years, telemarketing fraud has been a problem for citizens in West Virginia and across the country, especially for seniors. One of the most prevalent white-collar crimes in the country, telemarketing fraud robs honest people of an estimated \$40 billion a year. As one telemarketing con artist explained to The Washington Post recently, the scams are not very difficult to create: "People are so lonely, so tired of life, they can't wait for the phone to ring. It's worth \$300 to \$400 to them to think that they've got a friend. That's what you play on." But now, seniors are fighting back!

In a unique partnership, the Federal Bureau of Investigation and the American Association of Retired Persons (AARP) have teamed together in an operation called Senior Sentinel to catch these fraudulent telemarketers in the act. Retired law enforcement officers and volunteers, recruited by the AARP, go undercover to record the "sales pitch" of the scam artist. In the last five years, the senior volunteers have taped about 11,000 conversations with scam artists. These tapes and other law enforcement efforts have resulted in the criminal prosecution of more than 1,000 people on federal charges.

The Senior Sentinel volunteers have helped to

identify a wide variety of phony telemarketing approaches ranging from fake charities and investment schemes to the so-called premium promotions in which people are guaranteed one of four or five valuable prizes. Once enticed by the prospect of a prize, the victim is pressured to buy an overpriced product in exchange for some cheap gadget. Despite their promises, all that the scam artists deliver is disappointment.

This summer, I supported legislation, which was recently signed into law, increasing the penalties for con artists who purposely target senior citizens. In addition to longer jail terms, the new law requires convicted offenders to forfeit any real or personal property they obtained from the scam. The law also enhances the penalties for those people who mastermind the phony telemarketing scheme.

West Virginians who suspect they may be the target of a fraudulent marketing scheme might wish to call the West Virginia Attorney General's Consumer Protection Hotline at 1-800-368-8808. In addition, the National Fraud Information Center at 1-800-876-7060 can offer assistance or information. Fraudulent telemarketers must not be allowed to bilk honest citizens out of their economic security.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protecting Patients' Rights

Managed care -- be it called a health maintenance organization, preferred provider organization, or point-of-service plan -- is a growing reality in the health care industry in West Virginia. In these plans, a patient chooses a primary care physician from a list of doctors covered by the plan. That physician then coordinates all of the patient's health care. Across the country, 85 percent of all insured employees have moved out of traditional fee-for-service health plans and into managed care programs. This change has, at least in part, been positive, resulting in increased numbers of children receiving vaccinations, more women having mammograms, and lower costs for many services. Simultaneously, however, concerns are growing about who is truly responsible for making medical decisions.

In a typical managed care plan, many decisions that would have been made privately between a doctor and patient are shifted to an insurance company office. In too many cases, people are denied care or are forced to navigate a maze of bureaucratic red tape before receiving needed treatment.

For this reason, I am cosponsoring Senate Bill 1890, the Patients' Bill of Rights, which would provide patients with basic protections when medical decisions are being made. This legislation would (1) guarantee patients greater access to information and

care, including access to specialists and emergency rooms, (2) help to create a fair appeals process when health plans deny care, (3) expand choice, (4) ensure that medical decisions are made as part of the traditional doctor-patient relationship, and (5) hold managed care companies accountable for decisions that result in patient harm.

In West Virginia, the Patients' Bill of Rights would make a difference for all privately insured people and those covered by health plans funded through employer-employee contributions. It would provide protections currently not guaranteed, including referrals to health care providers not covered by a managed care plan, permission for a patient to continue to see his or her primary care physician even after the doctor leaves the plan, and the creation of an independent ombudsman for consumers who encounter difficulties with their managed care system.

Too often, patients find that the biggest challenge to getting well and staying well is a health care system which has profits, rather than patients' needs, as its focus. As more West Virginians move into managed care systems, they deserve basic patient protections. The Patients' Bill of Rights will help to ensure that people receive the medical care they need, when and where they need it.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Ending a Deadly Trend

Over the years, the culture of colleges has, unfortunately, changed from one of academics and study to one consumed too much with partying. Gathering at the library to prepare for an exam has taken a backseat to swilling beers at a party or ordering a round of shots at the closest bar. Surveys show that more than 85 percent of all college students, most of whom are under age 21, imbibe alcohol, whether it be a beer, a glass of wine, or some other potent concoction. More than 40 percent of the students are binge drinkers, consuming five or more drinks at one sitting within a two-week period.

The risks associated with these trends are enormous. In the past two years, there have been several incidents in which students have died due to alcohol poisoning or excessive inebriation. In Virginia, for instance, five students died within a one-month time span in alcohol-related accidents. Alcohol is a factor in the three leading causes of death for 15- to 24-year-olds — accidents, homicides, and suicides. Links have been identified between alcohol use and teen pregnancies and sexually transmitted diseases.

To address these troubling statistics, I added an amendment to the Higher Education Act of 1998 aimed at reducing alcohol use at the nation's colleges and universities. My amendment establishes a program to annually recog-

nize ten schools across the country that have developed innovative and effective alcohol prevention policies.

Through this program, each eligible institution, in recognition of its efforts to combat alcohol abuse, will receive a grant of \$50,000 to help maintain and improve each respective program. In addition, the U.S. Department of Education will distribute a publication to prospective college students and their parents through high school guidance counselors highlighting these schools' efforts.

Already, West Virginia's colleges and universities are taking steps to combat the problem of alcohol abuse. At West Virginia University (WVU), for example, the school's administration and student leaders have been working with Morgantown officials to find ways to avoid the problems related to binge drinking. WVU also provides late-night activities for students who might otherwise have considered drinking. In addition to offering alternatives, WVU provides an integrated program of alcohol abuse prevention, including the recent hiring of two drug and alcohol educators.

Schools that excel in combating alcohol abuse on campus deserve special recognition. It is my hope that these schools will move others to take a stronger stance against underage drinking by students.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protecting West Virginia's Steel Industry

West Virginia businesses and industries are developing strong abilities to compete in the global marketplace. In fact, according to the U.S. Department of Commerce, our industries are doing so well that, since 1994, international exports by West Virginia companies have increased by more than 41 percent.

West Virginia companies can successfully compete internationally when there is a level playing field. Unfortunately, domestic steel makers have been forced to contend with foreign subsidies that tip the playing field, change the rules, and make steel trade unfair for American companies. One significant problem for domestic steel companies, like Weirton Steel, has been the subsidies provided by the South Korean government to its second largest steel manufacturer, Hanbo Steel.

Because of these subsidies, Hanbo has been able to severely undercut the worldwide average market price of steel and, thereby, gain the upper hand in selling its steel, including here in the United States. In the first four months of 1998, U.S. steel imports from South Korea have increased by almost 45 percent over the same period of time in 1997. Much of those imports are in the form of pipe and tube, cold-rolled steel, and galvanized sheet metal -- all products that companies like Weirton Steel produce. The result: Hanbo is

literally taking money out of the pockets of West Virginia families and putting it into the South Korean government bank account.

On behalf of the thousands of families in West Virginia's Upper Ohio Valley and throughout the country who rely on the steel industry for their livelihoods, I recently added an amendment to a federal appropriations bill calling for a report by the United States Trade Representative on trade subsidies provided by South Korea to its domestic steel industry. This amendment follows on another I offered earlier this year, which was adopted by the Congress, to ensure that resources from the International Monetary Fund (IMF) are not used to undermine the U.S. steel industry. After the approval of the IMF-related amendment, the South Korean government temporarily stopped its steel subsidies. My latest effort is aimed at increasing the pressure on South Korea to end the subsidies for good.

I have long stood with the working families of West Virginia, keeping watch for unfair foreign trade practices and policies that might rig the game against them. I will continue to work for fair trading practices and to prevent this kind of subsidy from harming West Virginia families and industries again.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Striving for Classroom Excellence

Plato long ago wrote, "Excellent things are rare." Indeed, excellence is uncommon, and excellent acts, because of their remarkable nature and the effort they require, earn respect and admiration.

Earlier this year, I took an opportunity to speak in the Senate about some bright spots in education in West Virginia. In those remarks, I recognized two West Virginians who have been honored for their outstanding educational achievements -- Heather Wilson from Jefferson County and Susan Lee Barrett from Nicholas County. Wilson, a student at P.A. Mowery Elementary School in Shenandoah Junction, was selected as a National Runner-Up in the Reading is Fundamental 1998 National Reading Celebration. The Reading is Fundamental program annually challenges students to meet or exceed specific age-based reading goals.

Barrett, a teacher at Richwood's Cherry River Elementary School, was named the West Virginia Teacher of the Year for 1998 in recognition of her leadership in education reform. Even the most driven and ambitious students can falter in the hands of an unqualified, incompetent teacher. Educational success depends upon quality teachers. Susan Lee Barrett is a fine example of the kind of teacher we want in all of our classrooms.

In the United States today, one of the commodities most in demand is excellence in education. Unfortunately, too many American school systems employ teachers who lack the basic skills necessary to teach even at the most fundamental level, and classrooms abound with undisciplined students who close their minds to learning before ever opening the covers of their textbooks. As a consequence of these and other factors, the United States lags behind many other countries in student achievement.

If this country is to have any real hope of forging ahead in the realm of education, we must produce better teachers and students. Susan Lee Barrett and Heather Wilson have proved that good teachers and students do exist. They also underscore the basic fact that a strong educational system relies on the quality contribution of both teachers and students.

While the gift of intelligence may be planted upon birth, it requires cultivation to blossom into culture and wisdom. It is the inspiring teacher and the dedicated student who, together, possess the magic to make brilliance. In the early days of another school year, I encourage West Virginians to follow in the footsteps of these two pacesetters, and strive toward excellence in education.

By U.S. Senator Robert C. Byrd

Early Detection Key to Cancer Survival

October is Breast Cancer Awareness Month, a time of year when doctors and breast cancer survivors speak out, urging women to take time to learn about the disease. Programs offering education, cancer screenings, and other special services will mark Breast Cancer Awareness Month events across the country.

In West Virginia, the American Cancer Society estimates that this year 1,200 women will be diagnosed with breast cancer while nearly 300 women will die from the disease. Across the country, one of every nine women will develop breast cancer in her lifetime, up from a risk that was just one in 14 in 1960. More than 43,500 women will lose their battle with the disease this year, while 178,700 will begin their fight.

However, breast cancer does not always result in death. When a breast tumor is found in its earliest stages, a woman has a better than 90 percent chance of long-term survival. Advancements in treatments and prevention give women a better chance of surviving breast cancer and leading a happy, active life. But finding the disease early is the most important step.

The easiest way to detect breast cancer is through a combination of regular self-exams and clinical mammographies. Doctors can provide instructions on how to properly administer the self-exams. A mam-

mography is a simple and fast procedure available at many of the clinics and hospitals across West Virginia.

For many years, I have supported increases in cancer research funding and the development of new facilities. The statewide breast and cervical cancer prevention, education, and screening project, launched in 1990 with \$5 million I added to an appropriation bill, offers screenings to West Virginians who otherwise might not have access to such tests.

In addition, scientists at the Robert C. Byrd Cancer Research Laboratory, part of the Mary Babb Randolph Cancer Center at West Virginia University, are constantly searching for new cancer treatments. The Center, established in part with \$13.3 million I added to a series of federal appropriations bills, is West Virginia's first statewide cancer research and treatment facility.

These efforts, combined with research underway across the country, will hopefully one day lead to a cure for cancer. That will be a glorious day. But, until there is a cure, the battle against cancer must also take place in every home across West Virginia. Loved ones should be encouraged to take the necessary steps to look for the signs of the disease. Early detection is the key to survival.

Byrd's-Eye View

"You Know" Must Go

Much has been said about the so-called "lost art" of writing. The ubiquity of telephones and, more recently, electronic mail, as well as the growing acceptability of alternative presentations -- posters, pictures, plays -- in lieu of written essays in schools, can all be cited as contributors to the growing inability of many people to compose and edit well-organized and effective written documents.

Further, the speed of today's electronic communication with its instant responses inhibits the kind of thoughtful consideration of messages and care in editing that are the hallmarks of good letters and great literature. This trend means that the future's historical archives are likely to be littered with sentence fragments, incomplete thoughts, and embarrassing misspellings.

The Framers of the Constitution were certainly well read and good writers, characteristics that enhanced their speaking performance. Doubtless, their ability to organize the spoken word was key to their ability to reason and to convince one another of their views as they struggled to lay out our form of government.

Today, however, it often seems that we are awash in all-too-common fillers that plague common conversation today, especially "you knows" that are uttered

by those unaware of how their mouths are filling the time between words while their mind is still struggling to complete the thought.

There is almost nothing more irritating than suffering through countless "you knows" while trying desperately to discern what message the speaker is attempting to convey. Perhaps it is the television age, characterized by the seamless reading from scripts, that makes us unable to tolerate listening to pauses of any length, and, therefore, unconsciously we try not to allow even a few seconds of quietude to fill the air.

Clearly, a moment of silence is preferable to a string of "you knows." Imagine, if you can, the great speeches of history filled with "you know." Would the Gettysburg Address have so inspired us had it been littered with such space keepers? Would Shakespearean characters so enchant us? Would Roosevelt's call to arms after the attack at Pearl Harbor have so motivated us?

Ridding a person's speech of such verbal trash may not make an individual a leader of nations or of men -- that requires great thoughts as well as a clear and stirring delivery -- but resorting habitually to such verbal litter can surely blight the path to greatness.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

On the Cutting Edge of Medical Research

Through funding I added to a federal appropriations bill this year, planning and design will soon begin on a new world-class education and technology center to be based at West Virginia University (WVU). This new facility will expand the work of WVU's existing Positron Emission Tomography (PET) center, allowing scientists and physicians around the world to share research results, to better train health care workers, and to deliver improved patient care at a lower cost.

PET scanning is a highly accurate and noninvasive procedure, providing information that cannot be gathered through other techniques such as MRI or CT-scan. In a PET test, patients are injected with small quantities of a radioactive tracer material, which breaks down quickly after the test without harmful side effects. The tracer is carried in the bloodstream to the organ the doctor wants to study. A scanner maps the tracer, recording data about the organ which is analyzed and used by doctors to more accurately diagnose often dangerous medical conditions.

Though tremendously beneficial, PET is still too expensive for many smaller hospitals, clinics, and laboratories. This new national center will greatly enhance the ability of medical institutions throughout the country -- through the use of

communications technologies like Mountaineer Doctor Television -- to offer patients this diagnostic technology while filling a critical need for a national education center to support the development of PET.

This is perhaps the most important aspect of this new clinic. By putting PET technology within reach of clinics and hospitals in rural areas, West Virginia doctors and technicians will be able to diagnose many medical problems like brain cancer or heart disease at earlier stages while they are highly treatable. Since early detection is the key to patients' survival in many illnesses, PET possesses tremendous life-saving potential.

Throughout my career of public service, I have strived to ensure accessible medical care for West Virginians. From providing funding for rural clinics and supporting home health programs, to launching screening, testing, and research initiatives, I have tried to help meet the medical needs of West Virginians, many of whom live several miles from the nearest hospital. This new PET center will provide yet another means for improving the accessibility of state-of-the-art health care to all West Virginians, while putting West Virginia at the forefront of a critically needed, cutting-edge medical technique.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Moving Ahead with School Safety

Every morning, children pack their school bags and leave their homes for another day of lessons at school, confident that they will return home safely that evening. Regretfully, we as parents, grandparents, educators, and legislators realize that, just a few months ago, some of our nation's schools resembled war zones, stained with blood and the tragic loss of life. We now face the formidable challenge of rebuilding the safer and more serene school environment that every student deserves.

In an effort to provide West Virginians with an up-to-date school safety resource, I have created a new branch of my web site (www.senate.gov/~byrd/schl-main.htm) which contains the latest information on school safety. This web site is designed to be an electronic resource book, complete with descriptions of initiatives underway in West Virginia, updates on federal funding available for violence prevention efforts, and some of the latest information on legislation moving through Congress.

I have also introduced legislation to provide for the establishment of school violence prevention hotlines. Such a hotline would provide parents, students, and teachers with a means of reporting potentially threatening situations and dangerous individuals to authorities. Once alerted, authorities can work to prevent a disturbed individual in need

of help from taking that next, possibly fatal, step.

To help address school safety problems, the Congress recently approved more than \$335 million in new school safety programs in an omnibus appropriations bill. Of that funding, more than \$167.5 million has been set aside to increase community policing in and around schools. Officers and educators alike believe that having a familiar police presence in the hallways and a cruiser in the parking lot helps to reduce violence at school. Another \$151 million is devoted to a variety of community efforts, which include providing alternative education settings for students who are expelled for bringing a gun to school, providing specialized training for teachers and school security officers, and responding to disruptive and violent behavior by students.

Our nation has been grappling with the issue of improved school safety for years, and I find it alarming that American school children continue to face increasing crime and violence. In recent years, I have supported federal efforts aimed at solving this problem. But I would like nothing better than to see these programs grow obsolete as horrible incidents of school ground violence dissolve into distant memories.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

On Guard for Our Veterans

Fifty years ago, the Soviet Union attempted to enforce a blockade of all the overland and air routes to Berlin. The Soviets wanted to cut Berlin's ties to the rest of the world and take control of Germany, but America and the other Allied Forces stood firm against this effort. For months, through the Berlin Airlift, the Allies kept the city's people, and their hope for freedom, alive. The airlift became a symbol of the Allies' determination not to yield to communism.

West Virginians were part of that effort, just as they have been a part of every fight to protect the nation's interests abroad. Our state's sons and daughters have always been prepared to fight for our country, whether in Berlin or in other trouble spots around the globe.

We owe a great debt to our veterans for their service. In my work in the U.S. Senate, I have striven to help repay that debt. Recently, I became a member of the Senate's VA/HUD Appropriations Subcommittee, in part, because I felt it would better position me to fight for veterans' needs. In an appropriations bill this year, I supported the addition of \$42.5 billion for the Department of Veterans Affairs (VA). That legislation provided \$17 billion for veterans' health care, \$249 million above last year's level.

I also added language

to the report accompanying that bill urging the VA to accelerate efforts to establish outpatient clinics in Grant and Pendleton counties. Other language I added directs the VA to continue the specialized, local health services demonstration program operated by the Clarksburg Veterans Affairs Medical Center and the Ruby Memorial Hospital in Morgantown. These initiatives are intended to bring modern medical care within easy reach of West Virginia veterans.

I have also taken the lead to secure health care benefits for veterans who served in the Persian Gulf War. Since that conflict's end, thousands of veterans have suffered from a range of diseases and medical complications. However, the government has not provided them with the care that they deserve. Recently, I won approval of legislation guaranteeing that these veterans will finally receive the care they need.

West Virginia has sent record numbers of men and women to fight for our nation, never wavering in answering the call of their country. As we celebrate and commemorate Veterans Day this year, may God bless all West Virginians who have fought and sacrificed to preserve our freedom and interests throughout the world.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Character Counts

When I was a young lad growing up in West Virginia, I was, what I suspect would be labeled today, "a victim of poverty." At times I did not have socks or shoes or adequate clothing to keep warm.

I did not have money, but I was rich in so many other ways. The old couple who raised me instilled in me a sense of the "old values," such as honesty, integrity, and loyalty. They encouraged me to work hard and to use my mind in wholesome pursuits. I had teachers who inspired in me a love for learning. And I had heroes — public figures who showed, by their example, the way to achieve important goals.

Although I was faced with a ladder of life from which the bottom rungs were missing, I learned that I could reach the upper rungs on the shoulders of those public and private heroes who showed me the way to a fulfilling and successful life.

A national organization, the Character Counts! Coalition, recently released an unsettling report on the ethics of America's youth. The coalition reported that nearly half of the high school students surveyed claimed to be active thieves, and 70 percent admitted to cheating on an exam at least

once in the last 12 months. An astonishing 92 percent of surveyed teenagers admitted to having lied to their parents at least once in the last year! How shocking! According to that report, we are raising a generation rife with cheaters and liars. What a cause for despondency!

Is it any wonder? We live in a time where the noise of the bizarre and the spectacle of aberrant behavior are blasted at our young people. Too often, our children get the impression that it is the cheaters who prosper, and the unscrupulous who gain. Public heroes are in very short supply.

But, in the absence of public heroes, private heroes — good parents, good teachers, and those men and women who quietly set a good example and who give of their time to help young people formulate character and encourage excellence — are acutely important.

We all have a responsibility to guide and inspire young people. We need to teach them, by deed as well as word, that character does count. Not only is it one of the most important things any of us can do, it is also one of the most rewarding. It is not too late to save a foundering generation.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A New Approach to Classroom Safety

Nearly five years ago, the Congress approved a wide-ranging anticrime bill containing an amendment I authored to establish the Violent Crime Reduction Trust Fund. That amendment, which earmarked \$22 billion for the trust fund, provided for the expansion of major crime-fighting initiatives.

As a result of the resources made available through the trust fund, a variety of new anticrime initiatives have been created, all sharing the same goal -- to make our neighborhoods safer. One of the more well known of those initiatives is the Community Oriented Policing Services (COPS) program, which provides grants to local communities to hire more police officers. To date, this program has helped more than 150 West Virginia communities to put a total of nearly 540 officers on the beat.

Now, the COPS program is adapting to meet a growing concern of many parents -- school safety. Last year, tragically, the nation was shocked by high-profile acts of violence in schools across the country. These acts were not restricted to typically higher crime inner city schools, but they reached into idyllic, rural communities as well. The fatalities and injuries that resulted served as a startling reminder that, even though the majority of our

schools are free from major violence, we should take steps to make all schools even safer.

The new COPS initiative provides grants to help communities hire School Resource Officers (SRO). These fully trained and sworn officers are assigned to a school on a full-time basis. In addition to providing security, SRO's teach substance abuse prevention, mentor troubled students, and build respect for law enforcement among children.

Some West Virginia schools already have these officers on the school grounds, and reports about their presence are positive. Educators and officers alike generally agree that having a police presence in the schools helps to reduce violence in the classrooms. The new SRO program serves as an important new tool for school efforts to solve some of the problems that lead to juvenile crime and violence.

There is no single answer to the problem of classroom violence. Ensuring that our children have the opportunity to learn in a safe environment is a responsibility that parents, educators, officers, and lawmakers all share. By working together, we can take steps toward ensuring that schoolyard violence does not strike other innocent families.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Putting a Cork in College Drinking

With alcohol abuse permeating college campuses nationwide, I recently included \$750,000 in the fiscal year 1999 omnibus appropriations bill to develop and implement a national program to reward institutions of higher learning that implement innovative and effective alcohol and drug abuse prevention programs.

In 1997, the Harvard School of Public Health surveyed a number of colleges and universities across the country to find out how many students were drinking alcohol and how much they consumed. The results revealed that two of five students were binge drinkers and one in five was an abstainer. Moreover, the study found that four of five residents of fraternity or sorority houses were binge drinkers.

Binge drinking, or heavy episodic alcohol use often defined as five or more drinks at one sitting within a two-week period, is one of the most serious problems at our nation's colleges. Just last year, precious lives were prematurely lost as a result of alcohol poisoning or excessive inebriation. In Virginia alone, five college students died within a one-month timespan in alcohol-related incidents.

I have long been concerned by youth alcohol abuse, and to address this matter, I secured authori-

zation and funding for the National Recognition Awards program. Through this program, ten eligible institutions of higher education, in recognition of their efforts to combat alcohol and drug abuse, will receive a grant of \$50,000 to help maintain their respective programs. In addition, the U.S. Department of Education will make available to prospective college students and their parents, through high school guidance counselors, a publication highlighting the award-winning programs of these colleges and universities.

Incorporated into the set eligibility guidelines for a National Recognition Award is language to discourage colleges from promoting the alcoholic beverage industry in campus publications and at campus sporting events. Both U.S. Surgeon General David Satcher and U.S. Secretary of Health and Human Services Donna Shalala have endorsed these fundamental priorities.

Just as the schoolhouse should be a safe haven for students of all ages, so should the college campus. I commend those schools that have put a cork in the college drinking scene. It is now time for all institutions of higher learning to follow these leaders.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Taking a Stand for Steel

Thousands of West Virginia families are watching closely as the United States and several nations are engaged in a trade dispute about steel. Domestic steelmakers charge that some countries, like South Korea and Japan, have been dumping their products at below-market prices that domestic companies cannot match. During the first half of 1998, the U.S. Department of Commerce reports that Japanese steel imports jumped 114 percent and South Korean imports increased 90 percent over the same period one year ago. In the first half of this year, imports of hot rolled steel increased 27 percent over the first six months of 1997.

Unfair trade practices by foreign steelmakers affect entire communities. The city of Weirton, for example, depends on the steel mill for about 60 percent of its tax base and about a third of the residents' jobs. Hard times at the steel mill affect grocery stores, movie theaters, restaurants, and more. I know the importance of the mill to Weirton. I supported the establishment of an Employee Stock Ownership Plan (ESOP) that has helped the plant to continue operating during tough times. I also added \$9 million to federal appropriations bills to support development of an automated manufacturing system that allows Weirton Steel to track steel products throughout the manufacturing pro-

cess, helping the plant to produce steel more cost-effectively. But even these improvements cannot adequately shield Weirton Steel from the damage caused by unfair trade practices.

On behalf of the thousands of U.S. steel families, I have urged the Clinton Administration to crack down on the unfair trade practices being used by the foreign steel manufacturers.

In addition, as a member of the Senate Steel Caucus, I introduced and supported a number of pieces of legislation this year aimed at stemming the rising flood of steel imports. Most recently, the omnibus appropriations bill included a provision I added that calls for the U.S. Trade Representative to submit a report to Congress regarding subsidies reportedly provided by the government of South Korea to its largest manufacturer, Hanbo Steel. This provision simplifies the job of U.S. trade negotiators as they work to prove a link between an increase in imports and the harm those imports cause to domestic industries.

West Virginia steel companies deserve a level playing field. But the dumping by foreign steel manufacturers has tilted the playing field and made it impossible for U.S. companies to compete. It is time to put the "fair" back in fair trade.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Cutting Student Loan Interest Rates

The Senate recently passed a five-year reauthorization of the Higher Education Act to expand federal assistance to college students. This legislation, which was signed into law on October 7, 1998, reduces college student loan interest rates to the lowest level in seventeen years, representing perhaps the single most important education bill passed during the 105th Congress.

I am pleased to inform all West Virginians of a time-limited opportunity for college graduates to reduce the interest rates on their student loans. As included in the Higher Education Act reauthorization, borrowers who have student loans can apply for a consolidation loan from the Direct Loan program before January 31, 1999, to receive a lower interest rate for the life of the borrower's loan. The Department of Education estimates that, under this lower interest rate, most students will save approximately \$50 per \$1,000 of debt over the life of their loans. A typical student borrower at a 4-year college, who graduates with \$13,000 in debt, will save about \$700 over a ten-year repayment period.

Through loan consolidation, students are able to combine some or all of their outstanding student loans

into one consolidated loan, possibly extending the repayment period, reducing interest costs, and eliminating the hassle of dealing with multiple lenders. Loan consolidations are available through the Department of Education's Direct Loan program and through lenders participating in the Federal Family Education Loan program (FFEL), or the government-guaranteed loan program. Individuals interested in applying for a loan consolidation through the Direct Loan program may wish to contact the Direct Loan Origination Center at 1-800-557-7392, or download an application form from the Internet at "www.ed.gov/Directloan".

The federal government has played an integral role in helping to ensure that all students, regardless of their socioeconomic status, are granted the opportunity to further their education at the postsecondary level. The reauthorization of the Higher Education Act is another testament to the dedication and commitment of Congress to improving our nation's education system. I encourage individuals with college loans to explore this unique window of opportunity to lower their interest rate and save a considerable amount of money over the life of their loan.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

An Investment for New Jobs

The state's economy has long been rooted deep in the coal seams that stretch below our mountains. Our residents have traditionally found work in steel and glass production, timbering, and manufacturing. But today, while much of that bedrock remains, we are expanding our economic base to create new opportunities for the future. Numerous women entrepreneurs have contributed to this evolution, bringing with them a keen business sense, self-reliance, ingenuity, and dogged determination.

Women-owned businesses are increasing in number, range of products, diversity, and economic impact. As the numbers of women business owners grow, they contribute to the success of West Virginia's economy. According to the National Foundation of Women Business Owners, as of 1996, there were 40,400 women-owned businesses in West Virginia, employing 62,800 people and generating \$7 billion in sales. Between 1987 and 1996, the number of businesses owned by women in the state increased nearly 64 percent.

Recognizing the growth in the number of women entrepreneurs, the Congress recently approved legislation fully funding two important programs. The legislation provides \$8 million in funding for the establishment of Women's Business Centers nationwide. Already, 35 centers are open across the country, includ-

ing one in Charleston, and this additional funding will help to open another 25 centers in the coming year, resulting in one center in each of the 50 states. These centers, run by the Small Business Administration, provide entrepreneurial training to the women business owners of today and tomorrow.

In that same appropriations bill, the Congress provided \$600,000 for the National Women's Business Council, which serves as an independent source of advice to the federal government on issues affecting women business owners.

It takes a great deal of courage to start something new, to carve a reality out of a dream, often with few resources, sometimes in adverse surroundings, and in an economy that demands much of its participants. But federally supported resources like Women's Business Centers and the National Women's Business Council can help women to make the successful move into small business ownership.

As more and more families are finding it difficult to make ends meet on one salary, greater numbers of women are joining the ranks of small business owners. Ensuring the success of these women entrepreneurs is an investment in the economic well-being of the nation, and in the quality of life of West Virginia families

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

1998: A Year of Accomplishments

Over the past year, I was able to advance a number of initiatives that are important in strengthening the foundation for our state's future. As Ranking Member of the Senate Appropriations Committee, for example, I added funding for a variety of initiatives -- many that I have shepherded to our state -- to help expand West Virginia's economic base and provide good, well-paying jobs for future generations.

During 1998, I also achieved a major victory in the authorization of funding for infrastructure -- the roads and bridges -- that are so critical to West Virginia's economy. I added an amendment to the six-year highway authorization bill guaranteeing that all of the federal taxes paid at the gas pump, which had previously been allowed to accumulate unspent, will now be used for the upkeep and expansion of our national highway and transit systems.

As a result of my amendment, the 13-state Appalachian Regional Commission (ARC) Corridor Highway system stands to receive \$2.25 billion over the next six years, including \$345 million for West Virginia. My amendment not only provides an infusion of funding to the Corridor Highways over the course of the highway bill,

but it also serves as an all-important foot in the door to help ensure that a consistent and reliable source of funding will be available in years beyond the next six years to complete the Corridor system.

On another front, this past summer, I joined in a U.S. Supreme Court case opposing the Line Item Veto Act. Fortunately, the Court ruled, as I have long argued, that the line item veto was unconstitutional. The Framers, in drafting the Constitution, vested in the Congress -- the people's branch -- the power over the purse as an important check on the executive. When the Congress willingly shared that power with the executive branch, it handed away an important check on the executive and weakened our Constitutional system of separation of powers. Thankfully, the Supreme Court in its ruling preserved, for yet a while longer, the separation of powers and the fragile system of checks and balances that the Framers crafted to ensure that the liberties of the American people would be protected.

Just as the past year has been one of challenges to our state and our nation, so will the coming year. I look forward to working to meet those challenges as I continue my service to West Virginia.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Hopes for a New Year

Each January brings a sense of hope and optimism for the new year. This January, as we in West Virginia embark on a new year, we are also preparing to step into the 21st century armed with a firm knowledge of where we have been, and energized with the sense of where we are going.

If West Virginia had much to offer those who ventured into her steep terrain and followed her coursing streams in her early days, she has so much more to offer today. In addition to her natural beauty, this lady state of the mountains offers the brawn, brain, and talents of her hardworking and thoroughly modern populace. In towns and cities dotted with institutions of higher learning, West Virginia produces the intellectual firepower to combine with the fabled brute strength of her coal miners of old. The transportation system -- including interstate highways and connectors, rail, air, and even river routes -- is increasingly interconnected and modern. West Virginia also offers an extensive fiberoptic telecommunications network that allows today's cyber workers to combine high technology jobs with an uncrowded pastoral setting, a

low crime rate, and great family life.

Since the moment of her birth, West Virginia has undergone great change; yet, as I so often like to boast, she has never lost her grasp on those "old values" that continue to set her apart among the fifty states. Today, faith resides in her hills just as surely as it did when I was a youth living in her southern coal mining communities and in the hills of Mercer County. Faith is what has kept us going when hope has been in short supply. But it is hope that shapes our vision of the future, and drives us to achieve our dreams.

While she may adapt and modernize, and enjoy the fruits of economic prosperity, I hope that West Virginia will always be the sort of place that fills her native sons and daughters with a longing to be home. I see an energy and optimism throughout the state as new opportunities, new roads, and new buildings rise alongside the gentle reminders of the great and historic legacy of West Virginia's earlier settlers. I know that God's blessings have shone down on her people and her mountains, and that I have been blessed to be a part of securing for her a bright future.

December 30, 1998

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

COPS: A Partnership for Safer Communities

Every day in West Virginia, more than 540 police officers are on the job protecting homes, schools, and businesses because of a very successful program called Community Oriented Policing Services (COPS). Since 1994, the COPS program has invested millions of dollars in law enforcement efforts in West Virginia, helping nearly 160 communities to strengthen their police forces.

The COPS program is one of several approaches developed to put more officers where they are needed most -- on patrol, not behind desks filling out paperwork. The Omnibus Crime Bill of 1994 included an amendment I added to establish the Violent Crime Reduction Trust Fund, ensuring that programs such as COPS would be funded. In that bill, the Congress partnered national resources with local strategies. By building the cooperation between all levels of law enforcement and expanding police and prevention efforts, more criminals can be taken off the streets.

Police departments from across West Virginia credit the COPS program with giving them the flexibility they need to implement innovative crime fighting strategies and to build stronger partnerships within the community. These departments are not

required to follow a mandated program, nor do they have to rely on a one-size-fits-all approach to reduce crime in their neighborhoods. COPS gives these police departments the ability to tailor their crime fighting efforts to the specific needs of the local community.

In an effort to expand the COPS program to meet a greater range of needs, the Congress last fall approved funding for police departments in partnership with schools and other community-based organizations to develop programs to improve the safety of elementary and secondary school children and educators, including the hiring of school resource officers. A number of West Virginia schools already have these officers in place, and students, teachers, and officers agree that the effect has been positive. I have supported this initiative, believing that teachers cannot teach and students cannot learn in an undisciplined, unsafe environment.

West Virginia has traditionally boasted one of the lowest crime rates in the nation, a fact of which everyone should be especially proud. By strengthening crime fighting efforts, the COPS program has become an effective tool in continuing that tradition.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Ensuring that Patients Come Before Profits

As the Congress begins its new session, one of the top priorities is expected to be passage of a Patients' Bill of Rights. This legislation is aimed at protecting people from some of the abuses that have been associated with managed care operations. While there is general agreement that managed care has helped to reduce medical costs in recent years, there is also evidence of a troubling and growing trend of health insurance plans to move medical decisions out of the doctor's office and into an accountant's office.

Over the past decade, the number of Americans enrolled in a managed care plan has risen rapidly. In 1987, only 13 percent of people with employer-provided health insurance were in a managed care plan. Today, 161 million Americans -- almost 60 percent of the U.S. population -- are insured through managed care plans.

A Patients' Bill of Rights would provide basic protections for people enrolled in managed care plans. This legislation has wide support in both the House and Senate, and also is endorsed by more than 180 different organizations, including the American Medical Association and the American Nurses Association.

Basically, the Patients' Bill of Rights would ensure that patients with a serious illness are allowed access to

a specialist without having to get the permission of an accountant who does not have medical training. The legislation would give patients the power to go to any emergency room during a medical emergency, when every minute is critical, without waiting for pre-approval by their health insurance company. The Patients' Bill of Rights would give women direct access to their obstetrician/gynecologist and also would allow them to designate that physician as their primary care doctor. Finally, the legislation would ensure that patients who are denied care by an insurance company can appeal the decision to an independent reviewer and receive expedited decisions that are binding on the managed care plan.

The protections included in this legislation are not radical ideas. In fact, many health plans already provide these guarantees. This legislation is aimed at those plans which choose to put profits before patients and interfere with decisions that should be made by a doctor and patient.

As more West Virginians enroll in managed care plans, they deserve basic guarantees of protection. The Patients' Bill of Rights is the best way to ensure that health care is based on a medical diagnosis, and not on a business bottom line.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Coal for the 21st Century

Since the state's beginning, West Virginia's economy has been rooted deep in the coal seams. From one end of the state to the other, thousands of families have depended on coal-related jobs to put food on the table, to pay the doctor bills, and to send children to college. I am proud to say that much of what I am today and the values and beliefs that are the underpinnings of my character are the result of my roots in West Virginia coal mining communities.

The coal industry has changed greatly since I was a boy. Advancements in mining equipment have made it easier to pull coal out of the ground. Improved transportation methods move the coal more quickly to market. Safety advancements have been spurred by partnerships involving the entire coal industry. While fresh challenges to the coal industry await, experience should show that they can be met and conquered.

One promising strategy for harnessing change to the benefit of the coal industry is a program that I introduced in Congress in 1984. In that year, I proposed, and the Congress adopted, a \$750 million Clean Coal Technology (CCT) program. Originally, the program was designed to achieve long-term, real reductions in acid rain. Since

then, the program has expanded thanks to a joint government-industry investment of more than \$6 billion. This investment has led to 40 first-of-a-kind projects in 18 states, including an array of high-technology ideas that can spearhead a new era of clean, efficient power plants which will continue to burn our nation's abundant coal resources.

In addition to the benefits at home, the CCT program can also prove beneficial environmentally and economically on the international market. Developing nations are searching for cost-effective ways to upgrade their older, higher-polluting power plants and to expand their power production capacity. These nations can learn from our experiences and utilize our new technologies to combat these problems.

My life has spanned great changes in technology, in energy production and consumption, and in the global economy. Through all of this, coal has been a constant, in all its forms and uses. If the partnerships that have proved so valuable already are continued and if the investment in new technologies is expanded, I believe that the challenges of the coming age can be met, and light the way to a new millennium for coal as well as for environmental and energy policy.

West Virginia's Role in Impeachment

The last time the House of Representatives impeached a president was 131 years ago, when the bitter feelings that stemmed from the Civil War gave rise to the impeachment of Andrew Johnson in 1868. At the heart of the Johnson case were issues far larger than those individuals involved; instead, the case was centered on policies concerning Reconstruction. When Johnson became President in 1865, his reconstruction policies ran counter to those of the majority of the members of Congress. It was Johnson's decision to replace the popular Secretary of War Edwin Stanton that sparked a series of events that led the House to approve 11 Articles of Impeachment against Johnson.

At the time of the Johnson trial, U.S. Senators were elected by state legislatures, while the House of Representatives' members were elected directly by the people. The West Virginia Legislature had chosen Waitman Willey and Peter Van Winkle as the state's two Senators, and in February, 1868, approved a resolution urging them to vote to convict Johnson and, thereby, to remove him from office.

In March, the Senate voted on the eleventh Article of Impeachment, the charge that those House members handling the prosecution of Johnson thought was most likely to produce

a conviction. With 36 votes (two-thirds) needed to find Johnson guilty, the Senate tally on that article was 35 to convict, 19 to acquit -- falling one vote short for conviction and removal. Senator Willey voted to convict, while Senator Van Winkle, even though it meant his political career would come to an end, voted to acquit. Van Winkle thought that the constant fighting between the President and the Congressional leadership placed too great a strain on the fabric of the nation, a fabric that had already been stretched thin from the Civil War. The West Virginia Senate did not like Van Winkle's reasoning, however, and voted 18 to 3 to condemn his vote to acquit.

In the presidential impeachment trial of today, as in the day of Johnson, Senators have taken an oath, to "do impartial justice according to the Constitution and the laws: So help me God." Senators cannot be guided by political affiliation or political partisanship and keep faith with this oath. Senators must have the courage to weigh the evidence, search their own consciences, and render a judgement that is fair to the President and to the nation, one that reflects the gravity of the responsibility placed upon the Senate by the Constitutional Framers.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Primer on Impeachment

The U.S. Senate is engaged in one of its most serious of Constitutional responsibilities: deciding whether to convict or acquit an impeached president. The Framers of the Constitution struggled in the crafting of the impeachment powers but, in the end, created a delicately balanced tool that has served the nation well.

In crafting the Constitution, the Framers drew heavily upon their knowledge of English history and their experience with impeachments in the colonies and the newly formed states to carefully write the impeachment provisions that guide us today. In Article I of the Constitution, the Framers vested in the House of Representatives "the sole Power of Impeachment." In that same Article, the Framers gave the Senate "the sole Power to try all Impeachments." The language for impeachment and conviction was left purposefully vague so that it could reasonably be applied on a case-by-case basis in the future to meet whatever facts and circumstances might arise. The Framers intended that Senators bring their accumulated experience and wisdom to bear when called upon to determine whether the charges presented against the accused -- whether that person be President, Vice President, judge, or other civil officer

-- merit the very substantial consequences outlined in the Constitution.

The Framers deliberately set the bar high for the vote on articles of impeachment, first by requiring a supermajority of two-thirds of the Senate to convict, and second, by fusing the penalty -- removal from office -- into the question of guilt. In voting on articles of impeachment, Senators must answer not one but two questions: Is that President, Vice President, or civil officer guilty or not guilty of committing "high crimes and misdemeanors," and, if he is guilty, do his actions warrant removal from office? This coupling was not a casual step by the Framers. They wanted to force Senators to set aside personal prejudices and passions and focus, instead, on the best interests of the nation. Party politics should play no part.

For me, this vote will be the most difficult of the more than 15,000 that I have cast in the Senate. I have heard the views of my constituents, watched the deliberations of the House, reviewed volumes of evidence, and listened to the arguments by the House prosecutors and White House defense team before the Senate. But, in the end, it is not what a lawyer tells me that I may do; it is what my own clear conscience tells me that I ought to do.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Free Trade -- Fair Trade

Throughout my career of public service to West Virginia, I have found reason to be skeptical about the ability of administrations -- Democratic and Republican -- to negotiate and monitor international trade agreements. In my experience, U.S. trade policies have been influenced far too heavily by diplomatic interests and concern for the welfare of our trading partners. Too little consideration has been given to domestic needs and the jobs of Americans, too much to the economies and political problems of other nations.

West Virginia is feeling the pinch of ill-conceived trade policies. Our steel industry, for example, is currently suffering cutbacks and layoffs. The community of Weirton has been particularly hard hit. Hundreds of employees of Weirton Steel have been laid off as a result of the dumping of low-priced foreign steel on our shores, leaving many hardworking families in tenuous circumstances in the new year.

But steelmakers are not alone in suffering the consequences of poorly conceived trade policies. Numerous other West Virginia industries have experienced similar trade-related adversity. The glass industry, clothing manufacturers, the makers of leather goods, and even apple growers, have seen their share of trade-induced difficulties. In too many cases, businesses have closed their

doors and the jobs that they once provided have been shipped overseas. Moreover, the communities that once were built around these industries have seen significant losses of revenue, decreases in population, and a decline in their ability to provide basic services for their citizens.

My disappointment in previous U.S. trade negotiations led me to vote against GATT and NAFTA, and spurred me to draft legislation establishing a commission to study and recommend steps to reduce our nation's growing trade deficit. Further, the evidence of the failings of our trade policies has hardened my opposition to fast-track negotiating procedures that would severely limit the Senate's ability to influence trade policies.

There is something to be said for free trade. But in my experience, free trade has rarely been fair trade where American manufacturers and American jobs are concerned.

Trade wars have scarred a long list of businesses, and currently the battle lines are drawn for skirmishes involving steel. This is a battle we cannot afford to lose, but, thus far, I am unimpressed by the Administration's pallid remedies. So, as the Administration considers further steps to address the steel crisis, I will keep up the pressure to ensure that our steel industry and our steelworkers keep working to forge the future of our nation.

New Tax Credits for Education

As taxpayers begin the annual process of filling out their tax returns, they may notice that two new education tax credits are now available. These credits -- the HOPE Scholarship credit and the Lifetime Learning credit -- offer many people the opportunity to reduce the cost of their postsecondary education.

The HOPE Scholarship credit provides Americans with assistance for their first two years of postsecondary education. Available since January 1, 1998, the HOPE credit is equal to 100 percent of the first \$1,000 in qualified tuition and fees and fifty percent of the next \$1,000 that taxpayers pay for themselves, their spouse, or their children. In other words, a student with at least \$2,000 in postsecondary education expenses would be provided with a \$1,500 tax credit. To be eligible for this credit, which may be claimed for two taxable years for each student, students must be enrolled in a degree, certificate, or other program leading to a recognized educational credential and must carry at least one-half the normal full-time work load.

In addition, the Lifetime Learning credit provides additional postsecondary educational assistance. While the HOPE credit has received more publicity, the Lifetime Learning credit, available since July 1, 1998, offers po-

tentially greater tax benefits. This credit is equal to twenty percent of the first \$5,000 in qualified tuition and fees for individual taxpayers or their family members. Thus, for taxpayers with at least \$5,000 in postsecondary education expenses, the Lifetime Learning credit provides a tax credit of \$1,000. The credit can be claimed for any number of years for postsecondary education expenses and can apply to students enrolled in a single course or in a program to acquire or improve job skills.

It is important to note that both of these new credits cannot be claimed for the same student in the same year -- taxpayers must use one or the other. However, a taxpayer with two dependents in postsecondary education could claim the HOPE credit for one and the Lifetime Learning credit for the other in a particular year. Finally, both of these credits are only fully available to taxpayers with adjusted gross incomes up to \$40,000, or \$80,000 for married couples. The credits are gradually phased out for taxpayers above these income limits.

Anyone interested in obtaining more information on either of these two new credits can order a copy of IRS Publication 970 by calling 1-800-TAX-FORM or by going to the IRS Internet page at www.irs.ustreas.gov/forms_pubs/.

Budget Priorities for West Virginia

I have long worked to ensure that West Virginia's needs are addressed as Administrations craft their annual budget requests. Consequently, the fiscal year 2000 budget includes funding for a number of initiatives important to West Virginia.

Education is fundamental to preparing our young people for the challenges of adulthood. In addition to increased funding to put more teachers in the classroom, the budget, at my request, includes full one-year funding of \$39.9 million for the merit-based national Robert C. Byrd Honors Scholarship program. This scholarship recognizes many of the nation's best and brightest students for academic excellence. Since the program began in 1984, 520 West Virginia students have been named Byrd Scholars and benefited from this national scholarship.

Improving West Virginia's network of highways is crucial to the state's continued economic development. Last year, I helped to craft a six-year highway authorization bill that will improve our ability to address the nation's infrastructure needs in the next century by effectively using the funding available from gasoline taxes in the Highway Trust Fund. As a result of those efforts, the budget for the coming fiscal year contains approximately \$304 million for West Virginia highway construction, including \$69 million for continuing construction of West Virginia's Ap-

palachian Regional Commission Corridor Highways.

The budget proposal also contains \$311 million for operations of the FBI Criminal Justice Information Services Division in Clarksburg. This complex, which was constructed with \$185 million I added to an appropriations bill in 1990, is a cornerstone in the national effort to fight crime and make our communities safer places in which to live and work.

Mindful that international competition is making high technology an essential component of any state's economic plan for the future, several high-technology initiatives, with my support, are also slated to receive funding in the proposed budget. For example, three NASA initiatives based in West Virginia -- the National Technology Transfer Center and the Classroom of the Future, both located at Wheeling, and the Independent Verification and Validation facility at Fairmont -- are proposed to receive a total of \$25.8 million.

While West Virginia has reason to be pleased with many points in the budget request, that proposal is just the first step in the annual federal budget process. Ultimately, the Congress will craft the budget and appropriations bills that will serve as a blueprint for the nation's priorities over the coming year, and I shall continue to work to see that West Virginia's needs are addressed within existing budgetary constraints.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Keeping Schools In Check

Today, we are living in an information age. With the click of a computer key, a screen is illuminated with charts, graphs, and research detailing the latest statistics in almost any given field. Data are literally at one's fingertips. Yet, when parents attempt to gather information on the public schools in their district, they often are met with little success.

Recently, the publication Education Week, in partnership with two public opinion research firms, published an issue entitled "Reporting Results" that discusses the new buzzword of 1999 -- accountability. In an effort to uncover its true meaning, a 50-state study was conducted to assess what it is that parents and educators most want to know about their local schools.

Against the backdrop of growing pressure for school choice and greater competition among educational institutions, Education Week reports that schools are slowly beginning to unearth statistics representative of their academic performance. Education Week expects that 36 states will have "report cards" on the performance of individual schools this year. However, less than half of these states will include the kind of information that parents most want and need, and only 13 of

the states, including West Virginia, ensure that the "report cards" are sent home to parents.

Making the decision where to send a child to school is perhaps one of the most difficult and thought-provoking decisions a parent can make, and parents should not have to rely on word-of-mouth to make these important choices. Parents want documentation of test scores and graduation rates. They want to know what is happening behind the schoolhouse doors. Their concerns are as fundamental as curriculum, the qualifications of the teachers instructing their child, and the safety of their child.

After decades of measuring schools by how many books are in the library or how many computers are in the classrooms, parents and policy makers alike are seeking yardsticks better equipped to gauge academic results. The road to achieving greater accountability on the part of schools is a long one, with many obstacles ahead. But I commend West Virginia's education community for striving to shed more light on the performances of schools in the state. I encourage parents to take advantage of the statewide school-report-card program as they navigate this challenging territory.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Taking Steps to Save Social Security

In 1935, President Roosevelt signed the law creating the Social Security system, saying that the program was designed to "give some measure of protection to the average citizen and to his family against the loss of a job and against poverty-ridden old age." From modest beginnings, Social Security has become an essential facet of modern life. Today, one in seven Americans -- some 42 million in all -- receives a Social Security benefit, and more than 90 percent of all workers are in jobs covered by Social Security.

Because of the changing face of America, reforms are needed to ensure that Social Security is solvent for many years to come. When the so-called "baby boomers" begin to retire, the number of retirees is projected to grow much faster than the number of workers paying into the program, placing a great strain on the system. Currently, three workers pay into the Social Security trust fund for every beneficiary, but, by the year 2030, that ratio is expected to drop to only two workers per beneficiary. Without Congressional action, the Social Security trust fund will begin to run a deficit in 2013, and will be depleted by 2032.

Everyone has a stake in the future of Social Security. It provides a safety net for families, for people with disabilities, and for children who have lost a parent. To millions of elderly citizens in West Virginia and across the country, Social Security can be the difference between living in dignity or living in poverty. In fact, across the country, Social Security is the primary source of income for two-thirds of all senior citizens. In the last 40 years, Social Security has helped to cut the elderly poverty rate from 35 percent to less than 11 percent.

The Congress is beginning to examine a number of proposals that would extend the financial solvency of Social Security. A number of Congressional committees, including the Senate Finance Committee, the House Ways and Means Committee, and both the Senate and House Budget Committees, are working to find a bipartisan solution to ensure that the safety net of Social Security is not pulled away. Protecting the viability of Social Security is a high priority, and a solution must be crafted that works for all of America over the long term.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Fingering Criminals

Technology is a driving force in every occupation, from manufacturing to medicine to mining. In all fields, technology has left its stamp, including the effort to make West Virginia's streets and neighborhoods safe from crime. This year, at its new Fingerprint Identification Center in Harrison County, the Federal Bureau of Investigation (FBI) will initiate its automated system to speed local law enforcement agencies' access to data, keeping repeat criminals off the streets.

The Integrated Automated Fingerprint Identification System (IAFIS) is a major step forward from the old, paper-based fingerprint identification process. Using computer links, the system will allow any police agency with the proper equipment to submit electronically scanned prints directly to the FBI database, which will then process the material to find out whether the person in custody has a criminal history, poses a threat to the community, or is wanted in another jurisdiction. The IAFIS will provide our nation's 72,000 law enforcement agencies with a rapid, ultramodern, computerized system for checking fingerprints, confirming criminal backgrounds, and tracking lawbreakers.

The revitalization of the fingerprint identification system was launched in 1990, when, in response to the failing conditions of the FBI's antiquated system, I added \$185 million to an ap-

propriations bill for construction of a new computer complex. Since then, I have obtained more than \$700 million to develop the highly advanced system.

While the multifaceted network promises faster, more efficient identification of criminals for law enforcement agencies, it cannot be fully effective if local, state, and federal authorities do not have the proper equipment to communicate with the new system. That is why, this past fall, I added \$1.5 million to an appropriations bill to help accelerate the process by which police departments in states like West Virginia create their own automated databases and purchase the computer equipment necessary to take advantage of the IAFIS.

When the IAFIS comes on line later this year, the nation's investment in the new FBI complex and its revolutionary computer system will bear fruit in the form of a better integrated national crime-fighting network, and, in turn, in safer communities for American families. West Virginia, which traditionally boasts one of the lowest crime rates in the nation, makes a fitting location for the FBI's new fingerprint identification complex, and all West Virginians have reason to be proud of the fact that their state is home to a world-class initiative geared toward helping other states realize a better, safer quality of life.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Saving for College

As the costs of higher education continue to soar, the affordability of a college degree continues to grow as a concern for students and their families. To help alleviate the hefty burden of college bills, students and parents increasingly have been drawing upon financial assistance from a variety of sources. A recent study by the General Accounting Office revealed that 60 percent of seniors who graduated from a four-year public college or university in the 1995-96 school year had borrowed money at some point during their educational pursuit, a figure that is up from 42 percent in the 1992-93 school year.

To help students meet rising college costs, I am co-sponsoring legislation that takes a different approach to easing the sticker shock associated with higher education. This legislation would encourage saving for college by making state-sponsored savings plans entirely tax-free, provided that these monies are used for education. Under current tax law, distributions from these plans are partially counted when calculating a student's taxable income. Several states, including West Virginia, have established state-sponsored savings plans for higher education, and this legislation would help to make those programs more family

friendly.

The West Virginia Prepaid College Plan, which was launched last October, is one example of the state-operated programs that have recently been established throughout the country to help families save for college. Like programs elsewhere, West Virginia's Prepaid College Plan enables families to save for college while receiving special tax benefits. It also allows the family to lock in today's tuition prices for the date when the child actually enters a West Virginia college or university. Additionally, the plan provides flexibility in the event the student chooses to attend a private institution or a college or university in another state. Details about this option are available at the West Virginia Prepaid College plan Internet site at www.wvtreasury.com or by calling 1-800-307-4701.

As a firm believer in the importance of education, I can think of few investments as worthwhile as those that can make the dream of a college education become a reality. Prepaid college savings plans provide one option for families to reduce the burden of the high costs of college, and I am glad to support a piece of legislation that can help to make such programs more economically advantageous.

Linking Up: Online Safety for Children

As more families, schools, and public libraries acquire computers, more children gain access to the Internet. At the same time, the use of the web by unsavory individuals attempting to lure children into threatening situations has also grown.

For parents, monitoring a child's Internet access and providing important safeguards can prove challenging, especially when that child, as is often the case, is the most computer savvy member of the family.

To help steer children toward positive experiences on the Internet and away from sites that parents may find objectionable, or even dangerous, the nation's largest Internet-service providers and leading education and children's advocacy organizations have joined together to develop commonsense tips and strategies that may prove valuable for busy families. The joint effort, called "America Links Up," has resulted in a wide-ranging campaign to deliver information and provide guidance to parents and others responsible for children, including the following recommendations.

Take time to be online with your children. When a parent or teacher is directly involved with a child's Internet activity, the potential for danger is greatly reduced.

Teach children to never give out personal information to people they

encounter while online. This type of information can be used to target the child or the family for criminal activity.

Instruct a child never to plan a face-to-face meeting alone with an online acquaintance. News accounts from across the country have highlighted the dangers of arranging meetings with strangers. While a child may think that an online acquaintance has become a friend, a computer can often mask the true intentions of a criminal.

Establish clear ground rules for Internet use by your children. As an added precaution, parental controls and protective software are available and can be installed, often at little or no cost, to help prevent a child from wandering into dangerous cyberterritory when an adult is not directly supervising Internet activity.

The Internet has rapidly become one of the most valuable learning tools available. People of all ages use the Internet everyday for research, for communicating with friends, and for entertainment. However, parents, teachers, and other caregivers need to recognize that, with all of its benefits, the Internet poses very real dangers.

That old maxim, passed down through generations of parents, still holds true in today's high-technology age; "Children need limits."

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Power of Poetry

Each year, I give a great number of speeches. During many, I recite from memory a poem that captures the spirit of the moment. To me, a poem is one of the best ways to learn about humanity. Whether they are as long as the "Aeneid" by Virgil, or as simple as the verses of Emily Dickinson, or whether they are written by a Greek, Scotsman, or American, the lines of a poem contain the timeless power of concentrated thought. Poetry is the language of the soul. Through words, it expresses what links us, troubles us, and makes us fully human.

Every day, the power of poetry is all around. It speaks of love, death, disappointment, and elation. Poetry is the laughter of children, the gentle breeze of spring, and the soft golden rays of the sunset.

April is National Poetry Month, a time that brings together poets, literary organizations, libraries, and schools to celebrate poetry and its place in American culture. Among the activities scheduled this year, the Children's Book Council will launch a new event called Young People's Poetry Week to highlight the value of poetry for young people and to encourage

more librarians and educators to present poetry to children. Public libraries throughout the nation will have information about local poetry events.

Over the years, I have cultivated the potential of my mind by memorizing prose, dates, names, quotations, and, particularly, poetry. During my frequent drives between Washington and West Virginia, I would memorize line after line, trying to capture the words, rhythms, thoughts, and lessons of the verses. Over time, my repertoire became quite lengthy. As a matter of fact, I came to be able to recite poem after poem for the entire length of my trip without repeating a single poem.

National Poetry Month presents an opportunity for parents and teachers to work with children and encourage them to take the time to read and truly understand good poetry, not just to see words on paper, but also to dig for the emotions, spirit, and core thought of the author. For adults, this is a good time to step away from the hectic pace of daily life and revisit the words of the soul. Through their words, poets give a voice to that which is great within every human being.

April 7, 1999

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Economic Wealth and Environmental Health

April 22 marks the national celebration of Earth Day, an annual event that first occurred in 1970. In the nearly three decades since that initial nationwide observance, Americans have learned much about the need to protect our precious natural resources and how to balance economic development with environmental stewardship.

Since the founding of Earth Day, America's public and private sectors have taken numerous steps to ensure that economic growth and natural resources conservation could occur simultaneously and cooperatively. From cleaning up our rivers and streams, to protecting forests and public lands, to developing technologies that can improve energy efficiency, the achievements of the last thirty years have proved that a prosperous, industrialized nation can also be an environmentally responsible nation.

With these principles in mind, I have worked to ensure that West Virginia has the resources to achieve the kind of balance that provides for a strong economy and well-paying jobs, while protecting and preserving the wonders of nature for future generations.

For example, I authored the Clean Coal Technology program, a federal initiative that supports research and development into cleaner, more efficient uses of coal, our nation's most abundant

energy resource.

I have also obtained funding in appropriations bills to establish the Canaan Valley National Wildlife Refuge and the Ohio River Islands National Wildlife Refuge. Further, funding I have added over recent years has supported and strengthened the New River Gorge National River and the Monongahela National Forest, which hosts some of the state's most dramatic and sensitive lands, like Seneca Rocks and the Cranberry Glades. The federal designations of these lands not only ensure a special status for the resident flora and fauna, but also allow for recreational opportunities that benefit West Virginia's booming tourism industry.

Additionally, the U.S. Fish and Wildlife Service National Conservation Training Center, constructed at Shepherdstown with \$138 million I obtained in appropriations bills, is dedicated to educating professionals and the public about the value and methods of conserving our natural resources.

This Earth Day, as the nation renews its commitment to safeguarding the environment, we in West Virginia can rightfully celebrate the numerous ways in which we have improved our state's environmental record while enhancing our economic well-being. We are proving that economic wealth and environmental health can coexist.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Ending Downtown Decay

In cities in West Virginia and across the country, many downtowns are suffering from a great blight. Empty buildings spread like mushrooms, hinting at the decay within. After five p.m., downtowns grow quiet and lonely, haunted only by shades of their former bustling grandeur, while commerce and nightlife shift to the outer suburbs. Like a great old tree, a rot hollows out the center trunk even as the suburban branches flourish. This urban decay is a hard disease to fight, for it feeds upon itself. The less life there is in a downtown, the more life is driven away.

Reversing this trend is a great challenge, but many West Virginia communities are finding the answers. They are creating a vaccine against urban decay and downtown death. No miracle drug, it is penicillin distilled from caring and dedicated individuals who fight back -- first with dreams, then with plans, and finally with action.

One example of this drive and determination can be found in Wheeling, where a group of community leaders provided a spark of life by designing what has become the Wheeling National Heritage Area initiative. This joint federal government/local government/private sector initiative enables the Wheeling community to showcase its singular

qualities to attract increased numbers of tourists. Wheeling, the former state capital and gateway to the West, is particularly well-suited for this national initiative. I have been able to add \$15.4 million to federal appropriations bills to begin the work of preserving and showcasing Wheeling's historic treasures and clearing the way for even greater private investments. Today, private investors are staking out prime downtown real estate for various ventures, all designed to complement and build upon the vision for the downtown planned in the Wheeling National Heritage Area. The \$17 million in private investment within downtown Wheeling since 1994 is a tribute to the success of local proponents in bringing the vision of the Wheeling National Heritage Area to reality.

Just as life is repelled by empty and decaying buildings, it is drawn to the growth and energy of renovation and construction. Wheeling has proved, through its successes, that the blight of downtown decay can be reversed and the vibrancy of a community can be reborn. I applaud the efforts of Wheeling's citizens who are setting an example for others in creating a blueprint of growth and revitalization during the coming century.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Honoring Rosa Parks

In the long line of our nation's heroes there stands a small-framed woman, who, through a simple act of conscience, proved that every person can make a difference. On December 1, 1955, in Montgomery, Alabama, 43-year-old Rosa Parks took the bus home after a long day in the department store where she worked as a seamstress. She was glad to finally be off of her feet when a white man boarded and demanded that Parks give him her seat.

In an act that today would seem quite unremarkable, Parks refused his demand, even though the segregation laws said she must. She was arrested, but challenged the segregation law in court. During the court battle, Parks was harassed, threatened, and lost her job. In the end, though, Parks won when the U.S. Supreme Court ruled the segregation law unconstitutional.

Rosa Parks' actions were not staged for the television cameras. They were not part of a grand scheme to create a test case in the courts. On the contrary, they were the actions of a single individual determined to preserve her dignity as

best she could. They were the actions of a simple lady who, at that moment in her life, decided that enough was enough. She demonstrated the power of conviction and quiet dignity in pursuit of justice.

The U.S. Senate recently approved a resolution awarding Rosa Parks the Congressional Gold Medal, the highest honor that the Congress can bestow upon a private citizen. I cosponsored that resolution which, I believe, pays proper tribute to a woman who sparked an important change in this country. She displayed courage and a lifelong commitment to the Jeffersonian ideal that "all men are created equal."

Across the country, equality is the law of the land, but, in too many places, it is the law in name and not in spirit. Reports of violence against a person simply because of the color of his skin or personal beliefs dominate newspaper headlines far too frequently. I hope that all Americans can learn from the lessons of Rosa Parks, and work together to erase hate and discrimination from this nation.

Celebrating the Strength of Mothers

I recently participated in a celebration in the small community of Webster in Taylor County, the birthplace of Anna Jarvis, the woman who founded Mother's Day. My wife, Erma, and I were invited to attend the Mother's Day festivities by a community group called "Thunder on the Tygart," which had named Erma its 1999 Mother of the Year. The organization is devoted to the preservation of the Anna Jarvis birthplace and home, a site that is especially important to West Virginians. At the home, visitors learn of the strength, determination, and devotion that Anna's mother, Ann, displayed throughout her life, qualities that she would need when faced with tragedies that would overwhelm most people.

In the first six years of her marriage to Granville Jarvis from 1850 to 1856, Ann lost four of her six children to childhood diseases so successfully treated today that we seldom hear of them. Rather than giving in to despair, she recognized the now widely understood link between sanitation and disease and took action. She organized Mother's Work Groups to improve the health of children throughout her community.

When the Civil War tore at the community, Ann Jarvis used her Mother's Work Groups as a force for

good, keeping relations between warring neighbors from spilling into violence. This woman sought to reconcile her embattled neighbors by organizing a successful community picnic that she called Mother's Friendship Day. She made a special point of inviting veterans from both armies with their families. For all of these acts, she deserves the accolade of hero.

There are mothers like Ann Jarvis across the nation. They know what their children are doing, and what their children's friends are doing. These mothers understand and respect their role as supervisors. If they see signs of trouble in their own children, or in their children's friends, they will act. They will talk to the parents of their children's friends, to seek help in identifying the cause of the problem and warning other parents of the danger signals. This is not being nosy or intrusive. It is being a good parent.

Let us honor the spirit of Ann Jarvis that lives on in all good mothers. I hope we can find ways to foster the caring, compassion, observation, and energy that infused the Mother's Work Groups of old in more of today's mothers -- and fathers, too -- for a parent's work never ends while a child still lives that needs protection and nurturing.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Renewing the Gift of Life

Thanks to advancements in medical science, diseases that were once thought to be untreatable are so readily treated today that we seldom hear of them. However, those same advancements have brought with them new challenges and complications that doctors are working to overcome. One such challenge involves organ transplant recipients. Often, when a patient receives an organ transplant, special medicines are needed for the rest of his life to prevent his immune system from rejecting the transplant. But if the patient relies on Medicare for health insurance, the system will only pay for these drugs for the first 36 months after the surgery, even though they are needed for the rest of the recipient's life. To help address this problem, I am cosponsoring legislation that would ensure that patients receiving Medicare-covered transplants would be able to receive the drugs necessary for the rest of their lives to prevent their bodies from rejecting the new organs.

The Immunosuppressive Drugs Coverage Act of 1999 would provide for life-long coverage of needed immunosuppressive medicines for Medicare patients. In addition, the legislation contains a built-in safeguard to protect taxpayers' dollars.

The Act would ensure that, for those Medicare transplant recipients who also have private insurance coverage, the private insurance plan -- not Medicare -- would cover the cost of the immunosuppressive drugs. This legislation would help patients who cannot afford to pay for the life-preserving medicines, and, at the same time, would help Medicare to avoid the huge additional costs currently incurred when organs are rejected and a new surgery is then required.

In West Virginia, this legislation would make a difference. I have received letter after letter filled with individual stories decrying the Medicare system for its lack of foresight. These letters effectively make the argument that it is a senseless mistake for Medicare to cover expensive transplant operations, but then cut off payments for the medicines necessary to ensure that the transplanted organs work. The Congress can address that mistake by approving the Immunosuppressive Drugs Coverage Act that I am cosponsoring.

Each successful organ transplant carries with it a renewed gift of life for the recipient. That gift should not be jeopardized because of bureaucratic shortsightedness.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Putting an End to Domestic Violence

Five years ago, the Congress approved one of the most far-reaching pieces of federal legislation ever devised to fight crime in the United States. That legislation sharpened the focus of the federal role in assisting law enforcement on the state and local levels -- the front lines of the war against crime. To help support the bill's many innovative programs, I created the Violent Crime Reduction Trust Fund, which authorized more than \$30 billion for such priorities as putting more officers on the beat, developing comprehensive community-based approaches to combat crime and violence, and involving citizens in crime-prevention efforts.

The Trust Fund also included funding for the Violence Against Women Act (VAWA), which expanded women's and children's access to shelters where they can find immediate protection from violence and receive help in making the kinds of life changes that may be necessary to permanently break away from an abuser. It also supported training to better enable police officers to identify abusers and assist abuse victims. The VAWA instituted a fundamental change in the criminal justice system's response to violent crimes committed against women.

Since passage of the VAWA, the number of vic-

tims of domestic violence has been declining. In 1993, the year before the VAWA became law, more than one million women reported being a victim of domestic violence or sexual assault. By 1996, the last year for which complete statistics exist, that figure fell by 25 percent. In 1996, the number of women killed by someone with whom they had been in an intimate relationship saw a sharp reduction, down 60 percent when compared with 20 years earlier.

However, the news is not all good. In a nationwide survey of women in late 1995 and early 1996, a disconcerting 25 percent of respondents said that they had been raped or physically assaulted by a current or former spouse, someone whom they dated, or a cohabitating partner at some point during their lives.

To help address this continuing problem, I am cosponsoring the second Violence Against Women Act, which would extend the program's funding and give law enforcement officials an expanded array of legal tools to help protect victims of domestic violence and improve legal services for victims.

Given the prevalence of violence in our culture today, working to end violence against women is an uphill battle, but it is a battle well worth waging.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Preparing for a High-Tech Future

Recognizing the need for economic diversification to compete effectively in the worldwide marketplace, West Virginia is enhancing its high-technology resources and identifying new ways to attract and expand the promising high-tech industry. Toward that end, I have been promoting infrastructure investment in West Virginia to help lay a solid foundation for high-tech growth.

Today, West Virginians are harnessing new manufacturing techniques, exploring alternative energy uses, and developing more efficient and environmentally friendly methods of producing the foods that Americans put on their tables. These and other cutting-edge advances have been made possible, in large measure, through partnerships between the private and public sectors, and I have helped to ensure that those partnerships can flourish through my work on the Senate Appropriations Committee.

However, while West Virginia is expanding its high-tech horizons, a recent report from the American Electronics Association (AEA) found that students across the country are losing interest in high-tech degrees. According to the AEA report, the number of students pursuing a high-tech degree -- including engineering, mathematics, physics, and computer science -- fell five percent between 1990 and 1996. Pre-

liminary data from 1997 and 1998 show that trend is continuing. Further, according to the AEA report, a significant proportion of the declining numbers of high-tech degrees being awarded in the U.S. are going to foreign nationals. In fact, 45 percent of the doctoral high-tech degrees in 1997 and 1998 were awarded to non-U.S. citizens. This is a disturbing trend which indicates that we may well be shipping our technological knowledge overseas, and failing to adequately cultivate it in our own young people.

Ensuring that West Virginians are educated to fill those jobs is critical to the continuing success of our state's high-tech endeavors. Knowing that, I have supported a number of initiatives which are answering that need and helping to more firmly implant high-tech enterprises in West Virginia's economic landscape. Through efforts like the Robert C. Byrd Institute for Flexible Manufacturing, headquartered at Marshall University in Huntington; the NASA-sponsored Classroom of the Future at Wheeling Jesuit University; the Science and Technology Center at Shepherd College in Jefferson County; and the Aviation Training Center at Bridgeport, operated by Fairmont State College, I will continue to build the necessary foundation to promote West Virginia's high-tech growth.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Opening the Tap on Clean Drinking Water

Across the country, in hundreds of rural communities, there is a serious lack of safe, reliable drinking water. Since 1995, federal data outlining the sorry details of the safe drinking water crisis have been available and, yet, year after year, adequate funding for water and wastewater projects that would solve this crisis is not provided. That is why I recently added, and the Senate approved, \$30 million to a federal appropriations bill to boost such projects. This money would benefit the neediest of rural communities that are affected by extreme conditions that increase the cost of constructing water and wastewater systems, that have a high incidence of health problems related to water supply and poor sanitary conditions, or whose residents are suffering from a high rate of poverty.

Most Americans take safe drinking water for granted. Most Americans simply assume that, when they turn on the faucet, clean water will automatically flow out. The terrible truth is that, in the United States, the health of millions of men, women, and children is made vulnerable by their reliance on a possibly contaminated water supply.

According to statistics from 1998, approximately 2.2 million rural Americans

live with critical quality and accessibility problems related to their drinking water, including an estimated 730,000 American citizens who have no running water in their homes. An additional five million rural Americans are affected by grave, although less critical, water problems, such as water sources that are over-taxed or poorly protected, and by antiquated distribution systems.

The funding provided in my amendment is desperately needed to address conditions in much of Appalachia and other rural areas like the Mississippi Delta or outlying Alaskan villages. In West Virginia, families in towns such as Pageton, Belington, and Crum are forced to deal with water that must be boiled before consumption, or with water that flows -- when it flows -- like opaque brown sludge from their taps. This is water that is not fit for washing a car, let alone for cooking or mixing with baby formula. That simply should not be, in a nation as rich in resources as the United States.

This \$30 million I added for clean water systems gives hope to rural Americans that a brighter future lies ahead, a future flowing as bright and clear as the water out of their taps.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Rural Aging: A Global Challenge

A recent Census Bureau report labeled West Virginia the nation's "oldest" state, with more than 15 percent of its population being at least 65 years of age, a percentage that is expected to increase over the next several years. Population studies estimate that, between 1998 and 2025, the number of 65-year-olds will more than double worldwide. Such statistics underscore the need to take a closer look at how the needs of an aging population may affect West Virginia, the United States, and nations around the world.

To help address the challenges associated with aging, delegates from around the globe are slated to converge in Charleston next June for the international "Rural Aging: A Global Challenge" conference. Recognizing the special needs associated with a growing senior population, I secured \$500,000 from the National Institute on Aging to help fund that conference, which is being sponsored by West Virginia University (WVU) in collaboration with the United Nations, the World Health Organization, and the International Association of Gerontology.

The rural aging conference is planned to direct special attention toward

meeting the needs of the elderly residing in some of the least developed areas of the world. Organizers hope that the event will result in a stronger commitment to senior citizens by both the public and private sectors.

West Virginia University's role in this conference may seem surprising to some, but the University possesses valuable expertise in this field. WVU's Center on Aging has been focusing on rural aging issues for the past decade, examining the differences between aging populations in rural and urban communities. It is the only such center in the world devoted to studying these issues.

I have long sought to provide resources to aid West Virginia's seniors, safeguarding programs like Medicare and Social Security and providing funding for expanded health care and other special services for the elderly in our state. But I believe that the upcoming conference can help to identify new strategies, shape major policy, and promote programmatic enhancements that will better enable society to cope with the challenges it faces as the population of senior citizens living in rural communities continues to grow.

Celebrating West Virginia Day 1999

This year marks West Virginia's 136th birthday. Since those early days, as the nation healed from the long and bitter struggle of the Civil War, our state has made great strides. I have been fortunate, over the course of my life, to witness many of these advancements first-hand, and I look forward to the opportunities presented to us as the new century draws closer.

I lost my mother when I was about a year old to the influenza pandemic of 1918 that killed an estimated 20 million people around the world. Today's medicines and medical technologies were hardly dreamed of then, and, indeed, some of them I can still barely believe possible. West Virginians are a tough and hardy people, but credit must go to the quality medical care available throughout the state for keeping so many of us healthy as the years add on. I have taken special pride in my efforts to help the state's teaching hospitals and medical centers to stay on the cutting edge of the health care revolution.

I have also been connected to coal my whole life, having been raised the adopted son of a coal miner and having also married a coal miner's daughter. I

have long been a supporter of clean coal technologies that will allow us to burn coal with increasing efficiency and less environmental impact. Most recently, I have been working on a package of targeted tax incentives to bring these new technologies into more widespread use, and I have been urging the Administration to look into ways to spread the use of these technologies abroad.

One area of life that has not, I fear, seen improvement over the course of this century is the notion of values. The erosion of strong family and moral values before an advancing sea of senseless violence and materialism can, however, be stemmed by a concerted effort on the part of each of us. We all must not only be mindful of our own children and what they see and learn, but we must also set an example that we would like our children and our neighbor's children to emulate.

As we prepare to enter a new century, we must not be beguiled by good times into letting down our guard. With an eye toward future possibilities, and our feet firmly planted in our values and history, we can meet the new century with confidence and security.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Taking Time to Read

One of the most important, and most basic, skills a man or woman needs in order to succeed is the ability to read. As we race toward a new century, high-tech skills will be increasingly in demand. But how can a person be expected to understand high-tech information without a basic ability to read?

A recent report by the National Institute for Literacy paints a very disturbing picture. The organization studied the literacy level of men and women across the country, and estimated that more than 40 million adults, including nearly 281,000 in West Virginia, have minimal literacy skills. Although many of these adults could perform some tasks involving simple texts and documents, all of them displayed difficulty using certain reading, writing, and computational skills considered necessary for functioning in everyday life.

Without basic reading skills, the task of understanding a map, filling out the information on a job application, or comprehending a doctor's written instructions for prescription medicine can be very difficult, if not impossible. Activities that are taken for granted by a majority of the adult population can prove major obstacles for the more than 20 percent of the adult Americans who lack basic reading skills.

Addressing this prob-

lem requires a comprehensive approach. To help, many local organizations pair literate adults with those who are illiterate in programs designed to teach reading skills. At the Literacy Volunteers of America West Virginia Chapter, for example, nearly 700 volunteers partner with about 675 adults to increase their literacy skills. The federal government has also been a partner in the effort to increase literacy. Last year, the government devoted \$360 million to adult education and literacy programs. Millions more were spent on adult education at state and local levels.

But we should not wait until a person reaches adulthood before we begin to address illiteracy. A love of reading must be nurtured in childhood. As I was growing up, my parents did not buy a toy pistol or a cowboy suit for me; instead, they bought books and encouraged me to read. They wanted me to learn and to develop my mind. That kind of encouragement is still needed today.

This July 2nd is National Literacy Day. I encourage West Virginians to mark this day by taking the time to read a book to a child. Educating children about the importance of reading establishes a firm foundation for their future. Share with them the joy of reading, and open their minds to the world of knowledge and wisdom.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Finding Ways to End Youth Violence

Across the country, parents, teachers, students, law enforcement officials, and church and community leaders are struggling to get a handle on the growing problem of youth violence. In light of the shootings at Heritage High School in Georgia and at Columbine High School in Colorado, and the statistics showing a dramatic rise in violent youth crimes, I recently introduced, and the Senate approved, legislation to establish a National Commission on Youth Violence. This Commission calls upon experts in parenting, school administration, and law enforcement to open their ears, listen, and begin to identify and reconcile the root causes fueling this epidemic of terror and violence rocking our nation's schools.

Given the breadth of this challenge, a Commission, consisting of a panel of men and women with broad experience and seeking input from an array of interests, seems a requisite component in the quest for a solution to school violence. No viewpoint can be summarily dismissed as we search for ways to protect our children.

Likewise, no player should be given a pass. The makers of video games, producers of movies, musicians, parents, teachers, administrators, civic groups, church leaders, and public officials all bear some of

this burden. But organizations like the National Rifle Association and law-abiding gun-owners throughout the nation must recognize that they, too, bear some of the responsibility to end this madness. This is no time to take to the sidelines.

Part of the cure, I believe, can only be found by digging deep into the soul of America. Talk of a lack of morals and values and of the way things used to be has long been cynically brushed off as old-fashioned and out of step with the world today. But the experiences of my long life have convinced me that something in our society is seriously wrong. We are missing something that used to be a basic component in our society, and we desperately need to rediscover it.

It is my hope that, in working together with a National Commission on Youth Violence, we can identify and implement many essential steps for ending the terror besetting America's school system. It is high time to restore the peaceful schoolhouse we once knew so well -- a school setting which fosters creativity and inspires learning, and, most importantly, which provides each student with a safe haven for obtaining the knowledge and skills necessary to lead America into the 21st century.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Giving Small Businesses Y2K Help

In these complex times, our society increasingly relies on computers. From the scanners at grocery store check-out counters to the radars that monitor airplane traffic, computer technology plays a significant role in our daily lives. Unfortunately, because of the dominance of computers throughout our society, computer errors can have widespread, expensive, and potentially dangerous consequences. In recent years, a computer problem known as Y2K, for the Year 2000, has gained international attention.

The Y2K problem stems from the fact that, until very recently, computers and computer programs were designed, primarily for cost-saving reasons, to process date information by using just two digits, instead of four, to represent the year. For example, in many computers, "97" is used to represent 1997. Using this two-digit format, though, makes the year 2000 indistinguishable from 1900, and the year 2001 can be mistaken for 1901. Such a simple mistake could cause entire computer systems to shut down, with potentially catastrophic consequences for the programs, services, individuals, and businesses that are dependent on those systems. Fixing this problem can be very expensive, and for small businesses that operate on tight budgets, the

cost to repair the problem could prove prohibitive.

To help small businesses prepare for Y2K, legislation was recently enacted, with my support, authorizing the Small Business Administration (SBA) to provide loans to help companies become "Y2K ready." Two types of loans will be provided. Under the first, small businesses can borrow money to purchase the systems, software, and services they need to become Y2K compliant. These loans -- known as Y2K Action Loans -- are available now. After January 1, 2000, the SBA will make loans available to assist small businesses that suffer economic injury as a result of a Y2K-related problem.

Additional information on the SBA loan program can be found on the agency's Internet site at www.sba.gov/y2k. In addition, this site offers general Y2K information and guidance for small businesses. The SBA Answer Desk can be reached at 1-800-U-ASK-SBA for information on the SBA office nearest you.

Businesses, large and small, in West Virginia should take the Y2K problem seriously and examine their own readiness. The consequences and costs of ignoring the problem could be far more devastating than the expense of upgrading outdated systems.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Guaranteeing Steel's Future

Recently, the Senate approved a key measure intended to address the steel import crisis caused by the illegal dumping of foreign steel into U.S. markets. As a result of the flood of steel imports from late 1997 through the end of 1998, 10,000 steelworkers across the nation were laid off from their jobs. Several domestic steel plants have closed or declared bankruptcy. With no assurances that steel imports would abate in the near future, financial institutions have been unwilling to restructure most U.S. steel producers' debt. Without financial aid, weakened steel producers are increasingly threatened by closure.

Clearly, American steel companies are reeling. Foreign steelmakers have not been fighting fairly. Those companies have been ignoring international trade laws, and the Administration has failed to intervene decisively to stop those low blows. To address this crisis in a short-term manner, I offered an amendment to a federal appropriations bill that would create a guaranteed loan program for steel companies adversely affected by this steel dumping crisis. The legislation states that the maximum aggregate amount of a loan that could be available to a single company would be \$250 million. The total amount of all guarantees would not exceed \$1 billion. All loans would have to be repaid within six years, with

interest. This loan guarantee program would give steelmakers access to an infusion of capital that could help them to recover from those unfair punches and fight back.

Opponents of this loan guarantee program claim that it is an excessively costly solution to a non-existent problem. It is neither. The federal government would not be making the loans. The loan guarantee program outlined in this bill would provide qualified steel producers access to loans through the private market that are guaranteed by the federal government in the same way that the federal government now guarantees loans made to homebuilders, farmers, and even to foreign nations like Mexico, Israel, and Russia. Similar federal programs have been implemented in past years for New York City, Lockheed, and Chrysler -- and have worked.

I am proud that the Senate has approved this program, and I hope that the House of Representatives will act on this legislation soon to provide important relief for thousands of steelworkers and their families who continue to face an uncertain future. Further delay by the Congress and the Administration will only lead to cold blast furnaces and fading hopes in steel towns across the country. This is an emergency. It requires urgent action.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Commitment to Clean Water

West Virginians are benefiting from new drinking water systems and a better protected environment because of a very successful program at West Virginia University (WVU) called the National Onsite Demonstration Project (NODP). One of four nationally recognized environmental services and training programs housed at WVU, the NODP helps small communities to finance, implement, and demonstrate technologies to treat wastewater, prevent pollution, and protect public health. In 1993, I helped to initiate the NODP by providing funds in federal appropriations bills for the program. Since then, millions of dollars have been invested to help improve water quality.

Thousands of West Virginia residents, especially those in remote regions of the state, depend on on-site wastewater treatment systems. The NODP designs unique systems to meet the individual needs of each residence -- making clean and safe water both accessible and affordable. For instance, the NODP's Monongalia Management and Maintenance District will soon oversee systems for nearly 50 percent of the county's residents. Effective on-site systems will soon be installed in McDowell County as well, ensuring that the mountains of Southern West Virginia are no obstacle to the highest water quality for its citizens.

Because West Virginia is at the forefront in wastewater management and technology, experts from across the country, and as far away as South Africa and Uruguay, are traveling to NODP sites seeking solutions to their own wastewater problems. In addition to successes in McDowell and Monongalia counties, WVU has joined with Shepherd College, in Jefferson County, to establish a demonstration and training site at the Freshwater Institute in Shepherdstown.

Small communities far beyond our state's borders also benefit from the NODP. The program has additional sites in 12 other states, as well as a widely distributed research publication and toll-free hotline.

Throughout my career, I have worked diligently to prepare West Virginia for economic growth. To be competitive in attracting new business and industry, we must have the proper infrastructure in place. Like improved highways and bridges, effective wastewater management systems are vital to the continued expansion of West Virginia communities. The NODP is making development possible in regions of West Virginia where a central waste management system is not affordable or feasible. Due in part to the NODP's efforts, our communities are cleaner, safer, and prepared to move forward into the next century.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Meeting Education's Needs Through Flexibility

Local education officials have often complained that restrictions on the use of federal funds are often short-sighted, making it difficult for schools to meet the special needs of their students. To address this problem and give the states greater latitude to develop competitive educational programs, the Congress recently approved, and the President signed into law, the Education Flexibility Partnership Act of 1999, or "ED-FLEX." This measure extends to all qualifying states throughout the nation the same privileges currently available to just twelve states now participating in a pilot project. For West Virginia, this presents an opportunity for greater flexibility in exchange for increased accountability in school performance, a concept that I strongly support.

Through this new law, states and school districts will have expanded options in implementing programs that serve underprivileged children, train elementary and secondary teachers, and make schools safer. The legislation delegates greater authority to parents, teachers, and principals who are directly involved in the daily operation of schools.

ED-FLEX focuses on the important role of accountability at the state level to ensure that appropriate steps are taken to develop and implement challenging standards for educational content and student performance. In many circum-

stances, the details of running a school program can best be decided at the state and local levels. Increased flexibility, in these instances, can yield positive results. But in waiving federal education requirements, the impact that such action will have on student achievement must be taken into account so as to ensure that our nation's educational system is not weakened further.

ED-FLEX has received favorable reviews in states that currently participate. The flexibility the program provides has allowed those states and communities to pursue innovative initiatives for elementary and secondary education. For example, Maryland, a current ED-FLEX-designated state, has used its broader authority to provide one-on-one tutoring for reading students who have the greatest needs in the elementary grades, giving young students a firmer foundation for success in later educational pursuits. Other ED-FLEX states have been successful in reducing the average student per teacher ratio in mathematics and reading classes.

While preserving the intent of federal education programs and delegating greater flexibility to localities, ED-FLEX will help federal education dollars to be better targeted to meet the needs of particular schools and to prepare our nation's young people for the challenges of tomorrow.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Saving for a Rainy Day

Imagine going to work one day and being told by your boss that you will be receiving a bonus in each of the next ten years. What would you do with all that extra cash? You could wait until you actually receive it, then put some in the bank for retirement, and use the rest to pay off your bills. Or, you could throw caution to the wind, call the travel agent now, and start packing for that once-in-a-lifetime vacation extravaganza.

Believe it or not, that is essentially the predicament facing the Congress ever since government forecasters projected surpluses in the federal budget of almost \$3 trillion over the next ten years. Even setting aside the \$2 trillion that comes from overpayments to the Social Security system, and which everyone agrees will be needed to secure the long-term solvency of that system, Congress is still left with the question of what to do with nearly \$1 trillion. Before breaking out the suitcases and suntan lotion, though, let me offer two caveats.

First, the nation does not have an extra trillion dollars. Rather, what we have is a rosy prediction of an extra trillion dollars. And that is a whole different animal, particularly in light of the fact that, over the past 19 years, congressional budget forecasters have been wrong in their annual deficit/surplus esti-

mates by an absolute average of \$54 billion per year. Extend that average over the next ten years, and one can see that \$540 billion of the \$1 trillion projected surplus could melt away faster than a snowball in July.

Secondly, the projected surplus is not simply the result of additional treasury revenues arising from a growing economy. In reality, \$595 billion -- or 60 percent -- comes from draconian -- and as yet unspecified -- spending cuts in such things as crime prevention, veterans' health care, education, and airport improvements, to name just a few. Throw in the additional \$80 billion that experience teaches us will be needed to address natural disasters over the next ten years -- such as floods, hurricanes, and droughts -- and one can again see that the so-called surplus could be far less than anticipated.

This is not to say that the forecasters will not be right, or that the budget cutters will not prevail. But before we get too far along with grandiose plans, I hope that we in Congress can put aside our rose-colored glasses, provide for Medicare and Social Security, pay down the national debt, provide for the nation's investment needs, and put the welfare of our children and grandchildren ahead of our own self-indulgent inclinations.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Disaster Relief for Farmers

As a result of the many months of drought that has gripped West Virginia, President Clinton has, at my request, designated every county in the state a federal agricultural disaster area. This designation opens the door to farmers to receive short-term financial help through low-interest USDA loans and other programs to help cover losses that resulted from the drought.

In West Virginia, this drought has devastated the lives of hundreds of family farmers, and I am deeply concerned about the fate of West Virginia's last 17,000 surviving small family farms. Recently, I had the opportunity to visit a farm in Jefferson County and to meet with farmers. I stood in what should have been a fertile cornfield with corn above my head, but the tassels barely reached past my knees. Ears of corn snapped too easily from the stalk and were no bigger than two rolls of quarters placed end to end. I saw the conditions of the cattle and pastures in West Virginia. I saw the dry, cracked fields. I heard the heartbreaking stories of farmers and their wives.

The federal disaster designation is a first step in helping farmers to survive financially during this drought. In addition to the low-interest loans, farmers can apply for assistance

from the Emergency Conservation Program, which provides emergency cost-share funding for water conservation measures; federal crop insurance; and the Noninsured Crop Disaster Assistance Program, which provides compensation for crops for which crop insurance is not available.

Farmers have eight months from the date of loss to apply for the loans to help cover part of their actual losses. To be eligible, producers must have suffered at least a 30-percent loss of normal production in a single enterprise, be able to repay the loan and any other loans, be unable to obtain credit elsewhere, and have adequate security or credit history. Farmers and ranchers should contact their local USDA Service Center or Farm Service Agency county office for further information.

While this drought is primarily an inconvenience for most people in the mid-Atlantic region, it has stolen the life from much of the land and the livelihoods of many of our farmers. It is my hope that this federal disaster declaration, and the financial assistance that comes with it, will help farmers throughout West Virginia stave off devastation and survive until the rains return to the hills and fields.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Back to School

With the new school year just around the corner, students are stocking up on school supplies for their upcoming classes and teachers are putting the final touches on their lesson plans. Yet, despite the excitement that accompanies the first day of school, there is an anxious feeling that parents, educators, and community leaders also share this time of year.

Just a few months ago, our nation witnessed the most tragic school shooting of all time. While Littleton, Colorado, continues to cope with the devastating reality of what transpired there last spring, our nation as a whole must work together to ensure that a recurrence of this event does not happen in another American schoolyard. Every step we take in this regard brings us closer to restoring the old-time serene schoolhouse that our children deserve.

West Virginia is one step ahead in creating targeted violence prevention programs. From the West Virginia State Police's "Operation Safe Schools" program to the West Virginia Safe Schools program that provides ongoing training for principals, teachers, and school personnel on crisis intervention and management, our schools and communities are working to maintain a peaceful environment in which teachers can teach and

students can learn.

However, there is no single cure-all to the problem of school violence, and it is important to remember that prevention should not solely begin and end on school grounds. The problem is pervasive, and protecting our nation's children ought to be a team effort of schools, families, communities, and churches, not simply a matter of public policy. Parents and educators are youngsters' role models, and often their greatest confidants. So, teach children the "old values" of integrity, honesty, respect, loyalty, and religious faith that will carry them through the highs and lows of life. And heed unusual behavior and warning signs before a bad day progresses into a violent outburst.

One's education is a lifeline to a strong and prosperous future. It begins at home as a child and should never truly end. It saddens me to think that the critical years of elementary and secondary education have been stolen from students caught in the line of fire. Bright futures as scientists, writers, teachers, entrepreneurs, and community leaders are within reach for many of our nation's children. Let us all work together to keep our schools safe, and to watch these visions and aspirations blossom into a reality.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Opening the Workforce to All Americans

Despite the overwhelming growth and prosperity of our nation's economy in recent years, men and women with disabilities continue to struggle to live independently and become integral contributors to the workforce. According to a 1998 Harris survey, 72 percent of disabled Americans want to work, yet nearly three-quarters of the disabled adults in the country are unemployed. Given these staggering figures, I joined in cosponsoring S. 331, the Work Incentives Improvement Act of 1999, which would make significant strides toward reforming federal disability programs and removing unfair barriers facing disabled persons who desire to enter or return to the workforce.

The Senate recently passed this important legislation by a unanimous vote, opening more workplace doors to greater numbers of disabled Americans and unleashing the creativity and talent of this dynamic population. For too long, men and women with disabilities have suffered from unfair penalties if they go to work. They have been caught between the option of accepting a paying job at the risk of losing medical coverage, or simply sitting idle so that they can retain their vital health care benefits.

Through the Work Incentives Improvement Act, disabled citizens would no longer have to contend with this difficult and unfair choice. This legislation would help to remove existing health care barriers and would bring the goal of independence within the reach of many disabled Americans. It would give adults with disabilities greater access to health care coverage once they enter the workforce, including opportunities to buy into Medicare and Medicaid at affordable rates. Moreover, it would phase out the loss of disability cash benefits as income levels rise and would broaden access to vocational-rehabilitation and the employment services necessary for disabled persons to become successfully employed today.

For too long, disabled Americans have been unfairly barred from the workplace by unrealistic restrictions. President Franklin Roosevelt once said, "No country, no matter how rich, can afford to waste its human resources." This legislation lives up to President Roosevelt's objective. As a result of this initiative, a brighter future is on the horizon for our nation's disabled community, and our nation stands ready to benefit from an infusion of capable and motivated workers.

Protecting Seniors from Exploitation

Turning 65 years old is supposed to mark the beginning of a new stage in life, the "golden years," with more time for family, hobbies, and relaxation. Sadly, too many Americans in their "golden years" fall victim to gold diggers who seek to exploit senior citizens for personal gain.

Far too many Americans work hard for years, only to find that their retirement "nest egg" has been plundered through theft or fraud. Other senior citizens fall victim to telemarketing scams, in which con artists take advantage of their victims' often trusting natures. And, too often, seniors fall prey to health care fraud and nursing home abuse.

To protect older Americans from those who profit at their expense, I am co-sponsoring a bill that would crack down on a host of crimes which disproportionately target senior citizens. This bill -- the Seniors Safety Act of 1999 -- would direct the Attorney General to study crimes against seniors and to report back to Congress with suggestions on ways to reduce and prevent such crimes. It also would provide criminal and/or civil penalties for defrauding a pension, retirement, or medical savings plan, or engaging in bribery or corruption in administering such plans.

The Act would set up a

"Better Business"-style hotline to collect and provide information on complaints of telemarketing fraud, and would call for a computer database to be set up with information about companies that engage in telemarketing scams. These provisions would help senior citizens to make sure that the friendly voice on the other end of the telephone offering special deals or gifts is not just a smooth "con man" plying his craft. Upon notification by the Justice Department, telephone companies would have to discontinue or refuse service to perpetrators attempting to swindle seniors.

In addition, the bill would allow the Attorney General to bring actions in court against false claims or illegal kickback schemes involving federal health care programs. And it would penalize nursing homes that exhibit a pattern of health or safety violations which abuse the physical or mental health of residents.

I hope that the Congress will move forward with the legislation and create this important safety net to protect our older citizens from the unsavory criminal activity which so often afflicts them. The Seniors Safety Act would help older Americans to enjoy their golden years without fear. They deserve nothing less for their years of hard work.

Digging Out of the U.S. Trade Deficit

The U.S. Department of Commerce recently released trade deficit figures for the first six months of this year. Unfortunately, those statistics were not encouraging. According to the report, for five of the first six months of the year, the gap between what U.S. companies and consumers spent on imports and the amount that foreign countries spent on American products reached record levels. This report is further proof that U.S. trade policies need serious examination and readjustment.

For too long, American industries have battled unfair trade practices by foreign competitors. This and past Administrations -- both Democratic and Republican -- have allowed the nation's trade deficit to soar. As a result of Administration policies that reflected State Department concerns about the economies of foreign nations, American industries and American workers have suffered.

To address this situation, and to find ways to reverse the trade deficit, I authored legislation last fall to create the Trade Deficit Review Commission. Recently, this 12-member, bipartisan body began the process of studying the causes and consequences of, and looking for solutions to, U.S. trade deficits.

Clearly, growing and persistent trade deficits have reached the point of requiring this kind of examination. Furthermore, conventional wisdom has been placed into question re-

cently concerning the trade deficits. For instance, the widely held assumption that trade deficits would disappear or become inconsequential when the national budget was put into balance is clearly wrong.

The Trade Deficit Review Commission, which has a one-year lifetime and is required to hold at least four field hearings outside of Washington, D.C., consists of an excellent mix of men and women, including business, labor, and investment executives. These men and women bring to the Commission a variety of perspectives. The members include academic figures of national repute, former Cabinet and Federal Reserve officials, and former Senate and House staff members who have been central architects of virtually every trade bill in the last 20 years.

The intersecting issues that this Commission will examine have been marching across the front pages of America's newspapers. Those issues include such topics as China, steel, technology, agriculture, trading blocs, foreign subsidies, and so on. These are important issues on which the country needs clear and thorough guidance. I have every confidence that this Commission, if it can forge a strong consensus on future policies, will perform a very valuable service. For the sake of our economic future, our immense trade deficits must be reversed.

Building Safe Schools and Healthy Communities

A new school year is underway, with all its bright potential for learning. And while most students welcome the chance to again immerse themselves in the business of learning and growing, we, as parents, educators, and legislators, cannot help but reflect upon the memories of sudden, violent death that have visited several American schools.

I consider school violence to be one of the most critical problems facing our nation. School violence can happen again, and it can happen anywhere. That is why I recently hosted a statewide forum with West Virginia University to further enhance our collective knowledge of the efforts underway throughout the state to prevent youth violence. Moreover, it is my hope that this symposium will spark an open, active discussion across the state about what more needs to be done to better protect our teachers and children from classroom violence. Results from the forum, as well as presentations made throughout the day, are being posted on my Internet site at <http://byrd.senate.gov>.

At the symposium, several ideas were presented by panelists and participants alike. Among those ideas were expanding after-school programs to all children, restoring art classes that have been subject to budget cuts,

and teaching conflict-resolution and peer-mediation skills beginning in the early grades. Parents, teachers, and students also proposed reducing class size as a way to make young people feel that they are receiving more personal attention from teachers, and, therefore, are more a part of the school community. The idea of engaging students in their school and community was the single concept that resonated with most symposium participants. Too many children feel like they are just a faceless number moving through school. By involving a student in extra-curricular and community activities, a student may feel a greater sense of self-worth and pride, and may be less likely to commit an act of violence in school.

I do not have the answers to preventing youth violence, nor does any single individual. None of us, alone, possesses the magic answer that will solve the complex problem of preventing youth violence before it starts. But across this great state of ours reside the dedication, the devotion, and the innovation to find solutions that work. The recent statewide symposium spurred that effort forward. We must continue to work together, and we must draw others to our task. The future of our state and our nation depends on it..

Celebrating the VFW Centennial

This year marks the 81st anniversary of Armistice Day, designated to celebrate the signing of the armistice that ended the fighting of World War I. A generation later, 16-million Americans again answered their nation's call against aggression in World War Two. Since then, our nation's sons and daughters have served in Korea, Vietnam, Panama, the Persian Gulf, Haiti, Bosnia, and Kosovo. They have fought to protect our nation's interests and to ensure the freedom of others across the globe. Through the turmoil and change of the 20th century, one thing has remained constant: the dedication and commitment of our veterans to the survival and strength of this nation.

There is a unique opportunity this year to pay tribute to the men and women of the Armed Services with the 100th anniversary of the Veterans of Foreign Wars (VFW) on September 29. This centennial anniversary presents an opportunity to recognize and honor the more than two million veterans of the Armed Forces represented by the VFW.

The VFW began when groups of veterans of the Spanish-American War of 1898 banded together in Ohio, Colorado, and Pennsylvania. These first VFW members aimed to secure

veterans' medical care and pensions, benefits for which I continue to work today. In addition to its national leadership on veterans' issues, the VFW supports America's Armed Forces by sending letters, holiday cards, and gift packages to servicemen; by sponsoring USO shows; by contributing to memorial funds; by helping servicemen to obtain benefits; by assisting with job placement; and by holding "welcome home rallies" for servicemen. Whether at home or abroad, VFW members are committed to improving the lives of veterans and their families.

In West Virginia, there are approximately 26,500 members of the VFW who attend meetings at 133 posts around the state. The VFW Ladies Auxiliary adds another 20,000 members to support veterans issues and community projects to which the VFW dedicates time and energy.

I am proud to say that I cosponsored a resolution that passed the Senate earlier this year recognizing the VFW's centennial, and providing that September 29, 1999, be designated as "Veterans of Foreign Wars of the United States Day." I hope that West Virginians will mark this occasion by thanking a veteran whose sacrifices helped to secure the blessings of freedom in America.

Turning an Ear to the Cosmos

Early next year, the final pieces of West Virginia's new eye on the universe will be put in place, and astronomers will begin the task of testing the world's largest fully steerable radio telescope, located in Pocahontas County. The new Green Bank Telescope will be an important resource to enhance our knowledge and understanding of the Milky Way galaxy, and beyond.

The new telescope replaces the 300-foot telescope that collapsed in 1988 after 26 years of service. In 1989, I added \$75 million to a federal appropriations bill for construction of the new telescope and, in 1991, I added another \$5.4 million to build the joint Navy-National Science Foundation Operations Center at the observatory.

The 300-foot Green Bank Telescope specialized in discovering pulsars. While comets are remnants of the beginning of a star and its planetary system, a pulsar is all that remains after the star suffers a massive explosion that removes most of its surface in a phenomenon called a supernova. Pulsars emit regular pulses of radio waves that act as a type of "celestial lighthouse." These waves can be detected by a very large radio telescope, like the Green Bank Telescope, and may some day be used by space explorers as light-

houses to navigate our galaxy. The telescope will allow astronomers to search for pulsars in the very center of the Milky Way, a region so distant from the Earth that any pulsars there are too faint to be found by existing telescopes.

Working with the original telescope, astronomers made many significant discoveries. For example, it was the second telescope ever to detect a group of pulsars, and through its detection of another group of pulsars, astronomers realized the association between supernovas and pulsars. Additionally, a significant number of all pulsars detected to date were found with the original Green Bank Telescope. With all of that success, the doors that scientists and astronomers will be able to unlock with the new telescope are beyond imagination.

Because of its unique design, astronomers will be able to position the telescope with an incredible degree of accuracy, even though it is larger than a football field and taller than the Statue of Liberty. Scientists will begin aligning and adjusting the telescope later this year, and expect to dedicate it officially next spring. I look forward to the day when astronomers map the vast reaches of our galaxy and others after traveling no further than Green Bank, West Virginia.

GREEN BANK, W.Va.... The world's largest fully steerable radio telescope is now under construction at the National Radio Astronomy Observatory's site in Green Bank, Pocahontas County. Early next year, astronomers will begin the task of testing the new telescope.

By U.S. Senator Robert C. Byrd

A Victory for American Steel

Two of West Virginia's largest private employers, Weirton Steel and Wheeling-Pittsburgh Steel, are locked in a battle for survival. These companies, like so many other American steel producers, are fighting against a wave of illegal, below-cost, imported steel that has the potential to permanently cripple an industry that is vital to this country's economic base and national security.

The force of this wave can be seen in some disturbing figures. According to U.S. Department of Commerce data, in 1998, the U.S. imported more steel tonnage than ever before. In fact, last year's import levels were 83 percent higher than the annual import average for the previous eight years. Across the country, at the height of the import crisis, more than 10,000 steelworkers were forced off the job. At least six steel companies have filed for bankruptcy. Much of this damage can be linked directly to illegally dumped steel imports.

To help Weirton, Wheeling-Pitt, and other steel mills, I created a \$1 billion loan guarantee program specifically designed to provide some short-term relief to the American steel industry. Most recently, the President signed into law my initiative that will help domestic steel producers by providing access to an infusion of

capital to keep their furnaces burning and keep their employees on the job. The maximum aggregate amount of a loan available to a single company is \$250 million, and the loans will be guaranteed up to 85 percent of their total. My legislation establishes a three-member oversight board, consisting of the Chairman of the Federal Reserve, who heads the loan guarantee board, the Secretary of Commerce, and the Chairman of the Securities and Exchange Commission.

The loan guarantees will not solve the steel crisis, however. There must be a long-term, permanent solution to this crisis to prevent waves of illegal steel imports from drowning the U.S. steel industry.

For 50 years, I have fought for American workers, for the men and women who earn their livings by honest, hard work, and who are playing by the rules as they seek to achieve the American dream. The U.S. steel industry has made the sacrifices and investments necessary to increase efficiency and compete effectively against foreign makers. Our companies are willing and able to play by the rules. As a nation, we must protect the viability of our steel industry. To do so, we must insist that foreign competitors are held to that same set of rules.

October 6, 1999

WEIRTON, W. Va... Members of the Independent Steelworkers Union thank U.S. Senator Robert C. Byrd, D-W. Va., for his work on the Emergency Steel Loan Guarantee Act. Byrd's legislation, which was recently signed into law, creates a \$1 billion loan guarantee program specifically designed to provide some short-term relief to the American steel industry that has been struggling to compete against record levels of illegally dumped foreign steel.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Fighting for West Virginia Farmers

In the last year and a half, the worst drought in recorded history has struck at the mid-Atlantic region. Stretching from Tennessee to West Virginia to Vermont, farmers have been devastated by months of unrelenting drought, which dried up wells and ponds and left grazing lands parched and bare. Some farmers have had to make the painful decision to sell off their livestock or to give up farms that have been in their families for generations. This is nothing short of an emergency.

Recognizing the great needs of our farmers, I set to work, in my capacity as Ranking Member of the Senate Appropriations Committee, to boost funding in the Agriculture Appropriations bill this past summer for drought relief. Recently, that appropriations bill was amended in a Senate-House conference to provide more than \$1.2 billion in broad relief for farmers who have experienced losses due to natural disasters in 1999.

Moreover, since state agriculture officials identified aid for livestock losses as the West Virginia farming community's greatest area of need, I pressed for and won \$200 million specifically to help livestock farmers recover from drought losses. It was especially important to me that this aid be provided not as loans, but as direct cash

assistance, which would be of greatest help to financially strapped farmers, many of whom are already in debt. The bill also provides \$125 million for dairy farmers who have suffered losses.

Further, drought-stricken West Virginia farmers are eligible for other forms of aid in the bill, including revegetation and feed assistance; emergency cost-share funding for water conservation measures; federal crop insurance; and compensation through the Noninsured Crop Disaster Assistance Program.

In West Virginia, there are approximately 21,000 small family farms. Yet, because of this record drought, more than half of these farms have been put at risk. Clearly, the funding contained in the Agriculture Appropriations bill is badly needed, now. But, it is also evident that the level of funding is not sufficient to address all of the needs of drought- and hurricane-stricken farms. Therefore, the legislation also contains language that I supported to lay the groundwork for additional emergency farm aid in the future.

Saving our small farms not only preserves an honorable way of life for thousands of families, but it also ensures that our nation can continue to enjoy the fruits of their labor for generations to come.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protecting Miners' Health Care

In 1946, President Harry Truman and the United Mine Workers of America (UMWA) struck a deal that opened the way for greater mechanization of coal mines in exchange for cradle-to-grave health care coverage for miners and their families. The deal created a health care fund paid for by a tax on coal mined by UMWA members. But gradually, as more and more coal companies employed nonunion miners, the fund's resources have declined.

In response, the Congress, in 1992, approved the Coal Act, requiring coal companies to cover retiree health benefits, even if the companies were not bound to union contracts, or had gotten out of the coal business altogether. But, because of rapidly rising health care costs and adverse court decisions impacting the Coal Act, the fund's trustees recently determined that the money coming into the benefits fund would not be sufficient to cover anticipated health care costs over the next year.

After I learned of the situation from Congressman Nick Rahall and UMWA President Cecil Roberts, I set out to find a short-term fix for the system in the Interior Appropriations bill. With the help of Congressman Rahall, who lobbied key House Members, I fought hard for and won a \$68 million transfer of fund-

ing to the retired miners' health care fund. This short-term fix is needed to ensure a continuation of health care benefits for the more than 66,000 retired miners and their dependents, including more than 19,500 West Virginia men and women who are mostly elderly and on limited incomes. In fact, according to the fund's trustees, the typical beneficiary is a widowed spouse with an average age of 78, and whose monthly income is the \$140 UMWA pension check, supplemented by a social security check.

My efforts have provided some breathing room. The solution that I was able to win is a short-term "Band-Aid" for the retired miners' health care fund. However, the problem requires a long-term solution -- the kind of fix that ensures that retired miners and their dependents will not have to worry from month to month whether their benefits will soon lapse.

It is now incumbent upon the House and Senate authorizing committees of jurisdiction, on which I do not serve, to work with coal companies and the UMWA to craft a fair, balanced, long-term solution. There needs to be a plan in place that will ensure that retired miners and their dependents will not again face a funding shortfall and looming benefits cuts.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Standing Firm for Veterans Health Care

On November 11, 1919, our nation observed the first anniversary of the end of World War I. In 1926, Congress proclaimed that day Armistice Day, and passed a resolution that called for an annual observance of "thanksgiving and prayer and exercises designed to perpetuate peace through goodwill and mutual understanding between nations." In 1954, Armistice Day became Veterans Day, the holiday on which Americans now annually recognize the sacrifices that our nation's soldiers, sailors, and airmen have made to protect our freedoms.

Largely through the might of our Armed Forces, the United States enjoys an unprecedented position of international leadership. Yet, the promise of lifelong health care that this country made to our veterans has been threatened, not by the aggression of a foreign power but by inadequate funding. Across the country this year, veterans have been concerned about the Clinton Administration's proposed budget for veterans health care services. In fact, the Department of Veterans Affairs (VA) predicted that the Administration's proposed funding level of \$17.3 billion would result in significant reductions in medical care.

In response to these concerns, I worked to raise

the level of funding for veterans' medical care in an appropriations bill. During consideration of the bill by the Senate Appropriations Committee, on which I serve as Ranking Member, I added \$1.1 billion for veterans' health care, bringing the total funding level to \$18.4 billion. When the appropriations bill came to the Senate floor, recognizing that even \$18.4 billion was still not sufficient for veterans health care, I offered an amendment that added another \$600 million for their medical care. My amendment was adopted, and brought the total funding for veterans' medical care for Fiscal Year 2000 up to \$19 billion. This level of funding will enable the VA to continue to provide quality health care to veterans, and will prevent the kinds of cuts in services that many veterans feared would place their eligibility for care in question.

Throughout America's history, our sons and daughters have always been ready to answer the call to duty. In particular, West Virginians have a proud and enviable record of service to our country in perilous times of war and conflict. It is a matter of simple honor that the nation stand behind its promise to provide quality medical care for our veterans.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

West Virginia National Guard Named Best in Nation

I have always been proud of the men and women who serve in the West Virginia National Guard. These soldiers and airmen are ready to serve whenever they are needed, whether in response to floods or blizzards in the state, or in support of our Armed Forces around the globe. Regardless of the hour, the West Virginia National Guard is prepared to live its motto, "Always Ready, Always There."

The West Virginia National Guard is a community-based defense force. Our state's 32 armories and two air bases provide facilities for 1,200 full-time and 5,800 part-time National Guard personnel, with an annual economic impact of \$110 million on the West Virginia economy.

Recently, the West Virginia Army National Guard marked another impressive achievement. For the third year in a row, in each of four specific categories selected by the U.S. National Guard Bureau, West Virginia was ranked number one. Those four categories -- percentage of assigned personnel, percentage of available personnel, percentage of personnel who are qualified in a military specialty, and the number of units that are ready to be activated -- are designed to rate the overall readiness of National Guard units across the country. Through the

efforts of the West Virginia Adjutant General, Major General Allen Tackett, and the efforts of the dedicated personnel, West Virginia once again proved that its National Guard is the best in the nation.

To help the Guard keep this record for many years to come, I am working on a number of initiatives designed to maintain this high state of readiness. Of particular note, this summer, the West Virginia National Guard awarded a contract for construction of the new Regional Training Institute at Camp Dawson, Preston County. Last year, I obtained \$15.2 million for construction of the Regional Training Institute, which, when complete, will fill an important role in preparing members of the National Guard, Reserve, and active duty forces. Staff at this specialized complex will provide training in Special Forces, Engineering, selected Combat Arms, and basic leadership training to more than 2,000 men and women each year. It will be the only center of its kind in the Eastern United States.

It is through dedication and effort that the West Virginia National Guard is the highest rated Guard unit in the country. I applaud the Guardsmen for their commitment and hard work, and I know that they will always be ready to answer the call to duty.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Reaching Out to Autistic Children

One of our state's most exceptional educational resources is the West Virginia Autism Training Center at Marshall University. The men and women who work at this center provide education, training, and treatment programs for West Virginians who suffer from autism.

An estimated one in every 500 children born today will be diagnosed with autism or one of its related disorders -- mysterious diseases that affect brain and nerve development. Autism generally manifests itself in children in the first two years of life, severely impairing language and communication skills, and impeding social development. But its effects have implications for the whole family unit.

The Autism Training Center is a valuable resource for autism sufferers and their families. Through commitment, creativity, and a team approach, the center's staff helps families to provide autistic individuals with quality life experiences. Since its inception in 1983, more than 600 families of autistic children have benefited from the center's efforts. The demand was so great, in fact, that a satellite center was established in Fairmont so that services would be more readily available to families in Northern West Virginia.

Unfortunately, despite the fact that autism tragically leaves its victims pervasively disabled for an en-

tire lifetime, research into this disease has lagged. To help address that oversight, I am cosponsoring the Advancement in Pediatric Autism Research Act. This legislation would expand, intensify, and coordinate the various efforts underway to prevent and cure autism. The bill would authorize \$3.3 million for autism research and \$7.5 million for work by the Centers for Disease Control and Prevention that focuses on the incidence and distribution of autism, as well as ways to control it. Additionally, the legislation would authorize \$33 million for five National Institutes of Health centers of excellence to conduct extensive research into autism. The legislation must still win the approval of Congress, which I hope will occur next year.

At the core of the West Virginia Autism Training Center is the philosophy that individuals with autism can lead happy lives, and that they deserve to have the same quality of life as people without disabilities. By pairing these efforts with the research underway at the federal level, we can better understand the causes of autism, how to treat it effectively, and, hopefully, how to prevent it. In this age of such extraordinary progress on preventing, treating, and curing so many serious and debilitating illnesses, we cannot afford to miss this opportunity to make progress in the elimination of autism.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Striking a Balance between Jobs and the Environment

Throughout West Virginia in recent weeks, much attention has been focused on a federal court decision in a lawsuit involving mountaintop mining. That decision, which found that some of the practices common in both surface and deep mining are illegal under two federal laws, sent shockwaves throughout the coalfields of West Virginia and beyond.

Immediately after the court issued its ruling in October, in which the judge pointed to Congress as the source of a remedy for the situation, the West Virginia Congressional Delegation set to work to address what the court saw as misinterpretations of federal law. Together, we crafted an amendment that struck a delicate balance between the environment and jobs.

After several weeks of diligent negotiations and working against the odds to have the amendment included in an appropriations package, I finally pressed for a vote on this amendment in the Senate during the waning hours of the session.

The Senate, approving the amendment by a vote of 56-33, sent a clear message about congressional intent in interpreting laws governing mining. Even though the House Leadership was unwilling to give the matter a vote, the Senate vote lays a strong foundation for action on this matter in the next session of Congress, which begins in January.

I appreciate the work of the other members of the West Virginia Congressional Delegation, who have been firmly committed to resolving this crucial issue. Senator Jay Rockefeller and the three House members -- Nick Rahall, Bob Wise, and Alan Mollohan -- worked tirelessly to win support of a legislative remedy to the mountaintop mining problem. Their determination was unflagging to the end.

Coal mining is a matter of striking a balance between environmental conservation and the nation's economic and energy needs. Both ends can be achieved -- implementing strict environmental controls on mining activities, while also protecting jobs that are vital to West Virginia -- if we work together.

West Virginia's coal miners respect the environment; they want clean air and clean water for their children and their children's children. I am equally confident that West Virginia's environmental leaders want to pass along to their children and grandchildren a strong and vibrant economy, fueled by abundant and affordable energy.

The recent court decision has presented this nation with a challenge: Can we be creative enough and wise enough to harmonize economic growth with environmental protection? I believe that we can and we must.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Ensuring an Environmental Legacy

One of the greatest challenges facing our nation is the effort to balance the needs associated with protecting the environment while also protecting jobs. Over the years, I have worked to address this challenge by promoting initiatives that preserve the state's natural treasures, while advancing research to better utilize our resources in an environmentally sound manner.

The crown jewel of this effort is the U.S. Fish and Wildlife Service's National Conservation Training Center (NCTC) in Jefferson County. This center combines state-of-the-art technology and a professional staff to train men and women charged with protecting our nation's natural resources. This year, I obtained \$15 million for operations at the NCTC, which I initiated in 1989 and have, over the ensuing years, secured \$138 million for its further development.

Continuing my support of programs that protect West Virginia's natural treasures, I sought funds for land acquisition, operations, and improved facilities at the Canaan Valley National Wildlife Refuge and the Ohio River Islands National Wildlife Refuge. Specifically, this year I added \$400,000 for land acquisition at the Ohio River Islands National Wildlife Refuge, and \$150,000 for improved public facilities at the Canaan Valley National Wildlife Refuge.

In 1989, when West Virginia was the only state without a national wildlife

refuge, I added the first funds in an appropriations bill for the Ohio River Islands National Wildlife Refuge, clearing the path for the purchase of 13 islands to serve as the core of the refuge. The Canaan Valley National Wildlife Refuge, which I started by adding the initial investment of \$2 million to an appropriations bill in 1993, was the nation's 500th federal wildlife refuge. The establishment of these wildlife refuges stands as tangible evidence of my strong commitment to the safeguarding of West Virginia's natural resources while also further developing the state's economy.

Moreover, funding I added to appropriations bills this year has supported and strengthened the New River Gorge National River and the Monongahela National Forest, which host some of the state's most dramatic and sensitive lands, like Seneca Rocks and the Cranberry Glades. The designation of these lands as federally protected not only serves to ensure a special status for the resident flora and fauna, but also allows for recreational opportunities that benefit West Virginia's tourism industry.

Over the years, I have greatly improved our state's environmental record while enhancing our economic well-being. The challenge in the years ahead will be to continue to expand on that record of preservation, even as we build a dynamic economy.

Fulfilling Obligations to Our Veterans

In West Virginia, we are proud of our sons and daughters who have gone into battle to protect the freedoms and values that make America great. But the promise of lifelong health care and benefits for veterans has been too often jeopardized by funding shortfalls. Before adjourning this year, Congress approved two key measures designed to ensure the continuing availability of health care benefits to our veterans.

Congress approved an appropriations bill containing \$1.7 billion that I added for medical care provided by the Department of Veterans Affairs (VA). Last spring, West Virginia veterans began contacting me with concerns that the Clinton Administration's proposed VA budget was inadequate, and that, as a result, the VA would have to cut back the health care services it provides. It was, therefore, very important to add funding to an appropriations bill. With \$1.7 billion added by my two amendments, the enacted bill contained a total of \$19 billion to guarantee that Americans who have served in the defense of our nation would continue to have access to the range of medical services that the VA provides.

While ensuring that basic health care is available to our veterans, Congress also recognized that veterans' health care needs are

changing with the times, and with those new needs in mind, Congress passed and the President signed into law, the "Veterans Millennium Health Care and Benefits Act." The aim of that legislation is to enhance extended-care services for the expanding population of aging veterans by improving access to long-term care for severely disabled veterans and broadening the VA's authority to provide nursing home care alternatives for veterans.

Additionally, that legislation authorizes the VA to pay reasonable emergency care costs for services not provided in VA facilities. That new authority answers a critical need for veterans who require emergency services at a non-VA hospital or clinic.

Finally, the legislation provides the VA with the ability to move toward establishing six new cemeteries across the country, something that veterans groups have been seeking for many years.

Abraham Lincoln said very clearly that the nation has an obligation "to care for him that shall have borne the battle, and for his widow and his orphan." My efforts to protect medical care services at VA facilities, and the work of Congress to enhance many benefits for veterans and their families, are aimed at meeting those obligations.

Water -- A Basic Element of Growth

Signs of economic growth are evident throughout West Virginia. Our state's unemployment rate is down. Its construction rate is up. But while we applaud progress and eagerly anticipate increased prosperity, we must recognize that brisk economic development brings its own set of problems -- notably, an increased burden on our aging infrastructure.

As new businesses spring up and new homes are built, for example, the strain on our already overburdened and outdated water and sewerage systems increases. When one considers the viability of a thriving tourism industry or a more diversified commercial base -- not to mention the potential consequences of unsafe water on the health of our citizens -- the need for such basic elements as modern water and sewerage systems is obvious.

One area of particular need is the network of "combined" sewers in West Virginia and across the country, which serve as some communities' single collection system to transport both sewage and storm water. During heavy rains, these systems may overflow, leading to the discharge of untreated or partially treated waste into rivers, streams, parks, and even backyards, an occurrence that poses potential health risks.

For affected communities, the effort to control these discharges will likely

constitute one of the largest public works projects they have ever undertaken. For example, the City of Wheeling estimates a need of \$400 million for such projects. In total, the estimated cost for upgrades of combined sewers in West Virginia over the next 20 years is at least \$1 billion, and could easily reach the \$3 billion range.

To help our state address this problem, I am co-sponsoring the "Combined Sewer Overflow Control and Partnership Act." This legislation would help communities to overcome the cost of improving combined sewers by authorizing \$1.5 billion in competitive grants for discharge control projects nationwide. Admittedly, this amount falls short of the anticipated need, but it does signal a growing awareness of the magnitude of the problem, and provides a solid foundation from which to tackle this challenge. In addition, the legislation would advance cost-effective, technology-based controls and would help communities to avoid installing unnecessary controls.

If left unaddressed, this problem of outdated, overburdened sewerage systems will only become a bigger financial burden for our state. This legislation, therefore, is a good fundamental step toward helping West Virginia continue to attract new businesses and develop its economy in the years ahead.

Don't Believe This E-Mail Hoax

In this age of information and technology, one of the most powerful and manipulated tools is the Internet. As Internet access has increased, more and more people have begun to rely on the service. But, unfortunately, some of the information disseminated over the Internet is inaccurate.

For several months, I have received constituent letters and e-mails regarding the so-called "Bill 602P," supposedly introduced in the U.S. House of Representatives by a "Congressman Schnell," that would impose a 5-cent tax on every e-mail transmission, as well as a \$20- to \$40-per-month surcharge on all Internet e-mail activity.

According to the so-called legislation, the money would be collected by Internet Service Providers, and then turned over to the U.S. Postal Service (USPS) to assist with recovery of any financial losses that the Postal Service may incur due to a growing preference for e-mail rather than hard-copy letters.

In reality, no such legislation has been proposed in Congress. As a matter of fact, no "Congressman Schnell" exists. Furthermore, the USPS has no authority to charge for e-mail messages sent over the Internet. Nor, according to Postal officials, would they

support such legislation. In fact, the USPS actually operated with a budget surplus last year.

The 602P tax is a hoax that has been propagated by a widespread e-mail chain letter. The origins of this chain letter are unknown, but it is speculated that it was first circulated throughout Canada, targeting the Canadian Parliament, and was subsequently modified to reflect agencies within the U.S. government.

The Internet is an amazing device that has the ability to quickly and easily disseminate needed information. Conversely, it can spread false information just as quickly and easily. The high volume of inquiries to my office about the so-called 602P bill is an interesting commentary on the tremendous influence that the Internet has come to have in our modern lives. While the Internet serves as a valuable communication tool, it is disconcerting that such hoaxes are being perpetrated on West Virginians.

I hope that West Virginians have suffered no adverse consequences as a result of this widespread hoax, and I urge all Internet users to view with a healthy skepticism future such e-mail chain letters. To find out more information about this Internet hoax, visit the USPS Internet site at www.usps.com.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Successful Year for West Virginia

Throughout 1999, I continued my efforts to advance a number of ongoing appropriations initiatives that are improving the lives of West Virginians. But much of my time and energy this year was also devoted to responding to three emergencies that threatened the livelihoods and well-being of thousands of West Virginians.

The first of those emergencies came in the spring, when one of our state's core industries -- steel manufacturing -- was reeling from the unfair actions of foreign steelmakers. Because record levels of foreign steel were being illegally dumped on our shores, domestic steel prices had plummeted, threatening thousands of jobs and leaving American steel companies in dire need of short-term relief. In response, I authored the \$1 billion Emergency Steel Loan Guarantee Act to provide immediate assistance to American steelmakers who have had to cut jobs and close mills in the wake of the illegal dumping.

On another front, this past summer, when record drought conditions gripped West Virginia and the mid-Atlantic region, I worked for passage of a package of emergency aid for farmers. With my support, Congress approved \$8.7 billion in relief for farmers who had experienced losses due to natural disasters or depressed markets in 1999. Further-

more, because the West Virginia Department of Agriculture identified assistance to cattle farmers as the state's greatest drought-related need, I added \$200 million to that package specifically to help livestock farmers recover from drought losses.

In the fall, another emergency surfaced when I was alerted that retired miners and their dependents faced the possible loss of health insurance next year unless monies were added to a special federal health benefits fund. To help ensure continued health care coverage, I added an amendment to an appropriations bill that transferred \$68 million to the retired miners' health care fund. This short-term fix will continue health care benefits to more than 66,000 retired miners and their dependents, including more than 19,500 West Virginia men and women who are mostly elderly and on limited incomes, providing some time for the committees of jurisdiction to craft a long-term fix.

These three emergencies made this year perhaps one of the most challenging of my career of public service for West Virginia. But winning expeditious solutions to these emergencies also made 1999 one of the most rewarding. Fresh from the fray, therefore, I enter my 42nd year of service to West Virginia in the United States Senate with enthusiasm, prepared to tackle the new challenges that lie ahead.

The Millennium Mirage

There is good news for procrastinators who crossed the threshold of the year 2000 with trepidation, contemplating the long list of goals that had been set for the new millennium but left unfulfilled. And what is the good news? The third millennium does not start for another year!

That's right! In the midst of all the hype and the flying corks, celebrants seemed to have neglected the fact that the true beginning of the next century does not come until January 1, 2001.

I can understand the confusion many Americans must feel at the moment. Throughout 1999, our nation was immersed in a wave of advertising and public relations messages, generated by corporate giants and quoted by members of the media, who conveniently ignored historical and factual accuracy as they pushed Year 2000 products and futuristic messages in the hope, perhaps, of profiting from a manufactured millennium mirage.

In truth, it was 99 years ago, in 1901-- not 100 years

ago, or 1900 -- that newspapers across the country recognized the beginning of the 20th century. From the Chicago Tribune, to the Evening Times in the Nation's Capital, to West Virginia's own Charleston Gazette, editors nationwide marked the start of January 1, 1901, with reflections on the 1800's and predictions of technological advances and societal changes in the "new" century, which they recognized had just begun.

To call the year 2000 the beginning of the new millennium is a bit like marking a foot at 11 inches. Accuracy is far too important to miscount history by a whole year in the hunger for a good party or big profits.

Annoying as it has been to watch respected individuals falling all over themselves trying to find more and more ingenious ways to mark the turning of this particular calendar page, I have to admit that I will enjoy watching just what these creative minds might dream up next year to whip the nation into a second frenzy over the real beginning of the third millennium.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Renewing America's Soul

Something is missing in America today. We seem to have lost touch with some fundamental underpinning of our national soul, and it has never been more apparent than it is today.

All too many Americans now, more than ever before, seem to lack an appreciation or even comprehension of the spiritual aspect in our daily lives. In fact, we appear to have gone so far afield in our quest to avoid offending anyone that we have all but banished any reference to religion from any public forum.

Moreover, rampant materialism, the likes of which we have become accustomed to seeing in recent holiday seasons, underscores the sad reality that, in our nation today, what one has too often defines our view of success, rather than what one is. In many circles, the state of one's bank account means more than the state of one's soul.

Despite this rather discouraging state of affairs, I believe that the flame of spirituality can be rekindled in America.

I sense in our land a deep hunger for something more than prosperity, something more than technology, something deeper than deep pockets -- something that sustains the human soul, that lifts it up, that transcends our baser natures. I hear the clanging of alarm

bells from parents who cannot come to grips with the state of our schools and the violence threatening our children.

I note a growing recognition of the dangers posed by a society which has evolved from a collective avoidance of religion and moral teachings.

These signals I see as evidence that the time is ripe for a return in America to the religious values that call forth the best of human nature.

I believe that we are experiencing a growing demand for a return to religious beliefs, and I echo the call to all of us who believe in a Supreme Being to put God back into the daily life of our nation.

West Virginia has, to its credit, managed to preserve its religious and moral underpinnings, but that foundation may be weakened if we who believe do not rededicate ourselves to the task of putting the Creator first in our daily lives.

Such a simple act -- putting God first -- may be difficult. It may demand courage. But faith has always had courage at its core.

So, as we stand at the crossroads of a new year, contemplating the path ahead, let us be guided by a Divine Providence to a future of renewed spirituality in America

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Challenge of China

The unlikely dateline of Shepherdstown, West Virginia, on worldwide news dispatches concerning the recent round of Middle East peace talks between Israel and Syria is but the latest example of how international events frequently have local consequences.

Indeed, it does not require the occurrence of peace negotiations on West Virginia soil to remind us that events occurring in far-flung corners of the Earth can have a direct and immediate impact on our daily lives.

In the last 50 years, it was the Soviet Union that preoccupied U.S. military leaders and foreign policymakers. Whether the coming years will produce a similar regional or global superpower remains unknown, but one nation that bears watching is China, a country with which the United States has a complex, and potentially pivotal, relationship.

Trade is a major component of that relationship. The U.S. trade deficit with China reached a record \$57 billion last year. As long as such deficits exist, domestic manufacturers, including West Virginia companies, are hampered in their efforts to participate in the budding global economy. Opening China to U.S. imports is central to correcting the trade imbalance between the U.S. and

China, and to developing a healthy, mutually beneficial trading partnership.

National security is another major point of contention between the U.S. and China, particularly in the wake of last year's discovery that China engaged in espionage to steal sophisticated nuclear weapons technology from the U.S. Not only does China possess limited numbers of nuclear weapons capable of reaching the American mainland, but U.S. intelligence also indicates that China is selling its nuclear technology to rogue nations such as North Korea and Iran, both of which pose potential national security threats to the United States.

Additionally, the national security concerns provoked by China are helping to fuel the push for a U.S. National Missile Defense system, a costly new program that will require a major investment of tax dollars -- dollars that will not be available to address local concerns, such as education, highways, health care, and the like.

West Virginia may never play host to high level government meetings concerning U.S.-China relations, but we would be well advised to watch China carefully, and to be mindful that we in West Virginia frequently have a personal stake in the actions of other nations.

Tax Help Hitting the Highway

Once again, tax season is upon us. As tax forms arrive at the libraries and post offices, and the reminders spring up that tax filing deadlines are nearing, the unease that so many citizens feel about dealing with the Internal Revenue Service (IRS) returns. But, in response to customer suggestions, the IRS is trying to simplify the system and make it easier for taxpayers to file their returns.

The IRS, recognizing the need to cut red tape, is attempting to put the days of confusing forms and directions in the past. A keystone to this effort, and one with particular appeal to rural West Virginians, is the new "Highway 1040" initiative.

"Highway 1040" is designed to provide taxpayers who live in remote areas with first-hand assistance in the preparation of their federal income tax returns and the opportunity to sit and discuss their tax concerns face-to-face with IRS representatives. On February 5, 2000, at sites in Bluefield, Lewisburg, Logan, Sutton, Morgantown, Moorefield, and Romney, IRS officials will be available on a first-come, first-served basis to answer questions concerning the preparation of Form 1040, Form 1040 Schedules A, B, and R, Form 1040EZ, Form 1040A, and the Earned Income Tax Credit application. Those interested in participating should

call 1-800-829-1040 to learn about the location and times for the "Highway 1040" program closest to their home. Anyone interested in taking advantage of this outreach program should bring all of their tax documents with them, including W-2 forms, Social Security numbers, documentation of child care expenses, itemized deductions, and bank statements.

In addition, the IRS operates seven free, walk-in assistance centers across West Virginia, as well as toll-free assistance over the telephone at 1-800-829-1040. Five of these IRS centers -- in Bridgeport, Charleston, Huntington, Parkersburg, and Wheeling -- are open year round, Monday through Friday, from 8 a.m. until 4:30 p.m. The Martinsburg center is open from 8:00 to 4:30 on Wednesdays, and the Sophia center is open on Mondays, Tuesdays, and Wednesdays, also from 8:00 until 4:30.

Tax time can be frustrating. The forms and instructions can be confusing and difficult to follow. But, by offering free assistance and working with taxpayers on a one-on-one basis, the IRS is working to make the tax season as pain-free as possible. West Virginians who have questions or concerns about their taxes may wish to take advantage of these free IRS initiatives.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protecting the Future of Social Security

For more than 60 years, Social Security has been instrumental in easing the financial burden on elderly citizens with limited incomes, and in protecting families after the death or disability of a breadwinner. But the system faces a financial challenge. By the year 2030, there will be twice as many Americans 65 years or older as there are today. Once the baby boomers begin to retire, the number of Social Security recipients will exceed the number of people paying into the program. If no action is taken to deal with this problem, the Social Security Trust Fund is projected to be exhausted by 2034.

Recognizing this, many West Virginians have written to me to ask about various alternatives to shore up Social Security's long-term solvency. Common sense suggests that the government should set aside the Social Security surplus -- which last year totaled about \$124 billion -- to pay future benefits. But this misunderstands how Social Security is financed.

Putting the Social Security surplus on a shelf would be the equivalent of hoarding cash in a mattress instead of putting it into a bank. If the Social Security surplus is not invested in bonds, stocks, or even a traditional savings account, it loses its earning power.

Social Security surpluses are, by law, invested

in Treasury bonds so that the money can grow and be used to build businesses and create jobs. These bonds are placed into the Social Security Trust Fund as government "IOUs." In 2014, when the number of beneficiaries is projected to be larger than the number of workers paying into the system, the federal government will have to buy back the bonds to pay benefits. The current debate among those interested in ensuring Social Security's long-term solvency focuses on how best to prepare for this eventual financial crunch. Debt repayment will help to ease the fiscal pressures, but that, by itself, may not provide the government with adequate funds to pay all of the anticipated beneficiaries.

In 1935, when President Roosevelt signed the law creating Social Security, he said that it would "give some measure of protection to the average citizen and to his family against the loss of a job and against poverty-ridden old age." As the various Congressional committees of jurisdiction continue to craft a plan for Social Security, I hope that they will keep that ideal in mind. The viability of the Social Security system -- one that works for all Americans over the long term -- relies on a sound plan for the future demands which will be placed upon it.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Dreams of Riches Turn to Rags

Every day, it seems as if another sweepstakes entry arrives in the mail containing another attractive promise for the recipient to "get rich quick." While many companies may use sweepstakes offers responsibly, others have used such offers as a ploy to bilk millions of dollars from consumers in West Virginia and across the nation.

One common approach of such companies is to falsely imply that a purchase is necessary to qualify for the sweepstakes or to increase one's odds of winning. Frequently, companies use clever typefaces, incorporate official-looking symbols and gimmicky labels, or personalize the mailing to make the addressee believe the solicitation is a genuine letter of congratulations for winning.

A recent survey by the American Association of Retired Persons revealed that the elderly are particularly vulnerable to sweepstakes fraud. Among other results, the survey found that 40 percent of seniors polled believed that there was a connection between purchasing a product and winning the sweepstakes.

In response, Congress recently approved, and the President signed into law, legislation to crack down on these deceptive tactics. This new law prohibits companies from using certain misleading language. A company's mailings, for

example, cannot tell the addressee that they have won a prize unless they really have. Sweepstakes companies will, by law, be prevented from printing envelopes with, "You are our next million-dollar winner," or "You have already won \$10 million," unless you truly have won.

In addition, the new law requires companies to clearly point out that no purchase is necessary to enter a contest, and that a purchase will not increase the chances of winning. The law also gives the U.S. Postal Service the power to impose tougher civil penalties on those companies that do not follow the new regulations.

Finally, the new law provides consumers with the opportunity to remove their names from a sweepstakes company's mailing list. Information on how to request removal of a name must be included in every mailing sent out by the company. Once contacted, the company has 60 days to remove the consumer's name from its mailing list.

Sadly, too many people are vulnerable to promises of fame and fortune, when all that is actually being delivered are false hopes and empty promises. I hope that this new law will eliminate much of the misleading information that West Virginians receive from sweepstakes companies.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Working to Simplify Tax Filing

Tax season is never fun. No one enjoys the annual ritual of filling out tax forms, and signing a big check can be downright painful. But, as tax deadlines approach, there is some good news for West Virginia's taxpayers.

The Internal Revenue Service (IRS), to its credit, is working to make the filing process as smooth and as simple as possible. One way that the IRS is trying to speed the filing and refund process is by allowing citizens to file their tax returns electronically. There are three ways that a citizen can file electronically: through a tax professional, through a personal computer, or over the telephone.

According to the IRS, filing electronically is the fastest and most accurate way to file a return, and it cuts the processing time in half. Additionally, for anyone simply more comfortable with real mail than with e-mail, federal tax forms and publications are available over the Internet at www.irs.gov.

West Virginians can find free tax-filing assistance at offices in Bridgeport, Charleston, Huntington, Martinsburg, Parkersburg, Sophia, and Wheeling. West

Virginians can learn the exact location and hours of operation of these offices, or receive free tax help over the telephone, by calling 1-800-829-1040.

On another tax note, thousands of West Virginians can benefit from the Earned Income Tax Credit (EITC), which is intended to offset some of the increases in living expenses and Social Security taxes. EITC eligibility is based on income. A working taxpayer is eligible for the EITC if that person earns an adjusted gross income of \$10,200 and has no children. If the taxpayer has children, that income level increases to a ceiling of \$30,580. The maximum amount of the tax credit ranges from \$347 for taxpayers with no children to \$3,816 for taxpayers with two or more children.

Taxpayers should take some comfort in knowing that free help is available from the IRS for citizens who are trying to wade through the sometimes complicated filing process. I hope that West Virginians will take advantage of these IRS services, and will avail themselves of information that can help them make the most of their filing options.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Taking Count of America

In Article I, Section 2, the U.S. Constitution mandates that, every ten years, the federal government undertake a count of the people, called the census. The first census, in 1790, counted just under four million people living in the United States. This year, the government will once again take on the arduous task of counting America's population, one by one, house by house, community by community, and documenting vital information about each person.

One of the first things learned from the census is how many people live in the United States. But there is much more to this process than merely counting heads. The census is the cornerstone of knowledge about the United States, and the demographic information provided by the census lays the foundation for much of the nation's future governance.

The census results will help to determine where roads, hospitals, and libraries are needed. The statistics will give municipal planners the ability to select the best locations for schools, senior citizens centers, and playgrounds. The information will help the government determine how best to serve the needs of the people on the local, state, and national levels. Every year, billions in federal dollars, and a significant percentage of state resources, are allocated by

formulas that are based on the information gathered during the decennial census.

In addition to the public uses, census statistics are also used by private-sector businesses to help locate potential markets and to reduce financial risks. Thus, the information gathered by this year's census can lead to economic opportunities, job creation, and the greater availability of goods and services.

In the spring, the Census Bureau will mail each household a census questionnaire form. Ideally, the census would be complete when 100 percent of these forms are returned. Unfortunately, the national response rate has fallen for the past three census counts, dropping from 78 percent in 1970 to 75 percent in 1980 to 65 percent in 1990. In an attempt to reverse this trend, the Census Bureau is carrying out an aggressive public information effort to heighten awareness about the 2000 census and encourage participation in the process. In addition, census takers will visit local neighborhoods to count those people who have not mailed back their forms.

Participating in the census is a civic responsibility with broad ramifications. I encourage West Virginians to take the time to complete a census form and return it to the Census Bureau. We all have a major stake in ensuring that every West Virginian is counted.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Keeping the Promise to Retired Coal Miners

Last year, the United Mine Workers Combined Benefit Fund, which pays for the health care of retired coal miners and their families, faced a significant financial shortfall that, without immediate action, would have resulted in benefit cuts this spring. That shortfall, which resulted from rapidly rising health care costs and adverse court decisions impacting the fund, meant that there might not be sufficient funds to cover anticipated health care costs through the end of this year.

With the help of Congressman Rahall, who lobbied key House Members, I fought hard for and won a \$68 million transfer of funding to the retired miners' health care fund. This funding is critical because it means that there will not be any benefit cuts this year. But this solution is a short term remedy for the crisis facing the retired miners' health care fund. The problem requires a long term solution -- the kind of remedial action that would ensure that retired miners and their dependents would not have to worry from month to month whether their benefits would lapse after this year.

In its budget request of Congress, the Administration included \$346 million over the next ten years to ensure that retired coal miners and their families main-

tain the health benefits they have been promised. The funding would ensure the long term solvency of the Combined Benefit Fund. Retired miners and their dependents certainly deserve the security and peace of mind that would be provided by a more permanent fix.

Today, the typical beneficiary of the Combined Benefit Fund is a widow of approximately 78 years of age, whose monthly income is a \$140 UMWA pension check, supplemented by a social security check.

Now that the Administration has signed on to a long term solution, it is time for the Congress to follow through with necessary legislation. The committees with jurisdiction over this issue, on which I do not serve, need to move forward to craft a fair, balanced, permanent solution to the problems encountered by the Combined Benefit Fund.

In 1946, President Harry Truman and the United Mine Workers of America reached an agreement that opened the way for greater mechanization of coal mines in exchange for cradle-to-grave health care coverage for miners and their families. The federal government needs to act to ensure that the assurances provided to miners more than five decades ago are preserved.

Hearing from Students On School Safety

On April 8, high school students from across West Virginia will gather for the "Robert C. Byrd Youth Summit 2000," an event designed to give young people a voice in the effort to craft common sense ways to help end youth violence. This summit will be an opportunity to hear directly from students about an issue that directly affects them, and to gain a better understanding of their views and concerns.

The Youth Summit will be held at West Virginia University, and, through interactive televised links, at seven other sites across the state. The need for this type of event, and for a renewed effort to break the cycle of violence that has permeated our nation's schools, was made frighteningly evident recently when a six-year-old boy took a loaded gun to his school near Flint, Michigan, and shot and killed one of his classmates. This tragedy begs some very basic questions.

First, and perhaps most importantly, what has gone so wrong in our society that our young people are turning to guns as a way to solve their problems? How is it that so many children are finding easy access to guns? And what can be done to end

this cycle of violence?

In the time since the tragedy at Columbine High School last year, school violence has not stopped. The tragic scene of students and teachers pouring out of a school in fear has repeated itself in Atlanta and, most recently, in Michigan. For some reason that we cannot seem to get our arms around, children continue to injure and to kill one another.

That is why I think the upcoming Youth Summit is important. It is a chance to hear directly from students and get their thoughts on what is contributing to violent acts among their peers. It is an opportunity to listen and to learn about how such issues as drugs, alcohol, and violence in the media affect their lives. Student participation is a necessary component in any effort to curb school violence.

Putting an end to school violence will require broad participation from all sectors. No one can be given a pass. I hope that this nation will finally commit itself to take the difficult steps that are needed to break this cycle of violence, and to rebuild that serene school environment that every student and teacher deserves.

Educating Consumers On Credit Card Dangers

At one time, credit cards were considered a luxury item, a symbol of the wealth and success enjoyed by a select few. But that is no longer the case. Banks and credit card companies have become more competitive as they try to attract new customers, and credit cards are now available to everyone from CEO's to college freshmen. As the credit card industry finds new ways to reach the consumer, the Internet and electronic mail are poised to play a greater role in soliciting consumers to become cardholders.

Federal law requires that consumers be properly informed of interest rates, fees, and consumer protections when credit card solicitations are sent through the postal system. But credit card companies can circumvent these disclosure requirements by sending their solicitations through electronic mail. Accordingly, a consumer who receives a solicitation on the computer may not even be aware of basic consumer protection information, although such information is often buried in a separate Internet site.

Consequently, I recently offered an amendment, which was unanimously adopted by the Senate, that would help to educate consumers, empowering them to act as responsible financial managers. My amendment would re-

quire that every credit card solicitation or advertisement that is electronically mailed to a consumer be accompanied by an electronic pamphlet, or an Internet link to a pamphlet, that provides consumer-friendly information on choosing and using credit cards.

This pamphlet, currently published by the Federal Trade Commission (FTC), defines the various credit card interest rates and miscellaneous fees that may apply, explains how monthly statements are calculated, and outlines consumer rights. The pamphlet also provides a telephone number, mailing address, and an on-line form for consumers who wish to file a complaint with the FTC regarding a credit card solicitation.

Credit card companies give consumers all the information they need on the benefits and prerequisites of a credit card, but those companies need to balance that information with the costs and responsibilities of having a card. I hope that my amendment will help to better educate West Virginians who receive these Internet credit card solicitations. I urge consumers to read the information provided in the pamphlet and to make an educated and responsible choice when it comes to credit cards.

A Rocky Road Toward Peace in Kosovo

It was just one year ago, in March 1999, that NATO forces launched the first air strikes against Yugoslavia to stop the murderous assault of Slobodan Milosevic on Kosovo and the ethnic Albanians who live there.

The war ended 78 days after it began, but not before claiming thousands of Albanian victims, many of them killed by the Yugoslav soldiers and many more uprooted from their homes and forced across the borders into refugee camps in neighboring countries. The end of hostilities brought the beginning of a massive NATO peacekeeping effort. Currently, 37,000 soldiers from an array of NATO nations - including nearly 5,500 men and women from the United States -- are stationed in Kosovo in an effort to secure the region, resettle the people, and prevent the rekindling of hostilities.

The U.S. went into Kosovo with the best of intentions. Our men and women in uniform performed brilliantly. Although it was a joint NATO operation, America provided the military might and leadership to bring the campaign to a quick and decisive conclusion, without the loss of a single soldier in combat.

But now that the dust has settled, it is time to take a hard look at the future of the U.S. commitment to

keeping the peace in Kosovo. The Clinton Administration is seeking \$2.6 billion for U.S. peacekeeping operations in Kosovo this year. Meanwhile, the situation there remains tense, with regular flare-ups of violence between Albanians and Serbs.

The United States, along with our NATO allies, is finding that winning the war in Kosovo was a lot easier than winning the peace.

It is my hope that the Administration will closely examine the situation in Kosovo with an eye toward protecting our troops, accomplishing our mission, and bringing the American forces home. It may take time, but that must be our goal. America does not need another open-ended commitment of U.S. troops to peacekeeping in a troubled corner of the world that shows little sign of reconciling the deep-rooted differences among its own citizens.

West Virginians have always answered the call to duty and have served with distinction in U.S. military operations throughout the world, including in Kosovo. Our men and women in uniform are a priceless asset to this nation, and the President has a duty to make sure that America's military might is employed wisely.

A Commitment to Clean Power

America is the greatest nation on Earth, with power and influence almost without historical parallel. But the nation's continued strength ultimately depends upon the robust health of our domestic capabilities in technology development, manufacturing, communications, and transportation.

While the United States currently enjoys the benefits of an expanding economy, this sustained growth demands ever-increasing amounts of energy.

Over the years, the nation has wisely invested in the research and development of innovative, clean, and efficient technologies that will help to meet those growing energy needs. Much of the work to reach that worthy goal has long been underway at the Morgantown Energy Technology Center (METC) in West Virginia. In recent years, that facility joined a Pittsburgh Center under the umbrella name Federal Energy Technology Center.

Together, these facilities were recently renamed the National Energy Technology Laboratory (NETL), becoming the fifteenth national lab in the country.

That action signaled a recognition by the federal government that fossil fuels -- especially coal and natural gas -- must continue to be an important part of the national and international energy reservoir. The scientists who work at the NETL are helping to light a

pathway for the new era of energy use that will be important to ensuring that a comfortable standard of living exists for generations to come.

As the work at this laboratory is proving, economic growth does not have to mean environmental retrenchment. We can both expand our job base and protect our planet.

Thanks to the laboratory's research into clean coal technologies, and through the demonstration and deployment of these technologies at power plants and factories, coal can continue to be a viable "cleaner and greener" fuel for power generation. Furthermore, such American-made clean coal technologies pack a twin punch because they not only can provide a variety of positive benefits for the U.S., but they can also provide other nations which may acquire these technologies with the resources to develop in more environmentally friendly ways.

If we are to continue to find new and better ways to strengthen our economy and protect our environment, we must also find ways to use fossil fuels cleanly. Skeptics may say that it cannot be done, but I believe that it can. Through the talent, dedication, and know-how in place at the National Energy Technology Laboratory in Morgantown, we can work to solve the nation's energy-ecology conundrum.

By U.S. Senator Robert C. Byrd

Ending the Social Security Earnings Test

During the Great Depression, when jobs were scarce, Congress put in place an earnings test on Social Security benefits that reduced the size of a person's Social Security check if that person's earnings exceeded a designated level. This earnings test was designed to encourage older Americans to retire and, thus, to open more jobs for younger men and women during a time when jobs were difficult to find. While that may have been the situation across the country during the Depression, it certainly is not the case today.

In this economy, where jobs are more plentiful, many Americans are choosing to work well beyond their 65th birthday. However, because of the Depression-era Social Security earnings test, seniors who choose to work have one dollar in Social Security benefits deferred until retirement for every three dollars earned over \$17,000 on the job.

In response to this situation, I supported, and Congress recently approved, the Senior Citizens' Freedom to Work Act. This Act eliminates the earnings test, and also allows Americans who have reached retirement age to continue to work without

a deferral assessed on their Social Security benefits.

Once this bill is signed into law, it will be retroactive to January 1, 2000. Refund checks will be issued by the Social Security Administration to affected seniors as early as this May. Beneficiaries will receive a mailing that will explain the changes in the regulations. The Social Security Administration predicts that this measure may add as much as \$6,700 to the income of each affected senior this year. The changes will help to ease the burden on seniors who supplement their fixed incomes with part- or full-time employment.

The Senior Citizens' Freedom to Work Act will help workers who are not receiving their full Social Security benefits. It will also help those seniors who want to work but are not doing so because they fear the earnings test would consume most of their earned benefits. As the baby-boomer generation moves closer to retirement, it is especially important that older Americans who want to work have the opportunity to do so. I am pleased that Congress has finally taken appropriate steps to remedy this problem to better protect working senior citizens.

Getting Beyond Gas Prices

Across the country, gasoline prices have been on the rise. Primarily as a result of our nation's increased dependence on foreign fuel, the United States has been left vulnerable to the whims of other nations as they decide what level of crude oil to pump from the ground. I do not want the U.S. to be at the mercy of any nation, let alone those on which we rely for oil. That is why I believe it is long past time to renew the effort to implement a comprehensive national energy strategy, one that provides for the strategic uses of all our domestic energy resources, including the fossil fuels of oil, natural gas, and coal. The nation needs to explore the opportunities before us to increase America's energy independence.

Meeting this goal requires a strong commitment not only to research and development of new energy efficient and environmentally sound technologies, but also to their widespread commercial application. This can be an expensive endeavor. That is why I have coauthored the Energy Security Tax Act. The legislation would help to turn technological breakthroughs achieved in the laboratory into realities installed in the marketplace. Additionally,

the legislation would provide targeted tax incentives to encourage the demonstration and commercial deployment of many energy efficient technologies, some of which are under development at labs in West Virginia. Targeted tax incentives would help to capitalize on American research and development, and would remove a portion of the financial risk involved in the commercial use of energy efficient technologies.

An efficient, clean, and stable supply of energy is essential to the future growth and health of the American economy. The time has come for our nation to readdress our national energy strategy, taking a multipronged approach that looks at the whole range of available fuels and encourages the development and deployment of new technologies and conservation practices. America should not tremble each time foreign oil producing nations flex their muscles. The Energy Security Act will help to meet this challenge, serving as an underpinning for a new energy strategy that recognizes the importance of economic development and environmental protection at the same time.

Earth Day 2000

April 22, 2000, marks the 30th anniversary of the celebration of the first Earth Day. Earth Day was established in 1970 and was intended to raise the consciousness of Americans to the plight of the environment. Since then, Earth Day has been celebrated annually by increasing numbers of Americans and is now observed in more than 140 countries around the world. The wonders of nature are truly amazing, and I have worked throughout my career to protect and preserve the beauty of West Virginia.

Growing up in Southern West Virginia, I was surrounded by all the blessings that the mountains of West Virginia can bestow. I remember fondly those long summer afternoons when I would traipse through the thick green undergrowth of the forests. I remember the sweet taste of mountain spring water and the call of the whippoorwill among the mountain laurel. I believe that there is nothing quite so extraordinary as the natural beauty that is the Creator's handiwork.

Consequently, I have worked tirelessly to preserve the flora and fauna of West Virginia. I initiated the appropriations a few years ago to construct the U.S. Fish and Wildlife Service National Conservation Training Center (NCTC) in Jefferson County. This cen-

ter trains men and women to protect our nation's natural resources and is dedicated to educating the public about the importance of environmental conservation. In fact, just this month, I secured the support of Department of the Interior Secretary Bruce Babbitt for a new, three-story dormitory at the NCTC to utilize more fully the facility's capabilities.

As a member of the Senate Appropriations Committee, I added funds to establish the Canaan Valley National Wildlife Refuge, the Ohio River Islands National Wildlife Refuge, and the New River George National River. The federal designation of these lands not only ensures the protection of some of our state's greatest natural treasures, but it also provides for recreational activities that allow visitors to enjoy West Virginia's scenic wonders.

This Earth Day, as the world once again renews its commitment to the preservation of the environment, West Virginians can be proud of the efforts we have undertaken to protect the grandeur and beauty of our state. We have proved that economic prosperity and environmental preservation can coexist. The challenge for the years ahead is to ensure that this delicate balance continues.

Students Speak Out on School Violence

In today's reality, it is unfortunately true: school shootings can happen anywhere, at any time. The challenge is in preventing them. Recently, West Virginia high school students took up that challenge during the Robert C. Byrd Youth Summit. Held at West Virginia University and seven other sites throughout the state, the summit was designed to include young people in the discussion on how to reduce youth violence.

When asked about the causes of youth violence, students pointed to peer pressure, a strong feeling of isolation, and an eroding home and family life. They said that too many parents fail to set strong examples for their children and do not play an active role in their child's life.

Delegates focused on the taproot of the problem. In this fast-paced society where family members often only meet when they pass at the front door, the sense of family and of belonging has been lost. There is a strong undercurrent of isolation among young people. Replacing this feeling of isolation with one of belonging is crucial.

Instead of parents setting their children's value structure, it seems as if the media have taken over that role today. When they come home from school, the first step for students seems to be clicking on the com-

puter or television. By stepping away from family and community, the media takes over. As family relationships disappear, the media further isolate our children.

When asked what would best prevent youth violence, student-delegates identified the need for safe places where young people could gather after school. Delegates endorsed conflict resolution programs and peer mediation efforts as strong prevention initiatives. The students also felt that there should be a greater restriction on access to weapons in the home. They said that weapons should be locked up and kept away from children.

Part of the cure for youth violence, I believe, can only be found by digging deep into America's soul. Talk of morals and values has long been brushed off as old-fashioned and out of step. But, as the student-delegates pointed out, we are missing something that used to be a basic component in our society, and we desperately need to rediscover it.

For the sake of our young people, it is high time to restore the peaceful schoolhouse we once knew so well, a schoolhouse which fosters creativity, inspires learning, and, most importantly, provides each student with a safe haven for obtaining the skills necessary to lead America in the 21st century.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Answering the Call of Our Firefighters

Fire is one of man's oldest friends, providing warmth, security, and comfort. Yet, fire also presents a constant source of danger if not kept in check and guarded against.

In much of rural America, the only protection against fire and other disasters is the local volunteer fire department. The men and women who make up these volunteer organizations are always ready to answer the call, whether it comes in the dark of night or in the middle of the workday. The front line of community protection has always been, and will always be, the vigilance and commitment of the involved citizens of the community. Yet, this vigilance carries a price tag that is growing too quickly for many rural communities to meet.

Volunteer fire departments are struggling to pay for the equipment and training that make the dangerous job of fighting fires safer. Too many volunteer fire departments cannot afford adequate protective clothing, safety devices, and proper training. At the same time, firefighters are asked to be prepared to respond to terrorism, hazardous materials accidents, and natural disasters, while also educating their communities on safety and fire prevention. These men and women who are always ready to answer the alarm bell cannot rely

solely on small fundraising efforts. Pancake breakfasts, bingo nights, and spaghetti suppers are good, but they are not enough. A greater commitment at the federal level is needed to help local departments provide vital emergency services.

That is why I am co-sponsoring the Firefighter Investment and Response Enhancement Act, which would authorize \$5 billion over five years for grants to local fire departments. These grants could be used for just about any purpose that is related to firefighting, including community education and prevention programs, firefighter training, equipment purchases, or hiring additional firefighters. This funding would be a significant investment in the effort to make rural communities safer places to live.

The work of volunteer firefighters takes grit, determination, courage, and energy. It also requires support. The Firefighter Investment and Response Enhancement Act would provide that support, enabling local fire departments to equip and train their firefighters. The legislation would be an important step toward helping to provide those men and women who stand on the front lines of community protection with the resources necessary to do their jobs better and more safely.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Throwing Out the TV Trash

Concerns about the declining standards of broadcast television, and the effect that this slide is having on our children, have been voiced for some time by parents across the nation. Parents are fed up with the rising tide of glorified violence and increasingly explicit sexual depictions flooding into their homes through the television set. Despite the calls for restraint, the broadcast industry continues down a path that includes more, rather than less, unsuitable programming.

My concern about television programming hinges on the effect that it has on children. America's young people are being brought up in front of a television set, too often left alone to soak up the images of gratuitous sex and violent acts. Opinion surveys make clear that the overwhelming majority of Americans continue to recognize the risk that inappropriate television programming poses to children. A 1996 poll found that 90 percent of Americans believed that the glut of sex and sexual references on television contributes to the alarming number of children who are sexually active. Since that time, as indecency on television has grown more graphic, a number of leading child development experts have voiced concern about the way in which television, in conjunction with the rest of the electronic media, is con-

tributing to increased sexual activity of children at younger ages.

When presented with this evidence and the concerns of parents, many broadcasters have routinely denied that a problem exists. In fact, some television network executives have admitted that their strategy is to increase the sex and vulgarity on television to compete with racier shows on cable channels. These responses raise real questions about the commitment of broadcasters to serve the public interest.

Consequently, I have sent a letter to the Federal Communications Commission (FCC) chairman to urge him to reconsider whether, by airing such material, broadcasters are meeting their legal obligations. Broadcasters are granted licenses to use the public airwaves. But these licenses carry with them a responsibility to provide educational and informational programming for children. Steps should be taken to protect against the further erosion of broadcasting standards.

I hope that the FCC takes these concerns to heart and rededicates itself to this purpose. Children are impressionable; they can be easily led astray. We must work to ensure that tasteless television programming does not further contribute to the pollution of their minds and the moral decline of our nation.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Keeping Graduation Parties Safe And Alcohol-Free

In the coming weeks, high school seniors throughout West Virginia will complete final examinations, don cap and gown, and head off to college or career. But there is one important lesson that our students should be taught before graduation night: a few drinks can demolish years of effort in school, and erase whatever promising future may lie ahead.

All too often, it seems that the joy of high school commencement is marred by alcohol-related injuries and fatalities. At this time of year, newspapers too frequently print photographs of commencement ceremonies on their front pages, while also carrying tragic accounts of traffic accidents involving young people and alcohol.

Unfortunately, West Virginia is no stranger to this deadly combination. Our state has been ranked twelfth in the nation in the number of alcohol-related traffic fatalities of individuals under the age of 21. But, with a concerted effort, such tragedies can be prevented.

As an essential part of this effort, parents should discuss with their children the dangers of alcohol. Nothing can replace a serious, heartfelt talk between parent and child. While this may seem obvious, a 1999 nationwide survey found that only 25 percent of parents talk with their children about the complete avoidance of alcohol. That statistic is much too low, es-

pecially considering the fact that alcohol is a major factor in the three leading causes of death among adolescents-- accidents, homicides, and suicides.

Also disturbing is the fact that underage drinking has been linked to date rape, teen pregnancy, and sexually transmitted diseases. Furthermore, it has been established that students who binge drink in high school are three times more likely than non-drinkers to engage in serious alcohol abuse while in college.

Parents are key, but they cannot successfully battle this combination of children and alcohol alone. Underage drinking is a community-wide concern that deserves a community-wide effort. School administrators, teachers, religious leaders, community leaders, restaurateurs, and others should be diligent in their efforts to keep graduation parties safe and alcohol-free. Instituting alcohol-free contracts, or planning safe and supervised events for young people to celebrate their graduation are options that have been found to work.

West Virginia's young people hold the keys to the state's future. It will be their vision and their initiative that will carry West Virginia through the next century. We all have a stake in ensuring that the promise of our young people is not destroyed by alcohol.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Talking Turkey in West Virginia

Over the past few years, the economy of West Virginia has been expanding. More jobs have been created and more people are working. Nevertheless, the economy can be improved. But to do so, we must continue to look toward new horizons for opportunities that may result in increased prosperity in the years ahead. For that reason, I recently kicked off a new trade initiative to strengthen ties between West Virginia and the other Appalachian states, and the Republic of Turkey.

The U.S. Department of Commerce has designated Turkey as one of the world's ten "Big Emerging Markets." Over the past decade, the Turkish government has fostered a fast-growing market economy and strengthened regional stability. It is my hope that this new Appalachian-Turkish trade initiative will take advantage of these advances. My goal is to foster a trade relationship that is mutually beneficial and that builds on the great economic potential of both the Republic of Turkey and the State of West Virginia.

According to an analysis by the Commerce Department and the Overseas Private Investment Corporation, West Virginia products best suited to export to Turkey include coal, building materials, auto parts, and high-tech information systems. Other West Virginia business sectors that might benefit from a relationship with Turkey in-

clude general industrial equipment, mining machinery, specialty metal products, and industrial chemicals. In energy projects alone, an area in which West Virginia is a leader of fossil fuel production, as well as in research and development, the Commerce Department estimates potential market opportunities in Turkey at \$3 billion over the next 10 to 15 years. The prospects for investment, particularly from West Virginia companies, are impressive.

In an effort to spur this project forward, the Commerce Department, the Appalachian Regional Commission, and the West Virginia Development Office plan to hold a trade seminar late this year in West Virginia to highlight Turkish market opportunities. In addition, the West Virginia Development Office is examining the possibility of a trade mission to Turkey next year.

The economic landscape in West Virginia and the Appalachian region is changing dramatically, and, with it, the prospect for increased growth and prosperity. Likewise, the Republic of Turkey is moving forward with its economic plan to create new opportunities for the future. The Appalachian-Turkish Trade Project offers a chance to expand trade, advocate West Virginia business interests, and build a lasting and beneficial relationship between West Virginia and the Republic of Turkey.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Making Prescription Drugs Easier to Swallow

One of the major challenges facing the elderly of West Virginia is the ever-increasing cost of their prescription drugs. Many of these senior citizens live on fixed incomes, and many are unable to afford these high priced, but necessary, medicines. In fact, many senior citizens have been forced to make the troubling choice between paying for their medicine or paying for food, heat, or other necessities. To address this disturbing trend, I recently cosponsored the Medicare Expansion for Needed Drugs Act (MEND), a plan to offer universal voluntary prescription drug coverage to all Medicare beneficiaries.

Originally established in 1965, Medicare was designed to provide health care benefits to the most vulnerable segments of the population, the elderly and the disabled. Today, 38 million Americans, including 335,000 West Virginians, rely on Medicare to help provide for their medical needs. However, Medicare, as currently formulated, does not provide prescription drug benefits. Moreover, statistics show that three in five Medicare beneficiaries lack adequate, affordable prescription drug coverage.

MEND would change all of this. Under this plan, Medicare beneficiaries who do not currently receive prescription drug benefits

through a private insurer would be eligible to enroll in a voluntary prescription medicine benefit plan. Americans who have adequate, private coverage would not be required to participate. Those who lack such coverage could choose to pay a low monthly premium to receive prescription drug benefits and coverage of catastrophic drug costs.

The legislation calls for the federal government to subsidize 50 percent of the program's cost to ensure adequate participation and affordability. It is estimated that the monthly premium in 2002, the year the plan would take effect, would be \$25 a month. In addition, participants who have an annual income of approximately \$15,000 or less would be eligible for full assistance and free prescription drug coverage.

Seniors should not have to choose between paying for medicine or paying for other necessities. Statistics and studies show that the current Medicare program does not provide the coverage that Americans need today. The Medicare Expansion for Needed Drugs Act would help to address these shortcomings and fortify the Medicare program, allowing elderly and disabled West Virginians to rest assured that their prescription drug needs would be met.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Preparing for the Worst, Hoping for the Best

Last year, West Virginia and other states in the mid-Atlantic region were hard hit by drought. Months of lower than normal rainfall and higher than normal temperatures dried up wells and parched grazing lands. Many farmers were forced to sell off their livestock or risk losing farms that had been in their families for generations.

On the heels of last year's disaster come the predictions of continued drought this summer. A lack of winter snow and spring rain have failed to raise the water table, and weather forecasts do not offer much hope for significant rainfall in the coming months.

Recognizing the potential consequences for West Virginia farmers for another drought, I have met with U.S. Department of Agriculture Secretary Dan Glickman to discuss how federal aid might be expedited should another disaster materialize. I outlined for Secretary Glickman an initiative that I think would help to prevent a repeat of some of last year's drought-related losses.

Because of the mechanics of the budget process, the federal government, unfortunately, has a limited ability to deal with disasters, like drought, quickly. Last year, we found that despite our best efforts to press for expedited funding to

help farmers, in too many instances, aid came too late.

My initiative this year is really an ounce of prevention. It would set aside funding to be made available only if a drought occurs, but as soon as a disaster is declared. Secretary Glickman agreed that such a plan would be helpful in addressing drought more rapidly and, ultimately, reducing losses.

My plan would provide \$450 million for emergency livestock assistance this year. These funds would only be available for counties that receive an emergency designation by the President or the U.S. Secretary of Agriculture. In the event that no emergencies are designated, none of these funds would be spent.

We have all heard the old saying, "Hope for the best, but prepare for the worst." That is my guiding philosophy as I work on this emergency fund. While no one can control the powers of nature, Congress can prepare to deal with the consequences of natural disaster. By providing the federal Department of Agriculture with the resources it needs to respond to severe drought, I am working to provide relief to our farmers in the most effective manner possible. We should not delay in preparing for what could be another summer of drought and disaster.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Making Progress on Corridor H

For many years, I have worked in support of the construction of Appalachian Corridor Highway H from I-79 at Weston, in Lewis County, to Wardensville, in Hardy County. In 1994, the section from Weston to Elkins was finished. But, since then, the remaining 114 miles have been the subject of studies and court challenges that have delayed further construction.

Recently, however, I joined Governor Underwood, Congressman Wise, and hundreds of West Virginians in Hardy County for the groundbreaking of a new 14-mile section of Corridor H, stretching between Moorefield and Baker. The resumption of work on Corridor H serves as reassurance that construction of this road is again on track, and that the economic and safety benefits promised by it are going to be realized.

Corridor H has, for too long, been unfairly derided by some critics. But this road, which is intended to connect the Washington, D.C., area with North-Central West Virginia, is a passageway for opportunity. It is an avenue for economic diversity. It may bring change, but I believe that, with vision and courage, we can manage that change and fashion it to meet our own demands.

It is expensive to build roads in mountainous Appalachia, but the effort is certainly worth every dollar. Since 1989, I have added \$270.5 million to appropriations bills for construction of Corridor H. In addition, I authored an amendment to the 1998 highway reauthorization bill to provide the entire 13-state Appalachian Corridor Highway System with a reliable and consistent source of funding through the federal Highway Trust Fund.

Of that funding, our state is expected to receive approximately \$410 million over the six-year course of the bill for construction of Corridor Highways in West Virginia.

When it comes to highway needs, the Appalachian states deserve to be treated equitably compared with the other states. Construction of these highways is a national responsibility.

Since 1965, much of Corridor H has been left only penciled in on the national highway map. It is now time to ink it in, to firmly and indelibly add it to the vast web of roadways that unite our fifty states into a single nation. It is the right thing to do for the nation, and it is the right thing to do for West Virginia. It is a road to progress.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Challenges of an Aging Population

Recently in Charleston, delegates from around the world gathered for the first-ever International Conference on Rural Aging. These delegates worked to identify new strategies, shape major policy, and promote programmatic enhancements that will better enable society to cope with the challenges it faces as the population of senior citizens living in rural communities around the globe continues to grow.

The conference, sponsored by West Virginia University in collaboration with the United Nations, the World Health Organization, and the International Association of Gerontology, advanced an important discussion on how to meet the many challenges that come with a growing rural senior citizen population.

I had the opportunity to attend the conference, and to offer my thoughts on how, in many areas, the needs of West Virginia's rural senior citizens mirror the needs of rural senior citizens throughout the world. For example, around the world, seniors in rural areas may simply lack access to quality health care close to home. The problem of access is acute even in the most affluent nations. We know first-hand about the need for accessible health care in West Virginia.

With 60 percent of the world's elderly population living in rural and remote areas, there is a pressing need for medical personnel who are willing to leave the comforts and higher salaries of the big cities for rewarding work in smaller towns and communities. It is simply too difficult and too costly for many elderly people, particularly the frail elderly, to travel long distances for frequent medical appointments.

In addition, a rapidly aging population poses a great challenge to a society which is focused heavily on youth. While most of popular culture today focuses on the wants and aspirations of the young, a fresh appreciation of the not-so-young is beginning to emerge. There is a growing realization that the youth-centered society, and all of the material things that are paired with it, may benefit greatly from the insight and experience of our more mature population.

I applaud the work of the delegates at the International Conference on Rural Aging. Following their lead, we must rise to the challenges for our aging global population. They are a precious resource. Their contribution to the richness of all of our lives can be immeasurable, but their needs must be carefully tended.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Ensuring Local Satellite TV for West Virginians

For many months, West Virginians who rely on satellite dish receivers for their television signals have been concerned that they may no longer be able to receive network programming because of a dispute between local broadcasters and national satellite companies. At issue was whether these satellite companies could beam in network signals from faraway cities, or whether they should retransmit the broadcasts of local television stations.

In an effort to craft a compromise, Congress last fall approved legislation allowing satellite companies to retransmit local television station programming into homes in a local broadcast station's viewing area. This is called "local-into-local" service. This issue was particularly important in West Virginia, where 23 percent of the households have satellite services, but no West Virginia television station is available on a satellite system.

The legislation approved last fall allows a satellite company to carry the local broadcasts in any market the company serves, ensuring thorough local-into-local service. But convincing satellite companies to carry these local broadcasts is difficult because of the costs involved. It is costly for a satellite company to pick up the local station's signal and then retransmit that signal to the satellite receivers of area viewers.

For that reason, I re-

cently voted to create a loan guarantee program to facilitate the transmission of local broadcast signals to unserved and underserved areas. These loan guarantees would offset the cost to satellite companies as they install new equipment capable of delivering local programming to satellite service customers.

West Virginians would reap the benefits from this legislation because their satellite service would remain intact, while they also would be able to receive local and regional information. Access to local programming is important. Local broadcast stations provide weather warnings to the communities they serve. Broadcasters are an immediate source of information and instruction during local emergencies. Local news and public service programs help citizens participate in their government, assist their neighbors in need, and build stronger community bonds.

In West Virginia, high mountain peaks can make even the best efforts of local broadcasters and cable companies to reach rural residents very difficult. For households that are beyond the reach of cable and broadcast signals, satellite service has provided a reliable alternative. With the help of loan guarantees, I hope that more rural West Virginians will soon be able to rely on their television sets for local news, weather, and emergency information.

Going from Sci-Fi to Reality in West Virginia

Imagine walking to your front door to unlock it but, instead of reaching for a key, you look into a scanner that recognizes your eye pattern before allowing the door to open. In the future, drivers may simply place their fingertips on a pad that, by examining their fingerprints, will verify their identity and start the engine. These may seem like impossibly futuristic technologies for daily life, but they have the potential of being put into place soon as part of new security protections for critical Department of Defense (DoD) computers. And the most exciting part of this story is that much of this development could happen in West Virginia.

Last year, recognizing the growing threat to important government computer systems by "hackers" or "cyber-terrorists," I started working with the DoD to develop a plan to combat a potential computer catastrophe. Realizing that the nation's most sensitive military and national security secrets could be accessed by an enemy nation or organization through covert computer attacks, I thought it was crucial that improvements be made to protect these computer systems. The DoD plan would replace the current computer security system of passwords and cards with the cutting-edge science, called biometrics. To date, I have added \$22 million to appropriations

bills to assess those biometrics efforts that are already underway and to create a prototype system for the Defense Department. Eventually, this biometrics technology could also benefit private companies which might adopt computer security systems for other non-military uses.

Biometrics utilizes unique individual "signatures," such as a fingerprint, the pattern of veins in one's wrist, or the network of nerves in the iris of one's eye. When a computer network has a biometric security system, the system authenticates the user's identity from previously saved patterns or distinguishable traits.

I have worked to put West Virginia at the forefront of this effort. Soon, the Defense Department plans to open an interim Biometrics Fusion Office in North-Central West Virginia. This office should provide West Virginia an opportunity to get in on the ground floor of a promising technology.

Not too long ago, biometrics was strictly the stuff of science fiction movies. But what some people can dream, others can invent. Biometrics is quickly moving from fiction to fact. West Virginia has demonstrated the foresight to embrace this state-of-the-art technology, and the Mountain State is well positioned to lead in its development.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Catching Criminals on the Loose

In Harrison County, the Federal Bureau of Investigation's (FBI) high-tech fingerprint identification system is proving to be a valuable tool in the nation's crime-fighting effort. Through the Clarksburg complex, the FBI is working with local police departments to make our communities safer places to live and work.

More than a decade ago, the FBI realized that its antiquated paper-based system of matching fingerprints was simply not working in the modern age. The FBI had 32 million cards on file -- enough that, if stacked one on top of another, they would be 13 times as high as the Empire State Building. Matching a local suspect's fingerprints with one of those cards was a daunting challenge that often resulted in the suspect's going free before the FBI determined that the suspect was wanted in another jurisdiction.

When the FBI approached me about the problem, I added \$185 million to an appropriations bill to construct an ultramodern FBI complex. Since that time, I have obtained more than \$750 million for computers and equipment. The return on that investment is impressive. Today, when a local police department submits a set of fingerprints to the FBI, more than 97 percent of the time the FBI can,

within two hours, determine if the suspect has a criminal history. That speed can make a big difference.

For example, a man who had been living in Louisiana for 20 years was arrested and fingerprinted for failing to pay a court fine. After his fingerprints were electronically submitted to the FBI, the FBI informed local police that the man had escaped from an Alabama prison in 1979, while serving a sentence for a teenage boy's murder.

The FBI system is also solving what, up until now, have been unsolvable cases. Through its modern technologies, the FBI has been processing latent fingerprints taken at a crime scene and matching them to suspects with prior criminal records, finally providing closure to some victims and families who have been haunted by long unpunished crimes. The State of New York, for example, has used the FBI center to solve eight homicide cases, seven burglary cases, and a number of other cases that otherwise may have sat on the books unsolved forever.

The Harrison County FBI Complex is revolutionizing our nation's crime-fighting effort. West Virginians can be proud of the fact that our state is home to a world-class initiative geared toward helping the entire nation to realize a better, safer quality of life.

By U.S. Senator Robert C. Byrd

A Cure for Mental Health Benefits

When discussions are held on the major health issues of the day, the conversation often focuses on physical ailments and life-threatening illnesses such as cancer or heart disease. But mental illness, which affects about 20 percent of Americans -- 55-million people -- often goes undiscussed. Recent medical breakthroughs have shed light on mental illnesses, showing them to be just as diagnosable and treatable as diseases like high blood pressure and diabetes. Despite this research, however, sufferers of mental illnesses continue to suffer from the stigma of old stereotypes and to be treated differently, even when it comes to health insurance benefits.

Many insurance policies unfairly limit doctor and hospital visits for mental health treatment while at the same time allowing patients to seek treatment for their physical health needs without restrictions. Private health insurers, in many cases, take advantage of loopholes in the present system by denying treatment, restricting benefits, and imposing higher co-payments for mental health services than for general medical care. Furthermore, since many insurance plans lack adequate mental health benefits, a substantial financial burden is placed on these victims. Instead of being able to invest in education and retirement, these pa-

tients too often find themselves having to remortgage their homes in order to pay for needed treatment.

To address this inequality, I have cosponsored the Mental Health Equitable Treatment Act. This measure would ensure greater parity in the coverage of mental health benefits by prohibiting limits on the number of covered hospital days and outpatient visits for all mental illnesses, and requiring greater parity with physical health benefits in terms of co-payments and deductibles. The legislation would inject a measure of fairness in the insurance industry, and prohibit discrimination against those people who require treatment for mental illness.

Untreated mental illness can be very costly, both to the individual and to society. Those who suffer from mental illness but who do not seek treatment often end up dropping out of society, becoming homeless, or resorting to crime. Moreover, patients who do seek treatment are too often overwhelmed by heavy financial burdens resulting from insurance policy gaps that continue to exist despite the advances in the understanding and treatment of mental illness. The Mental Health Equitable Treatment Act would break down the barriers to mental health insurance coverage and would allow patients to seek the medical help they need.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Learning from the Past

"To be ignorant of what happened before you were born," admonished Cicero, "is to remain always a child." If Cicero were to look at history lessons for America's schoolchildren today, he might conclude that they will never grow up.

Once again, a recent test of young people's knowledge of history -- in this case, the history of our own nation -- has demonstrated a sorry ignorance. What is particularly disconcerting about this most recent report is that it reflects the knowledge base of college seniors from some of the best colleges and universities in the nation, not younger children with many years of learning still ahead of them.

The test, sponsored by the American Council of Trustees and Alumni, was given to college seniors at 55 top colleges and universities and consisted of questions from a high school-level American history test. I was very sorry to read that nearly 80 percent of those tested earned a grade of only a "D" or an "F." A mere 23 percent could identify James Madison as the principal Framers of the Constitution. More than a third of those asked did not know that the Constitution established the division of powers in American government. Just

60 percent could correctly select the 50-year period in which the Civil War occurred -- not the correct years, or even the correct decade, but the correct half-century! A scant 35 percent could correctly identify Harry S. Truman as the President in office at the start of the Korean War.

In light of such a dismal display of knowledge of our national history, in June, I added an amendment to an appropriations bill to provide a total of \$50 million in grants for schools that teach American history as a separate subject within school curricula.

Too many schools today are lumping history together with other subjects and offering them as courses broadly titled "social studies." This conglomeration certainly does not provide the kind of focused study that history deserves and requires. Moreover, it shortchanges our young people who will some day be the leaders of our nation.

It is my hope that my amendment and the funding it provides will encourage more schools to develop, implement, and strengthen classes in American history. If they are to have any hope of being prepared to lead in the future, America's students need a deeper understanding of our nation's past.

Parents and Teachers: Education Partners

As teachers put the final touches on another school year's lesson plans and as students look ahead to the crackle of new textbooks and classroom adventures, it is important that parents take the time to become involved in their child's education. The start of the school year is an excellent time for parents to meet their child's teachers and principal, and to make the commitment to play an active role in their child's school activities.

Too often, parents see the teacher as the sole party responsible for their child's education. But parents play just as important a role as teachers play. Parents can reinforce the lessons from school and make sure that homework is completed. Parents can exhibit the importance of schoolwork by showing a sincere interest each evening in what their child did at school that day. Perhaps most importantly, parents can, through consistency, reinforce the values and lessons taught at school and those practiced at home. In essence, parents and teachers are partners in a child's education.

Earlier this year, West Virginia University President David Hardesty and I hosted a Youth Summit that brought together more than 250 students from across the state to discuss the causes

of youth violence and to provide a general snapshot of opinions about their schools. When asked, as part of that summit, "What do you feel are the main causes of youth violence in America today?" students pointed to a lack of guidance and attention from their parents. This opinion is echoed by a significant amount of national research.

Research also shows that parents can make a real difference in the importance that their child places on education. One analysis found that there are three factors over which parents have enormous control--student absenteeism, the variety of reading materials in the home, and excessive television watching.

From the local to the federal level, policymakers are working to find ways to improve our students' education. But one means of helping to achieve this goal has existed for generations. Parental and family involvement complements every initiative underway in schools to improve student learning. The task of connecting families and schools is formidable, yet attainable. Already, many families actively engage in their child's education and, with encouragement and help, I hope that many more parents will do the same.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Decade of Progress for the Disabled

Ten years ago, disabled men and women who wanted equal access to buildings and public services commonly found their way blocked by such physical barriers as stairs, street curbs, and narrow doorways. Because of such structural impediments, disabled Americans missed out on job opportunities and day-to-day activities that so many of us take for granted, like going to the movies, shopping for groceries, or relaxing in the park. In 1990, responding to the long-time needs of disabled men and women, Congress, with my support, approved the Americans with Disabilities Act (ADA).

The passage of the ADA brought about numerous changes throughout the nation -- from advanced technology allowing for greater public accommodation at business and commercial establishments, to state and local government services and activities, to transportation and telecommunications technology for disabled Americans. For many disabled Americans, the Americans with Disabilities Act has meant a little more ease and comfort. For example, the ADA has facilitated easier access to restaurants and public restrooms, modifications to the aisles and entrances of supermarkets to allow for wheelchair access, assistive listening systems to help the deaf and hard of hearing, and large-print publications

for those with vision impairments.

Not only has the legislation reconfigured the way we think about architecture and our physical environment, it also has changed the way policies are formulated, helping to guarantee that our nation can benefit from the talent of all citizens. The Americans with Disabilities Act acknowledges that it costs our nation much more to allow the potential of millions of people to be lost than to make the modest accommodations that can allow all members of society to contribute fully. In a word, the ADA is about independence.

President Franklin Roosevelt once said, "No country, no matter how rich, can afford to waste its human resources." The Americans with Disabilities Act lives up to President Roosevelt's objective. For ten years now, this momentous, landmark legislation has opened new doors to disabled Americans. It has allowed handicapped individuals the opportunity and the access to have their potential recognized in the workplace and in the community. It has brought the American dream within reach for the millions of disabled citizens who, up until a decade ago, found that dream blocked, not so much by their own physical impairments, but by structural and societal barriers that the ADA is now tearing down.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Turning Off Entertainment Violence

I have long been concerned about the effect that entertainment violence has on children. Whether through television programs featuring gun play and car crashes, or through video games that make killing humans a rewarding experience, I believe that such constant repetition of violence desensitizes children, and even makes such action in real life seem to be a more acceptable option for them. Consider these facts: by age 18, the average American child will have viewed about 200,000 acts of violence on television; and while still in their formative years, before they leave elementary school, children will see about 20,000 murders and more than 80,000 assaults.

Given these statistics, and the sheer volume of time that America's young people spend watching television -- 15,000 hours by the time they graduate from high school versus 12,000 hours in formal classroom instruction -- one might think that its influence would be a forgone conclusion. Yet, the entertainment industry has maintained that children can separate entertainment violence from reality.

But now, four major public health organizations -- the American Academy of Pediatrics, the American Academy of Child and Adolescent Psychiatry, the American Psychological

Association, and the American Medical Association -- have come together to document the negative impact of entertainment violence. Specifically, these groups have written a joint statement highlighting the link between entertainment violence and aggressive attitudes and behavior in young people. Notably, the statement says that children who see a lot of violence are more likely to view violence as an effective way of settling conflicts; that viewing violence can lead to emotional desensitization toward violence in real life; and that children exposed to violent programming at a young age have a higher tendency for violent and aggressive behavior later in life than children who are not so exposed.

There is no more denying the fact that entertainment violence does have a detrimental effect on children. More than 1,000 studies point to a causal connection between media violence and aggressive behavior in some children. I hope that the entertainment industry will take these findings into consideration. The best way to address youth violence is through strong families and parental involvement, but a more responsible entertainment industry that no longer glorifies violence would go a long way toward making that job easier.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Keeping Doors to Rural Hospitals Open

Health care is one of the most important services that a community can provide for its citizens. Whether for routine check-ups or for more complex procedures, health care facilities that are close to home are important resources for local residents.

For many years, I have strived to help provide West Virginians with greater access to health care. From obtaining federal funding for clinics and outreach programs, to supporting federal policies important to the very special needs of rural medicine, I have tried to ensure that West Virginians have easy access to basic health care services.

In fact, I have recently supported legislation to correct the unintended funding challenges that resulted from the cutbacks in Medicare reimbursements made in the 1997 Balanced Budget Act (BBA). Originally designed to curb the uncontrolled growth in the Medicare system, the Act had unforeseen financial repercussions for many small, rural health facilities.

As designed, the BBA was supposed to tighten Medicare spending by approximately \$100 billion over five years. But the Act has not worked as intended. Instead of making small, incremental reductions, it resulted in Medicare cuts totaling more than \$200 bil-

lion. As a result, many rural clinics and hospitals are just barely surviving financially.

To soften these harsher-than-anticipated cuts, Congress last fall passed legislation containing the Medicare Beneficiary Access to Care Act, which I cosponsored, to restore \$27 billion to health care provider payments. That legislation addressed the most significant problems resulting from the BBA policies and focused payment adjustments on areas in which there were demonstrated problems.

But more work needs to be done. That is why I am cosponsoring the Health Care Access and Rural Equity Act, which I hope will further alleviate the financial crunch facing rural health care systems. The new legislation would restore inflation adjustment payments under Medicare to rural hospitals, and would provide rural hospitals with the chance to receive capital planning grants to be used for health infrastructure and technology improvements.

I hope that this legislation will be passed before Congress adjourns this year so that more rural clinics and hospitals will be better able to meet financial demands and, therefore, continue to provide health care service to West Virginia families.

By U.S. Senator Robert C. Byrd

Ending the Marriage Penalty Tax

Throughout the annals of human experience, in dozens of civilizations and cultures of varying value systems, humanity has looked to the permanent relationship between man and woman as a keystone to the stability, strength, and health of human society. Unfortunately, an anomaly in the U.S. tax code known as the "marriage penalty" undermines this principle by penalizing individuals who have vowed a lifelong commitment to each other through the sacred institution of marriage.

In the U.S. tax system, a marriage penalty occurs when married couples pay more in taxes than they would if they filed individual tax returns. In general, married couples whose joint income is split evenly between both spouses will suffer a marriage penalty. But married couples whose joint income predominantly comes from one spouse will typically benefit from a marriage bonus, which exists when a married couple has a smaller tax liability than they would if they filed as two singles.

I do not believe that our tax code should punish married couples. At a minimum, I think our tax code should be marriage neutral. However, the concept of marriage neutrality in the tax system has, thus far, proved to be an elusive goal.

The Marriage Penalty Relief Reconciliation Act of 2000, which was recently passed by Congress, correctly addressed this seemingly unattainable objective. That legislation, which I supported, was designed to expand the 15-percent marginal tax bracket and increase the standard deduction for all married couples, thus eliminating the most egregious marriage penalties in the tax code. Additionally, the legislation would have increased marriage bonuses and expanded an economic incentive for families who make the difficult choice to forego a second income or career so that one parent is able to stay at home with the children. Families in this situation ought to be extended tax incentives just the same as those families with a limited income or a child in the child care system.

Many West Virginians have contacted me to voice their opposition to a tax on married couples. I could not agree with them more. Although the Marriage Penalty Relief Act was recently vetoed, I continue to believe that it was legislation with an admirable objective. I voted for that Act because I believe in the institution of marriage, and that our government should do more to support the basic values exemplified by marriage.

By U.S. Senator Robert C. Byrd

Making American Steel Stronger

In 1998, American steel companies were caught in an avalanche of cheap -- often illegal -- foreign imports. As a result, the jobs of thousands of steelworkers in West Virginia, Indiana, Alabama, and several other states were threatened.

In response, I created the Emergency Steel Loan Guarantee program to give steel companies in need of assistance access to an infusion of capital to help them dig out and keep operating until the surge in foreign imports could be controlled. While 1999 import levels did drop, the statistics for this year, so far, are not encouraging. The American Iron and Steel Institute reports that, from January to May 2000, year-to-date steel imports were 22-percent higher than for the same period in 1999, and almost 16-percent higher than in the crisis year of 1998.

With these statistics in mind, I recently met with new U.S. Commerce Secretary Norman Mineta to urge him to remain firm in his support of the American steel industry. I told the secretary of my continued concern about the future of U.S. steelmakers, and asked for his commitment to use the authority of his office to fully enforce U.S. trade laws and to protect American steel producers from unfair trade practices.

Secretary Mineta as-

sured me that he was committed to keeping America's steel industry strong. In fact, the secretary said that he intends to make foreign trading partners adhere to fair trade practices.

In addition to these personal assurances, the Commerce Department has released a 240-page action plan on global steel trade that identifies numerous factors that triggered the 1998 steel crisis and recommends steps that the federal government can take to protect the industry from future surges in foreign imports. Major elements of the plan include early warnings of import surges and of changes in industry conditions; faster relief for industries, workers, and communities when import surges occur; expedited antidumping investigations; steps to address the root causes of instability in global steel markets; and the reinvigoration of the international steel policy agenda.

Our nation learned some tough lessons as a result of the steel crisis of 1998. We have taken some corrective steps and identified protective measures, but we must remain vigilant to potential unfair trade practices by foreign manufacturers. This nation cannot afford to let down its guard and surrender the American steel industry to foreign predators.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Making Prescription Drugs More Affordable

The high cost of prescription drugs has been a primary issue of concern for many West Virginians, especially for those men and women living on fixed incomes who rely on Medicare for health care coverage. Currently, Medicare does not pay for prescription drugs and, as a result, too many West Virginians have to decide between paying for their medicines or paying for other basic needs, such as the mortgage or groceries. That is not a choice anyone living in the greatest country in the world should have to make.

The medical industry has experienced incredible advancements in the last several years. Technology is uncovering new treatments at an astounding pace. Medicines and drug therapy are major components of those advancements. Extensive research and development efforts are helping to create new treatments for a variety of illnesses, from the most common to the most deadly. Unfortunately, the medicines that Medicare recipients need are often unaffordable.

In an effort to help offset the high price of prescription drugs, I am cosponsoring legislation that would allow Medicare to pay at least part of the bill for essential medicines. The Medicare Expansion for Needed Drugs Act would help with prescription drug costs for seniors. The ini-

tiative would be strictly voluntary and would require the participating Medicare recipient to pay a monthly fee and a copayment in order to benefit from the prescription drug coverage.

This would be an important benefit for many of the 335,000 West Virginians who rely on Medicare for their health care coverage. In our state, the average Medicare recipient has an annual income of just \$10,700. Of that amount, an estimated \$2,100 goes to out-of-pocket medical expenses. An affordable, voluntary Medicare prescription drug initiative would keep at least some of that \$2,100 in their bank accounts and available for other needs.

Medicare was designed 35 years ago to be a safety net for those who, because of age or disability, did not have access to traditional health insurance. At that time, no one could foresee how the costs of research and new medications would spiral over the years. The time has come to address this shortfall and to create a Medicare system that is more responsive to the needs of the people. That is why I am cosponsoring the Medicare Expansion for Needed Drugs Act. I hope that Congress and the Administration can work together to help ensure that Medicare recipients do not have to choose between paying for medicine and putting food on the table.

September 13, 2000

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Trade Policy Trade-Offs

Over the more than four decades that I have served West Virginia in the U.S. Congress, I have seen one Administration after another -- both Democratic and Republican -- trumpet its latest trade plan as being good for America. The trouble with these trade plans, however, is that they are based more on the needs of the State Department rather than on the needs of working families.

For example, in 1994, when Congress considered whether to approve the North American Free Trade Agreement (NAFTA), supporters made great promises of economic progress. But, according to the U.S. Labor Department, since NAFTA was enacted, more than 440,000 jobs have left the U.S. because of that agreement. According to the Commerce Department, the United States had a \$1 billion trade surplus with Mexico in 1994. From January to July of this year, the trade deficit with Mexico already totaled more than \$11 billion. In 1999 alone, the U.S. trade deficit with Mexico totaled more than \$22 billion. This is not a track record of economic success.

Unfortunately, Congress pays no attention to that track record. The Clinton Administration has convinced Congress to approve permanent normal trade relations (PNTR) with

China. I opposed this legislation for the same reason that I opposed NAFTA: this is not a plan that benefits working families. Rather, giving China PNTR, I think, will create even greater incentive for corporations to move more jobs overseas where labor is cheaper, where they do not have to contribute to Social Security, Medicare, and other benefits guaranteed to American workers, and where environmental and workplace safety regulations are not enforced.

I understand that today's marketplace is a global one, and that what happens in Beijing has as much of an effect on market conditions as do actions in Washington, D.C. But that does not mean Congress should abdicate its responsibilities to the American people and approve policies that put American workers at a disadvantage. Trade policy should not be dictated by State Department goals -- and big corporation profit margins. Rather, trade policy should be focused on the needs of the American people. Job losses in America must not be the price paid to expand job opportunities elsewhere around the globe. I will continue to push so that future trade policies take into consideration the needs of American workers, and so that profit margins are not put before working families.

September 20, 2000

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Marketing Violence to Children

I have long shared the concerns of many West Virginia parents that our young people are being exposed to far too much violence through the media -- movies, television, music, and video games. The entertainment industry, however, has generally rebuffed criticism about the content of its programs and products and about concerns that too much exposure to violence is harmful to our young people.

The industry, in fact, has repeatedly claimed to be making efforts to reduce the exposure of young people to violence, including instituting a program of labeling program content so that parents are better able to evaluate the programs, music, and video games that their children watch and play.

Now, however, the Federal Trade Commission (FTC) has released a report that found that the entertainment industry has been aggressively marketing violence-ridden materials directly to young people.

The FTC, the agency responsible for enforcing consumer protection laws, recently completed a year-long investigation into the entertainment industry's marketing practices. In its investigation, the Trade Commission found that movie studios advertised violent "R"-rated films during television shows with audiences primarily consisting of teenagers. Federal examiners also found that video games with violent content are regularly advertised in magazines designed

for young teenagers. And, the investigation determined, those much-heralded warning labels and content codes -- touted by the industry as evidence of its devotion to consumer protection -- are actually poorly enforced.

This investigation bears out many of the worst fears of those of us concerned about our impressionable young people. Additionally, it reinforces the fact that parents need to be vigilant when it comes to their children's entertainment options.

In an effort to address at least part of this problem, I have authored a legislative provision, currently under consideration by the Senate, that would require the Federal Communications Commission (FCC) to consider imposing a new set of voluntary broadcast standards for television networks. An analysis of prime-time programming by the Parents Television Council, released in March, found that overall sexual content, foul language, and violence have nearly tripled over the past decade. I want the FCC to consider whether a new set of voluntary standards would help to improve the quality of programming that television stations broadcast.

Moreover, I hope that the Federal Trade Commission's findings will send a signal to industry executives that is strong enough to cause them to implement significant reforms, and to stop pushing violent programming on our children.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Smaller Classes, Better Schools

In the beginning of my school years as a boy in Mercer County, I attended small, two-room schools. In my graduating class at Mark Twain High School in Raleigh County, there were only 28 students. It was there, in those small classrooms, where I started to receive the education that prepared me for a long career of public service and an even longer devotion to learning.

In this new school year of 2000-2001, my thoughts turn to a meeting that I had this past spring with students from throughout West Virginia. At that Youth Summit, which West Virginia University hosted with me, students were asked to identify the main causes of youth violence. Among the responses, students pointed to large classes and schools as major contributors because they lead to a feeling of isolation and disenchantment.

Replacing that feeling with a sense of belonging is crucial to a student's well-being and academic success. With my support, Congress has appropriated funds to help school districts reduce class sizes to eighteen or fewer students in kindergarten through third grade. Providing these funds to the early grades is a good start in this overall effort to create smaller classes.

School districts throughout the nation are currently receiving funds -- a total of \$1.3 billion -- to recruit, hire, and train new teachers for the 2000-2001 school year. West Virginia's share, which is based on population, is more than \$12 million. Local school districts may use the funds to hire more teachers or to provide training opportunities to upgrade the skills of their teaching staffs.

Research shows that smaller classes offer both immediate and long-term benefits. In Tennessee, for example, researchers found that students in grades one through three who were in small classes were about half of a school year ahead of students in larger classes in their learning in reading, language arts, math, and science skills. Smaller classes also have led to increased student participation and improved behavior.

As West Virginia students have pointed out, and as the research backs up, smaller classes are important in making students feel that they have a stake in their education. I hope that West Virginia school districts will take advantage of the federal resources available, and help not only to reshape our classrooms but also to chart a brighter course for our students' education.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Internet Safety Made Simple

October marks "Internet Safety Month" and provides parents with an opportunity to learn more about resources available to them to protect their children from inappropriate material available on the World Wide Web. With an estimated 5,000 new Internet sites coming online each month -- and with one-third of these devoted to material that is violent, obscene, or sexually explicit -- Internet Safety Month could not have come at a better time.

I recognize the valuable resource that the Internet can be for education, communication, and research. In just a few seconds, with just a few keystrokes, one can find out about medical breakthroughs, news reports, or historical events. But, at the same time, one can be exposed to pornography, vulgarity, and indecency. One way to avoid the negative material while promoting the positive is through filtering software. Often available for free or for a low price, filtering software can be a valuable tool for parents who want to protect their children from objectionable material but who cannot always monitor their children's Internet use.

Additionally, there are some basic "rules of the Web" that parents may want to consider for their children's Internet use. These commonsense tips may help set the ground

rules for children and may prevent them from accessing inappropriate material.

Take time to be online with your children. When a parent or teacher is directly involved with a child's Internet activity, the potential for danger is greatly reduced.

Teach children never to give out personal information to people they encounter while online. This type of information can be used to target the child or the family for criminal activity.

Instruct a child never to plan a face-to-face meeting alone with an online acquaintance. News accounts from across the country have highlighted the dangers of arranging meetings with strangers. While a child may think that an online acquaintance has become a friend, a computer can often mask the true intentions of a predator.

West Virginia parents need to make sure that their children will be safe while utilizing the Internet. The number of homes in West Virginia with Internet access continues to grow, and an increasing number of schools and libraries provide children with Web access. That is why it is important to set clear guidelines and utilize filtering software -- simple ways to ensure that children have positive experiences on the Internet while avoiding many of its pitfalls.

Peace of Mind for Retired Miners

Each fall, for the last two years, more than 60,000 retired miners and their families across the country have faced the threat of significant cuts in their health care coverage. This threat is no fault of the retired miners, but rather the fault of Congress for failing to act to protect the financially threatened fund that pays for those health benefits. That is why, once again this year, I have fought to protect those benefits and to give Congress more time to settle on a long-term solution for the fund's financial problems.

As part of a 1946 agreement between the unions and the federal government, coal miners and their spouses were promised lifetime health care coverage. That agreement eventually led to the establishment of the Combined Benefit Fund (CBF), which worked well until adverse court decisions and rising health care costs began threatening the financial solvency of the health care fund.

In order to keep the CBF running despite Congress' inaction, I have, for the past two years, won major legislative battles to shore up the fund and to protect the vital health care services for retired miners and their families. In an appropriations bill recently signed into law, I offered an amendment to transfer to the Combined Benefit Fund

up to \$94.5 million in interest on the federal Abandoned Mine Land fund. That follows on a one-year transfer of \$68 million I provided last year. This latest transfer will keep the CBF fully afloat through the end of August 2001. But it is only a short-term solution. The funding gives Congressional authorizing committees additional time in which to devise a permanent solution to the fund's financial problems.

Winning the \$94.5 million transfer was not an easy step. It was a tough fight. My amendment was patterned on legislation authored by Congressman Nick Rahall. In addition to Congressman Rahall, my provision was supported by Congressmen Bob Wise and Alan Mollohan and Senator Jay Rockefeller. Our West Virginia Delegation is committed to ensuring that the promise of lifetime coverage, made to our miners more than 50 years ago, is not broken.

The challenge now is for Congress to settle on a permanent solution to protect the health benefits of these elderly citizens. Beneficiaries must not continue to be placed annually in limbo, not knowing from one year to the next whether their health care benefits will evaporate. For the security and peace of mind of these families, a long-term remedy must be found.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Building Prosperity in West Virginia

As many West Virginians know, rural communities have difficulty funding public works projects, such as water and sewer systems, roads, industrial parks, and business incubators. A lack of infrastructure in a community can be burdensome, and, in some cases, life-threatening to its residents. West Virginians, unfortunately, are all too familiar with this lifestyle.

For decades, I have worked to address these types of problems by adding funding to appropriations bills specifically for infrastructure projects throughout our state, in an effort to provide the basic necessities to West Virginia communities. These initiatives are not extravagances. They are necessities. And, mile by mile, piece by piece, we are making significant progress.

A major resource for community development in recent years has been the Appalachian Regional Commission (ARC). Created in 1965, the ARC channels millions of dollars each year to economically distressed communities in West Virginia and the 12 other states in the Appalachian region. That funding supports such projects as the ARC Corridor Highway System, water treatment plants, sewer pipeline extensions, health care centers, and a variety of other infrastructure initiatives.

While critics complain that this targeted investment

in Appalachia is unnecessary, I contend that it is vital. For too long, Appalachia has faced major obstacles to economic growth and as long as Appalachia lags behind, the entire nation suffers. That is why I have worked to continue the operations of the ARC. Through my work on the Senate Appropriations Committee, I have obtained the funding necessary to allow the ARC to continue its mission of improving the economic conditions in our region. And this investment is paying dividends. A recent study found that, between 1990 and 1996, the investments made in infrastructure by the ARC alone have resulted in thousands of new jobs, millions of dollars in new wages, and a number of other benefits that significantly exceed the costs of the agency's investments.

I grew up in the coalfields of southern West Virginia. I have lived in houses without electricity and without running water. I know how difficult it can be to try to create opportunities for the future when the available infrastructure is mired in the past. In order to move forward, we need to continue to invest in those basic building blocks that constitute foundations for a brighter economy. By doing so, we will create the opportunities necessary to keep our children in West Virginia to raise families of their own.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protecting the Doctor-Patient Relationship

In West Virginia and across the nation, the number of people in managed care health insurance plans is increasing. Today, almost 60 percent of the nation's population is insured through managed care plans, up from only 13 percent in 1987. But while many Americans chose their health plan believing that medical decisions would be based on doctor-patient consultation, that is not always the case. That is why I continue to press for Congress to approve a Patients' Bill of Rights to help protect all Americans in managed care plans.

In managed care plans, an outside third party often makes decisions about a patient's health care regimen based more on cost than on need. I firmly believe that patients and their doctors -- and not an outside accountant -- should decide the best course of medical treatment.

The Patients' Bill of Rights that I support would ensure that patients with serious illnesses are allowed access to specialists without having to receive permission from an accountant who is without medical training. The legislation would give patients the power to go to any emergency room without waiting for pre-approval by their health insurance company.

The Patients' Bill of Rights would give women direct access to their obstet-

rician/gynecologist, and also would allow them to designate that physician as their primary care doctor. Finally, the legislation would ensure that patients can appeal medical decisions mandated by an insurance company to an independent reviewer. The reviewer would then make a ruling that is binding on the managed care plan.

The Patients' Bill of Rights has the support of the American Medical Association, the American Nurses Association, and every other major health organization in the nation. It is not extreme. In fact, many health plans already provide these guarantees. This legislation is aimed at those plans which choose to put profits before patients, thereby interfering with medical decisions that should be made between a doctor and patient.

When West Virginians enroll in managed care plans they should not be forced into a system that too often is more interested in lowering costs and increasing profits than in providing quality medical care. We need a Patients' Bill of Rights that guarantees access to medical care, protects the doctor-patient relationship, and provides accountability when managed care plans deny needed services. This is the best way to ensure that health care is based on a medical diagnosis, and not on an insurance company's profit margin.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Breaking the Cycle of Domestic Violence

In West Virginia last year, there were 11,534 reported domestic violence crimes that left 31 West Virginians dead. And those are just the cases reported to police. There were likely hundreds -- if not thousands -- of other incidents that went unreported. In an effort to combat domestic violence, and to help begin the healing process for victims of abuse, Congress, with my strong support, has approved the Violence Against Women Act of 2000.

This Act is one of the most critical pieces of legislation ever to come before Congress with regard to the safety and well-being of our nation's women and children. Specifically, the Violence Against Women Act calls for \$3.3 billion in federal funding during the next five years to expand women's and children's access to shelters where they can find immediate protection from violence and receive help in making the kinds of life changes that may be necessary to permanently break away from an abuser. The Act also supports better training to enable police officers to identify abusers and assist abuse victims.

Domestic violence has been on a steady decline in

recent years. Statistics from the U.S. Department of Justice show a 21-percent drop in domestic violence since 1993. Part of the reason for that reduction is the network of coordinated response teams in place throughout the country. These teams -- consisting of police, prosecutors, judges, victims' advocates, hospitals, corporations, and attorneys -- provide victims and their children the services they need in order to escape the violence and stay alive. The Violence Against Women Act reinforces these teams, giving them additional resources to draw upon to help victims. That is why I strongly supported this legislation.

Today, too many people view violence as the best way to solve problems and vent anger. Nearly one third of the women murdered each year are killed by their intimate partners. In 1998 alone, 307,000 women were raped and sexually assaulted, and approximately one-million women are stalked each year. The challenge ahead is to find a way to break this cycle of violence and abuse that has ruined tens of thousands of lives. While this is not an easy challenge to meet, it is certainly a battle worth waging.

By U.S. Senator Robert C. Byrd

Giving Thanks

Autumn's leaves are falling, the days are growing short, and the first frosts have blanketed our lawns with a lacy tracery of white. Thanksgiving is upon us. In 1863, President Abraham Lincoln's Proclamation for Thanksgiving began, "The year that is drawing towards its close has been filled with the blessings of fruitful fields and healthful skies." Though in the midst of the Civil War, President Lincoln was able to find something to praise. Currently, our nation is experiencing a time of peace and prosperity. This year, we must not take for granted our good fortune.

The first official Thanksgiving in America was celebrated by the Pilgrims in 1621. Those early settlers had overcome great privation and difficulty. They had built their homes from the raw materials around them, from stones pried from the earth and logs painstakingly cut from the surrounding forest. They cultivated crops from the precious stores of seed carried with them from the Old World, but the pilgrims would not have survived without the help from the local Indian tribes, who introduced the settlers to native crops such as corn and pumpkins. Even with the

help of the Indians, only half of the original settlers survived their first year in the new land. Yet, despite that first year of hardship, the Pilgrims chose to celebrate what they did have with a day of Thanksgiving. And, like today's celebrations, they shared their feast with family and friends.

I learned the history of the Pilgrims as a child, but it is only as an adult that I have come to truly understand and appreciate both the hardships suffered by the Pilgrims and the great sense of relief and thankfulness that they must have felt to have come through that first year. It is sometimes easier to wish for things that could make our lives better than it is to pause and recognize all those things, however small, that already make our lives good.

This year, as West Virginians gather around their Thanksgiving feast, I hope that everyone will savor and thank the Creator for all of the love and friendship gathered there, as well as the turkey, pumpkin pie, and cranberry sauce that recall the Pilgrim's feast so long ago. Whether it be a person, thing, or simply the rights and liberties we enjoy as Americans, each of us has blessings to count this Thanksgiving.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

New Ways to Use Old Fuels

Because the United States is heavily dependent on Middle East countries for oil, we are too much at their mercy when it comes to fuel prices. This is but one example of how such dependence on foreign fuels carries consequences for our economy as well as our national security. Therefore, if we are to gain greater control over our economic circumstances and shore up our domestic security, we need to address America's reliance on foreign fuel sources.

The United States possesses plentiful coal and natural gas reserves to heat our homes in the winter and to cool them in the summer. But the expanded use of those domestic resources has long been stymied by concerns about the impact that fossil fuels have on the quality of our air. Those concerns led me to create the national Clean Coal Technology program in 1985. That initiative matches government and industry funding to develop innovative methods to use coal in more efficient and environmentally friendly ways. To date, more than \$5.5 billion has been invested in that Clean Coal effort.

To expand this initiative, I recently included \$95 million in an appropriations bill to support the upgrade of existing power plants with environmentally friendly technologies that

would allow for the continued and expanded use of coal. Since 56 percent of this nation's electricity is generated in coal-fired power plants, it makes good sense to modernize existing plants in ways that allow us to better use our own coal supply. Such an effort will help us to trim our overreliance on foreign fuel sources while also cutting emissions of greenhouse gases, which are believed to contribute substantially to the problem of global warming.

When considering the worldwide scope of the global warming problem, it becomes obvious, then, that our clean coal technology effort should not stop at our nation's borders. Scientists have identified several developing nations as some of the world's most prolific emitters of greenhouse gases, and experts estimate that these nations -- China, Brazil, India, and Indonesia, for example -- will only increase their emissions as they continue to grow. If the United States can market clean coal technologies to these nations and others, we may well strike a significant blow for the Earth's environment.

We must continue to work to find a balance between our nation's energy needs and commonsense environmental protections. Both are vital to America's -- and the world's -- future.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

More Challenges for the Steel Industry

For three years, the steel industry in the United States has faced unrelenting pressure from foreign competitors. Much of that pressure has resulted from illegal activities by foreign companies and the governments which are subsidizing their steel production. As a result, these foreign companies are able to sell steel products in the United States at prices far below their production costs.

American companies have fought hard to stay competitive -- retraining workers, cutting costs, investing in new technology, and finding innovative ways to produce steel at a lower price. Yet, despite its efforts, the U.S. steel industry cannot match the unfair, below-cost prices offered by foreign competitors.

Since the import crisis began, at least six U.S. steel mills from across the country have declared bankruptcy. Now these imports have claimed another victim. Wheeling-Pittsburgh Steel, one of West Virginia's major employers, has filed for bankruptcy protection. The company has identified unfair imports as the root cause for its bankruptcy filing.

Further evidence of the trouble facing the American steel industry came recently in a report from the U.S. Trade Deficit Review Commission, a blue-ribbon panel appointed by Congress to explore the causes and con-

sequences of the nation's trade deficit. The commission agreed that government has to do a better job of protecting U.S. industries from unfair competition. In fact, the commission's chairman stated that the government needs to deal specifically with the industries, like steel, which have been struggling as a result of unfair, and often illegal, foreign trade practices.

We cannot sit idly by and watch this continuing crisis wipe out the rest of the U.S. domestic steel industry. With several other Senators' support, I have written legislation urging the President to initiate a comprehensive review of all steel imports. This review, called a "Section 201" investigation, would comprehensively address the massive surges of steel imports into this country and give the U.S. steel industry the reprieve it needs to get back on solid financial ground.

Steel has long been a driving force in the growth and prosperity of our nation. Instead of watching illegal steel imports erode our domestic industry, we must have a U.S. steel policy that helps to protect these good-paying jobs, generates a strong tax base, and supports the national security of all Americans. It is time to give these companies the support they need to survive and to thrive so that they can compete on a level playing field.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Cutting Health Insurance Red Tape

When West Virginians enroll in managed health care plans, they should not be forced into a system that too often is more interested in increasing profits than in providing quality medical care. In managed care plans, an outside third party often makes decisions about a patient's health care regimen based more on cost than on need. I believe that patients and their doctors -- and not an outside accountant -- should decide the best course of medical treatment. That is why Congress should approve a Patients' Bill of Rights. Unfortunately, it is unlikely that such legislation will become law soon.

But that does not mean that improvements in managed care systems cannot be made. New regulations have been issued to strengthen the rights of more than 130-million Americans who have medical insurance through private, job-based health plans. These rules promise patients quicker processing of health insurance claims and grant them the right to an expedited appeal when insurance claims are denied or delayed by health plans.

The new regulations represent the first changes to the health insurance claims and appeals process since the creation of the 1974 Employee Retirement Income Security Act,

known as ERISA, which governs private health plans. Currently, insurers have up to 90 days to decide whether or not to cover a patient's medical needs. Under the new rules, when an individual asks a health insurer to cover an "urgently needed" treatment or service, that insurer will have 72 hours to make a determination. For medical procedures that need advance approval, insurers will have 15 days to make a choice, and 30 days to decide on reimbursement for medical care that has already been delivered. Additionally, if a health insurance company denies coverage, a patient will have 180 days, instead of the current 60-day allowance, to file an appeal.

These rules are important in providing West Virginians with the health care protections that they need. However, in order to guarantee every West Virginian in managed care plans with the right to see a specialist, to go to the nearest emergency room, and to hold insurance companies accountable when they cause harm, Congress ought to pass a real, enforceable Patients' Bill of Rights. This is the best way to ensure that health care is based on a medical diagnosis, and not on an insurance company's profit margin.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Holiday Blessings

The holiday season is upon us. Decorations have been hung, candles and lights placed in frost-rimmed windows, and seasonal songs drift across the chill air. In stores, billions of dollars worth of goods are being sold, wrapped, and mailed to happy recipients. Steamy kitchens along quiet streets are perfumed with the scent of crisp cookies, fragrant fruitcakes, creamy fudge, and other family specialties being prepared by loving hands. Churches and synagogues are filled with regular visitors and with those whose worship centers around the holy seasons.

This season of the spirit is a good time to count our blessings. Americans are a fortunate people, blessed with a strong economy that offers opportunities for anyone willing to work hard. We are blessed with a strong military full of fine men and women who keep us and our interests safe around the world. We are blessed with a governmental system designed with enough foresight and care to provide a defined and orderly process for the transition from one administration to the next, in even the unusual circumstances in which we currently find ourselves. The Founding Fathers who established our Constitution were truly wise men, and their document for governance has proved to be a very pre-

vious gift, indeed.

Other nations experience such turmoil with every government transition, or live in the dark shadow of religious repression and sharply curtailed personal freedoms that we Americans can hardly imagine. In the light of that perspective, our own partisan rankling over elections and Congressional majorities pales in significance. We can all take heart from the calm manner in which the public has shown its confidence in the eventual, if delayed, decision and transition to the next administration.

I hope that the spirit of good will and the laying aside of our differences that usually accompanies the holiday season can be extended into the new year, and that Americans can draw together to celebrate the coming transition to a new administration, a new Congress, and a new opportunity to enjoy the blessings of liberty that we have inherited. Those blessings are a gift to every living American from the generations before us who fought to create and preserve our system of government. Those gifts are ours to treasure, ours to exercise and enjoy, and ours to safeguard for the next generation. As we celebrate the birth of His Son, let us remember and thank the Creator for all the blessings we share.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Unlocking the Secrets of Alzheimer's Disease

West Virginia is blessed with a number of fine colleges and universities. These institutions of higher learning are helping to prepare our students to lead the way in the new century. At the same time, researchers at these schools are seeking new ways to utilize energy sources, create new construction materials, and improve the quality of life for men and women throughout the world.

West Virginia University (WVU), is taking steps to address an illness that is both physically and emotionally taxing -- Alzheimer's Disease. Earlier this year, WVU and Johns Hopkins University in Baltimore, Maryland, announced plans to create the Blanchette Rockefeller Neurosciences Institute. The Institute is named for U.S. Senator Jay Rockefeller's mother, who suffered from Alzheimer's until her death in 1992. When complete, it will be one of the world's major centers for research into Alzheimer's and other neurological illnesses.

In support of this endeavor, I recently added \$20 million to an appropriations bill to design and build this center in Morgantown. As planned, the Blanchette Rockefeller Neurosciences Institute will be the largest scientific research venture in the history of West Virginia and the only major research institute in the world

to focus on human memory.

Alzheimer's is an agonizing disease both for the patient and for the patient's family. Slowly, almost imperceptibly at first, a person's mental capabilities erode. The memories of a lifetime are slowly stolen away by the illness. It is not uncommon in the late stages of the disease for the patient to fail to recognize even family members and close friends. It is my hope that, by utilizing the resources at the new Blanchette Rockefeller Neurosciences Institute, scientists and researchers will one day be able to find a way not only to control the disease but also to prevent it. I am proud to have been able to provide the Institute with its design and construction funding.

WVU is developing into one of the nation's premier medical research institutions. The work at the Robert C. Byrd Health Sciences Center includes, among other things, the development of new approaches to treat breast cancer, to avert strokes, and to make specialized treatment available through advanced technology to people living miles away from the nearest hospital. These efforts and investments are very worthwhile, and I hope that they will lead to the day when doctors are finally able to prevent debilitating diseases.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Teaching Technology to Teachers

West Virginia is fortunate to have talented school teachers, many of whom have been at their jobs for years and some even for decades. Their experience has honed their methods of instructing children to make the lessons applicable to everyday life. But so many years in the classroom can also lead to at least one distinct dilemma. Computer technologies continue to change rapidly, and many teachers are not able to keep pace. As a result, some students may never have the chance to benefit from the educational opportunities that these new high-tech resources offer.

West Virginia has spent \$95 million over the past decade to install computers and software in each of the public schools in the state. However, nearly half of our schools report that their teachers are only at a beginner's level in terms of their technological skills.

I am very concerned about this shortfall in our teachers' knowledge base. If West Virginia students are not able to learn about real-world applications of computers and technology, they will be far behind students from other states and from around the world as they enter the workforce.

That is why I recently added an amendment to an appropriations bill to start to provide every math and science teacher in West

Virginia's elementary and secondary schools with advanced training in computers and classroom technologies. The \$2.5 million that I added to the bill will allow the Erma Ora Byrd Center for Educational Technologies at Wheeling Jesuit University to begin this training program.

This initiative is ambitious. Working with the school districts, Wheeling Jesuit first hopes to train 1,000 of the state's 10,000 math and science teachers who have a significant part of their career ahead of them. These teachers will be selected for intensive technology training leading to a Master's degree. Each of these 1,000 teachers will, in turn, train nine other teachers. In the end, by matching highly skilled teachers with high-tech resources, West Virginia's students will be better equipped to move ahead in a computer-driven marketplace.

Keeping up with the dizzying pace of changing technology is challenging. But it is a challenge that our teachers must meet if they are to prepare our students to compete in the rapidly developing global marketplace. I hope that this new training initiative will provide teachers with much-needed support and help them to utilize computer technologies in the most effective manner possible.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Making High-Tech Medical Care Affordable

As we begin the new millennium, I marvel at the scientific advances in health care that make treating disease far easier than was the case when I was a boy. Today, West Virginians benefit from many advanced medical technologies, including one that allows doctors to make life-saving diagnoses without having to perform surgeries. Based at West Virginia University's Robert C. Byrd Health Sciences Center, the Positron Emission Tomography (PET) center allows doctors to analyze a patient and detect diseases without costly and painful invasive surgeries.

PET scanning is an imaging procedure that creates a three-dimensional image of a living organ such as a heart, a lung, or a patient's brain. The image provides physicians with a working model from which to make a diagnosis. This technology can be a powerful weapon in the battle against cancer, heart disease, and neurological disorders such as Alzheimer's disease and epilepsy. However, because of the high cost of this cutting-edge procedure, many patients are not able to take advantage of its benefits.

Until now, Medicare paid for PET scanning in only six different medical diagnoses. As a result, thousands of Americans have been shut out of advanced treatment and diagnosis. That is why I recently wrote to Donna

Shalala, the Secretary of Health and Human Services, in an effort to expand Medicare coverage of PET technology. Along with a number of other Senators, I urged the Secretary to allow Medicare to pay for various PET procedures. I am pleased to report that Secretary Shalala has agreed to expand Medicare payments for PET to include a number of deadly cancers that can be detected at much earlier stages with this technology than is possible through more traditional techniques. Since early detection is the key to patients' survival in many illnesses, PET possesses tremendous life-saving potential. I also hope that the new Administration will consider an even broader expansion of Medicare payments for PET procedures.

Throughout my career of public service, I have strived to ensure accessible and affordable medical care for West Virginians. From the provision of funding for rural clinics and the support home health programs, to the launching of screening, testing, and research initiatives, I have tried to help meet the medical needs of West Virginians, many of whom live in rural areas without access to a nearby hospital. Expanding Medicare coverage of PET scanning is yet another means to improve the accessibility of state-of-the-art health care to patients in West Virginia and across the nation.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Cutting Red Tape for Black Lung Victims

Growing up in the Southern West Virginia coalfields, I saw the debilitating effects of occupational pneumoconiosis, better known as black lung disease. It is an illness that is caused by the inhaling of coal dust by miners on a long-term basis. The coal dust sits in the lungs, reducing a miner's capacity to process oxygen, and causes such significant breathing problems that death often follows. Even though there has been meaningful progress in the prevention and treatment of black lung, the disease still claims an estimated 1,500 lives annually.

In 1969, in an effort to provide some relief to miners, I urged Congress to create a fund that would pay benefits to those miners who had contracted black lung and to their families. Congress agreed with me, and approved the benefits program. But, in recent years, the law has not worked as originally intended. Because of various rules changes, it has become increasingly difficult for miners to prove their black lung disability.

When a miner with the disease sought to receive black lung benefits, that miner often had to follow a long claims procedure. Frequently, the miner was overwhelmed by the number of medical opinions from "outside experts" that a coal company could engage

against the claim. Lacking the financial resources to counter such opinions, black lung victims often were forced to forfeit their legitimate benefit claims. In fact, since 1981, the extensive litigation that miners have had to face in order to prove their claims has been extremely cumbersome.

Fortunately, new regulations will provide miners with some support. These new rules allow the miner and the coal company to submit only two pieces of evidence each unless a judge determines otherwise. These regulations also give greater weight to the medical opinion of the miner's attending physician than to the opinions of outside experts. Thus, the new rules should create a more balanced process for the proof of disability by miners with black lung in order to win their claims.

These new regulations represent a real victory for black lung victims as they seek the benefits to which they may be entitled. Those individuals who have paid the price of their health to dig the coal that powers our economy must be protected and compensated for their sacrifice. Black lung victims should not be forced to worry from month to month, from appeal to appeal, as to whether they are going to be determined eligible to receive benefits. Our nation's coal miners simply deserve better.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

New Session, New Challenges

At the recent start of the new session of Congress, I took the Oath of Office to uphold the Constitution and to serve in the U.S. Senate for the eighth time. I am truly honored that the people of West Virginia have shown their faith in me once again, and I am committed to working hard so that they will always feel that their faith was well placed.

In this session, the Senate, for the first time since 1881, is evenly split. This split has brought with it an opportunity to forge a renewed spirit of cooperation. Toward that end, leaders from both parties have crafted an unprecedented agreement to work together, and I hope that their agreement will bear fruit. When I first came to the Senate in 1959, Lyndon Johnson was the Majority Leader. At that time, politics did not so overwhelmingly prevail over statesmanship. Leader Johnson worked with President Eisenhower, a Republican, in the best interests of the nation.

I hope that Members of the 107th Congress, and especially the Senate, will learn from past examples of cooperation. With 50 Democrats and 50 Republicans, the Senate has the opportunity to show that it can rise above the interests of party and accomplish something worthy of remem-

brance in the pages of history.

There are many issues that will come before the Senate this session, including discussions over taxes, Medicare, and Social Security. We will likely debate ways to improve access to health care and how to extend Medicare coverage to include prescription drugs. While there will certainly be differences between the parties on these issues, I hope that those differences will not result in extreme divisiveness. What is important to remember is that there is more on which we agree than on which we disagree. Whether it is increasing the minimum wage, improving classroom standards, or strengthening our nation's infrastructure, Senators should be able to find common ground on critical areas. If we fail to do so and put partisan agendas ahead of the people's interests, the nation will suffer.

I look forward to serving my eighth term in the U.S. Senate. There are many challenges ahead, both for the nation and for West Virginia. I will do all that I can, especially through my work on the Appropriations Committee, to meet those challenges and to help create a future with new opportunities for our children and grandchildren.

January 17, 2001

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Striving for a Balance

For years, I have been committed to finding a middle ground between environmental protection and economic security. When the Senate voted on amendments to the Clean Air Act in 1990, I pressed for compensation for miners who would lose their jobs due to the stringent provisions of that Act. When the Clinton Administration advocated the Kyoto Protocol to reduce global warming, I won Senate approval of a resolution that would help to ensure that the United States would not be placed at an economic disadvantage when compared with developing nations. Throughout these efforts and many others, I have worked to balance necessary environmental protections with the equally important economic needs in West Virginia and throughout the nation.

President Bush has said that he recognizes the challenges facing West Virginia. That is why I felt it was important to meet recently with two members of his Cabinet to discuss my efforts to balance the environment and the economy.

Incoming Environmental Protection Agency (EPA) Administrator Christine Todd Whitman seemed to understand the challenge in striking that balance. As governor of New Jersey, she has dealt with similar circumstances. In our meeting, I explained to her that many people in West Vir-

ginia believe there is a bias against our state at the EPA because of our coal mining. Based on that meeting, I think that Christine Todd Whitman will be an EPA Administrator who listens and responds to our concerns.

Similarly, new Energy Secretary Spencer Abraham has agreed with me that coal is integral to any national energy strategy. When I met with him, we discussed clean coal technologies and other research that can utilize many of our fossil fuel resources without damaging the quality of our air. Since 1985, when I established the Clean Coal Technology initiative with a Congressional authorization of \$750 million, more than \$2.4 billion has been invested in this successful program. Secretary Abraham voiced Administration support for these efforts. By utilizing our nation's knowledge and resources, we can meet our energy demands while also improving air quality.

In the coming months, there certainly will be debate over how best to protect the environment without risking the economic security of communities across the country. Adopting a commonsense national energy policy that takes advantage of our advanced technologies while also utilizing our vast coal reserves can be a win-win situation for the environment and the economy.

Marshall University: On the Cutting-Edge

Across America and around the world, science is opening new doors in medicine and exploration. In West Virginia, we are lucky to be home to several cutting-edge research facilities and universities, including Marshall University in Huntington and West Virginia University in Morgantown. These schools are setting a standard of excellence in the preparation of our young people for the challenges that they face in this new century.

For several years, Marshall University has been committed to the expansion of research and educational facilities. For example, the medical school, which opened in 1977, has attracted a dramatic increase in admissions requests and has raised the stature of the university. The John Deaver Drinko Library, constructed with the help of \$5 million that I added to an appropriations bill in 1995, provides students with a state-of-the-art learning resource.

Today, planning is underway for a new campus facility that once again will raise the standards for excellence at Marshall. The Biomedical and Science Center will provide students and faculty members with expanded scientific opportunities in a variety of fields including anatomy, physiology, biochemistry, microbiology, pharmacology, genetics, and immunology. These are some of the most demanding -- and most

promising -- areas of scientific research.

Additionally, this new center could be a significant boon to Southern West Virginia. Already in Cabell County, private companies are involved in the biotechnology industry. By specializing in related fields, Marshall can help to cultivate an exciting new industry for the Mountain State. While our industrial base for decades has relied on physical strength to mine coal and forge steel, our economy will rely more heavily on mental strength in the years to come. With this new investment, Marshall University will take a great step forward in training young people so that they can excel in a job force driven by technological know-how.

I contributed to the effort to construct the Biomedical and Science Center by adding \$25 million to an appropriations bill late last year, thus moving the center much closer to reality. With a final price tag estimated at \$36 million, university officials hope to begin construction next year.

Marshall University has a long-held devotion to service and an academic record of which to be proud. Today, the university is focused on the future, rededicating itself to high-quality education and technological sophistication. The drive to build and equip this state-of-the-art Biomedical and Science Center reflects Marshall's commitment to excellence in education.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Meeting the Needs of Autistic Children

Autism is a little talked about, but surprisingly prevalent, illness affecting hundreds of children in West Virginia. This neurological disorder is recognizable through abnormalities in communication and social development generally during a child's first three years. Autism affects one in every 500 children and is the third most common childhood developmental disability. As these autistic children grow up, some are relatively high-functioning, with speech and intelligence intact. Others may suffer from mental disabilities, are mute, or have serious language complications. For some, autism makes them seem closed off from the world around them. That is why autism is such a frustrating affliction not only for the sufferer but also for the sufferer's family and friends.

In the Mountain State, we are fortunate to have an outstanding resource available for children and families who are dealing with autism. The West Virginia Autism Training Center, based at Marshall University, works to meet the needs of autistic children and their families. Since it opened in 1983, the Center's staff has worked with families in 53 of West Virginia's 55 counties. Through commitment, hard work, and creativity, the staff helps to train the people involved with the

autistic child so that the child can lead a happy, productive life.

For six years, I have assisted the Autism Training Center by adding funds to appropriations bills so that more resources can be devoted to the needs of autistic children. Most recently, in an appropriations bill late last year, I added \$313,000 -- for a total of \$1 million in the legislation -- for the Center. The money will be used to hire additional staff members and to provide more families with support programs. Currently, a ten-person staff works to meet the needs of the 600 West Virginia families with an autistic child. By expanding its staff, the Center will be able to provide an improved service to those in need.

Today, more than ever before, children with autism can be helped. Special education programs -- like those designed and implemented by the staff at the West Virginia Autism Training Center -- can expand the capacity of autistic children to learn, to communicate, and to relate with others while also reducing the severity of disruptive behaviors. By pairing these efforts with the medical research into autism at the National Institutes of Health, we can better understand the causes of the disease, how to treat it effectively, and, someday, how to prevent it.

The Truth about Tax Cuts

In Washington, lawmakers are rushing to embrace a proposed ten-year tax cut proposed by President Bush. The President's plan, appealing though it may be, is based on predicted surpluses of \$2.7 trillion over the next decade, excluding the Social Security and Medicare Trust Funds. The numbers sound impressive, but the problem with budget predictions is that they are about as reliable as winter weather predictions -- reality rarely matches the forecast.

The Bush tax cut, when properly measured, is estimated to cost \$2.1 trillion, rather than the \$1.6-trillion figure regularly cited by the Administration. The \$2.1-trillion figure takes into account both the extra federal interest costs generated by the tax cut and other associated costs. And if the tax cut is made retroactive, as some suggest, the cost could reach as high as \$2.5 trillion.

That is the dilemma Congress faces. Do we harness a massive tax cut to uncertain budget forecasts or must we exercise fiscal caution until we have a better understanding of how the economic predictions will play out? If we pass a huge tax cut and the surpluses evaporate, how will we pay for imperatives such as education or Social Security or a Medicare fix or a prescription drug plan?

These concerns are not mere theoretical musings. Currently, 44.8-million Americans receive Social Security. That number is projected to grow to 82.7 million in 2030, yet the Social Security Trust Fund is expected to be exhausted in 2037. The Medicare Trust Fund is projected to run out of money in 2023. Since 1990, national spending on prescription drugs has tripled, yet Medicare does not provide a prescription drug benefit. How do we fund these needs if we have emptied the kitty with the huge Bush tax cut?

Finally, there is the matter of debt reduction. The nation is on the right course. We are paying down the public debt. But reversing course at this point would pass the burden of our national debt onto our children and grandchildren.

Tax cuts are appealing to everyone. Indeed, I support a moderate tax cut that would help to boost the economy and some specific tax cuts like the elimination of the marriage penalty. But, given our nation's needs and the uncertainty of the budget projections, we must proceed with caution when considering a massive tax cut. Congress ought to impose a reality check and turn the wishful thinking of the President into wise policy for the people.

Your Stake in the Health Care Debate

This session, Congress is positioned to make decisions that would affect the ability of West Virginians to gain access to more affordable, more reliable health care. From debate on the federal budget to negotiations over strengthening patient protections, health care will be a front-and-center issue in many Congressional deliberations this year.

One of the major debates will center on the proposed "Patient's Bill of Rights." This legislation, which I am cosponsoring in the Senate, would address many of the health care concerns for the 160 million Americans enrolled in a managed care plan. At the core of this legislation is the basic tenet that medical decisions should be made by the patient in consultation with the doctor, and not by an accountant at the managed care company. In too many cases, however, the managed care industry's priority has become higher profits and not better health care. The Patient's Bill of Rights would protect the traditional doctor-patient relationship and ensure that treatment decisions are based on a medical diagnosis and not on an insurance company's profit sheets.

Additionally, the Patient's Bill of Rights would allow a person in an emergency medical situa-

tion to seek immediate care from the nearest hospital without receiving prior approval from the managed care company. In an emergency, when every minute is critical, a person should not have to waste precious time waiting for permission from the managed care provider.

Finally, the legislation would ensure that patients who are denied care by an insurance company can appeal the decision to an independent reviewer and receive expedited decisions that are binding on the managed care plan. It would guarantee that HMOs are held accountable in court if their decisions harm patients.

This legislation has wide support in both the House and Senate and also is endorsed by more than 200 different organizations, including the American Medical Association and the American Nurses Association. In fact, most of these provisions have been endorsed by the managed care industry's own trade association as voluntary standards that its members should follow. Since responsible plans already provide these protections to their members as a matter of course, I believe all managed care providers should be required to live up to these basic standards.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Defense Starts at Home

There has been much talk in Washington about the need to increase defense spending, but little frank discussion of the role that our Armed Services will play in the new millennium. One mission that must be addressed is our nation's ability to defend against attacks from hostile states or terrorists using chemical or biological weapons of mass destruction.

Defense experts have found that our country is vulnerable to this type of danger. Due to the accessibility of high-tech equipment, there is an increasing likelihood that these weapons could be used against our citizens here at home. Law enforcement agencies work to stop would-be terrorists before they can implement their nefarious plans, but we also must be prepared to respond more quickly and effectively to the consequences of a successful attack.

I recently contacted President Bush about the need to implement a comprehensive homeland defense plan. One key to this plan must be to provide the right training and equipment for state and local authorities to respond to such emergencies. The other key to homeland defense is our National Guard. Our citizen-soldiers are experienced in responding to natural disasters. Many have the specialized knowledge that can be used to assess dangerous situations and to coordinate

the mobilization of the federal government's resources.

With this in mind, I have added appropriations for a number of counterterrorism initiatives that the National Guard is spearheading in West Virginia. These include \$5 million for the Memorial Tunnel National Counter-Terrorism Facility in Kanawha County which will help to train emergency responders in dealing with chemical or biological attacks; \$22.5 million for the Eastern Regional Training Center at Camp Dawson, Preston County, to provide the military with unique training to respond to a variety of scenarios; and the initial \$1 million for the Virtual Medical Campus at West Virginia University which will train emergency responders to identify the toxins used in attacks and to take steps to prevent significant loss of life.

With these initiatives and the other West Virginia National Guard facilities under development, our state can serve as a model for homeland defense efforts. The next steps are to make sure that our National Guard is ready to take on this mission and that our state and local officials know where to turn in the event of an attack. Taking action on these points now will help to assure the long-term security and safety of our citizens as we move forward in the new millennium.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Bush Back-Door Tax Hike

Over the next few weeks, there will be much debate over the Bush Administration's proposed \$1.6 trillion tax cut. But before joining in the rush to support the Bush plan, it would be well to examine the details of the proposal.

The most commonly held argument in support of the across-the-board tax cut is that it will benefit all Americans. But what we are not told is how a small minority of taxpayers will benefit greatly while the majority of taxpayers will see little benefit. According to an analysis by the accounting firm Deloitte & Touche, a millionaire would save \$47,000 annually in taxes under the Bush plan, while a worker making \$20,000 would save, on average, \$300 a year. In essence, a millionaire could pay the tuition bill for 34 semesters of education at West Virginia University, while the person with the more modest tax break could afford a student's books for a single semester. Congress ought not approve a tax cut that is so weighted against middle- and low-income families.

Additionally, those who have been quick to embrace this tax cut ignore the lessons of the not-too-distant past. In 1981, President Reagan proposed a tax cut based on projected budget surpluses. We heard that the Reagan tax cut -- which

I reluctantly supported -- would help to strengthen the economy. But the results of that tax cut were quite different. Instead of a stronger economy and projected surpluses, the Reagan tax cut resulted in massive deficits, higher unemployment, and increased interest rates. What the average taxpayer saved in reduced federal income taxes was spent several times over in higher interest costs on home mortgages, car loans, and credit cards.

I recognize the attraction of tax cuts. On the surface, reducing taxes seems a very easy thing to do, and there are tax cuts that Congress should approve. For example, I support some specific tax cuts like the elimination of the marriage penalty. But instead of buying into a massive tax cut, we ought to pay down the national debt, protect Social Security, and shore up the Medicare system. We ought to provide for a prescription drug benefit for Medicare recipients. And we should strengthen our nation's infrastructure needs, such as our roads, bridges, water and sewer systems, and airports. By addressing our nation's critical priorities and avoiding a return to the economic pitfalls of the 1980s, we can prove ourselves to be good stewards for our children and grandchildren.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Call to Save Lives

The recent shooting at Santana High School in California forces us again to confront the issue of violence in schools. While it is easy to assign blame for the problem of school violence, pointing fingers does little to prevent future tragedies. Instead, it is important to learn from these events and to act to prevent them.

The U.S. Secret Service recently concluded a study of school shootings in an effort to find ways to stop these disasters before they happen. Analyzing 37 school shootings from the last 26 years, a noteworthy similarity was found. In almost three-quarters of all the incidents studied, the assailant told someone of his or her plan before carrying out the shooting. It would appear, therefore, that many school shootings could be prevented if only those with advance knowledge of the possible violence would share this information with a parent, teacher, or school administrator -- someone equipped to prevent the act.

West Virginia is one of several states with a toll-free school safety hotline. The hotline, open 24 hours a day, seven days a week, is

designed to alert authorities of any planned violence in a school. Anonymous calls to the hotline are forwarded to local authorities and investigated within one school day. Threats cannot be taken lightly. When they are made, they need to be investigated. If evidence of potential violence is found, the authorities need to act.

In the days since the tragedy at Santana High School, students across the country have found the courage to tell authorities of potentially dangerous situations in their own schools. That is a good step toward ending this violence. Parents should teach their children that calling the hotline is not tattling on someone; rather, it may be saving someone's life.

The hotline is not a cure-all for safety problems in our schools, but it can be an important resource for preventing violence. Just as terror crept into the small community of Santee, California, it can easily creep into West Virginia communities. Call the West Virginia School Safety Hotline at (800) 418-6423, extension 359, to report any threatening situation that may endanger a school.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Soaring Cost of Medicines

The high cost of prescription drugs has been a primary concern for many West Virginians, especially for those living on fixed incomes who rely on Medicare for their health care coverage. This problem was recently highlighted in a study by the federal Health Care Financing Administration (HCFA).

The organization reported that, for the general population, prescription drug expenses will continue to rise at a faster rate than any other category of health care services over the next decade. HCFA predicts that drug costs will grow at an average rate of 12.6 percent a year through 2010. For those over age 65, the agency estimates that the average yearly bill will rise from \$1,989 per person next year to \$4,818 per person in 2011.

For West Virginia, which has the oldest per capita population in the country, this study is alarming. In our state, 335,000 people rely on Medicare for their health care coverage. Yet, even though most private insurance plans include a prescription drug benefit, Medicare does not.

I have cosponsored the Medicare Prescription Drug Coverage Act to help fix this deficiency in the Medicare program. The legislation would create a volun-

tary and universal prescription drug benefit. Importantly, for many West Virginians who live miles from the nearest health care facility, the Act would ensure access to medicines by providing bonus payments to rural pharmacies to ensure a rapid delivery of prescription drugs.

The costs associated with any Medicare prescription drug benefit necessitate a small premium for the voluntary program. But in the plan that I support, the premium would be affordable and based on a beneficiary's income. Additionally, to keep costs down, this new prescription drug benefit would give Medicare the ability to negotiate with drug manufacturers for lower prices. The resulting collective purchasing power would allow Medicare to receive the same drug price discounts that other large, private-sector insurance companies already possess.

Seniors should not have to choose between paying for medicine or paying for other necessities. The legislation that I am cosponsoring would provide an affordable remedy to that all-too-common scenario. Under a fortified Medicare program, elderly and disabled West Virginians could rest assured that their prescription drug needs would be met.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Teachers: Uncle Sam Wants You

In West Virginia and throughout the nation, public schools face a teacher shortage that threatens to undermine an education system which is already overburdened by expanding enrollment and a crumbling infrastructure. In the next decade, two million teachers across the nation -- half of all the teachers in our schools today -- will retire. Coupled with a severe scarcity of teachers and principals in rural and urban schools and with the shortage of educators who focus on key subjects like math and science, it becomes apparent that action must be taken today to avert a crisis in our classrooms tomorrow.

Consequently, I have cosponsored the National Teacher and Principal Recruitment Act -- a measure that should help to meet these challenges head-on. The Act would create a national Teacher Corps and a national Principal Corps to attract qualified individuals to the education profession. The Teacher Corps would utilize \$500 million annually to fund scholarships and bonuses to recruit up to 75,000 new teachers to teach in high-need schools -- facilities that have a high percentage of students from families with incomes below the poverty line. Simi-

larly, the proposed Principal Corps would receive \$50 million annually to help recruit new principals for our nation's most disadvantaged schools.

To increase retention, both the Teacher Corps and the Principal Corps would provide mentoring and professional development to ensure that more educators remain in the classroom. The National Teacher and Principal Recruitment Act would also authorize a \$1 million annual public service campaign -- similar to the recruitment promotions utilized by the U.S. Armed Forces -- to inform interested individuals about the resources, incentives, and support available to those who wish to enter the education field.

A quality education is the foundation of our society. Dedicated educators are crucial to building that foundation. It is imperative to the future of West Virginia and the nation that we address the shortages of teachers and principals in areas where their skills are needed most. It is my hope that the National Teacher and Principal Recruitment Act would help to attract more individuals to the education profession so that all American children may receive the quality education that they deserve.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Keeping the Commitment to Clean Coal

In 1985, I started the federal Clean Coal Technology initiative with an amendment authorizing \$750 million for the program. Since then, the initiative has expanded through a joint government-industry investment of more than \$6 billion. This investment has led to cutting-edge projects in 18 states, including an array of high-technology initiatives that can spearhead a new era of clean, efficient power plants fired by our nation's abundant coal resources.

During his presidential campaign, George W. Bush pledged \$2 billion for the clean coal technology effort over the next decade. After having to fight year after year to protect funding for clean coal technology, I welcomed Mr. Bush's commitment.

But in its recently released budget blueprint, the Bush Administration indicates that the President will carry through on his promise of \$2 billion for the clean coal technology effort at the expense of fossil fuel research programs – natural gas, oil, and other coal research. Because of this budgetary shell game, many of the promising fossil fuel research initiatives already in progress would be severely underfunded or eliminated. This budget strategy is akin to robbing Peter to pay Paul.

The President has stated that America is in the midst of an energy crisis. In

order to avoid future crises, we need a more diverse fuel resource base with domestically produced natural gas, oil, and coal as the foundation.

I have talked with the President about my concerns. I also recently met with Energy Secretary Spencer Abraham to voice my objections to reductions in fossil fuel energy research funding. The Administration talks about the need to increase the supply of domestically available fuels. Yet, how can we increase supply if we are going to cut back on the fossil fuel research that makes it possible to produce and more efficiently use more oil, more natural gas, and more coal? While I appreciate the budgetary increases for clean coal technology, it is shortsighted to pay for that technology by subtracting from other valuable fossil fuel initiatives already underway.

If this Administration walks away from fossil fuel energy research, it may well set our energy future on a course of rolling blackouts throughout the nation, and an increased reliance on foreign nations for the fuels needed to keep our economic engine running. Investment in both fossil fuel energy research and clean coal technology must be expanded if America is to be in a strong position to avoid energy crises in the future.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Clean Water Should Not Be a Luxury

When I was growing up in Southern West Virginia in the 1920's, my family did not have running water in our home. Instead, I had to take a pail to the nearby pump to fetch water for the household. Today, 80 years later, in many parts of West Virginia and throughout rural America, the pattern that I followed as a young boy is still repeated. In many areas, clean, safe drinking water and an operational sewer system simply do not exist.

Earlier this year, the Environmental Protection Agency (EPA) issued a new study on unmet drinking water needs across America. The agency reported that a total of \$48 billion is needed to address serious deficiencies in the water systems of rural communities of 10,000 or fewer residents. Of that total, \$33.5 billion has been identified as an immediate need. In 1997, the EPA released a similar report on rural wastewater that found nearly \$20 billion was needed to avoid serious threats to public health.

In order to confront this problem, I successfully offered an amendment to add \$1 billion in federal funding

to the Budget Resolution for the construction of clean drinking water and wastewater systems. In some cases, this will mean extending water and wastewater lines from one community to the next. In other cases, it will mean substantial construction projects that will, for the first time, provide many families with clean drinking water and sanitary wastewater systems.

In a nation as advanced as ours, where technology has moved us to places that once were only the stuff of science fiction, families should not have to worry about the safety of their water supply. In all parts of America, there are men, women, and children who live every day without the basic necessities of clean, safe, drinking water or sanitary wastewater disposal. Certain functions of government go straight to the fabric of the social contract. Those that help to provide all Americans with the basic necessities of life are paramount among them. We are in the 21st Century; it is high time to bring our water and sewer systems out of the 19th Century.

April 11, 2001

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Model of Community Health Care

Throughout my Congressional career, one of my priorities has been to expand West Virginians' access to health care. In many rural areas, the nearest doctor is miles and miles away. Moreover, specialized care too often is limited to bigger cities or available only out of state. That is why I have always worked to fund local, community-based health centers. While some specialized or surgical care is still limited, these community-based facilities provide an important health resource for rural West Virginians.

One such center recently received national recognition for its efforts. For the third consecutive year, the West Virginia School for Osteopathic Medicine (WVSOM) in Lewisburg has been ranked among the top 50 primary care medical schools in the nation, according to the magazine *U.S. News and World Report*. The school, which was created in 1972, rapidly became an important resource for West Virginia, as its graduates often went to work in the state's southern coalfields that, for too long, had been plagued by a distinct lack of medical professionals. Expanding primary medical care has always been a goal of the WVSOM. In fact, according to the magazine, in the last three years alone, 92 percent of the school's graduates have

entered the primary care fields of internal medicine, pediatrics, obstetrics/gynecology, or family practice.

In addition to its important role of training new physicians, the WVSOM is very involved in the medical treatment of Southern West Virginians. Through the Robert C. Byrd Clinic, the faculty of physicians provides medical care to residents of Greenbrier, Monroe, Nicholas, Pocahontas, Raleigh, Fayette, and Summers counties. I added \$4 million to an appropriations bill in 1995 to help fund the clinic's construction. Since the clinic opened, the number of patient visits has grown by an impressive 42 percent. But to handle the substantial demand for its services, the WVSOM needs even more space, which is why, last fall, I added another \$249,000 to a bill to help expand the clinic's ambulatory care unit.

Community health centers provide the kind of comprehensive, quality primary care services that are so urgently needed in underserved, rural areas. Facilities like the Robert C. Byrd Clinic at the West Virginia School for Osteopathic Medicine give qualified physicians the opportunity to serve people who need their help the most. I congratulate the school for its record of achievement, and look forward to its continued success in the future.

April 18, 2001

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Preventing Medical Mistakes

America has one of the most advanced health care systems in the world. Yet, despite the best intentions of medical professionals, studies have found that as many as 98,000 lives are lost annually in the U.S. due to mistakes made by health care providers. This ranks medical errors as one of the nation's leading causes of death. In addition, medical errors each year leave thousands of patients with permanent disabilities or unnecessary suffering. As a result of these errors, the nation incurs an estimated \$29 billion in lost income and disability and health care expenses.

While the most publicized medical errors occur in hospital settings, mistakes can occur throughout the health care system, in nursing homes, pharmacies, clinics -- even during home health care visits. While doctors and nurses are certainly trained to recognize and guard against mistakes, and while these professionals and the facilities in which they work take numerous precautions to prevent error, the practice of medicine, as the old adage goes, "is not an exact science." Caregivers and their patients are human, and humans make mistakes.

Of course that is not to

suggest that we cannot and should not reach for improvement -- especially when lives are at stake. For that reason, I supported the addition of \$50 million to an appropriations bill last fall to study the problem of medical errors. The funds will be used to collect data related to patient safety, to test practices aimed at reducing medical errors, and to determine ways to improve the training of health care providers. It is my hope that this research will result in practical solutions for a serious concern.

This initiative is an effort by government and the health care community, working together, to reduce mistakes. But patients, themselves, can play an important role in preventing medical errors. By becoming educated about medical conditions, medications and treatment options; by asking questions and insisting on answers; and by talking candidly with a doctor about any and all relevant medical history, a patient can help to ensure the quality of his or her care.

Good health is a precious commodity. The better we understand how medical mistakes are made and how to prevent them, the more we can ensure the good health of Americans.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Coast Guard's West Virginia Success

West Virginia has no oceanfront property. Our state does not boast of scenic Atlantic sunrises or Pacific sunsets. Yet the Mountain State is home to a crucial facility that helps to ensure the safety of ships traveling around the globe.

The Coast Guard Operations Systems Center in West Virginia's Eastern Panhandle is the computer nerve center for the United States' maritime rescue and environmental protection activities around the globe. In the 1980s, the Coast Guard had outgrown its original computer center in New York and started the search for a new, more advanced facility. Because of West Virginia's high-quality workforce and cutting-edge fiberoptic network, I saw that the Mountain State could be an excellent place for the Coast Guard's new facility. Working with Coast Guard officials, I secured \$4.7 million in federal appropriations bills to facilitate the establishment of the new Operations Systems Center in Martinsburg. Today, the Center has about 260 employees with an annual economic impact of approximately \$22 million.

In the decade since it opened, the Operations Systems Center has become the Coast Guard's primary computer and data networks center. It runs computer programs for search and rescue, marine safety, maritime law enforcement, military

personnel, logistics, and network security for the Coast Guard. If a ship issues a distress signal, Coast Guard officials can utilize the Operations Systems Center in West Virginia to find nearby merchant vessels that can assist in a rescue effort. Since 1990, this system is credited with saving over 2,000 lives. If a vessel is overdue in port, West Virginia Coast Guard staff can use another program to calculate the most likely position of the vessel, based on wind and ocean currents, dramatically increasing the chance of a quick rescue. This critical search-and-rescue information and support is available to Coast Guard units around the clock, every day of the year, from the Operations Systems Center.

I have endured more than my fair share of criticism for my efforts to meet national priorities with facilities in West Virginia. However, as the Coast Guard Operations Systems Center in Martinsburg exemplifies, these partnerships can be beneficial to everyone. In West Virginia, we can fulfill national needs while also providing important jobs for our state's citizens. I applaud the staff and contractors at the Coast Guard Operations Systems Center in the Eastern Panhandle and look forward to many more years of continued success.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Putting a Cork in Teenage Drinking

As the school year draws to a close, thousands of young people throughout West Virginia will put on tuxedos and dresses, buy flowers, and nervously wait for the arrival of their dates to the high school prom. Soon thereafter, these same young men and women will mark the completion of their high school educations surrounded by friends and family at graduation ceremonies. These events can form memories that last forever. Too often, however, these events turn to tragedy as young people use alcohol to celebrate their milestones.

In an effort to avert future alcohol-related tragedies, I recently added an amendment to legislation that would set aside \$25 million for local school districts to promote alcohol prevention efforts in our nation's high schools. Of this amount, \$5 million would be targeted specifically toward low-income and rural school districts. Our nation has taken elaborate measures to combat drug use. We have tightened our border patrols, increased funding for both police and prosecutors, and even sent military advisors to Colombia to assist in the international war on drugs. But alcohol -- Americans' most favored drug -- is widely available and extensively promoted.

According to the National Institute on Alcohol

Abuse and Alcoholism, the extent of consumption of alcohol by children ages 9 to 15 is startling. Consider these facts: three million children ages 14 through 17 are regular drinkers; 24 percent of eighth graders have used alcohol in the last 30 days; and more than 100,000 twelve- to thirteen-year-olds binge drink every month. Additionally, ninth graders who drink are almost twice as likely to attempt suicide as are those who do not drink, and 40 percent of children who begin drinking before the age of 15 will become alcoholics at some point in their lives. These statistics make the case for mounting a national effort to combat underage drinking.

Local government agencies and community groups commendably have been battling the problem for sometime. But with limited resources, they are simply outgunned by the profitable alcohol industry. I hope that the \$25 million that I have set aside will help to enhance and expand local efforts aimed at the prevention of underage drinking. As the statistics show, too many promising lives are lost to alcohol at an early age. By providing these dollars to implement anti-drinking programs, we may truly fulfill the old adage, "An ounce of prevention is worth a pound of cure."

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Relief from Rising Prescription Drug Costs

A recent report by the National Institute for Health Care Management shows an alarming increase in the cost of prescription drugs. The Institute -- which is a non-profit, nonpartisan organization dedicated to improving the effectiveness, efficiency, and quality of America's health care system -- found that the price of prescription medicines jumped by 19 percent between 1999 and 2000. In fact, the group's analysis found that doctors last year issued 2.9 billion prescriptions totaling \$131.9 billion. Many of the medicines responsible for the price increase are those used to treat illnesses more common in an aging population, such as arthritis, diabetes, and high cholesterol.

This report bears out the need for a prescription drug benefit as part of the Medicare program. When Medicare was created in 1965, it was modeled after the private insurance plans of the time. Very few of those plans included a prescription drug benefit. But today, while most private insurance plans include a prescription drug plan, Medicare has not kept pace. As a result, Americans who rely on Medicare for their health care coverage, especially those living on fixed incomes, are seeing more of their family budget swallowed up by the rising cost of medicines.

In an effort to provide

Medicare recipients with some relief, I am cosponsoring legislation that would create a universal, voluntary prescription drug benefit in the Medicare program. The legislation would provide all Medicare beneficiaries with affordable coverage for drug costs. Those who choose to participate in the prescription drug initiative would be responsible for an affordable premium and a copayment for their medicines.

West Virginians can learn more about the proposed Medicare prescription drug benefit by visiting my Internet site at <http://byrd.senate.gov>. Recently, I unveiled a new section of my site that takes a closer look at the issue and provides detailed information about the legislation that I am cosponsoring.

As the report by the National Institute for Health Care Management points out, the cost of medicines will likely continue to increase at a pace well above inflation. As new drugs and treatments become available, it is important that they be affordable. The legislation that I am cosponsoring would help to open the doors to these new medicines for Medicare recipients in West Virginia and across the country. It would help to fortify Medicare, allowing elderly and disabled West Virginians to rest assured that their prescription drug needs would be met.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Pride through Service

In schools throughout West Virginia and the nation, hundreds of children are expelled or suspended from class for disruptive, violent, and sometimes dangerous behavior. Too often, expelled or suspended students are then left to their own devices, without supervision or guidance, during the time that they are away from school. An amendment of mine that recently won Senate approval would begin to change that situation by encouraging states to create community service programs for suspended and expelled youths.

Specifically, my amendment to the education bill would provide \$50 million to encourage states to develop programs that put suspended and expelled students to work in community service activities. Whether picking up litter, whacking weeds, painting fences, or mowing the grass, public service programs would provide these young people with alternative activities that would help to better their communities and their lives.

It is said that idle hands are the devil's workshop. I think that we should put those hands to work. Too many students use suspension or expulsion as a means to avoid their classroom responsibilities. My amend-

ment would provide these youths with new duties. Instead of hanging around on street corners or roaming around the local shopping malls, these young people would be required to participate in community service activities that give them structure, promote a work ethic, and send the message that suspension from school is not a vacation.

These programs would also allow youths to give something back to their communities. Many young people of the "me" generation do not consider themselves members of society. They have no notion of social responsibility. By performing community service, these young people would make a contribution to their neighbors. This also might open their eyes to the problems of those around them.

I know that there is no magic wand to wave when it comes to instilling a sense of responsibility in children. If such a wand existed, teachers and parents would have used it years ago. But I hope that by encouraging community service for those who have erred in their ways, we can build a foundation of community spirit in these young people and, possibly for the first time, give them a sense of pride in themselves.

Economic Assistance for West Virginia Communities

As the marketplace has changed and old industries have given way to new, West Virginia has been confronted with new challenges in economic development. To help meet those challenges in an innovative way, I have supported federal legislation to continue a targeted program of support for communities struggling to realize a new vision for the future. The Community Renewal Tax Relief Act authorizes more than \$25 billion over the next decade to ensure the continued success of a federal initiative that encourages economic development.

The act continues the Empowerment Zones or Enterprise Communities (EZ/EC) program, which provides EZ and EC designations to select localities. With such a designation, these areas get a leg up on obtaining special tax incentives, grants, and loans to make community improvements, enhance infrastructure, and expand business opportunities.

Since the program was first established in 1993, more than 146 communities throughout the United States have benefited from EZ and EC designations. In West Virginia, the City of Huntington, McDowell County, the City of Charleston, and the five-county region of Clay, Roane, Braxton, Nicholas, and Fayette, currently participate in the program. The Community Renewal Tax Relief Act calls for the establishment of nine new empowerment zones and 40 new renewal com-

munities nationally over the next ten years.

Once designated as an enterprise community or empowerment zone, a local area receives special advantages, including increased weight in competition for federal grants and loans as well as assistance in strategic planning and design. In some cases, these communities may also receive waivers from federal regulations that otherwise can make it difficult for cash-strapped towns to pursue development opportunities. The EZ/EC designation also helps to cut through federal agency red tape so local communities can more quickly solve their economic-development problems.

To qualify for one of these designations, localities must satisfy several requirements. Communities must partner with private or non-profit organizations or with state or local government entities. They must develop strategic plans for growth and revitalization and they must also act in concert with their partners and the federal program to bring those plans to fruition.

The EZ/EC initiative is an example of the kind of innovative thinking that is needed to help struggling towns and rural areas improve their economic fortunes in this era of stiff international competition. It proves that old-fashioned bureaucratic red tape can be cut for the benefit of forward-thinking communities and for the welfare of the nation as a whole.

By U.S. Senator Robert C. Byrd

Keeping Our Vision Clear

As I drove through the Mountain State earlier this month to attend the dedication of the new West Virginia University (WVU) Eye Institute, I looked upon the marvelous wonders of nature that our Creator has bestowed upon our beautiful state. Who among us, with the good fortune to have vision, can conceive of living in West Virginia without the ability to see the verdant hills, the fuchsia mountain laurels, or the orange-purple glow of a summer sunset on the horizon?

Unfortunately, in West Virginia, more than 100,000 people have visual problems that hamper their enjoyment of life and threaten their independence. It is estimated that the total annual cost of West Virginia's visual problems, including medical bills and lost wages, is \$282 million, according to the WVU Department of Ophthalmology. Over the last five years, the number of eye patients seeking care at WVU has grown by 50 percent, creating a desperate need for more space and more resources.

To help address that growing need, I added \$3 million to a federal appropriations bill in 1999 to make possible construction of the West Virginia University Eye Institute. With the recent completion of the facility, West Virginians will have easy access to eye

care, no matter how complex or challenging their medical problem.

The new Eye Institute will provide one-stop consultation and high-quality clinical care, with specialists of all kinds to serve the needs of every patient in just a single visit. With the latest in modern technology, the Institute will also promote cutting-edge research and education on the causes and treatments of many kinds of vision problems.

To assist those with "low vision," whose needs cannot be met through standard medical procedures, I added \$1 million to an appropriations bill last year to establish, equip, and staff the Appalachian Center for Low Vision Rehabilitation at the WVU Eye Institute. The center will provide "low vision" patients with rehabilitation counseling, occupational therapy, mobility training, and links to available social services.

The WVU Eye Institute deals with vision, but vision is certainly much more than eyesight. The facility is part of a vision for a future when basic health care is available to all West Virginians. I applaud those at WVU involved with the long planning process for the new Eye Institute, and I look forward to the improved access to eye care that it will provide for West Virginians for decades to come.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Cupboard Is Bare

The recent decision by Vermont Senator James Jeffords to leave the Republican Party sparked an unprecedented event in history. For the first time, in the middle of a Congressional session, control of the U.S. Senate changed from one political party to another. This shift returns me to the chairmanship of the Senate Appropriations Committee. While I welcome the job, I wish that this sudden change were accompanied by the financial resources needed to address our nation's many pressing challenges. Unfortunately, that is not the case.

For more than a decade, Congress has tightened the federal fiscal belt in order to pare down the deficit, pay down the national debt, and protect Social Security and Medicare. With the help of a strong economy, that exercise in fiscal restraint has resulted in projected surpluses which ought to be used to address current and future national needs.

But the predicted surpluses are being swept away by the Administration's massive, \$1.35 trillion tax cut, which I vigorously opposed because it devours the surpluses and reduces Congress' ability to address many outstanding problems. According to a report card issued earlier this year by the American Society of Civil Engineers, these problems loom large. The engineers graded the country's roads at D+, our schools at

D-, and our drinking water systems at D. Because of the colossal tax cut and the resulting budgetary constraints, those poor marks are unlikely to improve anytime soon.

To pay for the \$1.35 trillion tax cut, the Fiscal Year 2002 Budget Resolution -- Congress' spending blueprint -- mandates a \$5.5 billion cut in funding for transportation, education, health care, veterans, and a host of other important programs. President Bush later this year also plans to send to Congress an additional budget request for increased military expenditures which will likely require even more cuts in funding for our national infrastructure needs.

I am proud to have regained the title of Chairman of the Senate Appropriations Committee. My dilemma, however, is how to meet the needs of West Virginia and of the nation, such as to shore up Social Security and Medicare and to fund a prescription drug benefit, when so many dollars will be needed for the tax cut.

This colossal tax cut will siphon off the funds necessary to confront the foregoing challenges. It has tied the hands of the Appropriations Committee to a considerable extent. And to top it off, the American taxpayer will be called upon to bear the cost -- a whopping \$116 million! -- of mailing out the tax rebate checks.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protecting Patients' Rights

Today, approximately 180 million Americans are enrolled in managed care health plans. While there is general agreement that managed care has helped to reduce medical costs in recent years, there is also evidence of a troubling and growing trend among health insurance plans to move medical decisions out of the doctor's office and into an accountant's office.

For five years, there has been a bipartisan effort to return medical decisions to the doctor and patient. Congress has worked to pass a Patients' Bill of Rights -- one that protects all Americans in all health plans, guarantees access to needed health care specialists, and includes an enforcement mechanism to make sure that these rights are administered. But, for five years, special interests have blocked such legislation.

In the coming days, Congress will renew this debate. Specifically, we will examine legislation that represents a balanced approach toward ensuring patient safety and health plan accountability without significantly raising health plan premiums or employer costs.

The Patients' Bill of Rights would ensure that patients with a serious illness are allowed access to a specialist without having to get the permission of an accountant who does not have medical training. The bill would give patients the authority to go to any

emergency room during a medical emergency, when every minute is critical, without waiting for preapproval by their health insurer. The proposal also would provide women with direct access to their obstetrician/gynecologist, and would provide children with direct access to their pediatrician. Finally, the legislation would hold managed care plans accountable if those plans are found to be responsible for a patient's disability or death.

This bipartisan initiative has the support of nearly 600 consumer and health care organizations, including the American Medical Association and the American Nurses Association. In fact, most of these provisions have been endorsed by the managed care industry's own trade association as voluntary standards that its members should follow.

Five years is long enough to wait for these protections. According to a study by the Kaiser Family Foundation, each day of delay leaves 35,000 patients without access to the specialized care that they need. Each day of delay results in 10,000 doctors treating patients who have been harmed because a managed care plan, for financial reasons, refused to approve a simple diagnostic test. It is time to end the delay. It is time for doctors and patients to make medical decisions again, not accountants and bureaucrats.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Better Late than Never

The Bush Administration has finally heeded the urgent call from communities across West Virginia and the nation to initiate an investigation into the continuing surge of foreign steel products into the American market. This decision to launch what is termed a "Section 201" investigation into the steel import crisis is welcome, but long overdue.

Since late 1997, the American steel industry has been decimated by a flood of below-cost and subsidized foreign imports. These import waves have washed away thousands of jobs and forced at least 18 U.S. steel companies into bankruptcy, including Wheeling-Pittsburgh Steel.

The Section 201 investigation, which is perhaps the most powerful trade tool that the United States has, can help to level what has become an increasingly tilted playing field. After thoroughly reviewing the steel import crisis and its damaging effects on U.S. companies and workers, the International Trade Commission will make recommendations to the President on how to remedy the trade imbalance. I am hopeful that the investigation finally can lead to the kind of remedies that will provide long-

overdue relief to domestic steel producers.

Travel through West Virginia's Northern Panhandle and you can see how vital the steel companies are to the area's economy. Those plants provide thousands of jobs directly, and even more indirectly. On a national level, a healthy steel industry is critical to our security. Our military relies on steel for its ships, tanks, and fighter jets. American steel keeps our military strong. But if the domestic steel industry disappears, our national defense and the economic health of many communities could collapse.

Last year, I included an amendment to an appropriations bill that called on the President to initiate the Section 201 probe. I will continue to urge the Administration to provide relief to the beleaguered steel industry. It is past time for the Executive Branch to take an active role in defending American steel from unfair trade. It is my hope that the Section 201 investigation is the first step toward providing domestic steel producers, their employees, and the communities that rely on the steel industry, the reprieve necessary to get back on solid ground.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Haste Makes Waste on Missile Defense

The President recently concluded a trip to Europe where he attempted to convince foreign leaders of the need for an American missile defense system. It seems that our allies in Europe have reservations about this apparent rush to judgment on a missile shield, and I can understand why.

The challenges of deploying an effective missile shield remain great. The last two anti-missile tests, performed in January and July of 2000, were failures. Military officers involved in the project have called the Bush Administration's 2004 deployment date "high risk," meaning that there is no guarantee that a system deployed by 2004 would provide any useful defense at all. I cannot support the deployment of a multi-billion-dollar scarecrow that would not be an effective defense if a missile were actually launched at our shores.

This year, the U.S. will spend \$4.3 billion on all of the various programs related to missile defense. But that is just a down payment. The Congressional Budget Office estimates that a limited missile defense system would cost \$30 billion, while a more comprehensive defense shield could range in cost from \$60 billion to a colossal \$120 billion. The

Brookings Institution reported that, since 1962, the federal government has spent \$99 billion on missile defense. For all of that money, I do not believe that our national security has been increased one bit.

The simple fact of missile defense is that it will always be of limited use. While there are those who equate a national missile defense system with a safe and secure nation, such a system will never detect a lone terrorist who crosses our borders armed with a chemical or biological weapon or with a portable nuclear bomb. That is why I continue to urge the Administration to pay greater attention to these immediate dangers. The flashy idea of missile defense should not distract us from other, perhaps more serious, threats to our national security.

There may be a road that eventually leads to an effective missile defense system, but that road must be paved with common sense. We must engage our friends, and listen to our critics; learn from the past, and invest wisely; test carefully, and assess constantly. But most of all, we must avoid haste. We cannot afford to embark on a quixotic quest that could damage our national security and waste billions of dollars in the process.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Derail Fast Track

Once again, a President is pressing for special authority to ram through international trade agreements with little input from Congress. As supporters of this so-called "fast-track" authority, many members of the House of Representatives, and some of my colleagues in the Senate, advocate a wholesale surrender of Congress' Constitutional authority over foreign commerce.

Although the President is given the power to negotiate with foreign governments, Congress has the responsibility to accept, reject, or modify any proposed trade agreements. Under fast track, Congress would forsake its duty and would agree to consider most trade legislation under mandatory deadlines, with limited debate and no amendments. This blurs a very clear line that separates the Executive and the Legislative branches of the federal government.

Fast-track authority could also very easily allow the principles of fair trade to be undermined. In the new world of international trade, our trading partners often come to the table proposing elaborate changes to U.S. laws that could harm American industries and close factory doors. The domestic workers who would suffer by such proposed modifications are given no voice in this process. Under fast-track authority, the voice of Congress is also essentially

muted. The House and Senate would become mere rubber stamps for potentially flawed trade laws.

I oppose any such efforts that would tie the hands of Congress and deny the people fair representation. I am against fast track. Too many American workers, companies, and communities have felt the sting of unfair trade for too long. Let the Administration proponents of fast track come to West Virginia and talk to the steelworkers who lost their jobs because of illegal trade practices. Let the advocates of fast track attempt to explain how their plans will help communities -- like those in our state that once boasted garment and shoemaking factories and glass and pottery plants that have gone out business as a result of unfair trade practices.

Although I support increased international trade, it must be fair trade. Fast track certainly does not guarantee a level playing field for U.S. industries. Instead, it puts American industries and workers at a disadvantage. Fast track invokes on the Senate a gag rule. It violates Senators' constitutional liberties of freedom of speech and the right to amend. We cannot permit this odious authority to weaken our voices, to sap the vigor of our democratic institutions, and to blind us to the needs of American communities.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Entertaining the Notion of Responsibility

The entertainment industry has greater influence today than ever before on young people. Children are bombarded by movies, television programs, music, and electronic games with adult-oriented themes. Although this industry in the past has resisted government regulation by instituting voluntary ratings systems, recent evidence proves that these voluntary efforts have not gone far enough.

Last fall, the Federal Trade Commission (FTC) released a report which concluded that the entertainment industry routinely targets children under the age of 17 for products that the industry's own ratings systems deem inappropriate, including those that warrant parental caution due to violent content. The FTC found evidence of marketing schemes that expressly focus on enticing young people to indulge in adult-oriented entertainment. These marketing plans included the purchase and placement of advertisements that hock music, videos, and electronic games in media outlets likely to reach children.

Although the entertainment industry promised to clean up its act, the FTC released a follow-up review six months after its initial report, which found that many of the objectionable practices continue. The review indicated that the motion picture and electronic games industries had "made some progress both in limiting advertising in popular teen media and in providing rating information in ad-

vertising." However, the report stated that the music recording industry, unlike its counterparts, had not made any real efforts to shield children from adult products.

Because entertainment companies have repeatedly violated the public's trust, focusing more on profits than on the well-being of young people, I have co-sponsored legislation that would help to prevent these businesses from marketing adult-rated products to children. This bill would expand the FTC's authority to crack down on companies that engage in "false and deceptive advertising practices." Businesses found to be peddling adult material to minors would be subject to fines of up to \$11,000 per day.

This legislation would not affect all entertainment companies. Those businesses that actively enforce the voluntary rating systems and do not market adult-rated materials to children will not face any penalties. But for those companies that continue to market inappropriate material to minors, this legislation would hit them where it hurts -- in their wallets.

The job of raising young people in today's culture is difficult enough without the entertainment industry's overwhelming them with inappropriate, adult material. By holding accountable the companies that target children, I hope that this legislation will make the job of parents a little easier.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Commitment to Disaster Recovery

Once again, West Virginians are cleaning up from severe flooding that exacted a heavy toll from our people and our state. It is an almost indescribable scene for many families who have watched their homes and belongings washed away by the flood. For many, the July flood comes just weeks after they finished cleaning up from May's heavy rains that prompted a federal disaster declaration.

The Federal Emergency Management Agency (FEMA) estimates that it will take at least \$180 million for West Virginians to recover from this flooding. This is far too much for any county to handle on its own without much-needed federal assistance. To help West Virginians affected by flooding, I recently secured Senate Appropriations Committee approval of \$2 billion for FEMA's disaster contingency fund for the coming fiscal year. In addition to responding to West Virginia's flood, FEMA will be able to use the money for other natural disasters across the country.

The grants that FEMA can provide to individuals and businesses affected by natural disasters can be crucial to the local attempts to rebuild. This funding should help many West Virginians who face the diffi-

cult task of reclaiming their homes and communities in the months ahead.

In an effort to provide more immediate assistance, I have added \$16 million to legislation signed into law by the President to alleviate the flooding devastation in West Virginia. Of that funding, \$8 million would assist the U.S. Department of Agriculture's Natural Resources Conservation Service in its efforts to remove debris and obstructions to waterways that pose a threat to property or human safety. The remaining \$8 million would assist the U.S. Army Corps of Engineers in restoration of streams and crucial public infrastructure, such as water and sewer facilities. This is just a small step in the recovery process, but it is an important step to take.

Despite the tragedy caused by the flooding, West Virginians have pulled through for their own. I thank the thousands of National Guardsmen, firefighters, law enforcement officials, Red Cross volunteers, State Office of Emergency Services personnel, and countless others who have worked to save lives since the crisis began. Their efforts have helped to prevent this disaster from taking an even larger toll on West Virginia.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Accountable Accounting at the Pentagon

The United States has the most powerful military in the world, with highly trained and disciplined men and women who use the most sophisticated technology available to defend our country and deter our adversaries. But this power comes with a considerable price tag: in Fiscal Year 2001, we will spend more than \$310 billion to maintain our national security.

However, no one knows for sure how the military spends its money, what exactly it owns, and, consequently, what it really needs. This is because the accounting systems of the Department of Defense are in such disarray that investigators cannot even begin to audit its books.

One recent investigation found that, out of \$1.1 billion in emergency funds that Congress appropriated in 1999 for the Pentagon to purchase urgently needed spare parts, 92 percent was transferred to an account that can pay for anything from aircraft repairs to administrative expenses. Once in that account, the military's bookkeepers could not track where the money went or how it was spent. It is disgraceful that the Department of Defense could spend more than \$1 billion, but not show the American people so much as a receipt for what was purchased.

Balancing the military's books is not as exciting as designing or purchasing the next generation of airplanes, tanks, or ships, but it is just as important. Every dollar wasted on unimportant programs is one less dollar available for training, increased pay, or improved housing for military personnel.

I first brought this issue to the attention of Secretary of Defense Donald Rumsfeld when he appeared before the Senate Armed Services Committee for his confirmation hearing in January. After my questioning, and upon taking office, Secretary Rumsfeld began a review of the Department's financial management systems. He has pledged to formulate a plan to address these massive accounting problems.

Because of the size of our Armed Forces, it will take many years before the military's books are sorted out. But that reform must begin immediately. As a first step, I included a provision in an appropriations bill recently approved by the Senate to require the Pentagon to report to Congress on its future purchases of spare parts. As we have seen, even a seemingly minor component of our national security, like spare parts, if left unchecked, can become a major waste of taxpayer dollars.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Safe Schools: A Shared Responsibility

As the days of summer draw to a close, parents soon will send their children back to the classrooms for the start of another school year.

In an effort to find new methods to protect students and teachers, I added \$100,000 to a federal appropriations bill last year to support a collaborative approach toward preventing violent schoolhouse tragedies, visited upon other states, from occurring in West Virginia. This funding, which was recently released by the U.S. Department of Education, will assist the West Virginia University (WVU) Extension Service to develop training materials for specialized workshops to be held at three pilot middle schools or junior high schools throughout the 2001-2002 school year. As a team, WVU Extension agents and on-site school coordinators from each pilot school will conduct specialized training seminars for teachers and other school personnel.

This project will take advantage of the knowledge and insights of those closest to the problem -- namely, the teachers, administrators, and students who spend at least eight hours a day in the schools.

It will pair their experiences with the technical and research expertise at WVU to create thorough, creative approaches for the prevention of school violence. The results of the pilot project will be evaluated at the end of the school year.

This initiative builds on the success of a pair of school violence prevention conferences that I cohosted previously with WVU President David C. Hardesty. In August 1999, we welcomed parents, teachers, lawmakers, police officers, and faith leaders to the first-ever statewide symposium on school safety. That event was followed by a students-only Youth Summit, held in April 2000 at WVU and seven other sites across the state. The recommendations from these events have helped to shape this new pilot project.

Tragedies can occur at any school at any time. Ending this problem is a shared responsibility. It will take a concerted effort, like the one under way at West Virginia University -- which blends the insights of teachers, students, parents, and community organizations -- to develop and institute the comprehensive measures that are necessary to ensure classrooms remain safe.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Hitting the Brakes on Unsafe Mexican Trucks

Seven years after the North American Free Trade Agreement (NAFTA) went into effect, the costs associated with that misguided agreement -- which I opposed -- are becoming increasingly clear. In February, a NAFTA dispute panel, examining a Mexican challenge to U.S. trucking restrictions, concluded that Mexican trucks must be allowed to enter the U.S., despite the danger that these unregulated trucks could cause to the safety of American citizens.

In accordance with that recent decision, the Bush Administration announced its intention to lift the crossing gate to Mexican trucks sometime before January 1, 2002. I believe that we ought not to take that step without, at least, establishing measures to prevent the hazards that these trucks could pose to Americans on the road.

Mexican truck- and driver-safety standards are nearly nonexistent. There is no truck-safety rating system in that country, nor are there comprehensive truck equipment standards. Mexican law fails to require many of the fundamentals of highway safety that are mandated by U.S. law and regulation, such as restrictions on daily hours of service that can prevent an overworked truck driver from risking his life and the lives of others.

I opposed NAFTA because I felt that it was bad policy. Like so many other

such agreements, I felt that it subverted the needs of our working families to the free trade agenda of the White House. I was concerned that NAFTA would make it easier for Mexico to attract American companies and jobs to go south of the Mexican border. Not only is that prediction coming true, but also NAFTA now is allowing Mexico to export danger onto our highways with these unregulated, unsafe trucks.

In February, I contacted U.S. Trade Representative Robert Zoellick and Transportation Secretary Norman Mineta to urge that the Bush Administration not compromise the safety of America's highways. Recently, the Senate approved legislation, which I supported, that would implement stringent standards for Mexican trucks crossing into the U.S. The Senate Transportation Appropriations bill would require border inspections of trucks and on-site safety audits of Mexican trucking companies. The legislation would also mandate that Mexican trucks cross the border only at facilities manned by U.S. inspectors.

Until the U.S. and Mexico can agree upon comprehensive standards for trucks, and until those standards can be enforced effectively, we must stand against efforts that would compromise the safety of Americans traveling on our nation's roads.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Casting a Vote for Election Reform

The right to vote is fundamental to our Republic. It is the central means by which the American people express their views, and thereby direct the future of the nation. But, as we saw in last year's Presidential election, casting one's ballot is not the end of the process. Votes must be verified and counted quickly and accurately, so that the American people have confidence in our election process. Preserving the integrity of the voting system is critical to the preservation of our representative form of government.

Over the years, the percentage of eligible voters who take the time to go to the polls has declined. I find it disappointing that American citizens would fail to exercise this precious right and important responsibility. Yet, I well understand how the spectacle of last year's elections and the irregularities that were widely reported can exacerbate a common misconception that one's vote does not count. The federal government should do more to reignite a passion for citizen participation if we are to pass on the principles of our representative democracy to future generations.

To this end, I have co-sponsored the Equal Protection of Voting Rights Act -- legislation aimed at reform-

ing the elections process in order to avoid the types of problems which were highlighted in the 2000 elections. This bill proposes three basic electoral reforms. It would require states to adopt uniform statewide standards for election machinery by 2004; it would require states to allow provisional voting -- that is, voters whose qualifications are challenged at the polls could vote, on the condition that their eligibility would be confirmed later; it would also require states to send all voters a sample ballot at least ten days prior to all federal elections, starting in 2004.

The bill would also establish a 12-member bipartisan commission to study possible improvements in voter registration, participation, and election technology. Additionally, the act would create a grant program, administered by the U.S. Department of Justice, to provide funds for states and localities to purchase updated technology, improve voter registration systems, and educate voters and poll workers prior to the 2004 elections.

I think it is critical that Congress work to enact election reform. This is the first important step in restoring confidence in our election process.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Figuring in Fair Trade

I support increased international trade. However, I do not believe that increased trade should come at the cost of fair treatment for American workers and industries. That is why I have voted against trade pacts that would carry a heavy price tag of lost U.S. jobs and businesses. I have opposed the North American Free Trade Agreement (NAFTA), permanent normal trade relations (PNTR) with China, the General Agreement on Tariffs and Trade (GATT), and other agreements that I thought did not serve the best interests of most American workers and their families. Workers in the garment industry, the steel industry, the glass and pottery industries, and certain other trades in West Virginia and across the nation have seen their livelihoods shipped to foreign countries because of misguided U.S. trade policy.

The Constitution gives Congress the exclusive authority to "regulate commerce with foreign nations." But, for too long, Congress has taken a back seat to Presidents bent on ramming through trade agreements that focus more on our foreign trading partners than on our interests at home. As a result, the American people have less input into trade agreements than they should have.

To help produce more balanced trade pacts, U.S. negotiators ought to have more input from the public's Congressional representatives. Expanded Congressional participation will help

to reinforce the framework of fair trade. It will give trade agreements greater legitimacy and increase public understanding of the costs and benefits of globalization. The Constitution demands that Congress make this effort, and the people expect it.

That is why Senator Max Baucus of Montana and I recently introduced legislation to create a Congressional Trade Office (CTO). This nonpartisan trade office, modeled on the Congressional Budget Office which provides Congress with unbiased budget data, would allow Congress better access to information about trade negotiations and the impact of trade agreements on the U.S. economy. The CTO would provide Congress with trade data and analyses, observe negotiations, evaluate trade dispute resolution proceedings, and monitor international compliance with major trade agreements.

It is Congress's duty under the Constitution to make sure that American interests are properly reflected as marketplaces around the world become more interconnected. The Congressional Trade Office would provide Congress with the information necessary to act as a watchdog for the interests of U.S. workers and industries. Establishment of such an office would help to ensure that the wrecking ball of unfair trade does not continue to topple the hopes and dreams of American families.

The Coarsening of Our Culture

Television can have a profound impact on young people. Children all across the country have benefited through the years from educational programs such as "Sesame Street" and "Mr. Rogers' Neighborhood." But it seems that, in recent years, television broadcasters have turned a blind eye to their influence on children. Bad programming has far outweighed good programming, and we are seeing the woeful results in our society. A recent report from the Parents Television Council (PTC) delivers some sobering news. The study confirms that shows broadcast during hours when children are most likely to watch television continue to be more vulgar, more sexually explicit, and more violent. The study showed that between 8:00 p.m. and 9:00 p.m. -- the so-called "Family Hour" -- objectionable material on television had risen 24 percent in just two years.

Between the 1998-1999 and the 2000-2001 television seasons, the PTC found that the use of vulgar language on television shows had increased 78 percent and that violence had jumped 70 percent. According to the study, 15 percent of all violent incidents in these shows involved a gun. The PTC examined six weeks -- nearly 200 hours -- of programming on ABC, CBS, Fox, NBC, UPN, and the WB networks.

The influence that these vulgar and violent images have on our children is of great concern to me. That is why I am cosponsoring legislation that would promote voluntary decency standards within the entertainment industry. The proposed Children's Protection Act would permit entertainment companies to devise voluntary codes of conduct for television programming, movies, video games, Internet content, and music.

According to the Television Bureau of Advertising, the average child watches more than three hours of television a day -- and one of those hours is usually the Family Hour. By the time that this child has reached the age of 18, he or she has seen 13,000 killings and 100,000 violent acts. In an age when children who commit violent crimes often model their acts after characters on television, in the movies, or in video games, it is long past time for entertainment executives to accept responsibility for their actions.

It is a shame that what passes these days for entertainment is so polluted with violence and vulgarity. It is an even greater concern when this profane "entertainment" is directed toward children. The Children's Protection Act, and the decency standards that it hopefully initiates, can be a first step toward reclaiming the airwaves for families.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Quarter Century of Hope

On December 6, 1907, explosions at a coal mine at Monongah in Marion County claimed the lives of 362 men and boys. Although this event stands as the worst mine disaster in American history, it is only one of many tragedies that have befallen U.S. coal miners through the years.

As a boy growing up in the coalfields of Southern West Virginia, and later as a public official representing coal miners and their families, I have seen firsthand the devastating effects of coal mining on the health and safety of miners. It was this concern for miner safety that prompted me in 1969 to suggest that the federal government create a mine safety training facility. After many discussions, and my efforts to obtain \$29.5 million in federal appropriations through the years, the National Mine Health and Safety Academy was formally established and dedicated on August 17, 1976.

This year marks the 25th anniversary of the Academy, located in Beaver, Raleigh County. Coal mining remains one of the most dangerous occupations in the country. But thanks to the efforts of the Academy over the last quarter century, the U.S. has made great strides to reduce the risk of

injury and death to coal miners. In the year before the Academy was dedicated, 155 miners were killed on the job. Last year, the number had dropped to 38.

The Academy has become the world's largest educational institution devoted solely to safety and health in mining. Thanks to the Academy's dedicated staff and first class training facilities, America is the world's leader in the promotion of mine safety. Miners, mine inspectors, and others involved in coal mining from Bulgaria, China, South Africa, Peru, Ukraine, Russia, and other nations have all come to the Raleigh County facility to study cutting-edge mine safety techniques.

While we can look back with justifiable pride over the accomplishments of the National Mine Health and Safety Academy over the past 25 years, we must renew our determination to do even better in the years ahead. Accidents will always occur in coal mines and there will always be tragedies that we cannot foresee or prevent. But vigilance, knowledge, and training -- as provided by the Academy -- remain the miner's best weapons against accidents. Training and education can mean the difference between life and death.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

America Stands Determined

From coast to coast, Americans watched in disbelief as hijacked airplanes crashed into a pair of our nation's most recognizable landmarks -- the World Trade Center in New York City and the Pentagon just across the Potomac River from Washington, D.C. The terrorists may have believed that their attack would undermine our nation, but they were wrong.

America stands strong. America stands united. America stands determined.

We are certainly a nation in mourning. We mourn those who were killed in the brutal and heartless terrorist attacks on America. We grieve for their families, friends, and coworkers. We pray for those who were injured.

Above all, we pray for peace, and we vow to leave no stone unturned as we search for a solution to the extremism and the intolerance that led to the massacres at the World Trade Center, the Pentagon, and the plane crash in Pennsylvania. We shall seek out those responsible for these acts of terrorism, but we shall not seek to perpetuate a cycle of violence.

In an effort to provide assistance to the people who were victims of the attacks as well as to provide the President with the immediate financial resources he needs to fight back against terrorism, Congress has approved \$40 billion in emer-

gency funding. Immediately following the attacks, I met with President Bush to discuss how best to respond. We agreed that this emergency funding is an important first step.

Like most Americans, I am astonished by the sophistication, organization, and complexity of the terrorist attack on the United States. These attacks took elaborate planning, significant manpower, and detailed knowledge of U.S. aircraft and aviation systems. While I have great admiration for our intelligence agencies, it is frankly beyond belief that such a massive assault on our nation could be executed without any discernable signals. It is beyond belief that our nation, with its vast network of worldwide intelligence resources, could be caught so utterly unprepared.

That is why we need to rebuild our intelligence capabilities, improve security at our airports, rebuild the Pentagon, and repair the devastation of New York's financial district.

America is certainly a changed nation as a result of this terrorist assault. We have entered a new and unfamiliar era. But one thing will not change. American resolve and American confidence will remain, strengthened by our renewed commitment to one another and to the ideals of the great country we all love.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Proud Heritage, a Bright Future

Even as West Virginia communities move forward with efforts to modernize and revitalize their economies, preserving the heritage of the Mountain State remains a top priority. The activities underway in the City of Wheeling, which combine economic development with historic appreciation, could serve as a model for others to follow.

The history of Wheeling, West Virginia's first capital, is America's history. The story of the community and its river port, which played a key role in the early industrial development of the United States, not only provides a glimpse into America's past but can also provide insight into where we are going as a nation. This is the mission of the Wheeling National Heritage Area project -- to preserve the lessons of history for future generations so that they are better prepared to lead.

The heritage project, which is a joint federal-local initiative, seeks to revitalize Wheeling's historic downtown area while also showcasing the city's rich cultural traditions. I recently participated in the dedication of the Wheeling Heritage Port, a component in the overall development plan. Throughout much of its history, the Wheeling port served as the crossing between the civilized East and the wild West. Thousands passed through this portal searching for their destiny, filled with dreams of fortune, energized by the

call of the unknown. The restored port, with its interpretive displays, will allow visitors to see firsthand the important historical and natural resources that made Wheeling a 19th-century hub of transportation, commerce, and Victorian culture.

I have supported Wheeling's efforts to rejuvenate its downtown through the National Heritage Area initiative by adding more than \$23 million to appropriations bills for the various heritage projects, including \$9.1 million for construction of the Robert C. Byrd Intermodal Transportation Center, which was dedicated in 1998 and houses the Wheeling Visitors Center; \$5.1 million for construction of the Artisan Center, dedicated in 1999 and featuring retail space that focuses on West Virginia artists; and \$6.7 million for development of the Heritage Port.

Wheeling's endeavors are an example of the hard work of Northern Panhandle residents in transitioning from a solely industrial economy to a diversified economic base, while at the same time retaining the cultural and historic character of the region. The Wheeling National Heritage Area initiative has put the community's traditions and treasures on display for the world to see, while at the same time propelling the city toward a brighter future.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Righting Rural Wrongs in Health Care

Across West Virginia, especially in our more rural areas, there is a serious shortage of doctors. Too often, families must travel long distances to see a physician, and even farther if specialized care is required. That is why, throughout my career of public service, I have worked to expand the reach of our medical facilities.

One such effort is the Robert C. Byrd Center for Rural Health, based at Marshall University. This center, constructed through \$4.5 million that I added to appropriations legislation in 1992, serves as the base for Marshall's rural medicine outreach programs, which serve counties throughout Southern West Virginia.

The West Virginia School for Osteopathic Medicine, located in Greenbrier County, is another important rural health care provider. Through the Robert C. Byrd Clinic, the school is very involved in the medical treatment of rural West Virginians. I added \$4 million to an appropriations bill in 1995 to help fund the clinic's construction.

My most recent effort to improve the accessibility of health care is underway at West Virginia University (WVU). WVU is in the process of developing a new medical campus to serve residents in the Eastern Panhandle. The new Eastern Clinical Campus, made pos-

sible through \$3.4 million that I added to legislation last year, will work with medical institutions, health care providers, and communities across the region. In addition to housing primary and specialty care physicians, the campus will train young people to become medical professionals.

The new medical campus will fill a large gap in West Virginia's health care network, specifically in the Eastern Panhandle. While that region is one of the state's fastest-growing areas, it is plagued by a terrible doctor shortage. The state averages 16.8 physicians for every 10,000 residents, but the Eastern Panhandle has only 9.26 doctors per 10,000 residents, according to WVU. The national average is about 20 physicians per 10,000 people.

West Virginians are proud of their history, their heritage, and their mountains. But that same rugged, rural terrain has been an obstacle for access to quality health care close to home. I hope that the funding that I added to legislation over the past decade will help West Virginia University, Marshall University, and the School for Osteopathic Medicine to overcome the obstacles that prevent many West Virginians from receiving the quality medical treatment that they deserve.

October 3, 2001

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

An Ounce of Prevention

In the wake of the brutal and heartless terrorist attacks on the United States, federal officials have started to reassess the strengths and weaknesses of the nation's emergency response capabilities. One area that has received increased attention is the threat of chemical or biological weapons, such as anthrax or smallpox, and America's ability to respond effectively to such an assault.

While our firefighters, police officers, and emergency medical personnel have shown that they can respond quickly to any emergency, these rescue workers will need the rapid support of trained specialists and scientific professionals in the event of a chemical or biological attack. If such an attack occurs, quick and accurate information for emergency personnel will be the first line of defense.

Following the tragedy of September 11, it is clear that our public health system must become part of our national defense. I discussed these very issues in a recent letter to the President and during a Senate hearing on bioterrorism with Secretary of Health and Human Services Tommy Thompson. Unfortunately, the public health infrastructure in this country has not kept pace with the potential threat.

While there is much work to be done across the country, an innovative approach that can benefit the entire nation is already underway in the hills of West Virginia. I added \$1 million to appropriations legislation last year and an additional \$4 million to Fiscal Year 2002 appropriations bills to create the Virtual Medical Campus at West Virginia University (WVU). The Virtual Medical Campus will be the computer network and national information delivery service of the National Training Center for Homeland Security that is being developed collaboratively by WVU and the West Virginia National Guard. The Virtual Medical Campus will link doctors and emergency personnel who respond to chemical and biological attacks with specialists who can immediately identify the steps that must be taken to protect the public.

As the old saying goes, "An ounce of prevention is worth a pound of cure." I am proud that West Virginia, through the Virtual Medical Campus, is at the forefront of efforts to prevent further tragedies. By providing crucial knowledge to the public health community and other disaster response groups nationwide, this initiative will help to protect the lives and health of all citizens.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Reclaiming the Safety of Coalfield Communities

For decades, West Virginia miners have extracted the coal that has powered our nation. The fruits of this labor brought about an industrial expansion that catapulted the United States to economic dominance in the last century. But in some cases, after the mines were no longer useful, they were left in such poor condition that they threatened the safety of coalfield residents.

In West Virginia and across the country, the backlog of abandoned mines is growing to dangerous levels. The federal government's Office of Surface Mining reports that West Virginia has more than 2,300 abandoned coal mine sites, the most of any state in the nation. That is more than \$766 million worth of mine reclamation needed in the Mountain State.

These old mines have posed health and safety threats to nearby residents for many years. In some instances, children have died after falling into abandoned mine shafts. Other mines stand on the verge of collapse. And, in many cases, acid mine drainage threatens water quality for nearby communities.

To address these concerns, Congress, in 1977, created the Abandoned Mine Land Reclamation program. This initiative provides states with funds

to repair mined lands left in dangerous condition. Through the years, as a member of the Senate Appropriations Committee, I have fought to secure proper funding for these areas that have remained safety hazards for far too long.

To help West Virginia and the nation meet this challenge for Fiscal Year 2002, Congress recently approved the Interior Appropriations bill, which includes \$203.5 million for the Abandoned Mine Land effort. These funds include more than \$36 million that I added to the legislation to make up for short-sighted budget cuts by the Bush Administration that would have increased the already severe backlog of mines awaiting reclamation. We should not shortchange the health, safety, and environmental protections for West Virginia residents that mine reclamation provides.

Those in West Virginia and across the country who live near these abandoned mines have the right to be safe and secure. It is my hope that the funding provided to the Abandoned Mine Land initiative will help to address this very serious health and safety shortfall. The people of America's coalfields, who have been so crucial to our nation's economic progress, deserve no less.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Homeland Security: A Sound Investment

As the nation struggles with a slowing economy and the lingering fears from the unprecedented terrorist attacks of September 11, America remains committed to recovery. The best way to cure our economic and psychological ills and to place the nation back on the road to prosperity is a commitment to America's homeland security infrastructure.

By investing in measures that strengthen our ability to guard citizens here at home, we can take an important step toward removing the paralysis that results from living in fear. The surest way to stabilize the economy and to encourage Americans to get back on airplanes, back into the shopping malls, and back to visiting automobile dealerships, neighborhood restaurants, and movie theaters is to take aggressive steps to address fears about future terrorist attacks.

I doubt many Americans find comfort in learning that the Immigration and Naturalization Service cannot account for how 6 of the 19 hijackers involved in the September 11 attacks entered the United States. Likewise, how much comfort do the American people find in knowing that the U.S. Customs Service inspects only 2 percent of the cargo entering the United States?

Our nation's transportation network and chemi-

cal and biological terrorism response capabilities face similarly daunting upgrades. In the days immediately following the September 11 attacks, airport security was improved, but much more remains to be done. And the recent anthrax scares have shown us that we must expand our nation's reserve of vaccines and antibiotics and provide our local health departments with access to the nation's computerized networks of medical response information.

The same case can be made for improvements to roads and bridges, railroads, water and sewer systems, and law enforcement capabilities. Due to years of neglect, we have allowed our infrastructure in these areas to become antiquated. With the threat of further violence on American soil, everything from dams to nuclear power plants to the method of transporting the nation's food supply must be examined in terms of its potential vulnerability.

Unless we take immediate and serious steps to address the various infrastructure shortfalls, then all of the rhetoric about normalcy is just hot air. By renewing our commitment to investments in our own country, we can help to mend the holes in America's homeland security. This is the surest way to remove the nation's psychology of fear, and we need to begin now.

October 24, 2001

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Guaranteeing the Future of American Steel

As the steel industry restructured itself throughout the last quarter of the 20th Century, the dogged determination of American companies and steelworkers allowed the United States to maintain its status as the most efficient and effective steel producer in the world. But, despite their best efforts to remain competitive, the working men and women of the American steel industry have come under assault from the forces of unfair trade.

Since late 1997, foreign nations have continued to flood the American market with subsidized and below-cost steel products. As the flood tides of cheap imports have risen, U.S. steelworkers and their families have suffered. To date, thousands of steelworkers have lost their jobs and more than 20 steel companies have declared bankruptcy.

It was with this situation in mind that I created an initiative in 1999 to provide short-term relief to the beleaguered American steel industry through the form of federally guaranteed loans. The \$1 billion Emergency Steel Loan Guarantee Act allows for a much-needed economic boost to steel companies damaged by unfair trade. Unfortunately,

domestic steel producers have had a difficult time receiving the financial assistance intended for them through this loan guarantee program because of the continuing steel import crisis.

To help increase the effectiveness of this important initiative and to make it more responsive to industry needs, I successfully amended the loan guarantee program. In October, Congress gave final approval to my changes, which include increasing the federal guarantee on loans, extending the period of repayment, and increasing the lifespan of the overall initiative. It is my hope that these amendments will spur private lenders to assist this industry that has been so vital to the growth and well-being of our nation. For too long, steelworkers, their families, and the regions that rely on steel for their survival have been devastated by wave after wave of unfair imports. It is long past time to avert disaster and support the domestic steel community. If we do not take every action that we can to support this crucial industry, I am concerned that American steel as we know it will cease to exist.

October 31, 2001

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Compassion and Caution: Avoiding Scams

West Virginians stood with the rest of the nation united in grief following the terrorist attacks of September 11. Those heartless, planned assaults are certainly different from the natural disasters that too often strike West Virginia, but the feeling of loss and despair and the need for recovery are the same.

As residents of the Mountain State understand all too well from their struggles against floods, blizzards, and other natural disasters, rebuilding and recovery are made possible by the support and assistance of friends and strangers. In a real spirit of national community, Americans have risen to the challenge to help those in need through donations of blood, money, food, and other goods and services.

Unfortunately, there are scam sharks that swim through the turbulent tides of society waiting for just such an opportunity to strike. In the aftermath of the terrorist assaults, a slew of Internet sites and telemarketers began to seek contributions for families of missing or injured firefighters, children orphaned by the tragedy, and pets left homeless. While some of these pleas were from legitimate charitable organizations that have raised more than \$1 billion to assist the victims of the attacks, other pleas were the work of scam artists bent on taking advantage of good-hearted Americans.

Officials at the Federal Trade Commission (FTC) have been on heightened alert looking out for consumer scams in the wake of September 11. In an effort to counter the con artists, they have issued helpful guidelines for charitable giving. These precautions are available on my Internet site -- <http://byrd.senate.gov>. By taking simple steps, such as refusing to give out credit card or bank account numbers over the telephone, individuals can stop scam artists in their tracks.

In this digital age, it is also important to know that these crimes are not only perpetrated over the telephone. In Fairmont, officials at the Internet Fraud Complaint Center (IFCC) have reported a sharp increase in national e-mail solicitation scams since September 11. The IFCC has suggested that computer users seek information on charities independently, and not respond to unsolicited appeals for donations on the Internet.

Just as officials have preached caution in the aftermath of terror, I remind West Virginians to stay alert when donating to relief efforts. Those who are intent on defrauding the public are no less despicable than the terrorists that have assaulted our country. By exercising prudence and following the FTC's tips, donations will truly go toward helping those in need, and not end up lining the pockets of thieves.

November 7, 2001

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protecting Our Food from Contamination

Since the terrorist attacks of September 11, the confidence of the American people has been shaken in a variety of areas, from transportation to public health to food safety. The response to the attacks has focused attention on the many shortcomings that exist in our food safety and inspection networks.

For instance, of the approximately 7,000 known food-borne illnesses, 85 percent are linked to diseases and bacteria that Food and Drug Administration (FDA) inspectors monitor. However, the FDA has sufficient personnel to inspect less than one percent of foods coming into the United States. Similarly, the U.S. Department of Agriculture (USDA) is responsible for the safety of our nation's meat, poultry, and egg products. Yet, because of the porous state of our nation's borders, the USDA is not able to properly inspect the food entering our country.

To help the United States meet the many challenges confronting these important public health organizations, I have authored a homeland security package that includes critical funding for food safety. This initiative contains \$100 million for the FDA to hire and train new inspectors and to purchase more advanced equipment to better ensure the safety of our nation's food supply.

My proposal also in-

cludes \$636 million for the USDA. These funds would be used for expanded border and import inspections of food. In addition, the money would boost the efforts of specialists who monitor our nation's grain supply for possible contamination. Inspections, especially at the border, should be considered a front-line defense to counter possible terrorist attacks.

Because the USDA also operates many research facilities that house biological agents which could pose a serious public health threat, this funding would tighten security at these facilities. In addition, it would expand the federal investment in the research and development of new ways to protect against and respond to future biological or agricultural acts of terrorism.

For too long, we have failed to invest adequate resources in food safety, in public health, and in so many areas that are invaluable to our homeland security. As a result, we are understaffed, underequipped, and underprepared to handle the variety of threats that the nation now faces. Congress needs to take concrete steps immediately to address these gaps. Investment in our homeland security is the surest way to provide for the safety and rebuild the confidence of the American people.

November 14, 2001

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Time for Thanks

It is time again to count our blessings, to sit together at a table surrounded by family and friends, and to offer thanks to the Creator. Thanksgiving can be one of the few times that generations have the chance to gather around a crackling fire to ponder photographs from the past, to slice carrots and mash sweet potatoes, to hear the laughter of children and the gossip from the kitchen, and, of course, to smell the sweet temptation of a juicy turkey slowly roasting. It is a time of gentle companionship around a sudsy sink. These shared experiences are ties that bind families together.

This year, in light of the tragic events of September 11 and the ensuing military action overseas, Thanksgiving will have an even deeper meaning for thousands of families. Many chairs will be empty at the dinner tables. Despite the tragedies that have stricken our nation, we should recognize that there is so much for which we should be thankful.

I am thankful that the American people have the steadfastness and the determination to move forward from the September 11 tragedies. I am thankful that we live in a country that can

confront a crisis with strength and moral certainty without abandoning the very principles and values that we hold most dear.

Like President Washington, who issued a "Thanksgiving Proclamation" for his new nation, we are thankful for "the many favors of Almighty God." Like President Lincoln, who called for a day of Thanksgiving on the third Thursday in November, we are thankful for the "gracious gifts of the most high God, who, while dealing with us in anger for our sins, hath nevertheless remembered mercy."

I hope that during this Thanksgiving, West Virginians will take the time to rediscover what it is that makes them a family. A shared address and a designated spot before the hypnotic television set do not make a family, but a group of loving individuals who share laughter, tears, chores, and fun make a true family. So, before devouring that lovingly prepared feast, families should take the time not only to express thanks for the bounty that is set out before them, but also for the opportunity to gather in kinship and to thank God for His manifold blessings.

November 21, 2001

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

West Virginia: How Majestic and How Grand

"Oh, the West Virginia hills! How majestic and how grand." These words, from "The West Virginia Hills," one of the Mountain State's official songs, capture the sentiment not only of many West Virginia natives, but also of the thousands of tourists who flock to the state to view its scenic wonders. From its mountains to its rivers, from its flora to its abundant wildlife, West Virginia is blessed with natural beauty.

I have long sought to preserve our state's God-given treasures. This year, I was successful in adding funds to appropriations legislation that was recently signed into law for two of West Virginia's scenic gems: the Canaan Valley National Wildlife Refuge and the New River Gorge National River.

As the home to 40 different wetland and upland plant communities which support more than 580 species of plants, the Canaan Valley National Wildlife Refuge is one of the largest and most diverse freshwater wetland areas in central and southern Appalachia. The diversity of plants and habitats supports an equally varied wildlife of more than 290 species of mammals, birds, reptiles, amphibians, and fish.

The \$7.8 million that I added to the legislation will allow the Canaan Valley Refuge to expand by more

than 12,000 acres, providing the refuge with important new resources and broadening what is already one of the nation's most diverse ecological communities. The legislation also provides the refuge with \$875,000 for repairs to dilapidated infrastructure, such as roads and parking areas.

Equally impressive is the New River Gorge National River. Tens of thousands of people from across the country annually visit the area's 70,000 acres, which run along one of the continent's oldest rivers. The \$6.8 million that I added to the bill will allow for the expansion of this West Virginia wonder by 6,800 acres. An additional \$1 million will allow for improvements to visitor access and facilities, such as upgrades to the river's Grandview Visitor Center.

It was West Virginia's natural wonders that inspired these words: "If o'er sea o'er land I roam, Still I'll think of happy home, And my friends among the West Virginia hills." I am proud to have added the funding that will help to preserve the Canaan Valley National Wildlife Refuge and the New River Gorge National River -- just two of the many examples of our state's scenic beauty that lie nestled within the West Virginia hills.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Victory for American Industry

In the complex world of Washington, commonsense solutions to our nation's problems sometimes are overlooked. When it came to penalties levied against foreign companies charged with unfair trade, the simplest and most equitable remedy fell victim to this tendency. For years, the penalties were collected and deposited in the U.S. Treasury, while the American companies and workers who lost profits and wages from unfair trade did not receive a nickel of compensation.

I was successful in changing this unfortunate situation in legislation that became law last year. Under the Continued Dumping and Subsidy Offset Act, which has come to be known as the Byrd Amendment, the fees collected from foreign companies charged with unfair trade are deposited in a new U.S. Customs Service account and then made available as grants to the domestic industries that have been harmed. These funds would be used for targeted expenses, including health care and pension benefits, personnel training, environmental activities, and production upgrades.

The first round of Byrd Amendment grants was recently awarded and two West Virginia businesses that were injured by unfair trade practices are among the first grant recipients. Ames True Temper of Parkersburg, with 750 em-

ployees, and Warwood Tool Company of Wheeling, which employs 22, will receive crucial funding from the Byrd Amendment account. Ames True Temper, the largest manufacturer and distributor of non powered lawn and garden tools in North America, will receive \$2.3 million through the Byrd Amendment, while Warwood Tool, which produces heavy-duty hand tools, will receive \$200,000. The U.S. International Trade Commission had previously ruled that these companies suffered direct financial losses because of illegal Chinese trade activity.

Currently, the Byrd Amendment is being challenged at the World Trade Organization (WTO) by several nations, including Canada, Mexico, and the 15-nation European Union. These foreign competitors want to flaunt the very trade laws that they negotiated with our government. I hope the WTO will knock down this backdoor attempt to undermine fair trade practices and remind our foreign trading partners that, if they simply follow the laws and agreements that are in place, penalties will never be assessed and Byrd Amendment grants will not be available. Until then, it is my hope that additional injured companies, like Ames True Temper and Warwood Tool Company, will continue to receive the compensation that they deserve.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Constant Vigilance for Steel

After a comprehensive investigation into steel imports that resulted in part from an amendment that I included in legislation last year, the U.S. International Trade Commission (ITC) has determined what many in West Virginia already know: namely, that imports have caused serious injury to the American steel industry. To help remedy this situation, the ITC recently recommended substantial tariffs for many categories of steel products, including those that are essential to West Virginia integrated steel producers.

While a step in the right direction, some of these proposed penalties fall short of addressing the needs of our steelmakers. The President, who has the authority to accept, reject, or modify the ITC recommendations, should not only act quickly to implement relief to the American steel industry, but also should increase the tariffs levied against steel imports. Only then will American steelmakers gain the breathing space that they so desperately need to improve their precarious financial positions.

Across the country, dozens of steel companies have filed for bankruptcy protection, while thousands of steelworkers have been laid off from their jobs. Since 1980, the industry estimates that nearly 400,000 steel jobs have disappeared. West Virginia has not been immune from this bloodlet-

ting. In the Northern Panhandle, both Wheeling-Pittsburgh Steel and Weirton Steel have suffered great financial harm as a result of illegal foreign trade practices. Wheeling-Pitt has filed for bankruptcy, while Weirton Steel, in the first nine months of this year alone, dropped into the red by more than \$353 million.

Enough is enough. American steel producers — the most technologically sophisticated and efficient in the world — have been singled out for elimination by predatory foreign competition. Steelworkers around the country have paid the price for this unconscionable attack on an industry that is vital to our national defense and our economic security. We should not allow that attack to continue unabated.

In 1997, when the waves of foreign steel imports began to crash upon our shores, American steelworkers adopted the motto, "Stand Up for Steel." Never has the need been so great as it is today. With the ITC's recommendations in hand, President Bush has the opportunity to stand up for steel, to stand up for American workers and American companies, and to put in place a fair tariff system that provides our industry with the chance to recover from illegal trade. The livelihoods of hundreds of thousands of steelworkers and a key American industry hang in the balance.

The Real Story of Christmas

For many, Christmas brings to mind thoughts of stockings, candy canes, mistletoe, and presents wrapped in red and green bows. To be sure, Christmas is a time for children to rush down the stairs in anticipation of the bonanza of presents waiting under the tree. But there is another story that has nothing to do with Santa Claus or snowmen or eggnog. It is the tale of a family who found no shelter but a manger, and also the story of a newborn child who would become the savior of the world.

"And she brought forth her firstborn son, and wrapped him in swaddling clothes, and laid him in a manger; because there was no room for them in the inn," Luke wrote in his Gospel. "And there were in the same country shepherds abiding in the field, keeping watch over their flock by night. And, lo, the angel of the Lord came upon them, and the glory of the Lord shone round about them: and they were sore afraid.

"And the angel said unto them, Fear not: for, behold, I bring you good tidings of great joy, which shall be to all people. For unto you is born this day in the city of David a Savior,

which is Christ the Lord. And this shall be a sign unto you; Ye shall find the babe wrapped in swaddling clothes, lying in a manger. And suddenly there was with the angel a multitude of the heavenly host praising God, and saying, Glory to God in the highest, and on earth peace, good will toward men."

I worry that too many of us have forgotten the true meaning of Christmas. The story of the birth of Christ has been overshadowed by the pressures and strains of a commercialized holiday. Families will spend hours at shopping malls, waiting in long lines, rather than in the company of loved ones or in church celebrating in song or prayer. Sadly, the Christmas season has become the shopping season.

During this holiday, as families mourn those lost to terrorism and pray for the safety of those fighting abroad and defending our homeland, I urge West Virginians to reflect on their families and their faith and to read the story of Jesus' birth in the Gospels. Perhaps, then, the materialism that has come to dominate the season will fade and we can begin to truly understand the great and glorious story of Christmas.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

In God's Hands

I have long encouraged Americans of all ages to learn about the rich and colorful history of our country. I firmly believe that the study of events and figures that helped to shape the world's greatest republic is essential to the continued preservation of our nation. Recently, at the invitation of film director Ronald Maxwell, I was provided the unique opportunity to help bring a small piece of American history to life.

Early in the morning of my 84th birthday, on a farm in western Maryland, I made my movie debut as General Paul J. Semmes, an advisor to General Robert E. Lee, during the filming of the Civil War movie, "Gods and Generals." On that day, I stepped out of the reality of representing West Virginia in the Senate and into the cinematic account of the real-life history that gave birth to our state.

In the days since my cameo appearance as General Semmes, I have reflected on our nation's experiences during the Civil War and the lessons that we can draw from our past during the current conflict at home and overseas. I hope that America's public officials will exhibit the same strength of character and dedication to duty that were shown by our nation's leaders during the Civil War.

President Abraham

Lincoln, who led the nation with such courage in a time of turmoil, wrote to a mother who had lost five sons in battle: "I pray that our Heavenly Father may assuage the anguish of your bereavement and leave you only the cherished memory of the loved and lost, and the solemn pride that must be yours to have laid so costly a sacrifice upon the altar of freedom."

It is clear that the American people will also need steadfastness and determination to deal with the aftermath of the September 11 tragedies. I pray that we have the fortitude, the willingness to sacrifice, and the patience that will no doubt be necessary during what I continue to believe may be a long struggle against terrorists.

The final words in scene 158 of "Gods and Generals" -- the scene in which I appeared -- come from General Lee. After hearing from his advisors about the preparations and planning for the upcoming battle, General Lee commends them and says, "The rest is in God's Hands." We can say the same today. We are making preparations and planning for the future. The rest is in God's Hands.

As written in Psalm 127: "Except the Lord build the house, they labor in vain that build it; except the Lord keep the city, the watchman waketh but in vain."

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Preserving the Legacy of Our Veterans

West Virginians have a long history of distinguished service to their country in times of war and national crisis. From the first mountaineers who raised their muskets in defense of their new homeland to those Mountain State residents who currently battle the scourge of terrorism in the mountains of Afghanistan, West Virginia's men and women in uniform have made their state and nation proud. Through the years, the brave acts of these soldiers, sailors, airmen, and marines have been remembered and honored by their fellow West Virginians.

One such remembrance, the Kimball War Memorial in McDowell County, is a unique tribute to the 400,000 black Americans who served their nation during the first World War. The war memorial, the first of its kind in the United States, was erected by the McDowell County Commission following a petition by veterans to honor black American patriots of that war. Hassle T. Hicks, one of Southern West Virginia's most prestigious architects, designed the monument building, which features four large columns.

For decades following its dedication on February 11, 1928, the Kimball War

Memorial also served as a community building, providing space for local celebrations and civic activities. But, in recent years, the memorial has fallen into disrepair. Already a victim of the typical wear and tear of age and weather, the building was gutted by fire in 1991.

To help reverse this unfortunate situation and to preserve a lasting tribute to these veterans, I added \$700,000 to an appropriations bill that was signed into law late last year. These funds will help to restore the historic Kimball War Memorial, ensuring that the sacrifices of these members of our Armed Forces are never forgotten. The latest funding is in addition to the \$462,500 that I added to a bill in 1999 for the renovation work.

Reportedly, 1,500 black residents of McDowell County alone served in World War I. Their patriotic contributions to our state and to our nation will live on in a newly renovated Kimball War Memorial. It is my hope that the funding which I added for this worthwhile endeavor will help to preserve the war memorial as a constant reminder to future generations of the price of freedom and of the sacrifices made by West Virginia's veterans.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Music Industry Out of Tune

One year ago, the Federal Trade Commission (FTC) released the results of an investigation into the entertainment industry's marketing practices. The Commission found that entertainment companies aggressively marketed violence-ridden materials -- even those specifically rated for adults -- directly to young people.

In the year following that initial report, the FTC worked with entertainment companies and monitored their efforts to inject a measure of responsibility into youth-centered advertising plans. Specifically, the FTC examined whether the entertainment industry, despite the Commission's initial report, continued to advertise violent, R-rated movies, explicit-content labeled music, and mature-rated (M-rated) electronic games in popular teen media. The Commission examined whether the industry included rating information in its advertising and it also reviewed internal documents provided by nine entertainment companies, including marketing plans for certain adult-rated movies, music, and electronic games.

The FTC's follow-up study, which was released recently, reports some good news. The Commission found that the motion picture and video game manufacturers have made

progress when it comes to halting marketing practices that peddle inappropriate material to children. But, regrettably, the follow-up study also shows that the music industry has been sorely lacking in these efforts. The Commission's review of ad placements by the music industry found that "it has continued to advertise explicit-content recordings in most popular teen venues in all media."

Those in the entertainment industry who continue to market adult material to children need to clean up their act -- and they need to do it now. This investigation underscores the need for parents to be vigilant when it comes to their children's entertainment options. It also should send a signal to industry executives, a signal that causes them to implement significant reforms and to stop pushing violent material on our children.

Some in the entertainment industry may claim that they are simply providing the material that the public wants. But a line must be drawn when it comes to luring children toward these adult-oriented products. The issue of marketing standards, which can have a substantial impact on children, is too important for any entertainment executive to dismiss.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Lessons from the Past, Wisdom for the Future

As Americans move forward and rebuild -- both physically and emotionally -- from the devastating terrorist attacks of September 11, a renewed sense of pride in our great nation has emerged. People have begun to reflect upon the ideals on which the United States was founded, and upon the unique individuals who helped to make the dream of America a reality.

America's heroes have been individuals born into wealth and into poverty, during wartime and in peace, in the largest of cities and in the smallest of rural hamlets. As a boy, I found strength and inspiration in the conviction and ideals of the great Americans of the past, men such as George Washington, James Madison, and Benjamin Franklin. These men were outspoken in their passion for independence and they risked their lives to ensure freedom for their new nation.

It seems that in recent years the popular definition of "hero" has changed for the worse. The Founding Fathers have been replaced in the imagination of America's youth by sports figures, rock-and-roll singers, and movie stars. Aspirations to serve have been replaced by shallow desires for quick and easy fame and fortune.

I fear that our schools have done little to curb this disturbing trend. Too often,

the study of the important figures from our past has been lumped in with other school subjects in a broad course called "social studies." To help correct this unfortunate situation, I successfully added provisions to both the education authorization and appropriation bills recently that should bolster the education of students about American history.

In the year 2000, I created the "Teaching American History" initiative with a \$50 million appropriation. In 2001, I strengthened that initiative with an additional \$100 million. This project seeks to deepen teachers' understanding of history so that they may impart this knowledge to their students. A West Virginia organization -- the Regional Education Service Agency III, which serves Boone, Clay, Kanawha, and Putnam counties -- was among the first in the nation to receive one of these history grants.

I am hopeful that West Virginia schools will continue to benefit from this much-needed effort to further students' education about, and appreciation for, this great land. At a time when terrorists have called into question the American way of life, it is important for our young people to learn about the people, places, and events that helped to create the greatest republic that the world has ever known: the United States of America.

January 16, 2002

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

From Brownfields to Greener Pastures

A byproduct of the industrial development that, through the years, helped to create millions of jobs across America has been a legacy of polluted industrial sites known as "brownfields." Throughout West Virginia, there are hundreds of these properties that could pose potential hazards to local residents and which serve as obstacles to economic development.

According to the U.S. Conference of Mayors, more than 450,000 brownfields sites exist in rural and urban areas across the nation. These sites, if cleaned up and redeveloped, could provide new opportunities for manufacturing, housing, and parks and recreation. The nation's mayors estimate that brownfields redevelopment could create more than 587,000 jobs across the country, which would provide a boost to local communities struggling with recession.

To help breathe new life into these aging industrial sites and to provide the opportunity for an economic rebirth in so-called Rust Belt communities and beyond, I cosponsored legislation that would assist local leaders with the reclamation of brownfields. Cleaning up these areas can promote economic development and can help to return crucial dollars to local tax rolls.

The Brownfields Revitalization and Environmental Restoration Act, which passed Congress and recently was signed into law by the President, provides \$250 million a year over the next five years for assessment and clean-up grants for local governments, states, and Indian tribes. The bill also creates an economic development incentive by granting legal protections for three groups -- contiguous property owners, prospective purchasers, and innocent landowners. It also outlines the parameters by which the Environmental Protection Agency may reenter a site to protect health and safety and the environment.

This law is the result of years of work by many members of Congress who have been concerned with the negative effects of brownfields on our states and localities. By providing funds to help reclaim these polluted sites and to reduce liability concerns for those who would seek to purchase and redevelop these properties, this new law will serve as an incentive for economic development. Cleaning up hazardous industrial sites not only can lead to increased dollars flowing through the smallest of towns and the largest of cities, but also can provide for a cleaner, safer environment for those who call industrial communities home.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Plugging Leaks in Immigration

The terrorist attacks of September 11 highlighted a number of gaping deficiencies in our homeland security, including serious loopholes in the U.S. immigration system that allowed terrorists to enter our country posing as students and tourists or, in some cases, by simply walking across an unpatrolled Canadian or Mexican border.

There are currently between 7 million and 13 million illegal aliens living in America. Six out of ten of these aliens crossed a U.S. border illegally and, therefore, were not subject to background checks by the Immigration and Naturalization Service (INS) or the State Department to determine if they had a terrorist or criminal history.

Another immigration concern is the nation's inability to keep track of those foreign nationals who enter our country legally as students. More than 500,000 international students are registered at 15,000 universities, colleges, and vocational schools across America. Some of these are nuclear engineering scholars, biochemistry students, and even pilot trainees who have access to highly advanced technology, training, and information.

To counter these dangerous shortfalls in our border security, I successfully included provisions in a recently approved antiterrorism bill that would fill some of the holes in our border

security and tighten our immigration regulations. My amendment provides funds for the Justice Department to enact a tracking system that requires every university, college, and vocational school to submit the name, address, and enrollment status of international students who are in this country on these special visas. Without a monitoring system in place, there is nothing to prevent someone from entering the U.S. on a student visa and then simply disappearing.

My provisions also require the State Department to review how it issues visas and to take steps to end "consulate shopping" — a practice in which foreign nationals seek out a U.S. consulate that does not have stringent background checks. Consulate shopping allowed a terrorist who was involved in the 1993 World Trade Center bombing to obtain a visa from the U.S. consulate in Sudan after being denied a visa from the consulate in Egypt.

For too long, our lax immigration and border security regulations allowed foreign nationals to enter this country illegally or to disappear after arriving on student visas. These new antiterrorism measures should help to fill the cracks that enabled dangerous individuals to slip through our immigration system. I am hopeful that this new law can help to prevent future terrorist attacks.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Price of Peace

With American troops on the ground in Afghanistan, as an uneasy coalition of nations confronts an unprecedented war on terrorism, it is time for America to rethink its policy regarding financial aid to foreign countries.

September 11 was a wake-up call on many fronts. As a result of the terrorist attacks, we have made sweeping changes to our concept of national security. We are now aware that we live in an age of global instability, of disenfranchised and desperate peoples, and of widespread proliferation of weapons of mass destruction.

And yet, in many ways, the major instrument of our foreign policy -- monetary aid -- reflects a distressing attitude of business-as-usual. If September 11 has taught us anything, it is that America must move away from using dollars to symbolize the strength of our relations with other countries, and instead focus our energies and our resources on a new foreign policy that complements and enhances our global war on terrorism.

Nowhere is this more true than in the Middle East, where renewed violence has brought Israel and the Palestinian Authority to the brink of open warfare. The U.S., like the rest of the world, has looked on this ceaseless carnage in horror.

We have wrung our hands in despair and have condemned the violence in the strongest terms. But we have not matched our words with any meaningful action.

Legislation was recently signed into law that this year provides \$5.1 billion in foreign assistance to Middle East nations, with the majority, \$2.7 billion and \$1.9 billion, heading to Israel and Egypt, respectively. It is as if nothing has changed since September 11. The money goes to these countries with virtually no questions asked. There is no requirement that either country exert itself to end the hostilities in the region in order to receive the funding. That is a missed opportunity on our part. By not using our foreign assistance as an instrument of pressure to bring about change, we are inadvertently helping to fuel the continued cycle of violence in the Middle East.

These are strong words, but we live in perilous times. As we have seen all too clearly, allowing hatred to rage unfettered in that volatile region places our own shores in jeopardy. Doling out astronomical sums of money with no strings attached is a recipe for disaster. We must use our foreign assistance dollars as an instrument of positive change or else end this international welfare program today.

February 6, 2002

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Pull the Plug on Foreign Energy Dependence

The United States has an enormous appetite for energy. Our homes, appliances, and cars consume an incredible amount of power. This hunger for energy has led to a great dependence on foreign oil -- a dependence that needs to be reduced.

One way to ensure a domestic power supply is to focus our efforts on developing new, cleaner, more efficient ways to burn our abundant fossil fuel resources.

The Senate soon will consider legislation that seeks to enact a comprehensive energy strategy for our country -- one aimed at creating new energy sources while also investing critical funds in utilizing our existing resources in an efficient, environmentally friendly fashion.

For West Virginia, this national energy strategy is of great importance. Our state is the leading producer of coal in the Eastern United States. Coal -- our most abundant fossil fuel -- is the source for 51 percent of our nation's electric power. Coal and its related industries employ more than 17,000 West Virginians.

In an effort to enhance the long-term viability of coal, I have included a \$2 billion authorization in energy legislation that would boost the development of clean coal technologies. In 1985, I launched the national Clean Coal Technology Program to help create cutting-edge ways to

burn coal while significantly reducing emissions of pollutants. These technologies -- many of which are being created in conjunction with the National Energy Technology Laboratory in Morgantown -- can help to reduce our country's dependence on foreign oil.

At the same time, the Senate legislation contains another provision that would create a national framework to address climate change. This proposal, which I authored with Senator Ted Stevens of Alaska, creates a comprehensive strategy, based on credible science and economics, to guide America in addressing climate change issues in its own backyard. My provision also establishes a major research effort to promote the development of advanced technologies that will help to reduce greenhouse gas emissions that contribute to global warming. We must invest in cutting-edge technologies, such as those that capture and sequester greenhouse gases, and we must develop renewable technology that is practical and cost-effective.

The U.S. needs a national energy strategy that continues to utilize our vast energy resources and also improves their efficiency and protects the environment. I hope that the President will support our efforts and will work with the Senate to move our country much closer to energy independence.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Search for Lighthouses in the Skies

Pocahontas County is home to one of the world's premier astronomical research facilities -- the Robert C. Byrd Green Bank Telescope. This telescope and its neighboring observatory work to enhance our knowledge and understanding of the Milky Way galaxy and beyond.

Dedicated in the summer of 2000, the telescope is already leading the way in space research. Recently, scientists at the Byrd Telescope announced the discovery of three new pulsars that will help to unravel more of the mysteries of the universe. The recently discovered cluster of pulsars is 22,000 light years from Earth, near the center of the Milky Way Galaxy.

A pulsar is all that remains after a star suffers a massive explosion that removes most of its surface in a phenomenon called a supernova. Pulsars emit regular pulses of radio waves that act as a type of "celestial lighthouse." These waves -- which are intercepted by the Byrd Telescope -- may some day be used by space explorers as lighthouses to navigate our galaxy.

Scientists plan to study these pulsars so that they can gain greater insight into the galaxy's growth. And the fact that these pulsars were uncovered in a part of the sky that has already been studied extensively demonstrates how valuable the

Pocahontas County facility will be to that effort.

At the same time, work is underway to make the resources of the Byrd Telescope available to West Virginia students. Legislation recently signed into law included \$5 million that I added to complete construction of the planetarium and science center at the Clay Center for the Arts and Sciences in Charleston, as well as for related equipment to link the Clay Center to the Byrd Telescope. This funding will help to further the educational experience of young people interested in astronomy and the sciences. Connecting the telescope to the Clay Center will bring cutting-edge scientific knowledge directly to the young people of West Virginia, and will help to fulfill the center's mission to inspire learning through the exploration of the sciences and technology.

Providing our young people with a solid foundation of education in science and mathematics is crucial to the future of our state. By joining our students' classroom experience with the high-tech astronomical resources in place at the Byrd Telescope, we open doors to new opportunity and exploration for our young people. I hope that this unique collaboration will spark a greater interest in our students of the world around them, and help to create a brighter future for our state.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

True American Heroes

In the weeks and months that have followed September 11, we have witnessed dramatic acts of heroism in response to the terrorist attacks. We have listened to stories of the brave police officers, firemen, and emergency medical teams who were first to respond at the World Trade Center Towers and at the Pentagon. We have learned of the courageous acts of those passengers who battled with their hijackers in the skies above Pennsylvania and gave their lives to foil the terrorists' nefarious plans.

But there are also people who, through their everyday actions, are heroes. These quiet heroes do not often garner newspaper headlines. These heroes are from various walks of life. But, despite their differences, they share a similar motive for their actions, namely, to serve and sacrifice for others. Everyday heroes give of themselves to help make their communities better places to live. They lead our society to a greater good; these men and women speak to the better angels of our nature.

The works of these

everyday heroes remind me of the "Elegy Written in a Country Churchyard" by Thomas Gray: "Far from the madding crowd's ignoble strife their sober wishes never learned to stray; Along the cool sequestered vale of life they kept the noiseless tenor of their way."

To me, my old coal miner dad was a hero. He was a hero because of the example he set for me -- one of humility, dedication, strenuous toil, honesty, and constant love that he gave to me and to the noble woman who was his companion for 53 years. West Virginia is a better place because of heroes like him.

America has memorialized those heroes who lost their lives on September 11, and saluted those who survived. But we should not fail to recognize those heroes who work quietly, day in and day out, to improve the lot of their fellow citizens and whose quiet contributions lift the spirits of their neighbors and the quality of life in their communities. I thank them. They stand among the true heroes of West Virginia and our nation.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Slim Down, Shape Up

A recent report by the U.S. Surgeon General highlighted what is quickly becoming a major health concern for Americans. Our society -- dominated by fast food, television, and sedentary behavior -- is rapidly becoming obese. Beyond just being overweight, obesity is a dangerous condition that carries with it other profound medical dangers, including, heart disease, hypertension, stroke, liver disease, certain cancers, and diabetes, among others.

In children, there is a strong correlation between obesity and time spent watching television. Some children watch as many as six hours of television each day. Children increasingly play computer and video games and surf the net. These hours of sedentary behavior, when combined with the prevalence of high-sugar, high-fat foods, are a dangerous combination.

The statistics are staggering. Each year, according to the U.S. Surgeon General, approximately 300,000 deaths across the nation are associated with being overweight and obese, and these conditions accounted for health-related costs of \$117 billion in the year 2000. Since 1980, obesity has doubled among adults and tripled among adolescents.

Unfortunately, in West Virginia, the prevalence of obesity has been among the highest in the country in 14 of the past 15 years. In fact,

the incidence of obesity in West Virginia has trended upward from 25.7 percent of the adult population in 1984 to the present high of 43 percent. We need to take steps to address this situation before it becomes a dangerous epidemic. We cannot ignore the health risks related to obesity.

In an effort to provide new resources in this effort, I recently added \$2 million to legislation to create a Center on Obesity at West Virginia University. This center will enable health care professionals and researchers to work with community groups, schools, and medical professionals to find innovative ways to prevent obesity and improve the nation's health. Center experts will have the skills and resources to help educate West Virginians about the dangers of obesity while assisting those who want to live a more healthy lifestyle.

These resources are only a part of the solution to obesity. Much of the effort needs to be made by individuals. West Virginians must not allow themselves or their children to be shaped by an environment of fast food temptations and electronic distractions that often foster unhealthy eating habits and sedentary behavior. I urge each Mountaineer to help reverse this dangerous health trend. Eat healthier. Exercise. Slim down, shape up, and break this cycle of obesity.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Working for Middle East Peace

Over the course of the past weeks, peace in the Middle East has seemed very far off, as news reports almost daily account for more deaths among the Palestinian and Israeli citizens. Despite international calls for a cease fire, the violence only seems to escalate.

In an effort to see what hope there is for peace in that volatile region of the world, I recently met in my U.S. Capitol office with Egyptian President Hosni Mubarak. President Mubarak will be one of the key figures in any peace talks, with an ability to utilize his friendship with both the Israeli and Palestinian governments to broker what all sides hope will be a lasting end to the region's violence.

President Mubarak described very plainly what he sees as the gap in this area, namely, the lack of involvement by the United States. Several months ago, our government pulled out of efforts to create a peace agreement between Israel and the Palestinian leaders; now is the time to return to those negotiations.

An idea that I broached with President Mubarak is

one that ties American foreign assistance to Middle East nations with progress toward peace. Currently, the United States provides \$5.1 billion in foreign assistance to Israel and Egypt without a link to progress on peace. Both countries receive that funding, no questions asked and no strings attached. I think that the United States ought to use its financial assistance as an instrument of pressure to bring about peace in the Middle East. Not to apply such restrictions is a missed opportunity on our part.

Crafting a lasting peace between and among Middle Eastern groups is not a simple task. But, as I pointed out to President Mubarak, the status quo of sitting back and hoping that all sides will voluntarily put down their weapons has not worked. The United States ought to give serious consideration to the idea of attaching strings to our foreign assistance. As a nation, we should press every advantage that we have to break the cycle of violence that has gripped the Middle East for so long.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Cultivating A New Farm Safety Net

As farmers have prepared for the planting season, the Senate has crafted a new farm policy to better reflect the needs of rural areas throughout the United States. The new farm bill, which the Senate recently approved, could not have been developed at a better time. Since Congress passed the last farm bill in 1996, farmers have seen prices drop each year and many rural communities have witnessed hard economic times. Without new legislation, such difficulties would only worsen.

In past years, farm policy has favored large corporate farms while smaller farms, like those throughout West Virginia, have struggled to compete. The new farm legislation would apply more balance to agricultural assistance. One key provision for West Virginia farmers is the expansion of assistance for producers who grow non-commodity crops -- crops like apples, peaches, and many of the vegetables that are grown in our state. Another key provision would include West Virginia dairy producers in the Northeast Dairy Market Loss Assistance Program, and ensure a more stable future for dairy producers.

In addition to assistance specifically for farmers and ranchers, the new farm bill also aims resources toward rural communities. Critical to West Virginia are the farm bill's conservation pro-

grams that would help the efforts of farmers and communities to be good stewards of the land. Expanded nutrition programs would help families when they face tough economic times. Rural development provisions would continue programs that develop water and sewer systems in areas where such systems do not yet exist but are so desperately needed.

At the same time, the government should plan for natural disasters, such as drought, that may threaten farm production and rural communities in the future. Forecasters are already warning of desperately dry fields and low water tables. With that in mind, Congress ought to make provisions that would speed help to communities hit by drought or other natural disasters instead of waiting until after the damage has been done.

Agriculture provides over \$1.3 trillion to the nation's economy, and accounts for 24 million jobs. Rural America comprises 80 percent of our nation's land mass and 20 percent of our population. Yet, rural America is hurting like never before. The new farm bill passed by the Senate would help farmers, ranchers, and rural communities. I hope that the House and Senate can quickly resolve any differences so that a new, stronger, and more balanced farm policy can take effect without delay.

Understanding Homeland Defense Needs

In the aftermath of the terrorist attacks of September 11, it has been made evident that more needs to be done at the state and local levels to prepare for potential attacks. To begin to address those needs, last December I worked to craft the first significant federal investment in homeland defense. As a result, Congress approved \$8.3 billion to fund the most critical initial needs.

In the coming weeks, I will convene a series of hearings of the Senate Appropriations Committee to learn what progress is being made with the initial funding and to determine what steps should be taken next. The Appropriations Committee will hear from mayors and governors about the challenges they face in order to prepare for a variety of threats. We also will hear from those men and women who would be on the front lines in responding to any future terrorist attacks -- police officers, firefighters, emergency medical technicians, doctors, and nurses. The committee will listen to those who best understand the security needs of the nation's communities with one simple goal in mind, namely, to determine how best to protect against, and respond to, future terrorist attacks.

The Appropriations Committee then will meet with those men and

women in the federal government charged with implementing federal homeland security efforts. Through testimony from Administration experts and Cabinet secretaries to military officials, my committee will examine the Bush Administration's plans to coordinate efforts with state and local emergency response teams. Cooperation must exist on all levels if the United States is going to be truly prepared for future terrorist attacks.

We cannot protect ourselves if we focus on our vulnerabilities only after they have been exploited by terrorists. A focus on every aspect of our homeland defense is essential in order to reveal and repair every weakness that we may find.

We can take preemptive measures to combat terrorism on the home front with a health care system prepared to respond to bioterrorism, a safer food and water supply, more secure airports and railroads, stringent border security, and state and local law enforcement officials who are trained and prepared to handle a terrorist attack. These critical efforts will help to ensure that all Americans have confidence in their state and local emergency response preparedness should, God forbid, another attack occur on our shores.

Bush Road Budget Detours Job Growth

Across West Virginia and throughout the nation, we have learned a simple lesson in economic growth: where there are four-lane, divided highways, there is job growth; where there are safe roads and bridges, communities grow and prosper.

Our transportation network of roads, runways, and railways has always been central to the health of our national economy. Yet, as I review President Bush's budget request for the Department of Transportation for the coming fiscal year, I am greatly disappointed by its lack of balance.

In its recently released budget request, the Bush Administration has slashed funds for road and highway construction by a whopping 27 percent. The reduction to the highway program, if enacted, would result in West Virginia's road and highway construction funds being cut from \$308 million this fiscal year to \$235 million in the coming fiscal year. Funds available for continued construction of the Appalachian Corridor Highway System in our state would drop from \$62 million to \$45 million. The American Association of State Highway and Transportation Officials estimates that such a loss of funding would result in as many as 3,300

lost jobs in West Virginia.

Those cuts can be avoided. The Bush budget fails to take advantage of available funding within the Federal Highway Trust Fund -- dollars obtained from federal gas tax receipts -- which has an unspent balance of more than \$18 billion. The majority of this balance represents tax dollars that were paid by the traveling public at the gas pump but are not being utilized for highway construction or renovation. If there ever is a time to consider tapping a portion of this balance to keep our highway construction program moving forward, now is the time.

While the investment in highway construction throughout the country has risen in recent years, we have not yet begun to reverse the trends of road deterioration and worsening congestion. The federal government should be looking for ways to move the investment in highways forward, not backward.

The nation's economy is slowly moving out of recession. But by slashing road and highway construction, by jeopardizing the jobs of thousands of West Virginians, the Bush transportation budget is a massive pothole to progress.

Celebrating West Virginia's Natural Beauty

This month, the nation will mark the 32nd anniversary of Earth Day — a day to renew our commitment to preserve the natural beauty of the world around us. In West Virginia, we have been blessed by the Creator with some of the most unique flora and fauna in the Eastern United States.

One of the largest and most diverse freshwater wetland areas in central and southern Appalachia is the Canaan Valley National Wildlife Refuge in Tucker County. I secured the initial funding to create the Canaan Valley Refuge — the nation's 500th National Wildlife Refuge. Opened in August 1994, the Refuge is home to 40 different wetland and upland plant communities which support more than 580 species of plants. In turn, the diversity of plants and habitats support an equally varied wildlife of more than 290 species of mammals, birds, reptiles, amphibians, and fish.

Recently, First District Congressman Alan Mollohan and I joined to announce the expansion of this crown jewel of West Virginia. Utilizing \$16 million that I added to federal appropriations bills, the U.S. Fish and Wildlife Service has acquired 12,000 acres of land adjacent to the Refuge from Allegheny Energy, Incorporated. This property transfer will expand one of our state's most beautiful trea-

tures. It will provide important new resources for the facility and broaden one of the nation's most diverse ecological communities.

Earth Day also provides an opportunity to celebrate other sites across our state that have a rich environmental heritage. I am proud to support these natural jewels with federal appropriations. Just last year, I added \$6.8 million for the expansion of the New River Gorge National Scenic River. These funds will help to make the visits of the tens of thousands of people from across the country who travel to the New River safer and more enjoyable. Further, funding I have added to appropriations bills in recent years has supported the Monongahela National Forest, which hosts some of the state's most visually dramatic and sensitive lands, like Seneca Rocks and the Cranberry Glades.

This Earth Day, as the nation once again renews its commitment to the preservation of the environment, West Virginians can be proud of the efforts we have undertaken to protect the grandeur and beauty of our state. We have proved that economic prosperity and environmental preservation can coexist. The challenge for the years ahead is to ensure that we sustain this delicate balance.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

West Virginia a Leader in National Defense

At a time when U.S. troops are engaged in a fight against terrorism overseas, West Virginia's role as a leading supplier of cutting-edge defense products grows ever more critical. Manufacturers across our state make significant contributions to national security and to the economic health of West Virginia. West Virginians provide our nation's soldiers, sailors, and airmen with the tools they need to protect America's interests around the world, and I am proud to have supported these efforts through the appropriations process.

Aircraft equipped with parts produced in Harrison County currently are employed in Operation Enduring Freedom in Afghanistan. The Bridgeport-based manufacturer, Aurora West Virginia, produces the tail sections and structural parts on the fuselage of the Global Hawk reconnaissance airplanes and fabricates full-scale models for Northrup Grumman, the prime contractor that provides Global Hawks for the Air Force. These unmanned planes are proving to be a valuable asset for American military efforts overseas.

The U.S. Navy-owned Allegany Ballistics Laboratory (ABL) in Mineral County has a long history of providing support for the U.S. Armed Forces. ABL is a major supplier of defense products, including warheads, rocket motors, and other vital military components, to the nation's mili-

tary services and to U.S. allies. I have added funds to appropriations bills to improve the ABL facility and to ensure the Laboratory's ability to compete in the high-tech environment of precision weaponry production. ABL now operates in four areas of excellence to support the U.S. military -- tactical propulsion, precision ordnance, missile defense, and composite structures -- all of which contribute to the superiority of the U.S. Armed Forces.

A new generation of Naval guns used to protect ships offshore soon will be developed at the Mason Technology Center in Mason County, scheduled to reopen this summer. The Combustion Light Gas Gun will be created and tested at the Center's advanced gun testing facilities. Mason Technology Center is on track to become a Center of Excellence for the development of advanced long range gun systems.

Our country's current military action and heightened focus on homeland security preparedness only strengthens the ever growing need to design and build advanced, innovative defense weaponry. I take great pride in West Virginia's thriving defense initiatives and will continue to work to provide the men and women of our country's Armed Forces with the technology, equipment, and training they need to successfully defend our nation.

School Safety: Continuing the Search for Solutions

Three years ago, two students at Colorado's Columbine High School walked into their school carrying several fully loaded weapons and opened fire on their teachers and fellow students. They killed 13 students and a teacher before taking their own lives. Their actions sparked a renewed assessment of our own schools in an effort to prevent such tragedy from striking close to home.

To include many voices and ideas in this assessment, West Virginia University (WVU) President David Hardesty and I started a series of meetings and projects to identify and expand effective strategies for safe schools.

The first meeting, held on WVU's Morgantown campus in August 1999, brought together educators, specialists, lawmakers, police officers, parents, and the church community to focus on efforts already underway throughout the state to combat school violence and on further steps that must be taken to better protect our teachers and students from classroom violence.

That first event led to a Youth Summit, held in April 2000, which gave students throughout the state a voice in shaping initiatives that would be implemented in their schools. The summit provided an opportunity for these young people to express their opinions on important issues such as violence, drugs and alcohol, and the media's influence on their lives.

The specialists at WVU's Extension Service took the ideas generated at these sessions, shared them with educators, and developed several new strategies that target school violence and aggression. At the start of this school year, these pilot projects, which were initially funded through \$100,000 that I added to a federal appropriations bill in 2000, were implemented at 42 schools. The strategies include various character education programs and the School-wide Positive Behaviors Supports Program.

With almost a full year of program experience to evaluate, President Hardesty and I, together with the West Virginia Department of Education, soon will share the results of the pilot programs with teachers throughout the state. The WVU Extension Service will discuss the lessons learned so far and seek the advice of teachers as to how best to apply these strategies in the classroom.

The lesson of the Columbine tragedy three years ago was that school violence can happen anywhere at any time. Solving this problem is a shared responsibility, one that requires strengthening basic values, teaching children right from wrong, and instilling in them a respect for others. Coordinated efforts by schools, parents, and community organizations can lead to proactive, comprehensive approaches to classroom safety.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Bright Future for America's Energy Policy

Our nation's quality of life and economic well-being are tied to energy, and, in particular, to electricity. Electricity powers our computers, home appliances, factory equipment, and life-saving medical technologies. The majority of America's rapidly growing energy appetite is fed by coal -- the country's most abundant natural resource. That is why I am particularly proud of the fact that the Senate recently approved an energy policy that will help to ensure the long-term use of coal in a more efficient, environmentally sound manner.

One of the key provisions that I included in this legislation is an incentive for electric utilities to install clean coal technologies in their power systems. In 1985, I launched this effort with a \$750 million appropriation. Since then, more than \$5.5 billion has been invested in clean coal research by the federal government and private industry to develop innovative methods to use coal in more efficient and environmentally friendly ways. This investment has led to a new suite of technologies to help power plants meet tougher environmental standards.

However, moving these technologies from the laboratory to the marketplace can be very expensive. That is why I have supported the inclusion of tax incentives to encourage companies to install these cutting-edge innovations at new and exist-

ing facilities.

These technologies also can help to meet another challenge that we can no longer ignore, namely, global climate change. Climate change and energy policy are two sides of the same coin. Energy use creates the vast majority of man-made greenhouse gas emissions, which scientists have concluded are a chief contributor to the problem of climate change.

To address this problem, Republican Senator Ted Stevens of Alaska and I crafted a climate change strategy that not only meets today's needs but also can adapt to the environmental issues that the country faces in the coming decades. Our provision, which the Senate has approved, would invest \$4.75 billion in advanced technology research while also creating a structure within the federal government to move toward a long-term, comprehensive climate change plan.

For the United States to remain a global economic leader, we must address these important energy issues. Now is the time to come together and craft an intelligent, responsible, bipartisan energy policy. With the enactment of this legislation, the nation can take another step toward improved energy production and conservation. The journey is just beginning, but the future is bright for a truly comprehensive national energy policy.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Saluting Our Armed Forces

Since 1950, the United States has celebrated Armed Forces Day on the third Saturday of May to honor members of the military for their patriotic service to the nation. The celebration replaced separate Army, Navy, Marine Corps, and Air Force Days when the Armed Forces unified under one department, the Department of Defense.

This year, especially, we are obliged to pause and give thanks to those who proudly wear the uniforms of the United States military. America's fighting forces work hard every day to keep our nation strong and free. They leave family, home, and hearth behind in the dedicated pursuit of this mission, and they are prepared, like legions of heroes before them, to make the ultimate sacrifice. Congress will continue to work to ensure that our military has the resources needed to protect our interests around the globe.

At the same time, Members of Congress have the added responsibility to ensure that the lives of the nation's sons and daughters are not jeopardized needlessly. We must ask questions of those crafting plans for war. Without defined objectives and solid planning, the war could drift into a haphazard campaign

that does not attack effectively the core elements of the global terror network. We would do far better to hear clear explanations and detailed justifications in the war on terrorism.

We are a powerful country, but we cannot hope to eliminate terrorism from the world without other nations by our side. We are a rich country, but we can never spend our way into perfect national security. Our resources are finite and choices must be made. And there will always be forces and circumstances in the world which are unpredictable and beyond our control. But we can strive to be a wise nation — one that understands its extraordinary possibilities as well as its very real limitations on the global stage.

I applaud the men and women of America's Armed Forces. They are engaged in very difficult missions where tensions are high and dangers abound. As they always are, West Virginia's sons and daughters are on the front lines of this effort. I will give them my full support in the U.S. Senate. At the same time, I will continue to ask questions and seek information to ensure that their willingness to serve their country, and perhaps sacrifice their lives, is not in vain.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Recovering from Floods

West Virginia once again suffered tragedy at the hand of Mother Nature as heavy rains prompted severe flooding in the southern part of the state. The damage has been so extreme that a federal disaster declaration has been declared for five counties, opening the door to financial assistance for residents and businesses. To apply for federal help, affected West Virginians should call 1-800-621-3362 or 1-800-462-7585 (TTY) for the hearing and speech impaired. The toll-free telephone numbers operate from 8 a.m. to 6 p.m., seven days a week.

As West Virginians begin to put their lives back together, there may be unsavory individuals who will offer insincere help only to help themselves to the hard-earned money of unsuspecting people in need. Posing as skilled laborers, these scam artists promise to repair damage to homes and businesses, but never deliver on those promises. To guard against such scams, West Virginians should keep in mind the following smart consumer tips.

Check the contractor's background and reputation. Call the West Virginia Attorney General's Consumer Protection Hotline at 1-800-368-8808 to determine the contractor's complaint history.

Always ask for references. Contractors should be willing to provide names

and telephone numbers of previous customers.

Make sure the contractor is insured. Be sure the contractor has workers' compensation and disability insurance. The home or business owner could be liable for accidents if the contractor is not properly insured.

Ask for a written estimate. Make sure that the estimate includes all work to be done by the contractor.

Ask for a contract. It might be worthwhile to obtain legal advice before signing any contract.

Do not pay in advance. Hold all or a substantial portion of the payment until work is completed and approved.

Despite the all-too-familiar damage and deaths caused by the flooding, West Virginians have once again pulled through with the help of their own. I thank the thousands of National Guardsmen, firefighters, law enforcement officials, Red Cross volunteers, and State Office of Emergency Services personnel who have worked to save lives since the crisis began. I also commend the countless family members, friends, and neighbors who have come to the aid of their fellow citizens and shared burdens too great to bear alone. Thanks to these efforts, West Virginians are repairing, rebuilding, and renewing their hope for brighter days.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Strengthening Our Defenses at Home

For many West Virginia residents, homeland security may seem like an obscure concept which does not bear upon their daily lives. Border security is an imminent concern for those states adjacent to Canada and Mexico. Port security is a critical issue for coastal states like Maryland, South Carolina, and Louisiana. But neither threat pertains directly to non-border, land-locked states like West Virginia.

However, a surprisingly high number of danger zones exist across the country. Therefore, each state has a vital interest in homeland security. That is why I have worked to ensure that the investments the government makes in homeland security result in substantial improvements in the security of all Americans.

In West Virginia, we have many areas that potential terrorists could perceive as vulnerable targets. For instance, chemical plants in Kanawha and Wood counties pose inviting opportunities for those who want to jeopardize lives. Attacks at the dams in Summers County or Nicholas County could cause significant loss of life and property. A plan to poison water systems anywhere in the state could endanger the health and lives of people who drink that water.

These statements may seem alarmist. But after listening to hours of testimony from terrorism experts and

Administration officials about vulnerabilities in our society, I believe these statements are simply pragmatic. We need to examine each vulnerability, assess potential threats and consequences, and take steps to protect against possible attacks.

To that end, the Senate soon will consider legislation that I have written to fund numerous homeland security initiatives. This legislation addresses many of the critical vulnerabilities throughout the country, from borders to airports to nuclear laboratories and power plants. The legislation takes immediate steps to bolster local police and fire departments. It provides critical funding to train and equip health professionals to detect and treat cases of biological, chemical, or nuclear attack. It provides funds for the Postal Service to protect postal workers and to purchase equipment to make our mail safer. By approving this package, the Senate can take immediate steps to protect Americans and to try to prevent future tragedies like the one we witnessed last September.

Despite West Virginia's distance from our nation's borders and ports, we should not close our eyes to the threat of terrorism. We should be actively involved in proactive, preventive efforts which can make a significant contribution to the safety of all West Virginians.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Fast Track to Fewer Jobs

The Senate recently passed legislation to provide the President with trade promotion authority -- better known as 'fast-track authority' -- which allows the Administration to negotiate international trade agreements without input from Congress. I am disappointed by the outcome of the Senate's lengthy trade debate, during which I strongly advocated my position that Congress not relinquish its Constitutional right to amend trade agreements. This authority is vital to the protection of American jobs, which are being lost due to unfair trade practices allowed under current trade agreements.

Clearly, Congress should be able to debate, amend, and, if necessary, reject trade agreements if such agreements harm certain U.S. companies and workers. The goal of these trade agreements should be to help all American workers by raising their standard of living and improving the quality of their lives. Otherwise, there is no reason for the United States to agree to them. This seems obvious. Yet, past experience shows that many of these trade agreements simply pave the way for companies to leave the United States and go to foreign lands where labor is cheaper and industries do not have to comply with the environmental and safety standards

that exist in the United States.

West Virginia has been particularly hard hit by this new economic reality. The latest example is in Wood County, where Ames True Temper has announced plans to close one of its plants and layoff approximately 160 employees. Ames' parent company plans to move the Parkersburg operations to China, where raw materials and labor are cheaper and environmental standards are virtually non-existent. This is devastating news for the employees and their families who relied on these jobs to put food on the table and children through college.

For too many American industries and the people who work in them, so-called "free trade" has been nothing more than a long and frightening slide to financial disaster, and Congress, by simply going along with Administration trade deals, has been a willing contributor to that decline. For too long, Members of Congress have stood by and allowed the interests of the workers and certain industries in their states to be sacrificed upon the altar of the false promise of "free trade." The American people deserve better. That is why I will continue to fight to preserve the duties and responsibilities of Congress and to protect the best interests of America.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Removing Rewards for Illegal Immigration

The United States is undergoing an unprecedented wave of immigration. Even at the peak of the last great wave of immigration in the early 20th century, the number of immigrants entering the country was only 850,000 per year, compared to at least 1.3 million immigrants who annually settle in the country today.

Illegal immigration is a driving force behind this wave. The Census Bureau recently estimated that there are as many as 8.7 million illegal aliens in the United States -- more than two times the number of illegals estimated in 1990. During the last decade, illegal immigration added between 6 million and 7 million people to the nation's population -- a net increase in the illegal population of about 500,000 immigrants per year.

While the United States is a generous nation when it comes to immigration, Americans are justifiably concerned about the current record levels of illegal immigration. Combined with our post-September 11 concerns about tracking who crosses our borders, this kind of population growth is placing tremendous strain on the infrastructure network, especially on education and health care systems.

Instead of cracking down on illegal immigration, President Bush has urged Congress to provide amnesty to those people who break the law. In doing so, the government effectively relinquishes control over those who cross the nation's borders. Moreover, such amnesty is not fair to those who abide by the rules and enter and remain in the country legally.

I find the President's amnesty proposals to be grossly irresponsible. That is why I blocked an amnesty provision from inclusion in border security legislation that recently was passed by Congress, and why "Americans for Better Immigration" recently honored me with an "A+" grade for my efforts to reduce illegal immigration.

The United States is a compassionate nation when it comes to immigration, but that does not mean that the nation should turn a blind eye to those people who illegally cross our borders. The federal government certainly should not encourage that kind of unlawful behavior with amnesty initiatives. Given the nation's financial constraints and heightened security concerns in the aftermath of the September 11 attacks, we cannot afford to allow this dangerous practice to continue.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protection Against Flooding

In recent years, the summer months have brought devastating rains to the mountains, resulting in lost lives and millions of dollars in property damage. Just a few weeks ago, heavy rains and flooding in Southern West Virginia took several lives, and the Federal Emergency Management Agency estimates that individual and public property damage will total at least \$38 million. Each summer, this loss of life and property has become the expectation rather than the exception.

Words cannot describe the tragic experiences of families who have watched their homes and belongings washed away time and time again by flood waters. We have seen mountain streams and peaceful rivers change character with amazing rapidity, rampaging through mountain valleys and nearby communities. The challenge for West Virginians is to develop an action plan that can help to prevent this destruction and save lives.

Utilizing \$1 million that I added to appropriations bills, Governor Bob Wise and other local, state, and federal officials have worked to draft the first-ever comprehensive flood strategy for West Virginia. To date, regional meetings have been held to gain a better understanding of the specific flood control and pre-

vention needs in communities across the state.

Later this summer, the task force charged with compiling the information and crafting the prevention strategy is expected to release its first report for public comment. This report will focus on Southern West Virginia -- the region that has been declared a federal disaster area three times in the past year. This initial framework will be adaptable for other regions of the state.

The dangerous cycle of flooding-recovery-flooding needs to be broken in a thorough, concerted manner. This new statewide strategy should offer the opportunity for local communities, in conjunction with state and federal partners, to take specific steps to save lives and protect property.

For too long, West Virginians living near rivers, creeks, and streams have shuddered at each forecast of heavy rain. Through the development and implementation of a statewide flood prevention plan, residents will be able to minimize some of the severe destruction we have experienced in West Virginia for so many years. By building on our experiences and learning from them, we can help to prevent such destructive forces from destroying homes and communities in the future.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Quick Action to Fight Terrorism

Not for 137 years has this nation faced war within our borders. The Civil War was a turning point in our history. Now we are facing another turning point as the nation is challenged once again by war on our shores. Today's violence has roots in a cultural clash of worldwide proportions.

We know terrorists live among us. Yet, we do not know where they will strike or when.

With endless warnings in mind, and with a clear realization of our many homeland security gaps, the Senate approved legislation that I authored totaling \$31.5 billion that could help to prevent future tragedies like the one we witnessed last September.

The legislation fully funds the President's \$14 billion request for the military and \$5.5 billion for New York in response to the events of September 11. The legislation also contains \$8.3 billion for critical homeland security efforts.

Within the legislation, \$4.7 billion is directed to the Transportation Security Administration to tighten protections at our airports and seaports. More than \$1 billion is directed to local first responders, including \$300 million for firefighters and \$174 million for police officers. The legislation includes \$723 million for the Coast Guard and

Customs Service to target and inspect suspicious shipments before they reach U.S. ports. Another \$387 million would help to expand lab and medical capacity to respond to bioterrorism threats. And \$200 million would protect against "dirty bombs" by better securing our nuclear labs and material.

Anthrax. Dirty bombs. Border security. Nuclear labs and power plants. Cybersecurity. Food safety. Airport security. Drinking water. We understand the gaps in our security structures. And if we know where those gaps exist, certainly the terrorists know as well.

Recently, the President announced a massive governmental reorganization to respond to terrorist threats. I support a Department of Homeland Security. But that department alone will not protect Americans from terrorism. There are many details to be worked out and we cannot wait to address gaps in our nation's defenses while this new department is crafted. Terrorists will not wait to attack anew.

We cannot afford delay. The Senate has passed this critical legislation; now it requires the approval of the entire Congress. This bipartisan legislation must move quickly to bolster our weaknesses, address our shortfalls, and protect American lives.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Recognizing a Special School

In the hills of Randolph County sits the smallest public school in West Virginia. At that school, students and teachers have aptly demonstrated that small cannot only be better, but also be among the best.

I recently traveled to Pickens School to deliver the commencement address to the three-person graduating class. I wanted these students to know that their achievements have not gone unnoticed. Just because one lives off of the beaten path does not mean that hard work should go unheralded.

Pickens School is one of only five high schools in West Virginia to which the state awarded "exemplary" status last year based on attendance, Stanford Achievement Test results, and writing scores. For six straight years, every graduate has gone on to college. While Pickens educates only about 1/10,000 of one percent of the students in West Virginia, two of 18 winners in this year's premier statewide writing contest are from this wonderful little school. What a roster of achievement!

But as important as the school's stellar academic feats, Pickens has no metal detectors, no armed guards patrolling the corridors, no graffiti on the walls, and no drug or alcohol problems. It is no coincidence that safety in schools often goes hand-in-hand with academic excellence. The small, rural

nature of Pickens School is, no doubt, a key factor in its success.

The graduating class is small, but its opportunities are immense. Who can fathom what greatness may lie ahead for these three young souls? One of the graduates may discover a cure for cancer or unlock a great mystery of our universe. The students at Pickens believe in themselves and strive toward bright futures because their school and their community have believed in them.

The quality of the education imparted to the youngsters who are fortunate enough to attend Pickens is due in large part to the excellent and committed teachers who devote their talents to the school. Good teachers should be the most important role models in the lives of students, but, unfortunately, they often do not receive the respect and acclaim that they so richly deserve.

If our country is to continue to have the cohesive society that we have traditionally enjoyed, our educational system must reinforce the basics that undergird our way of life: compassion, humility, and morality. This is the quality of life and learning taught to the gifted and successful students at Pickens School. "Good kids" and good students are no accident, and the incredible students at Pickens are both.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Keep Amtrak on Track

Congress created Amtrak, the nation's passenger rail service, in 1970, and coast-to-coast operations started a year later. In West Virginia, Amtrak stops in several communities including White Sulphur Springs, Montgomery, Charleston, Huntington, and Martinsburg. For many rural communities, Amtrak represents the only public transportation connection to the rest of the nation. But today that connection is in danger of being severed.

Because of growing financial pressures and accidents which have destroyed track and equipment, Amtrak needs an infusion of funding soon or else it faces bankruptcy. The Administration has taken a first step, agreeing to a \$100 million loan that will allow Amtrak to keep operating into early August. However, by forcing \$100 million in loans on the railroad, the Administration has made Amtrak's road to financial health an even longer one. Amtrak already carries nearly \$4 billion in debt. Congress ought to recognize this critical need and provide sufficient funding, both in the short-term and in coming years, to maximize the railroad's potential.

If Amtrak closes, the nation's transportation system will be thrown into chaos. All of Amtrak's

68,000 daily riders will be without service. Commuter railroads from east to west will be shut down. Thousands of vacation passengers who already have purchased Amtrak tickets will be left at the station.

Amtrak also plays a vital role in homeland security, providing a viable transportation alternative to highways and airways. To allow Amtrak to close its doors now, when the terrorist threats and attack warnings come almost daily, would be irresponsible.

To prevent any closing, I have proposed to include \$205 million in an appropriations bill that is in negotiations with the House of Representatives. That funding would allow Amtrak to repay its loan and keep trains running into October.

Last September, when the airline industry was shut down, Americans turned to Amtrak for transportation. Because of the continuing concern about air safety, Americans are turning to Amtrak in record numbers. At a time when the country is turning to Amtrak, the federal government ought not turn its back. We must find sufficient funding to keep the passenger rail system running. Amtrak needs emergency funding, and it needs this funding now.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Defending the Pledge of Allegiance

In 1954, I was a young member of the House of Representatives from Raleigh County. On June 7 of that year, I cast a vote that I have been proud of ever since. I voted to include the words "under God" in the Pledge of Allegiance. No other current Member of Congress cast that vote, a distinction that I value.

This is one reason why a recent federal appeals court decision in California disturbs me so greatly. That court ruled the Pledge of Allegiance to be unconstitutional because the majority of the court claims that the words "under God" run counter to the intent of the First Amendment of the U.S. Constitution.

During my many years in office, I have heard critics attack the words "under God" as they exist in the Pledge of Allegiance. They have implied that the Founding Fathers were essentially "neutral" about religion. These individuals assert that America's fundamental origins are basically devoid of religious meaning, and that this was the intent of the Founding Fathers.

Nothing could be further from the truth.

I believe that the intent of the Framers was to keep the new government from endorsing or favoring one religion over another, but it was never to prohibit any voluntary expression of re-

ligious faith. Religious faith always has been a basic tenet of American life. This is evident throughout the history of our nation.

The First Amendment in particular is one of the greatest legacies of faith bequeathed by the Founding Fathers, but I believe it is one that is little understood and sometimes distorted -- as it was in the recent court decision. In 1791, Congress passed the first ten amendments to the Constitution, called the Bill of Rights. The First Amendment recognized the importance of religion in American life, stating that, "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof." The purpose of this tenet was to allow religious faith to flourish, not to suppress it.

The connection between God and America is long established in the minds of most Americans. We should not erase that connection under the pretense of protecting the so-called constitutional rights of non-believers or atheists. I hope that this recent court decision is thrown out and that proper recognition is given to the history of our nation and to the role of faith in our society. The United States is, and always will be, one Nation under God, indivisible, with liberty and justice for all.

The Ohio River Islands: A Natural Beauty

West Virginians take great pride in the many natural treasures across the state. The need to preserve these precious resources is more important now than ever as West Virginia's tourism industry grows and as the commercial traffic on our waterways increases.

One of those natural treasures is the Ohio River Islands National Wildlife Refuge. Headquartered in Parkersburg, this refuge was the first national wildlife refuge established in West Virginia. In 1989, I secured funds in an appropriations bill to create the refuge, and over the last 13 years, I have provided additional funds for the refuge's land acquisition and operating expenses. Most recently, I included \$1.1 million in an appropriations bill for construction of a much needed new headquarters and visitors station.

The refuge presently includes 21 islands and encompasses more than 3,200 acres of valuable fish and wildlife habitat. The U.S. Fish and Wildlife Service eventually plans to acquire additional islands, for a potential total of 35, along a 400-mile stretch of the Ohio River between Pennsylvania and Kentucky.

Most of the refuge's islands are within West Virginia's segment of the river, stretching from the Northern Panhandle in Hancock County to south of Point Pleasant in Mason County. These jewels of na-

ture include a rich mosaic of bottomland hardwoods, wetlands, and life forms which are rare to the area, including migratory birds and freshwater mussels. The pink mucket mussel, a federally designated endangered species, is found among the islands along with at least 20 other species of plants and animals on the state's rare species list. Experts have long recognized the biological importance of the islands and recommended that they be protected and maintained in their natural state.

The refuge helps to preserve a declining ecosystem. Since the turn of the century, approximately 19 of the Ohio River islands have disappeared because of both environmental and man-made causes. That is one of the reasons why it is important to support this refuge. In addition to sustaining valuable wildlife, preservation of these islands will protect natural vistas and open areas for the recreational enjoyment of visitors. The islands are popular areas for nature study, hunting, fishing, camping, and boating.

Preserving wildlife in areas such as the Ohio River Islands Wildlife Refuge is an investment in future generations of West Virginians. It ensures that our children and grandchildren will have the opportunity to experience the immense beauty of their state and to learn the valuable lessons of nature's wonderland.

Affordable Medicines for Our Elderly Citizens

Thirty-seven years ago, in 1965, Congress created Medicare to serve as a health care safety net for Americans who, because of age or disability, did not have access to medical services. Since then, the health care industry has made giant strides in medical treatments and quality of care. At the same time, health care costs have increased significantly -- especially the cost of prescription medicines -- but Medicare has not kept pace. In fact, Medicare offers no prescription medicine coverage. The time has come to address this shortfall and to create a Medicare system that is more responsive to the needs of Americans.

Prescription medicines are one of the fastest growing sectors of the health care industry. According to the National Institute for Health Care Management, spending on these medicines jumped by 17 percent in 2001. The Congressional Budget Office projects that, over the next 10 years, drug costs for senior citizens alone are expected to total \$1.8 trillion. Such hikes threaten to make medications unaffordable for far too many Americans.

This harsh reality is why I have long supported legislative proposals to create a voluntary, universal Medicare prescription drug benefit. Congress should

craft an initiative that includes a co-payment system, modeled on the system used by many private insurance plans. A new initiative should also provide additional protections for low-income beneficiaries. Medicare beneficiaries should have the peace of mind that comes with understanding exactly what prescription medicine costs they would incur and what benefits they would receive.

In West Virginia, there are more than 335,000 Medicare beneficiaries, many of whom lack dependable, affordable coverage for prescription medicines. Many of these senior citizens live on fixed incomes and cannot afford these high priced, but very necessary, medicines. In the most unfortunate situations, seniors are forced to choose between paying for medicines that their doctors prescribe and paying for food and other basic needs. That should not be the case in the richest, most advanced nation in the world.

I hope that Congress will act to make Medicare more responsive to this unfortunate circumstance and craft a responsible, voluntary prescription medicine benefit. By doing so, Congress can help to improve the health of Americans and give peace of mind to millions of Medicare beneficiaries across the country.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Childhood Reading: A Door to Lifetime Adventure

In West Virginia and across this nation, too many children have poor reading skills. The most recent national round of reading achievement tests showed that only 29 percent of West Virginia's fourth grade students were "proficient" readers. The state's eighth grade students scored even worse, with only 27 percent receiving a "proficient" score. This means that only slightly more than one in four West Virginia students preparing to enter high school can read at an adequate level to succeed in the classroom.

In an effort to encourage more children to read, I recently partnered with the national Public Broadcasting Service and West Virginia Public Broadcasting (WVPB) in a new public service campaign to promote child literacy. This campaign, called "Ready to Learn," is designed to encourage children and parents to read to each other. The public service announcement will air on WVPB stations in the coming weeks.

Reading with children is one of the easiest and most enjoyable ways that parents can help to build the foundation in their children for a lifetime of learning. If children master reading skills at an early age, studies show that it significantly

increases their chances for later academic success.

WVPB has made childhood reading a priority in its programming. The network's early childhood education outreach efforts provide valuable instruction and training for our state's students and teachers. In addition to specialized educational programming, WVPB has conducted reading workshops for nearly 600 kindergarten and first grade teachers and has trained more than 50 childcare providers to utilize public broadcasting programs to support childhood literacy. More than 50,000 children across West Virginia have been instructed by adults who received this training. The WVPB approach has been recognized as a model initiative for the rest of the nation.

Reading opens doors to great adventures. It can take children on a journey to the center of the earth or around the world in 80 days. Reading can transport one backward in time to ancient Rome or encourage one to dream about the future. Reading teaches; it illuminates; and it challenges. I hope that more parents will instill in their children a love for reading. It not only increases a child's classroom achievement, but it also leads to a lifetime of thrilling adventure.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Roads to Economic Strength

The nation's infrastructure is the foundation of our economy. The country's roads, bridges, highways, airports and seaports, water and sewer systems -- these are core elements of a healthy, productive economy.

During my almost 50 years of service in Congress, I have focused on investing in the economic engine of infrastructure, believing that such investments not only improve the quality of life for those who directly benefit but also help to spur job growth and economic development. Whether in West Virginia or in any other state, a stronger infrastructure means a healthier, more productive economy.

That is why I found the Bush Administration's proposed budget for road construction and repair to be so baffling. The Administration is proposing a devastating \$8.6 billion cut in federal highway construction funding for the next fiscal year. According to the American Association of State Highway and Transportation Officials, that massive funding cut would result in more than 350,000 lost jobs across the country, including nearly 1,300 jobs in West Virginia.

Underfunding infrastructure investments and forcing hundreds of thousands of Americans off the job is a poor excuse for an economic assistance plan, but that is exactly what the

Administration's highway proposal would do. We have not yet begun to reverse the trends of accelerating road deterioration and worsening congestion. We should be looking for ways to move our investment in highways forward, not backward.

Recently, I won committee approval of legislation that rejects the Bush Administration proposal and, instead, advances investment in road construction. The Fiscal Year 2003 Transportation Appropriations bill restores the \$8.6 billion proposed cut and provides a total of \$31.8 billion for critical highway construction projects across the nation, thus funding backlogged repairs and upgrades while protecting hundreds of thousands of jobs. This transportation appropriations bill puts forward a responsible plan to invest in the nation's economic health.

At a time when there is great unease about the stock market and corporate financial misdeeds, it seems obvious to me that Congress should invest in initiatives that strengthen the economy instead of following Administration proposals that would accelerate its deterioration. This transportation appropriations bill will be good for the economy and for the safe travel of Americans in West Virginia and from coast to coast.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Haste Makes Waste for New Department

As America battles terrorism around the world, the Bush Administration continues to push for the rapid creation of a new federal department tasked with protecting citizens within our borders. The President's plan would constitute the largest government reorganization since the creation of the Department of Defense in 1947. His plan would shift 170,000 employees from at least 22 different agencies, shoehorning these agencies, with their widely disparate missions, into a single unit.

For instance, the President's plan would shift the Customs Service into the new Department's Border and Transportation Security division. But the Customs Service has a broader mission than simply guarding our ports. The Customs Service also is tasked with ensuring the rapid transfer of goods from port to market. That part of its mission -- expediting commerce -- runs counter to its security responsibilities. These conflicts are not limited to Customs, nor will they be easy to rectify. Congress should take sufficient time and give these problems broader consideration. We should ensure that, when this new Department opens its doors, its various agencies have a seamless mission and will provide true protections for the American people.

No lawmaker wants to be seen as delaying efforts to protect the homeland. But, in trying to avoid be-

ing labeled as obstructionists, we must not ignore even the most basic questions about the proposal -- such as will a Homeland Security Department actually make Americans safer from terrorists?

While I support the concept of a new Department, I fear that, by acting in too great a haste, the country will be more vulnerable to terrorist attack, not less. It would be far easier for terrorists to exploit loopholes in our defenses because of the chaos that will reign in the domestic security agencies during such a massive shake-up. We need to do this job right, not rushed.

Already this fiscal year, Congress has taken significant steps to strengthen the nation's security, investing \$15 billion to protect Americans from another terrorist attack and to better respond should, God forbid, another attack occur. But we should not rush in the course of a few days to create a brand new department that will have ramifications for decades to come.

Homeland security is a serious matter involving the lives and livelihoods of millions of Americans. The Administration and Members of Congress ought not offer the American people a quick bureaucratic fix but, instead, should take the time to work thoughtfully and carefully on an effective and lasting plan for the protection of the nation.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Progress Toward Lower Prescription Costs

Because of the skyrocketing cost of prescription drugs and because Medicare, which funds the health care for many senior citizens, does not provide a drug benefit, too many seniors must decide each month whether to pay for food and shelter or the life-sustaining medicine that their doctor has prescribed. That should not be the case in a country as advanced as ours.

The Senate recently approved legislation that takes a first step toward ensuring access to more affordable prescription medicines. While this legislation does not include the Medicare prescription drug benefit that I long have supported, it does provide the pharmaceutical industry with a desperately needed dose of competition.

The legislation would overhaul the laws governing the way prescription medicines are brought to market. Loopholes in current law allow brand-name drug companies to prevent less expensive generic drugs from reaching pharmacies, forcing seniors and other prescription drug users to pay top dollar for medications. This new legislation would close those loopholes.

For instance, since the patent laws were enacted, major drug companies have stifled low-cost competition with a host of tactics -- including filing frivolous patents on the color of a pill bottle and paying generic drug manufacturers not to sell their less expensive

drugs. By following such tactics, companies can charge high prices for their drugs while also delaying the arrival of less expensive alternatives for several years.

Drug companies should profit from their hard work and innovation but, once a patent expires, consumers should have the opportunity to save money by choosing cheaper generic versions of the medicines. The recently passed legislation would eliminate a number of the legal hurdles that major drug companies have utilized to keep the less expensive generic competition off the market.

For example, a drug provider charges \$115.80 for a 30-day supply of the heartburn medicine Prilosec, but the generic alternative costs only \$10.80. Similarly, Vioxx, prescribed to treat arthritis and joint pain, costs \$73.29 for a 30-day supply, while its generic version costs \$7.99. The savings for patients who are able to purchase generic versions of their medicines are substantial, while the profit motivation for major drug companies to keep these medicines from the market is obvious.

As advancements in medicines become available, it is important that they be affordable. By opening the pharmaceutical industry to greater competition, the Senate legislation begins to address the rising costs of prescription drugs that is cutting into the pocketbooks of many of West Virginia's 335,000 Medicare recipients.

Helpful Hotlines

Due to the vast number of regulations and options affecting federal programs and services, West Virginians often have questions regarding specific problems or concerns. In response, the federal government has established a system of toll-free telephone numbers that can assist West Virginians in receiving answers to their questions. With the thought that it might be helpful, I am listing some of the most commonly requested numbers.

Auto Safety Hotline ----- 1-800-424-9393
CDC National AIDS Hotline ----- 1-800-342-2437
Consumer Product Safety Commission --- 1-800-638-2772
Department of Health and Human Services (HHS)
 Cancer Hotline ----- 1-800-422-6237
DOT-Auto Safety Hotline ----- 1-888-327-4236
Eating Disorders ----- 1-800-931-2237
Energy Efficiency Clearinghouse ----- 1-800-290-8202
Federal Scholarship Information ----- 1-800-433-3243
Food & Safety Tips on Meat and Poultry - 1-800-535-4555
Hill-Burton Free Hospital Care Hotline--- 1-800-638-0742
Medicare Information ----- 1-800-633-4227
Narcotics Anonymous ----- 1-800-766-4442
National Domestic Violence Hotline ----- 1-800-799-7233
 Hearing Impaired ----- 1-800-787-3224
National Drug & Alcohol Treatment
 Referral Service (HHS) ----- 1-800-662-4357
National Flood Insurance Program ----- 1-800-427-4661
National Health Information Center ----- 1-800-336-4797
National Runaway Switchboard ----- 1-800-621-4000
 (For parents and runaways to leave messages)
Pesticide Emergency Information ----- 1-800-858-7378
Safe Drinking Water Hotline ----- 1-800-426-4792
Small Business Administration ----- 1-800-827-5722
Social Security Administration ----- 1-800-772-1213
Suicide - National "Hopeline" Network -- 1-800-784-2433
Veteran Benefits Information ----- 1-800-827-1000

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

First Responders Prepare for Terrorism Threats

With the realities of today's world, communities both large and small need to be prepared for the possibility of a terrorist attack. At the local level, the front line of counterterrorism efforts is composed of first responders -- the police officers, the firefighters, and the emergency medical personnel. As they have always been, the men and women who serve in these departments are constantly on the job, always prepared to fulfill their duty when their neighbors call for help. But the new threats of terrorism have forced these departments to refocus their training and restructure their budgets to respond to these threats.

In many cases, these departments rely on small fundraisers to pay for equipment and training. However, expanded missions and continuing threats are pushing the price of security too high for many rural communities to afford. That is why I have worked through my position as chairman of the Senate Appropriations Committee to provide funds for local first responders. In legislation this year, I have added \$610 million in emergency funds for local law enforcement and firefighters. These dollars are making an important difference in West Virginia and across the nation, assisting police and firefighters in their efforts

to prepare for the possibility of terrorism close to home.

In West Virginia, several fire departments already are benefiting from these funds. In fact, departments in 16 counties are sharing in more than \$1 million, and more grants will be announced in the coming weeks.

Terrorist incidents are primarily local events. The immediate response to the attacks at the World Trade Centers came from the police and firefighters in New York City. The immediate response to the attack at the Pentagon came from the first responders in the neighboring communities. These events bear out the critical need for well-prepared, well-equipped local emergency response teams. The ramifications of an ill-prepared local community, in today's world, are too large.

First responders likely will act alone in the initial critical moments of any emergency, no matter how large or small. In those moments, lives will be saved. But these first responders cannot be expected to fund the fight against terrorism with bake sales and bingo nights. That is why the support of the federal government, both in terms of funding and training, is so important for local police, firefighters, and emergency medical personnel.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Corridor Highways: Roads to Progress

In 1965, the Appalachian Regional Commission crafted a plan to build a network of roads to link interstate highways and to bring economic opportunities into the hills and hollows of the Appalachian states. I supported the creation of the Appalachian Regional Commission, I supported the creation of the Appalachian Corridor Highway System, and I have supported, and added hundreds of millions of dollars to, appropriations bills in order to promote the completion of that system of Appalachian highways.

Recently, Governor Bob Wise and I dedicated the latest sections of the Corridor system, opening the first miles of Corridor H east of Elkins. These miles in Randolph County and in Hardy County represent the first progress on Corridor H since 1990, and they bring West Virginia that much closer to an integrated system of safe, modern roads.

In 1947, when I served in the West Virginia House of Delegates, there were only four miles of divided four-lane highway throughout the entire state, and even these did not show up on a West Virginia road map. A Saturday Evening Post story in 1960 stated that West Virginia's highway system was "decades behind that of its neighbors." Those words were seared into my memory, and I have made

it a mission of mine to obtain funding to improve West Virginia's transportation network.

With the eight new miles of Corridor H, there are now more than 1,000 miles of divided four-lane highway throughout West Virginia. These new miles represent not just safety and efficiency. They are not just concrete ribbons connecting community to community. This road and highways like it are also seeds which feed prosperity and nourish a better life for all West Virginians. They provide jobs, link rural communities to hospitals and clinics, and promote tourism.

Much work is still to be done to complete the Corridor Highway system in West Virginia. The Corridor D bypass in Wood County is still under construction, and Corridor H will not be completed until 2010. But we are making progress.

I look forward to the completion of each mile of these roads because they provide a safer, more modern route for the West Virginians who live along it and for visitors who come to discover the beautiful scenery of our state. But also, and more personally, I look forward to their advancement because, upon completion, they will connect the nation to the heart of our state with four-lane roads that travel through -- not around -- West Virginia.

Renewed Determination on Mine Safety

This summer, the nation was captivated by an amazing story of survival and determination. Nine miners managed to endure being trapped in a flooded Pennsylvania mine for nearly 72 hours until they were brought to safety by a crew of relentless rescue workers who were resolved to beat the odds. People from coast to coast watched events unfold until, thankfully, the last miner safely reached the surface.

Communities in West Virginia and across the nation know all too well these tense vigils. They know the dangers that accompany coal mining. There will always be tragedies that can neither be foreseen nor prevented. In fact, the Department of Labor reports that last year there were 43 coal mining fatalities nationwide, including 12 deaths in West Virginia. That is why it is so important to train miners in the best ways to handle potential life or death situations.

Recognizing the importance of mine safety, in 1969, I suggested that the federal government create a mine safety training facility to better prepare miners for the risks they face on a daily basis. In 1976, what is now known as the Department of Labor's Mine Safety and Health Academy opened in Beckley. Since its inception, I have obtained more than \$30 million for the

Beckley mining academy, which played a crucial role in the rescue in Pennsylvania.

Not only was the specialized rescue equipment used in Pennsylvania housed in Beckley, but many of the experts on the scene received their training from the Raleigh County facility. In fact, each year, the Mine Safety and Health Academy trains more than 3,000 men and women in mine rescue and survival techniques. The successful Pennsylvania rescue exemplifies how the proper training can bring a happy ending to even the most treacherous of situations.

Early in the 20th century, coal mining took the lives of 1,000 to 3,000 coal miners each year. In the year before the academy was established in Beckley, 155 coal miners were killed in work-related tragedies. While Americans can look back with justifiable pride over the accomplishments of the National Mine Health and Safety Academy over the past quarter-century, we must not become complacent. Instead, we must renew our determination to do even better in the years ahead. I am thankful for the many lives saved by the skills taught at the mine safety academy, and it is my hope that the academy will continue to do the good work for which it was originally created.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

West Virginians' Voice in the Iraq Debate

In the coming days, Congress, the Bush Administration, and the entire nation will engage in the debate surrounding whether to commit American military forces to battle against Iraq. For a Member of Congress, there is no discussion more somber, no decision more critical as the decision whether to send the nation's sons and daughters to war. It is a decision which should never be left solely to an elite few in Washington. This decision should be studied and discussed by all Americans.

Every West Virginian should play a role in the national debate concerning whether our country should launch an unprovoked attack on Iraq. Consider the crucial questions. Does Saddam Hussein pose an imminent threat to the United States? Should the United States act alone? Should Congress grant the President authority to launch a preemptive attack on Iraq? What would be the repercussions around the globe? These and other questions are not simple to answer.

Without a solid foundation of knowledge upon which to analyze the serious issues involved, Americans will be buffeted this way and that way by spin doctors, by politicians seeking to follow the latest opinion polls, and by talk shows which often have an edito-

rial agenda. Americans should arm themselves with information so that they can cut through the fog, discern the truth, and recognize attempts at manipulation.

The American constitutional system of government has an inherent system of checks and balances which the Framers crafted to keep the American people free and to protect our liberties from being arbitrarily swept aside. The power of the purse, which resides with the Legislative Branch, is the ultimate check on an overreaching Executive and a prime guarantor of the people's freedoms. But there is another power which can serve as a check against abuses by overzealous government officials and that is the power of the informed citizenry -- a citizenry that is well equipped to judge truths from falsehoods. An informed citizenry is essential to preserving a republic such as ours.

This is a nation "of the people, by the people, and for the people." Never in our history has the role of a knowledgeable people been more important than in these turbulent days. An informed citizenry has to participate, ask questions, and demand answers and accountability. It is up to each American to do what he or she can do to provide the all-important check on power -- the wisdom of the people.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Fuel for Innovation

During the last century, coal powered dynamic innovations in technology development, manufacturing, communications, and transportation. However, as the United States prospered, Americans have become more concerned about the environmental impacts of coal. In response, the federal government and private industry have forged a research partnership that is leading to more efficient, environmentally friendly methods to utilize coal for many decades to come.

Coal now competes with a diverse mix of energy sources. Rather than be supplanted by solar arrays or wind farms, coal has relied on new technologies to become increasingly cleaner and more efficient, producing only a small fraction of the emissions that it did just 25 years ago. Many of these new practices are designed and developed at the National Energy Technology Laboratory, based in Morgantown. The laboratory's scientists are lighting a path for a new era of energy use. In fact, the federal investment in clean coal technologies has led to 40 first-of-a-kind projects in 18 states, including an array of high-technology ideas that can spearhead a new era of clean, efficient power plants which will continue to burn the nation's abundant coal resources.

But this is not enough. The challenges facing fossil fuels in general and coal in particular are great. That is why, in the Senate, I have consistently sought new opportunities that can help to ensure a bright future for coal. As Chairman of the Senate Appropriations Committee, I secured \$150 million for new clean coal initiatives last year. I authored another measure that added nearly \$2 billion in tax incentives to assist in the deployment of clean coal technologies in the marketplace. The Senate adopted my proposal as part of a national energy strategy approved this summer.

Coal is a part of the shared heritage of West Virginia. Coal is the most abundant, affordable, and accessible fossil energy source in the United States. That is why I continue to work to fund programs that will allow for the production and consumption of cleaner coal.

America witnessed great advancements over the course of the 20th century, and the new century promises inventions that one can only dream about today. But one fact will remain constant during the coming decades, namely, coal will remain the cornerstone of the nation's energy strategy and will continue to power innovation and change.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Awareness Saves Lives

October is Breast Cancer Awareness Month, a time to encourage all women to take an active role in their health and well being. Knowledge is power and, in the case of breast cancer prevention, knowledge can save lives.

Breast cancer is the second leading cause of cancer death for women in the United States. In West Virginia, the American Cancer Society estimates that this year 1,500 women will be diagnosed with breast cancer and nearly 300 women will die from the disease. Nationwide, one of every eight women will develop breast cancer in her lifetime. More than 39,600 women will lose their battle with the disease this year, while 203,500 will begin their fight.

Advancements in treatments and detection are giving women a better chance of surviving breast cancer and leading a happy, active life. But finding the disease early is the most important step to improving a woman's chance of long-term survival.

According to the American Cancer Society, the most effective way to detect breast cancer is through a combination of clinical breast exams, regular self-exams, and routine mammograms. A mammogram is a simple and fast procedure available at many of the clinics and hospitals across West Virginia. Women should consult with

their physicians to determine which method of detection is most appropriate for them.

For many years, I have supported increases in cancer research funding and the development of new facilities. The statewide breast and cervical cancer prevention, education, and screening project, launched in 1990 with funds I added to an appropriations bill, offers screenings to West Virginians who otherwise might not have access to such tests. I was also a cosponsor of a new law that allows Medicaid coverage for the treatment of low-income women diagnosed with breast and cervical cancer.

Scientists at the Robert C. Byrd Health Sciences Center, home of the Mary Babb Randolph Cancer Center at West Virginia University, are constantly searching for new cancer treatments. The Cancer Center is West Virginia's first statewide cancer research and treatment facility.

I hope that these efforts, combined with research underway across the country, will one day lead to a cure for cancer. But, until there is a cure, the battle against cancer must be waged in every home in West Virginia. Encourage loved ones to take the necessary steps to detect signs of the disease. Prevention and early detection are the keys to beating the odds.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Elections Matter

Two years ago, the nation watched closely as the last votes were counted in the election for president. The race went down to the wire. At the end, with more than 105 million votes cast across the nation, the election came down to the results of a single state -- Florida. In that state, when the final ballots were counted, George W. Bush won by a mere 537 votes and thereby won the national election.

This November, candidates across the country will seek election to Congressional, state, and local offices. Whether the nation will witness another race as close as the last presidential contest remains to be seen. But what should be clear from that recent history is the importance of every single vote. By voting, a person plays an active role in the government. One plays a role in determining what policies will be debated and implemented. This is as true for a city council or a county school board election as it is true for the election of a Member of Congress. Each vote counts. Each vote makes a difference.

Unfortunately, in the last presidential election, only 60 percent of the registered voters in West Virginia took the time to vote. Nationally, 67 percent of the registered voters cast ballots. It is beyond disappointing that American citizens would fail to appreciate and exercise this important responsibility. Participation in elections is the central means by which the American people can influence the future of the nation.

These are critical times for our state and for our country. Issues involving war and peace, the economy, retirement benefits, health care, education, Social Security, Medicare, and so many others are at stake in this election. Participation is key. This election will set the agenda for the next two years at all levels of government.

West Virginia is a very patriotic state. Our state's residents have never flinched in the defense of our country. Let West Virginia also show the nation that true patriotism requires us to do our duty at the ballot box. On November 5, go to the polls and vote.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Staying True to West Virginia Workers

The U.S. steel industry continues to falter beneath unprecedented economic strain. The industry's longevity hangs in the balance as companies struggle to keep their doors open and maintain precious jobs for American steelworkers. West Virginia's steelmakers have not been immune to these pressures. They have cut hundreds of jobs in an effort to remain solvent. That is why I have worked so hard to provide critical assistance to American steel producers to see them through this crisis.

For example, two years ago I championed a trade law called the Continued Dumping and Subsidy Offset Act that has been particularly important to U.S. steel and manufacturing companies. Under this law, more commonly known as the "Byrd Amendment," the U.S. Customs Service collects duties on products that have been unfairly subsidized or dumped in the American market. The duties assessed against the foreign products are then provided to U.S. companies to reimburse them for the costs associated with acquiring new equipment, implementing advanced technology, and providing workers' health and pension benefits.

Recently, the World Trade Organization (WTO) claimed that my initiative violates international trade agreements and wanted the

Byrd Amendment to be repealed. This ruling ignores the fact that the only reason that the Customs Service collects these fines is because foreign countries break the very trade agreements that they negotiated with the United States. Quite simply, if foreign nations would stop breaking trade agreements, then they would not be assessed fines.

The WTO's Byrd Amendment ruling is so clearly wrong that U.S. Trade Representative Robert Zoellick personally has assured me that he is appealing the ruling and will fight it vigorously. Unless reversed on appeal, the WTO panel's ruling will undermine America's competitiveness and diminish the ability of U.S. companies to invest in their workers' futures.

For the next few years, America will be involved in international trade negotiations with more than 140 other WTO members. At the top of the American demands ought to be an insistence that our foreign trading partners operate without subsidies and without granting their own companies unfair advantages. Until they do, I will continue to back initiatives like the Byrd Amendment which help to provide some assistance to American companies that have suffered for too long because of unjust foreign trade practices.

Teaming to Protect Communities

West Virginians are blessed to live in one of the safest states in the country, according to national crime statistics. That fact is a credit to West Virginia's citizens and law enforcement agencies which work together to prevent crime in our neighborhoods. Local police and private citizens team up to ensure that West Virginia's communities remain safe havens in which to work and play.

But protecting our populace is not an easy nor an inexpensive undertaking. Police forces struggle to fulfill their duty under tight budget constraints. That is why I have worked in the Senate to provide new resources for law enforcement. In various federal appropriations bills this year, I have included hundreds of millions of dollars to help train and equip police departments and other emergency responders as part of their expanded homeland security efforts.

Another key federal support for local law enforcement is the Community Oriented Policing Services (COPS) grant initiative. Established in 1994, COPS grants help to hire new officers, to purchase new equipment, and to develop school safety programs. In that same year, I authored legislation to establish the Violent Crime Reduction Trust Fund to guarantee that COPS and other crime-fighting initiatives receive federal funding. Most recently,

my Senate Appropriations Committee crafted legislation providing \$1 billion for the COPS program.

West Virginia police departments credit the COPS initiative for enabling them to implement innovative crimefighting strategies and to build strong partnerships between law enforcement officials and the communities which they protect. COPS grants allow police departments to tailor their crimefighting efforts to the specific needs of local communities.

Since its inception, the COPS initiative has invested nearly \$40 million in 165 West Virginia local and state law enforcement agencies. COPS grants have helped to hire more than 690 new police officers and sheriffs' deputies who are on the job protecting our homes and businesses. These grants also have provided funds to improve school safety in West Virginia schools. By empowering school districts to prevent crime, the COPS program helps to maintain schools as institutions dedicated to teaching and learning, and not as places where violence rules the day.

There is no single answer to the problem of crime. But strong partnerships between local law enforcement agencies and the communities that they serve are key. By working together, we can continue West Virginia's long tradition as one of the safest states in the nation.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A National Crime-Fighting Tool in West Virginia

The Mountain State is home to one of the most advanced and most widely used law enforcement facilities in the nation. The Federal Bureau of Investigation's (FBI) Criminal Justice Information Services Division in Harrison County provides state-of-the-art identification and information services to local, state, federal, and international criminal justice communities. Through the Clarksburg complex, the FBI is working with state and local law enforcement agencies to make our communities safer places to live and work.

Criminal identification by means of fingerprints is one of the most potent factors in apprehending fugitives who might otherwise escape arrest and continue their criminal activities indefinitely. More than a decade ago, escape was much more likely because the FBI relied on an antiquated paper-based system of matching fingerprints with suspects. That system simply did not work in the modern age. The FBI had 32 million fingerprint cards on file -- enough that if stacked one on top of another would be 13 times as high as the Empire State Building. Matching by hand a local suspect's fingerprints with one of those cards was a daunting challenge that often resulted in the suspect going free before the FBI determined that the suspect was wanted in another jurisdiction.

When the FBI approached me about the problem, I added \$185 million to an appropriations bill to construct an ultramodern FBI complex. Since that time, I have obtained more than \$800 million for development of the computerization. The return on that investment is impressive. Today, when a local police department submits a set of fingerprints to the FBI, more than 94 percent of the time the FBI can utilize its new technology to determine, within two hours, if a suspect has a criminal history. That speed can make a big difference.

At the same time, because of this system, the FBI is solving what, up until now, have been unsolvable cases. Through its modern technologies, the FBI has been processing latent fingerprints taken at a crime scene and matching them to suspects with prior criminal records, finally providing closure to some victims and families who have been haunted by long unpunished crimes.

The Harrison County FBI Complex has helped to revolutionize the nation's crime-fighting effort. West Virginians can be proud of the fact that our state is home to a world-class initiative geared toward helping the entire nation to realize a better, safer quality of life.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Telling the Story of West Virginia Veterans

West Virginians have never flinched when called to military service, always answering the call of their nation to duty. The experiences of these veterans are shared through tales of sacrifice and courage, of hardship and danger, of loss and survival. Their stories are the stories of veterans across the country.

The Library of Congress has undertaken the mission of preserving those stories for generations to come. Through its Veterans History Project, the Library is collecting the memories, accounts, and documents of war veterans and of those who served in support of them during World War I, World War II, and the Korean, Vietnam, and Persian Gulf conflicts. This national collection of artifacts will be available for use by all Americans, including students, teachers, researchers, and other veterans.

The Veterans History Project is only possible with the help of others. Various organizations in West Virginia have agreed to partner with the Library of Congress to record veterans' stories. West Virginia University, the West Virginia National Guard, and Marshall University are among the organizations which are gathering veterans' histories in the Mountain State. A full list of partners is available on my Internet site, <http://byrd.senate.gov>, or on the Library of

Congress site, <http://www.loc.gov>. As more organizations join in this effort, those lists will be updated.

Across the country, there are more than 19 million veterans, including approximately 202,000 in West Virginia. Each has a unique story to tell of service to country. In just the short time since its creation, the Veterans History Project has started to amass a remarkable collection of interviews and documentary materials that spans much of the 20th century. The collection includes compelling accounts of wartime service from men and women representing many ranks, jobs, branches of service, and theaters of war. I encourage West Virginia veterans to contact one of the partner organizations and ensure that their stories and recollections are saved for posterity.

The nation's veterans have repeatedly risked life and limb to defend the values that Americans hold dear. Veterans can pass on the lessons that they have learned to a younger generation, thereby ensuring that their experiences will extend long into the future. The men and women who serve in the Armed Forces are nothing short of heroes who have helped to shape history. The fabric of our nation is made richer when the embodiment of history, our nation's veterans, share their knowledge.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Giving Thanks for a Year of Blessings

Once again, Thanksgiving is upon us and West Virginians are preparing to give thanks to the Creator for His many blessings on our land. After the scares of last year and with the possibility of war looming ahead of us, the Thanksgiving feast, the epitome of family tradition, is more precious and appreciated than ever.

The nation, too, feels stronger. We are more aware of ourselves as citizens of one land rather than as an eclectic mix of communities with little connection to each other. This year, as a nation, we feared the sniper that stalked the national capital area. As a nation, we pulled for the miners trapped underground in Pennsylvania. As a nation, we follow the hunt for terrorists and mourn for the victims of terrorist acts committed around the world. The flags that have flown in yards nationwide since September 11, 2001, are still flying in our hearts.

Our military, with the National Guard and Reserve forces, is more unified this Thanksgiving. All are under the strain of extended deployments, but all are working together. I am thankful for their efforts and offer a prayer for each of the nation's men and women in uniform and their families. We ought to re-

member and be thankful for their efforts.

We also should remember the firemen, police, and lifesaving crews who have performed so heroically during the crises of the past year and more. People are alive today because of their efforts, and their future diligence may make the difference for all of us in the future.

At the first Thanksgiving, the settlers thanked Providence for seeing them through a difficult year. It is a daunting task, to carve a homestead out of the wilderness thousands of miles from anything familiar. Each log had to be cut with an axe, dragged to the site, and lifted by hand into place. Fields had to be cleared, planted, and tended, and game had to be hunted and cured, or there would be no food, let alone a Thanksgiving feast.

This year, we gather with our loved ones, each house a glowing lamp of civilization in an increasingly hostile world. But for a day, we can easily push our nagging fears aside and find comfort in the warm bonds of family affection. As we polish the silverware, set the table, and prepare and serve the delicious food, we should give thanks for life's greatest gift -- our families.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Developing a New Industry in West Virginia

At a time when concerns about security are constantly growing, the Mountain State is poised to help lead the country in the development of cutting-edge technologies that help to make computer networks safer from cyberattack. These technologies, called biometrics, protect information as large as electronic military networks or as personalized as one's banking or medical records. Biometrics utilize characteristics that are unique to an individual -- such as the pattern of the iris of the eye or the shape of one's hand or face -- in order to verify the identity of that individual.

West Virginia's role in biometrics began four years ago when the Department of Defense (DoD) approached me with concerns that terrorist organizations and rogue nations were attempting to break into the Pentagon's electronic networks. DoD officials believed that biometrics could provide the necessary security to protect critical information from would-be attackers. Since then, I have included \$92 million in appropriations bills to test biometrics identification systems and to develop a prototype security network for the Defense Department.

As it moved ahead, the DoD looked to those running the nation's largest biometrics repository for guidance. At my request, DoD officials toured the FBI Complex in Harrison County, which houses thousands of fingerprints electronically, and saw first-

hand the expertise that already called West Virginia home. After the visit, the DoD decided to open an interim Biometrics Fusion Center in Harrison County in 2000 to test various security approaches. That center has performed so well that the Defense Department is considering various West Virginia locations for a permanent testing facility.

The biometrics effort is not limited to the Defense Department. Recently, I announced that West Virginia University and five other companies and non-profit organizations in the state have been selected to lend their high-tech expertise to the critical work underway at the Harrison County center. This work will contribute to the country's ability to defend its electronic and computer information -- ranging from national security secrets to electrical grids or to drinking water systems -- from cyberattack.

As new technologies develop, the Mountain State is well-positioned to help lead the way. With the Biometrics Fusion Center and the combined expertise of WVU and several West Virginia companies, the state is gaining significant momentum in this young field. Not long ago, biometrics was strictly the stuff of science fiction. But what some people can dream, others can invent. West Virginia has demonstrated the foresight to embrace this state-of-the-art technology and is well positioned to lead in its development.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Steer Clear of Drunk Driving

The holiday season is upon us, bringing many opportunities to celebrate with family and friends. While many of the memories of this season will be bright, for some West Virginians the holidays will be filled with the tragedy of a loved one killed by a drunk driver. It is a scene that is played out far too often across the country.

A recent report card by Mothers Against Drunk Driving (MADD) found that, while alcohol-related traffic deaths dropped by 40 percent between 1980 and 1993, progress has stalled. In fact, during the past three years, the declining trend of drunk driving deaths has reversed course and climbed by five percent. Last year, 17,448 people were killed in alcohol-related crashes throughout the nation. In West Virginia in 2001, 36 percent of all traffic deaths were alcohol related. That translates to 135 lives that could have been saved in West Virginia -- if a driver had the sense not to drink before climbing behind the wheel of the car.

The holiday season is one of several higher-risk periods when people need

to be aware of the dangers of mixing alcohol with driving. Last year nationally, between Thanksgiving and New Year's Eve, 2,053 people were killed in alcohol-related traffic crashes, representing 41.5 percent of the people killed in vehicle crashes during that period. Of all traffic deaths across the country during the New Year's holiday, more than half were alcohol-related.

The statistics are sobering. They should remind all of us of the dangers of drinking.

Throughout this special season, it is important to remember what is truly important: family and friends. This season of the spirit is a good time to be thankful for the blessings that the Creator has bestowed upon us. But the holidays are not an excuse to drink and drive. 'Tis the season to be jolly, not drunk.

I offer my deepest hope that, in these last days of 2002, West Virginians show thoughtful concern for themselves and for the safety of others before taking to the highways. Cork the wine bottle. Cap the beer. Celebrate the season, but celebrate it sober.

December 4, 2002

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Roads to Progress

In 1965, Congress adopted the Appalachian Regional Development Act which promised a network of highways to connect Appalachia to the rest of the nation's highway network and to the rest of the nation's economy. While the country has virtually completed the Interstate Highway System, the people of West Virginia and the rest of the 13-state Appalachian region are still waiting for the federal government to live up to its promise on Appalachian Corridor Highways. That system is 78 percent complete throughout the region but, in West Virginia, only 72 percent of the Appalachian Corridor Highway system is open to traffic.

In 1998, Congress passed the Transportation Equity Act for the 21st Century (TEA-21). This legislation signaled a new day for Appalachian Corridor Highways. Because of a provision that I championed in that bill, TEA-21 took a great leap forward by authorizing direct contract authority from the Highway Trust Fund to the states for the construction of these roads. Until that point, funding for Corridor Highways had struggled with uncertain and inconsistent resources. By providing the states of Appalachia with a predictable source of construction funds, I reinvigorated efforts to honor the promise made to the people of the Appalachian region.

Soon, Congress will be-

gin debate on a new transportation bill. How this legislation is written will be key for West Virginia's future. This bill again will authorize funding for the Appalachian Corridor Highways. Congress, in concert with the Administration, needs to finally complete that highway system.

From the time they were first planned more than 35 years ago, Appalachian Corridor Highways have been recognized as essential pathways for prosperity in an economically challenged region. They provide for a freer flow of commerce which is essential to opening new opportunities to the people of Appalachia -- opportunities that have largely bypassed the region for decades. These four-lane highways also provide safer and more modern alternatives to what have been among the most dangerous roads throughout the state.

I have always believed that a modern, efficient highway network is one of West Virginia's most pressing needs and is necessary for promoting economic development and job creation in our state. While it will be extremely difficult to accomplish under this current national Administration, I will work in the coming months to provide sufficient funding for Appalachian Corridor highways and to ensure that West Virginians, who have been waiting for these better, safer roads, can begin to see the light at the end of the tunnel.

Byrd's-Eye View

The Christmas Story

Today, Christmas is filled with deadlines, shopping lists, and Santa Claus. In the rush to wrap presents and decorate the tree, though, it is easy to lose sight of the real meaning of Christmas.

The focus on material gifts underscores the sad reality that, all too often in our nation today, what one has is more important than what one is.

In this holiday hustle and bustle, it is good to return to the Bible and remember the true meaning of Christmas. Luke, in his Gospel, writes:

"All went to be taxed, every one into his own city. And Joseph also went up from Galilee, out of the city of Nazareth, into Judaea, unto the city of David, which is called Bethlehem; (because he was of the house and lineage of David:) to be taxed with Mary his espoused wife, being great with child.

"And so it was, that, while they were there, the days were accomplished that she should be delivered. And she brought forth her firstborn son, and wrapped him in swaddling clothes, and laid him in a manger; because there was no room for them in the inn.

"And there were in the same country shepherds abiding in the field, keep-

ing watch over their flock by night.

"And, lo, the angel of the Lord came upon them, and the glory of the Lord shone round about them: and they were sore afraid.

"And the angel said unto them, Fear not: for, behold, I bring you good tidings of great joy, which shall be to all people. For unto you is born this day in the city of David a Saviour, which is Christ the Lord. And this shall be a sign unto you; Ye shall find the babe wrapped in swaddling clothes, lying in a manger.

"And suddenly there was with the angel a multitude of the heavenly host praising God, and saying, Glory to God in the highest, and on earth peace, good will toward men."

This Christmas season, let us stop to ponder the true meaning of those simple and beautiful passages.

Let us appreciate anew the miracle of small children, the joy of family, and the peace that comes with closeness to one's God and kindness toward one's fellow men. Erma and I wish for you a safe, happy, and holy Christmas and New Year.

May God continue to bless this wonderful country and guide each of us toward a deeper sense of the spiritual in our lives.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Welcome to a New Year

As West Virginians turn the page on another year, it is a good time to recall the memories of the past while also looking ahead with hopeful eyes to the future. Reflecting on the five decades that I have served West Virginia in Congress, I have seen the state grow in magnificent ways. We have witnessed a dramatic expansion in opportunities for our young people. We have created innovative energy technologies that are helping to power the world. We have developed new medicines that are curing and preventing previously untreatable illnesses. Yet, with all of the advancements and changes, West Virginians have never lost sight of the old values that make our state unique.

Today, faith resides in the West Virginia hills just as surely as it did when I was a youth living in her southern coal mining communities and in the hills of Mercer County. Faith is what has kept us going when hope has been in short supply. But it is hope that shapes our vision of the future, and drives us to achieve our dreams. The

Bible teaches us, "Remove not the ancient landmarks which thy fathers have set." I hope that West Virginians will continue to preserve and honor the old values that guided and sustained our fathers and mothers and more distant ancestors in their daily lives and in the life of our state from its earliest beginnings.

As we cross the threshold into a new year, I urge my fellow West Virginians to build their futures on the development of the human mind and the rock of the human spirit. I hope that more West Virginians will understand the necessity of education and the value of our schools. Our state's future in fields of business, industry, science, and medicine waits for bright West Virginia intellects to open doors to those fields.

I extend to everyone my best wishes for a happy and safe new year. With God's will, West Virginians will continue to cherish and strengthen the traditional values that have served us so well, while we continue to build our state and prepare to meet the challenges that surely await us in the months and years ahead.

December 25, 2002

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Innovation: Engine for Job Growth

When I was growing up in Southern West Virginia, there was no computer line running to our home. I literally had to crank the telephone hanging on the wall in order to call a friend down the road. Coal was king. For many West Virginians, the coal company owned the house, the local store, and the doctor's office. If one ran out of U.S. currency, company scrip paid for the groceries. When the coal company pulled out of a town, the town, often, disappeared, too.

Today, while West Virginia's economy still relies on coal and the state's other core industries, we are witnessing a transition to a high-tech economy.

For example, the Touchstone Research Laboratory in Triadelphia is making great strides in the development of new materials using West Virginia coal. Just recently, I announced that Touchstone and the U.S. Navy are developing new materials for the construction of ship bulkheads. Using a Touchstone product called carbon foam, which does not burn, the Navy is hoping to build safer, lighter, and less expensive ships. Touchstone, which started as a small business in the basement of a house in Wheeling, has developed into a cutting-edge research and development firm that is helping to create new economic oppor-

tunities in West Virginia.

HGO Technology is another example of success. HGO has been a part of Wheeling for 15 years. Today, the company has more than 60 employees who specialize in computer network engineering, consulting, and software development. The U.S. Census Bureau utilizes software developed by HGO to encode its data. As a result, software designed in West Virginia is tabulating and analyzing every one of the 275 million questionnaires that the Census Bureau collected in 2000. The company's expertise is also benefiting groups like the U.S. Air Force and NASA. HGO is applying local know-how and superior capabilities to streamline and improve vital government functions.

I look forward to continuing my efforts in the Senate to promote these and other innovative efforts. From unprecedented advances in medicine, to new manufacturing techniques, to breakthrough computer technologies, the nation is in the midst of a technological revolution, and West Virginia is helping to shape this revolution. The foundations that we build and the opportunities that we create certainly will provide benefits for us today. At the same time, these foundations will help to develop new industries and new economic possibilities for many decades to come.

January 1, 2003

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Pressing Ahead for Autism Research

A new federal study is raising the awareness of parents about an often misdiagnosed childhood illness. Autism is a mysterious disease that affects brain and nerve development. Autism and its related diseases are generally manifested in children in the first two years of life, severely impairing language and communication skills, and impeding social development. The cause of these illnesses has not been found. However, doctors are pressing forward aggressively not only to treat the symptoms but also to find a cure.

In a just-released study, the U.S. Centers for Disease Control and Prevention (CDC) found a marked increase in the number of diagnosed cases of autism and related conditions in American children over the past two decades.

The CDC study found an incidence of 3.4 cases per 1,000 children, age three to ten. That result is ten times higher than rates from previous U.S. studies that measured the prevalence of children with autism and pervasive developmental disorders in the 1980's and early 1990's. Some of the increase is the result of expanded definitions of the disorder and better diagnosis, but the explanation for the rest of the increase is unknown.

The Mountain State is fortunate to be a national leader in autism treatment. The West Virginia Autism

Training Center, based at Marshall University, provides valuable services and training for sufferers and their families. The center's staff helps autistic individuals and their families to improve the quality of their lives. Since its inception in 1983, hundreds of families of autistic children have benefited from the center's efforts. In fact, the demand for services was so great that a satellite facility was established in Fairmont in 1997 and another just outside of Weirton last year. Now, autism treatments are much closer to home for families in Northern West Virginia.

I am proud to have played a small role in the success of this important center. Beginning in 1994, I championed Congressional approval of federal funds for the Training Center. Now, the Centers for Disease Control and Prevention recognizes the center's commitment to the treatment of young people and, with my support, includes critical funding for the West Virginia facility in its annual budget.

By learning from the West Virginia Autism Training Center and investing in federally funded research initiatives throughout the country, we can begin better to understand the causes of autism, how to treat it effectively, and, with hope one day soon, how to prevent it.

January 8, 2003

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Sustaining the Steel Industry

The American steel industry continues to struggle beneath ongoing financial strain caused by unfair foreign trade practices. A special investigation by the International Trade Commission found that the domestic steel industry has been seriously injured by the dumping of cheap foreign steel into the U.S. market. As a result of that finding, the federal government, beginning last March, placed tariffs on imported steel in an effort to make American steel more competitive. I support this effort and have worked throughout my career to stand up for steelworkers in West Virginia and across the country. I will continue to speak out for steel, especially as the future of the industry hangs in the balance.

In 1999, I created the \$1 billion Emergency Steel Loan Guarantee initiative to provide domestic steelmakers with access to funds to help alleviate the financial damage caused by foreign steel dumping. This program provides short-term relief for U.S. companies in a vital sector of the national economy. The initiative needs to be fully funded to give steel companies the greatest flexibility possible to restructure their operations, improve their productivity, and sustain themselves amidst prolonged financial difficulties.

Despite the demonstrated need for the Emergency Steel Loan Guarantee program, President

Bush's most recent budget cut \$96 million from the initiative. If Congress rejects this short-sighted Administration proposal, which I hope it will, the President is expected to push for an even larger cut in next year's budget request. By advocating such cuts, the Administration ignores the needs of the country's steelworkers when they are most in need of support. While the Bush Administration provides lip-service support for steel in its rhetoric, its policies are far from friendly to the American steel industry and its workers.

Together with 16 other Senators, I recently wrote to the President to express strong opposition to these ill-timed cuts which would effectively gut the Emergency Steel Loan Guarantee program. Eliminating these guarantees would leave financially distressed steel companies with nowhere to turn and would contribute to the demise of steel communities in West Virginia and across the country.

At a time when the nation's economy is hurting, we should not walk away from an industry that employs tens of thousands of Americans. The steel loan guarantees, coupled with other federal efforts, are imperative to the nation's long-term economic health. I urge the Bush Administration to end its efforts to dismantle this critical initiative.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

America's Energy Future Begins in West Virginia

In Congress this year, one priority must be the completion of a comprehensive national energy strategy. This is critical for West Virginia, which is one of the nation's leading producers of fossil fuels, particularly coal and natural gas.

Because of political agendas, the chance to complete energy legislation evaporated last year. But the issues of America's energy independence and the realities of climate change, which invariably result from energy use, are too important to let wither on the vine of partisan intransigence.

A comprehensive energy plan requires an understanding that energy, economic, and environmental goals are not mutually exclusive. If the United States is to be more energy independent, we must intensify the use of domestic energy resources in an economically and environmentally sound manner.

As part of the new national energy plan, I proposed legislation last summer to ensure a key role for fossil fuels in an energy diverse future. My initiative contains a \$2 billion, ten-year clean coal technology demonstration program to help speed these enhancements from the laboratory to the marketplace. Finally, my proposal calls for clean-coal tax incentives which will help industries to install clean coal technologies around the country.

I also have authored an

initiative that would address the long-term challenge of climate change. Based on scientifically, technically, and economically sound principles, my plan would put in place a coordinated climate change strategy, including a renewed commitment to develop the next generation of innovative energy technologies. This effort would commit more than \$4 billion during the next decade to vastly expand American technologies that can help to reduce the threat of global climate change. The bipartisan package I authored also provides for the creation of an administrative structure within the federal government to coordinate and implement a national climate change strategy. While some people may still debate the science of climate change, the fundamentals are obvious. The world is warming, and the increasing appetite for energy is a key contributor.

As Congress resumes work on energy legislation, it is critically important for that legislation to be balanced. Only legislation that commits to critical research and development of new fossil fuel technologies and also commits to address the problem of climate change can begin to place America on the road to a sustainable and environmentally sound energy future. By utilizing a full range of energy resources, technologies, and ideas, that future is possible.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

New Resources to Counter Obesity

Obesity is a serious disease which concerns much more than outward appearances. Being severely overweight is both a health risk and a growing epidemic which threatens the lives of many Americans. Doctors report that obese Americans have a much greater chance to contract heart disease, diabetes, some cancers, hypertension, respiratory disease, arthritis, and a host of other medical ailments. But the risks associated with obesity can be decreased with innovative research and prevention programs, which soon will be easier to access in West Virginia where prevalence of the disease is particularly high.

Utilizing \$2 million that I added to a federal appropriations bill last year, a new Center for Healthy Communities is being established at West Virginia University (WVU). The center will work with community health professionals and researchers to initiate effective programs to fight obesity throughout the state. I also have pushed for increased federal funding for the Centers for Disease Control and Prevention's efforts to create nutrition and physical activity programs that address obesity and other chronic diseases. These efforts will help to meet an important national health objective for

the year 2010: namely, to reduce the prevalence of obesity among adults from its current 21 percent to 15 percent.

Meeting this target will have critical health benefits for Americans. According to the U.S. Surgeon General, approximately 300,000 premature deaths across the nation each year are associated with being overweight and obese. Furthermore, these conditions account for health-related costs of more than \$100 billion annually.

As a nation, we cannot ignore obesity-related health risks and repercussions. Americans must not allow themselves to be shaped by an environment of fast food temptations that often fosters unhealthy eating habits. It is essential that local communities promote regular physical activity and healthy eating. The experts and resources at WVU can help in this effort.

There is no quick fix cure for obesity. The WVU Center for Healthy Communities' programs will be an important tool for people in the Mountain State and across the nation who want to break the dangerous cycle of obesity. I hope that West Virginians will take advantage of these resources that are so close to home and begin to make permanent changes for healthier living.

January 29, 2003

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Unlocking the Future of High-Tech Security

West Virginia is poised to become a national center for the testing and development of high-tech security systems that promise to revolutionize the protection of computer and other electronic networks. The Department of Defense has selected Harrison County as the home for its permanent Biometrics Fusion Center (BFC) -- a move that is expected to bring 150 to 175 jobs to North Central West Virginia by the end of the year, infuse between \$18 million and \$20 million into the state's economy annually, and open the door for new private sector investments.

The BFC will provide the Defense Department with unmatched ability to test and evaluate biometric technologies. While there are many variations in the technologies, they all share the common practice of using a person's unique physical characteristics for identification purposes. The technologies record these characteristics, whether from a fingerprint or facial design or hand contour. Those characteristics are then stored and available for comparison and verification when a person seeks entry to a location or to a computer network.

A few years ago, this technology was the stuff of science fiction. But today, biometric technologies are on the leading edge of innovation. Not only can these technologies protect military information networks,

but they also can protect Americans' banking information, medical records, or any other material stored in a computer network. In fact, the International Biometric Industry Association predicts annual industry sales of \$2 billion by 2006.

In addition to the BFC, I have worked to develop other biometrics initiatives in the state including West Virginia University's (WVU) nationally unique Biometrics and Forensics Degree program and the FBI's fingerprint database in Clarksburg, which is the largest biometrics repository in the world. In addition, WVU and five other companies and non-profit organizations in the state have been selected to lend their high-tech expertise to the work underway at the Biometrics Fusion Center.

The decision by the Defense Department to house its primary testing facility in Harrison County, combined with these other initiatives, places the Mountain State at the forefront of the burgeoning biometrics industry. The BFC can serve as a potent magnet for West Virginia's growing high-tech sector.

Cutting-edge technologies are climbing the mountains and bridging the rivers that once were obstacles to new jobs and economic growth. I look forward to the completion of the Biometrics Fusion Center and to the new opportunities that surely will accompany it.

Courageous Discoveries

Throughout the course of history, exploration has been a hallmark of mankind. Human beings have always wondered what is on the other side of the river, the mountains, the oceans, the stars.

It was that spirit of exploration that led George Mallory to climb Mount Everest. When asked why he wanted to climb that mountain, he responded, "Because it is there."

It was that sense of discovery that pushed John Glenn to orbit the Earth in Friendship 7 in 1962. After his voyage, the future Senator from Ohio said, "My flight was but one step."

It was that determination that led Neil Armstrong to take the first steps on the moon and say, "That's one small step for man, one giant leap for mankind."

Not all exploration is on such a grand scale. In 1953, Francis Crick and James Watson delved into the smallest of creations with the greatest of possible horizons. Crick and Watson discovered the molecular structure of DNA, the genetic structure that determines everything from the color of our eyes to the shape of our fingernails. In presenting the Nobel Prize to Crick, Watson, and another colleague, a professor of the Royal Caroline Institute said, "We can, through (your) discovery . . . see the

first glimpse of a new world."

The seven astronauts on the Space Shuttle Columbia shared this desire to glimpse a new world. Theirs was a desire to peel back the layers of the undiscovered, to see what lies beyond the moon, beyond the international space station, beyond the furthest reaches of our solar system. When orbiting Earth, those astronauts did not see a map with borders. They saw one world, and they gave their lives in an effort to advance the knowledge and ability of this world.

Back when Francis Crick, the DNA scientist, was a little boy, his parents bought him an encyclopedia. It was after reading this volume that Crick decided to become a scientist. But he told his mother that he worried that, by the time he grew up, everything would have been discovered. She replied, "Don't you worry. When you grow up, there will be plenty left for you to discover."

Each venture into space is another step toward discovery. Each scientific experiment is another step toward unlocking the secrets of our world. There will be obstacles in our path; advancement is never easy. But it is a journey that we must continue, for there is, as Mrs. Crick acknowledged, plenty left to discover.

Protecting Your Special Deliveries

More than a year has passed since the terrorist attacks and the anthrax tainted letters in the fall of 2001, yet many facets of our daily lives have not yet returned to normal. An endless stream of government-issued warnings continues to cause unease both at home and abroad.

Due to the high-alert environment, many activities in the nation's Capital continue to be subjected to increased security measures in an effort to better prepare for, and respond to, potential terrorist assaults. The police presence remains heightened at national monuments, and security at federal government buildings continues to be elevated.

Another such preventive step helps to ensure the safety of the mail which is sent to Members of Congress. Each piece of mail goes through an irradiation process which subjects items to intense heat in order to kill harmful toxins. While the process is critical to the safety of government officials, the unfortunate consequence is that some mail items are damaged by the high temperatures.

I encourage my constituents to be actively involved in the political process, and it is important that the mail sent to me arrives unharmed. Letters, in the main, are unaffected by the irradiation process and can be sent either to my Washington office or to my

Charleston office. Letters can also be faxed to 202-228-0002 (Washington) or to 304-343-7144 (Charleston). Another option for contacting me is my Internet page at <http://byrd.senate.gov>.

Mail consisting of more than a letter, such as packages with photographs, compact audio disks, or digital video disks, should be sent to my Charleston office. Please do not send the original copy of material, and never send anything that is irreplaceable.

My mailing address in the U.S. Capitol complex is 311 Hart Building, Washington, DC, 20510.

My mailing address in Charleston is 300 Virginia Street East, Suite 2630, Charleston, WV, 25301.

I have noted that some West Virginians are skeptical that their concerns ever reach my desk. Some have written, "I know that this letter will never be read by you," or, "This letter probably will not get past your secretary." Be assured that I place great importance on the letters and other correspondence that I receive from my fellow West Virginians. I endeavor to answer each letter promptly and address whatever issue or question is raised in the letter. While the security measures in place sometimes slow down the mail process, they are not a barrier to open lines of communication between my constituents and me.

Protecting the Promise to Retired Miners

In 1946, President Harry Truman and the United Mine Workers of America (UMWA) struck a deal that opened the way for greater mechanization of coal mines in exchange for cradle-to-grave health care coverage for miners and their families. The deal created a health care fund paid for by a tax on coal mined by UMWA members. But gradually, as many coal companies ended operations, the fund's resources declined.

In response, the Congress, in 1992, approved the Coal Industry Retiree Health Benefit Act. Under this act, coal companies pay premiums into the Combined Benefit Fund (CBF). Those premiums are then used to pay the health benefits of retired miners and their dependents.

That 1992 Act also provides for transfers of interest accrued in the Abandoned Mine Land Fund (AML), as necessary, to cover the costs of so-called orphan miners. These are retired miners whose former employers have gone out of business and cannot pay their share of the cost of benefits to these retired miners.

But because of skyrocketing health care costs, adverse court decisions, and plummeting interest rates that sapped the CBF's resources, 50,000 beneficiaries across the country -- including 15,000 in West Virginia -- faced a potential

summer cutoff of their health benefits.

When I learned of this imminent health care crisis, I went to work to ensure that the promise of medical care made to these families in 1946 would remain unbroken. To that end, I included a provision in a new law that allows the transfer of an additional \$34 million in AML interest to the Combined Benefit Fund. The \$34 million will supplement the regular payment to the health care program in the fall. CBF trustees have indicated to me that this funding will protect benefits for the rest of the year.

My legislation is a short-term fix for a problem that requires a long-term solution -- the kind of solution that ensures that retired miners and their dependents will not have to worry from month to month whether their benefits will soon lapse. The responsibility for this solution rests with the authorizing committees of the House and the Senate, working together with the UMWA and the coal operators.

The men and women who receive this health care coverage helped to power the nation in the 20th century. Their work in dangerous, often deadly, conditions lit the lights, fueled the locomotives, and powered the factories that opened the doors to today's modern America. In return, they were promised lifetime health coverage. It is a promise that should be kept.

Celebration of Discovery

This year marks the bicentennial commemoration of the travels of Meriwether Lewis, William Clark, and their team, the "Corps of Discovery." Reflecting on the journey reminds us that discovery of the unknown is one of the most profound traits of the American people. During the coming months, West Virginians will have an opportunity to learn about these adventurers and the time that they spent in the Mountain State.

In 1803, President Jefferson sent Lewis and Clark on a historic expedition through the lands gained from the Louisiana Purchase in order to find a navigable water route from the eastern states to the Pacific Ocean. During the trip, the two men and their team traveled thousands of miles, experiencing lands, rivers, and people that no American had seen before.

West Virginia played an important role in the Corps of Discovery's success. The U.S. Armory at Harpers Ferry supplied weapons and equipment for this great expedition.

Captain Lewis stayed in Harpers Ferry from mid-March until mid-April of 1803. While there, he purchased fifteen muzzle-loading, flintlock, long-barreled rifles which were among the first designed for the U.S. Army. The expedition would depend on these firearms for hunting food and for self-defense. Lewis returned to Harpers Ferry in July to test the guns and col-

lect his supplies. During his subsequent travels on the Ohio River, Lewis stopped in Wellsburg, Wheeling, Parkersburg, Belleville, and several other West Virginia communities.

One Corps member returned to West Virginia after the expedition. Patrick Gass, one of the few men on the trip who could read and write, spent his later years in West Virginia and died in Wellsburg in 1870. His diary serves as a key record of the journey.

The Harpers Ferry National Historical Park has planned an extensive schedule of Lewis and Clark commemorative activities between March 28 and 30, 2003, featuring music, drama, living history displays, and the opening of the park's new permanent exhibit on Meriwether Lewis. The weekend also will showcase a national traveling exhibit, "Corps of Discovery II: 200 Years to the Future." The exhibit will tell the story of the expedition and its significance as part of our history. A complete list of commemorative events throughout the state can be found at the website <http://www.callwva.com/lewis-clark>.

I encourage West Virginians to learn about the Lewis and Clark expedition. Their journey led to the opening of the American West. More importantly, the lessons they learned can help the next generation of Americans to chart their own course through history.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Road to a Stronger Economy

The foundation of a strong economy is a solid infrastructure. Through my service on the Senate Appropriations Committee, I have worked to fund improvements to West Virginia's infrastructure -- the roads and highways, the water and sewer systems -- with the goal of creating an environment that can support new jobs and opportunities. In an appropriations bill that recently became law, I continued these efforts.

Corridors H and D are the only unfinished Appalachian Corridor highways in West Virginia. Corridor H, when complete, will stretch from Weston almost to the Virginia state line. Corridor D will run from I-79 in Harrison County to the state line at Parkersburg. I added \$108 million to the legislation to advance construction of those highways.

U.S. 35 runs from Mason County to I-64 in Putnam County and is one of West Virginia's busiest yet most dangerous stretches of two-lane highway. Governor Wise wants to widen the highway to accommodate increased traffic and improve safety. To move this project forward, I added more than \$4.1 million to the legislation for upgrades.

In Southern West Virginia, residents anxiously await completion of three major projects -- the Coalfields Expressway, King Coal Highway, and Route 10. In a changing

economy, it is important to provide the crucial improvements that will allow the area to compete for new jobs and growth. That is why I added \$26 million to the appropriations bill for these roads.

In the Eastern Panhandle, similar anxiety has gripped residents fighting for the completion of Route Nine. For many years, I have worked to fund this project and I continued that effort this year, winning \$10 million to move this road closer to completion.

Overall, my efforts on this legislation will translate into more than \$379 million for highway and road construction throughout West Virginia. These dollars represent a significant boost for West Virginia's economy. For every \$10 million that is invested in highway and road building, not only is the safety of travelers improved, but also 420 people get jobs in construction and related fields. That means, for West Virginia, the construction dollars in this legislation will help to provide jobs to nearly 16,000 men and women.

Improved roads provide safer, more modern routes for the West Virginians who live along them and for visitors who come to discover the beautiful scenery of our state. I look forward to their advancement because, when complete, they will connect our state to the nation with four-lane roads that travel through -- not around -- West Virginia.

By U.S. Senator Robert C. Byrd

Bracing for a Budget Battle

Each spring, the President unveils his budget proposal for the coming fiscal year, outlining the Administration's plan for each piece of government spending both at home and overseas. For West Virginia, this year's budget is filled with bad news.

Several proposals buried within the budget pose a direct threat to the financial security and quality of life of citizens in the Mountain State. Key economic development programs in the state are targeted for significant reductions or, in some cases, outright elimination.

For example, while the Administration has stated that it is a friend to American steelworkers, the Bush budget undercuts two initiatives that are critical to the financial health of the nation's steel companies.

The budget proposes to eliminate all funding for the Emergency Steel Loan Guarantee program, which I authored in 1999 to help alleviate the financial damage caused by foreign steel dumping. The proposal also calls for the repeal of the Byrd Amendment, which collects duties from foreign companies that commit unfair trade practices and then distributes those funds to U.S. companies which are most adversely affected.

The President cannot claim to support steel while pushing policies that would make ghost towns of steel communities.

The President's budget also cuts in half funding for the Appalachian Regional Commission, jeopardizing critical water, sewer, and other infrastructure projects. This effort to slash initiatives which boost economic growth in some of the nation's poorest areas is a far cry from the economic security that the President is so quick to trumpet. Instead of giving these areas a helping hand, the Bush budget gives them the back of the hand.

In addition, the President's budget cuts \$20 million from Clean Coal Technology initiatives and shaves \$14 million in salaries from the National Energy Technology Laboratory in Morgantown. During his campaign, Candidate George Bush traveled to West Virginia and pledged to commit \$2 billion over 10 years to the Clean Coal Technology program, yet President Bush has not made good on his promise. Rather, he proposes to gut the very initiatives that allow fuels to be utilized in an efficient and environmentally friendly manner.

In the coming weeks, Congress will debate the Administration's budget plan. Members will pour over the details and work to fix the holes in the Administration proposal. For my part, I will work to correct the shortfalls which most directly affect West Virginia and try to ensure that those federal initiatives that are so important to the Mountain State are protected.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Primed for New Security Post

As military activity continues in Iraq, the concern about terrorist attacks on U.S. soil increases. If the nation's homeland security efforts are to have a real chance to protect citizens from harm, they need greater support from the federal government. As the top Democrat on the new Senate Appropriations Subcommittee on Homeland Security, I will work to provide security forces with adequate resources to carry out their critical duties.

The subcommittee has the awesome responsibility of balancing the funding priorities for, among others, the nation's police, firemen, emergency medical personnel, border guards, and airport security teams. The subcommittee has the additional duty to conduct strong oversight of the new Department of Homeland Security and ensure that the plans the department is crafting will truly meet the protection needs of the American people.

Congress has a responsibility to protect the nation. It must focus on the country's many serious vulnerabilities and invest dollars where they are needed most. I have tried repeatedly to provide additional dollars for homeland security that would have helped to plug critical holes in our defenses. But my efforts have been thwarted by the Bush Administration.

If there is one lesson that we should have learned

from September 11, 2001, it is that Americans are vulnerable here at home. When it comes to protecting this nation, there should be no distinction between providing the necessary resources for troops overseas and for first responders at home. Sadly, the White House appears not to have learned that lesson. When it comes to fighting in distant lands, the Administration's attitude is spare no expense. But when it comes to fighting the war on American soil, the Administration prefers to shop in bargain basements.

All Americans, whether they live in rural communities or big cities, want to know that, if there is a terrorist attack close to their homes, local doctors and nurses are trained to treat the injured. Americans want to know that local firemen have the capabilities and equipment to handle a chemical or biological attack. Americans want to know that local police officers are trained in identifying and responding to the wide-ranging terrorist attacks that we could face.

This new appropriations post will provide me with the opportunity to continue to lead in the protection of Americans here at home. It is my hope that the new subcommittee will step up to the plate and work to invest the necessary dollars to keep our people safe.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Keeping Amtrak Trains Running

While much has changed in America's modernized transportation network, one constant remains. A web of winding train tracks still connects the country from top to bottom, from coast to coast, from bustling metropolis to sprawling countryside. Amtrak, the nation's passenger rail service, provides dependable, economical travel. Amtrak's whistle sounds in several West Virginia communities, including White Sulphur Springs, Montgomery, Charleston, Huntington, and Martinsburg.

For too long, Congress and presidential administrations have set unrealistically high standards for Amtrak while providing terribly low funding. Amtrak is showing the wear and tear of its 33 years of operation and is suffering the effects of a beleaguered national economy. Despite \$1.2 billion which I was able to secure for Amtrak in last year's appropriations process, the cash-strapped rail service is in need of further investment from the federal government to sustain its long-term viability. Fortunately, that help is on the way.

The U.S. Senate recently adopted legislation that I authored to authorize an additional \$1.8 billion for Amtrak, a funding level that will ensure that the railroad keeps chugging throughout all of 2004. The Bush Ad-

ministration proposal only provided \$900 million for Amtrak, targeting the rail system for one of the largest funding cuts in the federal budget. The proposed cut would have bankrupted Amtrak, terminated the entire Amtrak rail system, and shut down commuter railroads that depend upon the continued operation of the rail service.

In addition to subsidizing the rail service's significant operating costs, the funding I obtained will allow Amtrak to make long-deferred capital investments to improve reliability and ensure the continuation of safe and timely rail service. These investments include the replacement of Amtrak's aging track infrastructure and the rehabilitation of a number of railroad bridges that are several decades old and in desperate need of renewal.

Amtrak is integral to the country's transportation network. For many rural communities, Amtrak represents the only public transportation connection to the rest of the nation. But without Congressional action, that connection is in danger of being severed. With continued support, Amtrak will have the time and opportunity to craft sound plans for the future. That is the best way to keep Amtrak on track for many years to come.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Prescription for Health Care Disaster

The U.S. House of Representatives recently passed a budget resolution that requires an estimated \$92 billion in cuts to Medicaid during the next ten years. Neither the Senate budget resolution nor the Administration budget includes any such cuts to Medicaid. These massive cuts in Medicaid funding, if enacted, would threaten the health care for millions of Americans, including approximately 300,000 West Virginians.

This is the worst possible time to enact such draconian cuts to Medicaid, a critical safety net program. States are currently facing the most severe budget crisis since World War II, and nearly every state has proposed or enacted cuts to its Medicaid program, including West Virginia. Any reduction in federal Medicaid funding would place millions of vulnerable Americans now receiving Medicaid in jeopardy of losing their health coverage. Federal funding reductions would force states to implement even deeper cuts by restricting eligibility, eliminating or reducing critical health benefits, and severely cutting or freezing reimbursement rates for health care providers. As a result, Medicaid funding cuts would add millions more to the ranks of the uninsured.

Medicaid was originally intended primarily for poor children and the disabled, but

most states, including West Virginia, have expanded it to include the families of the working poor or near-poor and elderly people who could not afford to fill in the gaps in their Medicare coverage. It is now the largest health insurance program in the country.

I recently sent a letter, along with several of my Senate colleagues, to the leaders of the Senate and House Budget Committees strongly urging them to reject the inclusion of any Medicaid cuts as part of the final budget resolution. It is unfortunate that Congress must divert attention to preventing mindless cuts to Medicaid when, instead, we should be focusing on ways to increase funding for this critical program. Legislation is needed to enhance federal funding levels for Medicaid to provide cash-strapped states with some fiscal relief and to shore up the health care safety net during this time of economic hardship.

I am deeply committed to ensuring access to needed health care for all West Virginians, and I am proud to have helped provide health care facilities and services throughout our state. In the coming weeks, I will continue to work to correct the budget shortfalls for Medicaid and other vital health care programs which most directly affect West Virginia.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Training the Nation's Finest

First responders from across the nation are coming to West Virginia to prepare for catastrophe. Firefighters, police officers, emergency medical technicians, and members of the National Guard are among those who are receiving real-world counterterrorism training at the West Virginia Memorial Tunnel, now known as the Center for National Response (CNR).

The one-of-a-kind training facility is located near Standard in a tunnel that was once part of the old West Virginia Turnpike. Operated by the Department of Defense, the center served more than 3,000 first responders in the last year alone. Groups ranging from East Bank's fire department to elite units of the U.S. Marine Corps have trained at the facility. These groups return to their communities and share knowledge with their peers to help prepare an ever larger pool of safety personnel for potential attacks on American soil.

The CNR's success lies in the fact that it recreates a wide range of disaster scenarios that first responders could encounter, including hazardous materials, bomb blasts, radiological devices, and subway attacks. It utilizes true-to-life settings, complete with the sights, sounds, and chaos of terrorist attacks, to best train first responders for any possible attack.

I am pleased to have

contributed to the creation of the CNR, working closely with then-Congressman Bob Wise and Adjutant General Allen Tackett to launch this initiative. Even prior to September 11, 2001, West Virginia recognized that America was vulnerable to terrorist attack and began to plan and implement programs to better respond to emergency situations. Since the Center for National Response was launched, I have worked to obtain \$21.5 million to convert the Memorial Tunnel into this state-of-the-art counterterrorism facility. When joined with other key homeland security efforts in the Mountain State, notably the Virtual Medical Campus at West Virginia University and the National Guard's Camp Dawson Regional Training Institute in Preston County, Mountaineer leadership and know-how play critical roles in the defense of our homeland.

The tragedies in New York City and at the Pentagon proved the absolute importance of well-trained first responders. These men and women form the front line of defense here at home. The Center for National Response and its employees help to ensure that our police officers, firefighters, and other emergency responders are well prepared should, God forbid, another terrorist attack strike America.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Presidential Threat to West Virginia Jobs

One of the most recognized West Virginia products is the Fiesta brand of kitchen and restaurant china. The unique Fiestaware is one of many products manufactured by the Homer Laughlin China Company in Hancock County. Founded in 1871, Homer Laughlin is the country's largest pottery manufacturer, employing more than 1,000 skilled workers at its 37-acre facility.

But today, those jobs are in jeopardy as the Bush Administration wants to eliminate long-standing safeguards provided to the American china industry against unfair foreign competitors. As part of ongoing international negotiations on trade agreements, the Bush Administration has put forward a "zero tariff" plan for imported restaurant china. The Bush plan would erase tariffs on imported restaurant china, opening the door to a potential flood of subsidized goods priced at less than their cost of production.

If accepted as part of the international negotiations, the Bush Administration proposal has the potential to destroy the U.S. restaurant china industry. Indeed, if the U.S. tariff scheme were adopted, it could wipe out the 1,000 jobs at Homer Laughlin and immediately affect the ability of other companies to attract and maintain employees.

Recently, I joined a bipartisan group of House and Senate lawmakers to write the President to state

our opposition to this "zero tariff" plan. The U.S. restaurant china industry is a prime example of a sector that anchors small communities. These companies, and the people they employ, have long been an integral part of our communities. We must continue to support them.

The President and his Administration provide a great deal of lip service to traditional American industries that have been threatened by unfair foreign trade practices. But this "zero tariff" plan would further threaten American jobs in the name of free trade. I hope that the President will rethink this proposal. Free trade should not carry the price of bankrupting entire American industries.

During the more than five decades that I have served West Virginia in Congress, I have seen one Administration after another trumpet trade plans as being good for America. The trouble with these trade plans is that they are based more on the needs of international relations rather than on the needs of working Americans.

Job losses here must not be the price paid to expand job opportunities elsewhere around the globe. I will continue to push so that future trade policies take into consideration the needs of West Virginia workers, and so that international corporate profit margins are not put ahead of working families.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Importance of Clean Drinking Water

Turn on the tap in the kitchen and look at the water that comes out. For most Americans, the water is clean and safe. But for far too many people, the water is dirty and filled with dangerous bacteria. In fact, according to studies conducted by the U.S. Department of Agriculture and the Environmental Protection Agency (EPA), more than 16 million Americans lack access to safe drinking water. In 21st century America, safe and reliable drinking water should be a staple of everyday life -- not just a benefit of living in metropolitan areas.

The costs associated with ensuring a safe and secure supply of drinking water are staggering. The EPA has estimated that there will be a \$534 billion gap between the current spending and the projected needs for water and wastewater infrastructure during the next 20 years, if additional investments are not made. This troubling projection comes at a time when communities are already less able to meet their financial needs due to a sustained economic downturn.

Funding is desperately needed to keep the current systems in working order, and that is to say nothing of the need for new systems to reach those without drinking water service. By failing to make the proper investments

today in public utilities, we allow a multibillion dollar problem to snowball into a clean water crisis.

In my position as the top Democrat on the Senate Appropriations Committee, I continue to work to secure federal funds to bring clean water to rural communities across West Virginia. In a recent appropriations bill, I provided nearly \$14.8 million for the final design and construction of a water supply reservoir in Southern Randolph County. The reservoir is expected to benefit residents in several Randolph County communities including Mill Creek, Huttonsville, Beverly, Daily, Mingo, Valley Head, and Elkins. This project will bring the promise of clean water closer to reality for at least 16,000 West Virginians. Yet, while this is an important milestone, there remains much work ahead.

Most Americans take safe drinking water for granted. Most Americans simply assume that, when they turn on the faucet, clean water will automatically flow out. The terrible truth is that, in the United States, the health of millions of men, women, and children is made vulnerable by their reliance on a possibly contaminated water supply. Safe drinking water is not merely an option. It is a necessity.

April 30, 2003

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Coal for America's Future

In the coming weeks, Congress is expected to move forward on a new national energy plan. At the core of this strategy should be the one energy source that is responsible for more than half of the electricity generated in the nation, namely, coal. While coal is the nation's most abundant natural energy resource, it is also one of the most controversial because of the pollutants that can be emitted when it is burned.

That is why it is so important to invest in new technologies that can allow coal to be utilized more efficiently and in a more environmentally friendly manner. In 1985, I started the federal Clean Coal Technology initiative with an amendment authorizing \$750 million for the program. Since then, the initiative has expanded through a joint public-private investment of more than \$6 billion. This research and investment has opened the door to a new generation of technologies that are beneficial for both coal and the environment.

I have recently introduced legislation that would build on this investment and help to spur a new generation of clean coal technologies. Specifically, my legislation authorizes \$2 billion over the next decade to speed advanced technologies from the laboratory to the marketplace. This

bipartisan bill also aims to improve air quality and the efficiency of the current fleet of coal-fired power plants by providing targeted tax incentives for the installation of these technologies at new and existing coal-fired facilities. Quite simply, this legislation will open the door to better power plants that produce more electricity with lower emissions and fewer pollutants.

In the wake of the military conflict in Iraq, concerns about our nation's current and future energy needs are on the minds of citizens across the country. By working to better meet America's demand for electricity, we help to secure the nation's economic and environmental future. My legislation will ensure that an abundant supply of clean coal will remain the cornerstone of the nation's energy strategy and will continue to power innovation and change.

Coal was integral in America's advancements in the 20th century. As Congress creates a new national energy policy, it is crucial to ensure that coal, burned in cleaner more efficient ways, is key to the nation's fuel diversity mix for the 21st century. By investing in this natural resource, future generations will be rewarded with cleaner, more versatile, and more efficient energy.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protecting the Right to Know

As the nation moves forward in a concerted effort to prevent another terrorist attack here at home, it is important that we continue to protect the Constitutional rights and liberties that have served us so well for more than 200 years. One of these rights is the right to know what the government is doing.

The Freedom of Information Act (FOIA) was enacted in 1966 and gives any person the right to request access to federal agency records or information. All agencies of the U.S. government are required to disclose records upon receiving a written request for them, except for those records that are protected by exemptions or exclusions.

When Congress last fall adopted legislation to create the new Department of Homeland Security (DHS), it also adopted a new exemption to FOIA, allowing private companies to hide information from the public as long as they voluntarily submit this information to the DHS. The exemption applies to any information about the facilities that make up our country's "critical infrastructure" -- such as privately operated power plants, bridges, dams, ports or chemical plants -- that could be targets of a terrorist attack.

The FOIA exemption that Congress enacted is too broad. It allows the Department of Homeland Security to cloak too many of its activities in secrecy. The current law does noth-

ing to encourage companies to address vulnerabilities, nor does it require the DHS to fix the problems. Potential dangers are effectively swept under the rug. To make a bad law even worse, the Department recently proposed new rules that would broaden the exemption even further.

To close these loopholes, I am cosponsoring legislation called the Restore Freedom of Information Act.

This legislation would exempt only records relevant to protecting private facilities, correcting the blanket protection given to industry for anything labeled "critical infrastructure information." The Restore FOIA bill would allow access to such information in order to hold companies accountable for wrongdoing or to protect the public. Simply, this legislation would prevent companies from using the label homeland security as a smokescreen to hide information from the American people.

Increased security concerns call for prudent changes to, not blanket exemptions in, the information available to the public. If the government is allowed to operate in secrecy, without scrutiny, then the people's liberties easily can be lost. We ought to strengthen the Freedom of Information Act, not undercut it. The American people ought to have access to information that directly impacts their freedoms and safety

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Woman for All Times

Many decades ago, I was a young boy growing up in the coalfields of Southern West Virginia. I attended Mark Twain High School in Raleigh County. It was in the halls of that school where I met my future wife, Erma Ora James.

She was not dazzled by my family's wealth; we had none. She was not swept away with our home; it was quite modest. Actually, what Erma saw in me then I still do not quite know. But on May 29, 1937 -- 66 years ago -- she became my wife.

Marriage is never easy. There are, from time to time, challenges and difficult moments. But it is how we respond to those moments that can strengthen a marriage and lead to a long and happy union.

Together, Erma and I have seen great changes in the world. We have experienced the highs and lows of family life -- the delight of two fine daughters growing up, marrying, and having children of their own; the tragedy of the loss of a grandson; the indescribable thrill of holding newborn great-granddaughters in our arms. For two hillbillies from Beckley, it has been a wild ride. I am glad that I

have shared it with Erma.

Erma has always been an equal partner in our marriage. Her domain is the home, where she rules as a benevolent dictator. When the duties of the Senate fill all my waking hours, she keeps the home fires burning. She took the lead in bringing up our two daughters, teaching them to be the fine women and mothers that they are. Without her help and support, I could not have put the level of effort into my Senate work that the people of West Virginia deserve and have come to expect. She proves the old adage: "Behind every successful man is a successful woman." Together, Erma and I are complete and whole, a total that is more than the sum of its parts.

To me, Erma is a priceless treasure, a multifaceted woman of great insight and wisdom, of humor and common sense, a fountain spring of serenity at which one can slake the thirst of a stressful day. As we celebrate our 66th wedding anniversary, I can only thank her that she has put up with me for so many years, and I thank the Creator for His guiding hand that has brought us to this glad day.

Protecting America with Smart Thinking

Whether through innovative first responder training techniques or specialized National Guard facilities, West Virginia has taken a leading role in the national effort to prevent or respond to terrorist attacks. Even before the traumatic events of September 11, 2001, West Virginians were engaged in critical homeland security training and prevention initiatives that benefit the entire country.

Now, a new chapter is being written, this one by NASA's National Technology Transfer Center (NTTC), based at Wheeling Jesuit University. The NTTC works to strengthen the competitiveness of U.S. industrial companies through identifying, developing, and commercializing marketable research and technologies. The experts at the center are working with the Federal Emergency Management Agency (FEMA) to make the best technologies and products available to the emergency response community.

Because of that foundation, a partnership between a small Northern Panhandle company and the NTTC has the potential to provide the country's first responders with an affordable technology that can help to save lives. What began as a sketch on a napkin just six months ago has developed into a groundbreaking product which alerts first responders to potentially life-threatening hazardous environments. The "HazMat Smart-Strip" is a cost-effective warning badge which detects the presence of toxic chemicals

or other weapons of mass destruction in the air.

Before the Smart-Strip was developed, first responders' protective equipment did not provide immediate chemical detection capability, and the high cost of electronic monitoring equipment was too expensive for most emergency response services. But the Smart-Strip is both affordable and easy to use.

The \$15 strips, which work for 12 hours once activated, detect hazardous chemicals in eight of the most common toxin categories. The strips will enhance the security efforts of police and fire departments, emergency medical teams, hospital emergency rooms, military forces, and hazardous waste workers.

The HazMat badges are manufactured by Printech, a family-owned commercial printing business in Ohio County. Because orders for the revolutionary warning strips are pouring in from around the world, Printech has hired additional employees to help meet the great demand for the product. In addition, NTTC has started to assess several more products which West Virginia companies could help to develop.

West Virginia ingenuity is opening the door to a safer nation. Whether through the development of products like the HazMat Smart-Strip or through the unique first responder training programs already in place in Kanawha, Monongalia, or Preston counties, the Mountain State is an integral piece of the nation's homeland security network.

Contracting Away West Virginia Jobs

The Bush Administration is pursuing a plan to privatize at least 850,000 federal jobs. Such a policy, euphemistically referred to as "competitive sourcing," could mean severe cutbacks at federal facilities in West Virginia affecting more than 3,600 workers. The Administration's policies encourage unfair treatment of dedicated public servants, many of whom are being forced into early retirement or the prospect of reduced benefits and lower pay.

For example, a recent letter that I received from Internal Revenue Service (IRS) Computing Center employees in West Virginia, Tennessee, and Michigan expressed strong concern with a privatizing initiative at the computer facilities in these states. The Administration plans to cut 10 percent of the federal workers at these centers and downgrade 75 percent of the remaining employees.

While the new IRS Commissioner has stated that "competitive sourcing" is not an effort to cut the federal workforce but rather an effort to increase efficiencies for the taxpayer, I disagree. West Virginia's federal workers have proved to be efficient, hardworking public servants. Mountain State employees regularly exceed the standards that they are charged to meet, and their dedication and experience cannot be measured in dollars alone. Mandating that their jobs go to private

firms is not based on merit, but rather on politics.

Other federal agencies in West Virginia also have announced plans to turn over government jobs to for-profit companies. The FAA wants to contract out air traffic control in Elkins and other critical air safety jobs throughout the state. The Coast Guard is considering privatizing the National Vessel Documentation Center in Falling Waters. Even the General Services Administration is turning over care of federal facilities to private contractors.

My efforts to locate federal agencies and offices in West Virginia have been much like matchmaking -- matching the needs of the federal agencies with the attributes offered by West Virginia. When I have learned that federal agencies had particular needs, I have urged them to look at West Virginia and see if there might be a site that would meet their criteria. Our state provides fertile ground for the sound investment of taxpayer dollars.

By arbitrarily forcing agencies to downsize without regard to mission or accomplishment, the Bush Administration may spoil that investment and, in turn, cost the taxpayers more in the long term than would be saved in the short term. "Competitive sourcing" is nothing more than an ill-advised budgetary shell game in which the real losers are the American people.

Flying Toward the Future

The West Virginia National Guard is among the best trained, best equipped Guard units in the country. The thousands of Mountaineers who give of their own time to be part of the National Guard are always ready to answer the call, whether in response to flooding or severe storms in West Virginia or in support of the active military around the world.

To stay on the leading edge, the West Virginia National Guard has undertaken a significant upgrade in its training and support. New readiness centers have been built throughout the state. Maintenance facilities have been modernized to keep the state's fleet of planes, helicopters, and trucks in top condition.

I have worked closely with Adjutant General Allen Tackett, the Guard's officers, and the enlisted men and women to move these new facilities from the planning stage to construction and completion. Through my positions on the Senate Appropriations and Armed Services committees, I have obtained millions of dollars required for these projects.

A major effort underway in Martinsburg will result in a new, demanding mission for the National Guard's 167th Airlift Wing. An extensive upgrade at that airbase will prepare the site

to house a fleet of 10 C-5 aircraft.

Recently, I won Senate authorization of nearly \$26 million for construction of new airport infrastructure, including a new control tower, for Martinsburg as part of this upgrade. This authorization is the first step toward a modernized Martinsburg airport. These renovations will ensure that the 167th Airlift Wing is ready and able to take on this expanded responsibility in the nation's security efforts.

When the work is completed, West Virginia will be home to one of the largest Air National Guard bases in the country. The upgrade will require more than \$200 million in construction and renovations at the airport. Once the C-5 fleet arrives, total personnel at the Airbase is expected to expand from the current 1,160 men and women to approximately 1,340, while the economic impact will increase from \$34 million to near \$50 million each year.

The men and women of the West Virginia National Guard are a vital part of our state. They truly live up to the motto, "Always Ready, Always There." At any hour of any day, the Guard is standing by, ready to help. We should be proud of their efforts, and continue to support them in the future.

Improving Access to Mental Health Care

According to the National Mental Health Association, more than 54 million Americans suffer from a mental disorder in any given year but fewer than eight million seek treatment. These numbers paint a troubling picture. For far too many individuals, debilitating mental disorders go untreated because sufferers lack the financial means to obtain much needed care.

While individuals afflicted with physical ailments such as cancer, diabetes, and high blood pressure can rely on health insurance to lighten the financial burden of their illnesses and speed their paths to wellness, those with mental disorders are often left to fend for themselves. Destructive stigmas are being eliminated as more people understand mental health issues, but health care policies are not keeping pace. Many private health insurance plans discriminate against mental health patients by imposing caps on doctor visits and hospital stays and charging higher co-payments and deductibles.

The country's health insurance system has neglected people who suffer from mental disorders for far too long. That is why I am cosponsoring legislation which would break down the barriers to mental health insurance coverage and allow patients to seek the medical help they need. The Mental

Health Equitable Treatment Act would ensure that mental health disorders receive the same insurance coverage as physical illnesses. The bill, which renews and improves upon a mental health parity bill enacted in 1996, calls for full parity for all categories of mental health conditions listed in the Diagnostic and Statistical Manual of Mental Disorders, Fourth Edition.

Fears that parity would cause insurance premiums to skyrocket are unwarranted. The Congressional Budget Office has estimated that this legislation would raise insurance rates by less than one percent, a cost that pales in comparison to the significant costs of untreated or mistreated mental illness, including lost work productivity, lost earnings due to illness, and social costs. Expanding health care access for mental health patients makes sense both medically and economically.

By allowing mental health suffers to obtain treatment when it is medically necessary, the legislation encourages early intervention, appropriate care to avoid relapse, and the opportunity for a healthy, happy life. The time has come to bring first-class health care to millions of Americans who have been second-class patients for too long.

Caring for Gulf War Illness

Twelve years since the end of the first Persian Gulf War, many of its veterans are still deeply affected by the physical repercussions of their service. One in seven Gulf War veterans have reported suffering from undiagnosed illnesses. While this fact has largely disappeared from newspaper headlines, there remains a critical need to provide Gulf War Illness victims with proper medical care.

These veterans suffer from unexplained conditions characterized by a variety of symptoms including fatigue, joint pain, skin rash, and memory loss. Exposure to low levels of chemical agents ranks among the most common theories to explain the mysterious illnesses. Following the war, U.S. and British troops destroyed chemical weapons in Iraq using large amounts of explosives, releasing huge clouds of smoke and nerve agents which could be the source of veterans' unexplained sickness.

In 1998, I sponsored the Gulf War Veterans Act which opened the door to health care and compensation for veterans affected by Gulf War Illness. But the Departments of Defense (DoD) and Veterans Affairs (VA) had to estimate how many veterans may have been affected by the destruction of chemical weapons. To do that, the departments constructed computer

models of the toxic plumes and determined that as many as 100,000 soldiers might have been exposed to the dangerous chemicals. I and other Members of Congress questioned that estimate and requested a General Accounting Office (GAO) review of the studies to find out whether the models were right or whether they fell far short of the mark.

The results of the GAO study are, in one word, shocking. The GAO found that the computer models have no solid basis in fact. It is increasingly clear that several hundred thousand troops may have been exposed to low levels of chemical warfare agents. But, despite the unreliability of the models, they are still used to judge whether a veteran of the 1991 war who suffers from an undiagnosed illness should have priority access to the VA health care system. I am deeply troubled that ailing veterans have been forced to wait for health care services based on these flawed models.

This glaring mistake must be corrected. Many veterans of the first Gulf War continue to live with illnesses that are attributable to their great service to their country, and they deserve access to adequate health care. This nation stands behind our troops when they take to battle; we also must support veterans who return home with injuries or illnesses.

Simple Justice for Steel Workers

For several years, American steel companies, employees, and their families have stood against constant waves of unfair foreign trade practices. They have done their best to withstand pressure applied by foreign countries and companies to bend -- and sometimes break -- the very trade agreements that their governments signed with our own. I have worked to find ways to support Wheeling-Pittsburgh Steel, Weirton Steel, Steel of West Virginia in Huntington, and the entire U.S. steel industry. But my efforts have been undercut by empty promises from President Bush's Administration.

In 1999, I created the \$1 billion Emergency Steel Loan Guarantee Program to provide U.S. steelmakers with access to funds to overcome harm suffered as a result of unfair trade. That program serves as the lifeline to steel companies facing imminent financial difficulty. Today, however, the Bush Administration is threatening to cut that lifeline by eliminating all funds for this program and refusing to extend its authority. No federal loan guarantees means no access to capital for steel companies that have nowhere else to turn.

In 2000, I wrote a law known as the "Byrd Amendment." Under this law, companies like Weirton Steel receive funds from duties imposed on imports found to be unfairly subsidized or

dumped in the U.S. market. This law simply encourages our foreign trading partners to play by the very rules that they negotiated with the United States. If they follow the rules, there is no negative consequence; but if they break the rules, then they must provide a remedy. Inconceivably, the Bush Administration is recommending that this law be taken off the books.

When George Bush was a candidate for President, he claimed that he recognized the value of West Virginia's steel companies and workers. Dick Cheney pledged that the Bush-Cheney ticket would always be a friend of West Virginia steelmakers, claiming, "We will never lie to you. If our trading partners violate trade laws, we will respond firmly and swiftly."

Now, three years later, West Virginia's steel companies are in serious trouble largely due to the unfair trade practices of our trading partners. But the Administration's reaction has been anything but swift and strong.

I and others have called on the Bush Administration to make good on its promises. Our effort has reached across party lines. But, to date, there has been no response. The silence has been deafening. I only hope that the President will fulfill the promises made to West Virginia's steel workers before it is too late.

Prescription for a Modern Medicare Plan

Congress is in the midst of an important debate on Medicare -- a debate that will shape the health care choices of millions of seniors for years to come.

Today, 40 million Americans, including 335,000 West Virginians, rely on Medicare to help provide for their medical needs. With more than one-third of all Medicare beneficiaries lacking insurance for the cost of needed medications, finding affordable prescription drug coverage is a critical issue for our nation's seniors. Prescription drugs are an essential tool for treating and preventing many acute and chronic conditions, but Medicare fails to cover them on an outpatient basis.

In West Virginia, the average annual income of a Medicare beneficiary is a mere \$10,800. Too many seniors, especially those living on fixed incomes, are forced to choose each month between paying for food and shelter, or buying the essential medicines that their doctors have prescribed.

Legislation that recently passed the Senate is intended to address that problem, but falls miserably short. Instead of a comprehensive, voluntary Medicare prescription drug benefit, the Senate legislation would force Medicare beneficiaries to rely on a private, untried, untested, drug-only insurance market for their prescription drug coverage.

The Medicare plan, as it stands, does not provide

the real, guaranteed, defined benefit that seniors desperately need and does little to address the high cost of prescription drugs. Under this legislation, some seniors would still be forced to split pills to make medicines last longer. Older Americans would end up shortchanging their own health by foregoing medicines that their doctors have prescribed.

Congress should do better for our seniors. That is why I have supported an alternative to create a Medicare prescription drug benefit with no deductible, lower cost-sharing, and no gaps in coverage. My plan would have reduced drug costs by allowing Medicare to negotiate group purchasing agreements with pharmaceutical companies. This proposal would have allowed seniors to choose for themselves how to best meet their prescription drug needs -- either through a private plan drug benefit or one offered through traditional Medicare.

Medicare was designed to be a safety net for those who, because of age or disability, did not have access to traditional health insurance. When created, no one could foresee how the costs of medications would spiral over the years, nor was it apparent how integral prescription drugs would be to health care. The time has come to address this shortfall, and to create a Medicare system that is more responsive to the needs of America's seniors.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Paycheck Fairness for Overtime Hours

For many West Virginians, a 40-hour workweek is just the beginning of their time on the job. These men and women from all walks of life work extra hours and, rightly, expect extra pay for their effort. But the Bush Administration is considering changes to overtime regulations that would take away those well-deserved dollars. The Administration plan would have people working more hours for less money.

The President's proposal would modify the Fair Labor Standards Act of 1938 which standardized the 40-hour workweek and guaranteed that many non-managerial employees would earn time and a half for extra hours worked. The Bush plan would eliminate overtime pay protections for as many as 8 million American workers who currently are eligible for overtime pay.

It is not just hourly workers in factories and restaurants who would be affected by the President's plan, but they are in a variety of fields -- computer engineers, paramedics, secretaries, grocery clerks, and delivery route drivers. These employees depend on overtime pay for housing, food, and health care.

Recently, I joined with 42 other Senators in contacting Labor Secretary Elaine Chao, urging that the Bush

Administration step back from its plan, and we are not alone. The Labor Department has been flooded with more than 75,000 letters debating the merits of the proposed overtime changes -- the most mail that the agency has received on any wage-and-hour topic in at least a decade. Even business groups, which have pressed for a revision of the overtime rules because they have lost millions of dollars in overtime lawsuits, have concerns with some of the rule changes.

American citizens work longer hours than ever before -- longer than in any other industrial nation. Protecting the 40-hour workweek is vital to balancing work responsibilities and family needs. It is certainly not family friendly to require employees to work more hours for less pay.

Since President Bush came into office, more than 3 million Americans have lost their jobs. More than 400,000 Americans are filing initial jobless claims each week. The nation's unemployment rate has jumped to its highest level in nearly nine years. And now, for those workers who still have jobs, the Bush Administration wants to cut their pay. The Administration would do better to find ways to put more people back to work.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Working for New Opportunities in Appalachia

The Appalachian Regional Commission (ARC) was created by Congress in 1965 to boost the quality of life in West Virginia and portions of 12 other states where mountains and isolation long have inhibited progress. I voted to create the ARC, and today, 38 years later, I have taken on the effort to ensure that the ARC continues to provide quality services to West Virginians.

The ARC is probably best known in West Virginia for the Corridor Highways that stretch throughout the Mountain State: Corridor G between Charleston and Logan and on into Kentucky; Corridor D between Parkersburg and Clarksburg; Corridor L from Sutton to Beckley; and Corridor H between Weston and, Elkins, and eventually, Wardensville. These Corridor Highways have brought with them new job opportunities while replacing some of the most dangerous two-lane roadways in West Virginia.

But highways are only part of the ARC mission. The commission also helps to fund education and workforce training programs, water and sewer system construction, small business start-ups and expansions, and development of health care resources. The ARC enables many of our most vulnerable citizens to pull themselves up by their own boot straps.

Since the ARC was founded, the 13-state Appalachian region has made considerable progress in overcoming its isolation. Yet, the region still lags behind the nation in many respects. The cycle of poverty remains all too prevalent in Appalachia. Too many children go hungry. Too many families have no access to nearby health care. With the many challenges before us, there clearly is much work to be done by the Appalachian Regional Commission.

Despite the overwhelming need, the Bush Administration has proposed to cut in half the non-highway budget for the ARC. If accepted, the Bush budget could set progress in Appalachia back by years. I do not intend for Congress to accept the Bush Administration's proposal. As a first step, I won unanimous approval from the Senate Appropriations Committee of my amendment to restore the ARC budget and provide \$71 million to the commission. The next step is for the full Senate to vote on the legislation.

The Appalachian Regional Commission's comprehensive and sustained effort is making a difference. But the job is not yet done. Congress should reject the Administration's shortsighted budget proposal and keep progress in Appalachia moving forward.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Rewarding Classroom Excellence

When I was a student at Raleigh County's Mark Twain High School in the 1930's, a commitment to academic excellence was the standard, not an exception. My graduating class of 28 students had learned from some of the most dedicated and demanding teachers who I have ever known. Those teachers inspired me to study and to apply my best talents toward my school work.

That early encouragement placed me on a path that has led to a lifetime of learning, whether in the classrooms at Morris Harvey College or Marshall University, or among the tall stacks of books at the Library of Congress. Solon, one of the seven wise men of Greece, said, "I grow old in the pursuit of learning." That philosophy has inspired me to continue to study and develop my mind while also applauding those young people who have started on the same path of lifetime learning.

Not enough acknowledgment is given to the achievement of individual excellence in the classroom. That is why, in 1969, I started an annual tradition of presenting a certificate and a U.S. Savings Bond to

a valedictorian from every West Virginia high school.

This year, I had the honor of presenting bonds to 158 young men and women who excelled in the classroom. In the more than three decades since I launched the Scholastic Recognition Awards, 9,527 students have received more than \$221,000 worth of bonds from me because of their outstanding effort in the classroom.

Plato long ago wrote, "Excellent things are rare." Indeed, excellence is uncommon, and excellent acts, because of their remarkable nature and the effort they require, are entitled to respect and admiration. Each of these Scholastic Recognition Award winners has displayed academic excellence worthy of praise.

While the seed of intelligence may be planted at birth, it requires cultivation, care, and hard work to blossom into culture and wisdom. Together, the dedicated teacher and the eager student possess the magic to make brilliance. I applaud the valedictorians of West Virginia's Class of 2003, and wish them continued success in their pursuit of education in the years ahead.

July 30, 2003

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Improving Treatment of Citizen-Soldiers

Nearly each day of the ongoing military occupation in Iraq brings news of the death or injury of American soldiers. President Bush's May 1 declared end to major combat operations has not stopped the bloodshed. Thousands of West Virginia Guardsmen and Reservists still serve in Iraq and Afghanistan, and more could be called to serve in a growing number of international hot spots.

I have heard from many families anxious to know when their deployed loved ones might return home. All of these families expressed a deep frustration with the open-ended, unfocused deployment of Guard and Reserve units. After reviewing what some of these units have experienced, I understand the frustrations.

One West Virginia National Guard engineering unit, after shipping out in January 2003, advanced deep into Iraq with front-line fighting forces, bridging a river under heavy Iraqi fire. I have several reports that unit members are able to call home only once every several weeks, and that they now are only helping to haul Iraqi ammunition.

Another Guard unit has struggled through back-to-back-to-back deployments. This unit was mobilized for state duty in response to flooding in West Virginia in the summer of 2001. After September 11, 2001, this unit spent one year performing homeland se-

curity missions. Then, after a three month rest, the unit was sent to the Persian Gulf in February 2003, where it remains. There has been no word as to when this unit will return home.

While the nation's citizen-soldiers are proud to serve their country overseas, they also have obligations at home. These part-time soldiers are full-time doctors, firemen, policemen, and a host of other roles which are critical to the security of American communities.

I recently contacted Defense Secretary Donald Rumsfeld to ask that he review and address the extended deployments, lack of well-defined missions, and reported rationing of basic supplies. Uncle Sam ought to better serve the interests of Guardsmen and Reservists who lay their lives on the line each time they are called to duty.

West Virginians have a proud tradition of service to America, and our troops should be commended for their courage and sacrifice. But National Guardsmen and Reservists also have important responsibilities to their families, their employers, and their communities. It is unreasonable to dip into the Guard and Reserves so frequently and expect them to serve with no indication of when their missions will end. We must do better to balance their commitments at home with their deployments overseas.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Expanding West Virginia's Health Care Network

Across West Virginia, especially in our more rural areas, there is a serious shortage of doctors and a lack of access to quality medical care close to home. Too often, families must travel long distances to see a physician, and even farther if specialized care is required. That is why, throughout my career of public service, I have worked to expand the reach of our medical facilities.

Recently, I announced the release of \$10.8 million for construction of a new facility at Marshall University that will house a medical education center, primary and specialty care clinical services, and a new heart institute. I included the funding in federal appropriations legislation earlier this year. The new facility will be part of Marshall's Center for Rural Health, which provides medical services in more than half of West Virginia's 55 counties.

Marshall University has taken a leading role in providing health care services to Southern West Virginia. The funding that I obtained will allow the University to expand its efforts and improve the quality of life for many more West Virginians.

West Virginia University (WVU) also has taken on the challenge of improving health care in rural communities. WVU recognizes that the dire shortage of doctors

across the state forces many citizens to travel long distances, sometimes leaving the state, to obtain quality medical care. In an effort to address this dilemma, WVU has established a new Eastern Division of the Robert C. Byrd Health Sciences Center.

This new facility will combine an important medical teaching campus with community-based facilities in Harper's Ferry, Moorefield, and Ranson. The innovative medical campus will provide West Virginia with access to a network of new and existing health care facilities and services throughout the Eastern Panhandle.

I recently announced the release of nearly \$3 million to complete the final phase of construction of the Eastern Division's hub at City Hospital in Martinsburg. This funding builds on \$3.5 million that I secured in the year 2000 to begin construction of the central facility.

West Virginians are proud of their history, their heritage, and their mountains. But that same rugged, rural terrain has been an obstacle for access to quality health care close to home. I hope that my continuing efforts with WVU and Marshall University will help to overcome the roadblocks that prevent many West Virginians from receiving the quality medical treatment that they deserve.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Wired to a High-Tech Future

Education has been the cornerstone upon which I have built my life. I realized early on that, for a poor boy from the coalfields, the only paths to success were education and hard work. Today, West Virginia's colleges and universities are preparing our young people for challenging futures in such fields as science, education, medicine, and technology. These students spend many hours in classrooms, laboratories, and libraries as part of their course work. But their studies, in recent years, have received an added boost from education resources around the world that are accessible through the Internet.

The Internet serves as a valuable educational tool on college campuses across the country. The World Wide Web allows students to conduct research for projects and papers, communicate with classmates and professors, and stay apprised of world events from the desks of their dormitory rooms. With a few simple computer keyboard strokes, students can access treasure troves of knowledge throughout the globe. But, in order to navigate the 'information superhighway,' students need an on-ramp.

One of the last colleges in the nation without a school-wide Internet network, West Liberty State College has launched its "CyberneticCampus" initiative to provide students

with fast, reliable Internet access. According to the college, the Cybernetic-Campus concept represents an institution-wide initiative to expand and enhance the integration of technology in classrooms, laboratories, and residence halls.

To help, I recently announced the release of \$1.7 million in federal funding that I added to an appropriations bill earlier this year. The funding that I obtained will allow West Liberty State to achieve its goal of building high-speed networks for students by equipping all residence halls with Internet access.

West Virginia has come a long way in promoting education and encouraging more young people to continue their studies after high school. But the journey toward excellence is a long one. While we have made progress, there are still challenges and opportunities ahead.

Education remains West Virginia's passport to progress. Young people who receive quality educations at West Virginia's colleges and universities give back tenfold to the future of the state. Through investments at West Liberty State College and the state's other academic institutions, students will have expanded research opportunities, new classroom resources, and improved learning environments.

Byrd's-Eye View

B&O Roundhouse Makes History Again

On July 31, an important piece of West Virginia's history was recognized for its contributions to the nation when the B&O Roundhouse in Martinsburg was designated as a National Historic Landmark. Nestled in the hills of the Eastern Panhandle, the Roundhouse joins some of the nation's most renowned sites previously designated as Historic Landmarks, including Mount Vernon, Pearl Harbor, and Alcatraz.

The designation stems in large part from the community's efforts to restore the Roundhouse to its original state. I have assisted by adding \$2 million to federal appropriations legislation for the project and supporting local efforts to secure an additional \$800,000 in federal funds.

Originally built in 1848, the Roundhouse was a technological wonder that pulled Martinsburg into the Industrial Age. Characterized by historians as a "machine in the garden," the Roundhouse allowed several steam engines to be repaired simultaneously without disrupting regular train flow. Trains would move from the main track onto a roundtable, similar to a Lazy Susan, allowing workers to spin the train to an empty bay for repairs. To pass the time, travelers browsed local shops for the latest fashions and sometimes spent the night at the Depot House hotel overlooking the rails below.

When the Civil War started, the Roundhouse became a military target. As

a vital transportation and communication route for the Union, General Thomas "Stonewall" Jackson led Confederate troops on a march to destroy much of the B&O railroad during the summer of 1861, including the Martinsburg station. General Jackson's troops burned the Martinsburg machine shops, Colonnade Bridge, and Roundhouse. Between June 1861 and September 1864, the railroad was destroyed and repaired nine times.

After the war's end, the railroad rebuilt and expanded the Martinsburg Roundhouse complex. Workers used the original molds during the recasting, making the structure architecturally rare.

The Roundhouse played a major role in labor history as well. In 1877, after the B&O Company imposed a 10-percent wage cut on employees, rail workers in Martinsburg launched the great Pullman strike -- the country's first national labor strike.

Providing more than a century of rail service, the Roundhouse finally closed operations in 1988; but its legacy continues to this day. Eastern Panhandle residents and organizations have worked tirelessly to protect this piece of Americana. I applaud the efforts of those who have worked to restore the Roundhouse, and I encourage all West Virginians to take the time to learn about this important piece of history tucked away in our rolling hills.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Breaking the Cycle of Coal Slurry Tragedies

Throughout West Virginia's history, coal mining has been a staple. While coal has strengthened the state's economy, the dangerous realities of the mining industry have not been lost on West Virginians, including the threats from ponds holding a mine's waste material, called slurry.

Accidents at these impoundments continue to occur almost every year. Often, the walls of the impoundments give way, allowing the waste material to flow into area streams and water supplies. Many of these incidents are small, but even a small spill can affect families living many miles away. For instance, earlier this year, 270,000 gallons of slurry spilled from an impoundment in Logan County into a local creek. That creek spread waste for seven miles along its banks and the nearby Guyandotte River.

Some spills are much larger. The Mountain State never will forget the 1972 Buffalo Creek disaster in Logan County. When that impoundment gave way, the resulting devastation cost the lives of 125 people. Since then, there have been at least nine major spills in the Appalachian coalfields.

For instance, in October 2000, a breach at a coal impoundment in eastern Kentucky let loose 250 million gallons of slurry, which then flowed into tributaries of the Tug Fork and Big Sandy rivers along the Kentucky - West Virginia border, where

it tainted key water supplies in a 60-mile area.

It is time to find ways to protect communities from these coal slurry tragedies.

Following the October 2000 accident, the National Academy of Sciences, with my support, launched a study and made recommendations on methods to improve safety and reduce the environmental impacts of coal waste impoundments. Now, those recommendations are being implemented.

Using \$3 million that I added to federal appropriations legislation earlier this year, the National Technology Transfer Center in Wheeling, together with the National Energy Technology Laboratory in Morgantown, the Mine Safety and Health Administration, and the Office of Surface Mining, will undertake a pilot program in Southern West Virginia to study and improve coal impoundment safety. This funding will support efforts to develop innovative ways to reduce the risks for communities near these sites and for individuals who work there. It is my hope that this work can be applied to impoundments throughout Appalachia.

Finding solutions will not be simple, but can be achieved. We must learn from the tragic coal slurry breaches of the past and push forward to discover new economically feasible and environmentally friendly ways to prevent such disasters in the future.

Finding the Wisdom to Win the Peace

As the situation in Iraq continues to spiral out of control, an anxious nation watches. Despite assurances to the American people that our troops would be welcomed with open arms as liberators, U.S. soldiers are increasingly being met with guns and car bombs. The American people are told to be patient. Winning the peace will take time. Meanwhile, the frustration of the Iraqi people grows by the day, as does their anger.

What has become tragically clear is that the United States has no strong plan for turning Iraq over to the Iraqi people and is quickly losing even its ability to maintain order. The Administration is stumbling through the dark, hoping by luck to find the lighted path to peace and stability.

Despite the best hopes for an Iraqi democracy, the Iraqi people and the world see only the worst fears of occupation. Instead of inspiring steps toward self-government, we witness hit-and-run murders of American soldiers, terrorist attacks, and sabotage. We promised to improve the quality of life; yet, so far, we have failed to deliver. As a result, increasing numbers of Iraqis see the United

States only as occupier, not liberator.

Now it appears that the Administration may be ready to swallow its pride and seek a United Nations resolution to encourage foreign participation in the occupation of Iraq. This would be a positive development, one that the Administration should have embraced from the outset. The challenge is too great for the United States alone. We must work with the international community to forge what we cannot achieve alone: a lasting peace for Iraq and, in fact, for the Middle East region as a whole.

A hallmark of true leadership is the ability to admit when one is wrong and to learn from errors. Candidate George W. Bush spoke about the need for humility from a great and powerful nation. He said, "Let us not dominate others with our power -- or betray them with our indifference. And let us have an American foreign policy that reflects American character. The modesty of true strength. The humility of real greatness." It is time for the Bush Administration to swallow its false pride and return to that philosophy of humility before it is too late.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protecting Diversity in the Media

Earlier this year, the Federal Communications Commission (FCC) voted to change media ownership rules which currently limit the conglomeration of print, radio, and television outlets across the country. This dangerous decision to lift the ownership cap threatens to strangle diverse voices at virtually every level of news and commentary. I fear that Americans' freedoms would be trampled; their rights would be subverted.

Local news media represent a community's window on the school board, city council, and county commission. More than any other resource, local news outlets educate people about the issues that directly affect their daily lives. The new FCC rules would undermine that role by allowing one person or one corporate interest to control such a significant level of discourse and debate. News and information could be forced to fit into a corporate plan or personal agenda.

Large media conglomerates already control the vast majority of what Americans see, read, and hear. Five media companies control 75 percent of prime-time programming. These same five companies also control 90 percent of the top 50 channels on cable. On the Internet, existing newspapers and television networks dominate the most popular sites for news and information. Technology has increased the number

of media outlets, but it has not stopped big media from extending its reach.

The FCC's proposal threatens to expand the influence of these few corporations even further, stretching their hands around a larger number of local television and radio stations and scarfing up newspapers and Internet news outlets.

The Framers of the Constitution understood that the Republic would not function properly if the media were not allowed to operate freely and without intervention from government. However, the media industry also must recognize the responsibility it has to the public which relies so heavily on daily news reports. Allowing just a few individuals or corporations to control what Americans see, hear, and read would only give Americans less information to use in making decisions about the key issues they face. Such control could limit access to the free and fair information which impacts the lives of all Americans. It could diminish the coverage of local voices and local issues as media giants gobble up local stations and nationalize the stories they broadcast.

The Senate has recognized this danger and voted to block the FCC from implementing this new rule. I hope that the House of Representatives will take a similar bipartisan approach and vote to protect media diversity.

By U.S. Senator Robert C. Byrd

Paycheck Protections for Working Families

Across West Virginia and the nation, families face an unsure economic future. In the last three years, nearly 3 million jobs have vanished from the American economy and are unlikely to return any time soon. Companies, in light of smaller profits and tough financial pressures, often are turning to their employees and retirees for concessions. Now, despite all of the challenges facing working families, the Bush Administration is pushing a plan that would take away overtime pay for millions of Americans. This Administration has turned a deaf ear to the working families of this nation.

The Administration's push to cut overtime pay follows in the footsteps of other initiatives that would eliminate worker protections and benefits. For instance, the White House has sought to prevent federal workers from unionizing and has consistently blocked an increase in the minimum wage. This is not the record of an Administration that understands the needs of working families. On the contrary, this Administration has not the faintest idea about what it takes for working, middle-class families to get ahead.

The President's proposal would repeal the 40-hour workweek, established by the Fair Labor Standards

Act of 1938, and take away the right of employees to earn time and a half for extra hours worked. The Bush plan would eliminate overtime pay protections for as many as 8 million American workers who currently are eligible for overtime pay.

These hard-earned overtime dollars often make the difference between workers just making ends meet and being able to provide a better life for their families. For many employees, overtime pay constitutes one-quarter of their wages. It is the extra cash to take care of elderly parents, a new baby, or unexpected medical costs. It is the money that is set aside for a child's college education.

That is why I worked in the Senate to win approval of legislation that would block the Administration's plan from taking effect. Overtime pay is one of the hardest-won achievements of the American labor movement. It was that extra help that families needed to stay afloat during the final years of the Great Depression, and it continues to bolster American families today.

For those who stay on the job after the five o'clock whistle blows or the shift ends, overtime pay is the reward for hard work. These critical dollars belong in the pockets of the workers who earn them.

Preserving Steel Jobs in West Virginia

The American steel industry has weathered more than four years of unfair trade practices and waves of underpriced foreign steel imports. But just as these companies are turning a corner, the Bush Administration wants to eliminate the very initiatives that have helped these companies to get back on their feet. One such program targeted for extinction by President Bush is the Emergency Steel Loan Guarantee Program (ESLGP) which I created in 1999 to provide American steel producers with access to short-term funding in the face of the import crisis.

When I worked to create the ESLGP, I pledged to do all that I could to make certain that U.S. steel companies can survive in the face of unfair foreign trade practices in the global marketplace. Time has passed, but unfair trade by our international partners has continued. That is why the ESLGP must be available now and in the future to help steel companies gain ready access to capital.

Recently, I won approval from the Senate Appropriations Committee to extend the threatened program for another two years. Without this extension, the ESLGP will expire at the end of this year.

West Virginia's steel companies and their workers continue to make sacrifices to keep their furnaces burning. However, without

the guarantees provided by the ESLGP, the furnaces could go cold and thousands of jobs could be lost forever. In August, officials at Wheeling-Pittsburgh Steel Corporation stated that their company was able to emerge from bankruptcy in large part because of the financial support made possible by the ESLGP. The loan guarantee application submitted by Weirton Steel earlier this year hangs in the balance if the ESLGP is not extended.

Over the past few months, I have been contacted by representatives of steel companies in California, Connecticut, Minnesota, Pennsylvania, Texas, and Utah -- all hoping to apply for a loan guarantee from the ESLGP next year. The program continues to serve an important purpose. Instead of spearheading efforts to kill it, the Bush Administration, which claims to support the U.S. steel industry, should encourage Congress to enact my two-year extension of the Emergency Steel Loan Guarantee Program. West Virginia has stood tall for steel. It is time for the Administration to do the same.

Now is not the time to walk away from the American steel industry. Too much is at stake for West Virginia and the country. Our steel companies need the help that is readily available through the ESLGP, and they need it now.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Finding a Cure for Breast Cancer

Each October, the nation marks "Breast Cancer Awareness Month" to focus attention on the disease and treatment options available for those diagnosed with it. Breast cancer is the most frequently diagnosed cancer in American women, with 211,300 invasive cases expected in 2003. Breast cancer is the second leading cause of cancer death in U.S. women: 39,800 deaths are expected in 2003. It is imperative that experts find a cure and continue research into effective treatments.

One decade ago, breast cancer research was an unacceptably low federal funding priority. That is why I have worked with Senators from both parties to increase America's investment in life-saving breast cancer research. This year, the federal government will invest almost ten times as much as a decade ago to find improved treatments and, one day, a cure for this deadly disease.

This research is paying off. While the number of breast cancer cases remains high, it is declining. The American Cancer Society reports that among American women overall deaths from breast cancer dropped steadily during the 1990's. This improved survival rate is attributed to progress in both early detection and better treatments for the disease.

Experts state that the most effective way to detect breast cancer is through a

combination of clinical breast exams, regular self-exams, and routine mammograms. Many studies have shown that women who get yearly mammograms are more likely to find breast tumors while those tumors are still small and treatments are highly successful.

Mammograms and other detection options are available through the statewide breast and cervical cancer prevention, education, and screening project, launched in 1990 with funds I added to an appropriation bill. This initiative offers screenings to West Virginians who otherwise might not have access to such tests.

In addition, scientists at the Robert C. Byrd Cancer Research Laboratory at West Virginia University are on the trail of a cancer cure. The lab is part of the Mary Babb Randolph Cancer Center, which was established, in part, with \$13.3 million that I added to federal appropriations bills beginning in 1985. The Cancer Center is West Virginia's first statewide cancer research and treatment facility.

By continuing the investment in cancer research and aggressively moving ahead to find a cure for the disease, I hope that one day we will not need a "Breast Cancer Awareness Month." But until that day arrives, I urge women to learn how to detect the disease at an early stage. Early detection is still the key to survival.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Hearing First Responders Loud and Clear

The nation's first responders deserve the best equipment available but, in many communities, they are getting by with the worst. When an emergency occurs, it is critically important that local fire departments, law enforcement agencies, and emergency medical services be able to communicate with each other on the scene. The reliability of their communications equipment can be a matter of life and death.

The attacks on September 11, 2001, were a tragic wake-up call that too many first responders lack the tools they need to do their jobs and protect the communities which they serve. Much more needs to be done at the state and local levels to better prepare for, and respond to, potential future attacks. Improving interoperability among first responders' communications devices is an important first step to saving lives in any crisis.

All Americans, whether they live in rural communities or big cities, want to know that, if there is a terrorist attack or emergency of any nature close to home, their first responders will be able to take control of the situation and come to the aid of victims. This task is made dangerously difficult when the policemen, firefighters, and medical personnel who report to the scene are unable to share information and coordinate a response plan.

After receiving numerous calls for help from emergency services across the country, I included \$80 million in two federal spending bills last year for a new nationwide program to help emergency personnel to establish clearer lines of communication in times of crisis. Through this program, the Department of Homeland Security recently released funds to 17 counties across the country to assist emergency services in upgrading their communications systems.

I am pleased that Harrison County has been awarded a \$5.7 million grant to explore available equipment and technology options to increase interoperability among the region's emergency services. This funding will allow Harrison County to serve as a model for communications systems upgrades across the country and will help to make West Virginia and all of America safer.

First responders risk their own lives to save the lives of others each time they are called to duty. We must provide them with the best equipment to do their jobs. Harrison County now will have funds to invest in cutting-edge technologies to help to protect emergency personnel and citizens. I will work to ensure that the lessons learned in Harrison County will help emergency workers throughout the state and nation to better protect their communities.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Blue Ribbon for Classroom Excellence

A blue ribbon is the symbol of excellence and success -- the mark of a job well done. Since 1982, the Blue Ribbon Schools Program has highlighted many of America's most successful schools. It supports and promotes improvements in education by recognizing schools that demonstrate a strong commitment to educational excellence for all students and that achieve high academic standards.

One does not need to attend the fanciest school to receive a quality education. The quality of teaching and the commitment of parents also are critical to a student's accomplishments. While the seed of intelligence may be planted at birth, it requires cultivation, care, and hard work to blossom into culture and wisdom.

Many schools in West Virginia have adopted that attitude and instituted programs to instill a passion for education in students. Recently, two West Virginia elementary schools received national recognition for their achievements with the Blue Ribbon Award -- the top award given to a school -- from the U.S. Department of Education. Steenrod Elementary School in Ohio County and Kenova Elementary School in Wayne County have been awarded this prestigious honor.

I congratulate the teachers, administrators, students, and parents at these schools on their hard work in achieving this recognition.

The Department of Education noted that Steenrod and Kenova have made significant progress toward meeting the challenging academic goals established in 2002 in the federal No Child Left Behind Act.

However, much work still remains. Too many schools are struggling to meet the significant mandates of No Child Left Behind without any new resources. While President Bush signed the act into law with great fanfare, he has not backed the funding necessary for more schools to achieve the successes of Steenrod and Kenova.

On more than one occasion, I have offered proposals in the Senate to fully fund programs to support the nation's elementary and secondary schools but, at each turn, the Bush Administration has opposed my efforts. Despite the setbacks, I remain committed to the task. We cannot afford to fail. The country's future depends in large part on the education of our young people. We need to take the necessary steps, which include providing adequate federal funding, to ensure that every child is placed on a path of lifelong learning.

Again, I applaud the accomplishments of Steenrod and Kenova elementary schools. Their success can serve as a model for all West Virginia schools as they strive for excellence and prepare our young people to lead the state and nation in years to come.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Recognizing Special Libraries

Opening the doors of a library reveals vast new worlds of knowledge to a child with just a library card and a desire to discover. For people of all ages, especially those who live in rural communities, the resources in the local library are often the only ticket to information about distant lands, fields of knowledge, and timely news.

Small libraries throughout West Virginia serve as community gathering places and provide vital programs and services for citizens. Recently, a West Virginia county received the nation's highest honor for extraordinary public service provided by libraries. The Pocahontas County Free Libraries was one of only three institutions across the country to be awarded the 2003 National Award for Museum and Library Service, an honor created to underscore the vital role of museums and libraries in society.

Located throughout the county's mountainous terrain, the four branches of the Pocahontas County Free Libraries (PCFL) in Green Bank, McClintic, Hillsboro, and Durbin are cornerstones of civic engagement. The libraries host activities for groups such as the Boy Scouts, business associations, the town council, blood drives, a pre-school playgroup, and youth after-school programs. Volunteers provide thousands of

hours of service, and local organizations make steady, substantial contributions to keep the libraries running.

The PCFL is home to the largest West Virginia and Appalachian collection of any small library in the state and has a Heritage Room with local historical materials and facilities for genealogical research. A collection named for Nobel Laureate and author Pearl Buck, who was born in Hillsboro, is currently under development. The libraries partner with other community groups for much needed historic and cultural projects, including such diverse items as a biographical film of a legendary local newspaper editor, a book and radio show about the history of forest fire towers, and a veterans' oral history project.

The PCFL serves as a model of excellence for small libraries throughout West Virginia and rural America. I congratulate the libraries' board of trustees, staffs, and community members on this well-deserved recognition. Their efforts ensure that the Pocahontas Free Libraries will continue to educate, enlighten, and inspire -- the role of all libraries in the state. The PCFL demonstrates that libraries are not just repositories of great books; they are also pathways to knowledge and gateways to the wonders of the world, right in our own neighborhoods.

October 29, 2003

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Infusing Funds in Community Emergency Efforts

Police, fire, and emergency response teams throughout West Virginia have sent a clear message to the U.S. Capitol, namely, they need more federal help to best do their jobs. Too often, these first responders have to rely on small events like bake sales and spaghetti dinners to raise funds for new trucks and safety equipment. But bake sale profits fall far short of the bill for the equipment and training that first responders must have. That is why I have tried repeatedly to provide additional dollars to help plug critical holes in our defenses here at home.

Most recently, I announced that West Virginia will receive nearly \$25 million in the next year for training, emergency response equipment, and terrorism prevention and deterrence grants. Specifically, West Virginia will receive \$18.9 million for terrorism and disaster training, equipment, and response planning. Another \$5.6 million will be directed to prevention and deterrence efforts. Finally, \$392,000 is for West Virginia's "Citizens Corps" -- an initiative modeled on the Neighborhood Watch program, where local residents develop plans to engage citizens in homeland security, community preparedness, and family safety initiatives.

West Virginia may not be the biggest or most populated state, but it holds potential terrorist targets.

For example, it is no secret that West Virginia has one of the most concentrated regions of chemical plants in the country. An attack on those plants could jeopardize thousands of lives. We need to take steps to ensure the security of those plants and the safety of the citizens who live nearby.

These funds also have an added benefit for West Virginia. The training and equipment provided to emergency response teams will be used not only in the event of a terrorist attack but also for disasters such as floods and ice storms.

For many months, I have worked through my leadership position on the Senate Appropriations Committee to provide first responders with adequate resources to carry out their critical duties. The release of these funds is the culmination of my work this year.

Congress has a responsibility to protect the nation. It must focus on the country's many serious vulnerabilities and invest dollars where they are most needed. When it comes to protecting this nation, there should be no distinction between providing necessary resources for troops overseas and for first responders at home. Police officers, firefighters, and paramedics are always willing to answer the call to duty; we must ensure that they have the tools and the training to be ready.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

On the Job for West Virginia's Future

West Virginia's core industries of coal, steel, glass, and chemicals have withstood the test of time and been the lifeblood of our state. But times are changing. We are shifting to a high-tech and service-driven economy. We need to continue to support our traditional industries, but we also need to work to encourage the establishment and expansion of smaller entrepreneurs and high-tech companies.

I have worked for many years to do just that. Utilizing my leadership position on the Senate Appropriations Committee, I have identified national security and defense-related technology needs and matched them with people and resources in West Virginia. I also have added critical funding to federal legislation for worker training and infrastructure development that have attracted high-tech employers to the Mountain State.

The Information Manufacturing Corporation (IMC) first established operations in the state in 1998 at the Allegheny Ballistics Laboratory Hilltop Office Complex in Mineral County. Since opening in West Virginia, IMC has created 325 skilled jobs in Webster Springs, Rocket Center, Bridgeport, and Clarksburg. IMC is a success story which serves as a model for job development

efforts throughout the state.

ManTech is another company whose decision to put down roots in West Virginia has proved fruitful. ManTech's operations in Hinton and Fairmont play a crucial role in developing and applying new computer-related technology to support the Defense Department. By converting Defense Department documents from paper to electronic formats, ManTech helps the Pentagon to cut costs and increase efficiency. The quality jobs that the company supports -- jobs which did not exist only a few years ago -- are helping to create new economic opportunities for citizens of the Mountain State.

These companies are just two examples of thriving high-tech initiatives that call West Virginia home. These endeavors have the potential to bring with them greater economic prosperity and technological advancements that will benefit West Virginians today and for many years to come.

One of my priorities in the Senate is to help prepare West Virginia so that our children may stay in the state and find jobs to support their own families. The foundations we build and the opportunities we create provide benefits now, but the ultimate reward is the brighter future that we leave to our children.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protecting Opportunity in Appalachia

In 1965, Congress, with my strong support, created the Appalachian Regional Commission (ARC). The goal of the ARC was to provide help to people living in the 13-state Appalachian region, people who were suffering because the economic progress that the rest of the country had experienced bypassed their region.

Today, nearly 40 years later, while much progress has been made in job opportunities, education, and health care, parts of Appalachia remain a step behind the rest of the country. The role of the ARC remains as important today as it was in 1965.

Despite the clear need, the Bush Administration has not been a friend to the ARC. In fact, in its latest budget request of Congress, the White House sought to cut in half the ARC's non-highway budget. This is funding for education and training programs, water and sewer system construction, small business start-ups and expansions, and development of health care resources. Such a drastic reduction would not have stunted growth in Appalachia; if accepted, the Bush budget would have set progress in Appalachia back by years.

Recognizing this danger, however, I went to work to defeat the Bush Administration budget and ensure that the ARC re-

ceived the funds that it so desperately needs. In light of the Administration opposition, it has not been easy, but Congress is preparing to give final approval to funding that restores the ARC budget. Instead of eliminating \$38 million from the ARC as the Bush White House proposed, Congress, at my insistence, will provide \$66 million for the agency for this fiscal year. That level of funding will protect the ARC's core mission of improving basic infrastructure, boosting job opportunities, and opening access to health care.

Since the ARC was founded, the 13-state Appalachian region has taken significant steps to overcome its isolation. Yet, the region still lags behind the nation in many respects. The cycle of poverty remains all too prevalent. Too many children go hungry. Too many families have no access to nearby health care. With the many challenges before us, there clearly remains much work to be accomplished by the Appalachian Regional Commission. Now is not the time to cut funding and slow progress, as the Bush Administration proposed; rather, now is the time to expand the partnerships and protect the initiatives that are moving West Virginia and the entire Appalachian region toward a brighter tomorrow.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Giving Thanks for Many Blessings

Each year, America pauses to celebrate Thanksgiving, a day for recognizing and celebrating our Pilgrim heritage -- that small group of men and women who left their homeland, crossed a mighty ocean, and settled in a wilderness so that they could worship God as they chose.

A year after landing -- after months of privation, suffering, sickness, hunger, and death -- these men and women set aside time to express their gratitude to God for protecting them and for preserving their community. They were not only men and women of great courage, they were also men and women of great religious faith.

The tradition of Thanksgiving was reaffirmed during the American Revolution. Following the Battle of Saratoga in October 1777, the Continental Congress approved a resolution designating a day of "Thanksgiving and praise." Five years later, on October 11, 1782, Congress proclaimed "the twenty-eight day of November next, as a day of solemn THANKSGIVING to God for all his mercies: and they do further recommend to all ranks, to testify to their gratitude to God for his goodness."

Following the establishment of the new government in 1789, President George Washington issued the first Presidential proclamation

calling for "a day of public thanksgiving and prayer." At President Washington's request, Americans assembled in churches on the appointed day and thanked God for His blessings.

So it is that we celebrate this unique American holiday, a day devoted to family, to country, and to God. Indeed, we have so much for which to be thankful.

We can be thankful for the heritage of liberty bequeathed to us by our ancestors, who entrusted us to preserve this living legacy for future generations of Americans.

We can be thankful for those men and women who, 383 years ago, had the courage, the faith, and the devotion to God, to embark upon the most difficult and dangerous of journeys and face the darkest unknown so that they, and we, could worship freely.

We can be thankful for our families and friends and for the strength of home.

I hope that during this Thanksgiving, West Virginians will take the time to rediscover what it is that makes them a family. Before sharing that lovingly prepared feast, families should take the time not only to express thanks for the bounty that is set out before them but also for the opportunity to gather in kinship and to thank God for His manifold blessings.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Prescription for Medicare Trouble

Recently, Congress approved legislation creating a limited Medicare prescription drug benefit. I have long supported the concept of comprehensive Medicare drug coverage, but I could not support this legislation because of its price; the Republican Medicare bill would take the first step toward undermining the Medicare system that has benefited millions of retirees.

Specifically, the GOP plan forces Medicare beneficiaries to rely on a private, untried, drug-only insurance market for prescription drug coverage, rather than building on the traditional, successful Medicare program. This flawed legislation covers less than a quarter of Medicare beneficiaries' estimated drug costs during the next 10 years, and the complicated coverage formula has a large, gaping hole, that will leave seniors without a dollar of support right when they need that support the most.

This legislation includes copayments, premiums, and deductibles that may be unaffordable for many low- and middle-income elderly citizens. A closer look at the fine print of this legislation reveals that private insurers can choose to charge senior citizens double or even triple these amounts. Premiums can fluctuate dramatically based upon the location and the health of a beneficiary. At the same time, the federal government will hand over billions of taxpayer

dollars to for-profit insurance companies just to entice them to participate in the program. Further, this legislation explicitly prohibits Medicare from using the purchasing power of more than 40 million beneficiaries to negotiate for lower prices on prescription drugs -- a cost-savings practice regularly used by the Department of Veterans Affairs, the Department of Defense, and several states including West Virginia.

Under the Republican Medicare plan, Mountain State seniors will not receive the real, guaranteed benefit that they desperately need. Despite this legislation's big promises, too many elderly citizens will still be forced to split pills to make medicines last longer. Too many seniors will still go to bed at night struggling with the decision whether to take their limited incomes and pay for food and shelter or pay for the medicines that their doctors have prescribed.

This new Medicare package sells out senior citizens in exchange for big profits for prescription drug companies. Senior citizens and disabled citizens deserve more than a new scheme that leaves them naked to the whims of private insurance companies, and offers only a now-you-see-it, now-you-don't promise of coverage. Instead of selling illusions, Congress ought to work on a responsible, comprehensive, voluntary Medicare prescription drug benefit. Our seniors deserve no less.

Steel's Fair-Weather Friend

The beleaguered steel industry has been dealt another blow, this time by the Bush Administration's recent decision to lift Section 201 tariffs on foreign steel imports. With this reversal, the President has removed the single most effective tool in place to help stabilize the American steel industry. Hope has been diminished for thousands of steel families who were just starting to see light at the end of the tunnel. It is bad news for the steel industry and bad news for West Virginia.

Since 1997, the American steel industry has been crippled by wave after wave of foreign imports. These imports have flooded the market and washed away thousands of jobs. After a lengthy investigation by the International Trade Commission (ITC), the President imposed tariffs last year of up to 30 percent on steel imports to provide the faltering steel industry relief from surges of imported foreign steel. But now, that help is gone.

I contacted President Bush and key Administration Cabinet officials several times to urge them to keep the Section 201 tariffs in place for their full three-year term. But instead of staying the course and completing the restructuring of a strong, stable domestic steel industry, the Administration has undercut the effort halfway through its intended

life span. In response, I have introduced legislation that would reinstate the Section 201 tariffs on steel imports and keep them in place through March 5, 2005.

The President's decision to lift the tariffs is an especially bitter pill to swallow because the program was working. It was eliciting the very industry adjustments the President called for when he imposed the tariffs. President Bush claimed that he wanted to give America's steel industry and its workers a chance to get back on their feet. But now the Bush team seems more than willing to let the steel industry land flat on its back.

When the Bush-Cheney ticket needed West Virginia's votes in 2000, it pledged to help our steel industry. The White House applied the steel tariffs, for which West Virginia was thankful. But then the President exempted import after import from those tariffs. Now the President has eliminated the tariffs completely. President Bush's support for West Virginia's steel communities apparently was nothing more than cheap lip service.

The White House may have forgotten the promises it made to the steel industry in West Virginia, but thousands of West Virginians will not forget. They recognize a fair-weather friend when they see one.

The Christmas Story

Christmas is one of my favorite times of the year, a time of joy and love, of family gatherings and warm memories. Over time, however, Christmas has become more about big store sales and shopping malls rather than the birth of Jesus. The meaning of Christmas is overshadowed by the pressures and strains of a commercialized holiday.

At its core, Christmas will always be about a couple who found no shelter but a manger, and also about a newborn child who would become the Savior of the world.

I hope that West Virginians pause to remember the words of Luke's Gospel, where the Christmas story comes to life.

"All went to be taxed, every one into his own city. And Joseph also went up from Galilee, out of the city of Nazareth, into Judaea, unto the city of David, which is called Bethlehem; (because he was of the house and lineage of David:) to be taxed with Mary his espoused wife, being great with child.

"And so it was, that, while they were there, the days were accomplished that she should be delivered. And she brought forth her firstborn son, and wrapped him in swaddling clothes, and laid him in a manger;

because there was no room for them in the inn.

"And there were in the same country shepherds abiding in the field, keeping watch over their flock by night.

"And, lo, the angel of the Lord came upon them, and the glory of the Lord shone round about them: and they were sore afraid.

"And the angel said unto them, Fear not: for, behold, I bring you good tidings of great joy, which shall be to all people. For unto you is born this day in the city of David a Saviour, which is Christ the Lord. And this shall be a sign unto you; Ye shall find the babe wrapped in swaddling clothes, lying in a manger.

"And suddenly there was with the angel a multitude of the heavenly host praising God, and saying, Glory to God in the highest, and on earth peace, good will toward men."

During this holiday, let us reflect on family and faith. Let us share a meal with loved ones and give thanks for our blessings. Perhaps, then, the materialism of the season will fade and we can begin to truly understand the great and glorious meaning of Christmas.

My wife, Erma, and I wish for you a happy and holy Christmas and New Year.

Return to Sender

The Internet is undoubtedly one of the most important inventions of the 20th century. In seconds, one can access a wealth of information about people and places far and wide. With a few strokes on a keyboard, one can send an e-mail message anywhere in the world. The advancements in communications technologies during my more than fifty years in Congress are nothing short of amazing.

Unfortunately, these technological breakthroughs also have a downside. More and more, unsolicited e-mail communications, commonly referred to as "spam" or "junk e-mails," are threatening to overwhelm the positive content of the Internet.

Experts estimate that more than 13 billion spam messages are sent each day. These unsolicited messages now account for nearly half of all e-mail traffic. Not only can spam be a nuisance, but its cost may also be passed on to consumers through higher charges from Internet service providers who must upgrade their systems to handle the heavy traffic. Also, spam often includes fraudulent information or adult-oriented material that offends recipients and concerns parents who want to protect their children. Experts estimate that spam will cost U.S. organizations more than \$10 billion in 2003 alone.

Congress has responded to the pitfalls of spam with passage of the "Controlling the Assault of Non-Solicited

Pornography and Marketing Act of 2003." This legislation, which I was pleased to support, will outlaw some of the most common methods for generating mass e-mails. The bill also will establish penalties for the most prolific spam producers, including jail time and up to \$3 million in fines.

While passage of this bill is a step in the right direction, West Virginians can take immediate steps to protect themselves from these intrusive communications. The Federal Trade Commission (FTC) website at <http://www.ftc.gov> provides information to help Internet users combat unwanted junk e-mail. The FTC recommends that individuals combat unwanted spam by using e-mail filters which are commonly available, reviewing the privacy policy when submitting an e-mail address to a website, and reading entire forms before transmitting personal information through the Internet. In addition, unwanted or deceptive e-mail messages can be forwarded to the FTC at uce@ftc.gov for use in law enforcement actions against people who send unsolicited e-mails.

The onslaught of unwanted commercial or pornographic e-mails threatens further expansion of the Internet. It is my hope that this new legislation, combined with prudent security actions taken by individual computer users, can begin to control this serious problem.

West Virginia Technology "Swarms" into Action

America must stand ready at a moment's notice to send its troops into harm's way when the need arises. Unfortunately, in the age of international terrorism, the unpredictability of the nation's enemies has dramatically increased the risks to the men and women of our military. While the critical missions of America's Armed Forces will always involve a certain degree of danger, there are efforts underway in West Virginia to provide the technology that can help to better protect our soldiers, sailors, airmen, and marines.

A team of West Virginia researchers will utilize \$4.25 million that I added to a recent federal appropriations bill to develop an intelligent control system -- essentially the brain -- for a small, light-weight unmanned aerial vehicle for the U.S. Navy. Unmanned vehicles, which are controlled from afar by military personnel, have become important tools in the military's arsenal.

Currently, many unmanned vehicles are operated individually with a rudimentary control system. But the project underway in West Virginia would allow new unmanned vehicles to fly in unison, as a flock of birds would. These new planes are called "Smart War-fighting Array of Re-configurable Modules." Coupled with sensors that

would detect biological, chemical, or nuclear weapons, this ability to "swarm" would allow these state-of-the-art vehicles to significantly increase the Navy's surveillance and reconnaissance capabilities, while decreasing the risk to military personnel.

The intelligent control system will be developed for the Navy by Augusta Systems, a Morgantown-based technology company, and the West Virginia University Institute of Technology in Montgomery. As part of the project, McLean, Va.-based Alion Science and Technology company, a global research and development corporation, will open an office in Morgantown. The collaboration with the Navy in this effort is a testament to the caliber of the state's high-technology workers.

The many challenges facing the men and women of the nation's military forces underscore the ever growing need to research, develop, and build advanced and innovative defense weaponry. I take great pride in West Virginia's contributions -- from the laboratory to the battlefield -- to America's Armed Forces. I shall continue to work to provide the men and women of the military with the technology, equipment, and training that they need to successfully defend our nation.

NASA Exploration Opens New Opportunities

In the early days of the New Year, the exploration rover "Spirit" safely landed on the surface of Mars and started to send images of the Red Planet back to Earth. The landing was a great step forward for the National Aeronautics and Space Administration (NASA), whose scientists will spend months analyzing pictures and information from the Spirit rover.

The "Spirit" will search for signs that Mars once sustained water. Progress may eventually spur a manned mission to Earth's neighbor in the solar system.

Many have questioned the wisdom of investing in the space program. However, investments in NASA have resulted in significant progress in West Virginia and the world.

For example, NASA is a key piece of the I-79 high-tech corridor in North Central West Virginia. The Independent Verification and Validation Facility (IV&V) in Fairmont was established in 1993 after I added \$10 million to federal legislation for the facility's construction. The IV&V's 215 workers test computer software to ensure the highest possible effectiveness for key NASA projects including the International Space Station, the Space Shuttle program, and the Kennedy Space Center.

The IV&V has spurred growth at the West Virginia High-Tech Consortium Foundation, anchored at

the Alan B. Mollohan Innovation Center. These facilities -- and the research underway there -- have led to hundreds of new jobs in the Mountain State.

The men and women of the IV&V continue to showcase the high-tech know-how and ingenuity that are alive in West Virginia. Through their work, the NASA specialists are showing that one does not have to leave the West Virginia hills to reach the stars.

NASA's high-tech efforts also have translated to everyday technologies. For instance, NASA-inspired communications satellites connect faraway locales, while orbiting eyes in the sky track hurricanes, wildfires, and volcanoes. Health care workers monitor many patients at once, thanks to technology first used to track the health of astronauts. And NASA research is helping make it safer to fly in a plane or drive on the nation's highways. Clearly, advancements in space continue to lead to advancements on Earth.

Each venture into space is another step toward innovation. The "Spirit" mission to Mars is such a step. While the journey is not easy, it is vitally important to the unlocking of the secrets of our world. I applaud the men and women of the "Spirit" project and salute those Americans who dedicate their lives to discovery.

Finding Families for Foster Children

Across America, hundreds of thousands of children are in foster care, hoping for the chance to be part of a loving family. Too often, however, prospective parents feel overwhelmed by bureaucratic red tape, facing long delays and immense piles of paperwork. In fact, many parents-to-be give up on the American adoption system and turn to foreign countries to find children. While it is important that parents are able to adopt children from all over the world, children in America are left bouncing from foster home to foster home.

Recognizing this dilemma, I supported legislation, recently signed into law, that is aimed at encouraging more parents to adopt children from America's foster care system. As a result of this legislation, the federal government will provide states with expanded financial incentives to encourage the adoption of special needs children and children over the age of 9. These two groups of young people traditionally face a difficult time finding a permanent home.

This new law builds on the Adoption Incentives Program, originally passed by Congress in 1997, that establishes an annual adoption goal for each state and then provides the state with a payment of \$4,000 per

child adopted above the goal. This program has proved successful. In the five years from 1998 to 2002, states placed more than 230,000 children in adoptive homes -- about the same number that had been adopted in the 10 years prior to 1998. Clearly, the incentives are working. More children are finding homes.

For an orphan or for someone in foster care, the day he or she is adopted is one of the most important days in that child's life. I know this firsthand. When I was two, my mother was dying from the influenza epidemic. She asked my aunt and uncle to adopt me as their own son. They did, and I went from being Cornelius C. Sale, Jr., to Robert C. Byrd. We moved to West Virginia, and my adoptive parents provided me with a loving, supportive home that continues to influence me to this day.

Too many children across the country are looking for that same chance. They need adults to step forward and make a difference in their lives. As the federal government continues to partner with the states to encourage adoption, I hope that more would-be parents take advantage. For to make a difference in the life of a child is to invest in the country's future.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Keeping the Promise to West Virginia's Children

Two years ago, President Bush signed the "No Child Left Behind Act (NCLBA)" into law. The Act was designed to insert accountability into the education system. The Act calls for regular testing of students to determine whether they are making progress. If they are not, changes must be made in a school.

Simply, the No Child Left Behind Act made a promise. In exchange for higher academic standards and greater accountability, President Bush promised to devote significant new resources to America's public schools. But, to date, it is a promise that the Bush White House has failed to fulfill. Accountability cannot just be a standard for teachers; it must also be a standard for this Administration.

About half of West Virginia's public schools receive Title I funding for children from poor school districts. This year, President Bush ignored the funding level pledged by NCLBA and asked Congress for an amount that leaves more than 2 million children without adequate education resources. I offered an amendment to legislation in the Senate that would have fully funded the promise to these children, but, with strong opposition from the White House, it failed.

The Administration soon will present its budget priorities for the next year to the nation. The

President has indicated that, again, he would cut the Title I funding promised to Mountain State schools by almost 35 percent. This means that 18,766 West Virginia children would be denied full academic services. Evidently, "Leave Only 18,766 Children Behind" was not a catchy enough title for the new law.

If the President were serious about education, he would provide the funds so that all students in America would have the opportunity to receive a first-class education. Instead, the President seems content to test students, determine that many are falling behind, and then leave it up to cash-strapped states to find the dollars to fix the problems. Amidst all the shouting about accountability, the Bush budgets are quietly undermining the ability of states to implement reforms. America's children will ultimately pay the price.

This is not a simple debate about budget priorities; it is a debate about our future. It is a debate about hiring good teachers, improving curricula, reducing class sizes, and buying educational materials -- all key elements in helping students to reach their academic potential. I voted for the No Child Left Behind Act. I support the reforms in that law. But schools need more funding if America is truly going to leave no child behind.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Celebrating West Virginia's Past

Beginning at an early age, West Virginians are taught the history of our state. Our state's heritage and traditions are important lessons to learn, for they highlight the struggle and the sacrifice that were so key to the establishment of West Virginia as the 35th state in the Union. Several organizations sponsor initiatives to more fully immerse West Virginia's young people in that heritage.

The West Virginia Division of Culture and History serves as the umbrella organization for many of those initiatives. For instance, that group, since 1979, has operated Camp Washington-Carver in Fayette County, named for Booker T. Washington and George Washington Carver.

Dedicated in 1942, the camp originally served from 200 to 1,600 black youths in vocational agriculture, soil conservation, and home economics. Today, it serves as a resource for all West Virginians, preserving our mountain heritage, folklore, and arts with a dinner-theater series, concerts, and festivals. Each year, more than 10,000 people wind through the roads of Fayette County to visit the camp and participate in one of its many cultural programs.

In addition to its unique cultural role, Camp Wash-

ington-Carver also is a site of historic note. The camp is one of West Virginia's best-preserved and most ambitious examples of Roosevelt-inspired Works Progress Administration projects.

Recognizing the importance of this history, I have made it a priority to protect national parks, landmarks, and other sites of significance so that they survive for many decades to come. Recently, in an effort to preserve Camp Washington-Carver's history, I added \$150,000 to federal legislation to help the West Virginia Division of Culture and History make critical upgrades at the camp. These improvements will help to ensure that thousands more visitors can enjoy the camp's many programs while learning about an important part of West Virginia.

Even as West Virginia communities move forward with efforts to modernize and revitalize their economies, preserving the heritage of the Mountain State remains a top priority. The activities underway at Camp Washington-Carver, which combine historic appreciation and cultural heritage with economic development, serve as a model for others to follow.

By U.S. Senator Robert C. Byrd

Weighing the Costs of Obesity

As the calendar flips to the second month of the new year, Americans are gauging the success of their New Year's resolutions, many of which concern weight loss. While staggering national obesity statistics show that these short-term efforts to drop pounds are a positive first step, the commitment to a healthy lifestyle should be a life-long endeavor.

Obesity impacts much more than outward appearances. Being severely overweight is a health risk and a growing epidemic which threatens the lives of many Americans. But the risks associated with obesity can be decreased with innovative education and prevention programs. That is why I have worked to provide critical new financial resources for the federal Centers for Disease Control and Prevention (CDC) to promote healthier lifestyles for all Americans.

Medical research has clearly shown that obese individuals have a much greater chance of contracting heart disease, diabetes, some cancers, hypertension, respiratory disease, arthritis, and a host of other medical ailments. According to the U.S. Surgeon General, approximately 300,000 premature deaths across the nation each year are associated with being overweight and obese. These facts sound an alarm for the residents of West Virginia where the prevalence of obesity is particularly high.

I recently included

\$45 million – \$17.6 million above the amount requested by President Bush – in federal legislation for the CDC's Nutrition, Physical Activity, and Obesity program. This program provides funding for states and communities to initiate nutrition and physical activity programs to help prevent and control obesity and other chronic diseases.

Beyond the physical and emotional toll of being obese or overweight, these conditions account for health-related financial costs of more than \$100 billion annually. A significant portion of such weight-related medical bills is paid by taxpayers through the Medicare and Medicaid programs. At a time when all medical costs are skyrocketing, the federal government must find cost-effective strategies to reduce the burdens of obesity on the health care system. The disease should be treated and prevented more aggressively through public health programs, like those supported by the CDC, that encourage healthy diets and exercise.

Americans must not allow themselves to be shaped by a high-tech, on-the-go society that often fosters inactivity and unhealthy eating habits. We can no longer ignore the health risks and repercussions of obesity. I hope that the funding for the CDC's efforts to curb this preventable health threat will spur a national commitment toward helping all Americans embark on paths to healthier living.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Bush Budget Fails West Virginia Families

When it comes to budget priorities, President Bush's latest budget plan fails West Virginia families miserably. His budget puts programs that are important for big campaign contributors at the head of the table, while initiatives that help families in West Virginia are forced to scramble for funding scraps.

For instance, the President's budget fails to meet the funding promises made to West Virginia's children in the No Child Left Behind Act. In exchange for higher academic standards and greater accountability, President Bush promised in that act to devote significant new resources to public schools. But the President's budget breaks that promise, undercutting the No Child Left Behind pledge by more than \$7.1 billion.

When it comes to Social Security, the President's budget jeopardizes the retirement security of millions of Americans. In 2018, the Social Security Trust Fund is projected to be running in the red. At that point, an estimated 65 million citizens will expect full Social Security benefits.

I believe that any Social Security surplus should be used to extend the solvency of the program. But, instead, the President wants to use all of the Social Security surplus to make his tax cuts permanent. It is a short-sighted program that risks the retirement security

of 65 million Americans to fund tax cuts that are skewed to benefit the richest Americans.

Steel communities similarly are not protected by the President's backward budget priorities. President Bush has proposed rescinding \$35 million from the Emergency Steel Loan Guarantee Program. This program helps to keep American steelworkers on the job despite unfair trade practices by our foreign trade partners. Yet, this is the very program that President Bush has targeted for a significant cut.

Time after time in the President's budget, working families are asked not only to bear the burden of the massive deficits created by this White House, but also to accept cuts in those initiatives and services which are most vital to their lives. Education. Health care. Job protections. Retirement. These are West Virginia priorities, but they are not priorities of the Bush White House.

In the Senate, I will work to protect these initiatives that are so basic to working families. I will continue to push West Virginia's priorities to the head of the budget table. When it comes to federal priorities, working families need a strong voice in Washington else they be drowned by the Bush Administration's misguided policies.

Expanding a National Treasure in West Virginia

West Virginia is home to many of the country's most notable national parks, rivers, trails, and recreation areas. Nature's bounty provides Mountain State residents and visitors from across the country with endless opportunities for adventure and learning. Harpers Ferry National Historical Park is one such treasure whose important role in American history, coupled with the scenic beauty of the Park and the surrounding rivers and hills, makes for a one-of-a-kind experience.

The Park's historical, recreational, and ecological significance suggests that the time is right to expand its boundary, a long-time goal of many Eastern Panhandle residents. I am pleased to have helped move the effort forward in Congress.

I have authored legislation, which recently won the approval of a key Senate committee, that would expand the park's boundary capacity by 1,240 acres, from its current 2,505 acres to 3,745 acres. The expansion plan has broad public support as well as the support of groups, including the Friends of Harpers Ferry, the Harpers Ferry Conservancy, and the Civil War Preservation Trust.

Harpers Ferry, which became part of the National Park System in 1944, hosted more than 300,000 visitors last year. Here, in one

setting, several themes in America's story converge: exploration, industry and transportation, the Civil War, and the natural splendor of our nation. The Park tells the stories of people and events that influenced the course of history and made the nation what it is today.

The rich history of Harpers Ferry is matched only by its great natural beauty. Throughout the year, West Virginians and visitors alike can be seen enjoying fishing, hiking, biking, horseback riding, rafting, canoeing, kayaking, and much more in this scenic setting.

In the Senate, I have worked to provide millions of dollars in federal funding for the National Park Service to update, renovate, and refurbish buildings and educational resources at Harpers Ferry. In addition, I shepherded funds through Congress for the purchase of the Murphy Farm property adjacent to the park and I facilitated the acquisition of the historic U.S. Armory Grounds in Harpers Ferry.

We must do all that we can to protect and enrich such a special place so that future generations can experience its grandeur and learn its lessons of history. That is why I will continue to work in the Senate to advance the effort to expand Harpers Ferry and ensure that it will touch lives for years to come.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Opening Job Access to the Blind

For people with disabilities, accomplishing what others see as a simple task at work can be an immense challenge. Whether it is a lack of wheelchair access or an inability to communicate through standard workplace technologies, Americans with disabilities too often must struggle to be active, contributing members of society.

The American Foundation for the Blind's Technology and Employment Center in Huntington (AFB Tech) is taking significant steps to break down the barriers between blind and visually impaired people and the communities in which they live. The Huntington center is instrumental in helping the American Foundation for the Blind to address two of the most critical issues facing the growing blind population -- employment and technology.

The numbers are surprising. Every seven minutes, someone in America becomes blind or visually impaired. Five million Americans age 65 and older are severely visually impaired. As the enormous baby-boomer generation ages, the number of older visually impaired people will double. Further, more than two-thirds of working-age blind or severely visually impaired Americans are not employed, largely due to a lack of training opportunities and significant obstacles faced in the workforce. The American Foundation for the Blind works to eliminate these barriers and help the 10 million Americans who are blind or visually impaired from reaching their

potential.

The experts at AFB Tech evaluate essential workplace technologies -- such as copy and fax machines, computer software, and cell phones -- and then offer recommendations to the industries that design devices on ways to make them more user-friendly for blind individuals. In addition, AFB Tech operates the CareerConnect program, a free national resource that assists blind and visually impaired persons to develop employment skills.

To enhance AFB Tech services, I recently won Congressional approval of \$1 million that I added to appropriations legislation to expand and improve the services of the Huntington facility. This funding will enhance the Foundation's efforts to make employment opportunities and workplace technologies more accessible to the blind.

This \$1 million will allow AFB Tech to expand the CareerConnect program which pairs sight-challenged individuals with blind or visually impaired mentors already in the workplace. The program's support network assists blind individuals to find diverse and challenging employment opportunities that match their skills and interests.

Barriers in communication and employment too often isolate people with physical disabilities. AFB Tech works to break through that isolation and open new opportunities for the blind and visually impaired, and I am proud to help this organization to accomplish its goals.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Beauty of the New River

Few song lyrics conjure up images of the grandeur of our country more than the words to America the Beautiful. Spacious skies. Purple mountain majesties. Amber waves of grain. When singing these words, one's thoughts paint the artwork of America's vast scenery. One may think of the Rocky Mountains, the Grand Canyon, or a colorful ocean sunset. But right here in our own backyard, West Virginia is home to one of the nation's most breathtaking sights -- the New River Gorge National River.

Tourists from across the country travel to our state to enjoy the New River's rugged white waters and surrounding mountains and canyons. I am proud to have helped write the legislation that established the New River Gorge as a national landmark on November 10, 1978. During the past 25 years, the park has grown into one of West Virginia's most visited natural assets. With its 53 miles of water and more than 70,000 acres of land, the park provides more than 1.1 million visitors each year with a wealth of outdoor opportunities, from white water rafting and hiking to mountain biking and fishing.

My work for the park did not stop at its creation. Utilizing my position as the

leading Democrat on the Senate Appropriations Committee, I secured \$5 million to build the Canyon Rim Visitor Center in Fayetteville, \$2.5 million to renovate and preserve the historic train depot in Thurmond, and \$4.2 million to construct the Fayette Station Bridge. Furthermore, I have obtained an additional \$11.9 million to make critical upgrades and improvements to park facilities.

I have long supported investments in our national parks. It is important that we, as a nation, protect special places like the New River so that future generations also may enjoy their benefits and beauty. National parks serve as sites for recreational activities and tranquil places to escape from the hustle and bustle of daily life. But our parks also embody the very spirit upon which our country was founded. By protecting our nation's lands, we preserve the story of our country and ensure that this story is passed along to posterity.

With the preservation of the New River Gorge National River, we save a piece of America the beautiful. Generations of future West Virginians will be reminded that, from sea to shining sea, God truly has shed His grace on us.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Strengthening Social Security, Not Jeopardizing It

From modest beginnings in 1935, Social Security has become an essential facet of modern life. Today, one in seven Americans receives a Social Security benefit. But the changing face of America is threatening to render Social Security bankrupt.

When the baby-boomer generation begins to retire, the number of retirees is expected to grow much faster than the number of workers paying into the system. That will place a much greater financial strain on the Social Security system which, if left unaddressed, could jeopardize retirement and disability benefits for tens of millions of Americans.

Ignoring the financial crisis facing Social Security will not make the crisis go away. But, rather than address the fundamental problem, the Bush Administration has squandered any opportunity to secure America's primary retirement and disability program. In fact, instead of ensuring the Social Security benefits promised to workers, the President's budget would spend the entire Social Security surplus of the next five years -- \$1.1 trillion -- to pay for tax cuts for the affluent and corporate elite. Not one dime would be allocated to save Social Security. If America continues on the Bush Administration's fiscal course, we will lose the best

opportunity we have to save Social Security.

Everyone has a stake in the future of Social Security. It provides a safety net for retirees, workers with disabilities, and children who have lost a parent. Social Security can be the difference between living with dignity or living in poverty.

Many West Virginians have called my office concerned that the benefits on which they rely might soon disappear. I will continue to push for sensible approaches to strengthen Social Security, not fiscal plans that jeopardize its future. Congress must anticipate the baby-boomer retirement and plan for it. That means eliminating the massive federal deficit sparked by the Bush White House's fiscal priorities of tax cuts above all else, and putting the people's priorities first.

When President Roosevelt signed the law creating Social Security, he stated that it would "give some measure of protection to the average citizen and to his family against the loss of a job and against poverty-ridden old age." Congress and the President share a responsibility to keep that pledge. It is time for serious debate about the future of Social Security, not just more political posturing from a White House that, to date, continues to undermine the long-term health of the nation's retirement system.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Cashing in on the Earned Income Tax Credit

The April 15th deadline for filing federal tax returns is fast approaching, and it is important that West Virginians take advantage of tax benefits for which they are eligible. One in particular, the Earned Income Tax Credit (EITC), can provide significant tax relief for many of the state's low-income families.

Congress initially enacted the Earned Income Tax Credit in 1975 as a temporary effort. But it has since grown into one of the largest anti-poverty programs in the federal government. Of the 750,456 West Virginians who filed a 2001 federal tax return, 133,414 claimed the EITC and received an average tax benefit of \$1,597.

West Virginia taxpayers with annual incomes below \$34,000 may be eligible for the EITC. Depending on the number of children, tax filers could claim a credit of up to \$4,204. Because the EITC is a refundable tax credit, a West Virginia taxpayer need not owe taxes to benefit. The EITC can even be distributed to claimants as an advance payment. This extra cash can be used to pay for doctor visits, medicines, school supplies, or groceries.

Despite efforts to raise awareness about the Earned Income Tax Credit, it is estimated that 10 to 15 percent of those eligible for

the EITC nationwide do not take advantage of its considerable benefits. In West Virginia, while many taxpayers utilized the EITC, many more were eligible yet failed to apply for the benefits available to them.

Tax forms can be confusing for even the most savvy filer. The National Taxpayer Advocate is an organization that can help taxpayers with questions about filing for the EITC. This independent service within the IRS can help taxpayers to determine their eligibility for the EITC and file the correct tax documents. The Taxpayer Advocate national hotline number is (877) 777-4778, and the West Virginia branch number is (304) 420-6616. More information about the EITC is also available at the IRS website, www.irs.gov, or by calling (800) 829-1040.

For many years, I have worked in the Senate to help expand the EITC and to deliver its benefits to West Virginians. With more West Virginians feeling the pinch of rising health care costs and a sluggish job market, the EITC can provide struggling families with much needed assistance to help make ends meet. I strongly encourage West Virginians who may be eligible for the EITC to check with the Taxpayer Advocate and to take advantage of the EITC's considerable benefits.

Looming Questions in Iraq

March 19 marked the one-year anniversary of America's invasion of Iraq. As the nation reflects on this milestone, our first thoughts should be of the service of the dedicated men and women of our Armed Forces. Americans owe them a debt of gratitude for their courage and patriotism.

The costs of war have been very high. More than 580 American servicemen and women have lost their lives. Countless thousands of Iraqis have perished, among them many innocent civilians. The American people have sacrificed \$121 billion taxpayer dollars for the war and the reconstruction of Iraq so far, and the end is not in sight.

Large numbers of American troops will be tied down in Iraq for years, unless the White House reverses its unilateralist ways and brings in more foreign troops to stabilize the country. The White House's continued refusal to include the United Nations and its corps of nation-builders in Iraq in any serious manner means that turning power over to Iraqis soon will be difficult and dangerous. The Bush Administration should never have started this war before building a strong coalition.

It is evident that the White House hype about weapons of mass destruction was no more than a rhetorical on-ramp to get this country

on the road to war. The President claims the power to send this nation to war, whether or not we face an imminent threat. Despite vocal opposition from the people, Congress passed a blind and improvident authorization for war in October 2002, buying into the dangerous doctrine of preemptive war. This hand-off of power should be reexamined.

A foreign policy based upon striking first and asking questions later shreds the Constitutional requirement that gives Congress, not the President, the last word on questions of war and peace. Moreover, this unilateralist doctrine has turned the image of the United States into that of a bully on the international stage.

In seeking to eliminate what the Administration claimed was a terrorist haven, we have created a swamp of violence instead. By rushing to act without the strong support of the community of nations, the Bush Administration has isolated America and made targets of the few allies we retained. As we begin the second year of war and occupation in Iraq, will we now insist on continuing the disastrous mistake of a highly visible, made-in-America occupation? I hope that the Bush Administration will learn from its errors and chart a new course in Iraq.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Paving the Way to a Brighter Future

In West Virginia, we understand the importance of modern roads. They make for safe travel to school and to work. They cut down on traffic deaths. They open our state to more visitors who come to discover the natural beauty of our home. Modern roads and highways create new job opportunities. With these facts in mind, it is no surprise that I have long made infrastructure improvements, particularly roads, highways, and bridges, a top priority during my service in the U.S. Senate.

Every six years, the Congress writes legislation that funds construction of these projects. Recently, the Senate approved a proposal that would infuse more than \$2.5 billion in West Virginia highway and road construction. Overall, that represents an increase of \$715 million, or 38 percent, above the funding included in the last six-year bill.

This federal investment will mean progress and jobs throughout the state. It will mean new funds for projects that have been in the works for many years, projects that West Virginians are ready to see become reality.

Whether by helping to construct Route Nine in the Eastern Panhandle, the Mon-Fayette Highway in North Central West Virginia, U.S. 35 in Southeast West Virginia, or the Coalfields Expressway in Southern

West Virginia, these dollars will improve the quality of life for all Mountain State residents.

Despite the strong support from Democratic and Republican Senators, and despite the obvious boost that this legislation would provide to the national economy, the President has threatened to veto this highway bill. The Bush White House has criticized the investment in highways as too expensive.

What the nation cannot afford is further stonewalling by the Bush White House. America needs these funds for safer roads; America needs these funds for new jobs. If he were to veto this bill, the President would cancel out tens of thousands of new jobs in West Virginia and across the country.

I look forward to the completion of each mile of these roads because they provide a safer, more modern route for the West Virginians who live nearby and for visitors who come to discover the beautiful scenery of our state. Upon completion, they will connect the nation to the heart of our state with four-lane roads that travel through -- not around -- West Virginia. This legislation and the dollars that it provides would help to pave the way to a brighter future for West Virginia and for the nation.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Standing By Our Vets

The unfortunate reality of America's ongoing military occupation of Iraq is that soldiers will continue to lose their lives and many more will be wounded in their brave service. To date, more than 3,000 Americans have been wounded in Iraq. Many of these fallen soldiers will require long-term medical care from the Department of Veterans Affairs. Now more than ever, the country must stand by its pledge to provide high quality medical care to its veterans.

Yet, a Veterans Affairs (VA) advisory panel has recommended that inpatient services be eliminated at the Beckley Veterans Area Medical Center (VAMC) in Raleigh County. The panel's study, which began in 2000, analyzed the need for VA facilities across the country based on predicted future veteran populations. The report, if approved, would require the 15,000 veterans enrolled at the Beckley VAMC either to rely on local medical facilities outside of Beckley for their medical care or to travel to the nearest VA hospitals in Salem, North Carolina, or Richmond, Virginia.

In addition to its recommendation to cut inpatient services in Beckley, the panel's report also rejected the VA's designation of the Beckley VAMC as a 'Critical Access Hospital,' which

would have retained at least 15 of the current 40 inpatient beds at the facility.

This is a bad plan at the worst time. Scaling back the services provided by the Beckley VAMC would do a great injustice to those West Virginia veterans who rely on the facility for their medical care. Removing acute inpatient hospital beds would turn away the veterans who are most in need of high-quality care close to home.

The good news is that the panel's recommendation is just that, a recommendation. VA Secretary Anthony Principi has yet to accept or reject the panel's assessment. I, along with Senator Jay Rockefeller and Congressman Nick Rahall, have urged Secretary Principi to reject this misguided recommendation and do right by our state's veterans. They deserve nothing less.

West Virginia's sons and daughters have a long history of military service to their country. Thousands are currently serving in Iraq, Afghanistan, and other military operations around the globe. In exchange for their service in the nation's defense, the government must make good on its promise to provide veterans -- those who served in past wars and those who return daily from the scourge in Iraq -- with the very best medical care possible.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Building for a Better Future

West Virginia, like the rest of the country, has had a difficult time in recent years holding on to jobs. But throughout the state, initiatives are underway to reverse this trend and put West Virginia on a path for job growth, not job loss.

For instance, in Cabell County, the Huntington Area Development Council has taken the lead in designing and constructing the new Velocity Center. This center is expected to draw high-tech businesses and jobs to the city and thereby ensure that the region will continue to be a magnet for new economic opportunities for years to come.

As the top Democratic member of the Senate Appropriations Committee, I added \$1 million in federal funds toward this project, an investment that will supplement \$4 million in private funds to finish construction. The goal is to have biotech companies housed at the center, some of which would come about as a result of research at the Marshall University Biotechnology Science Building. That facility is currently under construction thanks to \$35 million that I added for the project.

In Webster County, local officials have developed the Webster County Business Park and are constructing a high-tech office to anchor that park. I added more than \$2.6 million in federal funds to the effort. In fact,

while the new office building will not be open until later this spring, the facility has attracted Information Manufacturing Corporation (IMC), a West Virginia company headquartered in Mineral County. IMC already employs 87 people at a temporary facility in Webster Springs and plans to house up to 130 employees at the new facility by the end of this year.

Similar success is growing in Summers County, where local officials and the State of West Virginia and I have worked together to attract new high-tech opportunities. Utilizing \$3.6 million in funds that I added to legislation in recent years, the City of Hinton will soon award a construction contract to create an office complex which will house high-tech businesses and up to 150 jobs.

These efforts are bringing real change to West Virginia. Through innovation and cooperation, these communities are building opportunities that will grow for many years to come.

For too long, our state's mountains were barriers to economic progress. With technology, those mountains can be traversed in the blink of an eye. The early successes of these ventures in Webster and Summers counties, and the bright outlook for the Velocity Center in Cabell County, prove that West Virginia is on the move.

Don't Balance Trade Policy on Workers' Backs

In today's market, manufacturers face many challenges. Hiring well-trained employees. Meeting health care costs. Moving products to market. Things are much more complicated than when I owned a small business in 1950.

One distinctly different aspect of business today is foreign competition. In 1950, small businesses were concerned when a competitor opened around the corner. Today, they are concerned about competition from around the globe.

West Virginia productivity and commitment to excellence have always resulted in high-quality products. But when foreign competitors ignore trade agreements, pay workers pennies, and shun environmental standards, the ground is no longer level.

Consider the North American Free Trade Agreement (NAFTA), which eliminated trade barriers between the United States, Canada, and Mexico. Since NAFTA began 10 years ago, West Virginia exports to Canada have risen 186 percent, while exports to Mexico are up 122 percent. The exports have increased employment, but not enough to offset NAFTA-related job losses. According to the Economic Policy Institute, West Virginia has gained 4,030 export-related jobs since NAFTA began, but has lost 7,512 jobs because of imports. We are going backwards.

The consequences for West Virginia are very real.

In places that were once home to apparel manufacturers, for example, doors are locked and windows dark. In Bradshaw, McDowell County Apparel closed its doors, as did Connie Sportswear in Franklin, Safety Stich in Harrisville, Spenco in Glenville, Kellwood in Spencer, and Reibord Brothers in Buckhannon. All cited the pressure of foreign competition for their closures. These are jobs that, in all likelihood, are not coming back. Whole industries have been lost.

Despite the track record, the Bush White House is pushing new, broader trade policies. As the President moves forward with his Free Trade Area for the Americas plan, modeled on NAFTA, Congress must keep in mind the problems that arise when free trade ignores basic concepts of fair trade. Free trade is not "free" when it costs American jobs.

Congress should not simply acquiesce to the Administration's plan. Congress ought to demand that trade negotiations be a two-way street, in both form and substance. Expanded trade benefits all countries, but the rules have to be fair.

For too long, Congress has walked away from an active role in the formulation and implementation of trade policy. Congress must resolve to restore the Constitutional balance and insist that trade agreements reflect the interests of American workers and industries.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Eastern Panhandle Plays Key Homeland Security Role

What once was a small facility in Falling Waters has quickly grown into a key part of America's efforts to protect our nation from terrorist attack. The West Virginia home of the federal Bureau of Alcohol, Tobacco, Firearms, and Explosives (ATF) plays an important role in preventing attacks in the United States.

The ATF National Tracing Center was dedicated in Falling Waters in 1994. Since locating there, the Tracing Center has experienced significant growth, expanding from 100 initial employees to more than 425 employees today, with a local economic benefit of more than \$22 million. Such growth reflects the increased mission and the high quality of work from the men and women employed there. That growth also meant the need for a new facility, which is why I added \$8 million to legislation to renovate the former IRS building in Martinsburg to serve as the new home for the ATF National Tracing Center and other ATF efforts.

Since September 11, 2001, the country has worked to identify new threats and dangers that before did not carry as high a priority. As part of that examination, Congress passed the Safe Explosives Act in 2002, placing stricter requirements on those who are

responsible for explosive materials. With more than 6 billion pounds of explosives produced annually, stricter regulation helps to prevent explosives from falling into the hands of terrorists.

To implement that law, the ATF tasked the men and women at the Martinsburg facility with a new role -- heading the Federal Explosives Licensing Center. This center will be a valuable law enforcement resource.

Specifically, the new Federal Explosives Licensing Center will handle the processing and subsequent issuance or denial of all explosives licenses and permits. This includes conducting background checks and issuing clearances for all individuals responsible for explosives operations, as well as people who possess explosives. Recognizing the importance of this mission, I added \$4 million to legislation earlier this year to accelerate the work at this new center.

The ATF in West Virginia is a great success story, not only from a Mountain State perspective but also from a national security viewpoint. The men and women at the ATF in Martinsburg are working each day to make the country safer from crime and terrorist attack. I applaud their efforts and look forward to their continued success.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Expanding an American Treasure in West Virginia

Millions of visitors each year enjoy the beauty of the Monongahela National Forest. Headquartered in Elkins, the forest stretches more than 909,000 acres in 10 counties in West Virginia, making it the fourth largest National Forest in 20 northeastern states.

Ensuring that the forest stays healthy and a resource for many generations to come requires good stewardship and management. It also requires an eye toward the future, which is why a recent announcement that the U.S. Forest Service would add more than 1,400 new acres to the Monongahela National Forest is such good news.

I added \$1.8 million to federal legislation that allows the Forest Service to purchase those acres from The Nature Conservancy. The Nature Conservancy first purchased the property from Beckwith Lumber of Pocahontas County.

The Monongahela National Forest is an American treasure in West Virginia. By protecting the forest and building on its legacy, we ensure that people from around the world will be able to marvel at its beauty for decades to come.

The land being added to the forest includes high-elevation sites on Gauley and Cheat mountains and near the Highland Scenic

Highway. Spruce forests on these high summits support habitat for the West Virginia northern flying squirrel, which is federally listed as endangered. These properties also include native brook trout streams, access to hiking trails, and buffers for the upper Elk River and the historic Allegheny Battlefield.

I applaud the cooperation between Beckwith Lumber and The Nature Conservancy, and, in turn, the U.S. Forest Service. This public-private effort recognizes the need to balance economic opportunity with environmental conservation. The transfer of these acres to the Forest Service will provide for the preservation of unique areas while allowing for timbering work in areas that are not as environmentally sensitive.

More than 23 million visitors traveled in West Virginia last year, making tourism one of our leading industries. The Monongahela National Forest and other natural resources were top destinations. I am delighted to help create an infrastructure that supports tourism and recreation and conservation of historic lands. I hope all West Virginians will take the opportunity to enjoy these special places with their friends and families.

Back to School: Bush Budget Doesn't Add Up

Throughout West Virginia, the school year is winding down and students are looking forward to the summer break. But the time away from the classroom does not provide any respite for school superintendents, principals, and teachers. In fact, many of them will spend the summer struggling to find the resources to match the mandates of the federal No Child Left Behind Act.

President Bush championed this act as a way to improve the performance of schools across the country. Signed into law in 2002, the No Child Left Behind Act made a promise. In exchange for higher standards and greater accountability, President Bush promised to devote significant new resources to America's public schools. But, to date, it is a promise that the Bush White House has failed to fulfill.

Nationally, the President falls short of the funding promised in the No Child Left Behind Act by \$9.4 billion. For West Virginia's classrooms, the news is not good.

About half of West Virginia's public schools receive Title I funding -- dollars geared specifically for children from poor school districts. The No Child law established specific funding levels for Title I for every year through 2012, including \$20.5 billion for the coming

year. But the Bush budget undercuts that pledge by more than \$7.1 billion.

While No Child Left Behind promised Mountain State schools \$163 million for Title I for 2005, the President cuts that funding by almost 40 percent. Translated into students, the President's budget would deny full services to 21,366 West Virginia children.

The Title I program is not the only education program targeted for shortfalls. The Bush Administration freezes Pell Grant awards for the third straight year, cutting back on college financial assistance. The White House also has proposed to eliminate funding for 38 school programs including dropout prevention, school counseling, alcohol abuse reduction, and arts in education.

In the Senate, I have written and voted for amendments to make good on the funding promises made to our schools but, each time, these amendments have been targeted for defeat by the Bush Administration. If there is one federal investment that can offer real dividends down the road, it is education. But the White House continues to play political games with classroom funding. It is time to end the posturing and give students and teachers the resources that they need to succeed.

Top Flight Homeland Defense Training in West Virginia

For three years, military specialists, National Guardsmen, and local emergency responders have traveled to West Virginia to take advantage of training opportunities available nowhere else in the country.

The Center for National Response, located at the Memorial Tunnel in Kanawha County, customizes training scenarios to provide life-like situations to test and improve the response from police, fire, and emergency medical teams. Military units have taken advantage of the tunnel's structure to prepare for the caves and mountains of Afghanistan. Operated by the West Virginia National Guard, the tunnel has proved itself a valuable piece of security efforts at home and abroad.

The Virtual Medical Campus, a collaborative effort between West Virginia University and the West Virginia National Guard, provides local emergency responders and medical officials with information on how to identify, treat, and contain any possible chemical or biological terrorist attack. This system is designed to link doctors and emergency personnel at the point of an attack with specialists who can immediately identify steps to take in the event of a terrorist attack to protect people living and working nearby.

The Regional Training Institute at Camp Dawson in Preston County gives National Guardsmen and other military personnel the

opportunity to train for a range of important missions, including special operations and defense against weapons of mass destruction.

I am proud to have been able to assist in these initiatives, adding more than \$43 million to legislation to bring these projects to life.

Now, recognizing the value of these facilities to the country and their potential for the future, the U.S. National Guard Bureau has announced that West Virginia will be the site for the first comprehensive National Guard homeland defense training facility. This new center will be based at Camp Dawson and will build on the homeland security training facilities already in place in West Virginia.

This new center will mean new resources and new responsibilities for Camp Dawson. While the standard for excellence has always been high, this decision to make Camp Dawson the first National Guard Joint Training Center (JTC) for Homeland Defense raises the bar to a much more demanding level.

Long before September 11, 2001, West Virginia recognized the dangers of potential terrorist attacks here at home and quickly moved to train Guardsmen and first responders. That work has paid off with valuable lessons learned -- lessons that we can share with the rest of the nation. By training today, we can save lives tomorrow.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Fighting Global Terrorism in West Virginia

Last December, American military forces captured Saddam Hussein in a spider hole in Iraq. Images of authorities collecting Saddam's DNA and fingerprints dominated the news.

DNA and fingerprints are examples of biometrics -- distinctive physical and behavioral characteristics that are used to verify an individual's identity. Hand geometry, voice, and the iris of the eye are among these unique traits. Biometrics were used in Iraq to confirm that the captured man was indeed Saddam Hussein.

West Virginia is leading the way in the national effort to utilize this cutting-edge technology. The Justice Department's biometric experts work at the Federal Bureau of Investigation in Clarksburg. Also located in Harrison County, the Biometrics Fusion Center (BFC) tests and evaluates biometrics technologies for the Department of Defense. Since 1999, I have secured \$141 million to launch and expand the Defense Department's biometrics initiatives.

The BFC and the Clarksburg FBI facility work cooperatively every day in support of the men and women fighting terrorism around the world by identifying potential terrorists and other threats to the country's security. Fingerprints lifted at crime scenes and terrorist "safe houses" are compared against fingerprints in the FBI's database to determine if that person has committed prior criminal acts against

the country.

The BFC also works closely with industry and academia, spurring new business interest and growth along the I-79 high-tech corridor. As a result of this collaboration, West Virginia companies have discovered new economic opportunities by incorporating biometrics technologies.

In Morgantown, West Virginia University (WVU) provides a nationally unique undergraduate degree program in biometrics. The university plays a leading role in biometrics research on behalf of the federal government. The BFC employs as many as 10 WVU student interns each year, offering them a real-world opportunity to learn more about the industry and to better prepare them for careers in biometrics.

This summer, the BFC will continue its critical work in its new location at the Keeley Building in downtown Clarksburg. This facility will house a state-of-the-art demonstration center to showcase biometric technologies. The BFC will eventually transition to a permanent location at the FBI's Harrison County campus.

Biometrics offers real solutions to the significant security challenges facing America. The Mountain State had the foresight to embrace this cutting-edge technology and will continue to lead the way in the fight against terrorism at home and abroad.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Remembering the Sacrifice of Our Veterans

It was 60 years ago that Allied Forces launched the D-Day invasion to free Western Europe from Nazi control. The task was daunting. No such army had ever crossed the English Channel. The Allied armada was 5,000 vessels strong, transporting more than 150,000 men and 30,000 vehicles. More than 13,000 men boarded 800 planes from British airfields and parachuted behind enemy lines in France. Another 300 planes bombarded the French coast with more than 13,000 bombs immediately before the invasion began.

The stories of that invasion remain chilling and inspiring, gruesome and profound. By nightfall, more than 9,000 Allied soldiers had been wounded or killed in action. But their sacrifice was not in vain. More than 100,000 Allied forces had made it ashore and started to secure coastal French villages. The liberation of Western Europe had begun.

It is fitting that in the year we mark this 60th anniversary of the D-Day invasion we also dedicate the World War II Memorial on the National Mall in Washington, D.C. Tens of thousands of Americans have already visited this new memorial, and millions more are expected as part of this summer's 100-day tribute to World War II veterans.

Journalist Tom Brokaw nicknamed the men

and women of the World War II era as "The Greatest Generation." Their sacrifices and struggles certainly helped to shape not only 20th Century America but also the world.

To keep that history alive for generations to come, students at the West Virginia University (WVU) Perley Isaac Reed School of Journalism have partnered with the Library of Congress in the Veterans History Project. Students have been interviewing veterans and recording their stories for preservation in the Library's collection. The interviews are not intended to serve as a formal history of war, but rather as a unique resource of individual experiences.

WVU students are not alone in this effort. The West Virginia National Guard, VFW and American Legion Posts, and several schools and public libraries have partnered in the Veterans History Project. A list of the partner organizations can be found on my Internet site at <http://byrd.senate.gov>.

Veterans can pass on the lessons that they have learned to younger generations, thereby ensuring that their experiences will extend long into the future. I encourage West Virginians to participate in the Veterans History Project, for the fabric of our nation is made richer when the embodiment of history, our nation's veterans, share their stories.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Going Back to the Future in Charles Town

I recently had the pleasure of visiting one of West Virginia's most historic towns which today has a whole new look. I joined with citizens and local officials in Charles Town to celebrate the completion of the Downtown Revitalization Project. This inspiring effort to spruce up the aging downtown square honors the community's respect for the past as well as its hope for the future.

Like many locations in the Mountain State, Charles Town is blessed with the special richness of history. The stalwart of the downtown square, the Jefferson County Courthouse, was originally built in 1808 on land donated by Charles Washington, George Washington's brother. The historic building housed the trial of abolitionist John Brown in 1859 and was the scene of another famous trial involving 200 miners and union leaders during the coal mine wars of the 1920's. Today, Charles Town is a key stopping point on the Washington Heritage Trail, a national scenic byway designated several years ago with my assistance.

The people of Charles Town understand that their history is an inextricable part of the fabric of their future. Walking the streets of Charles Town is like traveling through the early days of America's story. The town had started to show its

age, and community leaders developed a plan to give it a makeover befitting its significance in the nation's history.

The Downtown Revitalization Project repaired cracked and deteriorated sidewalks, repaved downtown streets, and replaced the drinking water system. The effort also included the purchase of new street furniture, historically designed street lamps, trees, and tourism street signs. These changes will reap benefits in public safety and increased opportunities for local businesses. The revitalized downtown should help residents and visitors alike to link the town's meaningful past and thriving present.

I am pleased to have been a part of the effort to help build a solid foundation for Charles Town's growth by obtaining \$1.2 million in federal funding to support economic development and tourism. I share the community's hope for a renewed, bright future, and I am glad I could help to make the revitalization project a reality.

This effort to breathe new life into downtown Charles Town serves as a model for cities throughout West Virginia. When respect for the past, pride in the present, and hope for the future come together, we make our communities the best they can be.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

New Resources to Fight Obesity

Rarely does a week go by without a new health warning about the dangers of obesity. While some people may be content in brushing off the warnings, the consequences can be severe.

Without doubt, obesity is a serious condition which concerns much more than outward appearances. It is not a simple case of eating too much or needing to lose a few excess pounds. Obesity is an epidemic that threatens the lives of hundreds of thousands of Americans.

For instance, a study published in the *New England Journal of Medicine* reports that being overweight and obese may account for 20 percent of all cancer deaths in American women and 14 percent of cancer deaths in American men. Translated, that means that 90,000 cancer deaths in West Virginia and across the country could be prevented each year if Americans could only maintain a normal, healthy body weight. It is an eye-opening report.

A new report from the Yale University School of Medicine notes that obese children are more likely to develop a cluster of health conditions that put them at increased risk of diabetes and heart disease. The more weight a child gains, according to the study, the more likely the child is to develop dangerous medical

problems.

But the risks associated with obesity can be decreased with innovative research and prevention programs. That is why I added \$3 million to legislation to create the Center for Healthy Communities at West Virginia University. This important WVU effort builds on the work of the federal Centers for Disease Control and Prevention to help states and communities plan and launch programs targeting obesity.

Communities across the country are responding to the call and joining forces to fight obesity. Local partnerships including schools, hospitals, and community organizations are taking steps to encourage people to increase physical activity, add more healthy foods to their diets, and cut out other unhealthy habits which intensify the dangers of obesity.

West Virginians cannot ignore obesity-related health risks and repercussions. They must not allow themselves to be shaped by a modern environment that too often fosters inactivity and unhealthy eating habits. We need to create effective nutrition and physical activity programs that address obesity and other chronic diseases. The time is now to acknowledge the very real dangers of obesity and take steps to minimize them.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protecting a Piece of History

West Virginia is blessed with great natural and historical treasures. Places like the Monongahela National Forest, the New River Gorge, and the Canaan Valley National Wildlife Refuge are among the crown jewels of West Virginia and are important tourist attractions. Just as critical are the lessons of history that abound throughout West Virginia. Point Pleasant has the distinction of being the site of the Revolutionary War's first land battle. Wheeling served as a jumping-off point for the famed Lewis and Clark expedition to the West.

One of West Virginia's most famous landmarks is Harpers Ferry National Historical Park. At the confluence of the Shenandoah and Potomac rivers, Harpers Ferry played an important part in many events that helped to shape America.

Familiar names of history -- George Washington, Thomas Jefferson, Meriwether Lewis, Thomas 'Stonewall' Jackson, and Frederick Douglas -- are intertwined with the history of Harpers Ferry.

Key events -- such as the arrival of the first successful American railroad, John Brown's revolt against slavery, and one of the earliest integrated schools in the country -- are also part of the legacy of Harpers Ferry.

But that legacy needs protection.

Today, Harpers Ferry National Historical Park has nearly reached its capac-

ity. It cannot take steps to protect many historically unique sites without help. In an effort to provide that help, I have crafted legislation to expand Harpers Ferry National Historical Park by 1,240 acres, from its current 2,505 acres to 3,745 acres.

I am very happy to report that my legislation has passed the Senate, and recently was the subject of a committee hearing in the House of Representatives.

West Virginia Congressman Nick J. Rahall, who serves as the top Democratic member of the House Resources Committee, is working to guide this legislation through the House. At that hearing, he applauded the effort to expand the park, telling his colleagues, "Harpers Ferry is an incredibly powerful tool for telling the great story of our United States of America. These proposed additions will allow the Park to help us tell those stories even more completely." Congressman Rahall is absolutely right.

In the coming weeks, I hope that the full House of Representatives will move forward on my legislation to protect Harpers Ferry National Historical Park. This is an important bill for Harpers Ferry, for the Eastern Panhandle, and, in fact, for the nation. By expanding the park's boundaries, we can protect the rich historic and recreational opportunities that the park offers to residents and tourists alike.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Step Toward Expanded Health Insurance

In West Virginia, an estimated 286,000 people do not have health insurance. Nationally, almost 44 million Americans do not have medical coverage. These astounding statistics cannot be ignored any longer.

Finding ways to address this problem is not simple. But I have recently cosponsored legislation which I think could take a significant step toward reducing the number of uninsured Americans who go through life hoping and praying that they do not get sick or face a catastrophic medical problem.

The legislation that I am backing would allow for association health plans. These are plans where small businesses band together through a trade association to purchase health insurance. By joining together, small businesses will enjoy greater bargaining power, economies of scale, and lower administrative costs. This will result in lower health care costs and better insurance coverage options for small businesses and their employees.

Most Americans with health insurance obtain it through their employers, or a family member's employer, as a workplace benefit. Small employers, however, are far less likely than larger employers to have the financial resources to provide health insurance to their workers. In fact, almost half of the uninsured work for, or are family members

of employees who work for, small employers.

This legislation is one step that can be taken to open health care coverage to more Americans. It is not the be-all, end-all solution, but this legislation would help to move us toward a goal that we all share, namely, to reduce the number of Americans who do not have medical insurance.

Health care should not be a partisan issue. For me, it is an issue of basic quality of life.

Allowing small employers to obtain health benefits through associations will help to make coverage more affordable for far more Americans. Furthermore, association health plans will provide small employers with the ability to offer employees more choices of health plans, something that is nearly impossible to do with a small workforce.

With the number of uninsured Americans growing substantially each year, we must find ways to start to reverse that trend. Congress needs to act to provide small employers with options to secure health benefits for their workers and their families; we need to open the door to good-quality, affordable medical coverage for the millions of Americans currently without health insurance. While it is not the only step we can take, I believe that association health plans can be part of that solution.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Teaming to Improve Rural Health Care

America's Armed Forces and veterans deserve the highest quality medical care available. The same cutting-edge services that help to keep soldiers in top form also can reap benefits for civilian patients. That is why I have worked to ensure that West Virginians have access to a health care tool which previously was used only at the country's leading military hospital.

The experts at Walter Reed Army Medical Center in Washington, D.C., have developed an innovative program called HEALTHeFORCES. In their doctors' waiting rooms, patients use small computerized devices to answer questions about their illnesses and any health-related problems affecting their daily lives. This information helps doctors to better treat patients based on their full medical histories, rather than one particular symptom or illness.

Thanks to a collaborative effort I helped to initiate between Walter Reed, Marshall University, and the National Technology Transfer Center (NTTC), diabetic patients in Southern West Virginia are better managing their disease and enhancing their quality of life. Marshall's Byrd Center for Rural Health has adapted the HEALTHeFORCES program and launched HEALTHeWV at the Marshall University Medical Center and other rural clinics in Southern West Virginia. The NTTC, in turn, will lay the groundwork for the

program's implementation at other sites in the state and nation. HEALTHeWV is a shining example of linking national advancements with local expertise to meet West Virginia's health care needs.

While the HEALTHeWV program will likely address other chronic illnesses including heart and lung disease, diabetes patients were the logical first participants. Diabetics who participated in the military's HEALTHeFORCES program were far more likely to have appropriate testing and better test results. West Virginia's incidence of diabetes is 41 percent above the national average, impacting rural families and health care providers more than any other disease. Coordinating the multiple care components of this complex disease can be extremely difficult for rural physicians. I hope that HEALTHeWV's ability to document and track treatment plans will make doctors' jobs easier and patient care more effective.

For far too long, rural health care has meant inferior health care. I have worked throughout my years of public service to improve health care in all areas of the state. Programs such as HEALTHeWV allow patients to take an active role in their care, thereby helping to further the goal of health care equality. I look forward to the day when this latest technology allows chronically ill patients throughout West Virginia to receive better treatment and live better lives.

Fighting Back Against Indecency

Radio stations broadcasting vulgar language by national personalities. Nudity shown during the tawdry halftime show of this year's Super Bowl. Music and movie stars using curse words at award shows during prime-time viewing hours. With increasing frequency, the broadcast industry is breaking industry guidelines as well as the public's trust, airing obscene or tasteless content that has no place on America's airwaves.

I believe that the public is forced to tolerate too much media programming that is morally unacceptable. I particularly deplore the exposure of children to such negative influences. Certainly, the vulnerability of young minds to these influences can contribute to a breakdown of the moral fiber of our country.

Courts have held that obscene speech is not protected by the First Amendment and cannot be broadcast at any time. Further, it is a violation of federal law to broadcast obscene, profane, or indecent programming. Unfortunately, the current maximum fine for broadcasters who disregard the Federal Communications Commission (FCC) guidelines on indecent programming is a drop in the bucket for today's multi-million dollar media moguls.

The U.S. Senate recently approved an amendment that I strongly supported to crack down on lewd television and radio programming. The amendment increases the maximum fine on broad-

casters who air indecent material from \$27,500 to \$275,000. This substantial increase will help to deter broadcasters from airing material that is not appropriate for, nor appealing to, the general public.

The amendment also calls for a one-year moratorium on the FCC's recent move to relax its rules governing media consolidation. The FCC's dangerous decision to lift the media ownership cap threatens to strangle diverse voices at virtually every level of the country's news and commentary. More than any other resource, local news outlets educate people about the issues that affect their daily lives. The new FCC rules would undermine that role by allowing one person or one corporate interest to control a significant level of discourse and debate.

Finally, the amendment addresses indecent broadcasting's impact on children by instructing the FCC to implement effective measures to curb violent programming during the hours with a predominantly young audience.

The job of raising young people in today's culture is difficult enough without their being overwhelmed by broadcasters with inappropriate, adult-oriented programming. By increasing penalties and utilizing technology and ratings systems to help reduce indecent content, I hope that this legislation will make the job of parenting a little easier.

Equal Benefits for the Guard and Reserve

The country's National Guard and Reserves have become more than a source of manpower during times of crisis. Members of the reserve components have become an indispensable tool to carry out military operations overseas and homeland security missions at home. They deserve the same benefits that are provided to all members of the military.

The men and women of the National Guard and Reserves place their lives on the line just like the men and women of the Active Duty forces. Bullets and bombs make no distinction. Yet, for too long, the military health care system has made a distinction. The National Guard and Reserves were not given access to the same health care as the regular military. That is why I am working with a bipartisan group of Senators to help America's citizen-soldiers receive better health care benefits.

As the top Democrat on the Senate Appropriations Committee, I helped to shepherd legislation through the Senate to fund Guard and Reserve health benefits, including a temporary expansion of the TRICARE military health care program to members of the Guard and Reserves -- regardless of their activation status.

This is the first time that the Senate has appropriated funds to provide TRICARE

for Guardsmen and Reservists, even when they are not serving on active duty, and, frankly, it is a step that is long overdue. This should not be a question of if we should provide this benefit. These men and women have earned it.

The burdens being placed on our Guardsmen and Reservists and their families are heavy, particularly today with extended tours of duty for hundreds of thousands of citizen-soldiers in Iraq, Afghanistan, and other military operations around the world. Those burdens should not include trying to figure out how to pay for health care.

Under the legislation I supported, members of the National Guard and Reserves are eligible to enroll in TRICARE for a modest annual premium regardless of their deployment status. Premiums are about \$530 per year for individual coverage and \$1,860 per year for families. It is expected that the benefit will help to improve the quality of life for more than 300,000 Guard members, Reservists, and their family members.

More information about TRICARE is available by writing to the TRICARE Management Activity, 16401 E. Centretch Pkwy., Aurora, CO 80011-9043. Additional material is available from the TRICARE Internet site (www.tricare.osd.mil).

By U.S. Senator Robert C. Byrd

Chemical Plant Dangers Spark Safety Investigation

Since the terrorist attacks of September 11, 2001, the United States has worked to prevent a tragedy from occurring again. We have made progress in areas like airplane security and emergency response preparedness, but there are many gaps that remain -- gaps that we must address before it is too late.

One gap is the lack of protection at 'critical infrastructure' sites. Critical infrastructure includes the systems that, if disrupted, would threaten our national security, public health and safety, economy, and way of life. Earlier this year, the Government Accountability Office (GAO), the chief investigative arm of Congress, examined one specific segment of critical infrastructure -- reported that, despite voluntary efforts by individual companies to improve protections, the extent of security preparedness at chemical facilities across the country remains unknown.

In West Virginia, we are not immune from this responsibility. We have many sites that need to be fortified. We have many places that need to be protected. One of our largest vulnerabilities is also one of our key industries. It does not take great imagination to determine that the chemical plants that dot the Kanawha and Ohio rivers are also potential targets for attack.

But fortifying security at these facilities, according

to the Bush White House, is solely an industry responsibility. Despite the government's Constitutional responsibilities to provide for the safety and protection of the nation's citizens, the Bush Administration has consistently shifted the responsibility for 'critical infrastructure protection' to the private sector. The White House refuses to take the extra step to guard against attack -- a refusal that could cost lives if not fixed.

That is why I have asked the GAO to go back and determine what steps are being taken by the private sector to protect the American people, and what more needs to be done. Knowing and understanding what private sector industries are doing to protect critical infrastructure assets is essential in assessing the need for federal investments to protect the American people.

Protecting the American people from terrorist attack is a primary government responsibility. As we approach the third anniversary of the September 11 attacks, it is a responsibility that demands no further delay. The Bush Administration has, for too long, ignored the many holes in our homeland security protections. But just hoping that there will not be another attack is not enough; Congress must make the investments that protect the people, even if the President will not.

Black Colleges: Opening a Door to Achievement

The importance of education cannot be overstated. Horace Mann, a champion of America's public schools, said, "Education then, beyond all other devices of human origin, is a great equalizer of the conditions of men." Indeed, education is a key factor in the careers of most successful people. But there was a time in this nation's history when black Americans had few opportunities to further their education. The doors of many colleges and universities were closed to them.

Fortunately, Historically Black Colleges and Universities (HBCU) filled the void. The first HBCU was founded in Pennsylvania in 1837. Today, across the country, there are 105 Historically Black Colleges and Universities serving an estimated 370,000 students. These schools make higher education financially attainable for individuals who otherwise may not be able to afford a college degree.

West Virginia is home to two of these institutions -- West Virginia State University in Institute and Bluefield State College in Bluefield. These schools and their HBCU partners have helped to make a significant difference not only to the State of West Virginia but also to all of America.

The successful record at these schools is impressive. HBCUs have educated 75 percent of all African-Americans with doctoral degrees, 46 percent of all black business executives, 50 percent of all black en-

gineers, and 80 percent of all black federal judges. It is difficult to imagine where this country would be without the service and dedication of the professors, administrators, and supporters of these schools.

With this record of success in mind, I joined Maryland Senator Paul Sarbanes in sponsoring a resolution recognizing the accomplishments and importance of our nation's Historically Black Colleges and Universities. That resolution recently won unanimous approval in the Senate.

These schools continue to demonstrate their value. According to the National Association for Equal Opportunity in Higher Education, HBCU students graduate with greater frequency than African-American students at predominantly white institutions, and they receive greater academic and social support at HBCUs.

I have long believed that an education is one's passport to progress. It leads to new opportunities, not only for an individual but also for our state and nation. Historically Black Colleges and Universities have taken the lead in reaching out to students who, too often, are left behind or pushed to the side. In doing so, they have helped to build a stronger America. These institutions are an important piece of higher education in America. I applaud them for their successful past, and will continue to work for their future achievements.

The Heritage of Hard Work: Labor Day 2004

The first Monday in September is set aside each year to recognize the dignity of work and to thank American workers for their contributions to making a better and stronger country. It is a special day when men and women from all vocations join in celebration and recreation.

Labor Day is an old and honorable American tradition. In 1893, legislation was introduced in Congress to establish Labor Day as a federal holiday. The next year, President Grover Cleveland signed the legislation into law, and today, 110 years later, we still use this day to honor those who earn their bread by the sweat of their brow.

This Labor Day, it is most appropriate to recognize some of West Virginia's outstanding labor leaders and their contributions to American labor history and to our beloved state.

Frank Keeney, Fred Mooney, and Bill Blizzard were rank-and-file leaders of Southern West Virginia coal miners in the early 20th century who helped to lay the foundation for the United Mine Workers of America (UMWA) in our state. Arnold Miller of Cabin Creek was a leader in the black lung movement in the 1960's who was elected president of that great union. Current UMWA president Cecil Roberts also hails from Cabin Creek.

John Easton of William-

stown in Wood County was a flint glass worker who served as president of the West Virginia State Federation of Labor during the 1920's and as an official in the Congress of Industrial Organizations (CIO) in the 1930's.

Miles Stanley of Dunbar was president of his local steelworkers union and helped to negotiate the merger that formed the West Virginia AFL-CIO, of which he served as president from 1957 to 1974.

Ned Guthrie of Morgantown and later Charleston was the national legislative director of the American Federation of Musicians Union in the 1980's and was instrumental in bringing collective bargaining rights to that profession.

And there was the great Walter Reuther from Wheeling, who was president of the United Auto Workers in 1946, president of the CIO in 1952, and vice president of the AFL-CIO in 1955. He was an important advisor to a number of Democratic presidents, especially John F. Kennedy.

This Labor Day, I thank all West Virginia workers. The work they do each day, whether mining coal, pumping gas, cutting meat in a grocery store, or serving the public, is important. West Virginia's history boasts many well-known labor leaders, but it is all of us, working together, that combine to make America a great nation.

A Skewed Tax Policy Needs Fixing

When George W. Bush campaigned for the presidency in 2000, he talked a great deal about tax cuts. Once he took office, he rammed through some of the biggest tax cuts in the nation's history -- tax cuts which most benefit the wealthiest of Americans. It is a tax plan that does little to help working West Virginians.

By focusing on massive tax cuts for the wealthy first, President Bush squandered a great opportunity to improve America. The President came into office with a \$5.6 trillion surplus. He is preparing to end this term with a deficit of \$2.9 trillion. That incredible turnaround wasted the chance to make significant investments in education, fix Social Security, and strengthen Medicare. Instead of saving for the long-term and making sound investments in America, the Bush Administration chose to squander the surplus that had been handed to them in good faith.

Recently, the Congressional Budget Office (CBO), whose director served as the top economist in the Bush White House, highlighted the disparity of the President's tax cuts. According to the CBO, one-third of the tax cuts have been directed to people in the top 1 percent income bracket, who earn an average of \$1.2 million annually. The report calculated that households with incomes in that top 1 percent bracket were receiv-

ing an average tax cut of \$78,460 this year. In fact, for this year, the average tax cut for those American households with the highest incomes is more than seventy times the tax cut for middle-income households.

That kind of disparity places an unfair burden on working families. Already, the Bush Administration has slashed funding for programs that are important to families in West Virginia: funding for classroom initiatives has been erased; veterans are forced to wait in long lines for health care; seniors are told, in essence, that the best Medicare prescription drug coverage that the government can afford is a maze of paperwork and a small menu of choices. These and other problems go without solutions because of the skewed tax policies of this Bush White House.

Every politician likes to vote to cut taxes. But, when the tax cuts are massive and unfair, the flip-side to that vote is less funding for initiatives like education, health care, transportation, and worker safety, all of which benefit families and regular Americans. President Bush has his priorities wrong. The Administration's economic policy is broken. Instead of irresponsible tax cuts for the privileged that have resulted in oceans of red ink, we ought to invest in the future of this nation by promoting policies that benefit all Americans.

By U.S. Senator Robert C. Byrd

Building for an Innovation Economy in West Virginia

In May 1961, President Kennedy challenged America to be the first nation to put a man on the moon. It was an ambitious goal, for the United States was far behind the Soviet Union in the space race. The Soviets launched Sputnik, the first man-made satellite to orbit Earth, in October 1957, and had made significant advancements in the years after that accomplishment. But America relied on innovation and hard work to overcome the obstacles. The effort paid off when Neil Armstrong took the first steps on the moon on July 20, 1969.

Today, America's economy faces significant hurdles. Jobs are disappearing. Workers feel caught in a downward spiral. Health care costs skyrocket while wages stagnate.

America can do better. In the 21st century, the nation must have an innovation economy, one that relies on mind-power as much as muscle. At its core, the innovation economy will build on ideas and technologies. Our country must adapt to the changing realities of the global marketplace and respond with creative approaches to job creation and growth.

The seeds for an innovation economy have been planted across West Virginia.

For example, in Harrison County, the FBI Complex, which I helped to

bring to West Virginia beginning in 1990 and which employs more than 2,600 men and women, has served as a magnet for other high-tech investments, both private and public. The FBI Complex and the NASA Independent Verification and Validation Center in neighboring Marion County, which I helped to bring to the Mountain State in 1991, has served as the backbone for the West Virginia High-Tech Corridor. Businesses have started and expanded along that Corridor, merging creativity and technology to carve their niche.

Southern West Virginia can look to the early success of developments in the City of Hinton as a model. The Summers County community has invested funding and effort to foster a new commitment to technology jobs, and companies have responded. Two firms -- Computer Sciences Corporation and ManTech Corporation -- already employ more than 100 people in Hinton. I have partnered with community and business leaders to help make this venture a success.

Like the America of the 1960s which relied on knowledge and perseverance to lead the way to the moon, the America of the 21st century must also adapt to new challenges. The world will not stand still. We must find innovative ways to move our economy forward.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Don't Gamble with Social Security

Once again, a presidential candidate is talking about gambling with the future of Social Security. Unfortunately, the candidate floating these bad ideas is the same candidate who, as president, has squandered the best opportunity in decades to cement the promise of Social Security for generations to come.

From modest beginnings in 1935, Social Security has become an essential facet of modern life. Today, one in seven Americans receives a Social Security benefit. But when the baby-boomer generation begins to retire, the cost of the benefits of retirees will exceed the contributions of workers paying into the system. That will place a much greater financial strain on the Social Security system which, if left unaddressed, could jeopardize retirement and disability benefits for tens of millions of Americans.

But rather than address the fundamental problem, the Bush White House talks about privatizing Social Security while wasting any opportunity to responsibly secure America's primary retirement and disability program. In fact, instead of ensuring the Social Security benefits promised to workers, the President has proposed spending the entire Social Security surplus of the next five years -- \$1.1 trillion -- to pay for tax cuts

for the affluent and corporate elite. Not one dime would be allocated to save Social Security.

Everyone has a stake in the future of Social Security. It provides a safety net for retirees, workers with disabilities, and children who have lost a parent. Social Security can be the difference between living with dignity or living in poverty.

I will continue to push for sensible approaches to strengthen Social Security, not ill-conceived fiscal plans that jeopardize its future. Congress must anticipate the looming retirement of the baby-boomer generation and plan for it. That means eliminating the massive federal deficits sparked by the Bush White House's fiscal priorities of tax cuts above all else, and putting the people's priorities first. Instead of short-sighted proposals and campaign slogans that gamble with the long-term stability of Social Security, it is time for serious debate about the future of the program.

In 1935, when President Franklin Roosevelt signed the law creating the Social Security system, he recognized its importance. He stated that Social Security would "give some measure of protection to the average citizen and to his family against the loss of a job and against poverty-ridden old age." We must not allow that protection to fail.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A White House Roadblock to Safe Highways

Across the country, safe, modern roads are key to economic growth and crucial to saving lives. In West Virginia, where the roads too often are narrow passages between mountains, modern roads and highways are vital. Modern roads save lives; they make trips to school and to work far less dangerous; and they help to attract new jobs to far-reaching parts of the state.

Throughout West Virginia, road and highway improvements are a high priority. Updating and expanding Route 35 is key to Mason and Putnam counties. Completing Corridor H is important for people in Central and Eastern West Virginia. Building the Mon-Fayette Expressway will help to improve travel in North Central West Virginia. And progress on the Coalfields Expressway and the King Coal Highway is a priority for residents in Southern West Virginia. Throughout the state, residents understand a simple truth: modern roads make for a better quality of life.

Recognizing the same truth, the Senate has overwhelmingly passed legislation called the Safe, Accountable, Flexible, and Efficient Transportation Equity Act. Because of my efforts, that legislation provides \$2.575 billion for West Virginia highway construction -- \$715 million above the current highway funding law. This invest-

ment would mean progress and jobs. The legislation would lead to fewer lives lost in traffic accidents. It would mean a fresh infusion of dollars for projects that have been in the works for many years, projects that West Virginians are ready to see become reality.

Despite the urgent need, the Bush White House has threatened to veto this legislation. Instead of supporting the Senate plan which has strong backing among Democratic and Republican Senators, the Bush Administration would rather play political games. It is time for the games to end. America needs these funds for safer roads and new jobs. Jeopardizing the safety and quality of life for Americans is not the hallmark of leadership; rather, it is the hallmark of an administration that is out of step with the needs of America's families.

A modern, efficient highway network is one of West Virginia's most pressing needs and a cornerstone of economic development. Safe roads save lives while promoting job creation. While it will be extremely difficult to accomplish under this short-sighted veto threat by the Bush White House, I will continue to press for legislation to make the improvements that are so necessary to our state's roads and highways. West Virginians, who have been waiting all too long for these better, safer roads, deserve nothing less.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Standing Firm for Steel Communities

Since 1997, the American steel industry has been in crisis -- a crisis that continues today. Waves of unfairly subsidized and dumped foreign steel imports have washed away entire steel communities. Ripple effects are causing severe hardships for families throughout America.

In response, injured companies and workers continue to bring charges of illegal trade against foreign countries, and many countries are found in violation of trade agreements. As a result, the U.S. International Trade Commission and the Department of Commerce impose financial penalties on those steel products.

Under the law in 2000, these penalties were deposited in the U.S. Treasury to be used for general government programs. Injured companies and the workers who were laid-off or saw their pensions and health care slashed were left to fend for themselves. The government profited from their hardship. That simply was not right.

In response, I worked with a bipartisan group of Senators to help these workers and companies. Through what is commonly called the Byrd Amendment, penalties collected from trade partners violating the law are now available to those Americans injured by the violation. It simply makes sense.

If a driver is found at fault in a traffic accident, that driver has to pay to repair the other automobile

and help the other driver. Thanks to the Byrd Amendment, the same logic is applied to trade violations.

Despite this logic, the World Trade Organization (WTO) recently ruled that the European Union and other U.S. trade partners can retaliate against the Byrd Amendment. This ruling is outrageous. The WTO and these foreign countries want to stop the Byrd Amendment from helping hundreds of American companies, workers, and entire communities injured by unfair trade.

Our foreign trade partners fail to admit that there is a far simpler way for the fines under the Byrd Amendment to disappear: They can follow the rules. If these countries do not violate trade agreements, illegally subsidize products, or allow products to be dumped on American shores, the U.S. government will not levy duties on their products. But our trade partners want to continue to violate the law and chip away at America's economic base. They want to do the crime but not do the time.

This is a time of tremendous economic uncertainty. The United States faces stalled economic growth, a stagnant stock market, and the largest trade and budget deficits in history. Congress ought not allow the WTO to undercut one of the few federal trade initiatives that helps, rather than hurts, America's working families.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protecting a Piece of History

For many years, I have worked with men and women in West Virginia's Eastern Panhandle to find a way to protect the history and the heritage of one of our state's jewels -- Harpers Ferry National Historical Park (NHP).

Harpers Ferry is one of the most unique places in West Virginia. This one location has been home to many of the country's Founding Fathers and some of our notable thinkers. It has been the site for key events in almost every period of our history, including the Revolutionary War, the Lewis and Clark expedition to the West, and the Civil War. Harpers Ferry NHP is also among the most beautiful places in our state, set at the confluence of the Shenandoah and Potomac rivers. Sunsets at Harpers Ferry are simply magnificent.

Yet, this history was jeopardized by pressures from the ever-expanding urban sprawl from Washington, D.C. The land surrounding the Park was being swallowed up, and with it many significant historical sites. The National Park Service was unable to respond and purchase additional acres because the Park was nearing its maximum capacity. It would have been against the law for the Park Service to acquire any sizeable parcels of land.

With this concern in

mind, and with the encouragement of residents of the surrounding communities, I started work to expand and improve Harpers Ferry NHP. I shepherded funds through Congress for the purchase of the Murphy Farm property adjacent to the Park and facilitated the acquisition of the historic U.S. Armory Grounds in Harpers Ferry. Now, I am pleased to report, Congress has approved unanimously legislation I wrote to extend the Park's boundary by 1,240 acres, from its current 2,505 acres to 3,745 acres. This expansion plan has gathered broad public support as well as the support of groups, including the Friends of Harpers Ferry, the Harpers Ferry Conservancy, and the Civil War Preservation Trust.

The story of Harpers Ferry is really the story of America. In one setting, several themes in America's story converge: exploration, industry and transportation, the question of slavery, the Civil War, and the natural splendor of our nation. The Park tells the stories of people and events that influenced the course of history and made the nation what it is today.

I am proud that this important legislation is on the verge of becoming law. We have an obligation to protect and enrich such a special place so that its lessons and legacy will live on for generations to come.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protecting West Virginia's Wonderful Wild

"Oh, the West Virginia hills! How majestic and how grand." These words, from "The West Virginia Hills," one of the Mountain State's official songs, capture the sentiment not only of West Virginia natives but also of the thousands of tourists who flock to the state to view its scenic wonders.

West Virginia is a place where one can see and feel and hear nature without interruptions from the hectic outside world. It is a place where parents and children, young and old, can experience diverse wildlife, rushing waters, and thriving vegetation firsthand. I have long sought to preserve our state's God-given treasures. These wild lands remain relatively as the Creator made them with the help of legislation that recently celebrated its 40th birthday.

In 1964, Congress passed the Wilderness Act to protect wilderness areas throughout the country by restricting grazing, mining, timber cutting, and mechanized vehicles in these regions. By safeguarding the ecological, scenic, and scientific value of America's wilderness, we preserve it for future generations. I am one of only three remaining senators who cast a vote in favor of the historic legislation. I am proud that the 9.1 million acres originally designated as protected wilderness areas 40 years ago has grown to more than

105 million acres in 44 states.

In West Virginia, wilderness areas are some of the more popular destinations for residents and visitors alike. Dolly Sods, Otter Creek, Cranberry, Laurel Fork North, and Laurel Fork South Wilderness Areas are unique reminders of the beauty of nature and the handiwork of the Creator.

I recently received a letter from Mrs. Margaret Baker of Hillsboro who wrote of "how important wilderness areas are to the quality of life in West Virginia." Writing about West Virginia's Cranberry Wilderness Area, she explains that, in this special place "you can take your children here and actually see what nature looks like when it's not in a neatly labeled museum exhibit, when the animals aren't in cages and the trees aren't trimmed into perfect little bricketts of shrubbery."

Mrs. Baker is absolutely right.

It was West Virginia's natural wonders that inspired these words: "If o'er sea o'er land I roam, Still I'll think of happy home, And my friends among the West Virginia hills." I will continue my efforts in the Senate to protect these many examples of our state's scenic beauty that lie nestled within the West Virginia hills and ensure that they survive for generations to come.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

West Virginia Veterans Need Help

West Virginians have a proud record of service in the United States Armed Forces. The famed General Stonewall Jackson hailed from present-day West Virginia. Chuck Yeager, the World War II ace and first man to travel faster than sound, is a proud West Virginian. Staff Sergeant Junior Spurrer from Bluefield was the second most decorated American soldier in World War II.

There are many more West Virginians who served the nation but whose names will not be recorded in the great military histories of our country. These veterans have asked little of their country. They expect only that the government provide them with the benefits they earned in service to their country.

But, time and time again, the Bush White House has turned its back on veterans. When choosing between budget-busting tax cuts or funding veterans programs, the Administration has cut taxes for America's super-wealthy instead of taking care of America's veterans.

For the last three years, Congress tried to increase veterans benefits by allowing military retirees to keep all of their Veterans Administration (VA) disability checks and military retirement pay. But the Bush White House fought against funds for

veterans and even threatened to veto a \$396 billion defense bill to prevent veterans from receiving their due compensation.

This year, President Bush approved plans to close or cut services at veterans hospitals across the country. The Beckley VA Medical Center, which serves 40,000 veterans in Southern West Virginia, narrowly missed the President's chopping block. The Beckley facility was saved only with a last-minute intervention by Senator Rockefeller, Representative Rahall, and myself.

Last year, the Bush Administration decided that an entire category of veterans should no longer be eligible to seek health care from the VA. As a result, more than 520,000 veterans will be barred from VA hospitals. The Bush Administration also wants to double the cost of prescription drugs for thousands of veterans while increasing their doctor visit fees by 33 percent and sticking them with new annual enrollment fees.

West Virginia's veterans know about sacrifice. They have given much in service to this country. Yet, the Bush White House wants veterans to give up more and more of their hard-earned benefits. The Administration ought to stick up for veterans instead of sticking them with a bigger health care bill.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Farmington, a Tragic Reminder

November marks the 36th anniversary of the tragic Farmington Mine Disaster. It was this mine disaster, in which 78 coal miners lost their lives, that prompted Congress to pass the Federal Coal Mine Health and Safety Act of 1969 -- the most comprehensive mine health and safety legislation to date. In addition to enacting new, stronger safety and enforcement provisions, the 1969 act protected America's coal miners from Black Lung by limiting their exposure to coal dust.

The anniversary of the Farmington Mine Disaster is an unfortunate reminder that the struggles of American labor have been a fight for safer working conditions as well as better wages, shorter hours, and job security. It also is a reminder that our federal government must be committed to making America's coal mines safer.

This message seems lost on the Bush Administration, which has championed the most anti-labor policies in more than a century. The Bush White House has proposed increasing the allowable level of coal mine dust, reversing the 1969 act and needlessly exposing miners to Black Lung. Furthermore, the Administration has proposed killing a host of mine-safety regulations, including rules necessary to protect miners from toxic chemicals.

The Bush White House assault on American workers hardly ends with coal miners. The Administration has cut funding for needed job training programs. It is blocking efforts to provide unemployment benefits to jobless workers. It is stripping many workers of their right to overtime pay. It is repealing safety rules necessary for the protection of American workers. It has attacked the civil service system. It has sought to weaken collective bargaining rights.

Under this Administration's watch, 2.5 million good-paying manufacturing jobs, including several thousand in West Virginia, have disappeared. On average, 34,000 jobs a month are being shipped overseas.

Today, when the real value of the minimum wage is sinking to record lows, the Bush Administration has trapped millions of workers in poverty by blocking congressional efforts to raise the standard of living for working Americans.

When the great American labor leader Samuel Gompers was asked what labor wanted, he had a simple answer, "more." President Bush has answered with more -- more for big oil, more for big insurance companies, more for the well-connected high rollers -- but, sadly, less for America's working families.

Leaving West Virginia Children Behind

At Raleigh County's Mark Twain High School, I was one of 28 students in my 1934 graduating class. At Mark Twain, there was no question of accountability. The teachers were in charge. The students were there to study. The goal was to learn and always strive to make yourself smarter tomorrow than you are today.

Sadly, too often today, that same emphasis is not placed on teaching and learning. Parents know it. Members of Congress know it. That's why we voted to create the No Child Left Behind Act. Congress and President Bush worked together to ensure greater accountability in America's schools. We established standards and promised increased resources to help schools reach those standards and surpass them. But, to date, funding No Child Left Behind has been a Bush Administration empty promise.

Since President Bush signed the No Child Left Behind Act into law in 2002, not one Bush Administration budget has provided the funds that America's schools expected. In fact, nationwide, the Bush White House has shortchanged schools by \$33 billion. The Administration trumpets No Child Left Behind, but fails miserably when funding it.

For example, the federal Title One initiative provides dollars geared specifically for children from poor school districts. About half of West

Virginia's public schools receive Title I funding. While the President's No Child Left Behind Act promised West Virginia schools \$154 million for Title I for 2005, the Bush Administration's budget slashed that funding by more than \$55 million--a 36 percent cut. Translated into students, it would deny full services to 18,398 West Virginia children. Evidently, "Leave Only 18,398 Children Behind" was not a catchy enough title for the new law.

When President Bush signed No Child Left Behind, he said, "There's no greater challenge than to make sure that every single child, regardless of where they live, how they're raised, the income level of their family, every child receive a first-class education in America."

But what the President said and what the President does has proved to be vastly different. When it comes to America's schools and keeping the promise of No Child Left Behind, the Bush White House gets an "F."

If there is one federal investment that can offer real dividends down the road, it is education. It is time to end the posturing and give students and teachers the resources that they need to succeed. It is time for an Administration that will not play games with America's kids. Our schools and our children cannot afford four more years of broken promises.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Powering Job Growth in the New Century

In this century, West Virginia and the country will need to rely on innovation in order to create new jobs and new economic opportunities. In fact, innovation will be the key to whether we are able to lead or whether we stagnate. In a world where production costs are vastly different among countries, the one factor that will set the United States apart is our ability to generate new ideas and new approaches to meet demands.

In West Virginia, many of those innovations will be spurred by the National Technology Transfer Center (NTTC) at Wheeling Jesuit University. The NTTC provides technology management services that turn knowledge into value for the benefit of its clients. The group matches public needs with government research and development.

The U.S. Department of State is the most recent beneficiary of the work at the NTTC. The State Department has placed an order for 3,000 "HazMat Smart-Strips" -- a chemical-detection warning badge for emergency responders that was commercialized with assistance from the NTTC.

The Smart-Strip, produced at Wheeling-based Printech, is a \$20 strip of vinyl and paper that changes color when exposed to hazardous chemicals such as chlorine, fluoride, nerve agents, oxidizers, arsenic,

sulfides, and cyanide in liquid or aerosol form. A change in color in any of the eight categories alerts users to exposure, directing a responder to get additional gear, to decontaminate, or to evacuate the area.

Fire departments, hazardous materials technicians, law enforcement officers, branches of the military, consumers, and even communities located near chemical plants have ordered thousands of the baseball-card-sized Smart-Strips since they appeared on the market last year.

The Smart-Strip is an example of the innovation that will help to drive our economy in the 21st Century. The market for new ideas and new techniques never dries up. The push for better, faster, stronger, more affordable technologies will always drive the economy, and there is no reason why West Virginia cannot hold the keys to keep that engine running.

For decades, West Virginia's economy has relied on the strength of our arms and backs. Coal mining. Steel production. Chemical manufacturing. Those sectors of our economy will always be vital. But we also must use the strength of our minds and seek new opportunities to create jobs and lift our state. Innovations like the HazMat Smart-Strip will help to lead the way.

WV Guard Rises to the Challenge Again

As the saying goes, if a job is worth doing, it is worth doing well. The West Virginia National Guard has proved time and again that it abides by these wise words. The citizens of the Mountain State and America's troops around the world are safer because of the efforts of these brave men and women. Whether it be a devastating flood at home or the seemingly endless tours of duty in Iraq, they are always ready to answer the call.

With top-notch performance comes increased responsibility. The West Virginia Air National Guard's 167th Airlift Wing in Martinsburg has been selected for an important new role in the nation's defense. Beginning in 2007, the 167th's current fleet of twelve C-130 aircraft will be replaced with a new fleet of ten C-5 planes, which are among the largest aircraft in the world. The C-5's massive payload capability has made the aircraft an invaluable part of U.S. Air Force military and humanitarian efforts for the past 20 years.

Preparations are underway to ready the 167th Airlift Wing for the arrival of its newest charges, but much work remains to be

done. I recently advanced funding that will further the construction projects to help transform the base into a suitable home for the C-5s. The more than \$56 million in C-5 planning, design, and construction funds I guided through Congress this year and the more than \$40 million I added to legislation in past years will help to lay the groundwork for the 167th's important new mission.

The benefits of the Martinsburg Air National Guard Base's new assignment will extend beyond the 167th's borders. With the C-5s, comes new jobs and expanded infrastructure for the Eastern Panhandle. More than 100 additional positions will be filled, and the base's increased economic impact will provide a boost for the entire region.

The 167th Airlift Wing has long been recognized as one of the best trained units in the nation. They serve with the same dedication and perseverance exemplified by West Virginians in all branches of the nation's Armed Services. I remain committed to providing General Tackett and his units with the resources they need to continue their impeccable record of accomplishment.

Staying Healthy in Flu Season

The country's current shortage of flu vaccines has dominated news headlines and caused widespread concern. The insufficient vaccine supply has left hundreds of thousands of high-risk Americans scrambling for the scant doses. The more that West Virginians know about the shortage, the more likely they will be to stay healthy this flu season.

The flu shot scarcity is due largely to the closure of one of the major flu vaccine producer's overseas plants. Federal health agencies are working to identify new vaccine sources to help fill the shortage. Medical experts recommend that West Virginians who fall in the high-risk category should take measures to get vaccinated as additional doses become available. Experts further suggest that those in low-risk categories should not get vaccinated but should take precautions to help protect their health during the flu season.

Specifically, the Centers for Disease Control and Prevention (CDC) recommend that the following groups of people should have top priority for receiving the flu vaccine: adults 65 years of age or older; children between the ages of 6 and 23 months; children on chronic aspirin therapy; caregivers for infants younger than 6 months; health care staff that work with patients; pregnant women; women

who expect to be pregnant during flu season; and all nursing home residents. In addition, anyone with chronic medical conditions, regardless of age, should be vaccinated.

It is important for high-risk West Virginians to stay informed about the quantity of flu shots available locally. State health officials have announced that the vaccine will be distributed based on demand. High-risk individuals should contact their doctors or local health departments to inquire about the availability of the vaccine in their areas.

West Virginians in the low-risk groups who do not receive the vaccine can still take steps to stay healthy during the winter months. The CDC advises everyone to eat balanced meals with the recommended amounts of vitamins and minerals, get a proper amount of exercise, minimize contact with people who are sick, stay home from work or school if sick, and wash hands regularly to help ward off the flu and other ailments.

All West Virginians can be advocates for their own health. For more information on flu vaccine supplies, they can call the West Virginia Immunization Program at 304-558-2188 or 800-642-3634. The right mix of persistence and precaution can help all of us to stay healthy in the coming months.

A Time to Count Our Blessings

From its first celebration, when the Pilgrims sat down with American Indians to commemorate the plentiful harvest, to when Abraham Lincoln declared it an official holiday after the Civil War, Thanksgiving has always been a time to remember the blessings of the Creator.

This Thanksgiving is a time to reflect upon the many things we take for granted.

We have much for which we may offer thanks. We may celebrate the food on our tables, the roofs over our heads, and the friends and family with whom we share our meal. We may be thankful for our health, or for having the strength and support to deal with our afflictions. We may be thankful for the great nation in which we live, still a land of plenty and a land of great opportunity.

In this hotly contested election year, we may be grateful that we have a process of selecting our leaders in which everyone can participate, and which peacefully and securely affects the transfer of elected power. However one may

feel about the outcome of the election, it is still a vastly preferable system to that which exists in many other nations. The nightly news is full of stories, from the Ivory Coast to the Gaza Strip, which offer object lessons in how not to transition leadership. We are blest to be Americans.

In a year punctuated by war, we may offer our prayers and our gratitude to the many men and women who have lost their lives in Afghanistan and Iraq for the sacrifice that they have made for the nation.

To the gravely wounded and mentally tormented who have returned from this war, we may pray for their speedy recovery.

To those men and women still serving overseas, we may pray for a safe return.

To those families who are separated by war from loved ones this holiday, we may offer our heartfelt support.

And to everyone who will travel this Thanksgiving to be with family and friends, I wish a safe journey and a happy holiday filled with spiritual blessings, fellowship, and love.

Hope for Healing the Mind

Oh, the wonders of the human mind! Infinite in possibility and unique in capacity, it is surely God's greatest creation. The mind is a soaring and powerful force, able to produce incredible beauty. But all too often, the great gifts of the mind are seized by Alzheimer's Disease, depression, schizophrenia, or other maladies that prey upon the brain. Soon, West Virginia will become home to one of the world's major centers for research into these neurological illnesses.

I recently joined Senator Jay Rockefeller and Governor Bob Wise at the groundbreaking ceremony for the Blanchette Rockefeller Neurosciences Institute at West Virginia University (WVU). This collaborative effort between WVU and Johns Hopkins University is named for Senator Rockefeller's mother who suffered from Alzheimer's Disease until her death in 1992. The Institute will be the largest scientific research venture in the history of West Virginia and the only major research institute in the world to focus on human memory.

Many families have been personally touched by the suffering caused by Alzheimer's or other cognitive diseases. The pain of watching the mind and memory of a loved one slip away is unbearable. The slow loss of the ability to recognize one's spouse,

child, or grandchild is one of the cruelest blows for victims and their families.

I am particularly moved by the personal story of Blanchette Rockefeller and her struggle with Alzheimer's Disease. I admire Senator Rockefeller and his family for having generously contributed more than \$15 million dollars of their own money to carry out the noble mission of the new Institute.

I am gratified to have been able to secure federal funds for the construction of the Institute. Also, as the senior member of the Senate Appropriations Committee, I have helped to double the level of funding for the National Institutes of Health. This increase strengthens the federal government's commitment to advancing biomedical science and helps to create a bridge between ideas, the laboratory, and most importantly, the patient.

I am humbled by the many miracles of science that I have witnessed in just my lifetime. Each year, experts discover new cures and treatments for such illnesses as cancer, heart disease, diabetes, depression, and many more. Many of these scientific advances were achieved in the past century. I take great pride in knowing that discoveries of the next century are sure to take place at the Blanchette Rockefeller Neurosciences Institute.

By U.S. Senator Robert C. Byrd

The Backbone for Job Growth

In 1947, when I began my public service in the West Virginia House of Delegates, there were only four miles of divided, four-lane highway in the entire state. Four miles! In fact, there were so few miles that they were not recorded on the state roadmap that year. It took several hours to travel round-trip between Beckley and Charleston. Getting to the Eastern Panhandle from Southern West Virginia took an entire day. Commerce stalled because West Virginia's road and highway system was, as the *Saturday Evening Post* noted in a February 1960 edition, "decades behind that of its neighbors."

When I was elected to Congress in 1952, I made it a goal to turn that situation around. Today, more than a half-century later, I am proud to report that West Virginia has made significant progress.

By the end of this year, the West Virginia Department of Transportation estimates that there will be more than 1,300 miles of divided, four-lane highways throughout the state. These miles are in every region of the state, from I-68 in North Central West Virginia to I-77 in our western counties. Corridor Highways, promised by the federal government 39 years ago as part of the Appalachian Development Highway System, now crisscross West Virginia. Throughout the state, as miles long-planned

are finally paved, progress follows close behind.

There is still considerable work ahead. Route Nine in the Eastern Panhandle; U.S. 35 in Mason and Putnam counties; the Coalfields Expressway, Route Ten, and the King Coal Highway in Southern West Virginia; the Mon-Fayette Expressway in North Central West Virginia; Corridor H in the Potomac Highlands -- these are all ongoing high-priority projects.

To that end, using my position as the senior member of the Senate Appropriations Committee, I have added hundreds of millions of dollars to legislation to speed the completion of these highways. Soon, the President will sign legislation containing more than \$417 million that I obtained for West Virginia highway construction this year. I am proud of that work, and look forward to the day when each of these projects is completed.

In West Virginia, we understand the importance of modern roads. They make for safe travel to school and to work. New highways create new job opportunities. Throughout the state, residents understand a simple truth; namely, modern roads make for a better quality of life.

In the Senate, I will continue my efforts to construct West Virginia's highways and, importantly, build the backbone for progress in the 21st century.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Bringing Doctors to the Children

In many parts of rural West Virginia, a trip to the doctor for a check-up is anything but routine, and specialized medical care can be hours away from home. For children, this is especially dangerous. Vaccinations are missed. Early signs of medical problems go undetected. That's why I have worked throughout my career in the U.S. Senate to expand health care opportunities for all West Virginians, and especially for our children.

The latest effort comes thanks to Marshall University's Byrd Center for Rural Health. Already, the Center provides medical services to West Virginians who do not live near hospitals or clinics. The Center's mission is to get past the geographic isolation that serves as a barrier to health care in rural communities. Technology plays a key role in that effort.

For instance, the Center for Rural Health, in a partnership that I helped to start with the Walter Reed Army Medical Center and the NASA National Technology Transfer Center based at Wheeling Jesuit University, has introduced an initiative called HEALTHeWV. Through this effort, patients use small computerized devices to answer questions about their illnesses and any health-related problems affecting their daily lives. This information helps doctors to better treat patients based on their full medical

histories, rather than on one particular symptom or illness.

Now, the Byrd Center is expanding its reach to young people with a mobile medical unit specifically geared for children. Utilizing \$1 million that I recently added to federal legislation, this traveling doctor's office brings medical professionals directly to the children who need them most. This funding will help to ensure that this important initiative is able to expand its medical services and treat more children in Southern West Virginia.

When children receive proper medical care, they are more likely to avoid serious health conditions later in life. Marshall's mobile medical unit provides immunizations, routine check-ups, physicals, and sick visits to thousands of young people each year. Children are healthier because of the care they receive at the mobile facility, and soon more West Virginia children will benefit.

Access to quality health care is an essential part of life for all Americans, but is often a challenge for those living in rural areas. That's why initiatives like HEALTHeWV and the Marshall University mobile medical unit are so important. These efforts break through the barriers of isolation in rural communities and ensure that health care is available throughout our state.

Celebrating the True Christmas Story

Christmas is one of my favorite times of the year, a time of joy and love, of family gatherings and warm memories. Over time, however, Christmas has become more about big store sales and shopping malls rather than the birth of Jesus. The meaning of Christmas is overshadowed by the pressures and strains of a commercialized holiday.

At its core, Christmas will always be about a couple who found no shelter but a manger, and also about a newborn child who would become the Savior of the world.

That is why, each year at this time, I reread the Christmas story in the Gospel of Luke. My Christmas wish is that all of us will remember the words and, more importantly, the true meaning of this sacred season.

"All went to be taxed, every one into his own city. And Joseph also went up from Galilee, out of the city of Nazareth, into Judaea, unto the city of David, which is called Bethlehem; (because he was of the house and lineage of David:) to be taxed with Mary his espoused wife, being great with child.

"And so it was, that, while they were there, the days were accomplished that she should be delivered. And she brought forth her

firstborn son, and wrapped him in swaddling clothes, and laid him in a manger; because there was no room for them in the inn.

"And there were in the same country shepherds abiding in the field, keeping watch over their flock by night.

"And, lo, the angel of the Lord came upon them, and the glory of the Lord shone round about them: and they were sore afraid.

"And the angel said unto them, Fear not: for, behold, I bring you good tidings of great joy, which shall be to all people. For unto you is born this day in the city of David a Saviour, which is Christ the Lord. And this shall be a sign unto you; Ye shall find the babe wrapped in swaddling clothes, lying in a manger.

"And suddenly there was with the angel a multitude of the heavenly host praising God, and saying, Glory to God in the highest, and on earth peace, good will toward men."

Perhaps, with a greater focus on family and faith than on gadgets and glitter, the materialism of Christmas will fade and we can truly understand the great and glorious meaning of Christmas.

My wife Erma and I wish for all West Virginians a happy and holy Christmas and New Year.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protecting an American Symbol

The American Bald Eagle has long been the living symbol of freedom and liberty and the unshakable spirit of the American people. In 1782, the Second Continental Congress officially designated the Bald Eagle as the National Emblem of the United States. A species unique to North America and once very plentiful, the Bald Eagle population dropped to endangered levels by the 1960s. Fortunately, strong protection laws and conservation efforts have brought this majestic bird back from the brink of extinction, and I am pleased to have helped to guide through Congress legislation to help ensure the continued, long-term growth of the eagle population.

While the national bird is currently classified as a threatened species, it is expected that it will be removed from the endangered species list in the near future. The Bald Eagle would still be protected under existing federal and state regulations but little state or federal funding is available for that purpose. Significant funding will be required to monitor the Bald Eagle population for five years, as specified for delisted species under the

Endangered Species Act.

The bill I cosponsored authorizes the United States Mint to create and market a special three-coin set that will commemorate the recovery and revival of the American eagle. The money collected from the sale of the coin set will be placed in an American Eagle Fund, and interest from that fund will support ongoing eagle care efforts, as well as the monitoring and protection programs established by the U.S. Fish and Wildlife Service.

The Bald Eagle is a noble symbol of our Republic which has endured significant challenges to its survival. I commend the conservation efforts that have helped to return our symbol of freedom to the skies. There are now more than 5,000 nesting pairs and 20,000 total Bald Eagles in the lower 48 states and more than 35,000 Bald Eagles in Alaska.

I am proud to have supported legislation which celebrates the eagles' recovery and ensures that, as the eagle moves off the endangered species list, resources are in place to help keep the population healthy for decades to come.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protecting the Medicaid Safety Net

The federal government is running in the red. Under the Bush Administration, federal deficits have reached record levels, and now the White House is scrambling to find ways to cut back. One area that I fear could be unwisely targeted is the Medicaid program -- a health care safety net for more than 300,000 West Virginians.

Since 1965, the federal government has helped states to pay for health care for low-income Americans who do not have a way to afford medical treatments. In West Virginia, the health care infrastructure is comprised of hospitals, nursing homes, home health agencies, physicians, and community health centers. These providers are the backbone of the health care safety net, and they rely heavily on federal Medicaid funding to care for the poor, disabled, and elderly.

President Bush has already pushed forward a plan that would turn the Medicaid program into a block grant and arbitrarily cap the health care funding available for Medicaid recipients. That's a plan that would jeopardize medical services for the most medically vulnerable West Virginians, including low-income children, parents, pregnant women, people with disabilities, and senior citizens.

If the President's Medicaid plan becomes law, states would be left to shoulder the burden of

increasing health care costs on their own. A downturn in the economy that causes more people to become uninsured, public health threats or natural disasters, advances in costly medical technology or treatments, and the increasing costs of prescription drugs -- all these could drive a state's costs to levels higher than anticipated. And the health care needs of low-income people do not magically disappear just because there are fewer federal funds available.

As health care costs continue to grow over time, a limit on federal funds would force governors and state legislators to pit the needs of different populations against one another. States would be forced to implement even deeper cuts than those in recent years by further restricting eligibility, eliminating or reducing critical health benefits, and severely cutting or freezing reimbursement rates for health care providers. Consequently, many vulnerable people would lose access to health insurance and quality health care services.

I welcome an honest debate about ways to strengthen and improve the Medicaid program. As states are so often the incubators of policy innovations, I also recognize the need to increase state flexibility in the Medicaid program. But I am not willing to go along with President Bush's plan that cuts giant holes in the health care safety net for our nation's most vulnerable citizens.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Tragedy of Incredible Magnitude

On December 26, an earthquake with a magnitude of 9.0 on the Richter Scale occurred off the west coast of Northern Sumatra, Indonesia. That quake triggered a series of tsunamis that affected several countries throughout South and Southeast Asia, as well as Somalia, Tanzania, and Kenya in East Africa. But that scientific explanation does not begin to describe the devastation left in the wake of the calamity.

Lives by the tens of thousands destroyed. Families broken. Houses flattened. Communities washed away. There are few words to describe the destruction. It is a tragedy that is almost beyond comprehension.

At such times, one must wonder why it takes such tragedies to bring out the best of the human spirit. Yet, many of us only come to grips with our common bond of humanity in the face of truly enormous disaster.

The stark reminder of such horrific events is that man is really not in control of this world. God rules this world, and perhaps He sends us such devastation from time to time so that the goodness of human kindness and true empathy toward our fellow man. I do not know, but I do know that the prayers of many West Virginians are with the devastated families, the missing, and the dead at

this time.

Recovery will not be simple or quick. It will be a monumental task, one that I am encouraged to see the entire world joining to undertake. The United States is a strong partner in this work. The federal government has already pledged \$350 million to the effort, but our commitment to this effort does not stop there.

Americans from all walks of life have opened their hearts and their pocketbooks to the victims of the tsunami disaster. I commend President Bush for designating his father, President George H. W. Bush, and President Bill Clinton to lead the effort in raising private contributions. Those donations are pouring into relief agencies, and many people with expertise in medicine and other critical needs are putting their lives on hold to travel to these regions to help.

West Virginians wishing to make a contribution to the relief effort can help in several ways. Visit my Internet site, <http://byrd.senate.gov>, to learn more.

There may be many miles between our country and the victims of the tsunami, but we share the common bond of humanity. America will continue to stand shoulder-to-shoulder with those recovering from this disaster.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Keeping Coal's Future Bright

The United States needs a comprehensive energy plan, but, because of a policy stalemate in Washington, D.C., no such plan exists. I have tried to break that logjam, putting forward proposals to boost America's energy independence. Recently, my efforts were incorporated into a top-notch energy plan written by a bipartisan group of experts from industry, government, labor, academia, and environmental and consumer groups.

For two years, this group -- the National Commission on Energy Policy -- has worked on a strategy that places coal at the front and center of America's energy future while also cutting back on the nation's heavy reliance on oil and fuel imports. The need for such a strategy could not be more important. Breaking that foreign oil dependence is crucial.

By cutting America's reliance on foreign oil, we reduce the need for an American military presence in the Middle East. By shrinking the U.S. military presence in the Middle East, we address the concerns of those who are opposed to American forces near Islamic holy sites and take away a major reason for terrorist attacks. That is why this issue is so central to the country's future. America's energy policy is closely linked to America's national security.

The new report includes detailed recommendations for oil security, climate change, natural gas supply, the future of nuclear energy, and other energy and environmental challenges. Importantly for West Virginia, many of the Commission's recommendations can breathe new life into coal. The Commission recognizes that coal can be at the center stage of our efforts to secure our energy future.

The just-unveiled strategy recommends speeding the installation and use of technologies that will use coal more efficiently and more cleanly. These technologies can result in coal's being used in a host of applications -- from power generation to chemicals and liquid fuels -- while also significantly reducing the emissions of sulfur dioxide, nitrogen oxide, mercury, and carbon dioxide.

I believe that energy and environmental goals are two sides of the same coin, and the National Commission on Energy Policy recognizes that truth. Using this new report as a starting point, it is time for Congress and the Bush Administration to work with industry, labor, academic, environmental, and community interests to find common ground. By doing so, we can champion a new energy and environmental legacy that will move the nation forward into a brighter, more energy independent 21st century.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Time for New Beginnings

On January 17, 2005, I had the honor of sitting with Governor and Mrs. Joe Manchin as he delivered his inaugural address from the steps of the State Capitol in Charleston. Our new Governor talked about his hope for the future -- a hope that he wants to turn into progress. During his campaign to be our state's chief executive, Joe Manchin brought unity and energy everywhere he traveled, and I hope that we will continue to see these forces at work in his administration.

As Governor Manchin begins his first term, President Bush is embarking on his second. The start of a new term in office, even for those who have held that office already, offers the chance for a fresh start. Inauguration Day is not just for the man or woman who places a hand on the Bible and swears to "preserve, protect, and defend the Constitution." Rather, it is a day when the entire country can come together to celebrate our Republic and the opportunities that are before us.

Many challenges face the country as President Bush begins his second term, but the opportunities are just as plentiful. We need to make quality health care more accessible and affordable. We need to protect Social Security so

that this safety net is available when Americans need it the most. We must put more Americans to work and ensure that they are paid a decent wage. And we should direct America's energy policy in a responsible and balanced way.

Along with a focus on these and other issues which impact our daily lives, we also must re-evaluate America's policies beyond our borders. The resistance in Iraq continues unabated. Scores of thousands of brave servicemen and women are hourly risking their lives to fulfill a murky mission with a seemingly untenable goal. The United States needs to reexamine its approach to Iraq and the Middle East because the approach is not working.

It will take a renewed commitment to bipartisan cooperation to address these and many other issues on which Congress will deliberate in the days ahead. The political rancor which has plagued the legislative process in recent years can be put to rest. I hope that this year's inaugural ceremonies will mark a moment in history when partisan divides begin to take a back seat to working together in the best interests of the people of West Virginia and the nation.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protecting Social Security for the Next Generation

Many West Virginians have listened with concern in past weeks to dire claims about Social Security and its ability to continue to pay benefits. It is important for the 405,000 West Virginians who receive a monthly Social Security check to know that no imminent crisis exists. Rest assured, your Social Security check will continue to arrive in the mail.

However, the current worker-to-retiree demographics in the United States spell trouble for Social Security and its ability to keep up with its promised benefits for future generations. People are having smaller families resulting in fewer new workers paying taxes into Social Security. And seniors are living longer and collecting benefits for many more years. In fact, in a little more than a decade, in 2018, the Social Security Trustees anticipate that the revenues collected from Social Security taxes will no longer be enough to pay full benefits to everyone eligible.

Members of Congress must reach across party lines to consider how to best ensure that Social Security, which has well served three generations of West Virginians, remains robust for future generations. We should beware hasty decisions that may actually undermine the

Social Security system that so many West Virginians know and trust.

The volatility of the financial markets suggests caution in how we approach changes to the Social Security program, in particular, the use of individual accounts. Simply allowing workers to invest Social Security funds in the stock market may sound appealing to some, but the start-up costs of these new accounts and our skyrocketing budget deficits could actually sap revenues needed to pay current retirees.

West Virginians should insist on knowing the complete, unvarnished details of any proposal that would affect their Social Security benefits. That is why I have written to President Bush to urge him to explain the full cost of his Social Security plan and its possible effect on workers' benefits. Every employer, laborer, office worker, student, spouse, and child, who pays into Social Security or expects one day to receive benefits from it, deserves to know the fine print of the President's plan.

For many West Virginians, Social Security is their sole source of income. It is incumbent upon all of us to fully understand the details of any suggested reforms to ensure that West Virginians' best interests are protected.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Building the Tools for a Modern Military

Tucked away in Mineral County is West Virginia's largest defense manufacturing facility, the U.S. Navy's Allegheny Ballistics Laboratory (ABL). Started in 1941 to build ammunition for American soldiers fighting in World War Two, ABL has undergone a transformation in recent years to take its place as a high-tech hub for new defense-related technologies.

I have been proud to be part of that transformation. Using my position as the senior member of the Senate Appropriations Committee, I have worked with the U.S. Navy to invest tens of millions of dollars to demolish the old World War Two-era buildings and replace them with top-of-the-line manufacturing technologies and facilities.

The results have been astounding. Today at ABL, 60 years after it was founded, nearly 1,200 men and women are on site designing the latest generation of warheads, rocket motors, and other vital military components for the Department of Defense. ABL now operates in four areas of excellence to support the U.S. military -- tactical propulsion, precision ordinance, missile defense, and composite structures -- all of which contribute to the superiority

of the U.S. Armed Forces.

Recently, the largest company at ABL, Alliant Techsystems, announced that it would add another 180 jobs to the Mineral County facility. Beginning later this year, this new division will manufacture fuses and sensors for artillery, and both guided and unguided bombs.

ATK's decision to anchor this production operation at ABL is a credit to the facility's improvements and the quality work of its employees. These new jobs will provide a significant economic boost to Mineral County and will help to protect America's military forces around the world.

There is no doubt as to the strength of America's military might. A major part of that high standard is the ability of our soldiers, sailors, airmen, and marines to rely on cutting-edge weapons and resources. West Virginia is helping to design the next generation of advanced, innovative defense weaponry. I take great pride in West Virginia's thriving defense initiatives and will continue to work to provide the men and women of our country's Armed Forces with the technology, the equipment, and the training that they need to successfully defend our nation.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Meeting Our Constitutional Responsibilities

At the start of each term, Senators swear to "support and defend the Constitution of the United States...." It is a sacred oath, one before God and man, that I take with the deepest conviction.

The Constitution mandates that Senators provide "advice and consent" for presidential nominees, including Cabinet officers. I support the majority of President Bush's nominees. But I have opposed two people responsible for scars on the reputation and integrity of the United States.

When asked to confirm Condoleezza Rice as Secretary of State, I voted no. I do not question her credentials, but I oppose many of the decisions that Dr. Rice made during her four years as National Security Advisor. There remain too many unanswered questions about Dr. Rice's failure to protect our country before the attacks of September 11, her public efforts to politicize intelligence leading to war with Iraq, and her allegiance to the unconstitutional Bush doctrine of first-strike war. I cannot endorse promotion of a person who helped to set us on the path of a war that has led to the deaths of more than 1,440 American military men and women, and changed the image of this nation from that of a peacemaker to that of a bully.

When asked to confirm Alberto Gonzales as Attorney General, I again voted no. Mr. Gonzales, as chief legal counsel to President

Bush, provided his interpretation of law and policy directly to the President. When asked whether the United States should use torture as a means of interrogation, Mr. Gonzales gave the green light. Opinions on torture, which Mr. Gonzales either wrote, requested, authorized, endorsed, or had implemented, contributed to the graphic pictures and accounts of prisoner abuse in Afghanistan, Guantanamo Bay, and Iraq, including at the Abu Ghraib prison.

The Constitutional "advice and consent" responsibility is not a rubberstamp endorsement of a nominee's educational achievement or level of expertise. Senators are expected to use their best judgment in considering nominations. The people deserve nothing less.

In my judgment, these two nominees' records did not merit giving them higher responsibilities in government.

At his Inauguration, President Bush spoke about America's historic support of freedom. But truly supporting freedom means upholding human rights, not seeking rationalizations to circumvent them. Moral standards long have defined America. But official policies of torture and abuse, and misleading a nation about the reasons for war, undermine our moral authority. Rewarding the architects of such policies makes a travesty of accountability. The Constitution's Framers would not have approved, and neither did I.

By U.S. Senator Robert C. Byrd

Bush Budget Doesn't Make the Grade

President Bush recently sent to Congress his budget for the coming year. His plan proposes to cut and, in many cases, eliminate funding for key education initiatives in the Mountain State. When it comes to helping West Virginia students achieve, the President gets an "F."

Schools across the country are struggling to meet tougher federal guidelines with already limited resources; yet, the Bush Administration has proposed the first cut to the education budget in a decade.

Nearly a third of all the programs targeted for elimination in the budget are education initiatives. On the President's chopping block are the very initiatives which make a contribution to the lives of students who most need assistance. West Virginia would see an \$8.4 million cut in vocational education, a \$3.8 million cut in education technology, a \$3.1 million cut in safe and drug-free schools programs, and a \$1.6 million cut in family literacy initiatives.

The Bush budget will also mean another year of broken promises when it comes to funding for the No Child Left Behind Act. About half of West Virginia's public schools receive Title I funding -- dollars geared specifically for children

from poor school districts. The Bush Administration promised West Virginia's Title I schools \$182 million for the coming year, but included only \$107 million in the budget, denying critical Title I services to 23,475 Mountain State students. The White House also pledged \$17.6 million for West Virginia after-school programs, but included only \$7.7 million in the budget, denying after-school services to 13,339 students.

Simply, No Child Left Behind made a promise. In exchange for higher standards and greater accountability, President Bush promised significant new resources to America's public schools. But, year after year, the Bush White House has failed to fulfill its promise. Accountability cannot just be a standard for teachers and students; it must also be a standard for the Administration.

The people of West Virginia gave President Bush their votes, and helped him win reelection, but what has he done to say thank you? He crafts a budget that shortchanges the education of our children and damages their future. Whether one uses 'new math' or 'old math,' cutting programs that help young West Virginians adds up to a loss for the Mountain State.

By U.S. Senator Robert C. Byrd

“Phishing” for Your Identity

Each day, more and more West Virginians surf the Internet, but there is a downside to this seemingly harmless activity. Common-place online transactions often reveal bits of personal information, including bank and credit card account numbers, Social Security numbers, or one's name, address, and telephone number. Unfortunately, devious individuals seek to obtain this sensitive information and use it, without the victim's knowledge, to commit fraud or theft.

The Federal Trade Commission (FTC) reports that people whose identities have been stolen can spend months or even years -- and also considerable amounts of their hard-earned money -- cleaning up the mess that the thieves make of good names and credit records. Some victims have lost job opportunities, been denied loans, or even been arrested for crimes that they did not commit.

When it comes to sharing personal information, one should exercise caution and prudence. A safe approach is to avoid giving out personal information on the telephone, through the mail, or over the Internet.

A computer can be a goldmine to an identity thief. To help safeguard electronic information, one should regularly update computer virus protection software, not download files from strangers or click on hyperlinks from strangers,

and use a firewall to limit uninvited access. The FTC recommends that Internet users ignore and delete all unsolicited e-mail communications, commonly referred to as “spam” or “junk e-mails.”

“Phishing,” a new form of spam, is a practice where a criminal sends out millions of e-mail messages that look like they are from legitimate companies, such as banks or charities. These messages provide links to authentic looking websites and ask victims to solve a purported problem with his or her account. Unfortunately, such sites can be fake, and the information that victims provide can be used to purchase goods or steal identities.

All who suspect that they may be victims of identify theft should review their credit reports and, if necessary, place a fraud alert on them. They should close any accounts that have been tampered with or accessed without permission. Finally, they should file reports with local police and contact the FTC.

To file a complaint or to learn more about the FTC's Privacy Policy, visit www.consumer.gov/idtheft; call the FTC's Identity Theft Hotline toll-free at 877-434-4338 or 202-326-2502 (TDD); or write the Identity Theft Clearinghouse, Federal Trade Commission, 600 Pennsylvania Avenue, N.W., Washington, DC 20580.

Veterans Care Not Part of Bush Priorities

West Virginians are extremely proud of our veterans. Those men and women who have chosen to offer their lives in service to our nation are owed an enormous debt. The United States carries a moral responsibility, as President Lincoln said, "to care for him who shall have bourned the battle, and for his widow, and his orphan."

But the Bush budget undermines the country's commitments to America's veterans.

In his new budget proposal, the President includes a plan to double the copayment for monthly prescriptions and imposes a \$250 "user fee" for veterans whom the Administration reclassifies in "lower-priority categories." The Bush Administration made the decision to start turning away hundreds of thousands of these "lower-priority" veterans from service at U.S. Department of Veterans Affairs (VA) hospitals in January of 2003. According to the Congressional Research Service, this decision will mean that, by the end of this year, a staggering 522,000 veterans will be turned away from VA hospitals. Now the White House wants to go further and pile on more fees, copayments, and charges for veterans who have so far avoided

the Administration's budget axe.

The more than 190,000 veterans in West Virginia who receive their health care from the VA Medical Centers in the Mountain State are threatened by these significant hikes in fees and copayments. Combat veterans from the Iraq and Afghanistan wars add to the stress on our VA facilities. Yet, instead of strengthening the VA medical system, the Bush Administration short-changes it.

Already, the nation's three largest veterans organizations -- the American Legion, the Veterans of Foreign Wars, and the Disabled American Veterans -- have called the President's budget "the most tight-fisted, miserly budget for veterans programs." They are right!

Veterans paid for their health care at Iwo Jima, at the Mekong Delta, at the Chosin Reservoir, at Fallujah, and at so many other locales. They should not be expected to pay yet again. But, make no mistake, if the choice is between budget-busting tax cuts or funding veterans health care programs, the Bush Administration seems always ready to choose to take care of America's elites instead of taking care of America's heroes.

By U.S. Senator Robert C. Byrd

Health Insurance Options for Small Businesses

At a time when health care costs are skyrocketing, the number of individuals with medical insurance is dwindling. The harsh reality is that 45 million Americans have no health care coverage, including 275,000 West Virginians. For these people, health conditions go undiagnosed, illnesses go untreated, and critical medicines are not made available. These individuals go through life hoping and praying that they do not get sick or face a catastrophic medical problem.

Nowhere are the shortfalls in the health care system more apparent than in America's small businesses. In fact, those working in small businesses represent more than 60 percent of the country's uninsured. The cost of providing employee health benefits is rising for all employers, but small business owners are bearing an even greater burden. They are forced to pay more for policies that offer less. Exorbitant health care costs also serve as a barrier to job creation, forcing many small businesses to rely on part-time or temporary employees or limp along without needed help.

That is why I have introduced legislation that would open the door to health insurance for more small businesses and give more West Virginians access to affordable, good quality medical coverage. My bill would allow small businesses to band together

through a trade association to purchase health insurance. These partnerships would allow for the establishment of association health plans (AHPs). By joining together, small businesses would enjoy greater bargaining power, less financial risk, and lower administrative costs.

The legislation would ensure that more workers can afford health care benefits, regardless of whether they work for a large international company or a small hardware store. A worker at a local pizza place in West Virginia should have the same access to health benefits as someone who works for a large Fortune 500 company. But, instead, the "mom and pop" shops that support communities across the country have increasingly become the face of the uninsured.

This legislation is only one step that can be taken to make health care coverage available to more Americans. But AHPs would help to move toward a goal we all share, namely, to have as few uninsured Americans as possible.

Health care is not a matter of partisan politics. Rather, it is a basic quality of life issue. We must work to reverse the trend of rising numbers of uninsured Americans. Helping small employers to provide health benefits for their workers and their families is a smart first step.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Firefighters Need Help

The local fire department is a critical part of every West Virginia community. These men and women are always ready to assist their neighbors. A burning home, a passenger trapped in a car after an accident, and, yes, even the proverbial cat caught in a tree -- our firefighters are ready to respond to virtually any call for help.

The tragedies of September 11, 2001, reinforced in the minds of all of us the bravery of our firefighters. They place their lives in jeopardy in order to protect the lives and property of their neighbors. In West Virginia, many fire departments are staffed by volunteers, people who have full-time jobs elsewhere but are always prepared to set those jobs aside when the fire alarm rings. These men and women who put themselves in harm's way to protect their communities deserve the best equipment and training available.

That's why, in 2000, the Congress created the FIRE Act grant initiative. Fire departments throughout West Virginia and across the country have benefitted from this grant program. It has helped local departments to replace aging equipment and upgrade facilities. The grants have paid for training that helps to save the lives of firefighters and the people they protect. Last year, West Virginia fire departments received 108 FIRE Act grant awards, totaling nearly \$9 million.

Unfortunately, President Bush's budget for the upcoming year would force firefighters to carry out their critical duties with far fewer resources. The President has asked Congress to cut \$215 million from this grant program. This is a short-sighted proposal that jeopardizes the lives and well-being of people around the country, especially in rural communities.

Recently, I met with Carl Eastham, a firefighter from Huntington, who was in Washington, D.C., for meetings with his colleagues from across the country. Mr. Eastham rightly pointed out that police and fire departments already are, too often, understaffed, under-trained, and ill-equipped. Drastic cuts in funding, such as those proposed by the President, only serve to further jeopardize community safety.

Fortunately, funding for local fire departments is an issue that has broad support among Democrats and Republicans in Congress. It will take a strong show of support from members on both sides of the aisle to turn aside the President's misguided funding plan and invest in emergency preparedness and first responders in communities large and small. The equipment, technology, and training that the FIRE Act grants help to provide are key to protecting West Virginia's firefighters, our homes, and our families.

Remembering the Fabric of America

So often today, in the rush of our daily lives, we lose sight of what makes America unique. We get caught up in day-to-day pressures and fail to reflect on those freedoms which serve as the foundation for our Republic.

For instance, many people know the top movie at the box office or the winner of the World Series, yet far fewer know the names of the Founding Fathers or which freedoms are spelled out in the Constitution. Young people, in particular, are growing up without a real understanding and appreciation for the people and events which make up the fabric of our country.

According to a recent Harris survey, nearly two out of three Americans do not know all of the words to the Star-Spangled Banner, our country's national anthem. Even fewer know that the song's initial verses were written by the lawyer and poet Francis Scott Key in 1814 after seeing the American flag still flying after United States forces withstood the British attack on Fort McHenry in Baltimore, Maryland.

Most young people learn the words of the national anthem and other patriotic songs in school music classes. Unfortunately, music courses too often are cut when schools

face tighter budgets. That's why a new initiative -- the National Anthem Project -- is so important. Through this initiative, the National Association of Music Education hopes to re-teach Americans the words to the Star-Spangled Banner.

The project's musical ambassadors, The Oak Ridge Boys, visited me recently to talk about this effort. We discussed the importance of teaching young people about the country's historical roots from the story of Nathan Hale to the precious liberties bestowed by the Constitution. The musicians and I agree that if America's youth are to be prepared to lead in the future, they first must develop a deeper understanding of the nation's past.

I hope that more people will take the time to read and to learn about our nation's past. Without a knowledge of the sacrifices that our forebearers made where we came from and how this great country began, we cannot fully understand the value of the freedoms that we enjoy today.

Our young people need to know that the Star-Spangled Banner is not just a warm up act to a football game. Rather, it is a celebration of our history here in the "land of the free and the home of the brave."

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Defending Free Speech in the Senate

Debate in the Senate soon will turn to the "nuclear option." This is no terrorist plot or military action aimed at a foreign country. The nuclear option is a weapon aimed at the heart of the United States Senate, namely, the right to free speech.

The nuclear option is a procedural maneuver that threatens to eliminate the right to unlimited debate in the Senate, the world's premier deliberative body. The Senate has confirmed a record number of President Bush's judicial nominees -- 204 men and women. Seven nominees did not win Senate approval. Yet, these same seven have been renominated by the President and, to force a vote on them, some Senators plan to eliminate the filibuster of judicial appointments for all time in the Senate.

Ending the filibuster would eliminate the last line of liberty. Free and open debate in the Senate ensures that citizens have a say in their government. The American people are heard, through their Senators, before their money is spent, before their civil liberties are curtailed, or before a judicial nominee is confirmed for a lifetime appointment. Eliminating the filibuster would silence the people's voices.

It would start by shut-

ting off debate about judges, but likely would not end there. The nuclear option could stop a Senator from speaking on issues important to gun owners, to farmers, to senior citizens, or to working families. Once the nuclear option is launched, there is no stopping it.

This is not a matter of partisan politics. I would oppose the nuclear option just as strongly if it were proposed by a Democratic president. Why? Because the nuclear option targets the very freedom to speak out in the protection of the people's liberties. The Constitution's Framers intended the Senate to be the last line of defense against tyranny. They meant for Senators to speak out against any would-be dictator or power grab by an overreaching Executive Branch. This requires that Senators have the right to speak, perhaps without limit, and draw attention to new or differing viewpoints.

Yes, Americans believe in majority rule, but we also believe in minority rights. We recognize that the majority is not always correct. This is a nation built by God-fearing people who want to preserve liberty. Whether one agrees or disagrees, the people's liberties can be truly secure only in a Senate where all views can be freely voiced and heard.

A Man of Faith

When Pope John Paul II died, the world lost an inspiring figure. The loss is one felt not only by people of the Catholic faith, but also by people of all religions. For 26 years, Pope John Paul II was shepherd of the Catholic Church's flock. For 26 years, he served the world as a voice for freedom and a champion of the poor.

Too often, religion is used to divide. Christians are pitted against Jews. Jews are shown opposing Muslims. Muslims are portrayed as hating Christians. Sometimes it is a division within broad faiths -- Catholics versus Baptists; fundamentalists versus moderates. Such divisions are perpetrated by stereotypes and by news media that thrive on conflict. But a significant contributor to the mistrust is a refusal by people of one faith to make an effort to understand and respect the faith of others.

Pope John Paul II bridged those divisions and focused on those beliefs that unite us. He sought to bind wounds that have scarred religious believers for centuries.

In 1986, the Pope prayed at a synagogue -- the first Catholic leader to do so. He embraced those of the Jewish faith as "our elder brothers" and bluntly condemned all forms of anti-Semitism.

In 2001, he again marked a first for the leader of the Catholic Church, praying at one of Islam's most celebrated mosques and also the site of the tomb of John the Baptist. There, the Pope urged Muslims and Christians to "turn to one another with feelings of brotherhood and friendship, so that the Almighty may bless us with the peace which heaven alone can give." It is a message so vital today.

In a world focused more on what divides us, the Pope taught us to reach for what unites us. There are common bonds among people from around the globe. That is a universal truth, whether one is Christian or Jewish or Muslim or any other faith. God has given us the tools as well as the opportunity to move to a better day. But it is up to us, God's servants, to move the world closer to Heaven.

Matthew in his Gospel writes, "If ye have faith as a grain of mustard seed, ye shall say unto this mountain, Remove hence to yonder place; and it shall remove; and nothing shall be impossible unto you." Pope John Paul II helped to move mountains of poverty, of injustice, and of ignorance in all corners of the world. May his soul rest in peace.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Saving Lives with Science

I never cease to be amazed by the medical advancements which have occurred during my lifetime. Each day, doctors and researchers make critical discoveries and develop new technologies that help people to enjoy longer and healthier lives. West Virginia University's Byrd Health Sciences Center is at the medical forefront, utilizing cutting-edge technology to provide top-notch patient care.

WVU's Mary Babb Randolph Cancer Center is home to an updated Positron Emission Tomography (PET)/computed tomography (CT) scanner which will allow physicians to make more accurate medical diagnoses and better determine the proper course of treatment. The non-invasive PET/CT scan provides a precise, three-dimensional picture of human organs in action. In this case, a picture is truly worth a thousand words, helping doctors to evaluate more fully a patient's condition and prognosis.

While the PET/CT scanner's imaging technology can be used to diagnose a variety of medical conditions, it is particularly useful for cancer patients. It can more accurately determine whether a tumor is malignant or benign, and reveal a spread of the primary cancer to other parts of the body. The procedure is

also a critical weapon in the battle against heart disease and neurological disorders. The health of thousands of West Virginians will benefit from WVU's newest health care service.

PET research and treatment at WVU began in the early 1990s when I secured \$10 million in federal funding to build and equip the Cancer Center for this lifesaving technology. At that time, PET was an experimental imaging technology, but, thanks to research efforts at WVU and elsewhere, it has become an important tool in contemporary medicine.

I have secured additional funding in recent years to create a center for PET education as part of the new health sciences library under construction at WVU. The facility will serve as a national clearinghouse for information on PET technology and will help more health care facilities across the country to learn about and provide this critical service.

For too long, West Virginians have had to travel far and wide for their medical services. Fortunately, times are changing. WVU medical professionals are leading the way to better treatments close to home for diseases that impact so many of our loved ones. By using the science of the future, we are saving lives today!

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Power of Poetry

The poet T.S. Eliot considered April the "cruellest month." To me, April is one of our grandest months. April is the month when the Earth springs back to life as green buds reappear on stark gray branches, pink, purple, and yellow blossoms reemerge from the soil, and lawns are blanketed in a soft verdant cover. April marks the return of Daylight Savings Time, and the return of our national past time, baseball. And, April is National Poetry Month, a national celebration of poetry.

The Academy of American Poets was founded in 1934 to support poets and to foster the appreciation of poetry. The Academy helps in the formation of poetry book clubs, distributes posters featuring American poets to teachers, librarians, and booksellers across the country, and sponsors events to celebrate the place of poetry in America. In 1996, the Academy inaugurated National Poetry Month, an entire month devoted "to promoting, publicizing, and celebrating poetry."

National Poetry Month is intended to encourage more people to pay greater attention to poetry, and to bring together publishers, booksellers, literary organizations, libraries, schools, and poets nationwide to celebrate the power of language. The Academy, throughout the month of April, highlights the legacy

and achievements of American poets and attempts to introduce more Americans to the pleasures of reading poetry.

This year, the Academy provided a list of 30 ways, one for each day of the month, in which to celebrate poetry. Its suggestions include spending the day reading a book of poetry, memorizing a poem, reading a poem to family or friends, and signing up for a poetry class or workshop. All of these suggestions are wonderful ideas.

I have long loved poetry -- the rhyming words, the rhythm of the stanzas, and the soulful imagery that good poetry imparts to the heart and mind. Poetry expresses humanity, and, through meter, makes music of the spoken word as it rhythmically sways and floats through our imaginations. Poetry, simply put, is beauty defined.

This year marks the 10th anniversary of the celebration of National Poetry Month, I hope that more people will recognize the efforts of the Academy of American Poets and, more importantly, take the time to read a poem or two.

In her poem, "Spring," Edna St. Vincent Millay asked, "To what purpose, April, do you return again?" Now, thanks to the Academy of American Poets, we can answer, to showcase the power of poetry in our society.

By U.S. Senator Robert C. Byrd

Securing America's Borders

It is hard to believe that more than three and a half years have passed since September 11, 2001. An attack which most people could barely fathom anywhere happened here, on American soil. Life goes on, as it must; yet, many of us continue to ask ourselves, could it happen again?

Great strides have been made in the effort to better secure our homeland but much work remains. Perhaps there is no greater vulnerability in our national defense than the security of the country's borders.

Congress has passed bill after bill pledging funding for more border patrol agents and immigration investigators. But promises do not make our borders secure. To date, many of these promises remain unfulfilled, and America's borders remain full of gaping holes. High-ranking Customs Department officers, Bush Administration officials, and the President himself have spoken about the continuing threat from al Qaeda and the need for more border patrol agents. Yet, the White House included virtually no funds in the recent budget to hire and train new border officers and immigration investigators.

It is time to face the music about this very real threat to the security of the nation's borders. That is why I have written legislation that would provide \$390 million to hire 650 new border patrol agents,

250 new immigration investigators, and 168 new immigration enforcement agents and deportation officers. My proposal also provides funds to train the new personnel and pays for 2,000 additional beds for detained illegal aliens. I am proud to report that the Senate recently approved my plan, moving it another step closer to becoming law.

Americans are concerned about the security gaps along our borders. That concern has reached such a fever pitch in some locations that private citizens are banding together to form watch groups along the borders and report suspicious border crossings to the Border Patrol. This is a clear expression of the frustration felt by citizens along border areas and throughout the country that the federal government is failing to address this critical national security threat.

The job of the country's border patrol officers is staggering and their resources meager -- a dangerous combination indeed. Remember that 15 of the 19 September 11th hijackers slipped into our country because of an overburdened, underfunded border security system. My legislation will strengthen our borders and help to curb the alarming rise in illegal immigration. We cannot eliminate all threats to America's security, but we can take steps now to address known weaknesses in our border defenses.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Unplug Government Propaganda

In each year since 1951, Congress has passed a law prohibiting the use of federal funds for government propaganda purposes in the United States. Yet, despite the law, we have read report after report outlining efforts to skirt -- if not flat violate -- that prohibition.

On more than one occasion, the government has provided tax dollars to well-known talk show hosts to promote its agenda. One was paid a hefty fee to promote the No Child Left Behind Act. Another talk show host was paid to promote the Administration's welfare and family policies.

In an effort to blur the line even more between independent media and government propaganda, some federal agencies have produced prepackaged stories designed to look like real news produced by free market news outlets. People see these "reporters" on the television, but they do not know that the "reporters" were actually public relations professionals working under a false name for the government.

According to the Government Accountability Office, these actions violate the 1951 law. That is why I wrote legislation to prevent any government agency

from using taxpayer dollars to produce or distribute prepackaged stories which do not clearly identify that the so-called news was created by a federal agency or funded with taxpayer dollars. My legislation was approved by the Senate by a 98-to-zero vote, and soon will be on the President's desk to be signed into law.

I have no argument with the government's explaining its ideas and positions to the American people. Educating the public about issues affecting their lives is essential. But no Administration should engage in a blatant manipulation of the news media. Keep the job of government focused on the people.

We trust the free press to provide us with independent sources of information. We do not need phony news stories produced by the Administration at the taxpayers' expense. The government must not engage in propaganda paid for by the American taxpayer and targeted toward the American people. Government manipulation of the free press has no place in our Republic. In a free society, the people must know that reporters are presenting facts honestly, fairly, and without deception.

WV Guard ChalleNGes Young People

It is well known the contribution the National Guard makes to the excellence of the United States Armed Forces and the safety of communities across the country. The brave members of the National Guard serve on the frontlines of military operations around the world, and they always answer the call when emergencies and natural disasters strike at home. What is less known is the positive role the National Guard plays in the lives of America's at-risk youth.

I began the National Guard Youth Challenge Program in 1993 to help young men and women who have dropped out or been expelled from high school. The voluntary, 17-month program helps these students to earn their GED, enroll in college, or start a civilian or military career. Through the program's unique training and instruction, the students gain self-respect, tools for good citizenship, and other important life-coping skills.

The Youth Challenge Program currently operates in 24 states including the Mountaineer Challenge Academy at Camp Dawson, one of the program's original sites. Mountaineer Challenge has graduated 1,226 cadets, the vast majority of whom have joined the military, entered the job market, or gone back to school to continue their educations.

The Preston County academy was recently awarded the Challenge Program's "Excellence in Community Service Award" for providing students with opportunities to experience the value of giving back to the community. Mountain Challenge's community service efforts have included conservation projects and work at a local nursing home, library, and animal shelter.

Shortfalls in state budgets across the country have put the Youth Challenge program in jeopardy. That's why I have authored legislation to ensure that Youth Challenge will continue to mentor at-risk young people who want to change the direction of their lives. My legislation increases the federal cost-share of the program over the next three years and increases the program's funding by \$15 million for next year -- the first significant increase in per-student funding in the history of the program.

The Challenge program is extremely important to the youth of West Virginia and the entire nation. It takes at-risk students off the path of trouble and helps them to become responsible adults who will contribute to their communities. I hope current and future Challenge students will continue to thrive in the program and, by doing so, redeem their futures.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Standing by the WV Guard

For many years, the men and the women of the West Virginia National Guard have made us proud. They have flown across the globe to support America's Armed Forces. They've served bravely in Iraq and Afghanistan, in Bosnia and Kosovo, and in Panama. They have saved lives at home, too, battling floods and blizzards and storms in Clendenin, Philippi, Parkersburg, Petersburg, Wheeling, and so many more communities.

Now, the Department of Defense has recommended that the Charleston-based 130th Airlift Wing, with its more than 1,000 jobs, be stripped of its fleet of C-130 aircraft. Where there are no planes, there is no mission. Take away the planes, and you end the life of the 130th Airlift Wing. That's no thanks for a job well done.

Secretary of Defense Rumsfeld included the 130th Airlift Wing on a closure list that he submitted to the Base Realignment and Closure (BRAC) Commission. The commission can vote to remove from or add any base to the list and then forward a final list to President Bush for him to accept or reject.

Protecting the 130th and getting it off of the closure and realignment list will be a tough job. But the National Guard has

never run from a challenge, and neither will we. The West Virginia Congressional Delegation is united in the effort to protect the West Virginia National Guard. I personally spoke with the President and carried the concerns of the West Virginia Delegation to him at the White House, in hopes that the Administration would keep the 130th off the closure list completely. Our appeals fell on deaf ears. But our efforts are not over. We will continue to work with state and community leaders to protect the 130th and its mission. The fight has just begun.

Secretary Rumsfeld's plan to eliminate the West Virginia National Guard's 130th Airlift Wing's entire fleet of aircraft is a slap at these men and women who play such a vital role in National Security. They deserve better. The Guard lives its motto, "Always Ready, Always There," yet the Pentagon said thanks, but no thanks.

The men and women of the 130th are husbands and wives, moms and dads, sons and daughters, brothers and sisters. They are our neighbors and friends. The face of the 130th is the face of West Virginia. We must rise up together and stand by our National Guard as they have stood by us.

Clean Water in Our Homes

Modern technology can speed information across the world in a fraction of a second. People travel from one continent to another in a matter of hours. The advancements will only continue to amaze.

Unfortunately, there are still people in our country whose community infrastructure has barely entered the 20th century, let alone the 21st. One major problem is unsafe drinking water. Millions of Americans have drinking water which is filled with dangerous bacteria. It is an absolute travesty that some people in this country still turn on their kitchen faucets and get brown, cloudy liquid instead of pure, safe drinking water.

In fact, according to studies from the U.S. Department of Agriculture and the U.S. Environmental Protection Agency (EPA), more than 16 million Americans lack access to safe drinking water. In today's America, safe drinking water should be a reliable staple of everyday life.

That is why I have worked in the Senate to boost the federal investment in constructing water and sewer systems.

A project in Randolph County is the latest example. In 1997, community leaders put forward their plan for the Upper Tygart River Watershed Project to bring water service to thousands of area residents.

They had a good plan, but did not have the funding. That's why I went to work to get the funding through the federal appropriations process.

Using my position as the top Democratic Senator on the Appropriations Committee, I added more than \$21 million to appropriations bills to make this project a reality, including the final \$4 million in legislation just recently signed into law. Because of my partnership with local leaders, the Upper Tygart River Watershed Project soon will provide clean and safe drinking water to 16,000 people in Southern Randolph County.

While this is an important milestone, there remains much work ahead. The terrible truth is that, in our state and all across the country, the health of millions of men, women, and children is vulnerable because of their reliance on a contaminated water supply.

Hundreds of billions of dollars are needed to bring clean, safe drinking water to all Americans. The needs continue to grow and more and more of our people are at risk because the federal government refuses to face the problem. Clean water should not be some fancy luxury only afforded to those living in wealthy communities; clean water is basic to the health and prosperity of all citizens.

By U.S. Senator Robert C. Byrd

A Hands-On Approach to Home Safety

Home dangers are often easy to miss, but for West Virginians, it is a problem that is too serious to ignore. In fact, in its "State of Home Safety in America" report, the Home Safety Council found that West Virginia reported the third highest fatality rates from falls in the home, and was ranked the fifth highest state for home-injury related fatalities overall. On a national scale, the same study showed home-related injuries result in nearly 21 million medical visits and 20,000 deaths each year with the three leading causes being falls, fires and burns, and poisonings.

Keeping loved ones safe at home requires a daily commitment and, together with the Home Safety Council, I encourage West Virginians to take action to create a safe home environment. As June is Home Safety Month, here are some easy ways to make our homes safer places in which to live throughout the year.

Install smoke alarms on every level of the home and test them monthly. Also, create a fire escape plan that shows two exits out of every room, where possible, and identifies a place where

families should meet outside the home.

All stairs and steps need handrails along both sides, secured along the full length of the stairway. Keep stairs and pathways clear of clutter. In homes with babies and toddlers, use baby gates at the top and bottom of stairs.

Install lighting at the top and bottom of stairs.

Display emergency numbers such as 911 and the National Poison Control Hotline number (1-800-222-1222) next to every phone in the home.

Install child locks on all cabinets used to store dangerous items.

Keep the water heater setting at 120 degrees Fahrenheit or less.

These are just a few recommendations. But there are many more steps that can be taken to make one's home safer. For more information and tools, visit the Home Safety Council (www.homesafetycouncil.org) or my Web site (<http://byrd.senate.gov>) and click on the Home Safety Council logo. By taking simple steps, West Virginians can help to reduce the number of home-related injuries in our state and keep our families safe.

Celebrate West Virginia Day

June 20 is a special day for Mountaineers everywhere, as we commemorate the day when President Abraham Lincoln signed the bill which carved our state from the Commonwealth of Virginia. It is a day of great pride for our state and our people.

For me, West Virginia is more than a state of the Union; it is a state of mind. "Mountaineers are always free" is more than a state motto; it is a spirit that runs through young and old alike.

I have seen that spirit first hand. Growing up in the coalfields of Southern West Virginia, I watched as neighbor supported neighbor after a slate fall at the mine. I have stood with miners and steelworkers and so many others as they fought to put food on the table, to pay the doctors' bills, and to give their families good lives. I have helped as entrepreneurs take what once was just a vague idea and turn it into a new business and new opportunity. I have congratulated our young people as they receive their diplomas and embark on new adventures in their lives. I have marveled at the "joyful noise"

made unto the Lord in our churches, as religious voices rise up together.

Through all the years, in the face of so many challenges, at times of great success and in moments of deep anguish, we can all hold fast to our faith and to the spirit of West Virginia. In West Virginia, we work hard to leave our state and our country in better shape than when we found it. It may seem like a cliché to people who are new to our state, but, in West Virginia, that's just the way things are.

On this 142nd anniversary of West Virginia's statehood, it is a time to give thanks to the Creator for the beauty around us -- our majestic mountains and forests, our beautiful rivers, and our breathtaking landscape. It is also a time to rededicate ourselves to our state. Each West Virginian has a stake in the future. West Virginians, working together, can help to lift our state to a brighter day. With that strength, the days ahead will be filled, not just with the promise of hope but also with the satisfaction of success.

Happy birthday, West Virginia! And many happy returns, now and always.

Making the Case for the National Guard

West Virginia is fortunate to have one of the best National Guard organizations in the United States. The men and women of the Guard understand the importance of their mission to our state's safety and to America's security, and West Virginians are rightly proud of them.

Despite their outstanding record of service, the Secretary of Defense has proposed cutting the heart out of our National Guard by stripping all of the aircraft from the Charleston-based 130th Airlift Wing. The 130th is the support backbone for the rest of the state's Guard units; the Secretary's plan, if approved, would ripple throughout all of the West Virginia National Guard.

Recently, I accompanied a team of analysts visiting the airbase along with several members of the West Virginia Congressional Delegation, Governor Joe Manchin, Charleston Mayor Danny Jones, and other area leaders. These analysts work for the Base Realignment and Closure (BRAC) Commission, the commission charged by Congress with reviewing the Secretary's recommendations and deciding whether his proposals should go

forward.

Secretary Rumsfeld claims that the 130th can only park and operate eight C-130 aircraft at the Charleston base. In fact, the base can handle 12 aircraft right now and, with a few enhancements, could easily accommodate 16 aircraft -- the number described by the Air Force as the best size for a C-130 unit.

Making the case to the analysts is an important step. But it is just one step. I've asked BRAC Commission Chairman Anthony Principi to visit Charleston. He will travel to the West Virginia National Guard base in the coming days. At the end of the month, West Virginia will make its case to the BRAC Commission at a hearing in North Carolina. General Tackett, the Governor, and the West Virginia Congressional Delegation will stand together for the 130th Airlift Wing. They are doing a great job for all of us. We will do our best to pull together for all of them.

This is an uphill fight. The cards are stacked against us. But the men and women of the West Virginia National Guard have always stood by us, and we must continue to stand by them.

June 15, 2005

Senator Byrd and Governor Manchin are pictured with members of the West Virginia Air National Guard. Byrd is pushing to protect the backbone of the West Virginia Guard -- the 130th Airlift Wing based in Charleston. Defense Secretary Donald Rumsfeld wants to strip all of the aircraft from that highly decorated unit.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Easing Gas Price Pain

Gas prices are once again on the rise. The price of the oil that the United States imports from OPEC nations and other parts of the world hit \$60 per barrel this week, a record high.

West Virginians know that gas prices are significantly higher today than in years past, and that relief has been slow in coming. The American Automobile Association -- better known as Triple A or "AAA" -- reports that drivers are paying prices 25 to 30 cents per gallon higher than last summer. That kind of increase is putting a real pinch on drivers, especially those in rural areas where there is limited access to the kind of mass transportation you might find in big cities.

People in West Virginia are reminded every day, as they drive to work and take their children to school, of the outrageous cost of gasoline. Rural families, in particular, are hit hard by spiking gas prices, and they often have little extra money to absorb the increase, forcing painful cuts in their family budgets. These families are forced to stretch their paychecks a little further each week, and have been left to wait and hope that gas prices will go down

sooner rather than later.

That's why I am pleased to report that the Senate has overwhelmingly approved my legislation that will begin to provide West Virginians with relief from high gas prices. My amendment, which is now part of a larger Senate energy bill, would create a tax benefit for rural drivers in West Virginia. It is a step toward what I hope will be more significant help for working families.

My amendment would allow employers in West Virginia to offer their eligible employees a monthly \$50 tax benefit to help offset costly gasoline purchases. This initial tax benefit, if it is approved by the House of Representatives, would be available through January 1, 2007.

High gas prices are frustrating drivers, and hampering the local economies of West Virginia. I recognize that, and the Senate's adoption of my amendment demonstrates that the Congress is beginning to respond to the fact that rural states like West Virginia are being hit hard by high gas prices. I hope that this amendment is a first step in relieving the pain that West Virginians are paying at the gas pump.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Cornerstone of Quality Television

Too often today, television programming is geared toward sex and violence. Adult situations, crude language, and extreme violence pervade the airways. Parents look for ways to protect their children from these corrupting influences. These are not shows designed to educate or inform. They certainly aren't shows that help to inspire young people.

One of the few television networks that does not rely on sex and violence to drive its programming is the Public Broadcasting System -- PBS. Probably best known for its children's educational shows and characters like Big Bird and Mr. Rogers, PBS programming encourages healthy attitudes. PBS helps to open the imaginations of our children with wholesome, creative programs. It teaches our young people the importance of truthfulness, respect for others, and kindness for one's neighbor.

But PBS is more than "Sesame Street." It delivers news and information from around the world. West Virginia Public Broadcasting provides our state's residents with quality coverage of news from the Northern Panhandle to the Southern Coalfields, from the banks of the Ohio River to the banks of the Potomac. It teaches history and explores the world's wonders.

Yet, despite its many contributions to West Virginia and the country, an

effort led by the Leadership in the House of Representatives would start to dismantle public broadcasting. What makes public broadcasting 'public' is the fact that we the people contribute to its operations. Public broadcasting is publicly funded with tax dollars and private contributions. The Congress typically budgets for public broadcasting two years in advance. But this year, the House Leadership has proposed to slash \$100 million from public broadcasting for next year, and completely eliminate the funding the following year. If approved, West Virginia Public Broadcasting would face a cut of more than 46 percent in its overall funding. That kind of cut would be disastrous. The "vast wasteland" of TV programming would be left to continue its diet of sizzle and junk food for the mind.

West Virginia needs more public broadcasting, not less. Families need more programs that help to teach children to read, to listen to their parents, to be a part of their communities, and to live a good life.

I will fight on behalf of West Virginia parents to keep PBS going. We cannot afford to have this valuable public resource disappear. The cost to the Treasury to help support PBS is relatively small, but the benefit to our children and our values is enormous.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Taking Wing with the West Virginia Guard

Secretary of Defense Donald Rumsfeld a few weeks ago released his plan to strip the C-130 aircraft from the Charleston-based West Virginia National Guard 130th Airlift Wing. The Secretary's plan simply does not make sense -- not from a military perspective, not from a homeland security perspective, and certainly not from a West Virginia perspective.

Specifically, Secretary Rumsfeld would end almost all operations at our airbase, stripping the eight C-130 aircraft from Charleston. The independent, nonpartisan Base Realignment and Closure (BRAC) Commission is examining the details of the Secretary's plan, and has the power to stop it from taking effect.

This past week, the West Virginia Congressional Delegation, Governor Joe Manchin, Adjutant General Allen Tackett, and members and supporters of the West Virginia National Guard traveled to Charlotte, North Carolina, to make the case to the BRAC Commission for keeping our airbase open.

During the hearing before the BRAC Commission members, we praised the outstanding record of service that the 130th Airlift Wing has established. This unit has served with honor in Iraq and Afghanistan, in Rwanda, and in Kosovo. It has been at the tip of the spear in some of the most dangerous military missions in recent times and has al-

ways responded with skill and courage.

At the same time, the 130th Airlift Wing is the backbone of homeland security efforts not only in our state but also in 10 other states plus the nation's Capital. The 130th will speed specialized response teams to the scene in the event of a terrorist attack with a biological, chemical, or nuclear weapon. Without the 130th's pilots, crews, and planes at the ready, these highly trained homeland security teams would be left waiting on the runway for a ride to arrive.

In addition, the West Virginia National Guard always remembers its mission here at home. The 130th, like all of our Guard units, has responded to floods, blizzards, and hurricanes throughout our state. When Mother Nature sends us her worst, the West Virginia National Guard is on the job, saving lives and protecting property.

The BRAC Commission is weighing these facts and many others which were not included in Secretary Rumsfeld's closure plan. The commissioners have a tough job. But West Virginia has given them good reasons to keep the 130th flying.

It will not be easy to change the Pentagon plan. However, we won't give up the fight. I've said it before, but it bears repeating: Our National Guard has always stood with us; now we will stand with them.

Protecting the Pension Safety Net

Pensions are as much a part of workers' earnings as a weekly paycheck. Employees earn the safety net that pensions provide, and they depend on those dollars when retirement comes around. But, too many people are seeing their pensions dissolve into thin air when companies hit hard times.

At a recent Senate Budget Committee hearing, I questioned the head of the Pension Benefit Guaranty Corporation -- the federal pension insurer -- about companies that abusively use the bankruptcy code to avoid meeting their pension obligations. Businesses, rightly or wrongly, file for bankruptcy, and workers, through no fault of their own, find themselves stranded -- too young to collect Social Security and Medicare and too old to find a new job. As a result, too many workers are cheated of their hard-earned pension and health benefits.

It pains me to hear from workers who do not know how they will provide for their families, let alone themselves, when their companies terminate their pension plans. Coal miners, steel and aluminum workers, airline personnel, and countless others have been forced to live through this nightmare.

I have worked throughout my career to protect worker pensions. I supported the Employee Retirement

Income Security Act of 1974, which created the Pension Benefit Guaranty Corporation, insuring workers' pensions, as well as numerous requirements to protect workers' retirement savings. It is also why I have been such a staunch defender of Social Security, and why I will oppose any changes that would undermine that safety net. As I listen to West Virginians, I am convinced that more needs to be done to protect their pension benefits.

President Bush has proposed new rules to help ensure that voluntary, employer-provided pensions are funded when workers retire. That's a laudable goal, but we must also be sure that companies are not forced into doing away with their pension plans altogether. Congress should take a closer look at corporate bankruptcy laws and work to make sure that unscrupulous executives cannot secure a golden parachute while their employees are left to fend for themselves.

Pensions are the reward for a lifetime of hard work. American workers are holding up their end of the bargain, but too many employers are not. Workers' financial security ought not be jeopardized by corporate bankruptcies. That is the challenge which the Congress faces when considering pension reforms this year.

Living Up to the Constitution

Article II, section 2, of the Constitution states that a president "shall nominate, and by and with the Advice and Consent of the Senate, shall appoint . . . Judges of the supreme Court" and other federal courts.

The intent of these words recently has been the subject of serious debate. Many Senators believe that President Bush has a Constitutional obligation to seek the Senate's advice before selecting judicial nominees, while others apparently feel that the Senate's only role is to vote up or down on the President's choices.

Tensions grew and the Senate was on the brink of meltdown. A parliamentary maneuver was threatened by the Senate Republican Leadership -- a maneuver which would have ended filibusters of judicial nominees while also crippling a minority's freedom of speech and right to dissent. It was then that 14 Senators, including myself, reached a bipartisan agreement to allow confirmation votes on certain judicial nominees and to filibuster future nominees only in "extraordinary circumstances."

As part of the agreement, Republican Senator John Warner and I wrote a provision urging the President to seek the Senate's "Advice" on future nominations. By consulting Senators at the "take off," a president's judicial nominee is more likely to have a smoother journey toward confirmation.

When Justice Sandra Day O'Connor announced plans to retire from the Supreme Court, she launched events that have reinforced the Constitutional principle of "Advice and Consent."

The results are encouraging. Before selecting a nominee to fill the O'Connor vacancy, President Bush called me and some other Senators in both parties.

I shared with President Bush the qualities that I believe are essential in a Supreme Court Justice. I am delighted that President Bush heard the voices of our bipartisan group of 14 Senators. I commend him for his efforts to consult Senators and thus elicit their advice.

The bottom line is that our citizens need to have confidence in their federal courts. They need to know that nominees for the Supreme Court are selected on the basis of merit, not partisan politics.

Avoiding needless rancor and petty politics is a worthy goal when it comes to selecting candidates for lifetime service on the nation's federal courts.

I look forward to meeting the President's nominee, Judge John G. Roberts, learning more about him, and listening to his testimony before the Senate Judiciary Committee. The confirmation of a Supreme Court Justice is a major decision which will affect an entire generation of Americans. We need to select our "best and brightest" for service on the Supreme Court.

By U.S. Senator Robert C. Byrd

Keeping Amtrak on Track

As sure as the train whistle blows when entering the station, it's also like clockwork that the White House puts Amtrak on the funding chopping block. Every year the Administration threatens to send the national passenger rail service into bankruptcy, and every year I fight to keep it afloat. In President Bush's most recent budget, he proposed the nearly complete elimination of Amtrak's funding. I joined other Amtrak advocates in the Senate -- Democrats and Republicans -- to reject the debilitating cut. We even found a way to boost Amtrak's funding.

Earlier this year, U.S. Department of Transportation officials testified before Congress that Amtrak needed at least \$1.4 billion to maintain current routes and services. Yet, the President requested that the Amtrak budget be zeroed out except for a small amount for commuter train service between Washington, D.C., and New York City.

As the top Democrat on the Senate Appropriations Committee, I engineered a bipartisan effort to direct \$1.4 billion to Amtrak and reject the White House's plan to cripple the railroad. The funding not only restores the proposed cut but also adds \$200 million above Amtrak's operating subsidy last year. The victory will help to ensure that Amtrak has enough funding

to keep on track for the next year.

Amtrak is a critical transportation link for people in all corners of the country. Millions of people ride the rails daily to get to and from work, to visit family and friends many miles away, or to travel on vacation. National passenger rail service should be truly national. It should include big cities and small communities, like those along the "Cardinal" and "Capitol Limited" routes in West Virginia.

The elimination of Amtrak's subsidy is not a recipe for a streamlined railroad. It is not a recipe for a more efficient railroad. It is a recipe for a dead railroad. The Administration's shortsighted plan takes the "national" out of national passenger rail service and turns its back on rural communities where Amtrak is a primary transportation link to the rest of the country. With the high prices of gasoline and increasing competition for foreign oil, we must help Amtrak to improve its service and modernize its trains.

Studies report that passenger rail systems in the United States carry about five times as many passengers each day as airlines. Last year, Amtrak recorded its highest ridership levels in history. The American people depend on the railroad, and the White House should value it, too.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Veterans Medical Care Saved!

For the past several months, I have been warning of a looming shortfall in the funding for veterans medical care. Despite the concerns, the White House and the U.S. Department of Veterans Affairs (VA) acted as though no problem existed. But, recently, the truth caught up with the VA, and the Administration admitted that a massive financial shortfall threatened veterans' medical services.

Without action, our veterans' health care would have been placed at risk. America's veterans have given much for their country. We have a moral obligation to give back to them, and to provide for their health care needs.

Twice this summer, I guided through the Senate legislation containing \$1.5 billion to fill the growing deficit in VA health care funding. Each time, the Senate gave unanimous approval to my proposals. At first, the White House and the Republican Leadership in the House of Representatives said no, wanting to pare back the resources needed by West Virginia's 190,000 veterans and millions more across the country.

After much wrangling, I am proud to report that the \$1.5 billion that I sought for our veterans has passed the Congress and been signed into law.

The challenge now fac-

ing the Bush Administration is to put these dollars to work. Veterans cannot afford having the White House put this funding on a shelf. This money must be invested where it is so desperately needed, namely, in the health and well being of our country's veterans.

I have spent the last several weeks visiting the VA medical centers throughout West Virginia to personally thank our veterans for their service to our country. I want them to know that I will do all that I can to protect their health care. We owe them much.

We have veterans from two World Wars, Korea, Vietnam, the first Gulf War, and so many other battles already waiting in line to see a doctor. Now, we have new veterans coming home each day from the wars in Iraq and Afghanistan, some with grievous injuries. They should not come home to face long lines to see a doctor or, worse, to no doctor at all.

"Support the troops" means taking care of veterans after they come home. Our brave fighting men and women deserve quality health care. They should not be cut off from their doctors and nurses simply because the Bush Administration would rather save a few dollars. We must not fund veterans' health care on the cheap.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Safer Roads, Better Jobs

The United States Congress has given its final approval to legislation that will invest more than \$2 billion in West Virginia's highways, roads, bridges, and specialized transit programs, like the PRT at West Virginia University. This \$2 billion investment during the next five years is a significant step forward.

Throughout our state, many road and highway construction projects have been slower to develop than local residents or I would like. A big part of that problem has been an unreliable and, frankly, insufficient stream of funding. That's why my work on this highway package was so critical.

The just-passed highway bill will invest an average of \$404 million in each of the next five years in projects from the Northern Panhandle to the Southern Coalfields, from the Eastern Panhandle to the banks of the Ohio River. I especially want to thank Senator Jay Rockefeller and Congressman Nick Rahall for their partnership in helping me to move these funds forward.

In 1947, when I began my public service in the West Virginia House of Delegates, there were only four miles of divided, four-lane highway in the entire state.

Four miles! In fact, there were so few miles that they were not recorded on the state roadmap that year.

When I was elected to Congress in 1952, I made it a goal to turn that situation around. Today, more than a half-century later, I am proud to report that West Virginia has made significant progress. Today, there are more than 1,000 miles of divided four-lane highways throughout the state. These miles are in every region of the state, from I-68 in North Central West Virginia to I-77 in our western counties. Corridor Highways crisscross West Virginia. Throughout the state, as miles long-planned are finally paved, jobs and businesses follow close behind.

I am proud of the \$2 billion that I helped to get for West Virginia in this new highway bill. These dollars bring construction jobs. The roads bring new investments and open doors to new businesses and improved services. And, equally as important, these funds help to protect lives and reduce the risk of traffic accidents. I have worked hard to win these dollars, and firmly believe that the funding in this bill will make a real difference in the lives of all West Virginians.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Happy Birthday Social Security

As Americans this month mark the 70th Anniversary of the Social Security Act, many people remain concerned about the future of the program.

West Virginians know, better than most, the absolute necessity of Social Security. It oftentimes is the difference between living with dignity or living in poverty. One in four West Virginians -- more than 400,000 retirees, disabled workers, widows and widowers, spouses and children -- receives a monthly benefit check. The arrival of their benefit check is essential, and for 70 years it's been guaranteed regardless of hard economic times.

It is no exaggeration to suggest that the Social Security checks on which these West Virginians depend could be undermined by efforts to privatize the system. Social Security privatization would subject the livelihood of workers to the volatile movements of the financial markets. Some may do better than others with stock market gains, but many West Virginia families could lose a lifetime of their savings in a single day.

If Social Security is privatized, the arrival of a Social Security check for many families could no longer be guaranteed. When the market falls into a tail-spin, it is the privileged few at the top -- not the ordinary workers -- who would have the golden parachutes.

Social Security has always been a safety net for West Virginians, and not a roulette wheel for financial profit. It is an opportunity to share in a dignified and respectable living, and gambling with that opportunity is as unseemly as gambling with your weekly grocery money. Let us not be lured into trading away our safety net without adequate thought as to who the winners and losers would be under a privatized system.

Social Security is a gift from the World War II Generation to this and every generation. It was forged from their suffering and resiliency during the Great Depression, and the task now falls to us to preserve that gift for our children and grandchildren.

In 1935, when President Franklin D. Roosevelt signed the law creating Social Security, he stated that the program would "give some measure of protection to the average citizen and to his family against the loss of a job and against poverty-ridden old age." That protection is just as necessary today, and we must not allow it to be weakened or taken away.

I will continue to fight in the Senate, as I have always fought, to protect workers, and to retain the integrity, stability, and dependability of their Social Security system. Our future generations deserve no less.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Break the Grip of Foreign Oil

Gas prices are through the roof. Each week, the price at the pump climbs even higher, and there is no end in sight.

I have tried to offer some relief for people who drive back and forth to work in West Virginia and in rural communities across the country. I have pressed the Congress to approve my legislation which would create a new tax benefit for drivers who live in rural states, where public transportation is not readily available.

I'm proud to say that the Senate approved my proposal without opposition. But, behind closed doors, the Republican Leadership in the House and the White House pulled the plug on this attempt to provide a simple remedy to the American people for the ever-rising gas prices.

Make no mistake; these pressures are real. Families are rearranging priorities and cutting back on their household budgets so that they can afford to fill up their gas tanks each week. But the Congress hasn't lifted a finger to help.

For too many months, the Bush Administration has taken a "wait and see" approach when it comes to today's outrageous price of gasoline. Enough is enough. Washington ought to get its

priorities straight. Instead of focusing on what the big special interests want, the Congress ought to do all that it can to help working families.

The higher gas prices underline the fact that the United States is too dependent on foreign oil. Those foreign suppliers and the big oil companies are making record profits while working Americans see their family budgets continue to shrink.

Last month, I backed legislation that would begin to break these chains of foreign oil dependence. The new energy law will begin to make critical investments in West Virginia coal and in other resources that we have here in America -- resources that can power our cars and trucks and factories and homes. But this is just a start. While this new law opens the door to energy independence in the long run, it will take hard work and innovation to finally move away from our over-reliance on foreign oil.

I will continue to fight in the Senate for West Virginia coal and for our working families. I will once again press for my tax benefit for those who drive to work. And I will always work to free our nation from the binds of foreign oil.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Big Win for the West Virginia Guard

Three and a half months ago, the West Virginia National Guard was placed in jeopardy, not by a foreign enemy but by our own Department of Defense. In May, the Pentagon unveiled a plan to cease all flying operations at the West Virginia National Guard's 130th Airlift Wing in Charleston. I said it then, and I'll say it now: The Defense Department's plan was wrong. Closing the 130th made no sense from a national security perspective, a homeland security perspective, or a West Virginia perspective.

When the plan came out, Governor Joe Manchin, the West Virginia Congressional Delegation, and hundreds of West Virginians joined to fight it. The Pentagon proposal needed the approval of the independent Base Realignment and Closure (BRAC) Commission. After talking with Adjutant General Allen Tackett, Charleston Mayor Danny Jones, and Kanawha County Commission President Kent Carper, I immediately contacted BRAC Commission Chairman Anthony Principi, urging him to visit the Charleston base and see for himself just how wrong the Defense Department was.

Chairman Principi agreed to visit, and I accompanied him to the airbase. After his inspection, Chairman Principi agreed that the Defense Department had its facts wrong.

The Defense Depart-

ment claimed that the 130th could only handle eight C-130 aircraft. The facts showed that the base can handle 12 aircraft right now and, with a few enhancements, could easily accommodate 16 aircraft.

The Defense Department also ignored the role that the 130th plays in homeland security. The facts show that the 130th Airlift Wing is the backbone of homeland security efforts not only in our state but also in 10 other states plus the nation's Capital.

These facts and many others convinced Chairman Principi. They also convinced the other eight members of the BRAC Commission. All nine commissioners voted to save the 130th Airlift Wing. The vote signals strong confidence in the future of the West Virginia National Guard.

The 130th has not wasted any time in answering the call to its mission. Within days after Hurricane Katrina struck the Gulf States, the 130th activated to help with relief and recovery efforts. I applaud them for their unceasing commitment to our state and our country.

The BRAC win is a great victory for the more than 1,000 members of the 130th Airlift Wing and for all of the state. I am immensely proud of our West Virginia National Guard. They have always stood by us, and I will always stand by them.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Helping Victims of Hurricane Katrina

Hurricane Katrina dealt the people of America's Gulf States an unspeakable blow. Tens of thousands of homes have been destroyed. Entire cities have been washed away. And, most tragically, thousands of lives have been lost.

West Virginians know all too well the wrath of Mother Nature when flood waters flow. After a severe flood, the feeling of helplessness and hopelessness can be overwhelming. However, Mountaineers also have known the depth of human goodness when friends, neighbors, and caring people from far away lend a helping hand. We have been shown great kindness in our times of need, and we must do what we are able to help those impacted by the hurricane.

According to the Federal Emergency Management Agency (FEMA), the lead coordinator of the relief effort, cash donations are most helpful at this early stage. Money contributions allow relief organizations to meet victims' immediate needs. Volunteer agencies use cash donations to provide a wide variety of post-disaster services including clean-up, childcare, housing repair, crisis counseling, sheltering, and food.

If you can, make a donation for the hurricane victims by calling the American Red Cross hotline at 1-800-

HELP NOW (435-7669). For a longer list of relief organizations that are accepting cash donations, visit my Internet site at <http://byrd.senate.gov>.

Giving money is not the only way to help. Simple prayers can help those people whose lives have been turned upside down by Hurricane Katrina. The power of prayer cannot be underestimated. The hurricane victims, their families, and the relief workers who are coming to their aid need our support and the Creator's strength.

As the people of the Gulf States start the long journey to put their lives back together, I want answers from FEMA as to why it took so long for rescue teams to get on the ground in Louisiana, Mississippi, and Alabama. There is no excuse for the days of delay and the inexplicable lack of coordination in the response effort. People's anger and frustration are justified. The government's actions in the days following the tragedy were slow and misguided at best, and completely inept at worst. The federal response effort is unacceptable, and we must do better in the future.

Hurricane Katrina is a national disaster. It is a national tragedy. And it will take a national effort to help people rebuild their homes, their cities, and their lives.

A Coast Guard Success in West Virginia

West Virginia recently celebrated the 10th anniversary of the establishment of the Coast Guard's National Vessel Documentation Center (NVDC) in Falling Waters in Berkeley County. The Center has thrived during its decade as a Mountain State employer. The facility's success is a testament to the area's advanced telecommunications system, strong workforce, low cost of living, and outstanding quality of life.

After meeting with me in 1994, the Coast Guard announced plans to consolidate its Vessel Documentation Offices into one West Virginia location. Those offices were previously spread out through 14 cities across the country. The Coast Guard determined that consolidating its vessel documentation offices would save taxpayers \$1 million each year -- a prediction that has proved true. Since the establishment of the NVDC in West Virginia in 1995, program costs have been reduced by approximately \$17 million. The consolidation was a good federal investment, which provided substantial savings to the American taxpayer.

The center, which employs more than 100 people, facilitates maritime commerce while protecting economic privileges of United States citizens through the

enforcement of regulations, and provides a register of vessels available in a time of war or emergency to defend and protect the United States.

The NVDC is the second Coast Guard facility to locate in the Eastern Panhandle. In 1991, the Coast Guard used funds that I added to legislation to establish the Operations Systems Center (OSC) near Martinsburg. The OSC has since expanded and today has nearly 420 employees. The establishment of these two Coast Guard functions in the Eastern Panhandle was part of my ongoing effort to encourage the Coast Guard to locate operations in West Virginia.

The Coast Guard's decision to locate both the OSC and the NVDC in West Virginia demonstrates that, once an agency or business puts down roots in West Virginia, the state's many attributes encourage expansion.

The Coast Guard and West Virginia share many similarities. We both have a small but versatile and highly skilled workforce, and we both value our heritage and time-honored traditions. The agency's partnership with the Mountain State has a bright future as we forge ahead with innovative solutions and a "can do" attitude.

Top-Notch Medical Care Close to Home

From one end of the state to the other, West Virginia's medical facilities are fast developing into some of the best in the country. That progress is saving lives. Rural patients have greater access to doctors and nurses. People no longer have to travel long distances for specialized medical care. Technology, training, and cutting-edge facilities are helping doctors and nurses to better treat patients' illnesses. These efforts also are helping West Virginians to live longer, healthier lives.

Progress is plainly evident at the Byrd Health Sciences Center at West Virginia University (WVU) in Morgantown. And soon another critical piece of that campus will be under construction with the release of \$20 million in federal funding that I added to legislation for a new Biomedical Science Center.

Each day, doctors and researchers make amazing progress toward cures and treatments for diseases that have threatened lives for generations. WVU has proved an important resource for people suffering from cancer, Alzheimer's disease, and so many other debilitating and potentially fatal illnesses. The new WVU Biomedical Science Center will cement the university's position at the forefront of the nation's cutting-edge medical institutions. The new facility will be designed and equipped to foster research in areas

of special concern to West Virginians, such as cancer, heart disease, diabetes, stroke, and other serious illnesses.

Already, WVU is home to top-notch cancer and trauma centers. The West Virginia Eye Institute at WVU provides advanced care and treatments for maladies that otherwise would cause blindness. The Blanchette Rockefeller Neurosciences Institute, a priority for Senator Jay Rockefeller and named for his mother, is currently under construction. The Rockefeller Institute is bringing together some of the world's foremost experts in Alzheimer's disease and other brain illnesses.

Each of these facilities is based at West Virginia University. And each is helping to save countless lives. With the new Biomedical Science Center, WVU will be home to one of the most advanced health sciences centers and research institutes in the country.

"Knowledge belongs to humanity, and is the torch which illuminates the world," said Louis Pasteur, the French scientist whose work in microbiology beginning in the mid-19th century continues to serve as the basis for modern medicine today. It is my hope that the Biomedical Science Center will help to expand our knowledge of some of the most debilitating diseases facing mankind and lead to cures that today we can only imagine.

Take A Bite Out Of High-Tech Crime

For 25 years, the National Crime Prevention Council's "McGruff, the Crime Dog" has been teaching families how they can help to combat crime in their communities. McGruff and his signature "Take a Bite Out of Crime" message highlight the average citizen's role in public safety and crime prevention. The well-known dog's efforts are needed now more than ever as new types of crimes are striking innocent victims.

Facing these new challenges, McGruff today is focusing his crime-fighting skills on technology-related crimes. As more individuals use the Internet to communicate with family and friends, to make financial transactions, and to do retail shopping, criminals are finding new ways to exploit people's personal information. Identity theft and on-line fraud are the fastest growing technology crimes and affect millions of Americans each year.

As McGruff so often reminds us, we can take steps to help avoid being victims of these dangerous crimes. To prevent identity fraud, individuals should avoid providing any personal information via e-mail; they should report suspicious e-mails to their Internet service providers and the Federal Trade Commission; and they should install software

on their computers that protects from viruses and unsolicited e-mails.

In addition, be suspicious of electronic notices of prizes or cash awards that require personal information to claim the award. The old maxim is still true today: If the offer seems too good to be true, then it probably is. Lastly, parents should monitor their children's activity on the Internet and install software on the family computer that protects children from on-line sexual predators.

To learn more about how to prevent electronic crimes, call the National Crime Prevention Council at 1-800-627-2911 and request a copy of the free publication *Preventing Identity Theft: A Guide for Consumers* and the free action kit *Crime Prevention in the Information Age*. To read more about the history of McGruff, 25th anniversary activities, and what communities can do to support crime prevention, visit www.ncpc.org.

McGruff and the National Crime Prevention Council are helping to empower communities, in partnership with local law enforcement, to ensure safe and secure neighborhoods in West Virginia and across the country. As McGruff has told us all of these years, by working together, we can all help to "take a bite out of crime."

Constitution Day 2005: A Great Success

On a September afternoon in Philadelphia in 1787, an amazing event took place. Some of the brightest and bravest men of that, or any, generation came together to forge the document that continues to guide our nation today: the Constitution of the United States.

The Constitution's Preamble established our government's purpose in just a few simple words: "We the People of the United States, in Order to form a more perfect Union, establish Justice, insure domestic Tranquility, provide for the common defense, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this Constitution for the United States of America." One paragraph, followed by a few pages, gave this nation direction and structure. We all cherish our liberty, and our liberty is enshrined in the Constitution.

Because it is so fundamental to each American, I have been increasingly concerned about the lack of understanding of the Constitution, especially by young people. Studies have shown that more young people know the names of the three Rice Krispies cereal characters than know the three branches of government. We need to put an end to such ignorance.

That's why, last fall, I wrote legislation creating Constitution Day. Because of this law, students across

the country are asked to spend some time every September 17 -- the date on which the Constitution was signed in 1787 -- learning more about our founding document.

This September, the nation marked the very first Constitution Day. I have been nearly overwhelmed by the excitement and the creativity that teachers and students have shown in celebrating this special day.

In West Virginia, hundreds of students gathered at Wheeling Jesuit University for a special day-long program on the Constitution. The West Virginia Department of Education produced a special television presentation, distributed to more than 200 schools, about the importance of the Constitution to young people and its roots that stretch back for hundreds of years. Some schools recreated the Constitutional Convention, with children portraying George Washington and Ben Franklin. Other schools took a closer look at our freedoms -- such as freedom of speech and freedom of religion and the right to bear arms -- and how each freedom needs to be guarded zealously.

From coast to coast, the inaugural Constitution Day was a great success. I look forward to next year's activities. More importantly, I look eagerly ahead to the day when Americans not only cherish the Constitution but also understand its content and its importance to our lives.

Stop the Scourge: End Domestic Violence

In West Virginia, there were more than 10,400 cases of domestic violence abuse in 2003 -- the most recent year for which statistics are available. That's more than 28 abusive crimes a day, every day of the year. Of those cases, 25 resulted in the victim's death. Domestic violence is a scourge. It is a despicable crime. The challenge ahead is to find a way to break this cycle of violence and abuse that endangers tens of thousands of lives. While this is not an easy challenge to meet, it is certainly a challenge that we must pursue.

That's why I sponsored the Violence Against Women Act of 2005. This legislation, which I am proud to report the Senate has approved, is a bipartisan effort to reauthorize and expand on the successes of the groundbreaking 1994 legislation of the same name. That law instituted a fundamental change in the criminal justice system's response to violent crimes committed against women. But, despite the progress, domestic violence continues to take a terrible toll on families. We cannot stand still.

This renewed legislation will put new resources into the hands of law enforcement, and new hope into the hearts of victims of abuse.

Law enforcement officials need stronger tools to combat domestic violence. That's why the legislation

would increase funding to more than \$400 million each year to law enforcement officials, lawyers, judges, and advocates. The legislation would stiffen existing criminal penalties for repeat federal domestic violence offenders and give federal prosecutors more discretion in charging stalking cases that occur on the Internet.

For victims of abuse, the Violence Against Women Act would strengthen support services. The bill would create a new, dedicated grant program to strengthen the 1,300 rape crisis centers across the country, reinvigorate programs to help older and disabled victims of domestic violence, enhance existing programs for rural victims and victims in underserved areas, and increase funding to \$5 million per year for the National Domestic Violence Hotline.

When we marry, we pledge to love and honor our spouse, and to comfort and care for that person. Beatings, rape, and even murder -- domestic violence makes a mockery of those vows. And while bruises and broken bones heal, the emotional and mental scars of abuse can last for a lifetime. As a society, we must get at the root of this problem. We have a moral obligation to stop domestic violence and to give those who suffer from it a chance for a better future.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Winning the Battle Against Breast Cancer

Each October, the nation marks "Breast Cancer Awareness Month" to focus attention on the disease and spread the message that early detection saves lives. Breast cancer accounts for one in three cancers diagnosed in American women, with 211,240 new invasive cases, including 1,410 in West Virginia, expected in 2005. It is the second leading cause of cancer deaths in U.S. women. Even more compelling than the statistics are the personal stories of struggle and loss, all too familiar to each of us.

One decade ago, breast cancer research was an unacceptably low federal funding priority. That is why I have worked with Senators from both parties to increase America's investment in life-saving breast cancer research. This year alone, the federal government will spend more than \$850 million on breast cancer research to improve detection and treatments so that one day there will be a cure for this deadly disease.

Our investment is paying off. While the number of breast cancer cases remains high, it is declining. The American Cancer Society reports that deaths from breast cancer have dropped steadily during the 1990s -- progress that is attributed to both early detection and better treatments.

Experts state that the most effective way to detect breast cancer is through a combination of clinical breast exams, regular self-

exams, and routine mammograms. Mammograms often can find breast cancer early, when treatments are most successful. Yet, many women who have either no health insurance or poor insurance policies cannot afford the cost of this life-saving test.

Fortunately, free mammograms and other cancer screening are available through the statewide breast and cervical cancer prevention, education, and screening project, launched in 1990 with funds I added to an appropriations bill. This initiative provides critical tests to West Virginians who otherwise might not have the access or the financial means to get them.

In addition, scientists at the Mary Babb Randolph Cancer Center at West Virginia University are treating cancer patients and helping to find a cure. The Cancer Center was established, in part, with \$13.3 million that I added to federal appropriations bills beginning in 1985. The facility provides patients with high quality, comprehensive breast cancer treatments.

By continuing the investment in cancer research and aggressively working to find a cure, I hope that one day we will not need a "Breast Cancer Awareness Month." But until that day arrives, I urge women to learn how to detect the disease at an early stage. Early detection remains the best key to survival.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protecting Nature's Beauty for All to Enjoy

Fall is here. That means high school football games and beautiful colors adorning the trees and the mountains. For many West Virginians, fall also means the start of the deer season for hunters, a tradition that many families pass from one generation to the next. While this is a proud tradition, it would disappear if there were no forests or rivers protected for this experience. No woods, no deer; no rivers, no fish.

That's one of the reasons why I have worked in the Senate to preserve and grow West Virginia's natural beauty.

For example, up until 1989, West Virginia was the only state without a National Wildlife Refuge. Imagine! Our state, so recognized for its scenic beauty, without a protected area for wildlife and unique trees and plants. I went to work to obtain the funding to establish the first refuge in the Mountain State -- the Ohio River Islands National Wildlife Refuge, headquartered in Parkersburg. Most of the refuge's islands are within West Virginia's segment of the river, stretching from the Northern Panhandle in Hancock County to south of Point Pleasant in Mason County. The U.S. Fish and Wildlife Service eventually plans to acquire

additional islands, for a potential total of 35, along a 400-mile stretch of the Ohio River between Pennsylvania and Kentucky.

The Canaan Valley National Wildlife Refuge was the country's 500th refuge. The Tucker County refuge is one of the largest and most diverse freshwater wetland areas in central and southern Appalachia. The incredible diversity of plants and habitats support an equally varied wildlife of more than 290 species of mammals, birds, reptiles, amphibians, and fish.

The Monongahela National Forest; the New River Gorge National River; wilderness areas like Dolly Sods, Otter Creek, Cranberry, Laurel Fork North, and Laurel Fork South -- so many places in West Virginia are unique reminders of the beauty of nature and the handiwork of the Creator.

Protecting and growing these amazing sites guarantees that they will be enjoyed for generations to come. It matters not whether one is a hunter or a photographer, a hiker or a skier; each West Virginian can appreciate the beauty of the lands around us, and each of us can do our part to make sure that these precious resources are preserved for decades to come.

In Thanksgiving

As communities along the Gulf Coast clean up from Hurricanes Katrina and Rita, as Florida reels from yet another hurricane, as casualties in Iraq and Afghanistan soar, and as scandal engulfs the White House, it might seem difficult to find anything to be thankful for on this Thanksgiving.

Many families' prospects for rebuilding the lives they once knew are uncertain, but there is hope. There is also much to celebrate as Americans gather for Thanksgiving. We may be thankful that the loss of life from those hurricanes was not greater. We can celebrate the support that erupted from Americans and from friends around the world. The public response to the Gulf Coast disasters proved that the nation's sense of community remains strong.

In Iraq, we can celebrate the performance of our troops. Whatever the circumstances under which they were sent, the U.S. military has performed their duties with courage and dedication under the most dangerous conditions.

Even the scandal washing over the President's closest advisors may give cause for celebration, and not for partisan reasons. Americans may be thankful

for our system of government with its checks and balances. We may celebrate the wisdom of guaranteeing freedom of expression and a free press. Without those guarantees, Ambassador Wilson could not have told the truth about his mission to Niger.

We can be grateful that the Constitution's checks and balances remain a strong tool for oversight and accountability. That is what keeps this country strong. President Abraham Lincoln said, "Let the people know the truth and the country is safe." Whatever the final outcome of these investigations, the nation is safer and better off for having the means to challenge possible abuses of power.

So, even in these dark days, there are reasons to give thanks. I hope the recent dip in gasoline prices will allow families to gather together and set a table overflowing with home-cooked food. There are few days devoted entirely to family. Thanksgiving is the one time we can really focus on all that we have to be thankful for just by looking around the table.

Erma joins me in wishing a happy Thanksgiving to all West Virginians. May each of you be blessed this Thanksgiving.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Broken Budget for West Virginia

In the coming weeks, the Congress will vote on a new federal budget. This budget jeopardizes many initiatives that are important to our state, while setting the stage for massive cuts in services and a huge hike in our nation's debt in the months ahead.

When President Bush took office, his Administration was handed a balanced budget with record surpluses. The economy was moving full-speed ahead. But now, record surpluses have been replaced by record deficits, and the national debt is growing at an alarming pace. In fact, the budget crafted by the Republican Senate Leadership will cause the national debt to rise to more than \$11.3 trillion in the next five years. But, this irresponsible budget doesn't stop there.

This unfair budget plan increases Medicare Part B premiums while slashing \$24 billion from Medicaid. In West Virginia, 350,000 senior citizens, many on fixed incomes, rely on Medicare to help pay their doctor bills. Medicaid provides health care for 300,000 West Virginians, primarily the poor and uninsured children. These West Virginians are not given a choice about the cuts in services; they are simply told to deal with the

reductions.

The cuts in the proposed budget help to make room for massive tax breaks for multi-millionaires and Washington, D.C., special interests.

Certainly these budgetary tax cut goodies do not help most working West Virginians very much. People with incomes between \$50,000 and \$200,000 would see a tax break of only \$112, while those earning less than \$50,000 would receive a tiny \$6 tax cut.

The median West Virginia household income is \$31,504. Cutting programs vital to the people of our state is an unfair way to pay for tax cuts for millionaires.

As Americans, and as people who believe in a Creator and a moral society, we share a responsibility to protect those who may need help -- to feed the hungry, to care for the sick, to house the homeless. This budget scoffs at those moral principles. Americans are a kind and generous people, and that spirit is alive and well in West Virginia. Just look at the way our state reached out to help the victims of Katrina. Those are the kinds of values our national budget should reflect, and this particular spending plan is way off the mark.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Veterans Day: Recognizing A Debt of Honor

West Virginians have been part of every military effort to protect the nation's interests abroad. Our state's sons and daughters have always been prepared to fight for our country. Each of us owes a great debt to our veterans, and to the men and women in our Armed Forces today who will be veterans tomorrow. We owe our veterans thanks; we owe them honor; and we owe them our support.

Part of that support is in providing the medical care that they were promised when they enlisted in the military. President Abraham Lincoln said that it was the nation's duty "to care for him who shall have borne the battle, and for his widow, and his orphan." Unfortunately, the federal government has been more than stingy when it comes to meeting President Lincoln's standard.

This year alone, the Bush Administration underfunded veterans' medical care by more than \$1 billion. Fearing that veterans would see their medical services cut off or needlessly delayed, I went to work to fill the funding shortfall, and the Congress approved my work. As a result, none of West Virginia's 187,000 veterans saw their medical care disappear because of

the Administration's budget shenanigans.

Now, the challenge is to take care of a shortfall for next year. We know that the veterans' medical care budget is going to run out of funding. The Congress needs to step up and make sure that our veterans receive the care that they were promised.

Our veterans served, and many died, so that this country might be able to fulfill the great hope of our Founding Fathers. Our veterans answered the call of their country and they did not fail it, even in death. And it is proper and it is right that we take one day a year to pay our most profound respect to the men and women who have worn our nation's uniform, to thank them, and to recommit ourselves to their support.

This Veterans Day, I thank our veterans for their service to our country. I hope everyone will join in offering a prayer of thanks to the brave men and women who did not come home from battle, who defended us with their lives. May God bless all West Virginians who have fought and sacrificed for the preservation of our nation's freedom and our nation's interests throughout the world.

By U.S. Senator Robert C. Byrd

Saving Money on Energy

Hurricanes, increasing energy demand, and insufficient energy production are setting the stage for an expensive winter. Many people will struggle to afford the skyrocketing costs of gasoline and home heating during the coming cold months.

The federal government needs to step up to the plate and pass additional measures to achieve energy savings. Congress needs to crack down on price gouging and smartly expand production capacity. The federal government also needs to support new technologies, like coal-to-oil conversion, that can use America's natural resources in a clean, efficient manner.

At the same time, there are steps that individuals can take to save money this winter.

To limit trips to the gas station, slow down and drive the speed limit. Speeding and rapid acceleration can lower gas mileage by 33 percent at highway speeds and five percent around town.

Another way to minimize gas usage is to consolidate errands. Several short trips taken from a cold start can use twice as much fuel as combining all stops covering the same distance when the engine is warm.

Keep vehicles in good working condition, ensuring that the engine is properly tuned and checking and

replacing air filters regularly. Replacing a clogged air filter can improve gas mileage by as much as 10 percent. Also, keeping tires inflated properly improves gas mileage by more than three percent. These tips will help to keep money in drivers' pockets, and out of the pockets of the big oil companies this winter.

People also can save money on home heating costs. On sunny days, open curtains and blinds to let the sunlight in and then close them again at night to protect against cold air. Run washing machines and dryers only with full loads. Set water heater temperatures at 120 degrees, which cuts water heating bills without sacrificing comfort. "Winterizing" one's home can cut costs, as well. Caulking and weatherstripping doors and windows takes little time and can be done with inexpensive, widely available materials. Programmable thermostats, insulation, and storm windows are just a few products that can pay for themselves from savings in home heating bills.

For other energy money saving tips, please visit my Internet site, <http://byrd.senate.gov>. High energy prices don't have to keep West Virginians out of their cars and in the cold this winter. Small steps can make a big difference in families' budgets this winter.

By U.S. Senator Robert C. Byrd

Standing With Our Veterans

Across this great nation, we are proud of our veterans. The battlefields may have been far away -- Iwo Jima, Berlin, the Chosin Reservoir, the Mekong Delta, Kabul, and Fallujah. But our veterans' devotion to their country gave them courage under fire.

President Abraham Lincoln noted in his Second Inaugural Address that, in thanks for their service to our country, America should always "...care for him who shall have borne the battle and for his widow, and his orphan." That is a heavy responsibility and a solemn duty. Unfortunately, President Lincoln's admonishment appears to have been forgotten in some quarters.

A few months ago, the U.S. Department of Veterans Affairs (VA) reported a massive financial shortfall that, if left unaddressed, could threaten the health care that veterans receive each day from the VA. The VA budget was in the red by billions of dollars, and fast Congressional action was needed.

Working with concerned Senators from both political parties, I steered funding through the Congress intended to ensure that VA medical care would continue uninterrupted for 2005. In addition, Congress recently approved more than \$22.5 billion to protect veterans' health care for

2006, including \$1.2 billion in "contingent emergency" funding. That "emergency" designation means that the dollars can be shifted to the VA medical centers in West Virginia and across the country immediately -- but only if President Bush also designates the funds as an emergency. I hope that he will. I have written to the President and urged him to speed these funds to our veterans and ensure that there are no delays in their medical treatments.

At this point, the VA expects the \$1.2 billion to cover any 2006 shortfall, and, in my position on the Senate Appropriations Committee, I will do my best to make sure that veterans' health care is not short-changed.

Each day, new veterans come home from war. These men and women have made us proud. Many of these 21st century veterans have specialized health care needs. The battlefields of today are inflicting wounds unlike those experienced by the soldiers, sailors, airmen, and Marines of past wars.

Treating these injuries requires well-trained doctors and nurses, a dedicated staff, modern equipment, and money. We must be ready to respond. Veterans' health care is a responsibility that we must never shirk.

Saving Lives of Trauma Patients

Accidents and injuries are an unavoidable part of life. The care that individuals receive in the moments following a trauma can be the difference between life and death. The Jon Michael Moore Trauma Center at West Virginia University (WVU) Hospitals has been saving lives for 17 years and recently earned national recognition for its top-notch standard of care.

The Trauma Center is named after my grandson, Jon Michael Moore, who lost his life in 1982 in a fiery truck accident. My family and I experienced all of the emotions that accompany such a tragedy -- anger, depression, loss. But with God's grace and the love and the support of friends and family, we endured.

Today, doctors and nurses at the Jon Michael Moore Trauma Center work each day to help other families cope with trauma and tragedy. My grandson would be humbled to have this facility named in his memory, and his family is hugely proud of the center's incredible record of treating victims of tragedy. This is a tremendous legacy.

The Jon Michael Moore Trauma Center has been dually honored for its stellar patient care. The American College of Surgeons Committee has renewed the hospital's Level One trauma center status, making it one of only 31 Level One cen-

ters in the country for both children and adults trauma. West Virginia's Office of Emergency Medical Systems also has redesignated the facility as a Level One center. This recognition means that WVU's trauma center meets or exceeds all national standards for the care of severely injured persons. It means that it is one of the best of its kind in the entire country.

The Jon Michael Moore Trauma Center treats more than 3,000 patients annually and is one of only a handful of nationally recognized Level One trauma centers serving a mostly rural population. West Virginians should take great pride in this shining star among the state's many excellent health care facilities.

I know that the Jon Michael Moore Trauma Center will continue to excel. Every minute of every hour of every day, this team of highly skilled doctors and nurses and technicians is committed to saving lives. They work under extreme pressure, and they know that their every decision has great consequence. But these men and women have proved themselves to be up to the challenge.

I congratulate the Jon Michael Moore Trauma Center on its national recognition and its service to our state. May the Hands of the Great Physician continue to guide the patients and staff at this remarkable place.

Celebrating the True Christmas Story

Christmas is one of my favorite times of the year, a time of joy and love, of family gatherings and warm memories. Too often today, though, big sales and the shopping frenzy try to take Christ out of Christmas. The meaning of Christmas is overshadowed by the pressures and strains of a commercialized holiday.

At its core, Christmas will always be about a couple who found no shelter but a manger, and also about a newborn child who would become the Savior of the world.

That is why, each year at this time, I reread the Christmas story in the Gospel of Luke. My Christmas wish is that all of us will remember the words and, more importantly, the true meaning of this sacred season.

"All went to be taxed, every one into his own city. And Joseph also went up from Galilee, out of the city of Nazareth, into Judaea, unto the city of David, which is called Bethlehem; (because he was of the house and lineage of David:) to be taxed with Mary his espoused wife, being great with child.

"And so it was, that, while they were there, the days were accomplished that she should be delivered. And she brought

forth her firstborn son, and wrapped him in swaddling clothes, and laid him in a manger; because there was no room for them in the inn.

"And there were in the same country shepherds abiding in the field, keeping watch over their flock by night.

"And, lo, the angel of the Lord came upon them, and the glory of the Lord shone round about them: and they were sore afraid.

"And the angel said unto them, Fear not: for, behold, I bring you good tidings of great joy, which shall be to all people. For unto you is born this day in the city of David a Saviour, which is Christ the Lord. And this shall be a sign unto you; Ye shall find the babe wrapped in swaddling clothes, lying in a manger.

"And suddenly there was with the angel a multitude of the heavenly host praising God, and saying, Glory to God in the highest, and on earth peace, good will toward men."

In these days of rushing and wrapping, I hope that West Virginians will take the time to focus on the great and glorious meaning of Christmas.

My wife, Erma, and I wish for all West Virginians a happy and holy Christmas and New Year.

Finding a Solution to Our Energy Crisis

Fact: The world is running out of oil. The Chief Executive Officer of Exxon-Mobil predicts that less than half of the oil needed to meet world demand by 2010 can be supplied by existing oil fields. When that time of "scarceness" arrives, competition for remaining oil will likely become cut-throat, possibly triggering monumental changes in the economies, societies, and relationships between the nations of the world.

In reality, backfilling an oil shortfall will take a variety of energy sources. Renewable resources like hydro, solar and wind power, and biomass, along with finite resources like natural gas, all must be part of a comprehensive national effort to shake off the oil addiction. And a major player in any such effort must be coal and coal-based technologies. Coal has been used to make diesel and jet fuels for 80 years. Moreover, synfuels made from coal burn cleaner and perform better than petroleum. We can produce synthetic fuels in West Virginia, using our own abundant supply of coal, natural gas, and other resources. All we need is the money, the right policies, and the commitment to do it.

I congratulate Governor Manchin for stepping into the energy policy debate. He and others are making an effort to wake the Ameri-

can public to our looming energy crisis. But they are not just ringing alarm bells. They also have a blueprint which can be part of a solution. They want to develop domestic energy sources and produce jobs and economic security, as well as ensure a dependable, affordable, clean American-based energy supply.

By encouraging the cleaner, more efficient use of coal in power plants and other facilities, we help to ensure jobs in West Virginia for many years to come. Our brain power, coal reserves, and excellent workforce can lead the way to America's energy independence. It is time to devote new innovation and ingenuity to energy policy and blaze new trails.

Just as President Kennedy did when he sent this nation on a mission to put a man on the moon, this government can begin an intense clean coal research and development program similar to the National Aeronautics and Space Administration Program of the 1960s. Like the research done for the space program, such energy research will produce spin-offs that create jobs, improve life, secure our energy future, and bolster our national security. Not even with our best crystal ball can we fully know what fantastic gains can be made, and we should not delay in starting.

Reflections on 2005

As we bid farewell to 2005, it is a fitting time to reflect on the events that have impacted humankind throughout the year. We have seen a sobering amount of human suffering in the past year, with the tsunami in Southeast Asia devastating hundreds of thousands of lives, and then the earthquakes that brought tragedy that was felt around the world. We are mindful, too, of America's own tragedies with hurricanes Katrina and Rita, which wreaked unspeakable havoc on those people living in the Gulf Coast region.

But, in the face of such adversity, there is strength in the generous and giving nature of the American people. Many West Virginians heeded the call, time and again, to give comfort to those less fortunate. West Virginia's Mountaineers came together in the spirit of goodwill and Christian love to help those near and far in times of great need.

After Hurricane Katrina, food and clothing drives sprang up throughout the state. Students organized and collected thousands of school supplies and toys for children left with nothing. Virtually every community in the state found ways to help, from pancake breakfasts and raffles, to gospel sings and blood drives.

Perhaps the strong show of support is because West Virginians are no strangers

to sacrifice. As we know all too well, the elements of Mother Nature can be harsh and unrelenting. West Virginians know the blessings of prosperity, but also the difficulties and hardships that life can bring. In the worst of times, the people of our state are often at their best.

In times of sorrow and uncertainty, I am comforted by the words of the Lord. Second Corinthians tells us, "Though our outward man may perish, yet the inward man is renewed day by day. For our light affliction, which but for a moment, worketh for us a far more exceeding and eternal weight of glory; While we look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but the things which are not seen are eternal."

Mountaineers have always been a special breed of people and proved that again in 2005. Our people served proudly in the military in faraway lands. West Virginians banded together to help their fellow Americans survive tragedy. Together, we overcame the challenges of 2005.

As we mark the start of this New Year, I thank the Creator for His blessings on our state and nation, and I wish all West Virginians a happy, safe, and prosperous 2006.

By U.S. Senator Robert C. Byrd

Lessons from the Leadership of Gerald R. Ford

The President of the United States is a powerful figure in this country. The President sets the tone for the nation. He can either challenge us to reach for our better angels, or take actions that serve to deeply divide the country. The president can either promote an agenda that brings the American people together, or he can press for policies that split us apart.

In the summer of 1974, the country was suffering. President Richard Nixon's actions in the Watergate affair only compounded the anger and distrust that people felt over the Vietnam War. The country was near a boiling point. President Nixon, on the verge of being impeached by the House of Representatives, resigned from office, elevating Gerald R. Ford -- a former Congressman from Michigan, a former Republican Leader in the House of Representatives, and the then Vice President of the United States -- to our country's highest Executive Office.

Many people across the country did not know President Ford very well. Few knew the quality of the man, as he had never run for office outside of his Congressional district. I knew Gerald Ford, having worked with him in the Congress, and I had confidence that he would be the kind of presi-

dent that we needed at that moment in time.

Gerald Ford brought to the presidency a humble tone very different from that of President Nixon. He worked to heal the nation after one of the most turbulent periods in our history. His actions were defined by his patriotism and his belief that America had to move forward instead of looking back. I have always been impressed with the quiet determination that President Ford showed in office. He understood that sharp partisanship does not serve the country well, and that political parties need to work together to forge solutions to the challenges we face.

That is a lesson that should be remembered today in Washington, D.C. Too often, more attention is paid to scoring political points than is paid to working for the American people.

As the new Congress begins, we have an opportunity to come together and put the people's priorities first. That means focusing on those issues that West Virginia families and families all across our country are most concerned about -- good jobs; access to better health care; improved classrooms. If we pull together, Democrats and Republicans, we can find the best solutions for America.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

United in Sorrow, Determination

West Virginia has once again proved what makes our state unique. As calamity struck the miners in Upshur County, West Virginians banded together in support of those men and their families. When news came that 12 of those 13 souls had not survived the explosion at the mine, West Virginians united to console the families, and to continue to pray for the survivor, Randal McCloy, Jr.

Each miner faces physical dangers with a knowledge that every other miner with him is his brother. Together, they do their jobs with extraordinary bravery and professionalism. The Sago miners were brothers. They worked together; they struggled together; and together today, they are with the Lord.

As the families grieve, they also deserve to know what happened in that mine. One of the finest tributes we could pay to these families and their lost loved ones would be to take steps to help prevent other families from ever experiencing such pain.

To do that, the federal and state investigations will move forward to determine what happened in that mine to spark the explosion and whether the explosion could have been prevented.

In Congress, there are tough questions to be asked of the federal Mine Safety and Health Administration

(MSHA). Is enforcement of coal mining regulations tough enough? In the last five years, nearly 200 federal coal enforcement personnel have lost their jobs because of budget cuts. Are the regulations on the books today current enough to handle the challenges posed by 21st century coal mining? Are mine hazards being minimized? During the past several years, many key mining health and safety improvements have been delayed or discontinued by MSHA. These and other issues demand scrutiny, and the miners' families deserve the answers. I will work in the Senate to get the truth.

West Virginians know coal mining. The mines are near our homes. The mining industry has employed our families, in some cases for several generations. We understand the risks. But we also understand that coal miners deserve protection. They must know that rules and regulations, put in place for the well-being of the miners and nearby communities, are not being overlooked or disregarded.

In this hour of prayer and tragedy, West Virginia will honor these men, and hold close their families and friends. But we must also do everything possible to prevent other mining families from experiencing such terrible pain. That should be the legacy of the Sago miners.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

New Congress Brings New Opportunities

As the new Congress begins, I will take every opportunity to refocus our government's attention on the issues that matter most to West Virginians. I know from countless conversations with constituents throughout the state that there is a strong desire for change.

The American people expect Members of Congress to work together. The nation is tired of divisive partisan rhetoric. There is a clear mandate for the 110th Congress to put more energy towards working to achieve practical results for the people, and less on hatching political victories.

Though the Democrats now hold a majority in the Senate by the thinnest of margins, I believe the shift in power presents Congress with an opportunity to undo the partisan gridlock that has impeded good government in recent years. The new Congress will work longer hours, and we are resolved to be more open and inclusive. We will dust off the traditions of dialogue, deliberation, and decorum that have been shelved in recent years.

I intend to reach out to my Republican colleagues on the Budget Committee for their input and assistance in restoring the fiscal balance and responsibility that Americans expect from their government.

The views of my colleagues across the political aisle on the Committee on Armed Services will be welcomed, respected, and carefully considered. It will take a bipartisan effort to untangle ourselves from Iraq and provide for our national security. It will take the collective political will of both parties to meet the challenges of providing adequate care and services for our new generation of veterans.

Though needed reforms in the earmarking process are being implemented until we return fiscal responsibility and accountability to the budget process, I will continue to be mindful of the needs of my home state of West Virginia as I return to the role of Chairman of the Committee on Appropriations.

Americans have given Congress a resounding mandate to set the country on a more stable, responsible path to domestic progress and prosperity, while strengthening national security. I am excited about the opportunities this new Congress presents, and optimistic about the future of this great nation.

Progress will require hard work and great personal commitment. I stand ready and eager to continue to serve the great state of West Virginia and this great nation.

Honoring Dr. King's Living Legacy

The greatness of women and men is often best judged from a historical perspective. History gives us the detached viewpoint that allows us to better understand and appreciate the person, the cause, and the legacy. This happens because great individuals often have been leaders who challenged the status quo as they pushed the country into areas where it had feared to go. As a result, such leaders often arouse criticism and opposition. That criticism certainly followed the Reverend Dr. Martin Luther King, Jr.

But time and the march of history afford a better understanding of Dr. King and his contributions toward making the United States a better, stronger, and greater nation.

That is why this year, as the nation marks the anniversary of Dr. King's birthday, it is important to look at what we, as a people, have done to improve our country since his death, and understand what more needs to be done.

His work included all Americans. When Dr. King stood on the steps of the Lincoln Memorial and proclaimed, "I have a dream," he looked forward to the time "when all of God's children, black men and white men, Jews and Gentiles, Protestants and Catho-

lics, will be able to join hands." Dr. King's efforts also focused on the economic rights of economically deprived people of all races and creeds, as well as on civil rights. In this quest, he proposed a Bill of Rights for the Disadvantaged. He advocated a Guaranteed National Income. At the time of his death, Dr. King was organizing a "Poor People's March" on Washington, an effort meant to focus national attention on poverty among not only African-Americans, but also among the poor whites of Appalachia, as well.

Dr. King's vision was not only about what America could be, but also what America should be.

I have come to appreciate how Martin Luther King, Jr., sought to help our nation overcome racial barriers, bigotry, hatred, and injustice, and how he helped to inspire and guide a most important, most powerful, and most transforming social movement.

With his works as well as his words, Dr. King left us a legacy that inspires and guides millions of Americans today. It is a legacy that demonstrates that human problems, no matter how big or complex, can be addressed -- a legacy that proves that one determined person can make a difference.

By U.S. Senator Robert C. Byrd

Finding Ways to Protect Our Miners

In the days since the fatal Sago mine tragedy, we all have sought to find answers to the most basic questions. What sparked this explosion? Could it have been prevented? What can be done to make sure that it does not happen again, in West Virginia or anywhere across the country?

Investigation teams will work to determine the explosion's cause and what happened in the immediate aftermath. So that they are thorough and accurate, these reports will take time.

The Congress has a responsibility to look at the Sago tragedy, as well. The federal agency tasked with keeping order at coal mines is the Mine Safety and Health Administration (MSHA). In the days since the explosion, many questions have been raised about MSHA. Are there enough inspectors checking on mining operations? Are safety violations handled appropriately? Does MSHA have an effective system in place to respond quickly to mining disasters?

I recently met with MSHA officials to learn about their progress in the explosion investigation and, more importantly, to get their view of the culture of safety in our nation's mines. After hearing what these officials had to say, I still have lingering concerns. I believe that the federal gov-

ernment can do more to protect coal miners. We need more inspectors. We need more resources. Because of decisions made by officials in Washington, the federal mine safety agency is understaffed, underfunded, and underequipped.

A focus on modern technology could help. We owe it to the Sago miners to update technology in the areas of mine safety and rescue operations. Right now, safety and rescue equipment is 30 to 40 years old. We can send machines to Mars and communicate with them almost instantaneously; we ought to be able to talk with miners trapped 250 feet below ground. There have been plenty of technological advances in mining equipment over the years, but miner safety and health have not been given the same priority.

Next week, the Senate Appropriations Committee will hold the first of what I expect will be many Congressional hearings into the operations of MSHA. My message at that hearing will be clear. We must take a hard look at the Sago mine tragedy; learn its lessons; and do whatever is necessary to protect miners from a repeat of this disaster. MSHA needs to remember that its mission is mine health and safety, and that mission must always come first.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Mine Safety for the 21st Century

In the wake of the fatal mine tragedies in our state this month which claimed the lives of 14 men, all of us have been searching for ways to prevent repeat incidents. One of the most glaring shortfalls in mine safety is the out-of-date technology that is used in America's mines.

Much of today's mine safety equipment was developed 30 to 40 years ago. Here we are, in the year 2006, relying on safety technology that was put in place in 1966.

Emergency breathing equipment provides trapped miners with one hour of oxygen. Yet, at Sago, it took nearly 11 hours for rescue teams to enter the mine and begin their search. That's unacceptable.

In this age of instant communications, there was no way to communicate with the 12 men at Sago and the two men trapped at the Aracoma Alma mine in Logan County. That, too, is unacceptable.

Despite global positioning satellites and wireless remote technologies, rescuers used best guesses to drill through hundreds of feet of rock and soil, hoping that the trapped Sago miners would hear the drill and signal their location. A guessing game is no way to pinpoint miners when every minute is the difference between life and death.

Federal mining officials have stated that there is no

off-the-shelf technology that can solve these communications problems. They're wrong.

The Defense Department has tracking technology that can be readily adapted for mines.

The National Institute for Occupational Safety and Health is advancing technology that will significantly expand the emergency oxygen supplies that miners can carry with them.

Private companies also are working to adapt everyday technologies for mine safety. For example, many cell phone users are familiar with text messaging where a brief message can be sent to one's mobile phone. This same technology exists in a piece of mining equipment, first developed in Australia. The small device, worn on a miner's belt, allows for instant text messages from the surface. Despite the advantages and relative affordability, the manufacturer reports that only 14 mines across the country utilize this device. That's 14 out of 15,000 deep mines nationwide. The nation must do better by our miners.

We all mourn the deaths of the 12 men at the Sago mine and the two men at the Aracoma Alma mine. But their deaths should not be in vain. The country needs to wake up to the dangers of mining -- many of which could be avoided by bringing mine safety technology into the 21st century.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Urgency of Mine Safety

This week, two more West Virginia coal miners lost their lives on the job. Two more families have seen their worlds turned upside down. In the first 32 days of this new year, the Mountain State suffered as 16 coal miners have died -- first in Upshur County, then in Logan County, and now in Boone County. Miners and their families throughout the state are wondering where the next explosion will occur, what will spark the next fire, and will it be at their mine.

We are facing a safety crisis. The time for talk is over. We've got to take steps now to protect lives.

The West Virginia Congressional Delegation has introduced legislation in the House of Representatives and the Senate that has one simple aim: the prevention of future fatal mine tragedies. As a united Delegation, we share the strong belief that coal miners deserve the best protections and the best safety enforcement possible. The longer we wait to make positive changes in mine safety, the more risk coal miners face on the job. We have a moral obligation to get this done.

The West Virginia Delegation's federal mine safety package focuses on sev-

eral areas, including rapid notification and response, tougher penalties for safety violations, emergency communications and breathing equipment, and expanded use of advanced safety technologies.

The tragedies at the Sago and Alma mines highlighted gross weaknesses in mine emergency preparedness, and the failure of leadership at the federal Mine Safety and Health Administration (MSHA) to get tough about rescue procedures and safety initiatives. The status quo is not good enough; the status quo is putting lives at risk. If the federal agency will not take steps on its own, then the Congress must take the lead and, if need be, poke, prod, and push MSHA into fulfilling its mandate.

We need more than platitudes to protect the safety of our nation's miners. We need resources. We need swift action. We need to impress deeply upon the psyche of MSHA and of the nation's coal mine operators that the safety of miners will not be compromised for personal profit or politics. Protecting the safety of our miners is a moral responsibility, and I, for one, will never, ever, forget that obligation.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Meeting Our Troops' Needs

I am proud of the men and women of America's Armed Forces. Whether active duty, Reservist, or National Guard, our troops volunteer for their jobs; they carry out their missions; they risk their lives. In return, they only ask for the support of their country, both in terms of equipment and resources during their service and medical care when they come home.

This week, one West Virginia soldier's story caught the attention of the nation, and I hope that it serves as a wake-up call for the civilian leadership and the top brass at the Pentagon.

First Lieutenant William Rebrook was medically discharged from the Army after he suffered shrapnel wounds in Iraq. After he was attacked, military medics evacuated him from the battlefield. His body armor was removed so that emergency doctors could treat his wounds. That was the last time that Lieutenant Rebrook saw that armor.

Before he could be discharged and return home to Charleston, the military handed him a \$700 bill for his destroyed body armor. I find it astounding that the Pentagon would ask soldiers, wounded in battle, to pay for equipment damaged or destroyed during their service.

At a hearing this week of the Armed Services Committee, I brought the case of

Lieutenant Rebrook to the attention of Defense Secretary Donald Rumsfeld and General Peter Pace, Chairman of the Joint Chiefs of Staff. I urged them to take this story, and so many others like it, seriously. Already, friends and family members of many soldiers have dug deep into their pockets to pay for body armor and other key pieces of equipment. And when a soldier is injured, he or she should not be forced to pay for equipment that doctors and medical teams discard so they can treat those injuries.

Our soldiers, sailors, Marines, and airmen are the finest in the world. All Americans owe them a debt of gratitude for their service to our country. But we also owe them something more. We owe them not only mega-million dollar missiles and tanks and airplanes but also basic body armor and detection devices to protect them from the deadly nickel-and-dime IEDs of the Iraqi insurgency. And we owe them a military health care system and a veterans' benefits program that serve them as well as they have served the nation.

The Pentagon needs to remember that the military's strength is not centered in fancy weapons systems, but in the spirit and courage of the men and women who serve in our nation's Armed Forces.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Balance the Federal Checkbook

West Virginians know how to budget. We know how much money will be in our paychecks and how much our bills will be. We plan for big costs and put a little aside when we can for unforeseen emergencies. It's common sense.

But the federal government doesn't seem to understand how to budget to pay today's bills while saving for those unforeseen emergencies. The White House recently sent to Congress its latest budget, a proposal that ignores common sense and results in growing debt for as far as the eye can see. In fact, under this budget, the Administration admits that the debt will grow to a mind-boggling \$11.5 trillion by 2011 -- a more than \$3 trillion jump in the next five years.

In the time from President George Washington to the start of President George W. Bush's term, the United States took on debt totaling \$5.6 trillion. According to the White House budget documents, the debt that took 212 years to acquire will stunningly double in size by 2011.

Imagine that a family paid its mortgage, doctor's bills, grocery bills, and utilities with the credit card. The debt grows and grows and grows. That's what we have in this Administration budget. The debt explodes, and the financial pressure

facing future generations continues without pause.

It's time for responsible federal budgeting.

In the coming weeks, the Senate will roll up its sleeves and rewrite the White House budget, seeking to inject some common sense and accountability. Senators also will work to write a budget that reflects the priorities of the country. I, for one, want the government to make good on its promises of health care to our seniors and our veterans, invest in teachers and resources in our classrooms, and protect the country from another terrorist attack. I also want the federal budget to support efforts to create jobs, give a boost to small businesses, and provide American manufacturers with the tools that they need to compete around the world.

Most importantly, we've got to be responsible and turn around this massive federal debt. Each day that the debt is allowed to grow is another day of higher interest rates on mortgages and student loans and car payments. An out-of-control debt results in a back-door tax hike on West Virginia families, and it has to stop.

"Families balance their checkbooks. They work hard to make ends meet and live within their means. It is long past time for the federal government to do the same.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Tax Incentives for Energy Savings

As energy prices reach record highs, West Virginians are finding it more and more difficult to hold onto their hard earned dollars. While Congress continues to look into ways to ease the burden, it has already taken steps to help offset some energy costs.

Last year, the Congress passed the Energy Policy Act (EPACT). Included within EPACT are incentives that provide tax credits when a person purchases energy-efficient products. Consumers who buy approved items this year will be able to take full advantage of these incentives when filing their taxes next year.

For example, EPACT incentives can help to keep down the costs of renovating a house or business. The tax credits are available on the purchase and installation of energy-efficient products including insulation, windows, doors, and roofing materials. Taking advantage of this opportunity could potentially save thousands of dollars for West Virginians who decide to move ahead with these kind of home improvement projects.

The EPACT tax incentives are not only useful for big renovation projects but also for smaller

ones. When looking to purchase a new stove or washer and dryer, it can save money to explore options that qualify for a tax break. EPACT provides incentives for consumers who buy more energy-efficient clothes washers, heatpumps, air conditioners, water heaters, dishwashers, and refrigerators. These "Energy Star" qualified appliances will not only provide hundreds of dollars in tax credits, but also will run more efficiently, saving money on energy bills for years to come.

These tax incentives can be money in the bank for West Virginia families. They help to lower the cost of home projects and new appliances, and also can point the way to a future where America is far less dependent on foreign oil and other energy sources.

We have to break the grip that foreign energy producers have on our country, and these smart investments in more efficient products in our homes is a step in the right direction.

Check with local retailers about energy efficient products that qualify for the tax incentives. For more information, visit my website, <http://byrd.senate.gov>.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protecting Against Identity Theft

The Internet plays a big part of many people's daily lives. But it also has dangers, and West Virginians need to be alert. Everyday, millions of Americans visit the Internet, using new technologies that make commonplace activities like shopping, banking, and traveling easier and more efficient. Unfortunately, some people are using the same technologies, with increasing savvy, to commit fraud and theft.

In 2005, the Federal Trade Commission (FTC) received more than 1,800 fraud complaints from West Virginians, with identity theft leading the list. Statistics showed that identity thieves used various schemes to perpetrate their crimes, including phony Internet auctions, catalogue sales scams, fake sweepstakes, bogus foreign money offers, and computer service scams. Victims of such crimes suffer long-term, often devastating damage to their finances and credit records.

The federal government's law enforcement efforts go after the perpetrators on several fronts. The FTC and other agencies use many tools to track down, catch, and punish these criminals. However, they cannot do it alone. *Prevention, education, and reporting* are the most important lines of defense, and consumers must be smart and protect themselves.

To help prevent being a victim of identity theft, it is important to maintain anti-

virus software, spyware, and an effective firewall to shield personal computers from violators. Also, be cautious when sharing private information online. Personal details should only be given to individuals or companies with which one regularly does business. The FTC also recommends that Internet users not open and immediately delete all unsolicited e-mail communications, commonly referred to as "spam" or "junk e-mails."

It is also important to stay informed about existing and emerging scams. Several websites are devoted to alerting consumers to new scams and suggesting ways to avoid them, including www.fraud.org and www.staysafeonline.org.

Finally, be sure to report scams and cases of fraud and identity theft. Those who fear that they might have been a victim of identity theft should check their credit reports, close any accounts that have been tampered with, file reports with local police, and contact the FTC.

For other helpful website links and information about how to file a complaint, visit my website at <http://byrd.senate.gov>.

The Internet can be a great tool for education and information. But it also can serve as a fertile field for fraud. West Virginians need to be careful Internet users to ensure that they get the most benefit from the Internet without suffering from illegal scams.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protecting the People's Liberties

As a U.S. Senator, I have sworn an oath to support and defend the Constitution of the United States. I take this role seriously and am deeply concerned that Americans' Constitutional right to privacy has been violated by the Bush Administration's domestic spying programs. West Virginians should be concerned, too.

It has come to light that, in 2002, President Bush signed a secret order to allow the National Security Agency to eavesdrop on U.S. citizens without a warrant, even though there are laws against such domestic spying. The White House says that it did not have time to obtain the proper legal authority to listen to those conversations. This claim is false. In fact, our laws provide that surveillance can continue for several days before a warrant is required. The Administration's actions deserve close scrutiny. Violations of the Bill of Rights and of our laws must not be swept under the rug.

It must be determined if the First Amendment right to free speech and the Fourth Amendment protection against unreasonable searches and seizures, which are guaranteed by the Constitution, were violated by government eavesdropping. We have entered very dangerous waters when the government can spy on citizens without even so much as a warrant.

Constitutional freedoms will never be abolished in one fell swoop. The American people cherish

their freedoms and would not tolerate such a loss. But the erosion of freedom usually occurs as a gradual process, cloaked in secrecy, and glossed over by claims of necessity for greater security. A climate of fear and secrecy can take a hefty toll on the people's liberties.

That is why I have introduced legislation to establish an independent, nonpartisan commission to investigate warrantless surveillance on law-abiding American citizens. This commission should investigate the legality of the Administration's secret domestic spying program to shed much-needed sunshine on any unlawful or unconstitutional executive intrusions into the lives of ordinary Americans. It could then determine how best to protect the homeland, while also safeguarding the Bill of Rights.

An independent commission is vital because the Senate Intelligence rejected a proposal by Senator Rockefeller to begin a thorough, bipartisan investigation into the domestic spying. I support Senator Rockefeller's efforts. He has worked diligently to ensure that the Administration, even in its most secret circles, follows the law and the Constitution.

Preventing more terrorist attacks must be Congress' utmost priority. But it is spurious to suggest that the American people will be safer in their homes if only they forego their Constitutionally-protected birthrights.

New Jobs, New Opportunities in West Virginia

In all walks of life, people are trying to save money. That fact is just as true for companies as it is for families. Manufacturers are searching for new approaches to save costs. Families are looking for products that are more economical. One design approach promises benefits to both groups -- more durable, lighter-weight materials for manufacturers, and more economical, longer-lasting products for families.

That design approach is the use of composites. Composites blend raw materials and scientific applications to create entirely new materials to achieve a desired final product. Today, composites are breaking barriers in industries from aerospace to outer space to military supplies to the clothes that we wear.

Many West Virginia companies are stepping forward in this industry. In Harrison County, FMW Composite Systems produces airplane parts crucial to the next generation of fighter jets. FMW is the world's exclusive manufacturer of titanium matrix composite (TMC), a product that strengthens fighter aircraft while also reducing their weight. Lighter planes are more fuel efficient and more maneuverable. The Defense Department sees TMC as a key part for these top-of-the-line fighters.

Soon, FMW's work also will be part of the Space Shuttle. NASA is working to modernize the shuttles -- and turned to FMW for help. It took four years, but

FMW recently completed a Super Lightweight Integrated Carrier, built of the same composite used in the fighter plane. This new carrier shaves thousands of pounds off of the current design, helping NASA to increase shuttle payload capacity and improve each flight's productivity.

Another West Virginia company making great strides in composites is Touchstone Research Laboratory. The Ohio County company has patented several new composites, including its fiber-reinforced aluminum called MetPreg.

MetPreg can be used to build airplane fuel tanks; the skins of aircraft; lightweight structures for automotive, rail, and other transportation applications; crane booms; tennis rackets; golf club shafts; and bicycle frames. The same product that one uses to ride around the block can be part of the fighter jets patrolling a battlefield.

FMW and Touchstone are just two West Virginia success stories, and in the coming years, I expect more companies will join their ranks in the composites industry.

Combine this growth with other cutting-edge fields, like biometrics, software development, and defense manufacturing, along with a commitment to West Virginia's core industries of coal and energy, chemical production, and steel. The resulting economy will be much like a composite: stronger than its individual components and ready to meet the challenges ahead.

First Steps Toward Better Mine Safety

It has been several weeks since we suffered a coal miner death in this country, but we must not grow complacent. The next accident could happen tomorrow. The 24 miner lives lost so far this year, 16 in West Virginia, have brought to light the urgent need for better rescue equipment and stronger safety enforcement. We know what needs to be done, and we must start doing it now. Every day of delay risks miners' lives.

In recent years, the federal coal enforcement budget has been tightly squeezed, resulting in gross incompetence at the federal Mine Safety and Health Administration (MSHA). We have seen the tragic consequences when the political leadership at MSHA forgets that its number-one job is protecting coal miners. Miners die when MSHA cuts its staff. Miners die when MSHA does not insist that 21st century rescue equipment is used in the mines.

Despite unprecedented national attention on mine safety, the budget that the President recently sent to Congress maintained the status quo. Four years of budget cuts and four years of coal enforcement staff cuts were left in place. That is unacceptable, and I am working to fix the President's broken budget.

Fortunately, the Senate

has taken the first step in the right direction. It has approved legislation that I wrote to add \$184 million to MSHA's budget during the next five years. The boost will allow MSHA to hire additional mine safety inspectors and implement better mine rescue technologies. These are common-sense changes that miners, and the families they work to support, deserve.

There are 217 fewer coal enforcement personnel on the MSHA payroll today than five years ago, yet the President's budget included no funding for additional inspectors. When West Virginia coal miners were killed at the Sago and Alma mines, the men's emergency communications and breathing equipment proved woefully inadequate, yet the budget contained severely insufficient funds for better rescue technology. My legislation would send more safety inspectors into the mines and place new rescue equipment into the hands of miners.

This is an important first step. It begins to fix the safety gaps in coal mining that we all know exist. MSHA has allowed safety enforcement to drag for years, and West Virginia has paid a terrible price. Enough is enough. It is time for the federal government to get serious about mine safety.

National Problems Find West Virginia Fixes

In the Senate, I'm in a unique position to learn about the problems facing the government's many federal agencies. For instance, it wasn't that long ago that the FBI watched as criminals, arrested in one place and wanted by police in another, were let loose because there was no way to check the suspect's fingerprints quickly. Prints were kept on individual cards that had to be searched one at a time. The FBI Complex at Clarksburg changed all that by digitizing fingerprints and storing them electronically. Today, after an investment of more than \$1 billion, these electronic fingerprints can be checked in a matter of moments, not days. The Harrison County complex has helped to revolutionize the nation's crime-fighting efforts.

The FBI is just one example of how, working with federal agencies, I've been able to identify national problems and help to find solutions in West Virginia.

Today, the Coast Guard has a similar problem. Its licensing and documentation procedures are fragmented and scattered around the country. There are gaps in our national security because the Coast Guard cannot process information as quickly and as thoroughly as it should. That problem also is finding a West Virginia solution.

I went to work with the Coast Guard on a new

National Maritime Center (NMC) to streamline the licensing and documentation practices, and to plug the holes in our nation's security. The Coast Guard has decided to build this new facility in the Eastern Panhandle, and a transitional office will open later this spring in Jefferson County.

It was not hard to show the Coast Guard the benefits of locating the NMC in the Mountain State. Already, the Coast Guard's two other facilities in the Eastern Panhandle have proved to be among the agency's most highly productive, efficient units. West Virginia benefits as well, with hundreds of jobs that add more than \$50 million each year to the local economy. The NMC, when fully up and running, will add another 250 good-paying jobs to the area.

The Coast Guard has proved what I have always believed: federal agencies can have their offices in Washington, but also get far more bang for their bucks by locating other key operations in West Virginia. I'm going to keep working to find West Virginia answers to national problems. We've shown that West Virginians can get the job done. We have the workforce. We have the infrastructure to support demanding high-tech projects. We have an excellent quality of life. Overall, there's no beating West Virginia.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Keeping the Promise to Coal Miners' Families

Next week, the miracle of the Sago mine explosion celebrates his 27th birthday. Randal McCloy, Jr., will be with his family, just weeks after he survived the Upshur County mine disaster that claimed the lives of 12 other men. The fact that Mr. McCloy will celebrate his birthday at home, surrounded by loved ones, is a remarkable testament to the dedication of his family, his doctors, his friends and fellow miners, and all of those in the community and state who have offered prayers and support.

All West Virginians wish Randal a happy birthday. We want him to recover fully from his experience and enjoy a long life with his family.

We still feel the pang of sadness that 16 other West Virginia miners will not have the same opportunity to celebrate birthdays with their families. The deaths of those men will remain in our hearts, and those coal mining families will remain in our prayers.

I have talked with many of those families. I have listened to their concerns. Their wish is that other coal mining families do not have to go through the pain of having loved ones killed on the job.

In the days since the recent West Virginia mine tragedies, I have pressed hard for the federal Mine

Safety and Health Administration (MSHA) to get its act together. For too long, MSHA has ignored my warnings that its lackadaisical attitude toward safety has jeopardized lives. No longer can MSHA close its ears to these fears. MSHA must know that the safety and health of coal miners are its paramount responsibilities.

This week, I won Senate Appropriations Committee approval for \$35.6 million for emergency mine safety measures. This funding would pay for more than 200 new safety inspectors. It would also help to spur the installation of advanced communications, rescue, and survival technologies in coal mines. Technologies exist that can help to save coal miners' lives after an explosion. But those technologies have not been put to use in most of America's coal mines. That has to change, and the funding in my legislation will help to get the job done.

The next step with this mine funding is to win the approval of the full Senate. The Senate is expected to debate this funding in the next few weeks, and I will continue to push for approval of my mine safety provisions. We face a safety crisis in the mines. Action is needed now to protect miners' lives.

Real Steps Toward Port Security

This spring, when newspapers reported on White House plans to give control of six major U.S. seaports to a company owned and operated by the government of the United Arab Emirates (UAE), the American people were dumbfounded. How could the United States allow a foreign country, which supported the Taliban and is linked to financing al Qaeda, to have an inside role in this country's port security? I am amazed that such a plan was rubber-stamped by the Bush Administration without so much as a raised eyebrow.

The debate about the UAE's operation of American ports sheds light on the fact that our port security efforts are paper-thin. Right now, inspectors check less than five percent of the more than 11 million shipping containers entering American ports -- less than five percent! Without urgent steps, America's seaports will remain prime targets for terrorists.

Last week, the Senate Appropriations Committee approved my proposal to invest \$648 million in port security initiatives. As a result, my port security funding package is now a part of an emergency national security appropriations bill, which includes money and resources for our troops in Iraq and Afghanistan.

Our federal government must get serious about security here at home. We hear

great rhetoric about White House plans for homeland defense, but those plans are hollow. There is not enough money to back up the big talk.

My port security plan, unanimously approved by Republican and Democratic members of the Senate Appropriations Committee, would put the funding in place to inspect more of the cargo headed to the United States. We would be able to scan more containers for nuclear devices -- the so-called 'dirty bombs' that could kill hundreds of Americans. We would hire more inspectors and more security teams to ensure that shipments entering our ports are safe.

In this post-9/11 world, the Congress and the White House must put the safety of our citizens first. In order to stop potential terrorist plots and protect U.S. citizens, we must strengthen safeguards here at home. That means stronger port security and a commonsense policy governing the ownership and operations of our ports. That means more agents on our borders. That means giving our police officers, firefighters, and emergency medical teams the resources they need in order to respond to attacks. The White House's rhetoric about homeland security sounds good, but it is time to match those words with the financial resources to get the job done.

April 12, 2006

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Taking Steps to Stop Illegal Immigration

From the West Virginia hills to the halls of Congress, there is increased attention concerning illegal immigration. An estimated 11 million illegal immigrants are in the United States today, and the number continues to skyrocket. The immigration debate has raised serious questions about America's homeland security and economic future.

Without doubt, immigration has been important to America's greatness in the past as it will continue to be in the future. But, there is no excuse for turning a blind eye to the 500,000 aliens expected to sneak across the borders illegally this year. If we ever are to control illegal immigration, we have to start with tougher border security.

For more than four years, the nation has wondered how 19 terrorists managed to carry out the heinous September 11 attacks. Yet, today, America still remains dangerously exposed to terrorists who want to penetrate our borders. In fact, since September 2001, an estimated two million illegal immigrants have successfully evaded U.S. border security.

Such a dangerous situation must be turned around. That's why I wrote a new law last spring investing more than \$273 million in border security initiatives, including the hiring of 500 border patrol agents and more than 200 immigration enforcement agents and criminal investigators.

But that was just a first step. From morale problems to outdated technologies to a significant lack of manpower, border security efforts are inadequate and plagued by inefficiencies. To address those problems, I plan to offer a new funding proposal that will build on the success of last year's effort.

One proposal that I will not support is amnesty for illegal immigrants. Amnesties open routes to legal status for illegal aliens who want to circumvent vital security checks. Advocates may try to distance themselves from the word "amnesty," characterizing their proposals as "guest-worker" programs or "temporary visas," but the real effect of these amnesty proposals is to legalize the unlawful actions of millions of undocumented workers and the businesses that knowingly employ them.

The United States cannot afford to allow this huge stream of illegal immigration to continue. We also cannot afford to grant amnesty to millions of people who have broken our laws. Our country's resources -- our hospitals, schools, and social programs -- are stretched thin by this massive wave of illegal immigrants, and we are much more vulnerable to terrorists who want to slip past our lax security. It's time to toughen America's border security and invest in other steps necessary to curtail illegal immigration.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Turn the Tap on Clean Water

Modern technology surrounds us. Our computers speed information from one side of the world to the other in a split second. Nanotechnology, so small that it takes a microscope to see, is leading to amazing advances in medicine, manufacturing, high-performance materials, information technology, and energy and environmental technologies. The latest in composite materials are being used in all sorts of products, from more efficient cars and airplanes to the fabrics in our clothing. Today's dreams are rapidly becoming tomorrow's realities.

Unfortunately, with all of the progress in so many areas, one aspect of daily life remains stuck in the 20th century. Today, millions of Americans are forced to live with drinking water that is unhealthy and unsafe, filled with dangerous bacteria and so dirty that it turns a clear glass deep brown. There is absolutely no reason for people in this day and age to be forced to live with inadequate and dangerous water supplies.

That's why I have worked in the Senate to invest critical dollars toward the construction of modern water and sewer systems. These dollars, invested in facilities in West Virginia and across the country, are changing lives.

Just recently, I announced a major step forward for such a project

in Randolph County. The Upper Tygart River Watershed Project, in planning for nearly a decade, is finally moving toward construction. The dam and drinking water system will be built by Heeter, Inc., of Roane County. When it is finished, this project will help to bring clean drinking water to 21,500 Randolph County residents.

I am proud to be a partner in this watershed project. I worked in the Senate to provide \$23 million in federal funding for the work, with the remaining dollars coming from state and local sources.

While this is an important milestone, there remains much work ahead. The terrible truth is that, in our state and all across the country, the health of millions of men, women, and children is vulnerable because of contaminated water supplies.

Communities, especially those in rural areas, cannot possibly afford on their own to pay for the construction of safe drinking water systems. They should not have to. The federal government has a clear responsibility to provide support, both financial help and engineering assistance, to build safe and efficient water systems.

Clean water should not be a luxury afforded only to those living in wealthy communities; clean water is basic to the health and prosperity of all citizens.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Partnering for Better Health Care

Progress has been made across our state toward the goal of high-quality, affordable health care for all West Virginians, but much work remains. For every person who now has access to medical care close to home, there is another who still has to travel long distances to see a doctor. Whether it be emergency treatment for an illness or routine check-ups and screenings that help to maintain good health, proper medical care should not discriminate. All people, including those who live in small cities and rural areas, deserve the same access to doctors and nurses. That is my goal for West Virginia health care.

I have worked in the Senate to create and expand health care facilities throughout the state. I have joined with hospitals, universities, and private organizations to develop innovative solutions to West Virginia's health care challenges. I also have supported investments in the state's health care education programs. These efforts are training the next generation of health professionals, many of whom I hope will stay and practice their healing craft at home.

I recently participated in the dedication of one of the state's newest education facilities on the campus of City Hospital in Martinsburg. The new Health Professions Education Center is

part of the Eastern Division of the West Virginia University (WVU) Byrd Health Sciences Center. I secured \$6.5 million to construct the center, which will serve to improve health care services for residents of the Eastern Panhandle and help to address the shortage of physicians in the region.

WVU graciously chose to name the new education center after my dear wife. I am humbled by this gesture, and it is a tribute to the compassion that Erma showed toward everyone she met. I pray that the hands of the Great Physician will guide the doctors, nurses, pharmacists, and other health professionals who train at this facility and give healing to their patients for many years to come.

From one end of West Virginia to the other, our state's medical facilities are fast developing into some of the best in the country. Technology, training, and cutting-edge facilities are helping doctors to better treat patients' illnesses and to help West Virginians live longer, healthier lives. I hope that the Erma Byrd Health Professions Education Center can serve as a model for other collaborative efforts to improve health services across West Virginia. Together, we can work to ensure that all West Virginians get the care that they deserve.

Guiding West Virginia's Graduates

As the warm breezes of spring spread through the hills of West Virginia, signs of new beginnings are all around. Flowers are blooming. Birds are chirping. Young people are graduating high school and college and embarking on new journeys. It is an exciting time indeed for these young adults, their families, and all West Virginians who are proud of their academic accomplishments.

I recently had the honor of delivering the commencement address at Marshall University's graduation of its largest class ever. It was a pleasure to see the pride and emotion in the faces of the graduates and their loved ones. The sky is the limit for what young West Virginians can accomplish in their lives. As thousands of young West Virginians all across our state graduate, I hope that they will never stop learning. Commencements are an important stepping stone along a life-long pursuit of knowledge. Some graduates will continue their formal education, but not all learning takes place in the classroom. People of all ages can continue to learn and thrive through reading, travel, and the study of history.

While the real world holds boundless promise

and opportunity for our young people, it also offers challenges. There will be rocky days and stormy nights, but all problems are made for solving. In His wisdom, Almighty God provided mankind with a brain and the will to use it. Perseverance is the key. In fact, it is the mark of a true West Virginian. All it takes is believing in oneself.

We can all be proud of our West Virginia heritage and the values we cherish. Honesty, hard work, love of country, family, and fellow man, and faith in God are time-tested West Virginia values and a key part of what makes our state unique.

As students from Marshall University and West Virginia's other colleges and universities start out on their life journeys, I urge them to forge their futures in West Virginia. We need their energy, their idealism, and their enthusiasm.

West Virginia will undoubtedly be a better place because of the active involvement of this spring's fresh crop of graduates. I commend them for their accomplishments, and I look forward to important contributions from them for our beloved state for years to come.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Honoring Our Law Enforcement

It matters not the day or the hour. It matters not the weather or the circumstance. When our communities need them, we can rely on our law enforcement officers. Local police departments, county sheriffs and deputies, campus police, state troopers, federal agents, and the men and women in their ranks display great courage, always putting their lives on the line for the people of West Virginia.

Every May, we honor these law enforcement personnel for their dedication and, too often, unfortunately, for their sacrifices. Not far from the U.S. Capitol is the National Police Officers Memorial, where the names of those officers who have given their lives in the course of their duty are engraved in marble for all time. This year, the names of 466 officers were added to the memorial, 155 officers who were killed in the line of duty in 2005 and 311 officers from previous years. These are men and women who, through their lives and their deaths, exemplified selfless service and a desire to make our communities safer for all of us.

We hear a great deal about heroes these days. But, so many times, that moniker is associated with famous actors, athletes, or musicians. Not often enough, regrettably, are our

law enforcement officers, firefighters, emergency medical teams, and other first responders called "heroes." Without a doubt, those who are willing to lay their lives on the line, track down criminals or jump into a burning building to defend the innocent and respond to any danger -- these people are true heroes.

All of us remember the selfless acts of New York's first responders on the morning of September 11, 2001. Knowing full well that their lives were in jeopardy, the police officers and firefighters never flinched. They went into those twin towers, climbed those stairs, and rushed people to safety, understanding that the buildings might collapse at any time. Until the last minute, they worked to save the lives of the people trapped at the World Trade Center. Their bravery will live on in our hearts forever.

Similarly, West Virginia's police officers and firefighters risk their lives each day. They are ready to do everything within their power to protect their fellow citizens. These men and women teach us lessons of dedication and courage, of community and character. I thank them for their commitment to our state, and I urge all West Virginians to do the same.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Blessings of Marriage

In our society, the value of commitment seems to always shrink. Perhaps this trend is most disturbing when it comes to marriage. In America, more than 40 percent of all marriages end in divorce. For some people caught in abusive, destructive relationships, divorce may be the best option. However, as a person married for nearly 69 years, who pledged to endure hard times as well as revel in the good times, I can attest to the value of marriage.

The Book of Proverbs teaches, "Whoso findeth a wife findeth a good thing, and obtaineth favour of the Lord." Marriage -- a man and woman dedicating themselves to each other before Almighty God, and then together taking on whatever life throws at them -- is the most soul-fulfilling experience in this earthly world.

Marriage isn't easy. There are rocky days and tough times. But, it is well worth the effort, for what we give to our husband or wife comes back to us a hundred-fold, in love and support, in compassion, in understanding, and in personal growth.

My wife, Erma, proved that truth every day. Throughout our almost 69 years of marriage, she was our family's anchor. While I worked long hours

in the Senate, she raised our daughters into the fine mothers and grandmothers that they are today. When I had a tough day, Erma would find a way to pick me up. When I had success, Erma was there to make sure that I didn't get a big head and that I stayed humble and focused on the job ahead. Her earnest and dedicated support throughout a lifetime was one of God's richest blessings to me.

I cannot easily describe the love that Erma and I shared. But I can testify to the sanctity of marriage, and the sheer joy that comes with finding one's soul-mate and sharing that deep companionship during many happy years. I have had the unique opportunity to meet many great people -- kings, queens, presidents, and other celebrities. But visiting them never compared to the simple pleasure of coming home each night to Erma.

Marriage isn't like a new dress or suit. One doesn't change one's spouse just because times change. Marriage is a deep, lifelong bond. To bond with another soul in the commitment of marriage is the most satisfying experience that God can grant us in this life. I pray that more people in this country will experience the joys of marriage and that, for those who do, it is a lifelong commitment.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Moving Mine Safety Forward

Throughout the year, West Virginians have pressed for answers as to why 19 of our coal miners have been killed on the job this year. We all want to know what happened, why, and how we can prevent future tragedies.

While the investigations are continuing, there are certain facts that have come to light about these deadly incidents.

First, the oxygen that miners carry on their belts provides only about an hour of air. That's not enough to last until a rescue team arrives. Emergency supplies of oxygen should be stored inside the mines so trapped miners can survive until rescue teams arrive.

Second, there is no widely used technology to communicate with miners who are trapped underground. The technology exists, but not enough coal mines take advantage of it. There must be a mandate that communications technology be installed without delay.

Third, rescue teams, while incredibly brave, are not always familiar with a particular coal mine. In an emergency, those teams should know every turn and every tunnel of the mine involved. Time is a precious commodity during a rescue. A working knowledge of a mine where an explosion has occurred is vitally important to any rescue effort.

I am proud to report that the Senate has approved

legislation providing solutions to these widely accepted facts learned from this year's deadly mining incidents. The Senate legislation, called the MINER Act, will help to save lives and prevent future mine tragedies.

The MINER Act, which Senator Rockefeller and I helped to write, would require coal operators to submit plans detailing their mines' use of the most current communications, tracking, and breathing apparatus technologies. The Act would require coal mines to have continuously updated emergency response plans and two experienced rescue teams capable of a one-hour response time. The legislation toughens penalties for mine safety violations and gives the federal government the power to shut down a mine that fails to follow the safety laws.

The MINER Act is not the only step that Congress should take to improve mine safety, but it is a major step forward. This legislation would save more coal mining families the heartache of losing their loved ones in a mining disaster. We have a moral obligation to do everything we can to put an end to the safety crises in our nation's mines. The MINER Act is the best hope to begin fixing obvious problems that, if left unaddressed, would continue to cost lives.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Forward Thinking for National Disasters

Nearly a year has passed since Hurricane Katrina wrought massive destruction throughout the Gulf Coast region. The common refrain heard in the days after the disaster and throughout the months of rescue and recovery has been, "We weren't prepared." There is no mistaking that New Orleans, Louisiana, surrounding states, and the federal government were not prepared to handle an emergency of such magnitude, and millions of Americans have paid the price.

West Virginia knows all too well the damage that flood waters can do, but we don't give much thought to the impact that a different kind of emergency could have on our state. Since September 11, I have been concerned that if another terrorist attack were to strike Washington, D.C., it would be a flood of people, not water, that would rush into West Virginia.

Potentially millions of people could clog the highways leading into our state. They could turn to West Virginia communities for food and water, shelter, and medical services. The result might be a monumental challenge for West Virginia's infrastructure and emergency services. We need to plan now to be ready to handle such a challenge.

I am proud to report that West Virginia's preparations for such an emergency

situation have received a major boost. The state will receive nearly \$13.3 million in federal homeland security funds for this year. Of that total, more than \$7.5 million will support efforts to protect citizens in an emergency, including mass evacuation preparations. Another \$5.5 million will assist state and local law enforcement agencies to prevent and respond to potential acts of terrorism.

The West Virginia evacuation plans should include "preset" services and provisions that could help to speed people westward from the East Coast. Items like gasoline, medical supplies, beds, food, water, and other essential commodities would help facilitate a safer, more efficient evacuation.

Last fall, I authored a key provision of law that paved the way for states and local governments across the country to develop multi-state, multi-jurisdictional emergency evacuation plans. I have worked closely with Governor Joe Manchin and the U.S. Department of Homeland Security in a combined mission to develop and strengthen West Virginia's mass evacuation plans.

In a post-September 11 world, we can hope for the best, but we must plan for the worst. By taking the right steps now, West Virginia will be ready to answer the call if disaster strikes.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Happy Birthday, West Virginia!

Certain momentous occasions are well-known simply by their place on the calendar. December 31, for example, is readily recognized as New Year's Eve, while January 1 is known to all as New Year's Day. July 4 is Independence Day. And, in the Mountain State, we all know one other calendar date: June 20, West Virginia Day!

West Virginia is a place of incredible natural beauty. When God created the Earth, He blessed West Virginia with an abundance of natural resources, unparalleled mountain views, cool green forests, sparkling lakes and rivers, and awe-inspiring geological wonders. No man-made park could ever compare with the natural glory so abundant in West Virginia.

But as beautiful as God's handiwork may be, it pales in comparison to the grace and the goodness that He has instilled in our people.

One does not define West Virginia by its boundaries on a map. West Virginia is defined by her people. West Virginians are unique, holding fast to our faith in God and love of country, our devotion to family and our caring for neighbors. Having grown up in the coalfields of West Virginia and devoted my public service to building a better

future for the families in our state, I am immensely proud of the people of West Virginia! We've been laughed at and called hillbillies. We've been ridiculed and lampooned. But, at each obstacle, the spirit of West Virginia shines through, and our people rise to the top.

In the coming years, there are many challenges awaiting us. We must continue to develop new jobs and new opportunities for our families. We must find new ways to bring doctors closer to their patients, so that people don't have to travel such long distances for basic medical care. Our classrooms must continue to improve -- a job that requires the efforts of our teachers, students, parents, and lawmakers alike. But problems are for solving. Working together, we can meet any challenge; we can overcome any obstacle.

As we celebrate West Virginia's 143rd birthday, we should pause to thank our Creator for His many blessings -- for the natural beauty around us and for the fellowship of our friends and neighbors. We should take pride in our heritage and embrace the opportunities ahead. Always keep in mind: "Montani semper liberi" -- Mountaineers are always free!

Happy birthday, West Virginia!

“In God We Trust”: A Motto For All Time

Money is an important part of our daily lives, but the bills and coins hold meaning beyond their monetary value. Each is inscribed with a simple, yet powerful, phrase that has helped to shape and guide the nation from its beginning. It is the national motto, “In God We Trust,” and it is celebrating its 50th anniversary this year.

The phrase began influencing national life long before its official adoption. The sentiment was central to the hopes and vision of the Founding Fathers. They relied on an abiding faith in the Creator for strength during the most difficult times in their struggle for freedom.

In the early days of the American Republic, while declaring independence from Great Britain, the Framers asserted: “We hold these Truths to be self-evident, that all Men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness.”

The signers of the Declaration of Independence further declared: “And for the support of this Declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our Lives, our Fortunes and our sacred Honor.”

Francis Scott Key captured this same sentiment of reliance on Divine Providence in song in 1814. The original version of “The Star-Spangled Banner,” later adopted as the National Anthem, states: “Praise the Pow’r that hath made and preserv’d us as a nation! Then conquer we must, when our cause it is just, And this be our motto: ‘In God is our trust!’”

In 1955, the phrase was designated to be inscribed on all currency and coins of the United States, and, in 1956, President Dwight D. Eisenhower signed a joint resolution of Congress declaring “In God We Trust” to be the nation’s official motto. It has played a fundamental role in America’s story since its designation.

As the only current Member of Congress who voted to establish our national motto, I was proud to introduce legislation in the Senate recently to commemorate the Golden Anniversary of “In God We Trust” and to reaffirm the motto’s place in our national life.

More than 50 years have passed since Congress officially endorsed the motto, but the words still ring as true today. Moral principles have shaped what America is today, and they should guide what America will be in the days and years to come.

A Bittersweet Victory for Mine Safety

In February, just a few weeks after the tragic events at the Sago mine in Upshur County and the Alma Aracoma mine in Logan County, the families of the men who lost their lives in those mines came to the U.S. Capitol. They carried a simple message with them: make our coal mines safer.

In the days since, the West Virginia Congressional Delegation has made that mission our top priority. We introduced legislation aimed at fixing the worst problems evidenced at Sago and Alma. Our bill targeted emergency oxygen supplies and communications, better trained rescue teams, a more rapid response, and tougher enforcement of the safety laws on the books.

That West Virginia bill, I am proud to report, served as the foundation for what is known as the MINER Act -- the first major mine safety legislation passed by the Congress and signed into law since 1977. This act, which Senator Rockefeller and I helped to write, passed the Senate unanimously and the House of Representatives with an overwhelming vote. The bottom line is that this new law will save lives. It will protect coal miners. It will mean tougher mine safety, better enforcement, and faster rescue in case

tragedy strikes.

I went to the White House to stand with President Bush as he signed the MINER Act into law. Families of our West Virginia coal miners also were there, holding pictures of their loved ones killed on the job. And Randal McCloy, Jr., was there with his wife, Anna. His ability to survive the Sago explosion, with the support of the men who were trapped underground with him, and his incredible journey toward recovery are an inspiration.

That trip to the White House was a bittersweet one. All of us were proud of the progress that this new law makes for mine safety, but saddened that it has taken the deaths of 19 of our coal miners to put these commonsense safety improvements into law.

The MINER Act is a good step forward for mine safety. But it is not the only step that we should take. Many new technologies and new safety ideas have been put into place in mining in Canada, Australia, and many other countries around the world. The United States Congress has clearly said that it is time for America to join the 21st century, and put the safety of our coal miners first and foremost.

Vacationing Close to Home

As the calendar flips to July, many West Virginians are making plans for family summer vacations. Some may be foregoing faraway travel plans in the face of rising gas prices and costly airline tickets. I encourage all families to consider the many exciting destinations close to home.

Picturesque state parks saturate the West Virginia landscape. Visits to these natural treasures can give people of all ages a new appreciation for the beauty of our Mountain State. No artificial theme park could ever compare with the natural wonders so abundant in West Virginia.

What locals and visitors alike find when they visit our state parks is an array of breath-taking scenery, outdoor activities, stunning geological formations, and history. These parks offer some of the best, most family-friendly, recreational activities in the country complete with swimming, boating, and white-water rafting; horseback riding and golfing; camping, hiking, and biking.

West Virginia State Parks also offer educational opportunities. Many parks contain momentous historical sites that speak to the different stages in the development of America. These areas teach about colonial America, Revolutionary America, Civil

War America, and industrial America.

Our first President, George Washington, was one of many famous early Americans who made regular journeys to what is now Berkeley Springs State Park. They drank and bathed in the warm mineral waters that flow from the springs at a constant temperature of 74.3 degrees. Visitors can still see President Washington's personal outdoor bath tub. Perhaps the most important lesson children will learn at the state parks is that history is both alive and fascinating.

There is so much to see and do in West Virginia, and there is no better place to enjoy a summer vacation. Stay in a picturesque lodge or secluded cabin, or, even better, pitch a tent or haul a trailer into the parks' campgrounds. Set up camp and cook dinner over a Coleman stove. Go fishing in a nearby watering hole. Gather the family around the campfire at night to tell stories and roast marshmallows. Spread a sleeping bag and fall asleep under the stars while pondering the Almighty's infinite majesty, as you thank Him for creating such a magnificent place.

In just a few days at one of our state parks, families can accumulate a lifetime of memories and learn why West Virginia really is "Almost Heaven!"

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protect Chemical Facilities, Local Communities

Chemical plants and distribution facilities dot West Virginia. Throughout the state, there are 73 chemical manufacturing plants and 100 chemical distribution plants. Many are built along the banks of the Kanawha and Ohio rivers. It does not take great imagination to determine that these facilities are potential targets for terrorist attack. Such an attack could lead to devastating loss of human life and damage to the local and national economies. The same can be said for facilities in New Jersey, New York, Texas, Michigan, California, Pennsylvania, and many other states.

That is why it is so important that we protect these key facilities and the communities that surround them.

Unfortunately, the federal Department of Homeland Security has let chemical plant protections slide to the back burner.

Last year, at my request, the Government Accountability Office (GAO) took a hard look at chemical plant safeguards, and concluded that, for 93 percent of the chemical industry, it is uncertain whether facilities are improving security at all. Only 1,100 of the 15,000 chemical facilities in the country are known to adhere to voluntary industry security procedures.

The Environmental Protection Agency reports that 123 chemical plants

located throughout the nation could each potentially expose more than a million people if a chemical release occurred.

We cannot ignore these facts and simply hope that nothing bad will happen. We have to take action.

I'm proud to report that the Senate has approved a proposal that I authored to spur community and chemical plant protections. My proposal instructs the Department of Homeland Security to work directly with chemical companies on ways to ensure that their facilities are better protected from potential terrorist attack.

More than three years ago, the GAO urged the Department of Homeland Security and the U.S. Environmental Protection Agency to develop a comprehensive strategy for protecting chemical plants. Yet, that strategy remains unfinished. My amendment would require the Department of Homeland Security to get to work to protect these vulnerable sites.

All of us hope that an attack against a chemical plant will never happen. But hope alone won't prevent disaster. We must take steps now to tighten security in the chemical industry and to protect the lives of the people living in the communities near our plants. Anything less would jeopardize millions of lives and place our state and our country at risk.

Visit the West Virginia State Fair!

There is nothing like the State Fair at Lewisburg. Each year, the communities of West Virginia meet at the fairgrounds in Greenbrier County for a celebration of our heritage and look with hope toward the future, for contests and music, for food and friends. This year's State Fair -- the 82nd in West Virginia history -- will run from August 11 through August 20. The fairground gates open at 8 a.m. each day, with activities and exhibits happening all day long and far into the evening.

I have always enjoyed the State Fair. In fact, this year, I plan to be there for the Fair's Opening Day. I hope that visitors to the Fair will stop by and say hello. Members of my staff will have a booth set up on Friday, August 11, and Saturday, August 12. They will be on hand to say hello and listen to concerns that people may have about the federal government. This is the latest stop in our Mobile Office operation, an operation that has had members of my staff traveling hundreds of miles each year to visit communities throughout the state. This outreach is a key part of my efforts to respond to the needs of West Virginians. After all, I have

no more important role as a United States Senator than standing up for the people whom I represent.

I like to try to cut through red tape and help West Virginians with problems or concerns that they may have about the federal government. By bringing my staff to the local community, I hope that we can answer questions and provide the assistance that people need. Whether at the State Fair in August or on another stop throughout the state, the Byrd Mobile Office team is ready to lend a hand.

To learn more about the services that I offer through my federal office, I urge that people visit my website at <http://byrd.senate.gov>. To learn more about the State Fair's daily schedule, accommodations, directions, and entertainment, check out the Fair's website at <http://www.wvstatefair.com>.

I hope that West Virginians will enjoy this year's State Fair at Lewisburg. It is a wonderful time to spend with family and friends. And plan to visit my Mobile Office, whether at the Fair or when we make a stop near your hometown. I look forward to hearing from you.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Use Our History to Build Our Future

West Virginia has helped to shape America's history. George Washington and some of our nation's Founding Fathers once lived in what is today our Eastern Panhandle. Lewis and Clark stopped in Wellsburg, Wheeling, Parkersburg, and Belleville preparing for their 1803 expedition to find a water route from the east to the Pacific Ocean. Barbour County was home to the Civil War's first land battle. Harpers Ferry was pivotal to the end of slavery. The list of historical events which occurred in our state could stretch for many pages.

Today, many communities throughout the state recognize that our past can play a central role in our future. Recently, I had the opportunity to visit one such effort -- a historical restoration project in Berkeley County.

A few years ago, local residents banded together to rehabilitate the Martinsburg Roundhouse. The Roundhouse gained national significance as the scene of the first U.S. labor strike and a target of a six-week-long siege by Confederate troops, led by "Stonewall" Jackson. Because of the importance of the railroad to supplying troops, Martinsburg and the Roundhouse were prime targets for both Union and Confederate forces, with control of the city passing back and forth between the two more than 50 times. The Roundhouse remained in use until 1988, when it finally felt the inevitable

winds of change and its operations were transferred elsewhere.

But community members believed that this piece of yesterday could be a key piece of tomorrow. They went to work to restore this facility and, through their passion and perseverance, the rail station has been transformed into a centerpiece for community gatherings, tourism, and economic development.

I am proud to have helped the Roundhouse effort, just as I have helped many other similar projects throughout West Virginia, by obtaining nearly \$3.7 million in federal funds for its restoration. Those federal dollars helped to attract millions of additional dollars from a variety of sources. As a result, what once was a crumbling relic now has a bright, promising future.

A statue near the National Archives in Washington, D.C., carries the inscription, "Past is prologue." West Virginians, as we celebrate our glorious heritage, must also recommit our wholehearted strength and vision to the future of the state.

Like the residents of Martinsburg, we must embrace history and use it as our sword and shield to build community spirit, promote tourism, and encourage investments in new businesses. The lesson is simple: By heralding our past, a united West Virginia can build a brighter tomorrow.

WV Guard: Always at the Ready

It is no secret that the West Virginia National Guard is one of the best trained, most highly respected units in the country. These brave men and women make West Virginia proud in their service at home and abroad. They fly across the globe, serving in Iraq and Afghanistan, in Bosnia and Kosovo, in Panama, and at the U.S./Mexico border. They also save lives at home, battling floods, blizzards, and storms in communities across the state.

This exemplary record of service comes at a time when the nation's Army National Guard is in a dire readiness situation. Media reports state that more than two-thirds of the Army Guard's brigades throughout the country are not combat ready. The problems are largely caused by equipment shortfalls when units return from war and by delays in training new Guardsmen.

According to West Virginia's Adjutant General Allen Tackett, the Mountain State's Army Guard is at a readiness level that is 20 percent above the national average. West Virginia's units were among the first to deploy when the Iraq operation began, and they have successfully reconstituted units as they return. All the while, they are the first to respond when emergencies strike at home. No matter

the challenge, the West Virginia Guard is always ready to answer the call.

I have worked in the Senate to make sure that the West Virginia National Guard has the tools and training it needs to carry out its mission -- wherever that mission may be.

Later this month, we will dedicate the new Williamstown Army National Guard Readiness Center. The more than 40,000 square-foot facility replaced an outdated and undersized center and currently supports 28 full-time and 243 drilling Guard members. The center will enhance the West Virginia Guard's aviation training. Since 1999, I have been actively involved in helping the Williamstown center to secure a new fleet of five Blackhawk air ambulance helicopters.

These aircraft are specifically designed for emergency medical evacuations and are capable of transporting six acute care patients at one time. They are greatly improving the West Virginia Guard's ability to respond to state emergencies and to serve the national needs of the active Army.

I applaud the West Virginia National Guard for its unceasing commitment to our state and our country. They have always stood by us, and I will always stand by them.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Building Tomorrow's Jobs Today

West Virginia's economy has long been based in strong core industries -- industries like coal, steel, timber, and chemicals. I have worked hard to expand the opportunities for these industries, opening new doors for West Virginia products and standing up for the men and women who earn their living by the sweat of their brow. These industries employ tens of thousands of West Virginians and are central to the future of our state.

But none of us should ever be satisfied with "good enough." I believe that, in this global marketplace, West Virginia must have an innovative economy, one that relies on brain power as much as muscle. West Virginia, like the rest of the country, must adapt to the changing realities of the global marketplace and respond with creative approaches to job creation and growth.

Through my work for West Virginia in the Senate, I have planted the seeds of this innovation economy throughout the state. High-tech initiatives underway in Summers County are prime examples of this effort. Partnering with local officials and Congressman Nick Rahall, I worked to obtain \$3.6 million in federal funds, matched by state funding, to construct a new four-story, 72,000 square-foot high-tech office building. The new facility will

serve as a unique jobs engine, helping to grow the city's workforce and provide an economic shot in the arm for the entire region.

Already, high-tech companies are taking note of these efforts. A pair of companies -- ManTech Corporation and Information Manufacturing Corporation -- have recognized that West Virginia's mountains can be traversed with fiberoptic lines, and West Virginia's people are ready to take on the challenges of the new economy. These two companies are putting West Virginians to work, and their success can provide the blueprint for other high-tech companies looking to compete in the Mountain State.

I recently dedicated this new high-tech facility with Summers County residents. We have a great deal to celebrate -- a proud heritage and a bright future.

From powering the country's economy with clean-burning Mountain State coal, to advances in medicine, to new manufacturing techniques, to breakthrough computer technologies, the nation is in the midst of a technological revolution, and West Virginia is helping to shape it. The foundations that we build and the opportunities that we create certainly will provide benefits for us today. At the same time, these foundations will help to develop new industries and new jobs for many decades to come.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Turning Point in History

A century ago, a group of men and women gathered at Storer College in Harpers Ferry for the first meeting in America of the Niagara Movement. These courageous individuals were looking for ways to advance civil rights in the United States. They organized, against all odds, determined to change America.

Their meeting in Jefferson County in 1906 was a catalyst for progress in the United States -- progress that continues to this day. Storer College is now part of the Harpers Ferry National Historical Park. Thousands of people are visiting the park for the Niagara Movement's centennial celebration.

From the Niagara Movement emerged the National Association for the Advancement of Colored People (NAACP), which has been at the forefront of defending and supporting the causes and interests of African-Americans and others in their pursuit of equal protection under the law.

I look forward to the Niagara Movement's celebration at Harpers Ferry. I have worked with the leadership of the West Virginia NAACP and the Jefferson County NAACP to help

make this event a great success. I am proud to report that I was able to obtain \$300,000 to help fund the centennial celebration.

The courageous and determined men and women of the Niagara Movement made claim to their birthright as citizens of this country, and reminded the nation of their right to full citizenship as outlined in the 13th, 14th, and 15th amendments to the Constitution.

That commitment and determination are a testament to what a few individuals motivated by passion and faith can achieve. Mountains can be moved. Prejudice can be overcome, and the course of history can be changed.

Much progress has been made since the time of the Niagara Movement, but the journey must continue. The celebration at Harpers Ferry reminds us all of the brave struggle of many souls moved and inspired by the dream of freedom and justice for all. As we pay tribute to the resolute members of the Niagara Movement, let us remember the statement issued at the conclusion of the conference: "The battle we wage is not for ourselves alone, but for all true Americans."

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A New Way to Save for College

In West Virginia, education -- particularly a college education -- is the passport to progress. But the rising cost of college tuition is making this important stepping stone harder for working families to afford. The average cost of attending a four-year college, including tuition and room and board, has increased more than 500 percent in the last 30 years. Fortunately, there is a program available to help parents save for their children's education.

The West Virginia SMART 529 college savings plan allows individuals to open college savings accounts with as little as \$100. These investments grow free of federal tax and can be withdrawn tax-free, as long as the dollars are used for education purposes. This tax-free saving will help families to put away more money for college and to build a brighter future for their children.

The state program already has more than 76,000 accounts with a value of more than \$775 million. That is a major down payment for the future of these young West Virginians. In today's global economy and competitive job market, education is a major asset for a person starting a

business or looking for a job. By helping families to begin saving for college early, and not taxing the investments, the federal government can help to open the door to a college degree for tens of thousands more students.

I am proud to have co-sponsored legislation that provides federal tax benefits for families who use these college savings accounts. That legislation served as the foundation for a new law, extending the federal tax benefits for families who use these college savings accounts. As a result, more West Virginia families will be able to benefit from these college savings plans.

I could not afford to attend a four-year college. My college education is a patchwork of classes that I pieced together by taking courses at various schools in the state. I know attending college can be costly and difficult. I know it is a hardship and a sacrifice for students and parents. But it is so important. The time I devoted to my education changed my life.

It is my hope that the legislation I cosponsored will make it a little bit easier for West Virginians saving for college to achieve their dreams.

August 23, 2006

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Today's Science Is Tomorrow's Opportunity

The economy of our world, our country, and our state is changing. Science and technology are playing leading roles in the new global marketplace. A race is underway to see who will make the discoveries of the future and who will watch from the sidelines. One thing is for sure: West Virginia has joined the race -- and we have what it takes to win.

Many years ago, I saw the changes on the horizon and began to plan for West Virginia's role in the new economy. I threw my energies into building the critical infrastructure that is needed to support our state's traditional industries while also harnessing the emerging industries of the future. One such project at Marshall University has grown from a seedling idea to a state-of-the-art facility that will open its doors in coming days.

The new 144,000 square-foot Biotechnology Science Center is the largest capital improvement project in Marshall University's history. The innovative facility represents limitless possibilities for scientific research and economic development in the state. The discoveries that will be made by the scientists, researchers, doctors, and students at Marshall will advance science beyond the power of our imaginations and will create one of the future economic pillars of the Mountain State and the

nation.

The effort to construct a cutting-edge science facility and create a stronger foundation for a biotech industry in West Virginia began when former Marshall University President Wade Gilley visited my office in 1999. We talked about the potential for biotechnology in Marshall's future. After our meeting, I rolled up my sleeves to do the work in Congress to secure federal funding to help turn Marshall's dreams into reality. It was a real partnership for progress, and I was pleased to dedicate the new building recently with Marshall students, faculty, and community leaders.

We have the talent right here in West Virginia to take advantage of the biotechnology wave. The state's colleges and universities, strengthened by the efforts at Marshall, are producing more graduates with greater skills in various scientific fields. We all share a goal to provide educational opportunities that will allow graduates to find good paying jobs in West Virginia, rather than having to look out of state.

The new biotechnology center will open exciting doors to educational advancements and economic growth for our state for years to come. I will continue to work every day on initiatives that build for the future of West Virginia and create new opportunities for our people.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

One Lesson of a Tragic Anniversary

Five years ago, on September 11, the sun was shining in New York City and over the Pentagon. People were going about their day, not knowing that, in a matter of minutes, thousands of lives would be lost and our country would be changed forever.

That day, more than any other, reinforced in our minds the bravery of our first responders. That morning crystallized for us the quiet courage of our emergency personnel. These men and women are always ready to place their lives on the line. They hold constant watch over us, always ready to respond.

Amazingly, too many people in Washington have not learned a key lesson of 9-11: We must give our first responders the tools and money they need to do their jobs. But instead of making sure that our police officers and firefighters receive the training and equipment that they need, the White House has put forward budget after budget that shortchanges our emergency response teams.

The President, in his latest budget plan, proposed to cut firefighter equipment and training grants by 46 percent and to eliminate the program to hire more firefighters. He also wanted to cut grants to state and local law enforcement by more than \$1 billion. Neither

cut made sense to me, and I went to work to make sure that our emergency response teams did not feel the pain of the budget axe. I am proud to report that we were able to defeat every dollar in firefighter and law enforcement cuts that the White House proposed.

I will continue my efforts for our police officers and firefighters. Just last year, I worked to provide more than \$10 million for West Virginia's local law enforcement and emergency response teams. Those dollars are at work today, protecting communities and saving lives.

America cannot afford to shortchange our communities' safety. The lives of thousands more people could be placed in jeopardy with another terrorist attack or natural disaster. The Congress and the White House share a responsibility to invest in our police departments and fire departments and rescue teams and hospitals. Without that critical network in place, trained and equipped, any disaster could be magnified with confusion, chaos, and an even greater loss of life.

I will continue to do all that I can to invest in our community protections. Our police officers, firefighters, and rescue squads have always stood for us, and I will always stand for them.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Meeting the Needs of Injured U.S. Troops

For many of the troops who serve in the wars in Iraq and Afghanistan, their sacrifices do not end with their deployments. Those who are injured in battle often return home in need of specialized medical care. Their recoveries are many times long, difficult, and have lasting effects on the victims and their families. These brave men and women risk their lives for their country, and we owe them nothing short of the best medical care available.

The weapons of choice in today's wars have changed and so have the injuries. Our forces serving in Iraq and Afghanistan are under attack by grenades, bombs, land mines, and artillery shells. These explosive devices have made brain injuries the "signature wound" of the war in Iraq, and the health care we provide to returning troops must adapt.

That is why I have championed funding in the Senate for the Defense and Veterans Brain Injury Center (DVBIC) at the Walter Reed Army Medical Center in Washington, D.C. The center provides medical evaluation, treatment, and long-term care for active duty military members, their dependents, and veterans with traumatic brain injuries.

The DVBIC estimates that approximately one in ten service members in Iraq,

and two in ten troops on the front lines, return from combat tours with concussions. As of March 31, 2006, the Pentagon reported about 1,200 traumatic brain injuries as a result of the wars in Iraq and Afghanistan. Experts say the real total is much higher because internal head injuries -- in which there may be no obvious wound -- often go undiagnosed.

The DVBIC's leaders asked Congress for additional funding for the coming year, due to the growing number of patients with brain injuries, the cost of long-term care, and the need for research to improve treatment and prevention. Yet, the center was at risk of having its budget cut by 50 percent.

The facility is critically important for rehabilitating injured servicemembers, and I could not let its funding languish. I went to work on legislation that would fully fund the DVBIC for the coming year. The funds were recently approved by the Senate and are now one step closer to becoming law.

America's fighting forces put their lives on the line when they report for duty. They have earned the respect of their nation as well as access to high-quality medical care for as long as they need it. I will continue to work to ensure that our troops receive nothing less.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Marking the Lessons of Constitution Day

Our Constitution is the foundation of our freedoms. Just a few pages, written on parchment, established for all time the direction and structure of these United States. The first ten amendments, known as the Bill of Rights, guarantee our freedoms: freedom of speech; freedom of religion; the right to assemble; the right to petition the government; the right to bear arms; and the right to vote. Our liberties are protected by that Constitution, not only by the Bill of Rights but also by the separation of powers and the checks and balances among the three equal branches of our government.

But a great Republic cannot sustain itself unless its citizens participate actively in their own government. To do that our citizens must be familiar with the Constitution and the intent of the Framers who wrote it. That is why, two years ago, I included a provision in U.S. law which designates September 17 of each year as Constitution Day, so that, on or near this day, all Americans can learn more about the Constitution and reflect upon its importance. Once again this year,

schools in West Virginia and throughout our country offered special Constitution Day programs. And citizens from all walks of life stopped to think about the role of the Constitution in their daily lives.

Each of us should give thanks that on September 17, 1787, our forefathers signed their names to the new Constitution and launched mankind's most remarkable experiment in self-governance.

Constitution Day should remind us all that we the people are the ultimate guardians of our freedoms.

Unless we understand our birthright and guard it vigorously, we risk losing the gift of the Framers. Our Constitution continues to inspire millions around the globe. It has survived the stresses and strains of 219 years of incredible challenge and change.

Our Constitution's Framers were willing to risk everything they owned, even their own lives, to give us the great treasure that is our nation and our form of government. Each of us has an obligation to hand that treasure on to future generations intact and strong and secure.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Voluntary School Prayer Gaining Ground

Earlier this year, I introduced a Constitutional amendment to clear the way for voluntary prayer in schools. I am proud to report that my effort is gaining the support of a growing number of Senators, including key members of the Senate Republican Leadership team.

My efforts on school prayer go back many years. Like most West Virginians, I think that court decisions have gone way too far when they have acted to prevent any sort of religious expression in public settings. Prayer and faith in the Creator have helped to shape this nation from its earliest days. Our Founding Fathers relied on the Creator's strength to carry them through the most difficult hours in the battle for independence. But despite the clear role of prayer and faith in our nation, too many courts have tried to gag citizens who want to voluntarily express their beliefs.

In ruling after ruling, the courts have been moving perilously close to prohibiting the free exercise of religion in America. Americans do not want to force religion on anyone. But neither do we want religious censorship. Ours is a religious nation, and we have been so throughout our history.

That is why I am urging the Congress to approve my Constitutional amendment to allow voluntary school

prayer. The First Amendment to the Constitution states: "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; ..." I believe that court rulings have been significantly one sided -- with far more weight being given to the first part of that clause ("Congress shall make no law respecting an establishment of religion") than to the second part ("or prohibiting the free exercise thereof").

A growing number of Senators have signed up to support my proposal. My West Virginia colleague in the Senate, Jay Rockefeller, is a cosponsor of the amendment. Other Senators, including Thad Cochran and Trent Lott, both of Mississippi, Saxby Chambliss of Georgia, James Inhofe of Oklahoma, and Elizabeth Dole of North Carolina are also working with me to win Senate approval of this initiative.

Faith has long been a guiding principle in our country and, we need to remember its role in our history and development. In the coming weeks, I hope that more Senators will join me in my effort to restore a voluntary recognition of a higher power to the daily lives of our children, and that this effort will begin to restore some balance to the role of faith in our nation's public life.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Standing Strong for Social Security

In 1935, when President Franklin Roosevelt signed the law creating the Social Security system, he stated that Social Security would "give some measure of protection to the average citizen and to his family against the loss of a job and against poverty-ridden old age." For more than 70 years, Social Security has been the ultimate financial protection for the American people. But now, there is another threat to the long-term strength of the traditional Social Security program.

Earlier this year, the White House included a proposal in its budget to divert \$700 billion in Social Security funds for the President's scheme. That plan was met with widespread opposition by the American people. Unfortunately, the White House is not listening to the people. In recent speeches and news interviews, President Bush revealed his plan to take another run at privatizing Social Security -- but not until after the November elections. The White House seems committed to gambling Social Security protection for our elderly on the whims of Wall Street.

Let me be clear: I will fight to protect Social Security and not allow it to be jeopardized on some risky privatization scheme. There is little good that can come from placing our seniors'

Social Security benefits at the mercy of the stock market. Social Security should not become some Wall Street baron's play thing. We have to work to strengthen Social Security for this generation and generations to come, and not place that safety net at risk.

Recently, with Senator Rockefeller, I signed the "Golden Promise" petition -- a pledge to fight to protect Social Security and not risk it with dangerous, politically motivated schemes. Hundreds of people gathered at the Capitol to launch the petition drive, all of us committed to the effort to protect Social Security. To join the effort and sign the petition, visit www.americansunitedforchange.org.

More than 400,000 West Virginians rely on the Social Security program for assistance. For many of these people, Social Security is their sole source of income. That is why we cannot allow Social Security to be jeopardized. The stakes are simply too high for this White House gamble.

Social Security is a gift from the World War II Generation to this and every coming generation. It was forged from their suffering and resiliency during the Great Depression, and the task now falls to us to preserve that gift for generations to come.

Good News in the Fight Against Cancer

Each October, the nation marks Breast Cancer Awareness Month -- a time to take note of our progress in the fight against cancer and to celebrate the progress that we are making together.

Rest assured, there is progress to celebrate. Just last month, the National Cancer Institute (NCI) announced that, overall, cancer mortality in West Virginia is declining faster than the national average. That's the good news. But the bad news is that the Mountain State's cancer rate still exceeds the U.S. average.

In West Virginia, according to the recent NCI data, cancer deaths dropped 1.5 percent per year from 1999-2003, the latest five-year period for which full data are available. It's a small drop, but an important one. That drop represents lives which have been saved.

While this is good news, we still have considerable work ahead. The NCI reported that approximately 4,700 Mountain State residents continue to lose their battles against cancer each year. Detailed statistical information on cancer across the country and in West Virginia -- including information about each of our 55 counties -- is available online at <http://www.state-cancerprofiles.cancer.gov>.

Throughout the state,

experts are working to raise people's awareness to the warning signs of cancer and to prevent the illness from ever striking. The more that people know and the better the information that is in their hands, the more effective the prevention will be.

One of our state's best anti-cancer efforts is the work at West Virginia University's Mary Babb Randolph Cancer Center, attacking the disease on all fronts: treating cancer patients with cutting-edge, comprehensive care; finding new cancer cases in their early, treatable forms; and researching a cancer cure. One of the key priorities at the cancer center is its broad-based research program in breast cancer. The WVU center is making an impact statewide in cancer detection and prevention and in helping to save lives.

Cancer is a devastating disease that has touched the lives of nearly every West Virginian. The good news is that West Virginia's cancer rate is falling. But we cannot stop with just this sign of progress. As individuals, we must live healthier lives and make preventive care a top priority. As a state and a nation, we must continue to invest in life-saving research. We can find the cures to these diseases, and the answers may be found right here in West Virginia.

Stopping Domestic Violence Before it Strikes

This fall, news reports have carried the stories of too many families in West Virginia suffering terrible incidents of domestic violence. Ironically, October is Domestic Violence Awareness Month. A spate of recent beatings and murder-suicides has made us painfully aware of the devastation that results when family members turn against one another in anger.

Domestic violence is a scourge we cannot ignore. It is reprehensible in every respect, and we must do all that we can to stop it. Since September, horrific incidents of domestic violence have occurred in Berkeley, Cabell, Kanawha, Putnam, and Jefferson counties. By mid-October, the third murder-suicide in two months was reported in the Eastern Panhandle.

These tragic events have resulted in lost lives, shattered families, and anguish for all involved. They serve as painful reminders that the consequences of domestic violence are devastating, not only for the adults who are killed or injured, but also for the children who witness them.

We must do more to stop domestic violence before it happens. I cosponsored legislation to reauthorize the Violence Against Women Act (VAWA), which was signed into law early this year. Despite this success, the Administration's budget for next year cuts millions from federal efforts to enforce domestic

violence laws.

There is no conscientious reason to support cuts that place lives at risk. On the Appropriations Committee, I worked with Democratic and Republican Senators to reject those budget cuts and provide an additional \$43 million for family protection initiatives in West Virginia and across the country. I hope that the entire Senate soon will approve our effort, because victims of domestic violence should not also be the victims of ill-conceived budget cuts.

We must all work harder to anticipate and halt domestic violence. If you or anyone you know fears imminent harm, call the local police or 911. To try and prevent a violent incident, call the National Domestic Violence Hotline at 1-800-799-SAFE, 24 hours-a-day. Or telephone the statewide office of the West Virginia Domestic Violence Coalition at 304-965-3552. Calling ensures safety, since all information sent over the Internet -- including e-mail -- can be intercepted by third parties. To obtain contact information for local domestic violence programs, visit www.wvcadv.org/member_programs.htm.

Every few seconds, another woman in America is battered, usually by a boyfriend or husband. Spousal crime is one of the most unreported crimes in the country. We cannot simply hope that it will end. We must take action.

Progress to Report on Corridor H

The paths through West Virginia's Potomac Highlands are, too often, a dangerous maze of two-lane roads, winding dizzily around the region's mountains. As a result, job opportunities have been slow to find the region while traffic accidents and deaths are far too common. That's why completing Corridor H will make such a difference in people's lives.

Already, in the sections of Corridor H that are open to traffic, cars and trucks are able to navigate the mountains more safely and more quickly. Fatalities are down and opportunities are growing. But the promise of Corridor H is still elusive for the people who have been waiting and waiting for the road to be built.

The legal hurdles to the remaining sections of Corridor H have largely been overcome. Now, the focus turns to funding. It's no secret that building a mile of highway in West Virginia is far more expensive than building that same mile in flat states like Kansas or Iowa. Projects like Corridor H are incredibly expensive, and acquiring the funds takes time.

I am proud to report that, already, I have won Congressional approval for

more than \$656 million for Corridor H design and construction -- and more dollars are on the way. Last summer, Senator Rockefeller and I partnered on federal legislation to ensure that West Virginia would receive \$432.5 million in Corridor highway construction funds. And, when the Senate returns to work in November, I shall press for the approval of separate legislation that would direct another \$20 million toward Corridor H, as well as other construction dollars to key highway projects throughout West Virginia.

Those dollars are translating into real progress. This summer, construction began on the very first segment of Corridor H in Grant County, as crews started work on a section of highway that will stretch from Moorefield to Forman. That's solid progress, and more work is on the way.

More than 40 years ago, in 1965, Congress promised the people of Appalachia that it would build a network of roads to link the region to interstate highways and bring economic opportunities into the hills and hollows. That is a promise that needs to be kept. It is time to finish Corridor H.

By U.S. Senator Robert C. Byrd

FBI Mission Growing in WV

Since the FBI opened in Harrison County in 1999, the facility's mission has grown and adapted as crime-fighting priorities have changed. West Virginians are proud of the Clarksburg complex and its evolving role in national law enforcement efforts. The agency's Mountain State presence is helping to identify criminals and terrorists alike and to ensure the safety of all Americans.

When the Senate gets back to work after the November election, I will push for more than \$449 million in funds for the FBI in Harrison County. That is a \$50 million boost over the facility's current funding -- an increase that will help the agency continue to expand its mission.

We all know that the Clarksburg FBI complex is a key tool in keeping criminals off the streets. The facility provides critical support for state and local law enforcement agencies, helping them to identify suspected criminals and analyze evidence in crime scene investigations. But perhaps not as well known is the fact that the facility also plays a growing role in America's counterterrorism efforts.

The fingerprint database in Clarksburg includes information on some 40,000 known or suspected terrorists as part of approximately 47 million sets of finger-

prints and corresponding criminal history information stored electronically at the site. Since the FBI fingerprint system became operational in Clarksburg, more than 130 million fingerprint submissions have been processed.

The FBI funding that I will push in coming months will allow the agency to keep ahead of the complex network of criminal and terrorist activities. These dangerous individuals continually change their tactics, and the country's defenses must always be ready to adapt. This new funding builds on the more than \$1 billion that I have obtained for the Harrison County FBI's computer and high-tech infrastructure.

The Clarksburg FBI complex is a prime example of Mountain State resources and top-notch manpower helping to meet national security and law enforcement challenges. More than 2,500 federal employees work at the Clarksburg FBI Complex, with another 1,000 contract personnel in West Virginia having jobs linked to the facility.

These men and women work each day to make the country safer. West Virginians should take great pride in the fact that our state is home to a world-class initiative that is helping the entire nation to realize a better, safer quality of life.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Ensuring Quality Care for Our Veterans

West Virginia's veterans have served in missions around the globe. Their bravery and courage have helped to keep our nation safe and strong. The gratitude that we express to our veterans sends a message to future generations of fighting men and women, as well as to our current veterans, and to the families of the fallen.

That is why I am honored, this Veterans Day, to participate in the dedication of the new West Virginia Veterans Nursing Home in Clarksburg. This \$26 million facility will provide long-term medical treatment for veterans from across the state and ensure that these men and women do not have to travel long distances, perhaps even out of state, for their care.

While this nursing facility will assist some of West Virginia's older veterans, we also must focus on providing the care that our new veterans require. Each day, as they come home from war, many of our new veterans have specialized medical needs.

Some of the most serious injuries facing these new veterans are those that cannot be seen from the outside. In fact, brain injuries have been called "the signature wound" of the Iraq war. Yet, the Defense Department's premier brain

trauma center faces funding cuts that jeopardize treatment of brain injuries for our troops.

I am not going to stand by and see these services placed at risk. I pressed the Senate to approve legislation so that these very challenging, very intricate injuries will receive the attention of experienced doctors and nurses. The Senate responded, directing \$19 million to the Defense and Veterans Brain Injury Center at the Walter Reed Army Medical Center in Washington, D.C.

The nature of combat in Iraq and Afghanistan, where roadside bombs are as prevalent as bullets, means that the medical care we provide must adapt to these new conditions. This funding will help to meet the need for better research and treatment of brain injuries.

This Veterans Day, and each day, we should take the time to say "thank you" to our veterans for putting their lives on the line for our freedom. To anyone willing to serve this country in the Armed Services, everlasting gratitude is theirs by right. In the Senate, I will continue to work for our veterans and for our troops in the field. These men and women did not flinch when called to duty, and we must never flinch from our support of them.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Leading America

On Election Day, the American public issued a strong message that they desire positive change. Partisans of either political party -- Republican or Democrat -- would do well to consider that message carefully.

A strong America does not require political party dominance. The foundation of our country's strength is not intemperate rhetoric or skillful opportunism.

I believe the message of this election is that "We the People" desire a return to many of the traditional values that have made our country great. The American people yearn for public servants with sober clarity of purpose.

The core of my political philosophy has always been to work hard, be honest, and fight for West Virginia's interests. It is a simple prescription, but it works.

In this recent election, the voting public felt that many basic principals had not been upheld by Congress.

Some voters questioned the responsibility of allowing an exploding deficit to add \$1.5 trillion to our national debt.

Many Americans were motivated by concern for an elective war that is costing \$8 billion each month, with growing casualties and no sign of progress in sight.

Other voters had questions about honesty. Is our government deliberately suppressing scientific

truths? Are they conducting matters openly and in good faith with the public? Are corporations creating federal policy? Are our leaders giving us the truth about Iraq?

Many people in rural states like West Virginia were troubled by economic and fiscal policies that slowed growth, concentrated wealth, expanded inequality, and increased our number of poor and uninsured.

Whatever an individual's motivation to go to the polls, the message to all who are elected to serve is the same: American government must return to the basic principals of fairness, honesty and accountability.

We must endeavor to replace partisanship with statesmanship.

As I prepare to embark upon an historic ninth term in the United States Senate, I have reflected on the great honor I have enjoyed in representing my fellow West Virginians for so many years.

I have always believed that the Golden Rule -- to "do unto others as you would have others do unto you" -- is more than good Scripture to live by. It is also good policy to govern by.

Be certain that, as I enter my ninth term representing the good people of the Mountain State, I will continue to work hard, be honest, and fight for West Virginia's interests.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Senior Citizens Deserve Affordable Medicines

Senior citizens in West Virginia and across the country right now are deciding whether to re-enroll in the Medicare prescription drug program -- often referred to as Medicare Part D. In West Virginia, more than 326,000 seniors currently participate in the Part D program, part of a group of 43 million Americans enrolled in the prescription coverage plan. While these men and women navigate the options available to them, many seniors also are asking why their prescriptions continue to cost so much. They want affordable medicines, not bureaucratic excuses.

I share that goal of making prescription medicines more affordable. One of the easiest ways for Medicare to help lower the costs for senior citizens is for the agency to use its bargaining power to negotiate directly with the drug companies. But, so far, the Bush Administration has resisted this commonsense idea. I cannot understand why.

Already, the Department of Veterans Affairs uses its bargaining leverage to negotiate cheaper prescription prices for America's 25 million veterans. Why not give the same benefit to the nation's senior citizens?

Pharmaceutical companies have raised prices on many top-selling medicines by six percent or more this

year -- double the overall inflation rate. Meanwhile, the majority of our senior citizens live on fixed incomes. As their prescription costs rise, they have to make difficult decisions: Do they pay for their medicines? Or do they pay for their food or housing or utilities? While that seems an extreme situation, it is, sadly, a reality facing too many seniors.

The benefit for individual seniors and for the federal government is clear. Independent studies have found that allowing Medicare to negotiate with the pharmaceutical industry could save the government and Medicare beneficiaries at least \$600 billion during the next seven years. That is a significant savings which could help to reduce the burden on American families.

In January, when the new session of Congress begins, I expect that this will be a key issue that we will face. Instead of clinging to Medicare's status quo, I hope that the Bush Administration will work with the Congress in a bipartisan effort to fix this broken prescription program. Medicare should be allowed to negotiate lower prices with the drug companies. Doing so would help to ease the financial burden facing so many of our senior citizens.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

It's Time to Tackle Poverty

Across the country, middle-class families are finding it hard to make ends meet. Often, both parents are holding down jobs just to pay the bills and save a little money for their children's college tuition. Economic experts in Washington are worried about increasing inflation, but these policy wonks are not nearly as anxious as are many West Virginia families.

These pressures are especially difficult for families struggling at minimum wage jobs. Right now, the federal minimum wage is \$5.15 an hour. Adjusted for inflation, the federal minimum wage is at its lowest level in 50 years.

Today, a person working full-time at the minimum wage earns \$10,712 annually. Nearly 15 million American workers and their families live on that income, even though it is almost \$6,000 below the poverty level for a family of three. We must raise the minimum wage, a step that the Republican White House has fought against for many years. It's time for the fighting to stop and help to arrive for working families.

When the new Congress begins in January, I will vote with what I hope will be a strong bipartisan coalition to raise the minimum wage to \$7.25 an hour. This would mean an additional \$4,400 a year for the individual minimum-wage

worker. That pay raise is a step ahead and a step away from poverty.

While Congress is considering this minimum wage hike, we also should look at ways to help businesses. Many minimum-wage earners are employed by entrepreneurs who spark our economy. If there are commonsense ways in which Congress can reduce the burden on small businesses, then we ought to help.

One step that Congress can take immediately is to approve tax credits for research and development efforts and investments in communities. There is broad bipartisan support for these tax incentives, and I hope that we can vote on these initiatives quickly and send them to the President to be signed into law.

We need to create a cycle of opportunity to replace the cycle of poverty that has engulfed too many working families. Developing incentives for businesses will create new jobs and benefits for working families. Lifting the wages of those same families will give them greater buying power at stores, a stronger ability to afford college tuition, and an overall better quality of life. We must balance our approach. If we do, we can work together not only to tackle poverty but also to build a better future for our state and nation.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Celebrating the True Christmas Story

From the time I was a boy, I have been enthralled with the Christmas season. Growing up in the Southern West Virginia coalfields, my family never had much in terms of material goods. But it never mattered how many packages there were to open on Christmas morning. What mattered was the love and the joy that we shared as a family. Christmas is not about store sales and the latest gift gadgets, but rather it is about salvation and faith.

Each year at this time, I reread the Christmas story in the Gospel of Luke to remember the words and, more importantly, the true meaning of this sacred season.

"All went to be taxed, every one into his own city. And Joseph also went up from Galilee, out of the city of Nazareth, into Judaea, unto the city of David, which is called Bethlehem; (because he was of the house and lineage of David:) to be taxed with Mary his espoused wife, being great with child.

"And so it was, that, while they were there, the days were accomplished that she should be delivered. And she brought forth her firstborn son, and wrapped him in swaddling clothes,

and laid him in a manger; because there was no room for them in the inn.

"And there were in the same country shepherds abiding in the field, keeping watch over their flock by night.

"And, lo, the angel of the Lord came upon them, and the glory of the Lord shone round about them: and they were sore afraid.

"And the angel said unto them, Fear not: for, behold, I bring you good tidings of great joy, which shall be to all people. For unto you is born this day in the city of David a Saviour, which is Christ the Lord. And this shall be a sign unto you; Ye shall find the babe wrapped in swaddling clothes, lying in a manger.

"And suddenly there was with the angel a multitude of the heavenly host praising God, and saying, Glory to God in the highest, and on earth peace, good will toward men."

I hope that this Christmas will be the kind of Christmas that I remember from my boyhood – a Christmas of family and faith and love, of hope and redemption. May all West Virginians find health and happiness this Christmas season, and joy throughout the coming New Year.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Keeping Our Promise to Fight AIDS

It has been more than 25 years since the Acquired Immune Deficiency Syndrome (AIDS) epidemic was fully understood. In that time, the disease has exacted a tremendous toll, both here in the United States and throughout the world. The facts are staggering. Roughly 40 million people around the world are living with HIV -- the virus that causes the deadly disease, AIDS -- and infection rates are rising dramatically in many regions. Approximately 14,000 people are infected every day, and more than 3 million people will die from AIDS this year alone.

West Virginia has not avoided this terrible disease. Today, nearly 700 West Virginians suffer from AIDS, while more than 650 people in our state have been infected with the HIV virus. These men and women hope and pray that scientists will soon find a cure and eradicate this scourge from the earth.

The international community recently marked World AIDS Day 2006 -- a day to raise awareness and call for a renewed commitment to improving HIV/AIDS treatment and prevention efforts. The theme for World AIDS Day was accountability and the

slogan was "Stop AIDS: Keep the Promise." This message serves as an important reminder that the United States should lead the way to help alleviate the misery suffered by millions of AIDS-inflicted families across the globe.

In 2003, President Bush proposed to spend \$15 billion over five years to fight HIV/AIDS in 15 severely affected countries. Despite that promise, the White House has consistently proposed cuts in America's contribution to the Global Fund to Fight AIDS, Tuberculosis, and Malaria. The Global Fund is the most important multilateral funding mechanism for combating AIDS and has bipartisan support in Congress. As a nation, we ought to live up to our full commitment to fight HIV/AIDS, at home and abroad.

The Gospel of Matthew teaches, "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me." Many of those who suffer from AIDS and HIV are the least among us. They are poor, and most live far away from what we would consider modern medical care. We have a moral obligation to help stop their suffering and find a cure for this terrible disease.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Building Hope from Tragedy

I remember November 14, 1970. I don't remember it because of the weather or some action in Congress. I remember it because it was on that day when one of the greatest tragedies to strike our state occurred. On that day, returning from North Carolina, a plane carrying 75 Marshall University football players, coaches, university staff, community members, and crew members crashed against a Kenova hillside. Not a single person survived.

Dozens of children lost a parent in the tragedy, and quite a few lost both. Wives, husbands, brothers and sisters, aunts, uncles and cousins were taken away from their families. I had a good friend on that airplane, as did so many others. For some people, it is still difficult to talk about that crash and those whose lives were lost. That crash stole the lives of so many young people, just starting on their life's journey, and so many of our friends and loved ones, but it did not destroy the strength of spirit in the hearts of West Virginians.

Today, that spirit is being celebrated with the release of the new film, "We Are Marshall." It is

not often that I watch movies, but I look forward to seeing this one. This film will showcase what I have always believed to be West Virginia's greatest strength; namely, the character and the courage of our people.

Some people around the country may find this story an unusual narrative for the holiday season -- a movie about a plane crash and a football team. But the story in "We Are Marshall" is far more than a sports film. It contains elements of abiding love, faith, and perseverance. The miraculous ascendance of the Marshall University community from the ashes of such disaster is inspirational. It may be a story rooted in tragedy, but it is a story worth remembering and sharing.

I hope that the film about this episode in West Virginia's history will somehow carry blessings of comfort and joy during this holiday season, especially for the families of those who were lost on that terrible day. The importance of their lives, and the significance of their loss, has never been forgotten in West Virginia. Now the world will know their story, and of the love, faith, and perseverance of those who carried on.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Forging a New Direction in Iraq

The news reports from Iraq are like a broken record, recounting the latest car bombings, insurgent attacks, and, sadly, injuries or deaths of American servicemembers. We honor all of the brave men and women serving in Iraq. However, despite their courageous efforts, our troops are caught in the crossfire of a civil war that the Bush Administration's political efforts have failed to stop. The time for staying the course is long over. We must have a new direction in Iraq.

Two recent events can help to change the course in Iraq. President Bush made the wise decision to replace Defense Secretary Donald Rumsfeld, and the Senate worked quickly to hold hearings and vote to confirm Robert Gates to fill that key position. Also, the bipartisan and well-respected Iraq Study Group delivered its report which makes clear that there is no magic wand to bring peace and stability to the volatile Middle East.

The report warns that a new approach is desperately needed, and time is running out. The status quo will serve only to widen the chasm between Iraq's warring factions, increase the dangers facing our troops, and risk greater instability throughout the Middle East. The report, coupled with a new Defense Secretary and a new Congressional major-

ity willing to ask the tough questions and hold leaders accountable, can help to spur a new direction in Iraq.

We must send a message to the world that the United States is willing to depart from the Administration's disastrous unilateral agenda that has served us so poorly. The American people and our troops in the field deserve honest leadership and fresh ideas at the Pentagon. They deserve leaders who will not just rubberstamp White House political plans, but who also will put the security of the country and the best interests of our troops at the top of their priority lists. And they deserve a Congress that will ask hard questions and demand truthful answers from those crafting our foreign and military policies.

Before the war began, there was no doubt as to the military outcome of the initial invasion of Iraq; our might was unquestioned. The doubt centered on the specious motives for war, and the repercussions that would follow. We have experienced those repercussions all too clearly, yet the White House still clings to its failed approaches. We must have a new direction for our mission in Iraq. Congress must rise to the challenge, set aside party labels, and press the White House to change its "stay the course" policy.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Lessons from the Leadership of Gerald R. Ford

The President of the United States is a powerful figure in this country. The president sets the tone for the nation. He can either challenge us to reach for our better angels, or take actions that serve to deeply divide the country. The president can either promote an agenda that brings the American people together, or he can press for policies that split us apart.

In the summer of 1974, the country was suffering. President Richard Nixon's actions in the Watergate affair only compounded the anger and distrust that people felt over the Vietnam War. The country was near a boiling point. President Nixon, on the verge of being impeached by the House of Representatives, resigned from office, elevating Gerald R. Ford -- a former Congressman from Michigan, a former Republican Leader in the House of Representatives, and the then Vice President of the United States -- to our country's highest Executive Office.

Many people across the country did not know President Ford very well. Few knew the quality of the man, as he had never run for office outside of his Congressional district. I knew Gerald Ford, having worked with him in the Congress, and I had confidence that he would be the kind of president that

we needed at that moment in time.

Gerald Ford brought to the presidency a humble tone very different from that of President Nixon. He worked to heal the nation after one of the most turbulent periods in our history. His actions were defined by his patriotism and his belief that America had to move forward instead of looking back. I have always been impressed with the quiet determination that President Ford showed in office. He understood that sharp partisanship does not serve the country well, and that political parties need to work together to forge solutions to the challenges we face.

That is a lesson that should be remembered today in Washington, D.C. Too often, more attention is paid to scoring political points than is paid to working for the American people.

As the new Congress begins, we have an opportunity to come together and put the people's priorities first. That means focusing on those issues that West Virginia families and families all across our country are most concerned about -- good jobs; access to better health care; improved classrooms. If we pull together, Democrats and Republicans, we can find the best solutions for America.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

New Congress Brings New Opportunities

As the new Congress begins, I will take every opportunity to refocus our government's attention on the issues that matter most to West Virginians. I know from countless conversations with constituents throughout the state that there is a strong desire for change.

The American people expect Members of Congress to work together. The nation is tired of divisive partisan rhetoric. There is a clear mandate for the 110th Congress to put more energy towards working to achieve practical results for the people, and less on hatching political victories.

Though the Democrats now hold a majority in the Senate by the thinnest of margins, I believe the shift in power presents Congress with an opportunity to undo the partisan gridlock that has impeded good government in recent years. The new Congress will work longer hours, and we are resolved to be more open and inclusive. We will dust off the traditions of dialogue, deliberation, and decorum that have been shelved in recent years.

I intend to reach out to my Republican colleagues on the Budget Committee for their input and assistance in restoring the fiscal balance and responsibility that Americans expect from their government.

The views of my colleagues across the political aisle on the Committee on Armed Services will be welcomed, respected, and carefully considered. It will take a bipartisan effort to untangle ourselves from Iraq and provide for our national security. It will take the collective political will of both parties to meet the challenges of providing adequate care and services for our new generation of veterans.

Though needed reforms in the earmarking process are being implemented until we return fiscal responsibility and accountability to the budget process, I will continue to be mindful of the needs of my home state of West Virginia as I return to the role of Chairman of the Committee on Appropriations.

Americans have given Congress a resounding mandate to set the country on a more stable, responsible path to domestic progress and prosperity, while strengthening national security. I am excited about the opportunities this new Congress presents, and optimistic about the future of this great nation.

Progress will require hard work and great personal commitment. I stand ready and eager to continue to serve the great state of West Virginia and this great nation.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Learning from Martin Luther King, Jr.

Each January, the nation pauses to remember the life and legacy of Dr. Martin Luther King, Jr. The lessons that he taught still carry relevance today, and, I expect, will do so for many years to come.

Dr. King's words ring so loudly today because they were based on principle and faith. He marched, preached, and spoke out for equality between races. He battled economic injustice. The Reverend Dr. King was a champion for people who had no voice, little influence, and even less opportunity. His faith in God gave him strength, conviction, and courage. He saw America as it was, and struggled to build America as we all dream it to be.

The ground has been broken on a memorial to Dr. King on the National Mall in Washington, D.C. I worked to guarantee \$10 million in federal funds for the memorial's construction. Those are dollars well-invested to honor a life well-lived. It is fitting that the country pay tribute to Dr. King at this memorial. But I hope that it is more than a tribute. Dr. King's legacy can still inspire us.

Today, we live in a nation still divided by racism and sharp partisanship. We have growing divides between the wealthy, the working class, and the poor. Too many people are being left behind in this 21st century America. Dr. King's words and actions are vibrant with energy and meaning.

"Let us rise up tonight with a greater readiness. Let us stand with a greater determination. And let us move on in these powerful days, these days of challenge to make America what it ought to be. We have an opportunity to make America a better nation." Dr. King spoke those words in 1968, and they offer hope today. We have that opportunity to bridge the gaps of distrust and discord that divide our people. Reaching that promised land will not be easy, but few things in life worth doing ever are.

As we remember the lessons from the life of Martin Luther King, Jr., let us stand with determination against injustice and inequality, and let us work together for a better tomorrow for all of America's children and the generations yet to come.

Building Better Fiscal Roads

There is no easy, painless way out of the fiscal chaos left behind by the outgoing Congress. In six years, we have seen a \$5 trillion surplus drained, and our government swamped in an ocean of red ink.

The outgoing Congressional leadership ended 2006 without completing work on a single appropriations bill that invests in our communities, provides medical care for veterans, fights crime, or works to make college more accessible.

As Chairman of the Senate Committee on Appropriations, it is my responsibility to help provide leadership out of this fiscal mayhem.

These are dire and fiscally challenging times. State and local governments need to know how and what the federal government is funding, and Congress needs time to consider and legislate fiscal issues more responsibly. Reforms to the earmarking process are long overdue.

It is important that West Virginians know that, while extraordinary measures are being taken to restore credibility and responsibility to Congressional spending discretion, critical development projects in the state are not being abandoned.

For example, Senator Rockefeller and I worked very hard to make sure that legislation was passed during the last session that will continue the advancement of

the state's beneficial high priority projects. The decision to disallow earmarks in the Fiscal 2007 appropriations bills will not impact previous funding for meritorious projects. Congressional earmarks will be eligible for consideration in the 2008 budget under the reformed process.

I am proud of the community, economic, and research projects I have been able to help bring to West Virginia over the years, and honored to publicly sponsor those bills. However, one of the flaws of the earmarking process is that it is difficult to evaluate earmarks that are not openly sponsored by an individual legislator. It is often these "unclaimed earmarks" that are involved in corruption scandals like those involving former Representative "Duke" Cunningham and lobbyist Jack Abramoff.

It is unavoidable that bringing long overdue reforms to the appropriations process will mean short term delays in some funding areas. However, promoting fiscal responsibility and consistency is absolutely necessary in order to restore confidence and promote transparency in funding decisions.

Soon, with new standards in place for Congressionally directed investments, we will be able to move West Virginia and the country forward with a more open, more accountable federal funding process.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Good Budget Requires Honesty and Conscience

An essential ingredient for restoring fiscal health and responsibility to government spending is honesty. Without a budget that reflects real-world numbers, it is difficult to implement real-world progress.

Regrettably, the budget that President Bush submitted to Congress recently does not provide the honest accounting necessary to make it a good roadmap for digging the nation out of debt.

As a result of an amendment that I authored this past summer, the White House is now required to include next year's anticipated war costs in Iraq and Afghanistan in the budget just presented. For too long, the Bush Administration has labored to screen the public from the huge costs of the war in Iraq and its devastating impact on domestic spending. Actual appropriations for the wars in Iraq and Afghanistan to date total nearly \$380 billion, and are expected to climb by about \$200 million each day.

As reflected by his budget, the cost of this President's war in Iraq is pushing more working families into poverty, restricting access to health care coverage, and starving important education initiatives.

While further extending bouquets of tax cuts to the wealthiest Americans, the President's budget

leaves many initiatives to die on the vine -- initiatives that help to provide education and health care and job creation for West Virginians.

In this budget, 300,000 children from low-income families would be dropped from child care assistance by 2010. The Head Start program, of which I have been a strong supporter, would be cut further, and a modest food security initiative that serves low-income elderly would be terminated.

Elementary and secondary education, pollution control and abatement, and health care research and training all lose billions of dollars while more of the fiscal burden for Medicaid is shifted onto state governments.

This strategy clearly intends to balance the budget on the backs of low-income and working families while larding the top one percent earners with more perks and privileges.

Fiddlesticks, I say.

Soon, I will write more about the President's shortchanging of other important areas like homeland security and rural initiatives. In the meantime, as the federal budget process moves forward, I will continue to fight for the principles of fairness and compassion that we share as West Virginians.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

More Vigilance for Mine Safety

A little more than a year ago, West Virginians were joined in sorrow after the deaths of 14 coal miners, first at the Sago mine in Upshur County and then, just a few weeks later, at the Aracoma mine in Logan County. At the state and federal level, West Virginia officials responded with legislation aimed at addressing the key issues in those tragedies: emergency supplies; communications; and stiffer enforcement of regulations already on the books.

I have been especially concerned with the work of the federal Mine Safety and Health Administration (MSHA). Under this White House and its Department of Labor, regulators have subjugated their obligation to protect the safety of miners to the goal of increased productivity in coal mines. White House budgets consistently starve safety efforts, resulting in a loss of mine inspectors and antiquated safety technologies in coal mines. That must change. In Congress, we will hold the Labor Department accountable for anything less than an unequivocal commitment to the lives and health of the men and women who work in the coal mines.

However, two miners' deaths in January in Southern West Virginia serve as a somber reminder that the

crisis in the coalfields is far from over. It is time to be innovative and proactive. It is time to stop simply coping with mine disasters after they happen. We must seek opportunities to prevent the dangers in the first place.

We must make special emergency refuge chambers available to miners underground. Additionally, wireless communications should be available to coal miners as soon as possible. If that means providing more funds to federal researchers to expedite the development of wireless communications and tracking, and prodding the industry to purchase and install that equipment, then that must be done.

The federal mine safety agency needs to redouble its efforts to hire at least 170 new mine inspectors. To this end, I was successful last summer in adding \$26 million to MSHA's budget. These dollars will save lives. More inspectors and tougher enforcement means that fewer violations can be swept aside with a wink and a nod.

We have a moral obligation to protect our coal miners. The new inspectors and tougher mine safety laws are good steps forward. But better mine safety will require continued vigilance and innovation. We owe nothing less to the men and women who bravely work in the nation's mines.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Bush Budget Shortchanges Homeland Security

Recently, I wrote in this space that the 2008 budget submitted by President Bush squeezes critical domestic programs in health and education, pushes more working families into poverty, and hammers deeper wedges between the poor, the middle class, and the mega-wealthy.

The budget proposes big cuts in Medicare and Medicaid, upon which many West Virginians depend. These cuts are being made so that the President can pursue a Quixotic scheme to pay for the war in Iraq while extending more tax cuts to the well-off without revenue increases. Anyone who can balance their checkbook can instantly see the folly in this goal.

The President often speaks about his concern for the safety of Americans at home. But, once again, his rhetoric turns out to be as hollow as a ten-gallon hat. The President's budget actually proposes more than \$2.6 billion in cuts to homeland security initiatives. This includes dramatic cuts to state formula grants, Law Enforcement Terrorism Protection, Fire-fighter Assistance Grants, the Community Oriented Policing Services (COPS) program, and a 54 percent cut in funding for all state and local law enforcement programs in the Department of Justice.

Meanwhile, as our

homeland security capacity is ratcheted down, the conflagration of war continues to grow, and threatens to spread throughout the Middle East.

Rural states like West Virginia are heavily dependant on volunteers to serve our communities as fire-fighters and other emergency first responders. Many of these service-minded men and women are also National Guard personnel, who are being caught up in long deployments abroad. The end result is that, while one hand is reducing the number of available emergency responders in local communities, the other hand is taking away the funding that supports those emergency relief and security initiatives at home. The President's budget, in effect, creates double jeopardy for homeland security in rural areas.

The President has said himself that our emergency responders are the first line of defense during a disaster of any kind -- flood, hurricane, earthquake, or terrorist attack. He has also said many times that the security of all Americans is the top priority of his Administration.

The budget recently submitted by the President reveals serious discrepancies in his publicly stated priorities. The time for rhetoric has passed, and the moment to take action is upon us.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Keeping Amtrak On Track

Each year when the Bush Administration presents its budget, I find myself defending one of our most useful and practical public services -- Amtrak, the nation's passenger rail system. I take on this challenge because modern, growing economies need a broad range of transportation options. I work for better rail service because it is environmentally sound. A strong rail infrastructure is necessary to our national security. And I fight for passenger trains because they reduce our dependence on foreign oil.

Amtrak has been starved for more than 30 years, never receiving the kind of support that would give it the fighting chance to fulfill its great promise. Congress funds the construction of highways, seaports, subways, and airports. Interstate rail transportation should not be any different.

Bringing our rail system into the 21st century would greatly reduce U.S. oil consumption. We all have heard President Bush say that America must reduce its dependence on foreign oil. He has even said we should take carbon emissions more seriously. Slashing funding for Amtrak is counterproductive to both goals.

The rest of the world recognizes the benefits of national passenger rail, but, for some reason, the White House does not.

China, for example, is making significant investments in rail

service. One prominent Chinese project is an 820-mile link between Shanghai and Beijing, using trains with top speeds of more than 200 miles per hour. This rail line will reduce the travel time between the two major cities from 13 hours to just under five, and passengers will find the train ticket much cheaper than airfare.

When it comes to reducing auto emissions and our dependence on foreign oil, we do not need to wait on emerging technologies to become viable. We can make investments in mass transportation technologies that are available today.

Passenger rail travel is clean and safe. The 25 million people who travel by train each year can attest to that. Passenger trains carry about five times as many riders as airlines. If we abandon our support of rail travel, where would all those travelers go? And how many people in rural areas would no longer be able to afford to commute to their jobs in urban areas?

Each of the Bush Administration's annual budget requests have recommended funding levels that would bankrupt Amtrak and shut down its operations. Each year, I have worked to keep our nation's rail system on track. As Chairman of the Senate Appropriations Committee, I will continue to fight for programs that are in America's national interest.

February 28, 2007

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Mission Failure

The Bush Administration has made much use of the phrase "support the troops." The White House has used "support the troops" as the mantra to justify failed foreign policies, silence critics, and divide the electorate. What the Bush Administration has not done is put much action behind its rhetoric.

The White House sent troops into battle without body armor or protected vehicles. Congress stepped in and funded the equipment that our soldiers so desperately needed.

The White House underfunded veterans health care by billions of dollars. I and other Members of Congress stepped in to fill the breach.

No matter how hard Congress pushes back, the Bush Administration continues to treat our soldiers and veterans all too shabbily. The deplorable care for wounded service members at Walter Reed Army Medical Center is the latest example that this Administration's support-the-troops rhetoric is "all hat and no cattle."

As with other facets of government, the Bush Administration's strategy for military medical care is to squeeze it for every nickle, place party loyalists in leadership positions, and outsource any job possible.

A lawyer and real estate developer with no medical background, Department of Veterans Affairs (VA) Secretary Jim Nicholson's chief qualification for running the country's largest health care system appears to be that he

is a former Republican National Committee chairman. The resulting problems in the care of wounded soldiers and veterans under his watch has put the VA under intense political and public scrutiny.

Having worked for our veterans for decades on the Appropriations and Armed Services Committees -- along with Senator Rockefeller on the Committee on Veterans Affairs -- we can tell you that the egregious situations at Walter Reed are not isolated problems. There has been a systemic neglect of veterans services and a pervasive failure in leadership.

For example, the Administration's ideological pursuit of privatization at Walter Reed led to an exodus of highly qualified and experienced personnel. Federal workers have been replaced by private companies like IAP Worldwide Services, which is led by former Halliburton executives. IAP's parent company, Cerberus Capital Management, is no stranger to government contracts, big political contributions, and controversy.

Through ongoing investigations, we are certain to uncover more troubling details about the medical care of our wounded soldiers and veterans. In serving those who serve their country, it is clear we are far from "Mission Accomplished." Congress must step in where the Bush Administration has failed. Our troops protect us on the battlefield; it is time that we protected them and their families here at home.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Stopping Threats at the Border -- From the Heart of West Virginia

All of us are concerned about the vulnerabilities along the U.S.-Mexico border. There are far too few Border Patrol agents stretched out along far too many miles of border. I have worked in the Senate to significantly increase the numbers of our Border Patrol agents, resulting in the addition of thousands of new, trained border security officers.

But expanding our Border Patrol is only a start. We also must prevent those with criminal backgrounds from taking advantage of a slow bureaucracy to enter the nation before Department of Homeland Security staff can stop them. That's where men and women working at the FBI in Clarksburg have made a real difference.

Clarksburg is home to the FBI's database containing the fingerprints of criminals and potential terrorists. Already, the FBI database is linked to state and local law enforcement agencies around the country, alerting police to individuals with outstanding warrants in other jurisdictions. Instead of waiting day after day after day for a fingerprint search under the old system, the FBI Clarksburg database provides officers with the information they need in just a few hours.

The FBI has taken steps to build on that success by linking U.S. border stations with Clarksburg. When someone tries to enter the United States, Border Patrol agents are able to connect

with the FBI's Harrison County facility to check that individual's background. In 2006, the Clarksburg fingerprint system returned "hits" on more than 150,000 criminal subjects who were attempting to enter the U.S. illegally. Those individuals were prevented from walking freely in the United States. That's a remarkable accomplishment.

Recently, I met with FBI Director Robert Mueller to talk about ways to better protect our communities and our country. Director Mueller hopes to expand the mission of the Clarksburg facility and the entire FBI to stop terrorists and criminals alike.

Law enforcement agencies need the tools and the training to stop another terrorist attack before it happens. Unfortunately, the men and women tasked with protecting us are forced to do so with paltry budgets and precious few new resources. We must change that approach. Law enforcement agencies need manpower. They need money. And they need the tools to get the job done.

I will continue my efforts in the Senate to invest in law enforcement and to protect our citizens from criminals and terrorists alike. Matching technology and expertise with the security needs across the nation, like the Clarksburg FBI is doing with the Border Patrol, is moving in the right direction.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Protecting Coal, Protecting Miners

In spite of new machines that have dramatically increased the production of coal, the work of a modern coal miner remains strenuous and dangerous. Thousands of feet beneath ancient mountains, a miner toils in primordial darkness, accompanied by heavy moving machinery, electrical cables, and deadly gases that cannot be seen or smelled. The roof is sometimes only inches above a miner's steel-toed boots -- precariously propped up by what amounts to sticks and bolts.

For most Americans, coal mining evokes monochrome images of hard-scrabble coal camps, impoverished children and stoic working-class faces. But those images do not tell the whole story.

As a young boy, I eagerly awaited my father's daily return from the mine, his face a contrasting smudge of coal dust and reddened eyes, a carbon lamp perched on top his miner's hat. I looked forward to his smile, and sometimes a small piece of cake from his dinner bucket. His working in the mine was as natural as my going to school. My father was a strong and decent man who loved his job and his family. That, to me, is the true face of coal.

Growing up the son of a coal miner, and marrying a coal miner's daughter, may explain why I regard all miners as family. Recently,

I met with some family members of the 12 Sago miners who died in that mine. A tragic, preventable loss like that can leave its mark on a family -- and on a state -- forever.

That the deaths at Sago were preventable makes it clear that advances in safety have not kept pace with advances in production. We must strengthen safety measures in the coal industry on several fronts.

Through approval of the federal MINER Act, we have launched measures to increase safety regulations, enforcement and emergency response. This was a good beginning, but by no means an end.

Last summer, I included \$25.6 million in special funding to allow MSHA to hire and train 170 new coal mine safety inspectors. An additional \$10 million was directed toward the development of new communications and rescue technologies that can speed efforts to save miners after an explosion or collapse.

Though different reports draw different conclusions about the causes of the Sago tragedy, there is no question that government, industry, and labor must embrace substantial improvements in mine safety in order to affect meaningful change. We share a moral obligation to protect our coal miners to the very best of our ability. We must not fail.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Federal Budget That's Good for West Virginia

After six years of federal budgets devised to favor the wealthy, starve social initiatives, and fund a disastrous and costly war, the new Democratic majority in the Senate has passed a budget more in tune with West Virginia's priorities.

The Senate budget approved recently invests 25 times more than the Bush Administration proposed for children's health care, providing up to \$50 billion in medical services over the next five years for our children most in need.

The budget also increases funding for education by \$6 billion above the White House plan, invests \$43.1 billion in medical care for our veterans, and protects the Medicare and Social Security trust funds.

Instead of lavishing several more large tax breaks on those who are already financially secure, the budget passed by the Senate targets relief for working middle class families. Working families are the heart and soul of America, and in recent years they have been feeling pressure from all sides. This new budget reaches out to those families.

The budget also strives for some degree of fiscal responsibility, reinstating a "pay-as-you-go" rule that includes both spending programs and tax cuts.

West Virginians are fed up with the runaway deficit spending that has been a hallmark of the Bush Administration. This budget cuts taxes for the middle class and contains no new tax increases. Revenues are raised by cracking down on tax cheats, closing tax loopholes, and making it harder for companies to hide money in secretive offshore accounts to evade taxes.

The impact of this budget on health care in West Virginia and across the country is significant. Our health care system is in crisis. As many as 46 million Americans -- including 275,000 West Virginians -- are without any health insurance. As a nation, we cannot continue to close our eyes to this reality. The Senate budget begins to make the investments to ensure access to health care for all Americans.

Finally, the Senate has passed a budget that makes good investments in health care, education, veterans, and other sorely neglected priorities.

America's fiscal burden has been balanced on the backs of the middle class for far too long. The budget recently passed by the Senate goes a long way toward acknowledging that the days of comforting the comfortable must come to a close.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Pledging Allegiance to Our Veterans

As recent news reports have detailed, many soldiers returning from Iraq and Afghanistan are not being provided the care that they have earned and deserve. Through investigations and Congressional hearings, it has become evident that the deplorable conditions at Walter Reed Army Medical Center are but the tip of the iceberg.

We have heard first-hand accounts of soldiers being denied or delayed proper care and of nettlesome bureaucratic tangles. These reports raise serious concerns about the capacity of the military and the Veterans Affairs (VA) medical system to deliver proper care and treatment. In particular, the VA appears to be having difficulty dealing with the long-term health care challenges many of our soldiers face as the result of brain injuries, post-traumatic stress, and other debilitating physical and psychological wounds so tragically common among our Iraq and Afghanistan veterans.

Senator Rockefeller and I have fought for veterans' benefits for many years now. Through my work on the Committee on Appropriations and Senator Rockefeller's many years of solid leadership on the Committee on Veterans Affairs, we have worked hard to improve veterans' services in West Virginia, particularly for those who live in very rural areas.

As part of our ongoing collaboration on behalf of veterans, Senator Rockefeller and I have set up special email accounts for soldiers and veterans to contact us directly and share their own personal experiences. Good or bad, we are very interested in hearing from West Virginia's veterans, servicemembers, and their families about what is working well, what needs improvement, and how the delivery of medical services through the VA might be improved.

Veterans, their families, and employees of the VA health care system are encouraged to write us at vets@byrd.senate.gov with their personal experiences and ideas. While we intend to use this feedback to develop a better understanding of the current state of West Virginia's VA health care system, individual names will be kept strictly confidential.

Next year, the VA expects to treat 263,000 veterans from Iraq and Afghanistan. These brave men and women have served our nation in the most dangerous and volatile places on earth. Too many of our troops are returning injured, debilitated and battle-scarred for life. It is a moral imperative that we meet their needs to the best of our abilities, and with the highest degree of quality, professionalism, compassion and honor befitting their service.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Reforming the Congressional Earmark Process

Often, the words "Congressional earmarks" are, unfortunately, met with derision. I believe in the good that earmarks can do, and I am not alone. In fact, the Constitution's Framers understood that the people's elected representatives needed the ability to respond to the public's problems, and so they placed the power of the purse in Congress. Today, a Congressional earmark is often the only way to ensure that a good idea becomes reality.

Many meritorious West Virginia projects would never have happened without earmarked funding. For example, tens of thousands of people have clean drinking water because of my Senate work. Recently, I directed \$23 million toward a Randolph County project to help 21,500 West Virginians. No longer will they worry about the safety of the water in their homes.

Much of the advanced medical technology at West Virginia University is the result of funding that I earmarked in federal legislation. The cancer center, the eye institute, the trauma center, the neurosciences institute -- these facilities provide cutting-edge care for people throughout the state and were built with millions of dollars that I fought for in appropriations bills.

My earmarks in West Virginia create jobs and build a better future for the state.

The benefits of Congressional earmarks do not stop at our state's borders.

Earmarks launched the Human Genome Project, which has dramatically improved disease treatment and prevention, saving many lives. Earmarks funded the Predator and Global Hawk aircraft. These unmanned planes have been among the most effective assets in the military's effort to track, target, and capture terrorists.

Sadly, there have been abuses in the Congressional funding system. These high-profile cases have resulted in Members of Congress being forced from office in disgrace and ultimately going to jail. The sins of a few have tarnished Congress, and we have an obligation to restore the integrity of the institution.

That is why, as Senate Appropriations Committee Chairman, I have put in place tougher standards for accountability and openness. Earmarks will be clearly identified. The public will know which Senator asked for funding, how much is provided, the purpose of the funding, and which individual or organization will receive the dollars. In addition, Senators will have to certify that they have no financial interest in any earmark.

Congress has a responsibility to help expand opportunity for our families and to invest in a better future for generations to follow. That work will continue to include funding key initiatives through Congressional earmarks in a responsible and open manner.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Small Businesses Drive Our Economy

West Virginians are always thrilled by major announcements that large manufacturers are locating or expanding in our state. Yet, when a local business adds five or ten employees not much attention is paid. But multiply those five or ten employees by the number of small businesses in West Virginia, and it becomes clear that these small employers are the real economic engine of our state.

Small businesses drive innovation and opportunity. They create jobs and provide key services for the people in their communities. I have been proud to support many of these entrepreneurs through my work in the Senate by helping to expand specialized training or pairing local businesses with federal agencies.

Right now in our state, we have an opportunity to achieve great things together, and to help ensure economic prosperity for many years to come. But we must work together. This is a time for statewide cooperation. It does not matter whether one is from Charleston or Wheeling or Martinsburg or Hinton. We must all pull together to improve the prosperity of our state.

I use my experience to get things done from Washington, but I rely on the people of West Virginia to let me know what helps them most. One priority that I hear almost every day is the need for investments in West Virginia's infrastructure--projects like roads, highways, water and sewer systems, and airport improvements. Modern and well-maintained public works attract new jobs, help communities to thrive, and ensure a better life for our people. To me, such investments represent the most bang for the taxpayers' buck because good highways, clean water, modern schools, safe parks, and easy access to health care benefit everyone.

In the early 19th century, Oliver Wendell Holmes wrote, "I find the great thing in this world is not so much where we stand, as in what direction we are moving." West Virginians have always embraced progress with an eye toward the next opportunity. Thriving small businesses create that opportunity, not only for this generation of West Virginians, but also for generations of Mountaineers to come.

“American Eagle Day” Pays Tribute to the Nation’s Spirit

I am very pleased to announce that the United States Senate has unanimously approved a resolution, sponsored by Senator Lamar Alexander of Tennessee and myself, designating June 20, 2007, as “American Eagle Day.”

On June 20, 1782, the Second Continental Congress selected the American Bald Eagle as America’s national symbol. Our Founding Fathers, in their wisdom, recognized this magnificent creature as the embodiment of America’s soaring optimism and love of freedom. For the past 225 years, the Bald Eagle has served as an inspiration for generations of Americans. Until now, there has never been a national occasion to recognize America’s inspirational bird and the special meaning it has for millions of Americans.

In April, I welcomed Challenger, the first American Eagle in history trained to free-fly into major sporting events, to my Capitol Hill Office for the announcement of the bill’s introduction. I was truly inspired by the strength and grace of this magnificent eagle. It is hard to believe that forty years ago, the Bald Eagle was almost lost. However, thanks to federal protections and the hard

work of conservationists, the American Bald Eagle now represents one of the great recovery stories in our nation’s history. As recently as 1963, there were roughly 400 nesting pairs of Bald Eagles in North America. Today, the species is flourishing once again, with approximately 7,000 to 8,000 pairs thriving in the wild.

As we celebrate West Virginia Day on June 20, Americans across the country will have the opportunity to recognize what this majestic bird represents for the American people. “American Eagle Day” will serve as an annual occasion for Americans to celebrate the ideals represented by the Bald Eagle, and to recognize the remarkable recovery of the species, which is proposed to be removed from its current threatened status later this year.

On June 20, citizens are encouraged to remember the principles upon which our country’s greatness was founded, renew the American spirit of pride and patriotism, and recall the story of how our National Symbol came to be. We almost lost its living presence in the wild to extinction, but we have rallied together and saved the Bald Eagle for posterity.

Finding a Plan for Peace and Security

More than four years ago, American military forces toppled the regime of Saddam Hussein. The skill of our troops overwhelmed that dictator, showing that preparation and foresight can provide a strong advantage in any challenge.

Unfortunately, preparation and foresight vanished when the Bush Administration moved forward with its occupation of Iraq. With the Saddam Hussein regime gone, the Iraqis turned to the U.S. for help in crafting a new government. But the political leadership at the White House failed. The military victory was not matched by security and economic stability. As a result, Iraq is a nation embroiled in civil war.

Peace now demands an Iraqi-led political solution to bridge the ethnic and sectarian divisions that are splitting the country -- a solution which, to date, the Iraqi government has been unable or unwilling to take on. That is why Congress approved legislation that offered a new beginning for the reconstruction and the stability of Iraq, and shifted the responsibility for that nation's long-term success to the Iraqi people themselves.

Regrettably, President Bush vetoed the proposal. His choice was unwise, and its consequences will echo for a long time. This veto ensures that hundreds, maybe thousands, more will die in Iraq. It forces our

military to continue to pursue a mission impossible, creating democracy at the point of an American gun.

The President's choices carry consequences at home, as well. When a deadly tornado struck Kansas recently, the Kansas governor was hamstrung. That state's National Guard was forced to leave its emergency equipment in Iraq after a recent tour of duty. Equipment that had been positioned throughout the state for just such a crisis was sitting thousands of miles away. Help was slow in coming.

This problem is not unique to Kansas, which is why Congress, in that same Iraq-related legislation, included \$1 billion to replace the trucks and heavy equipment that Guard units have been directed to leave in the sands of Iraq. If the White House clings to its failing strategy in Iraq, we will see more stories of heartache like those from Kansas. The President's single-minded obsession with Iraq has dire consequences for all other priorities here at home.

Congress has begun work on a new version of the Iraq-related legislation. We will not delay. But we also will continue to press for a strong, intelligent foreign policy that does not rely on military might alone. And we will not stop in our efforts to bring peace to Iraq and our troops home from war.

By U.S. Senator Robert C. Byrd

West Virginia's WWI Veteran Is America's Hero

April 6, 2007, marked the 90th anniversary of America's entrance into World War I. That historic conflict marked America's arrival onto the world stage, and our emergence as a global superpower.

Nearly 5 million Americans served in the U.S. military during that "war to end all wars." Only four are still living. I am proud to say that one of them is a hale and hearty West Virginian, my friend Frank Woodruff Buckles of Charles Town.

In 1917, Private Frank Buckles boldly stepped forward to serve the Army as a doughboy. He was so compelled to serve that -- at the age of 16 -- he lied about his age in order to enlist, and served his country in England and France. But the drama of his life, as compelling as any novel or film, did not end with his official military service.

His work on a commercial steamship took him to Nazi Germany, where he attended the 1936 Olympics in Berlin. There, Frank Buckles saw German Chancellor Adolph Hitler bristle with embarrassment as the great Jesse Owens won four gold medals for the United States.

His maritime career landed him in the Philippines in 1940, where he was working in Manila when

the Japanese invaded. Mr. Buckles was captured and spent the next 3 ½ years in Japanese prison camps where, although a civilian, he was treated as a prisoner of war. At dawn on February 23, 1945, the same day that the American flag was raised on Iwo Jima's Mount Suribachi, the 11th Airborne Division liberated Mr. Buckles and his fellow prisoners.

In 1954, Frank Buckles and his wife, Audrey, moved to a 330-acre farm in the West Virginia's Eastern Panhandle, the same area where his ancestor, Robert Buckles, had settled in 1732. For more than five decades, Mr. Buckles has continued to operate his beloved farm.

Today, at the age of 106, this sturdy West Virginian is still going strong and will proudly serve as Grand Marshal of the World War I section of the Memorial Day parade in Washington D.C.

West Virginia is blessed with so many examples of men and women of extraordinary character and bravery. We should salute people like Frank Buckles -- and the thousands of people whose names are not so well known -- for their inspiring commitment and sacrifice, keeping them close to our hearts and always in our prayers.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Making Wise Investments for America

It is time to roll up my sleeves and go to work once more for West Virginia in the Senate Appropriations Committee. This month, the committee, which I lead, will begin to write the federal funding bills for the next fiscal year. These bills are crucial for our state and this nation. The decisions that the Appropriations Committee makes will set the pace for America's progress.

The first bill to come before my committee will help to secure this country from terrorist attack. There are too many gaps in our protections. Cargo is not checked for explosives before being loaded on airplanes. The northern and southern borders remain far too wide open. Critical infrastructure sites, like chemical plants and power facilities, are far too vulnerable. Police officers, firefighters, and emergency medical teams still do not receive the equipment and support that they need to meet the realities of the times.

We need to address these major gaps in homeland security. The federal government must not just pay lip service to protecting our citizens. It is long past time to invest the dollars in the security of this country. If we do not, American lives will continue to be needlessly at risk.

The second piece of legislation that will come before the Appropriations Committee is one that pays for the medical care for our veterans.

During the past several weeks, Senator Rockefeller and I have heard from West Virginia veterans about the quality of their medical care. One fact is clear: there are not enough doctors and nurses to handle the medical needs of our veterans. With wounded heroes coming home from war every day, and with veterans of past conflicts already standing in long lines for treatment, we must invest in their care.

Make no mistake, there are tough choices ahead. The list of pressing funding demands across the country seems to be endless, but the resources are not. We need to wisely invest the people's money to ensure a brighter future for the nation.

As these bills move forward, I will update you on their progress. The lives of people in West Virginia will be directly affected by the choices that the Appropriations Committee makes. Jobs, health care, security, education, worker training and safety -- all of these issues are shaped by the appropriations bills. I will continue to do all that I can to build a brighter future for our state and to create new opportunities for generations of Mountaineers to come.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Honoring the Spirit of West Virginia

On June 20, 1863, President Abraham Lincoln signed the official proclamation declaring West Virginia statehood. On each successive June 20 since then, Mountaineers not only celebrate our heritage, but also rededicate ourselves to the future of our state.

In the Senate, I use West Virginia Day to share some thoughts about the Mountain State with other Senators and with people from across the nation. Sometimes I speak about our state's natural beauty, which is second to none. Other times, I talk about the history of our state and its origins during the Civil War. But I think that people are most impressed when I talk about the true strength of West Virginia -- her people.

I have traveled around the world. I have met presidents and kings and prime ministers. I have dined with royalty. I have shaken hands with religious leaders from many denominations. And while many of these men and women were impressive, I have found that no people anywhere compare with the people of our state.

It is hard to quantify what sets West Virginians apart. Personally, I think that it is a combination of factors, the first being an unabiding belief in the

Creator. West Virginians carry that faith in God in our hearts. It serves as the foundation for everything we do.

Another uniquely West Virginia characteristic is that we treat everyone as family. We show people respect, treating them as we ourselves would want to be treated. If someone is in trouble, the entire community rallies to their aid. If a neighbor needs a hand, there are always people ready to pitch in. Nowhere that I have traveled have I seen the same devotion to others as I do in our state.

As we celebrate our 144th year as a state and begin the journey to the next anniversary, I hope that we will hold fast to the values that set us apart. These values may be old fashioned, but they will never be out of style.

We have great opportunities ahead of us. To reach them, and to harness the bright future that we want for our state, we must dedicate ourselves to reaching these goals. It will take imagination and innovation. But, most of all, it will take the strength of a united people who believe in each other and who care for one another.

Happy birthday, West Virginia! And my best wishes for many, many more.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Using Coal to Power Energy Independence

For too long, the United States' energy policy has been crafted more to suit political agenda than energy independence. As a result, our nation relies heavily on foreign oil for our cars, trucks, and airplanes. That reliance has subjected us to the whims of foreign rulers whose priorities and objectives are often far different than our own. It is time to break free of those chains and become truly energy independent.

The Senate is debating legislation that offers the opportunity to invest in fuel resources here at home. The legislation also provides a chance to develop new technologies which utilize those resources more cleanly and affordably. The United States has an enormous supply of one of these resources right here at home -- coal. But we have not invested in the technologies necessary to convert coal to new energy uses.

It is time to think about coal in new ways. No longer can it be only a fuel source for power plants. The technology exists today to transform coal into clean transportation fuels. Imagine pulling up to the pump and seeing an option for coal-based fuel right next to the oil-based gasoline. The choice is not that far into the future.

Coal is not the only answer to our energy independence, but it must be a major piece of the puzzle. Right now, coal provides about 50 percent of the nation's entire supply of electricity. We cannot afford to walk away from coal. But neither can we afford to stand still and rely on technologies that are 30, 40, even 50 years old to power our economy.

In this legislation, I am working with Senator Rockefeller and a coalition of Senators to provide the incentives to speed the installation of modern, clean, coal-focused technologies in existing power facilities. We also want to encourage private investments in plants that can turn coal into transportation fuels with lower pollution emissions and more efficient processes than are in place today.

Our nation's energy policy should not be dictated by the whims of foreign countries. For too long, these foreign oil producers have been telling our families how much we will pay at the gas pump. Our military is being used as a protection force for the oil lines in the Middle East. It is time for America to be powered by American resources and American know-how. It is time for America to work to achieve energy independence.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Promises Made, Promises Kept

A few weeks ago, I reported that the Senate Appropriations Committee, which I lead, was beginning work on next year's federal funding bills. It was time for West Virginia priorities and values to take center stage in Washington, D.C.

The first piece of legislation approved by the Appropriations Committee funds the U.S. Department of Homeland Security. The White House and many in Congress have made "homeland security" a great political slogan, but have refused to put resources behind their rhetoric. America's security was funded with spare change.

I am proud to report that I have been able to reverse this short-sighted approach. The Senate bill invests \$37.6 billion in anti-terrorist efforts here at home. We commit resources to border security, securing air cargo, equipping and training community first responders, and securing our ports. We have a responsibility to the American people to invest funds in real security efforts and respond to known vulnerabilities. That is a promise which Members of Congress have made, and that is a promise that my legislation keeps.

The second piece of legislation to move through my Appropriations Committee funds medical care for veterans, whether they are heroes just home from war or troops from

wars past.

The legislation I shepherded through the Appropriations Committee provides \$43 billion for veterans' medical care, an increase of \$6.5 billion from the current funding. That increase avoids the dangerous budget shortfalls that have jeopardized quality health care for all veterans and should cut down on the waiting times at veterans' medical facilities. These dollars will help to expand treatment of Traumatic Brain Injury (TBI) and Post Traumatic Stress Disorder (PTSD). The increase will pay for new claims processors to address the Veterans Administration (VA) service backlog, and invest in VA repair and maintenance needs to prevent a Walter Reed-type situation in the VA system.

These results represent West Virginia values. We protect our communities. We care for our soldiers. We respond to the greatest needs we face. I am proud of the work that we have accomplished so far in the Appropriations Committee.

Later this month, several more pieces of legislation are on deck. We will fund the military. We will work on improvements for roads, highways, and airports. And we will continue to make decisions that invest in America and build a better future for our country.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Roads to Saving Lives and Creating Jobs

As I travel throughout West Virginia, I hear one comment in almost every location: "Senator, we need better highways." For as long as I can remember, improving our roads and highways has been a top concern for Mountain State residents.

Unfortunately, addressing that concern is not as easy as one might hope. It is not easy, nor is it cheap, to build roads that zigzag through our mountains. But I have not let those difficulties deter me from working to steer vital federal road construction dollars to West Virginia.

In legislation that I expect to come before the Senate in the next few weeks, I have worked to increase West Virginia's highway construction funding by \$26 million - - to more than \$356.1 million for next year. To augment those dollars, I have added funds for specific projects throughout the state, from the Eastern Panhandle through the Potomac Highlands, from the Southern Coalfields to the Northern Panhandle. There are urgent highway priorities all across our state, and these extra dollars should help to jumpstart many of them.

People often ask me: "Senator,

why do you care so much about roads and highways?" Modern highways mean safer highways. The safety of the people of West Virginia is of paramount importance to me. Traveling to and from church should not be dangerous. Driving to school or work in the morning should not be hazardous. But two-lane roads with sharp turns and blind corners certainly compromise safety. By investing in wider, straighter roads, we invest in the safety of our people and help to save lives.

The economic benefit that a modern road and highway system can bring to an area is also very important. Not only is there the significant employment provided by road construction, but business development tends to follow close behind major road improvements. When business is growing, more people are working and communities can reap rewards.

I will continue my efforts to invest in the basic infrastructure of our state, including our roads and highways. Better roads save lives. Better roads bring jobs. Better roads pave the way to a brighter future for West Virginia. It's just that simple.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Time For Service

Since the United States went to war with Iraq in March 2003, a disturbing trend has accelerated to a dangerous point. Americans with differing views on the war have declared rhetorical war against one another. No longer is a difference of opinion seen merely as an alternative point of view from a fellow citizen. Today, disagreements often lead to charges of faltering patriotism or even scorn. Such attitudes thrive at both ends of the political spectrum, and the fallout could potentially cause great damage to our nation.

As a country, and as a people, we must always remember that there is much more that unites us than divides us. Our common belief in justice, freedom of religion, fairness, individual rights, and the time-honored principles embodied in our great Constitution binds us together. Historically, we have always been a people characterized by helping hands, not tightened fists. We need to step back from the current poisonous partisan invective and remember our common purpose.

I believe that one of the best ways to draw the venom from the political backbiting in this country and begin the healing process is through community service. Throughout the United States, there are

people in desperate need. In our own communities in West Virginia, there is a litany of projects, large and small, which are in need of willing volunteers. If each of us were to spend just a few hours a month working for a community service project, I believe it would go a long way towards creating empathy and understanding for our fellow citizens.

I have been in politics for a long time. I understand the realities of the rough and tumble political world. But, politics is not the be-all and end-all for us as Americans. When we take the time to see others as neighbors and fellow human beings, when we make an effort to join together to improve our communities and our great country, harsh political divides fall away. When we reach out to others we can get past the stereotypical images that partisan talk show hosts, newspaper columnists and television talking heads peddle to us for profit, and begin to appreciate each other as the unique and valuable individuals we truly are. For the sake of our nation, and for the future of our children, it is time to rededicate ourselves to helping each other. In this way, we can give back to the society that has given all of us so very much.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

West Virginia Can Compete Globally

When it comes to competing in the global economy, good old fashioned American ingenuity has been the key to our success. Our ability to continue to stimulate and lead innovation here at home will play a great role in determining whether we can sustain our place as the world's economic superpower.

West Virginia's economy has long been based in strong core industries like coal, steel, and chemicals. I have worked very hard to expand the opportunities for growth in our manufacturing industries. Even in these traditionally labor-intensive sectors, we must continually strive for innovation, relying on increasing our brain power as well as our muscle.

Thankfully, there is no shortage of "can-do" attitude in West Virginia. While it is true that we have seen a troubling increase in the migration of American jobs overseas this decade, we have worked very hard in West Virginia to protect and expand our manufacturing base.

In 1990, the Robert C. Byrd Institute for Advanced Flexible Manufacturing (RCBI) was created in Huntington, and now has locations in South Charleston, Bridgeport and Rocket Center. Its mission is to help introduce new concepts and processes to manufacturers. Through the RCBI's "teaching factories," manufacturing companies and their

workers can get hands-on experience and training with computer-controlled mills, lathes and other new and developing state-of-the-art technologies.

The RCBI is directly responsible for bringing more than 1,000 good-paying, highly skilled jobs to the region, while adding \$290 million in output to state businesses that use its services. Since January 2001, the RCBI has helped manufacturers secure more than 60 new Department of Defense and other federal government agency contracts worth more than \$100 million.

I have always believed that there are few problems in West Virginia that cannot be solved by the creation of more quality jobs. Despite some in the media who depict West Virginia's economy as perennially lodged behind the proverbial eight ball, more and more are discovering that West Virginia is a great place to live and do business.

From supplying the nation's energy needs with our high quality coal, to pioneering new advances in manufacturing techniques and breakthrough technologies, West Virginia is staking its claim on the technological revolution. Our strong manufacturing base is already busy helping to shape that revolution, providing direct benefits today and new job opportunities for the future.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Honoring Our Wounded Warriors

Most Americans are painfully aware of the fact that more than 4,000 of our soldiers have lost their lives serving in Iraq and Afghanistan. Fewer may be aware that over 30,000 of our servicemen and women have been wounded in these conflicts. Many of our troops are returning home with terrible physical injuries -- missing arms or legs -- and nearly all bear emotional scars that, for some, may never heal. The sacrifices that have been made by these brave souls and their loved ones are impossible to measure.

The men and women who risk their lives fighting for our nation are performing the most noble and courageous duty imaginable. It is our moral responsibility to ensure that those who have been wounded are treated not only with excellent care, but also with the dignity and respect they deserve.

It is clear that America's military and veterans' health care systems are woefully unprepared to meet the needs of our returning troops. As evidenced by the revelation of deplorable conditions at the Walter Reed Medical Center in Washington, the quality of care provided for our wounded veterans is, in far too many cases, completely unacceptable. In fact, it is a national disgrace.

That is why Senator Jay Rockefeller and I have been working to tackle this problem. Together, we co-

sponsored legislation that addresses serious shortcomings in the care of injured veterans in West Virginia and across the country. The "Dignified Treatment of Wounded Warriors Act", which recently passed the U.S. Senate, strengthens health care for veterans, and eliminates cumbersome bureaucratic barriers facing our wounded servicemen and women.

The bill invests in medical research for the treatment of combat-related injuries, requires a comprehensive policy on the care and transition from the military to VA or civilian life for service members with combat-related injuries or illnesses, and authorizes the military and VA to provide emergency medical care and counseling to family members.

Earlier this year, with the support of Senator Rockefeller, I was proud to author legislation that increased funding for the VA medical system by more than \$3.6 billion over last year. I am hopeful that the new reforms in the Wounded Warriors bill, combined with the increased funding the new Congress has directed to veterans' health care, will begin to rectify the outrageous injustice that has faced far too many of our wounded warriors upon their return home. The status quo is deplorable. Our wounded heroes deserve much better.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

LABOR'S LEGACY

"Let us have a festive day during which a parade through the streets of the city would permit public tribute to American industry."

So spoke the fiery, red-headed Irishman known as Peter McGuire to the 1882 Central Union meeting in New York City. A carpenter by trade, McGuire was steeped in the labor politics of Michigan and Missouri, and had spent two decades organizing disparate construction workers into the United Brotherhood of Carpenters and Joiners of America.

That following September, after McGuire publicly suggested there be a day to honor those "who from rude nature have delved and carved all the grandeur we behold," workers in New York acted on his proposal and staged a parade up Broadway to Union Square. Despite harsh warnings by their employers against marching, more than 10,000 turned out to participate in the parade. President Grover Cleveland, by no means a friend of labor, was moved by the growing worker's rights movement and in 1894 declared that the first Monday in September would become a national holiday called Labor Day.

Though the efforts of people like Peter McGuire eventually led to important victories for workers like decent pay, workplace safety, overtime, sick leave, and health care, these basic benefits were not won

without great struggle and sacrifice.

In 1930, over 35,000 jobless workers marched in Chicago to protest against national unemployment and hunger, drawing much needed attention from the White House. The combination of these labor parades and protests contributed to the passage of the National Labor Relations Act the same year.

West Virginia, with an economic base in extractive and manufacturing industries, has a long and storied labor history punctuated with colorful characters and dramatic events.

When the availability of German-made chemicals became scarce during World War I, West Virginia's great chemical industry was born. Both World Wars brought the rapid expansion of coal mines and steel mills. Such accelerated growth naturally contributed to some labor problems, especially in the coal mines where wages were low, hours were grueling, and working conditions extremely dangerous.

Although many great victories have been won for workers since those days, we are still fighting to increase hourly wages, make health care more accessible and affordable for working families, ensure that safety regulations are enforced, and pensions are protected.

I am proud to stand with my union friends and family on Labor Day, and recognize their many contributions to all workers everywhere.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Scientific Advancement is America's History and Future

Last month, it was once again my great privilege to host the annual National Youth Science Camp Luncheon in Washington, D.C. The science camp, which began in 1963 as part of West Virginia's Centennial Celebration, draws recent high school graduates from each state to Camp Bartow in Bartow, West Virginia. Attendees, all of whom have demonstrated a genuine interest in the sciences, are chosen by representatives of their state's respective governors. This year, three bright young West Virginians -- John Cavendish of Morgantown, Alex McPherson of Huntington, and James Koval of Charleston -- were selected to participate in this terrific program. The camp helps to develop the students' scientific talents, and encourages and inspires them to pursue careers in this exciting and rewarding arena of human endeavor.

When I address these aspiring scientists each year, I can't help but believe that they hold the future of our great nation in their hands. The scientific discoveries of the twenty-first century promise to be awe-inspiring. In this century, I believe Americans will set foot on Mars, find a cure for cancer, and develop solutions for our most vexing environmental problems. I am just as confident that some of the young people whom I

address in these luncheons will contribute to these marvelous achievements.

Scientific progress is in the interest of every American. Scientific progress is the backbone of our economy, the promise of our health care system, and the foundation of our national security. Science helped our nation win World War II. It helped our nation win the Cold War. It won the space race. Scientific advancement is the future of the United States.

More than a century and a half ago, the famous French political thinker, as well as observer of the American scene, Alexis de Tocqueville, pointed to the uniqueness and greatness of the United States, when he wrote: "The incredible American believes that if something has not yet been accomplished, it is because he has not yet attempted it."

How right he was. Exploration and discovery are essential components of the American national tradition. They are a part of the American character.

Americans have always been and will always be a bold, pioneering people, seeking out new and untried frontiers. The young scientists that attended this luncheon are proof of our nation's enduring thirst for scientific knowledge and advancement in the greatest of American achievements.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Enforcing Mine Safety Laws Must Remain Our Priority

When disaster struck at the Sago mine last year, it was described by some as an "anomaly." Then, last month, in the short span of twelve days (August 4 and August 16), seven miners were killed, and six more are presumed dead, perhaps permanently entombed at Crandall Canyon in Utah. On Labor Day, another miner lost his life, right here in West Virginia, in Mingo County. Altogether, the total number of coal fatalities this year doubled in less than a month.

It should be clear now that these tragedies are not "anomalies." To claim that they are is an insult to the families of the deceased, and a shallow attempt to deny that something has gone terribly wrong within the agencies and offices charged with the safety and health of our nation's coal miners.

The federal Mine Safety and Health Administration (MSHA) was intended to be a strong federal agency. It is blessed with career employees, many of them natives of West Virginia, who are the brightest mine experts in the world. It is infuriating to watch the political leadership in Washington, DC, not take advantage of the resources they have, especially here in West Virginia.

At a recent Senate hearing, I

raised my concerns with the administrator of MSHA, Richard Stickler. I let him know how I, along with my colleagues in the Senate, will not tolerate a continuation of MSHA's current course, influenced more by politics than the safety and well being of the miners they are charged with protecting.

Miners have chosen a noble and honorable profession, which supplies the much needed energy that helps to fuel our nation. And that critical work is undermined by every partisan decision, every misguided and incompetent action, and every failure by the political leadership in Washington to enforce the law and to ensure the safest working environment for our nation's miners.

It is past time for the agency to get rid of the political dead weight and to empower its inspectors and employees to go after the recalcitrant coal operators who are jeopardizing the coal industry and daily putting the lives of our miners at risk.

I assure my fellow West Virginians, especially those who earn their daily bread by working in the coal fields, that I will continue to do all that I can to protect the health and safety of our miners.

Leave No Schools Behind

While students across the state are settling into classrooms this month, Congress is preparing to debate the reauthorization of the education reform act, known as No Child Left Behind (NCLB). Nearly five years ago, I voted for NCLB. I supported the reforms in that law. But we have come to learn that schools need more funding and more support from Congress if we're truly going to leave no child behind.

When Congress passed NCLB in 2002, we made a deal with the American people. We said that from now on, we will hold schools more accountable than ever before. We will require them to make sure that all children succeed academically. Not just the wealthy, not just those who live in the nice parts of town, but all children -- students from Appalachia to Alaska, children with disabilities, and students of all races and ethnicities.

Congress has learned, since the implementation of NCLB, that we need to make good on the promises made to our students, teachers, and families in the law. West Virginia's schools need to be given more access to tools that will help our students meet NCLB's testing mandates and requirements.

As part of NCLB, the federal government is supposed to provide direct assistance to children from

poorer schools. Currently, about half of West Virginia's public schools receive Title I funding. The Title I funding helps students who need help the most -- those schools in rural communities and low income areas. Every child has a right to reach his or her potential, but that right has been stifled by unfulfilled promises to our schools.

In this year's federal budget, I worked with my colleagues to include more money for Title I in elementary and secondary schools; to reserve funds to make pre-school more accessible, and provide tax breaks for teachers who purchase their own school supplies. The budget fixes years of broken funding promises from the Bush Administration that have short-changed our teachers, principals, students and parents.

For years, schools have been hamstrung with unfunded mandates and paltry federal support that make the existing challenges facing our teachers much more difficult. Schools are working hard to meet increasing federal education guidelines in NCLB, but Congress must do its part to help teachers and students meet these expectations.

By providing students and teachers with the resources that they need to succeed, we can meet the goals of NCLB and help all of our students reach their full learning potential.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Celebrating the Heart and Soul of Our Nation

This week, September 17, 2007, marked the 220th anniversary of the signing of the Constitution of the United States. Across West Virginia and the nation, many students, teachers, historians, and federal employees spent time reviewing, learning about, and most of all, appreciating the United States Constitution.

To mark Constitution Day, I visited Wheeling Jesuit University and spoke to more than 100 Ohio Valley grade and high school students about the Constitution. Through streaming technology, my speech was broadcast to another 12,000 students in states across the country. I discussed the history of the document that is the heart and soul of our nation, and encouraged students to learn more about the workhorse that is our Constitution.

For 220 years, the Constitution has remained a living, breathing document, still as full of passion, patriotism, and intrigue as the plot of a Shakespearean play. Perhaps this is because the Constitution, like many of Shakespeare's works, deals with the relations between human beings in society. The Constitution's articles and amendments lay out the roles for its actors – the executive, the legislature, the judiciary, the states, and the rights of individuals. The script is basic – run a country and ensure the welfare of its citizens. But,

being human, people never seem content with playing out their own roles as written. History is replete with examples of governmental actors who sought to expand their influence at the expense of the other players. Fortunately, history is also full of instances when the grasping star's excesses were checked by the concerted actions of the rest of the cast.

I have always found this historical drama more stimulating and more absorbing than any television program. Perhaps it is because the Constitutional drama has played such a large role in my own life. In the 220 year history of this nation's Constitution, there have been only 1,896 individuals fortunate enough to serve as Senators. I am number 1,579, and have served longer than any other U.S. Senator in American history.

But whether or not each citizen has a direct role in our Constitutional drama, none of us should be a mere spectator. The Constitution plays a key role in the life of every citizen. I encourage everyone to read the Constitution, the Federalist Papers, and other writings by our Founding Fathers. Read deeply of history and personal biographies, and follow what is happening in Washington, D.C. Then you will become that most valuable of all things: a true defender of liberty – an informed citizen.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

No More Blank Checks for the Iraq War

Congress and the American public were treated to another sales job on Iraq recently that would have made any used car salesman proud. We heard from dark-suited diplomats and starred generals in uniform, and a rehearsed Oval Office speech. They presented their grand vision for a peaceful and prosperous oasis of democracy and stability in the Middle East, if only our gallant soldiers stayed for a little while longer.

As the Senate addresses the Defense Authorization bill, and certainly before the Senate considers yet another war funding supplemental appropriations bill, the cost of the Iraq war should be uppermost in our minds. After all, the White House's grand vision comes with a price tag.

Five years into this misguided war in Iraq, Congress has already appropriated over \$450 billion. If Congress approves President Bush's latest supplemental funding request, the budget will grow to over \$600 billion during Fiscal Year 2008. These direct costs do not cover the many hidden, indirect costs of this war, such as higher Veterans Administration costs and higher oil and gasoline prices. The combined direct and indirect costs and obligations of this war will exceed \$1 trillion by the most con-

servative estimates. Many economists believe that the costs are much higher.

That price tag also does not begin to cover the lost opportunity costs—the ways in which money now spent on Iraq could have been used to make our bridges safer and secure our borders. Nor does that price tag cover the costs of keeping upwards of 130,000 troops in Iraq for the additional years the President and his men suggest will be necessary to achieve their grand vision. It boggles the mind to consider the long-term costs of buying this war.

I am convinced that the best way to support our troops is to bring them home, and the only way to get them home may be to somehow restrict the funds for this disastrous war. We have tried this before but President Bush vetoed the bill. We must try again and attach strings to this money. This Senator will support no more blank checks for Iraq.

We simply cannot afford to buy into another slick White House sales job. Too many young men and women have died or have been maimed in this horrific war. After nearly five years of war, more than 3,800 deaths, over 27,000 casualties, and no end in sight, we must stop blindly funding this lemon of a war and begin to change course.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Cooperation Not Confrontation Key To Movement On Funding Bills

Last week, Congress approved a seven week "continuing resolution" that ensures on-going funding for the entire government while Congress works to complete action on individual appropriations bills. I supported this resolution because I believe the alternative would have been a government shutdown, including operations to protect our homeland and its borders, process Social Security checks, maintain mine safety inspections, and ensure air traffic controllers and federal law enforcement personnel remain on the job.

Unfortunately, we have come to an impasse with the White House in moving forward with the appropriations bills because the President has threatened to veto any bill that exceeds his budget request. These veto threats include all the spending bills that provide funding for our domestic programs -- programs that in one way or another benefit each and every American. These domestic spending bills provide the essential building blocks for the foundations of our great country.

On the one hand, the President is seeking over \$190 billion in emergency appropriations to fight the wars in Iraq and Afghanistan. Yet the President wants to veto critical domestic spending bills because they total \$22 billion above his budget request.

While the President characterizes this money as "increased" spending, the

reality is that most of this "increase" simply represents restorations of the President's attempts to savage important domestic initiatives -- law enforcement, first responder grants, education, the National Institutes of Health, and infrastructure repairs to name a few.

This White House stand-off is not over some irresponsible plan for an expansion of government. Rather, it is the President's efforts to prevent cancellation of his ill-conceived budget cuts. There are major consequences for failing to invest in America's safety and future. Hurricane Katrina proved that. The collapse of the I-35 bridge proved that. Increases in violent crime prove that. And increases in food borne illnesses prove that.

Regrettably, rather than recognizing the consequences of his budget, the President is spoiling for a political fight. When President Bush came to town, he vowed to reach across the aisle for the common good of our nation. Now is his chance to make good on that pledge. He can continue his purely partisan fight over \$22 billion in needed funding, or he can work with the Congress to confront the problems that face Americans here at home. It is my hope that the President will put away his veto pen so that we can get on with the business of adequately funding programs that contribute to a safe and prosperous nation.

A Simple Way to Help Protect the Planet

As West Virginians, we are blessed to live in one of the world's most spectacular natural settings. With our state's rolling hills, streams, and meadows, we are inspired every day and instilled with a deep respect for the wonder of God's creation.

In our busy lives, however, many who care about protecting our natural environment are unsure of how to make a contribution. Thankfully, there are simple ways to make a real difference. If each of us makes just a small effort, the collective impact can be considerable.

For instance, most Americans are probably unaware that lighting accounts for close to twenty percent of the typical home's electric usage. The Department of Energy's "ENERGY STAR Change a Light, Change the World" campaign is a national effort to ask every American to play a part in protecting our environment one light at a time.

The program encourages Americans to replace one light or fixture in their home with an energy-efficient ENERGY STAR qualified product. Products that meet strict energy efficiency guidelines set by the Environmental Protection Agency (EPA) and U.S. Department of Energy earn the ENERGY STAR. Many major retailers carry qualified light bulbs and fixtures,

which can be identified by their blue ENERGY STAR label. To find out more, go to www.energystar.gov.

Simply replacing one light bulb might not seem like much, but consider the dramatic cumulative effect that would result if everyone in the Mountain State participated.

If each household in West Virginia changed just one incandescent light bulb to an energy star qualified bulb, the state could save up to 38 million kilowatt-hours of electricity per year. This is enough energy to light all the households in Charleston for over 170 days! The amount of energy saved would reduce household electrical bills by a combined total of \$2.4 million a year. Remarkably, West Virginia would prevent the release of over 58 million pounds of greenhouse gas emissions each year.

As you can see, we can all play a part in reducing pollution and greenhouse gases. An act as simple as changing a light bulb can make a real difference.

I believe it is our moral responsibility to act as good stewards of our planet. If we fail, our children and grandchildren will suffer the consequences. I hope that you will each take the time to make this small contribution to the future of our planet. Together, it will pay big dividends for generations to come.

Eastern Panhandle's Growth and Conservation Go Hand-In-Hand

The Eastern Panhandle is one of West Virginia's greatest treasures. The area is a vital part of our state's agricultural and tourism industries, and is home to generations of West Virginia families as well as many newcomers to our state. I have worked hard to protect the historical and cultural heritage of the region, and channel resources to the Eastern Panhandle which have fostered new jobs and investment.

As Chairman of the Senate Appropriations Committee, I have added funding to aid in ecological preservation and economic development. The Improved Efficiency of Cool and Cold Water Species/Trout Genome Mapping Project supports research that will help ensure that our streams are filled with healthy aquatic life. My work to develop the National Center for Cool and Cold Water Aquaculture in Leetown, has assisted vital research for the aquaculture industry.

The Appalachian Fruit Research Center in Kearneysville is another endeavor of which I am very proud. To help advance the Center's research efforts, I have provided funds in past appropriations legislation. In the Fiscal Year 2008 Appropriations bill, I included funds to help with repairs and renovations at the facility, and advance its Disease/Insect Control Alternatives Program. This funding aids

apple and pear growers fight fire blight, a destructive bacterial disease.

Across our state, many West Virginians deal with devastating floods and problems with water supply. That is why I have made it a priority to help provide flood protection and protect the water supply in the Eastern Panhandle. The Potomac Headwaters Land Treatment Watershed Project, run by the Natural Resources Conservation Service, helps land owners to implement bacteria and nutrient-reducing techniques in the Potomac River. Additionally, the Lost River Watershed Project provides flood protection, water supply, and recreation to eastern Hardy County.

Throughout the Eastern Panhandle region there are magnificent attractions that draw visitors from all over the world every year. The success of federal and local conservation efforts allows the area to remain home to abundant wildlife and assure access to some of the nation's most pristine landscapes.

With its beauty and economic potential, the Eastern Panhandle's rivers, streams, and farms engender pride in all of us. As long as we continue to conserve the land and make smart investments in the economy, the Eastern Panhandle will continue to be a treasure chest of history and natural wonder for generations to come.

The Mountain State Is Home To Groundbreaking Scientific Discoveries

Pocahontas County is home to one of the world's premier astronomical research facilities – the Robert C. Byrd Green Bank Telescope. This telescope and its neighboring national radio observatory work to enhance our knowledge and understanding of the Milky Way galaxy and beyond. Last week, the National Radio Observatory, a National Science Foundation facility that houses the Byrd telescope, celebrated its 50th anniversary.

Dedicated in the summer of 2000, the Byrd telescope has been leading the way in space research. Recently, two teams of scientists announced the discovery of the largest negatively-charged molecule. The molecule was of particular surprise to the scientists because it contains an extra electron, giving the molecule a negative electrical charge. With this exciting information on-hand, astronomers claim that, "there will be a drastic revision of theoretical models of interstellar chemistry."

Prior to the recent finding, scientists at the Byrd Telescope announced in 2002 the groundbreaking discovery of three pulsars. A pulsar is what remains after a star suffers a massive explosion that removes most of its surface. This phenomenon is known as a supernova. By studying these pulsars, scientists are gaining greater insight into the galaxy's growth. Pulsars emit regular pulses of radio

waves that act as a type of "celestial lighthouse." These waves – which are intercepted by the Byrd Telescope – may some day be used by space explorers as lighthouses to navigate our galaxy.

The Byrd telescope had already become the world's champion molecule-finder prior to these discoveries. Using the telescope, scientists discovered eight cosmic molecules in two years – an unmatched achievement. The fact that pulsars were discovered in an already extensively studied part of the sky demonstrates the value of the Byrd telescope. No other telescope has provided such insight into space since the first molecules were discovered in the 1960s.

I have been working to make the resources of the Byrd Telescope available to West Virginia students. In 2002, I secured \$5 million to complete construction of the planetarium and science center at the Clay Center for the Arts and Sciences in Charleston, and for related equipment to link the Clay Center to the Byrd Telescope. This funding has helped to further the educational experience of young people interested in astronomy and the sciences.

I hope that the Byrd telescope will continue to make advances in scientific research, and help spark a greater interest in this exciting field, which has limitless potential for discoveries.

America Must Not Sleep Walk Into Another Disastrous Military Confrontation

In West Virginia and across the nation, we have reaped the bitter harvest of this Administration's reckless invasion of Iraq. As the President persists undeterred with his hopelessly failed policy in Iraq, the threat of another major conflict in the Middle East looms on the horizon.

Every day now, it seems that the confrontational rhetoric between the United States and Iran continues to escalate. The main point of contention is Iran's pursuit of nuclear weapons. While few doubt Iran's desire to attain a nuclear bomb, there is little evidence that they are close to acquiring such a capability.

I am no apologist for the Iranian regime, any more than I was for Saddam Hussein, but I believe that the recent blustering by the Bush Administration does not serve our nation's interests. Rather than pursuing a robust international diplomatic offensive, the Bush Administration is once again pushing the world community aside, pursuing unilateral sanctions, and making threatening statements. We have seen all too clearly where this path leads. We must not pursue it again.

We hear shadowy claims about Iran's destabilizing actions in Iraq, with little proof offered to back them up. Vice President Cheney has threatened "serious consequences" if Tehran does not acquiesce to U.S. demands -- the

exact same phrase used by this Administration in the lead-up to the invasion of Iraq. The parallels are unmistakable.

Even more troubling, the President has stated his belief that previously enacted Congressional resolutions grant him all the authority he needs to launch a new war. This is simply not the case. Article One, Section Eight of the United States Constitution vests Congress all power to declare war. No such Presidential authority has been granted.

To make this point crystal-clear, I will be co-sponsoring legislation in the Senate stating that "any offensive military action taken against Iran must be explicitly approved by Congress".

It is incumbent upon this Congress to reassert the powers granted to the people's branch in the Constitution. That is the best way to prevent another colossal blunder in the Middle East. It is the people of this country who pay the price of such presidential misadventures. We, as their representatives in the Congress, must not fail in our number one duty: to protect their interests.

President Bush must understand that the Congress will not stand idly by while his Administration plots another march to war. We must not allow this nation to sleep walk into yet another unnecessary and disastrous conflict.

By U.S. Senator Robert C. Byrd

Helping Families Face Rising Energy Prices

As the low temperatures settle in the mountains and valleys of West Virginia, I am reminded of the beauty that comes with Mountain State winters. But the change of season also means cold nights for many families who cannot afford to heat their homes. The upcoming impact of high oil prices and other energy challenges will test our ability to meet the heating needs of our homes this winter season.

Many West Virginians will be faced with tough choices about whether to use their paychecks to heat their homes, to fill their cars with gasoline, or to buy winter clothes for their children. I believe that it is our government's moral responsibility to help disadvantaged Americans find some relief from the soaring price tag that is attached to home heating costs.

Included in the 2008 Labor, Health and Human Services Appropriations bill, is funding for a program that has been helping low-income and elderly families cope with home heating prices. In 1981, the Low Income Home Energy Assistance Program (LIHEAP) was established to help those at the lowest income levels meet home energy needs. Currently, more than 100,000 households in West Virginia benefit from the LIHEAP program.

According to the Department of Energy (DOE), home heating oil prices are expected to be 16 percent higher for the 2007-2008 winter compared to last year's winter. While families across the nation are bracing for record home heating costs this winter, President Bush has proposed a \$379 million cut to LIHEAP in his 2008 budget request. Apparently, the President has not visited West Virginia during its coldest months, so he overlooked the fact that winter nights in our state are much colder than those in Texas.

Congress, however, has taken the right steps to help our families cope with skyrocketing home heating costs. We must not stand by and let President Bush leave the most vulnerable in our country out in the cold. Congress has closed the budget gap by approving a \$250 million increase for LIHEAP funding.

When temperatures fall toward the freezing level, families that need home heating assistance may seek help through LIHEAP. In West Virginia, residents can contact the West Virginia central LIHEAP office, which is located in Charleston, by calling 1-800-642-8589.

The sanctuary of a warm home is something to which each and every American should be entitled.

Preparing Today to Save Lives Tomorrow

Long before September 11, 2001, the West Virginia National Guard (WVNG) recognized that our federal, state, and first-responder personnel needed to be better prepared to respond to incidents of mass destruction. The WVNG's concept was initially met with some resistance at the Pentagon, especially prior to the horrific attacks of September 11th. However, armed with a solid plan and my efforts to develop state-of-the-art training facilities, the WVNG's vision and early work paid off. In May of 2004, West Virginia was designated by the Chief of the National Guard Bureau as the nation's first National Guard Joint Interagency Training and Education Center (JITEC), dedicated to homeland defense training.

Today, the JITEC is a national level anti-terrorism and homeland security facility based at Camp Dawson in Preston County. The JITEC provides anti-terrorism, counterterrorism, and homeland security training for Department of Defense units, federal and state government agencies, and military and civilian first responders throughout the country. The training and related operational support activities focus on preventing, deterring, and responding to terrorist threats and natural disasters.

The Center for National Response is a key JITEC asset. The former highway tunnel near Standard, West Virginia, is a one-of-a-kind training facility that, since starting operations in De-

ember 2000, has supported over 55,000 man-days of training for military and civilian first responders from around the nation. This unique facility trains military and civilian responders together to improve the coordination of our government's responses to terrorist events, natural disasters, and national emergencies.

Interagency partnership is a cornerstone of the JITEC, having partnered with many federal agencies to develop and implement key national level critical-infrastructure protection programs. JITEC and the West Virginia National Guard also provide support to other agencies for National Security Special Events such as State of the Union addresses, presidential inaugurations, and the Super Bowl. In addition, JITEC supports antiterrorism training at Camp Dawson for the Department of State.

In the realm of homeland defense, the West Virginia National Guard is setting the standard for homeland security training for the rest of America to follow. I am proud to have supported the JITEC concept and to have included the necessary funds to support its mission, such as the construction of the Regional Training Institute at Camp Dawson, and the transformation of the Memorial Tunnel into the Center for National Response. I will continue to work closely with officials of the WVNG, who set a fine example by teaching us that by preparing today, we can save lives tomorrow.

The Flu: Nothing To Sneeze At

West Virginians have enjoyed such a temperate autumn that it is hard to imagine that the bitter days of winter are on their way, but on the way they are - bringing ice, snow, and the influenza virus that causes the common, yet debilitating, seasonal flu.

The flu is a contagious respiratory illness. Its symptoms of feverish headaches, aching muscles, and extreme fatigue strike an average of 5% to 20% of the United States population each year.

My mother died of influenza before I reached my first birthday, during the great pandemic of 1918 that took many millions of lives worldwide. Thankfully, modern medicine has equipped us with more effective treatment and prevention of influenza in the years since that terrible epidemic. The flu, however, remains a serious threat to public health, especially to those who have not been vaccinated. Over 200,000 people who fall ill from the flu require hospitalization from complications including dehydration, bacterial pneumonia, and congestive heart failure. Sadly, approximately 36,000 Americans die each year from the flu. Our children, our elderly, and those suffering with compromised immune systems are most susceptible.

The influenza virus is spread from person to per-

son mainly through coughing and sneezing. While covering your cough can ease the spread of the influenza virus, good hygiene is not enough. The best way to prevent getting, and spreading the flu this winter, is to get a flu vaccination. Even when a person is experiencing no flu symptoms, it is still possible for the virus to be passed onto family members, and loved ones. Because the virus changes slightly over time, it is vital that people get a flu vaccination every year.

The West Virginia Bureau of Public Health advises that now is the time for West Virginians to be immunized against this year's influenza virus. Mountaineers seeking flu shots may wish to contact their private physicians or county health departments to obtain information on when and where they can get a flu shot. Veterans may be eligible to obtain free flu shots, and are encouraged to contact their local VA Medical Center or VA Community Based Outpatient Clinic. Likewise, Medicare and Medicaid patients may be eligible for flu shots at a free or reduced rate.

To some this winter, the flu will only be an uncomfortable inconvenience. Tragically for others, the flu will prove to be fatal. Please prepare yourself and your family for the upcoming flu season, and schedule a flu shot today.

A CHANGE OF COURSE IN IRAQ

Recently President Bush requested that Congress provide him -- with no strings attached -- \$196 billion to maintain a presence of some 130,000 U.S. troops in Iraq for a sixth year. The President claims "progress" is being made in Iraq. Like a down-on-his-luck gambler, he wants to keep throwing good money after bad, and keep risking more soldiers' lives, to win his bad bet on Iraq. Remember that President Bush has said that if he had his way, U.S. troops would remain in Iraq long after he leaves office. That is unacceptable. This misguided war must be brought to a close.

It is long past time to limit our military mission in Iraq and bring the bulk of our troops home. We must seriously engage our allies and the nations of the Middle East on Iraqi security issues. It is time to put the United States back on the track that has served us so well in the past -- demonstrating by example how democracies should function, as defenders of human rights, and beacons of hope, strength, and economic prosperity. For most of my lifetime, the world looked to the United States for moral leadership. Now our friends and allies worry about which nation we will invade next. That is how far we have fallen in the eyes of the world. It is long past time to reject

this path, and return to, as President Lincoln so eloquently put it, the better angels of our nature.

Congress cannot continue to act as a rubber stamp, providing endless billions and endangering tens of thousands of lives, for an undefined goal that has succeeded only in undermining U.S. national security and our standing in the world.

The Senate recently attempted to consider a bill that would have provided \$50 billion for continued operations in Iraq, while requiring the President to prepare for the safe and orderly redeployment of our troops consistent with a more limited military mission in Iraq, and in conjunction with regional diplomatic initiatives.

The bill also provided other protections for U.S. troops. These are not onerous strings intended to tie the hands of the President in the conduct of foreign policy. These are sensible provisions that are consistent with America's values and strategic interests.

Unfortunately, the President's friends in the Senate refused to allow the debate to move forward, and blocked the bill. Rest assured that I will continue my efforts to ensure that there will be no more blank checks for this misguided war.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

THE PRESIDENT MUST REMOVE ROADBLOCKS TO HEALTH CARE ACCESS

Recently, President Bush and his friends in Congress demonstrated a startling inability to understand the health care system, and a troubling indifference to the problems of those who cannot access it.

The President began by vetoing an expansion of the hugely successful Children's Health Care Insurance Program (CHIP), legislation that was initiated by my colleague, Senator Jay Rockefeller, D-W. Va. Though a majority of Americans support broadening the CHIP program, the President -- deaf as Ulysses to the sirens' songs -- vetoed a bi-partisan plan to extend basic health care coverage to low-income children. He has also threatened to veto a new plan which covers even more low-income children.

Then, the President dismissed concerns about the rising number of working Americans unable to afford health insurance, by making an extraordinary claim: "No one goes without health care in America. After all, you just go to an emergency room."

Ignoring the disastrous consequences of swamping the nation's emergency rooms with patients seeking non-emergency treatments and care, the President went beyond underestimating the health care problem. He simply denied that one exists.

Working-class Americans know better. They know that denying children

access to health care and denying that a national health care crisis exists will have detrimental consequences for America's health and its economy.

West Virginians know first-hand the disastrous consequences of the current health care system. Residents in rural areas often have to travel long distances to reach the nearest doctor. Not only does this force many to postpone treating medical problems -- often making the prognosis worse -- it further drains the pocketbooks of those who can least afford it.

While President Bush has been a free-wheeling military spender, he has been ruthlessly "penny-wise" on many domestic issues. While he is eager to pour billions into military adventurism abroad, American children have lost their health insurance and veterans' hospitals like Walter Reed have fallen into disrepair. While President Bush is ready to spend billions of American tax dollars to build roads and schools and hospitals in Iraq, our own country's health care, education, and infrastructure are at the top of his hit list for spending cuts.

By any measure, President Bush's priorities do not match those of the American public. Our people need to demand that their needs be met. It is past time for this White House to get its priorities straight.

By U.S. Senator Robert C. Byrd

A HOLIDAY MESSAGE TO OUR TROOPS AND THEIR FAMILIES

During this Holiday season, over 200,000 young American men and women are serving our country in Iraq and Afghanistan. Many have been deployed overseas before, or will spend their second consecutive Christmas in a battle zone rather than gathered around a Christmas tree with friends and family. For our troops, the holiday season will be rather spartan, spent in uniform, patrolling dangerous streets, and overlaid with an ever present watchfulness that comes from living on the front lines.

In living rooms across the country, candles glow, carols sound, and the scent of pine boughs and Christmas baking fills the air. But many families will be missing a treasured family member around their Christmas table. Their holiday pictures will be missing a smiling face, who will instead be wearing a helmet over their body armor and combat fatigues. The soldiers and their families will put on a brave face, but the strain and loneliness are very real. No care package or telephone call can ever replace the warm hugs of a loving family. And nothing can fill the ache of families who have lost a loved one in combat.

Throughout our nation's history, the members of our

armed forces have served willingly and tirelessly overseas so that we might enjoy the peace won through their sacrifice. Our troops in Iraq and Afghanistan, and elsewhere around the globe, add to this distinguished history of courage and service. In this season of love and light, song and laughter, we owe to them our heartfelt thanks and our commitment that we will never take their service for granted.

While this holiday season may be marked by an intense debate between Congress and the White House over our military commitment in Iraq, no one who wears the uniform of this country should ever doubt the American people's gratitude to them and their families for the sacrifices they have made and continue to make every day. I want each of them to know that I have no greater wish for the New Year than their safe return home. And for their families, I pray for strength and comfort as you struggle through the holidays -- and every day -- without a loved one. You are always in my thoughts and prayers.

And with the thanks of a grateful nation, may you share in an abundance of God's blessings during this Christmas season and the coming New Year.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Christmas Spirit is Alive and Well in West Virginia

It is my Christmas wish that we all keep more of the Christmas spirit with us throughout the coming year. Charles Dickens said it best: "I will hold Christmas in heart and try to keep it all the year."

Christmas is a time of peace, and a celebration of the birth of Jesus, whose message of love for His fellow man included tolerance, kindness, and humility. These days, it takes effort to carve out enough time and energy from the ceaseless march of consumerism to find the true spirit of Christmas. Thankfully, that spirit is still alive and well even amid all of the bright lights and holiday parties. The true spirit of Christmas can be seen in the piles of canned goods donated to food banks. It is alive and well in the generous responses to 'angel trees', which allow the fulfillment of the Christmas wishes of children in need. The message of the birth and life of Jesus thrives in the music sung by Christmas choirs in magnificent performances.

Each Christmas season, inspiring choir renditions of favorite carols can be heard throughout the churches of West Virginia. There are

few things more uplifting than coming out of an evening church service, buoyed up by the sweet melodies of traditional music, accompanied by a host of stars sparkling like diamonds across the nighttime sky. All the carols we learned as children, in church or around the family piano, resonate in our memories – the three kings following the "Yonder Star," the stars shining brightly on that Holy night, the manger in Bethlehem, and the Holy mother and child on that silent night. Each year, these images rise anew from the deep well of childhood, bringing with them fond images of happy times and family members dear to our hearts.

This year, many families will look to the stars and hear the music of the season and know that far across the globe, their loved ones gaze up at those same stars remembering home and the Christmas story. For our troops especially, we pray for peace, and their speedy return to the loving arms of their families.

May you share in an abundance of God's blessings in this Holy Christmas season and in the New Year.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Fighting the Scourge of Methamphetamine Addiction

Methamphetamine or “meth” is a highly addictive drug that has destroyed many lives in West Virginia and throughout the country. In 2005, I cosponsored the Combat Methamphetamine Epidemic Act, which limited sales of medicines containing pseudoephedrine (PSE) and other chemicals used to make methamphetamine, and required that the chemicals be placed behind pharmacy counters. It also mandated that pharmacies keep a written or electronic log of their sales. The West Virginia Legislature passed a similar law that same year.

According to the U.S. Drug and Enforcement Administration, the discovery of clandestine meth labs in West Virginia peaked in 2005 at 213, and declined to 83 in 2006, largely as the result of the new state and federal laws regulating chemicals used to make the drug.

However, meth remains a serious problem in our state. Consequently, I recently cosponsored S. 2071, the Combat Methamphetamine Enhancement Act, which seeks to strengthen the earlier legislation. For example, the 2005 Act required pharmacists to file “self-certifications” that said their personnel had been trained about the law’s requirements, including behind-the-counter storage, logbook entries, and limits on sales. Unfortunately, thousands of the chemicals’ retail sellers have not yet self-certified, and it is difficult to iden-

tify non-complying stores. The 2007 bill is designed to improve self-certification by requiring sellers of chemicals used to make methamphetamine to file self-certifications with the Attorney General. It also requires that the Attorney General publish a list of all self-certified persons on the Drug Enforcement Agency website; it restricts distributors of the listed chemicals from selling to anyone other than self-certified sellers; and it imposes penalties for any negligent failure to self-certify.

I have also provided funding for the High Intensity Drug Trafficking Area (HIDTA) in West Virginia. The HIDTA program coordinates drug control efforts among local, state, and federal law enforcement agencies. It provides the agencies with equipment, technology, and other resources to combat illegal drug activity throughout Appalachia.

Since 2001, I have also provided funds for the West Virginia National Guard (WVNG) Counterdrug Program, which completed over 106 missions during FY 2007. The missions resulted in 500 arrests and the seizure of drugs and assets worth \$78.8 million.

I share West Virginians’ deep concern about the drug problem in our state. I pledge to continue to sponsor legislation that will enhance awareness, promote drug treatment, and provide law enforcement with the tools it needs to fight drug crime.

By U.S. Senator Robert C. Byrd

CONGRESS DELIVERS ON AMERICA'S PRIORITIES

The Constitution grants to Congress an extensive array of power, each of which, in one way or another, touches the lives of every one of the 300 million people who live in America today. But of all those powers none is so powerful -- or so necessary for the welfare of our country -- as the power to appropriate money from our treasury.

But it is not simply within the power of Congress to appropriate funds for the operation of the government. It is a duty that must be exercised each year, without fail, without excuses. The operation of the government -- to enforce our laws, to serve our people, to protect our liberties -- depends upon Congress providing the funds necessary to do so.

Congress has done just that. We have passed and the President has signed into law a funding bill totaling \$555 billion for operations relating to nearly every agency in the Federal government, and which restores many of the President's ill begotten spending cuts.

A key priority in this bill is increased funding for the Veterans Administration, for veterans health care and for the hiring of more VA personnel to reduce a six month backlog of benefit claims.

With energy prices going through the roof, a significant increase in funding

over the President's budget request has been designated for the Low Income Home Energy Assistance Program, which will provide 2 million families with additional help for winter heating bills.

Despite the fact that violent crime is on the rise for the first time in fifteen years, the President attempted to cut State and local law enforcement. The Congress restored \$1.2 billion of the proposed cut.

The measure also makes education a top priority by increasing Head Start by \$114 million, stopping a proposed cut of 30,000 slots for early childhood education. And for college students, Pell Grants are increased to \$4,731 per year.

Plans to eliminate or slash numerous programs for our rural communities, such as rural health, rural housing, and clean water programs, were scuttled.

And at my direction, the bill included a \$20 million increase above the President's request for mine safety for a total of \$334 million. This money will help save lives.

The Democratic Congress understands that there are consequences for our failure to invest in America and the American people. And as Chairman of the Senate Appropriations Committee, I will continue to stand up for the priorities of the people of West Virginia and all Americans.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A NEW DIRECTION IN PROTECTING THE HOMELAND

In February 2007, I wrote in this space that despite President Bush's talk about his concern for the safety of Americans at home, his rhetoric was as hollow as a ten gallon hat. The President's budget request for 2008 homeland security programs proposed more than \$2.6 billion in cuts to our nation's homeland security initiatives. Programs funding Law Enforcement Terrorism Protection, Firefighter Assistance Grants, and Community Oriented Policing Services all faced dramatic cuts at a time of increasing concern that terrorists were once again plotting to attack our shores.

In my capacity as Chairman of the Senate Appropriations Subcommittee on Homeland Security and Chairman of the full Senate Appropriations Committee, I made it a priority of the Committee this past year to reverse these misguided cuts and better protect this country from future terrorist attacks.

I am pleased to say that when President Bush signed the Consolidated Appropriations Act of 2008 in late December, it signaled a new direction in funding to protect our homeland. The Democratic Congress restored the significant cuts sought by the President to the Department of Homeland Security (DHS) and improved efforts to secure our nation's borders.

When Congress sent this bill to the President, we

made it clear that DHS must be both nimble and have the resources necessary to effectively respond to evolving threats. We reversed the President's unfortunate attempt to secure the homeland on the cheap.

In October 2006, President Bush signed the SAFE Port Act yet he requested no funds to implement it. In July 2007, the Administration issued a National Intelligence Estimate that concluded that Al-Qaeda had reconstituted itself in Pakistan with the intent of attacking America again. Then, unbelievably the President proposed cutting grants which equip and train our first responders by \$1.5 billion. And in August 2007, he signed the 9/11 Commission Implementation Act and requested no resources to implement it. Signing ceremonies alone will never secure our borders or enforce our immigration laws. It takes money to implement these goals.

As the recent events in Pakistan remind us, the world is a very dangerous place. The Congress did its part to provide necessary funds to train and employ the border patrol agents and first responders who are our first line of defense against unforeseen attack. Now the President has signed that legislation into law, establishing a clear new direction for the Department of Homeland Security, and ensuring that American lives are not put needlessly at risk.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Building for the Future

In 1947, when I began my public service in the West Virginia House of Delegates, there were only four miles of divided, four-lane highway in West Virginia. Needless to say, travel within West Virginia at that time was slow and extremely dangerous. Commerce stalled and lives were lost because our road and highway system was, as the Saturday Evening Post noted in February 1960, "decades behind that of its neighbors."

We have come a long way since 1947. I have worked hard throughout my career to fund the Appalachian Development Highway System and other critical road projects in our state.

But there is still much work to do. This year, I designated \$41 million in federal funding specifically for West Virginia highways, increasing West Virginia's total highway funding to a total of \$356.1 million. I fought for these dollars because I know they will bring real benefits for West Virginians -- safer roads, new jobs, and economic growth for communities in need of modern highways.

The Corridor highways, and four-lane highways in general, generate economic growth in the communities they traverse.

That is why I have made it a priority to com-

plete West Virginia's Corridor Highways. Our state is set to receive \$102 million this year for construction of the Appalachian Corridor Highways, including \$15.7 million that I added. With the Corridor D bypass scheduled for completion this spring, the only unfinished corridor highway in West Virginia will be Corridor H -- planned to stretch from I-79 at Weston through the Potomac Highlands to the Virginia state line. Now that we are close to completing work on all of our other corridors, these new investments will mean more progress on this vital project.

I have also boosted funding for other important projects throughout the state, including: \$3.9 million for the Coalfields Expressway; \$3.9 million for the King Coal Highway; \$7.5 million for West Virginia Route 2 in the Northern Panhandle; \$7.8 million for Route 9 in the Eastern Panhandle; and \$1.9 million for an access road from the Morgantown airport to I-68.

The progress we have seen in West Virginia roads and highways over the last half-century has been truly remarkable. As every West Virginian knows, however, there is always more to do. I will continue to look for opportunities which benefit West Virginia's highways in the year ahead.

A Tax Credit for Working West Virginians

Each year, many working West Virginians qualify for tax breaks but they simply don't take advantage of them. The Earned Income Tax Credit (EITC) and the Child Tax Credit (CTC), are federal tax benefits created to offset Social Security taxes and to help people keep their jobs and care for their families.

The EITC can be worth up to \$4,716 for families who worked in 2007. Workers raising children who earned less than about \$38,000 in 2007 may be eligible for the EITC. Additionally, workers not raising children who earned less than around \$13,000 can qualify.

Along with the EITC, some families are also eligible to receive the CTC, which can be worth up to \$1,000 per child. While the credits are offset by the amount of income taxes workers owe – even workers who owe no taxes may qualify for the credits.

To claim the credits, eligible workers must file a tax return. While filing may seem overwhelming or complicated, there are organizations in West Virginia called Volunteer Income Tax Assistance (VITA) to help prepare tax returns. VITAs offer free tax preparation and assistance to

qualifying workers. Volunteers help to educate taxpayers about the EITC, including qualifying for and claiming the credit.

Taxpayer Assistance Centers will be open for Saturday hours on February 2nd, 9th, and 16th to help EITC taxpayers who may not be able to seek assistance during the work week. The Huntington site, located at 845 Fifth Avenue, will be open from 8:30 a.m. – 12:30 p.m. The Charleston site, located at 1206 Quarrier Street, will be open from 8:30 a.m. – 12:30 p.m.

Other free EITC return preparation options include Free File (www.irs.gov) - for taxpayers with internet access. Online filing is available. Taxpayers can also find local Volunteer Assistance sites by calling 1-800-829-1040 or visiting www.wveitc.com.

It is estimated that 15 to 20 percent of eligible workers do not claim their EITC. That means millions of dollars are not making it into the pockets of eligible Americans, including thousands in West Virginia. West Virginians should seek assistance at tax time. They are entitled to the tax breaks in the law which can ease the strain on the family budget.

THE UNFORTUNATE STATE OF OUR UNION

President Bush this past week delivered his seventh and final State of the Union Address to the American people. While he painted a picture of America's economy, and our role in the international community in bold brush strokes, I was not looking through the same rose-colored glasses as the President. I believe that our nation's ship of state lies berthed in drydock and is in desperate need of repair. With reports that United States' economic growth is the weakest in five years, concern has increased over President Bush's failed economic policies.

When President Bush entered office in 2001, we had a budget surplus and our country was on its way to eliminating much of its public debt. Since that time, the American people have watched as this Administration has not only squandered that surplus but has also created three of the largest deficits in the history of our nation.

President Bush has added more than \$3.5 trillion to the debt owed by our government to its creditors. He has accomplished this by championing massive tax cuts for the very wealthy at the expense of hard working West Virginia families and the health of America's economy. The President has demanded over \$500 billion for his war in Iraq and every penny has been borrowed.

And, he once again blindly asked the Congress to make those tax cuts permanent, with no concern for the financial burdens this would inflict on our children and grandchildren.

Before our very eyes, our President is auctioning off our economy to the highest bidder. He has presided over an economy that has shipped good-paying American jobs overseas. And President Bush has sat idly by during most of the past year as the home mortgages of hard working American families have been bought by foreign creditors. Literally, the roofs over the heads of many Americans are owned by foreigners.

It is extraordinary that President Bush -- who continues to squander billions of dollars every week in Iraq -- presumes to lecture Congress on its stewardship of taxpayer dollars. He fails to understand that there are consequences for our failure to invest in America. The American people want their hard-earned tax dollars to be spent on priorities here at home -- on homeland security, clean water, bridges, and roads -- not on a disastrous nation-building adventure halfway around the world.

It is time to right our ship of state, make the drastic needed repairs, and set sail for a brighter economic future.

By U.S. Senator Robert C. Byrd

FINAL BUSH BUDGET MORE OF THE SAME

Last week, President Bush submitted the final budget of his presidency to Congress. Once again we saw a replay of his previous budget requests - - deficits, deception, and demagoguery.

The Bush budget mortgages our children's and grandchildren's future through massive federal budget deficits, while short-changing critical domestic priorities. In fiscal year 2000, America had a budget surplus of \$236 billion. The President's fiscal year 2009 budget now projects a budget deficit of \$407 billion. This Administration has racked up three of the largest deficits in the history of our nation, and President Bush's FY 2009 budget could yield yet another record deficit. It appears that lip service will be this President's legacy on fiscal discipline.

While President Bush has been adding to our deficit dilemma, he continues to rob Peter to pay Paul by taking critical funds from essential domestic programs for his disastrous war and nation-building misadventure in Iraq.

For West Virginia families, the Bush budget is a bad deal. It cuts federal housing programs, despite widespread recognition that our nation's economy is in a housing crisis. Huge cuts will endanger access to quality health care for West Virginia's 600,000 Medicare and Medicaid beneficiaries. More than 9,000 West Virginians living with invasive cancer and 10% of adults

who have been diagnosed with diabetes will have their health care and medical research jeopardized.

Under the Bush plan, the Low-Income Home Energy Assistance Program, which helps families heat their homes in the winter, will be slashed. And the budget assaults local crime fighting efforts - - the Community Oriented Policing Service (COPS) and the Justice Assistance Grant (JAG) programs -- because both programs are zeroed out.

The Mine Safety and Health Administration's budget will be slashed by \$10 million, which is absolutely absurd in light of the disasters at Sago and other mines and the safety concerns for our brave miners which need to be addressed. In an unfortunate and short-sighted move, which smacks of raw politics, the President proposes to eliminate the Robert C. Byrd Honors Scholarship program, thus slamming shut the door of opportunity for thousands of our nation's most promising students who need help to pay for their college tuition.

I had hoped that after almost eight years in office, President Bush would finally recognize the need to invest in the priorities of the American people. It is clear that dog will never hunt. However, you can be assured that I will continue to stand up to the President's misplaced priorities and fight for the needs of West Virginians and the American people.

By U.S. Senator Robert C. Byrd

Early Action is Key to Ensuring Your Child's Eye and Vision Health

One of the great responsibilities of parents is to ensure the health of their infant. Managing this task can be overwhelming, especially for those families who are already struggling to make ends meet. To help working families afford critical eye care for their newborn, there is a program called InfantSEE. This eye and vision health program makes it affordable to monitor an infant during their first year of development and offers early detection of potential eye and vision problems.

Good eyesight contributes immeasurably to the quality of one's life. It allows us to witness memorable events in the world, enjoy countless books, and see the beautiful faces of dear family and friends. But for more than 10 million children in the United States suffering from undetected vision problems, the gift of good eyes may be elusive.

The InfantSEE program provides a variety of services including: no-cost access to an eye-care doctor who has the instruments and resources not available to general-care doctors like pediatricians and family physicians; detects potential problems that, if undetected, may lead to learning and developmental issues later; and gives new parents the peace of mind that their

infant's vision is developing properly.

Through InfantSEE, optometrists will provide a one-time, comprehensive eye assessment to infants in their first year of life, offering early detection of potential eye and vision problems. In the 2008 Consolidated Appropriations bill, I added \$431,330 for InfantSEE that will help this program continue to provide its important services.

InfantSEE encourages parents to take their children to an eye doctor early in life, when many vision problems might be prevented or more easily corrected. That is the key to preventing long-term eye and vision problems. A doctor's assessment between six and 12 months of age can help determine whether an infant is at risk for eye or vision disorders.

Many disorders of the eye can only be identified by a doctor in the infant's first year of life. Working parents can guard their children's eyesight by seeking an InfantSEE assessment, and a wellness evaluation of the eyes performed by a pediatrician or family practice doctor.

I encourage parents to take advantage of InfantSEE. To learn more about the program, visit "<http://www.infantsee.org>" www.infantsee.org or call (800) 365-2219.

Celebrating the Founder of Black History Month

February is Black History Month. In February our country recognizes and honors the countless contributions that African-Americans have made to our American history and culture. What is less well known is that the founder of Black History Month was a West Virginian – our own Carter G. Woodson.

Woodson, the son of slaves, was actually born in New Canton, Virginia, but at an early age, he moved to West Virginia in order to attend Douglass High School in Huntington. He financed his education by working as a coal miner in Fayette County.

After receiving his Bachelor of Literature degree from Berea College in Kentucky, Woodson taught school from 1897 to 1900 in Fayette County. In 1900, he became the principal of Douglass High School, and later served as Dean of West Virginia State College in Institute, WV.

In 1908, Carter G. Woodson received his Master's Degree from the University of Chicago and in 1912 he was awarded his Ph.D. in history from Harvard University.

As he studied, Woodson realized that the role of African-Americans in American history had been largely ignored or misrepresented. "Those who have no record of what their forebears have accomplished," he wrote,

"lose the inspiration which comes from the teaching of biography and history." Maintaining that African-Americans must know their past in order to participate intelligently in the affairs of our country, he set out on a course that would eventually lead him to be known as the "Father of Black History."

More than six decades before there was anything resembling a course on Black Studies, Woodson had authored numerous scholarly books on African-American History, including, *The Negro in our History* and *The Mis-Education of the Negro*. In 1915, he helped establish the Association for the Study of Negro Life and History. The following year, he began publishing the influential *Journal of Negro History*, now one of the oldest learned journals in the United States.

In 1926, Woodson launched "Negro History Week" which was eventually expanded to "Black History Month."

Carter G. Woodson often said that he hoped the time would come when all Americans would easily recognize the contributions of Black Americans as a legitimate and integral part of the History of the USA, so that Negro History Week would not be necessary. We may not be there yet, but with the work and efforts of scholars like Woodson, we are well on our way.

Free Trade is Still Not Fair Trade

In early February, the U.S. Labor Department reported that, for the first time in nearly two-and-a-half years, the American economy lost jobs. Unfortunately, the Chairman of the Federal Reserve delivered an even less comforting Valentine's Day message before the Senate Banking Committee. He predicted a further drop in home building, with more job losses, higher energy prices, and diminished home values – all of which will cause consumer spending to decline. At the same time, he noted that inflation has increased as the result of soaring prices for both oil and food.

The Bush Administration's seven years of neglectful fiscal and trade policies have left America's working families in the lurch. The President's myopic obsession with funding the Iraq war has taken the focus off of our country's economic needs and permitted the forces of globalization to gut our middle class. While the Bush Administration pours billions of dollars into the sieve in Iraq, the White House mindlessly beats the drums for misguided free trade agreements (FTAs) here at home. These FTAs make it easier for U.S. corporations to move offshore and ship goods back into the United States duty-free. Overseas, U.S. companies produce goods with cheap labor not subject to stringent health, safety, labor, or environmental standards. According to reports, since

2001, an estimated 830,000 white-collar jobs have been sent overseas.

As I have said for decades, free trade is not always fair trade. The lengthy string of FTAs enacted over the past 14 years, including NAFTA, CAFTA, the U.S.-Morocco FTA, and the U.S.-PERU FTA, have done little to benefit West Virginia. Instead, they have increased the strength of multinational corporations, which view outsourcing and profit, rather than people, as their top priority. These corporations have not used the profit they have obtained by using cheap labor overseas to reinvest in America. Instead, wages in the United States have stagnated, and manufacturing employment continues to decline. Seventy percent of workers in America now recognize that their income is not keeping up with their cost of living. This cannot continue.

America must refrain from creating FTAs and start providing incentives for companies to remain in the United States. We should insist that corporate chieftains invest a higher percentage of their company's profit in local communities, rather than in ballooning executive salaries. We need to provide America's working families with economic security, while encouraging innovation and greater investments in education. By doing so, we will ensure a brighter future for workers in West Virginia and across our great nation.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Waste, Fraud, and Abuse in Iraq

As America's massive military and nation-building effort in Iraq continues with no end in sight, the cost to the American taxpayers is piling up at a staggering rate. According to the Congressional Budget Office, the cumulative cost of the war is expected to reach \$608 billion by the end of the year.

Here are some statistics to help put the enormity of \$608 billion in perspective. It is over \$2000 for every man, woman and child in America. It is approximately 120 times what President Bush has requested in his 2009 budget to fund the U.S. Immigration and Customs Enforcement Agency. According to NASA, \$608 billion could purchase 355 Space Shuttles.

The massive price tag for the war can be traced in part to the widespread waste, fraud, and abuse in Iraq. From the very beginning, huge sums of taxpayer dollars have lined the pockets of greedy contractors, whose work goes undone or poorly done. Money, weapons, and oil profits have apparently been delivered directly to insurgents and militias in Iraq. Large sums of cash have simply disappeared.

Meanwhile, stories of rampant corruption within Iraqi cities have become commonplace. A local Iraqi

businessman told a reporter, "I'd say that about 10 per cent of business was corrupt under Saddam. Now, it's about 95 per cent. We used to have one Saddam, now we have 25 of them."

To add to our budgetary woes, troop levels are not projected to decrease any time soon. The Pentagon now says that 140,000 of our troops will remain in Iraq even after the troop surge has concluded. Clearly, this budgetary comet will only continue its meteoric rise.

We must not settle for more feeble excuses and deceptions. There is simply not a serious enough effort underway to crack down on contract fraud and to pressure the governments in Iraq and Afghanistan to clean up their acts.

That is why, as Chairman of the Senate Appropriations Committee, I will be holding hearings to demand answers from the Administration on the widespread waste, fraud, and abuse that continues to take place in Iraq.

This is not a partisan political issue. Every American should demand that their government serve as a good steward of their taxpayer dollars. It is our common responsibility to determine the scope and scale of the problem, and go about fixing it. That is exactly what I intend to do.

Fire Department Funding is Central to our Homeland Security

Across the nation, there are men and women who put their lives on the line every day fighting fires. From house fires to chemical spills to bioterrorism threats, they, along with their colleagues in law enforcement, are the first at the scene.

While public attention has finally focused on the role that firefighters and emergency responders play in our overall homeland defense efforts, these silent heroes have always understood their mission.

As American life has become more complicated, the firefighter's job description has only gotten longer. The jobs of firefighting and emergency response have become increasingly complex and dangerous. The nationwide increase in the use of hazardous materials and the recent rise in both natural and man-made disasters pose new threats to firefighters and emergency workers. Often, they perform their duties without proper equipment, training, and staffing. But they do it anyway, and we are all better off for their bravery.

In this high technology, post-9/11 world, firefighters deserve the latest equipment and training to effectively deal with changing threats. We are safer, individually and collectively, with properly equipped and trained firefighters. Because the safety and security of our communities is dependent upon the capabilities of our firefighters, I believe that it is wise to invest federal dollars in this effort.

That is why I have fought the Bush Administration's misguided attempts to cut funding for fire grants. Our fire departments should not have to struggle to pay for the training that makes the dangerous job of fighting fire easier.

As Chairman of the Senate Appropriations Committee and the Chairman of the Appropriations Subcommittee on Homeland Security, I have worked to restore funding for the Assistance to Firefighters Grant Program (AFG), which provides equipment and training for these courageous public servants. The 2007 AFG program will award more than \$490 million in critical grant funds to fire departments in big cities and small towns across the country.

I have insisted on the restoration of severe budget cuts for staffing for Adequate Fire and Emergency Response Grants (SAFER) which provide grant funding to fire departments for recruitment and retention. Although the Administration sought to eliminate SAFER grants, I am proud that approximately \$115 million will be awarded to fire departments through the program in 2007. We must not be penny-wise and pound foolish.

When it comes to protecting our communities and giving our firefighters the training and tools they need to succeed, cutting corners is unacceptable. We must do all we can to provide our firefighters with the best resources available.

Byrd's-Eye View

SPRINGTIME AND EASTER

As many of you know, I took a nasty little fall at my home recently. Fortunately, I only gave my back a good wrench, but my family and doctors insisted on a lot of care and physical therapy, which was both therapeutic and frustrating. I do not like being poked, prodded, or cajoled any more than the next person, especially after beginning to feel better and ready to return to work. Nevertheless, the rest did let me spend a little time staring out of the windows, watching the beauty of springtime begin to steal across the landscape.

March 20th, the first day of spring this year, is the day that marks the Last Supper between Jesus and his disciples, the evening before the crucifixion on Good Friday, and the miracle of resurrection on Easter Sunday. It is fitting that the dawning of the spring and the resurrection of Christ occur in such close conjunction. Both events celebrate renewal and rebirth and the awakening of new life. The dawning of spring brings a sense of restored health and energy that enhances our appreciation of the miracle of the Easter season and its promise of eternal life.

As Christians moved through the liturgical calendar of Easter, observing and commemorating great

events of two millennia past, the occupants of the northern hemisphere also counted down the days until spring.

In these early warm and fragrant days, we can most fully appreciate the beauty of the season, in contrast to the cold and wet weather of recent weeks. With each trumpeting daffodil, each nodding crocus, each arching branch of yellow forsythia, and each dainty petal of blooming pear and cherry tree, we find the cheerful evidence of the approaching season.

In the ever-lengthening evening light, we spy the house wren flitting about as she seeks a sheltered spot to build her nest. We hear, clear and strong, the first evening chorus of frogs, a song that will be lost in the background noise later in the season. But these few weeks, we hear it 'a capella,' unaccompanied by the hum of air conditioners on hot summer evenings.

Each sign of spring, each glory of the Easter-tide, is a gift from the Creator, a promise made to each of us that there is life after death and stunning beauty after the dark days of winter. I hope the people of West Virginia will step outside and revel in the glory of God as they enjoy the fragile beauty of spring.

4000 SOULS

Last week marked the fifth anniversary of the start of our nation's invasion of Iraq. Again we are confronted with a sorrowful reminder of the consequences of that fateful decision by the death of four Americans killed in Baghdad, bringing the total number of American troops who have made the ultimate sacrifice in Iraq to 4000. Each brave soul leaves behind devastated loved ones -- sons, daughters, wives, husbands, moms, and dads. Each tragic loss leaves a void -- a missing smile and loving embrace, an empty chair at the family dinner table -- that can never be filled.

As we mark this painful milestone, we must ask ourselves: what is the moral justification for allowing this war to continue? Can we honestly say that the disastrous mission in Iraq warrants the sacrifice of more of our troops and the heartache and loss that so many loved ones continue to suffer?

In March of 2003, just prior to the invasion of Iraq, I made a final plea to the Administration and my colleagues in Congress to avert a war that I believed would reap sorrowful consequences for our nation. In a speech entitled "We Stand Passively Mute", I expressed my outrage at the fact that the United States Senate -- the world's greatest deliberative body -- stood "for the most part-

silent-ominously, dreadfully silent" on this monumental question.

Sadly, my worst fears have been realized. The decision to invade Iraq may go down as one of the gravest foreign policy blunders in our nation's history.

Yet the war continues. American troop levels are higher than they were the day President Bush flamboyantly swooped onto the deck of the aircraft carrier *Abraham Lincoln* to declare "Mission Accomplished."

Four thousand Americans have now lost their lives, including twenty-three brave West Virginians. Almost thirty-thousand Americans have been wounded in action, many gravely, and countless thousands of Iraqi civilians have been killed.

It is long past time to start bringing our troops home. Our men and women in uniform toppled the dictator. There were no weapons of mass destruction. There is scarce evidence that the Iraqi government is working to achieve the kind of political reconciliation that could end the continuing sacrifice of our brave men and women.

At this somber moment, let us resolve to take steps to finally bring this tragic war to an end. In 2008, the American people must not stand passively mute, as far too many of their leaders did five years ago. Let your voices be heard

David Hunter Strother: A Life and Career Worth Recalling

The Monongahela National Forest is an incredible wilderness area of rugged landscapes and spectacular views. Within this forest are two of the highest mountain peaks in our state, including Spruce Knob, the highest peak in our state, and Mount Porte Crayon, the sixth highest. Known for its strong winds and inclement weather, Mount Porte Crayon is named after a great West Virginian who was one of the most widely known U.S. authors and artists of his time, but, unfortunately, is little remembered today. His is a life and career worth recalling.

David Hunter Strother was born in Martinsburg on September 26, 1816. As a young man, he studied art in Philadelphia, New York City, and Rome.

For a while, Strother worked as an artist for *The Crayon*, the leading art journal of his time. Because so much of his early work consisted of landscapes and other outdoor scenes, he helped illustrate travelogues, and became a frequent contributor to *Harper's Monthly Magazine*.

In 1853, Strother wrote and illustrated an article on Canaan Valley that was published in *Harper's* under his pen name, Porte Crayon. The article proved immensely popular and earned him considerable renown, making Porte Crayon a household name across the country.

During the Civil War, the Union army commissioned Porte Crayon as a staff officer. Because of his artistic abilities and detailed knowledge of the Shenandoah Valley, he was assigned as a topographer to various generals. He rose to the rank of Brigadier General and served as a war correspondent for *Harper's*.

After the war, *Harper's* published Porte Crayon's powerful and influential recollections of the war and his ten-part series titled, "The Mountains," which introduced America to the new State of West Virginia, its people, and its culture. In 1879, President Rutherford B. Hayes appointed Strother to be General Consul to Mexico City.

But after a few years, he returned to the hills of West Virginia where he edited a newspaper and worked to convince the state's leaders to invest in the infrastructure essential to the state's economic well-being. Porte Crayon died in Charles Town on March 8, 1888 – 120 years ago.

Today, he is largely forgotten by people in our state, except when a dedicated hiker ventures through the Monongahela National Forest and comes across Mount Porte Crayon – a worthy reminder of the man who contributed so much to the history and culture of our state.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

U.S. FOREIGN POLICY MUST MOVE BEYOND AN IRAQ-ONLY FOCUS

To date, the national debate over the Iraq War has focused almost entirely on the enormous human and financial costs of the conflict. The human costs have been heartbreaking -- more than 4000 Americans have lost their lives and nearly 30,000 have been wounded. The financial costs have been staggering -- nearly half a trillion dollars to date.

Less attention has been paid to the dire strategic consequences of this misbegotten, seemingly endless war. By undermining our military readiness and detracting from other national security priorities around the globe -- particularly Afghanistan and Pakistan -- President Bush's open-ended commitment in Iraq has made the world more dangerous, and our nation less secure.

Recently, I joined with colleagues in the Senate in writing to the President to express our collective view on this subject. An excerpt follows:

"Repeated and extended deployments to Iraq have greatly strained our military's capabilities. Readiness has sunk to levels not seen since Vietnam. Units do not have enough time at home to achieve through training the full-spectrum combat capabilities on which our security depends. We have no ready reserve for an unexpected crisis. We must begin immediately to restore the readiness of

our Army and Marine Corps by returning to 12 month deployments, and providing active and reserve units sufficient time at home between deployments to retrain and reequip."

"For too long, this Administration has treated Southwest Asia as an afterthought, even as it committed more U.S. troops and treasure to the war in Iraq. The neglect of Afghanistan and Pakistan reflects a failure to recognize this region as the central battlefield in the war against al Qaeda.

"An al Qaeda attack on the U.S. homeland would likely originate in the Afghanistan-Pakistan border region...Our nation cannot afford to stand by while the danger to the region—and to America—grows stronger day by the day."

I fear that our plea will fall on deaf ears, as has too often been the case with this President. As Chairman of the Senate Appropriations Committee, I will continue to press for accountability and oversight on the increasing costs and devastating consequences that the current strategy is having on our national security posture. And Congress must prepare for the smoothest possible transition for the next President. For it is the next President who will be charged with the daunting task of setting a new, wiser course that will truly make our nation and the world a safer place.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

MONEY FOR IRAQ BUT A BIG "NO" FOR MONEY FOR AMERICA

By the end of 2008, the war in Iraq will have cost the United States taxpayers a whopping \$600 billion. Over 4,000 U.S. service members have died, and over 30,000 U.S. service members have been wounded. In the next few weeks, the Senate Appropriations Committee, which I chair, will consider the President's request for Congress to approve yet another \$108 billion of emergency funding, mostly for this endless war in Iraq. We will consider the President's request at a time when the U.S. economy is, by most accounts, in serious trouble.

A careful review of President Bush's request reveals no evidence of funding to bolster our country's economy or to help Americans deal with lost jobs, mortgage foreclosures, and the rising cost of living. There is no money to address our crumbling infrastructure, high home heating oil costs, or nutrition programs for infants and children. Yet, the President has thrown down the gauntlet and threatens to veto the supplemental bill if the Congress has the temerity to add one dime to his request in order to help our citizens cope with the situation here at home.

What a contrast to the President's request for as-

sistance for Iraq! We have already poured \$45 billion of our citizens' hard-earned tax dollars into reconstruction projects in Iraq, projects that have done little to promote political reconciliation. That is 45 billion American dollars gifted to Iraq, despite the fact that the Iraqi government is running a huge surplus due to its excess oil revenues!

Now, the President is asking this Congress to shovel yet another \$3 billion of American taxpayer dollars for more rebuilding projects in Iraq. Well, I say charity begins at home!

The President wants money to build schools in Sadr City, but not in Seattle. Why does he demand money for roads in Ramadi, but nothing for Richmond? The President wants money for Mosul, but not one dime for Minneapolis. Why is he determined to reconstruct Baghdad, but not Baltimore, Biloxi, or Birmingham?

We must also invest in our own economy and take care of our people here at home. To fail to do so will only further dampen our economy, work a hardship on our citizens, and deplete our ability to pay these endless, ever-climbing requests for more money to fund this war in Iraq. The well is running dry, and it is time to prime the pump.

FREE COUPONS PRESERVE MUST-SEE TV!

The Digital Television Transition and Public Safety Act, enacted in 2005, requires that all American television stations stop broadcasting in analog and switch to 100 percent digital broadcasting after February 17, 2009. Analog uses radio frequency waves to transmit pictures and sound, while digital broadcasting uses a more efficient method of transmitting information using computer code. The switch to digital will make additional airwaves available for emergency responders, and hopefully will provide a clearer picture and more programming options.

Homeowners who have cable, satellite, or other pay television services, will not be negatively affected by the change to digital broadcasting. However, those who do not have cable or a satellite system or a pay-TV service, will lose service after February 17, 2009, unless they acquire a digital converter box. A converter box is a new product that enables analog-only television sets to operate after February 17, 2009. A certified converter box is expected to cost between \$40 and \$70 dollars. The government has established a TV Converter Box Coupon Program to help consumers purchase digital converter boxes. The program enables consumers to acquire, at most, two coupons per household, each worth \$40 apiece, to be used to acquire digital converter boxes. A converter box plugs into a normal, analog television set and will keep the set working beyond February 17, 2009. Another

option for consumers is to purchase a television with a digital tuner.

While supplies last, coupons for analog television sets may be obtained free-of-charge, before March 31, 2009, in one of five ways, by:

- By applying online at: www.dtv2009.gov;
 - Calling the Coupon Program 24-hour Hotline at 1-888-DTV-2009 (1-800-388-2009);
 - Mailing a Coupon application to: P.O. Box 2000, Portland, Oregon, 97208-2000;
 - Faxing a Coupon application to 1-877-DTV-4ME2 (1-877-388-4632);
- or
- Deaf or hearing impaired callers may dial 1-877-530-2634 (English/TTY) or 1-866-495-1161 (Spanish/TTY). TTY service is available from 9:00 a.m. to 9:00 p.m. Eastern Time, Monday through Friday.

The Coupons are being mailed via standard, rather than first-class mail, and should arrive approximately two to nine days from the date on which they are mailed. The coupons expire 90 days after they have been mailed.

The coupons are plastic cards, which look like gift cards. They cannot be printed or downloaded from any website, and they are not available to be picked up at retail locations. The U.S. government provides a list of coupon-eligible converter boxes and the participating retailers who sell them, at www.dtv2009.gov/FAQ.aspx/.

The Power of Coal

Coal has always had its critics. Despite them, coal has not only endured, it has prevailed. It has helped to light and heat our homes for centuries. It fueled America's Industrial Revolution in the 19th Century. It fueled America's naval battleships in the early 20th Century. It possesses the bright potential to help America get out from under the thumb of foreign oil-wielding despots in the 21st century.

The coal industry has evolved in the last centuries, shaped by safety and environmental issues. The industry has shown a willingness to evolve further. But, recent harsh attacks and efforts to demonize coal are becoming increasingly irresponsible, inflammatory, and destructive. Coal miners hear these harsh comments and what are they to think? They're patriotic Americans. They risk their lives everyday underground. They live near the coal-fields, where they attend church and teach their children solid values. And they vote! Miners do not deserve to have their profession – or to have their family livelihood maligned.

Harsh destructive criticism of coal mining is counterproductive to the challenges that lie ahead. If our nation is ever to escape its addiction to foreign oil, coal has to be part of the solution. There's no getting around that reality.

Coal produces half of the electricity consumed by the American people. It is an economical, abundant resource at a time when the American people demand stable, reliable energy prices. The U.S. military is already making long-term investments in liquid coal technology. Some form of the chunk of rock that once burned in a stove will soon be widely used in the fuel tanks of aircraft, cars, trucks, and buses. This can be done cleanly if we will only commit to the research.

Renewable fuels have their place in the energy portfolio. But, renewables are not a panacea. Certainly one renewable energy source alone, like wind for example, will not guarantee our nation's energy independence. We need to expand our use of all renewable and alternative fuels. Solar is important, geothermal is showing promise, tidal has great possibilities, and biomass combined with coal can help reduce emissions that concern us all. That would certainly be a worthy investment for our country.

We must not allow heated rhetoric or grandiose promises to blind us to the continuing promise and need for coal. Coal is a plentiful domestic source of reliable and relatively low-cost energy, and we need it now.

For Many Seniors and Veterans, There is Still Time to File for a Stimulus Check

This summer, millions of Americans will receive an Economic Stimulus Payment (ESP) from the federal government. Everyone who qualifies and has filed an income tax return will receive this one-time payment, which was approved by Congress earlier this year in an effort to stimulate America's struggling economy.

In addition, some 20 million low-income seniors, veterans, and people with disabilities are eligible to receive a check of \$300 for individuals and \$600 for married couples. Many who qualify, however, do not ordinarily file income-tax returns and have not yet completed the simple paperwork necessary to receive their payment.

The good news: you have until October 15th to do so. I urge you to review the information provided below to determine whether you or a family member may qualify. If you need further information, I encourage you to visit the Internal Revenue Service's (IRS) website (www.irs.gov), or call their toll-free hotline – 1-866-234-2942.

Who Qualifies?

According to the IRS, you may qualify for an economic stimulus check if you had \$3000 or more in income from earnings, Social Security benefits, Social Security disability benefits, veterans' disability benefits, railroad retirement, or a combination of

these sources in 2007. You must have a valid Social Security number, and if you are married and filing jointly, your spouse must also have a valid Social Security number. If you are a dependent or eligible to be a dependent on someone else's return, you do not qualify. (www.irs.gov)

How Do People Claim the Economic Stimulus Payment?

To receive the payment, you must file a 2007 tax return. Even people who are otherwise not required to file because they have very low incomes or nontaxable benefits MUST file a Form 1040A to claim their 2008 economic stimulus payment. The IRS sent packets to some 20 million seniors, veterans and people with disabilities providing instructions on how to file the Form 1040A to get the payment. Anyone who has already filed a Form 1040, 1040A, or 1040EZ showing \$3,000 or more for 2007 does not need to file additional documents.

I hope you find this information helpful. It would be a shame for eligible West Virginians to miss out on a payment that they are entitled to by law.

Remember, the deadline to apply is October 15th. Please visit www.irs.gov for more details. If you do not have internet access or would prefer to attain information over the phone, you can contact the IRS at 1-866-234-2942.

MEMORIAL DAY, 2008

May 26 is Memorial Day, the day we set aside each year to remember and honor those men and women who gave their lives in service to our Nation. All across the United States, families will be visiting the grave sites of their loved ones. Among rows of tombstones, adorned with small American flags, they will lay wreathes and pay their respects to those who served our country with honor and distinction in our Nation's wars.

This year, like all Memorial Days since September 11, 2001, has very special meaning as troops are engaged in hostilities in Afghanistan and Iraq. They are again showing that freedom does not come cheap. It is too often paid for not only in dollars but in the lives of America's best.

Writing about the thousands of soldiers who lost their lives during the battle at Antietam, Civil War historian Bruce Catton explained that those men did not die for a few feet of a cornfield or a rocky hill. They died so that this country might be permitted to go on, and that it might be permitted to fulfill the great hope of our Founding Fathers. So may it be said of all those courageous men and women who gave their lives in our

Nation's wars. They served and they sacrificed to defend our country, to protect our freedom and our liberties. As President Abraham Lincoln said of those soldiers who fell in the Battle of Gettysburg, they "gave their lives that this Nation might live."

It is my hope that on Memorial Day, all Americans will take time to remember those who have fought and died to preserve our great Nation. The personal suffering and sacrifice endured by our fallen soldiers and their families for the sake of our country must not go without a measure of recognition by each of us on this most solemn of days. These were real people, not just statistics in a history book or names chiseled on stone. These were young men and women with sisters, brothers, mothers, fathers, hopes, dreams, aspirations and fears like the rest of us.

But on this Memorial Day, we must also remember to pray for those American service men and women who are now in harm's way on the other side of the globe, in Iraq and Afghanistan, and in other foreign lands. They are doing their duty for the Nation they cherish, and the families they love.

TIME TO INVEST IN AMERICA

This week, the U.S. Senate is debating the President's most recent emergency war supplemental funding request. I am frankly disturbed that while the tragic war in Iraq continues into its sixth year, critical priorities here at home continue to go unaddressed.

It is indefensible that, in his latest request, the President has not asked for funding to invest in America or to help Americans deal with a faltering economy. When it comes to Iraq, it appears that money is no object for President Bush. Yet when it comes to important priorities here at home, he turns into Ebenezer Scrooge.

The Congress has to date approved \$45 billion for reconstruction projects in Iraq. Now, despite the fact that the Iraqi government is running a huge surplus from oil revenues, the President is asking this Congress to approve another \$5.6 billion of American taxpayer dollars for reconstructing Iraq.

The President wants money to build schools in Sadr City, but not in Shepherdstown. The President wants money for Mosul, but not one dime for Morgantown. He is eager to fund projects in Baghdad, but not Beckley, Buckhannon, or Berkeley Springs.

As Chairman of the Senate Appropriations Committee, I will support our

troops, as I always have, by giving them the funding they need. We must also support and honor our troops when they return home from the battlefield. That is why we have included in the supplemental bill a provision sponsored by Senators Jim Webb and John Warner of Virginia that would provide service members who have served on active duty since September 11, 2001, including activated reservists and National Guard, with improved educational benefits similar to those provided veterans who served in the World War II-era.

As Americans struggle to find work during the current economic downturn, we have also included in the legislation an extension of unemployment benefits by 13 weeks for all workers nationwide and an additional 13 weeks for workers in high-unemployment states. This extension is critically needed and mirrors actions taken in recent recessions. We will also roll back Medicaid regulations proposed by the Bush Administration that would disrupt coverage for our most vulnerable citizens.

It is deeply distressing that the President continues to favor investing in Iraq above investing in the United States. We must not lose sight of which priorities come first, and American needs must come first.

FAILURE TO FUND HOMELAND SECURITY KEEPS US AT RISK

Since its inception, convincing President Bush of the urgent need to adequately fund the Department of Homeland Security (DHS) has proven to be a constant struggle. As Chairman of the Senate Homeland Security Appropriations Subcommittee, I have persistently criticized the Bush administration's insufficient homeland security budget requests because I know that American lives are on the line.

When DHS was established in November 2002, the president announced, "Our government will take every possible measure to safeguard our country and our people." I do not believe the president has lived up to that promise. His budget requests do not provide nearly enough dollars to support the more than 200,000 dedicated men and women who are working every day to keep our nation safe.

In February 2008, when Director of National Intelligence Mike McConnell released the Annual Threat Assessment, we were given crystal-clear evidence that potential attacks on our homeland have not diminished. He confirmed that al Qaeda has regrouped in Pakistan and that terrorists continue to pose a significant threat to the United States.

Terrorists are likely to continue to focus on prominent infrastructure targets with the goal of producing mass casualties and significant economic damage.

Remarkably, even the alarming information contained in this threat

assessment was not enough to convince President Bush of the need to increase his DHS fiscal year 2009 budget request, which is flat. While the administration asserted that it had requested an increase of seven percent for the coming fiscal year, an accurate calculation tells us something different. The president's fuzzy math does not include the \$2.7 billion of funding for border security that Congress provided in the last emergency funding bill. Even the President's budget for 2009 recognizes that most of that emergency funding was provided not simply to address a one-time need. Rather, it constitutes a vital component of border security funding that must be supported on an on-going basis.

I am particularly troubled by the President's 48 percent proposed \$2 billion cut to first-responder grants. Hurricane Katrina tragically demonstrated how unprepared local communities are to respond to major disasters in the absence of effective support from the federal government. Dramatically cutting funds for emergency planning and for our police, fire, and emergency medical personnel will only make matters worse.

The American public can be assured that the Congress, with this Senator leading the charge, will fight to restore President Bush's reckless cuts to our homeland defense.

HONORING OUR FATHERS

Last month, in honor of Mother's Day, women across West Virginia were treated to cards, flowers, calls, hugs and kisses, brunches, and gifts. Retailers urged more extravagant manifestations of love for our wives and mothers, offering a dazzling array of heart-shaped diamond jewelry – all of which is certainly deserved, if not always affordable!

Sunday, June 15th, fathers get their due. A less extravagant selection -- coffee mugs, cologne, and, of course, neckties -- constitute the classic Father's Day gift assortment. Still, I am sure that most American fathers will enjoy being the center of the family's attention on Sunday.

Fathers deserve their day in the limelight. Good fathers are very busy men, and their contributions to the family merit recognition just as much as their equally busy wives do. They often fulfill the stereotypical 'Dad role' – keeping the house and the yard in good repair, even if it means tackling mechanical or construction activities for which they have little skill. They assist with homework and school projects, patiently helping to build foaming volcanoes or dioramas. They teach children to fish, paddle a canoe, or ride a bicycle. Good fathers want great

things for their children, and always let them know that they believe in them.

The man who raised me, the man I always called Dad, my adoptive father, was just such a good man. Every night he walked home from the coal mines, tired and caked with coal dust. Tired as he was, he always greeted me with a smile. Sometimes he had a cupcake in his lunch box, saved just for me. Even though I wanted to go into the mines like him, he always told me to do well in school instead. He wanted better for me than he had, and he put his energy into urging me to improve myself. His influence has been a resource for me my whole life.

For children, to have a great father, whether he is one's biological or adoptive father, or simply a father figure who influenced one's youth, is a very special thing indeed. Their children have the security of knowing, always, that they are loved and that someone is rooting for them and looking out for them. In that security, a child can find the confidence to try and to fail, and to get up and try again. It is a great and lasting gift that our fathers give to each of us, one that certainly deserves one day of specific recognition each year

FLAG DAY

As we celebrate Flag Day in June and look forward to the Fourth of July, I thought it an appropriate time to reflect on the origins of "Old Glory".

Early in our nation's history, many flags flew over the land that would become the United States of America. The British Union Jack, the Spanish flag, the French flag, and others identified territory and colonies under the control of those nations. As the colonies and various fighting forces organized themselves to take up the call of the new nation-to-be, many new flags began to fly. The flags, with their various designs and slogans, sought to establish a separate and often defiant new identity for our burgeoning nation.

During the War of Independence, the Continental Congress had to choose a flag under which the armies and colonies could unite. On June 14, 1777, the Continental Congress adopted a resolution establishing a national flag for the United States. It stated simply, "... the flag of the United States shall be of thirteen stripes of alternate red and white, with a union of thirteen stars of white upon a blue field, representing a new constellation." The thirteen stripes and stars symbolized the thirteen colonies that had fought for and won the

liberty to establish the new nation.

The flag grew and changed, adding stripes as well as stars before it was recognized that the expansion of the states was greater than the flag's pattern could bear.

Early in 1818, a Congressional committee presented a report recommending a proposal by Chester Reid, a naval captain and hero of the war of 1812. His suggestion was that the thirteen-stripe flag honored the original thirteen Colonies, and that new states could be honored by the simple addition of stars, to reflect the growth of the new constellation.

Old Glory still serves to unite our nation today. It is both commonplace, seen daily in front of post offices and schools, and yet hallowed, placed with solemn care over the coffin of a veteran or flying at half mast to mark a tragedy. It is also a symbol of patriotic pride, carried proudly by Olympic athletes or streaming in the wind behind a mighty warship. And who can forget the sudden, spontaneous, outbreak of U.S. flags that erupted across the nation in the wake of the 9/11 tragedy? That act captured the essence of our flag and the American spirit -- a nation defiant, strong, and united in the face of adversity.

BETTER INVESTMENTS FOR OUR ENERGY FUTURE

West Virginians are rightly frustrated with rising gasoline prices. During the last eight years, gas prices have quadrupled, causing terrible pains at the pump. Rural and mountainous states like West Virginia are hit harder than most due to our longer commutes and mountainous roads.

Not surprisingly, energy companies and their friends in Congress are attempting to take advantage of these frustrations. They have their sights set on drilling in the coastal plain of the Arctic National Wildlife Refuge (ANWR) in Alaska. This, and similar drilling proposals, are not new. But as in the past, these industry-backed proposals usually mean more profits for the oil companies without helping American drivers.

Oil and gas companies hold leases to 92 million acres of Federal lands, but are drilling on only 25 percent of it. Doing so would produce an additional 4.8 million barrels of oil per day, about one-third of what the United States imports daily. Instead, oil and gas companies are stockpiling drilling permits in the hopes of higher profits. They are also resisting royalty payments for the resources extracted from Federal lands, even as they are benefitting from billions of dollars in sweetheart tax breaks enacted in recent years.

Given this history, I am more than a little skeptical about opening even more federal lands for oil and gas

exploration. Environmental arguments aside, these public lands and their resources belong to the American people. Simply handing them to multinational conglomerates and hoping American consumers are treated fairly at the pump is naive.

But rather than coddling the industry, let's use our leverage to ensure that oil companies minimize price increases. Let's have extensive Congressional and Federal investigations into price gouging and the obscene salaries for industry executives (since 2004, the top five oil conglomerates reported incomes totaling \$424 billion and not a dime was returned to American motorists!).

Because the oil industry benefits from taxpayer subsidies, we should insist that their profits be invested in long-term programs that benefit American consumers. Then we can improve mass transit and light rail systems, and develop technologies that rely more upon domestic energy resources like coal. This plan would help promote jobs in West Virginia and across America, while reducing the amount of checks to oil-producing nations overseas.

Simply opening more land to drilling does not fix our problem. Oil is a finite resource, and once it's gone, it's gone forever. We have a moral responsibility to invest in resources here at home and to save for future generations.

Byrd's-Eye View

WEST VIRGINIA DAY 2008

Certain dates on the calendar carry special meaning. These are great and glorious days that are given to devoted reverence and are a cause for recognition and adoration. Thanksgiving, the Fourth of July, and New Years Eve are a few dates that come immediately to mind. Another one that came to my mind, as it does every year, was June 20 – the day we celebrated West Virginia Day.

For it was on June 20, 1863, that West Virginia became the 35th state of the union. The state proudly adopted as its motto, the phrase, “Montani semper liberi,” which means, “Mountaineers are always free.”

This was a most appropriate motto for a state born in the middle of the greatest struggle for freedom and liberty in American history – the Civil War. And West Virginians have always strived to live up to our state motto.

West Virginia workers were in the forefront of the historic labor struggles in the late nineteenth and early twentieth centuries that sought an end to the exploitation and oppression of American workers that had accompanied the Industrial Revolution. In 1877, the Nation's first general strike began among the railroad workers and citizens of Martinsburg, West Virginia, after the railroad tycoons

repeatedly lowered wages. Seeking to end the industrial autocracy that had engulfed the state with the opening of the coal fields in the 1880s, West Virginia coal miners, engaged in a series of conflicts now recognized as the West Virginia Mine Wars.

West Virginia has also played an important role in the quest of African Americans for liberty and equality. For one thing, West Virginia has been the site of some of the important events in African-American history. Prior to the Civil War, John Brown's raid on Harpers Ferry prefigured West Virginia's breakaway from the slaveholding Confederacy into full statehood. And Harpers Ferry later served as the setting for the second meeting of the Niagara Movement, a meeting that led to the formation of the NAACP.

I am very proud of my state and honored to represent it in the United States Senate. I have always appreciated its kind, good, and generous people and the way they have retained what I call the “old values” -- faith in god, love of country, family, honesty, decency, and integrity. And a leading value of West Virginians, as I have tried to show, has been our motto, “Mountaineers are always free.”

As always, happy birthday West Virginia. May God always bless you, and keep you free.

WEST VIRGINIA AND COAST GUARD: WORKING HAND IN HAND TOGETHER

While landlocked West Virginia is miles and miles away from the ocean's edge, many West Virginians would be surprised to learn of the large United States Coast Guard presence in the Mountain State.

The men and women of the Coast Guard provide a critical service to the nation, safeguarding our citizens, securing our maritime borders, and serving as stewards of the world's oceans. And over the years in my capacity as Chairman of the Senate Appropriations Committee and the Subcommittee on Homeland Security, I have worked to pair national security needs with Coast Guard opportunities in West Virginia. The Mountain State is able to provide a high-quality, low-cost home for vital national initiatives. Those initiatives provide West Virginia with substantial economic investments which mean a win-win scenario for the Coast Guard, for West Virginia, and for the taxpayers of America.

Our most recent success story occurred on June 26, 2008, as Coast Guard officials dedicated a new state-of-the-art National Maritime Center (NMC) facility in Martinsburg. The mission of the NMC is to issue credentials to fully qualified mariners in the most effective and efficient manner possible in order to assure a safe, secure, economically efficient, and environmentally sound Marine Transportation System.

More than 220,000 merchant mariners and hundreds of firms depend on the NMC. Merchant Mariners must meet strict standards of capability, health, and security to work on U.S. flagged ships, ranging from charter fishing boats to cruise ships to international cargo shippers.

In 2003, I directed the Coast Guard to undertake an assessment of the costs and benefits of co-locating the Mariner License and Documentation function with the National Vessel Documentation Center in Falling Waters. In addition, I secured a \$12 million appropriation to restructure and centralize the facility in the Eastern Panhandle.

The National Maritime Center in Martinsburg now joins the Coast Guard's Operations System Center and the National Vessel Documentation Center in the Eastern Panhandle. And with this new facility, the Coast Guard has once again proven what I have been saying for years: federal agencies can have offices in Washington, but also get far more bang for the federal buck by locating other key operations in West Virginia. I'm going to keep working to find West Virginia solutions to national needs. We've shown that West Virginians can get the job done. We have the workforce. We have the infrastructure to support demanding high-tech projects. We have an excellent quality of life. Overall, there is no beating West Virginia.

THE GREEN BANK TELESCOPE PROVES AN EINSTEIN THEORY

This month, scientists working with the National Science Foundation's Robert C. Byrd Green Bank Telescope published the results of a study that supports Albert Einstein's 93-year-old theory of General Relativity. Put simply, the General Theory of Relativity proposed that matter causes space to curve. Einstein theorized that smaller masses travel toward larger masses not because they are drawn in by a mysterious force, but because the smaller masses travel through space that is warped by the larger object. This theory has intrigued many scientists over the years, but it has been difficult to find evidence to prove it.

The telescope at Green Bank allowed the scientists, including Maura McLaughlin of West Virginia University, as well researchers from Canada, Great Britain, France, Italy and the United States, to examine a unique pair of twinned neutron stars, or pulsars, 1,700 light-years from Earth whose orbital plane is aligned nearly perfectly with their line of sight to the Earth. This configuration causes the lighthouse-like beams of radio waves emitted by each pulsar to be blocked, or eclipsed, as they orbit each other every two and a half hours. These eclipses allowed the astronomers to verify Einstein's 1915 theory, which predicted that in

a close system of two very massive objects, such as neutron stars, one object's gravitational tug, along with an effect of its spinning around its axis, should cause the spin axis of the other object to "precess," or wobble like a spinning top.

Theories of gravity do not differ significantly in ordinary regions of space, such as our Solar System, but in regions of extremely strong gravity fields, such as that surrounding the twinned pulsars, the differences predicted by Einstein were expected to show up. Confirming the wobbling tested key details, building the case for the accuracy of Einstein's theory.

The Robert C. Byrd Green Bank Telescope in Pocahontas County is the world's largest fully steerable radio telescope. Dedicated in August 2000, its unusual design includes small motor-driven pistons at the corner of each of the 2,004 panels that make up the surface of the telescope, allowing the surface of the dish to be precisely adjusted for critical high-frequency performance.

The Green Bank telescope has again proven its worth in international science, astronomy and physics. Today, it has enabled scientists to prove some of Albert Einstein's greatest theories about space and time. Who knows what tomorrow will bring?

By U.S. Senator Robert C. Byrd

TAKING THE STING OUT OF BUSH'S CUTS TO THE MEDICARE PROGRAM

This past week, the House and the Senate reversed President Bush's callous veto of Medicare legislation. The President's action would have had devastating effects on our nation's Medicare program and on the more than 44 million American seniors who depend on the program for all or part of their health care.

The Medicare Improvements for Patients and Providers Act of 2008 will prevent doctors' Medicare reimbursement payments from being slashed by a whopping 10.6 percent over the next 18 months. Reimbursements from Medicare to West Virginia doctors alone could have been reduced by \$80 million dollars over this period. If this cut had gone into effect, as the Bush Administration was advocating, it was widely expected that many doctors would simply stop treating Medicare patients.

As West Virginia is a largely rural state, a failure to reverse the President's veto would have also created new challenges to those seeking to obtain quality health care services in their own backyard. However, with the override of the President's veto -- which I supported -- Congress has helped to ensure that rural health care facilities and providers have the resources they need to deliver quality health care in their communities.

With inpatient care facilities being far and few between in rural areas -- in

some instances the sole community hospital can be 50 miles away -- the legislation seeks to update the data that is used to reimburse sole community hospitals for care, which will most likely mean an increase in payments to those facilities.

By exploring ways to better coordinate care among critical access hospitals, home health, nursing homes and other providers, the bill aids rural communities that are in danger of losing specialty health care services that seniors need close to home. This will enable rural West Virginians to have a full complement of health care options.

In addition, the bill increases Medicare payments for ground ambulance services in rural areas. For rural ambulance providers, the bill requires more consideration of a physician's recommendation for air ambulance services when Medicare seeks justification for the expense.

Overall, the measure would increase coverage of preventive health care services, provide more affordable mental health care and help more low-income seniors access the subsidies and assistance that make Medicare more affordable.

It is distressing that President Bush fails to realize the importance of health care access for our seniors. It is fortunate that the Congress had the wisdom to reverse this ill-advised veto.

ONGOING OVERSIGHT OF WASTE, FRAUD AND ABUSE IN IRAQ AND AFGHANISTAN

The Senate Appropriations Committee recently held its second hearing on the topic of waste, fraud, and abuse in Iraq and Afghanistan. I scheduled this hearing because I want to confront the lack of oversight regarding contracts awarded for services and construction in Iraq, and the failure by the Departments of Defense and Justice to aggressively investigate and prosecute contract fraud and abuse. This lack of oversight has resulted in tens of billions of tax dollars having been lost or wasted on bad contractors and shoddy workmanship – even resulting in the deaths of our soldiers. According to some sources, some of those U.S. funds and weapons have made their way to foreign insurgent groups that have used them against our own soldiers.

The Army's funding of contracts has increased by more than 350 percent over the last 11 years, while the government's oversight workforce has decreased by more than 50 percent. Too few auditors and too few contract specialists mean no one is watching the store when it comes to contracts and private contractors. Too few investigators are being tasked with bring-

ing perpetrators of fraud, waste, and corruption to justice and with recovering stolen billions. There are individuals living high on the hog in the United States and in cities across Europe and the Middle East on these stolen tax dollars.

The FBI has a grand total of only five investigators working these cases in Iraq and Afghanistan. As a result of the lack of enforcement actions, more unsavory characters can get away with bilking the U.S. taxpayer or the Iraqi government, embezzling funds, taking and making bribes, substituting inferior goods or inferior workmanship, or just plain stealing. This illegal activity takes money directly away from the pressing needs of our troops and the needs of the Iraqi and Afghan people.

Congress needs to make "collars and dollars" our motto – more arrests, more indictments, and more funds recovered. We need to be much more aggressive about minimizing the waste, fraud, and abuse associated with these wars. I am determined to address these issues. It is outrageous that the Bush Administration has turned a blind eye to such abuses.

OUR OLYMPIANS

The 2008 Summer Olympics, officially known as the Games of the XXIX Olympiad, begin on August 8th in Beijing, China. The motto of this year's games is "One World, One Dream," and viewers around the world will surely tune in to see athletes in 28 different sports attempt to make their Olympic dreams come true in each of the 302 events.

Since the original games in 776 B.C., the Olympics have brought together great athletes in a setting of peaceful competition. When the modern Olympic Games were reestablished in 1896, 241 participants from 14 nations took part. In Beijing, more than 10,500 athletes from more than 200 nations are expected to compete.

Several athletes at the 2008 Summer Games have ties to West Virginia, so everyone in our state also may feel a special interest in the USA baseball team, riflery team, and women's track and field events. These competitors also have ties to West Virginia University, so Mountaineer alumni around the country surely will be cheering on these special athletes.

Jeremy Cummings, of Charleston, played baseball for South Charleston High School and West Virginia University before beginning a career in minor league baseball that took him across the United States, Canada and even Taiwan.

Cummings currently lives in Huntington, where he is completing work on his undergraduate degree at Marshall University. Playing on team USA in this most American of sports at the Olympics in Beijing will be a career highlight that he will share with an elite group of just 23 other baseball players in the United States.

A 2005 West Virginia University alumna from Edmonton, Alberta, Megan Metcalfe will represent Canada in the 5,000 meter track event. Metcalfe was a nine-time All-American at WVU in both cross country and track and field. She still lives and trains in Morgantown under WVU track and field and cross country coach Sean Cleary. She also works part-time as a physical therapist at Ruby Memorial Hospital.

West Virginia University alumni and WVU rifle coach since 2006, John Hammond will also compete in the Beijing Olympics. A native of Aberdeen, Scotland, Hammond will represent Great Britain in three events: the 50-meter prone, three-position, and 60-shot air rifle. Any success he enjoys may result in a medal for Great Britain, but it will reflect admirably on West Virginia and the United States as well.

Best wishes to Team USA and to our West Virginia Olympians!

SUMMER FUN CLOSE TO HOME

The uncertain economy and high gas prices have put a dent in many families' paychecks this summer. Across the United States, people are cutting back and pinching pennies. Rising airline ticket costs and other travel fees have made air travel increasingly unaffordable, especially for families. The Travel Industry Association projects that summer travel will drop 1.5 percent from last year, and other industry sources say that trips this year tend to be shorter and closer to home.

Fortunately, West Virginia is full of beautiful, exciting, historic and artistic destinations that can fill a summer vacation schedule without emptying the gas tank. The West Virginia tourism website, www.wvtourism.com, is a great place to start your planning. It features upcoming events around the state, from county fairs to festivals, summer concerts to dinner theaters. It also offers links to targeted web sites that can help plan trips around a variety of different themes, such as golf, river sports, history, outdoor adventures, and cultural activities.

Information about West Virginia's 48 state parks, forests and wildlife management areas can be found at www.wvstateparks.com. These parks are not just for picnics, as the busy calendar of events demonstrates. Hiking, nature walks, Appalachian dance, square dancing – you

are sure to get a fun workout at a West Virginia state park! You can make reservations on-line for events, programs, and lodging. Pet friendly cabins are available in many locations, so the entire family can enjoy the summer vacation.

History abounds in West Virginia, from family histories to museums and sites linked to American history and industry. Explore the Beckley Exhibition Coal Mine and Museum, the New Deal Homestead Museum in Arthurdale, and do not overlook the Cass Scenic Railroad State Park or Harpers Ferry National Historic Park. Children young and old might enjoy a trip to Wheeling for the Kruger Street Toy and Train Museum, the Official Marx Toy Museum and the Museums of Oglebay Institute. You can even visit prehistoric sites. The West Virginia Division of Culture and History, at www.wvculture.org, is a good place to start, with links to the National Register of Historic Places, cemetery information for those interested in family history, and news about frontier forts and prehistoric archeological sites in the state.

Though this summer's tough economy has forced us to become more cost conscious, it also challenges us to be more adventurous about exploring new destinations close to home – in Wild and Wonderful West Virginia.

INVESTING IN WEST VIRGINIA'S AIR NATIONAL GUARD

West Virginia's Air National Guard -- composed of the 167th Airlift Wing based at Shepherd Field in Martinsburg and the 130th Airlift Wing at Yeager Airbase in Charleston -- is not only a major asset to the U.S. military, but also a vital part of the West Virginia community. As your Senator, I am committed to supporting the men and women of the 167th and 130th by providing them with the resources they need to thrive for many years to come.

In 2005, when Yeager Airbase was placed on the Pentagon's Base Realignment and Closure (BRAC) list, I worked alongside state, local, and federal officials in coordination with the West Virginia National Guard and grassroots supporters to save the base. I am now renewing my efforts in the Senate to update and expand the Guard's capabilities in Charleston.

To that end, I added \$27 million this year to legislation for the construction of a C-130 fuel cell hangar. Eventually, the C-130 hangar will be connected to a new maintenance hangar that will be built with funds I secured last year. Together, the new facilities would expand capabilities at Yeager and help to protect the facility from potential efforts to close the base.

I have also been working

to support enhancements and upgrades to the Martinsburg Airbase. In 1999, I began working with Pentagon officials to bring ten C-5 transport planes to the 167th in Martinsburg.

One of the largest aircraft in the world, the C-5 is a true marvel. With its unique capabilities, it is invaluable to Air Force military and humanitarian efforts. The first of the new fleet of C-5 aircraft landed in Martinsburg in 2006. Once the C-5 unit is fully operational, the 167th anticipates an additional 200 full-time jobs. The annual economic impact is expected to increase to at least \$50 million a year annually.

To support construction of the C-5, I have worked in the Senate to fund the infrastructure needed to accommodate this project. Recently, I announced \$14.5 million in contract awards for the construction of a C-5 Squadron Operations facility, the continued development of the base's parking apron, and for runway expansion projects at the airport.

Recently, twenty-eight members of the 167th Airlift Wing shipped out for duty in Iraq. I, along with all West Virginians, wish them Godspeed and a safe return home. With top-notch facilities, leadership, and training, I know they will continue to be the pride of our state and the nation.

LABOR DAY 2008

The first Monday in September is set aside each year to recognize the dignity of work and to thank American workers for their contribution to creating a better and stronger country.

Labor Day is an honorable American tradition. In 1893, legislation was introduced in Congress to establish Labor Day as a federal holiday. The next year, President Grover Cleveland signed the legislation into law, and 115 years later, we still use this day to honor those who earn their bread by the sweat of their brow.

Four years ago, I used my Byrd's Eye View on Labor Day as the opportunity to celebrate some of the great labor leaders our state has produced. That column received so much favorable attention that I decided to honor those individuals again this year and recognize our state's pride in their accomplishments.

Frank Keeney, Fred Mooney, and Bill Blizzard were West Virginia coal miners and rank-and-file leaders who helped lay the foundation for the United Mine Workers of America (UMWA) in our state. Arnold Miller of Cabin Creek was a leader in the black lung movement in the 1960's who, in 1972, was elected president of the UMWA. Current UMWA president Cecil Roberts also hails from Cabin Creek.

John Easton of Williamstown was a flint glass worker who served

as president of the West Virginia State Federation of Labor during the 1920's and as an official in the Congress of Industrial Organizations (CIO) in the 1930's.

Miles Stanley of Dunbar was president of his local steelworkers union and helped to negotiate the merger that formed the West Virginia AFL-CIO, of which he served as president from 1957 to 1974.

Ned Guthrie of Morgantown was the national legislative director of the American Federation of Musicians Union in the 1980's and was instrumental in bringing collective bargaining rights to that profession.

Joseph W. Powell was president of the West Virginia AFL-CIO for 23 years (1974-1997). Mr. Powell was recently inducted into the Southwestern District Labor Council's Hall of Fame.

And there was the great Walter Reuther from Wheeling, who was president of the United Auto Workers in 1946, president of the CIO in 1952, and vice president of the AFL-CIO in 1955.

This Labor Day, I thank all West Virginia workers. The work they do each day, whether mining coal, pumping gas, cutting meat in a grocery store, or serving the public, is important. West Virginia's history boasts many well-known labor leaders, but it is all of us, working together, that combine to make America a great nation.

CREATE YOUR OWN CONSTITUTION DAY CELEBRATION!

The Constitution of the United States will celebrate its 221st birthday on September 17, 2008. On or near that date, I hope that citizens across our great land will honor our National Charter in thoughtful and creative ways. By law, September 17th has been designated Constitution and Citizenship Day. This is the date, in 1787, on which the Constitution was signed by the Framers in Philadelphia.

In December 2004, I helped to enact the federal law that designates September 17th of each year as Constitution and Citizenship Day. I did so because I care deeply about this precious document. On and around September 17th, I would like all Americans to take the time to read the text of the Constitution. Each and every American needs to better comprehend the genius of this extraordinary document. When I declare that every American needs to dedicate themselves more fully to the study of our Constitution, I refer to Members of Congress and Presidents, as well as all other Americans.

Consequently, I invite all Americans to come together in mid-September to read, analyze, and reflect on the Constitution. It is a learned and dynamic document. Brilliant in its brevity, it remains extraordinary in its wisdom. It protects our individual liberties. It

reveals the courage and creativity of our forefathers. How commendable that they put aside their personal differences to create this special document for the common good! In so doing, they created the unique and incomparable separation of powers that is reflected by the three branches of our government.

My hope is that citizens of every State in the Union, including children, will be inspired to organize local celebrations of Constitution Day. Just as the National Education Project for the past three years has organized "Constitution Day on the National Mall" here in Washington, D.C., people across the nation, in every large city and small town, should organize their own spectacular event in honor of Constitution Day. Let us spread the excitement of celebrating Constitution Day on September 17th far and wide, through every hill and dale, across the Great Plains, through the Deep South, across the West, the Southwest, the Northeast, as well as up and down the Atlantic Seaboard, and especially in West Virginia.

Let us all unite on September 17, 2008, to appreciate our magnificent Constitution.

I hope that you will work with me to preserve and protect our Constitution in this new and exciting way.

REMEMBERING SEPTEMBER 11

Seven years ago a pleasant autumn morning became a day of horror. Terrorists hijacked four American commercial passenger jets and used them in their barbaric, twisted plot. Two airliners struck the World Trade Center in New York City. A third slammed into the Pentagon. A fourth, on direct course with the U.S. Capitol, was diverted by brave passengers and crashed into a field in Pennsylvania, killing all on board.

We will never forget the sights of that day: the collapse of those buildings, people running through the streets, the plumes of smoke that emerged from Ground Zero and the gaping hole in the Pentagon, the very symbol of America's military might.

The tragic events of that day certainly transformed our world. When we saw that second plane slam into the Twin Towers, we all sensed that America would never be the same again. The world's most powerful and wealthiest nation suddenly and shockingly discovered that it too, was vulnerable. Our great country became a nation under siege as security check points increased and security everywhere intensified. Electronic billboards appeared over our interstate highways telling motorists to report "suspicious activity."

Among the transformations of that day was that, for a while, ours became a united

country. The terrorist attack of 9/11 had cut across all racial, religious, economic and ethnic lines, and, as a result, our country was united in emotion and purpose. For a while, Americans were unified in our determination to seek out and destroy the terrorists who had attacked us.

And, for a while, much of the world was united. "We are all Americans," proclaimed the French newspaper *Le Monde*, shortly after the attacks of 9/11.

For a while, the American people and the nations of the world rallied behind President Bush as he undertook a war against the dreaded terrorists. All of us were ready and willing to go after the butchers who had taken the lives of so many innocent people, so many of our fellow countrymen.

But then President Bush became determined to shift the war to Iraq, and everything changed. The war with Iraq has deeply divided our formerly unified country. And, because of Mr. Bush's War, we find ourselves more and more isolated from the rest of the world. The war on terror has bogged down, and Osama Bin Laden remains alive and well because of the Bush War in Iraq.

That 9/11 has come to symbolize not only the tragic loss of innocent life, but also a lost opportunity, may be among the most far reaching consequences of that autumn day seven years ago.

THOSE WEST VIRGINIA HILLS

September 15 is a special day in the history of our great state. It was on that day in 1885 that a little newspaper in Gilmer County, the *Glennville Crescent*, published a poem by Ellen Ruddell King.

The poem was only four verses, but in it, Mrs. King, who was born in Glennville, April 22, 1846, not only captured the beauty and grace of the rolling green hills of West Virginia, but expressed the pride that the people of West Virginia have in them. There are some indications that Mrs. King may have collaborated with her husband, the Reverend David H. King, in writing the poem. Nevertheless, the poem is clearly identified as Mrs. King's creation, and it was magnificent and appealing.

A farmer and music teacher from Philippi, Henry Everett Engle, read Mrs. King's poem and was so moved by it that he decided to make a song of it. He composed the music for it along with a chorus. Soon, people all over our state were singing what would become one of the most recognized and beloved songs in our state, "The West Virginia Hills."

In 1960, the West Virginia Music Education Association began urging the state to formally adopt Mrs. King's song as the state song of West Virginia. The effort was successful. On February 3, 1961, the West Virginia State Legislature passed a resolution to

officially adopt "The West Virginia Hills" as the state song of West Virginia.

Two years later, during the state's centennial year, 1963, "West Virginia, My Home Sweet Home," by Colonel Julian G. Hearne Jr. of Wheeling, and "This is My West Virginia," by Iris Bell of Charleston, were also adopted as state songs. Both of these are beautiful and touching songs that express the majesty of our state. But, Mrs. King's creation remains the most recognized and most beloved of our three state songs. I fondly recall the first stanza and chorus:

Oh, the West Virginia hills!
How majestic and how grand,
With their summits bathed in glory,
Like our Prince Immanuel's Land!
Is it any wonder then,
That my heart with rapture thrills,
As I stand once more with loved ones
On those West Virginia hills?

Oh, the hills,
Beautiful Hills,
How I love those West Virginia hills,
If o'er sea or land I roam,
Still I think of happy home,
And my friends among the West Virginia hills.

It all began on September 15, 1885.

Voter Registration Deadline is Nearing

Exercising our right to vote is perhaps the most fundamental responsibility we have as American citizens. An engaged electorate holds politicians and government officials accountable for addressing the needs of the people. It is the only means by which we can truly realize a government "of the people, by the people, and for the people," as described so eloquently by Abraham Lincoln in his famous Gettysburg Address. Millions of Americans have given their lives defending this sacred right.

The next leader of our country will face many extraordinary challenges - from fixing our broken economy to restoring America's leadership position in the world. In this great country of ours, it is up to you - the people - to decide who that leader will be. That is a great responsibility indeed! If you are an eligible West Virginia voter and have not registered, you will miss out on your chance to have a say in this critical matter.

Registering to vote is very simple. West Virginia has a toll-free hotline for voter information - **(866) SOS-VOTE** or **(866) 767 - 8683**. You can also find the West Virginia voter registration form and helpful information on eligibility online at <http://www.wvsos.com/elections/voters/registernow.htm>.

Once you have com-

pleted the registration form, mail it to your county clerk, whose address can be found at <http://www.wvsos.com/service/rosters/county-clerks.htm>. In order to be eligible to vote in the upcoming election, you must register by **October 14th**, which is just a few weeks away.

If you are going to be out of the state during the election, or are unable to vote in person, you can easily request an absentee ballot, which can be mailed or faxed to your County or Municipal Clerk. You can obtain an absentee ballot request form at <http://www.wvsos.com/service/findforms.htm>, or by calling **(866) SOS-VOTE**. You should receive the ballot in the mail in the following weeks. Be sure to return your completed ballot to the County or Municipal Clerk's office in time for them to receive it at least six days before the election.

Voting is essential to the success of democracy. The actions of the government affect your life and the lives of those around you. Make sure your voice is heard, and register to vote before October 14th. If you know of a family member, friend or neighbor who is not registered, please encourage them to do so. On Election Day - November 4th - regardless of which political party or candidate you support, let your voice be heard!

Wall Street in Turmoil

The shock waves storming through our financial markets and the resulting impact on our economy, and on everyday Americans, have left many citizens deeply anxious and justifiably angry. I share those feelings.

Company names like Merrill Lynch, Bear Stearns, Lehman Brothers, and AIG, names that have stood for stability to the investing public for many years, have been shaken from their very foundations, causing turmoil on Wall Street and throughout the world's financial markets.

What is the average West Virginian to make of all this? I wish I could say that this will all blow over in a few days, but it will not. What are we to do? Fortunately, within our FDIC system, there are government financial guarantees in place protecting deposit and retirement accounts. A few websites you can visit to obtain more information are: www.fdic.gov, www.federalreserve.gov, and www.occ.treas.gov. Your questions also may be answered toll free by the FDIC Call Center at 877-275-3342.

In hopes of averting further erosion of our financial markets and to help stabilize the economy, the Bush Administration has responded with a request to Congress to place \$700 billion – that is BILLION – in the hands of one government official to spend without review by any court or agency!

Congress must not rush to judgment on this proposal. We need to take a good, hard, close look at this request and carefully weigh its consequences, for the short and long terms for our economy, for our families, and for our government. The Constitutional system of checks and balances in our government must be preserved and not suddenly surrendered in the midst of misunderstood panic.

The request for such unchecked authority is shocking, and the price tag is so staggering, that if approved, our national debt as a percentage of our gross domestic product (GDP) would rise to its highest level since 1954, a time when we were still paying for World War II. Moreover, our federal budget deficit could approach an unfathomable \$1 trillion for a single fiscal year. This could force draconian cuts in almost every federal domestic program and might further hinder economic recovery for people on Main Street.

The poison seeds of this calamity – deregulation and lax enforcement – have been sown over the past eight years by the same Administration that proposes this disturbing remedy. One thing is certain as we move forward with efforts to restore confidence in our financial markets - there must be greater, not less, Congressional oversight of our overwhelmingly complex financial systems and the government entities that oversee and regulate them.

Early Voting May be a Convenience for West Virginians

A reliable, quick, and relatively simple way for registered voters to make certain that we complete our civic duty in the upcoming general election is to vote early, meaning prior to the general election date of November 4, 2008. West Virginia began in-person early voting in 2002, and it has enjoyed increased popularity in recent elections.

This year, the period of in-person early voting in West Virginia begins twenty days before the election, and it continues until three days before the election. This means that most in-person early voting in West Virginia will generally occur Monday through Friday from October 15 to November 1, 2008. Early voting hours on those dates will range from roughly 8:00 a.m. to 4:00 p.m.,* with the precise hours, listed by county, available at the following website: <http://www.wvvotes.com/voters/documents/EarlyVotingHours.pdf>

Early voting will also be available on the two Saturdays before the election, October 25, 2008, and November 1, 2008, from 9:00 a.m. to 5:00 p.m.

The Clerk of the County Commission (County Clerk) is responsible for the administration of early voting. A voter need only go to the County Clerk's Office and ask to vote early in-person. He or she may then vote, just as they

would on election day in a voting booth at their normal precinct. If a paper ballot is used, the voted ballot will be sealed in an envelope and placed in a ballot box. Then, on election day, that ballot will go to the voter's normal precinct, where it will be counted or placed with other ballots for computer tabulation.

The area reserved for early voting at the courthouse must conform to the same requirements applicable to a regular polling place. Such requirements include that a sufficient number of voting booths or devices be available, and they must be arranged to provide the voter with complete privacy. Further, all ballots, both voted and unvoted, must be secured at all times. In addition, the location must be accessible to voters with physical disabilities, and no "electioneering" is permitted on the property of the courthouse during the period of voting.

Additional information concerning early voting is available by writing the Office of the West Virginia Secretary of State, Bldg. 1, Suite 157K, 1900 Kanawha Blvd. E.

Charleston, WV 25305; by telephoning (304) 558-6000; or by accessing the web at:

<http://www.wvvotes.com/voters/early-voting.php>

* Some counties' hours of operation may differ slightly on certain days of the week.

FABULOUS FALL IN WEST VIRGINIA

How truly blessed we are in West Virginia by the beauty of our State, and never is that beauty more apparent than with the coming of the lovely fall foliage. As the days turn shorter, and the frost draws nigh, we have a few precious weeks to enjoy all of the colors cascading through the hills. No place on God's Earth can parallel the views of our majestic mountains and valleys, awash with fiery reds, warm amber, vibrant auburn, and golden hues.

So striking is our fall foliage that many travel every autumn to West Virginia to marvel at our wondrous hills, brushed with the colors of the season's pallet. "Leaf peepers," as they are often called, visit West Virginia every year to behold the bountiful beauty, and to take advantage of the renowned hospitality we offer. Luckily, this fall season in particular promises a grand display of color. The U.S. Forest Service is predicting a good year for fall foliage, and West Virginia should be particularly brilliant given the ample rain we received earlier in the year.

As the leaves begin to change, I am reminded of the Robert Frost poem, "Gathering Leaves." The poet wrote:

Spades take up leaves
No better than spoons,
And bags full of
leaves
Are light as balloons.

I make a great noise
Of rustling all day
Like rabbit and deer
Running away.

But the mountains I
raise
Elude my embrace,
Flowing over my arms
And into my face.

I may load and unload
Again and again
Till I fill the whole
shed,
And what have I then?

Next to nothing for
weight,
And since they grew
duller
From contact with
earth,
Next to nothing for
color.

Next to nothing for
use.
But a crop is a crop,
And who's to say
where
The harvest shall
stop?

I encourage all to get
out and enjoy the splendid
joys of our Creator during
this beautiful fall foliage
time.

By U.S. Senator Robert C. Byrd

“EARMARKS” IS NOT A DIRTY WORD

In recent weeks, there has been an increased focus on the issue of Congress earmarking funds for specific projects. Some Members of Congress and even one of the presidential candidates have asserted that all “earmarked” funding is wasteful spending or an abuse of power which should be ended.

Congress has the power of the purse. That is stipulated in the Constitution. Since the beginning of our Republic, Congress has allocated money for specific projects and purposes. For example, in 1798, \$3,500 was appropriated for firewood and candles for the Treasury Department, and \$454.41 was appropriated for rent at a house, “near Gray’s Ferry on the Schuylkill.”

An earmark is an explicit direction from the Congress about how the Federal Government should spend the people’s money. Yet earmarks are arguably the most criticized and the least understood of Congressional practices. Accounting for less than 1% of the federal budget, there is nothing inherently wrong with an earmark. It is absolutely consistent with the Framers intentions, codified in Article I of the Constitution, giving the power of the purse to the representatives of the people.

Well intentioned though they may be, the civil servants making budget decisions in the Executive agencies of the Federal Govern-

ment do not understand the communities that Members of Congress represent. They do not meet with the constituencies. Bureaucrats can be poor judges of what is necessary and what is frivolous from the perspective of the states and the people. These bureaucrats are not elected and therefore are not directly accountable to the people.

Earmarks serve an important purpose. They are the safety net for situations when formula funding fails or when extraordinary circumstances exist. Recently, I was in Putnam County to dedicate the opening of 2.1 miles of upgrades to U.S. Route 35. This new highway was the result of my efforts to secure dedicated funding, or earmarks, to move this project forward. We all know that it has never been easy to secure federal funds for the building of highways in West Virginia. Our beautiful mountains that we love so much also make it costly--up to \$25 million per mile --to build modern highways. Time and again, I have had to fight the Bush Administration and its supporters in the Congress to ensure that West Virginia is not left out when it comes to safer roads and bridges.

And you can bet that I will continue to push hard in the U.S. Senate, and use my experience, and earmarks, when necessary, to build for the future of the people of the great State of West Virginia.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

WHAT'S AT STAKE ON NOVEMBER 4TH

In these difficult times, some West Virginians are understandably upset with the direction of our country. This frustration, which has been building for years, is a natural response to job loss and the real-life consequences of eight years of a failing economy and a long, dismal war. As Americans suffer through the worst economic crisis since the Great Depression, it is important to remember that things could be different. Leadership matters. Elections matter. Your vote really does count.

On November 4th, West Virginians and all Americans will have the opportunity to weigh in and select a new leader for our nation—and the stakes could not be higher.

In the more than six decades that I have served in public office—from the West Virginia House of Delegates to the U.S. Senate—I cannot remember a time when our country was in more urgent need of maximum participation by our citizens.

The question before us is clear. Do we want to continue on the path we have been traveling for the last eight years or do we wish to chart a new course?

Will we be satisfied with four more years of the same policies that have

led to a faltering economy and the loss of millions of jobs or will we opt for a new direction that tries to achieve sustainable economic growth?

Will we continue with what appears to be an endless war in Iraq, which has cost thousands of American lives and hundreds of billions of dollars or will we choose to find a way to end this ruinous occupation and bring our troops home with honor?

On November 4th, I urge you to fully consider what is at stake, and just how important this election will be for our country, for you, and for your family's future.

Voting is much more than a civic duty. It is a sacred privilege. At this pivotal moment in our history, we simply cannot afford more of the same kind of apathy we have seen in past elections. Our citizens need to demonstrate the courage to face challenges, voice their opinions, and participate in renewing the promise of America. West Virginians have always been at the head of the line when it comes to doing our duty for our great country. I am confident we will be there again. Whatever your political persuasion, go to the polls, take a friend, and vote.

VETERAN'S DAY 2008

President John F. Kennedy liked to quote a poem found in an old sentry box at Gibraltar. The poem read:

God and the soldier, all men adore

In time of trouble and no more,

For when war is over, and all things righted,

God is neglected and the old soldier slighted.

The multitude of churches that cover our great land is a reminder that in the United States of America, God is not neglected. And Veterans Day is a vivid, powerful reminder of the debt that each and every American owes to our nation's veterans, and that they must never be slighted.

Veterans Day is a day of reverence. It is the one day of the year that we set aside to honor the people who have defended our country, our way of life, and our freedom. It is the day that a grateful nation takes the time to pause, to recognize, and to thank our bravest and finest citizens for their patriotism and their willingness to serve and to sacrifice.

The very origins of this day are both historic and symbolic. It began at the 11th hour on the 11th day of the 11th month, that is, 11/11/11 of 1918, when the Allied Powers signed a cease-fire agreement with the Central Powers,

thus bringing to an end the bloody nightmare known as World War I.

The next year, the United States set aside November 11th as Armistice Day to remember and honor the sacrifices that men and women made during World War I. In 1926, a Congressional Resolution officially named November 11th Armistice Day. And twelve years later, in 1938, Congress made Armistice Day a national holiday.

In 1954, following World War II and the Korean War, Congress made November 11 a day to honor veterans of all wars, and, therefore, changed the name of this most important day to "Veterans Day."

Writing about the thousands of soldiers who lost their lives during the Civil War Battle of Antietam -- the bloodiest single day in American history -- the great historian of that war, Bruce Catton, explained that those men did not die for a few feet of a cornfield or a rocky hill. They died that our country might be permitted to go on, and that it might be permitted to fulfill the great hope of our Founding Fathers.

The same may be said of every person who has worn our Nation's uniform. They served and sacrificed to permit this country to go on, to fulfill the great hope of our Founding Fathers.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Relief for Main Street Americans

The recent economic meltdown on Wall Street has, regrettably, served as the final verdict on the failed economic policies of the past eight years. All the while, Americans on Main Street are facing even tougher times in the form of higher unemployment, rising food costs, and skyrocketing health care costs.

In September, Congress and the White House worked together to craft a package to rescue Wall Street in an effort to restore confidence in our credit markets and to shore up our faltering economy. Now that the government has taken action to address the credit crisis, I believe that we must address the struggles of Americans living on all of the Main Streets in West Virginia and all around the country.

The almost daily dismal statistics facing our economy are simply mind boggling. The U.S. economy has lost jobs every month this year, for a total of over 700,000 jobs. Construction has lost more than 525,000 jobs since September 2006. Manufacturing has lost 353,000 jobs since June 2007, and a recent report has indicated that the nation's manufacturing sector has fallen to a 26-year low. Auto sales have nosedived and consumer confidence is at a near 50-year low. Food prices have increased by

7.5 percent this year after increasing 4.9 percent in 2007. And despite some recent relief from prices at the pump, energy prices remain at very high levels – having risen more than 22% this year alone -- and the winter season has not yet arrived.

When Congress returns to work the week of November 17th, it is my hope that we move forward with a badly needed economic stimulus package that will create jobs, help Americans cope with high energy costs, and provide relief for those struggling to find work and put food on the table. There are major consequences for not investing in America and the American people.

Minimally, this package should include an extension of unemployment benefits for the jobless; a temporary increase in food stamp benefits; additional funding for the Women, Infants, and Children (WIC) program; help for states to pay for Medicaid; and investing in our infrastructure in order to put people back to work.

I believe that the time to act on these priorities is now. If we can provide a \$700 billion bailout for Wall Street, then we in Congress, along with the Bush Administration, should support a targeted investment to create jobs and assist Americans on Main Street.

LETTERS ABOUT LITERATURE COMPETITION PROMOTES READING FOR STUDENTS

Reading, Writing, and Arithmetic, the three "R's," was the way we were taught when I was young and attended a two-room schoolhouse. I would go to school during the day, finish my chores and homework in the early evening and then fall asleep reading by the light of a kerosene oil lamp. I looked at education as an opportunity to excel and to this day I'm not too old to keep learning. Education, to me, has been a passport to progress.

While education is universal in our country today, it is perhaps hard for some to realize just how much a high school diploma was coveted only a couple of generations or so ago – or actually how few people had one.

Our young people today seem more pre-occupied with video games, watching television, and listening to the latest and loudest music. They are no longer eager to open a book and turn its pages to reveal the next opportunity to stimulate the mind.

But the Center for the Book in the Library of Congress has launched an exciting new program called Letters About Literature (LAL). It is a nationwide writing contest that celebrates the relationship between young readers and authors. Students are invited to write a personal letter to an author explaining how his or her

work somehow changed the reader's view of the world.

Letters About Literature provides a challenging opportunity to young readers by asking them to write to a particular audience, or explain or describe his or her personal reader response to the work they had just read. This encourages meaningful reading and helps to create successful writers. Competition is grouped into three grade categories: 4 – 6; 7 & 8; and 9 – 12.

In addition to the educational rewards students obtain from this exercise, each year LAL awards more than 150 state-level prizes. The program also selects six national winners, each of whom will earn for their individual community or school library a \$10,000 Letters About Literature Reading Promotion Grant. Twelve national honorable mention winners will each earn a \$1,000 grant for the community or school library of their choice.

So I encourage all West Virginia students to participate in this reading and writing competition. The development of the human mind is all too important in this ever changing global environment. Go to the LAL website, www.lettersabout-literature.org to obtain how-to-enter guidelines. But you better hurry, as the postmark deadline for this competition is December 6, 2008. Good luck and good reading.

Giving Thanks in These Changing Times

Thanksgiving is one of America's oldest and most beloved holidays. It is a day devoted to turkey, family, football, parades, and the beginning of the Christmas season. Most importantly, it is, or should be, a day devoted to God.

Four centuries ago, a small but courageous group of people left their homeland, boarded a flimsy, little craft, journeyed across a mighty ocean, and settled in an inscrutable wilderness. They took all of these risks because they wanted to worship God as they pleased.

Think about it! How many of us today profess to be religious, but hate getting up on Sunday morning in order to go to church? How many of us do not like to walk those few blocks or drive those few miles to worship God? But here were the Pilgrims crossing a three-thousand mile ocean and facing the darkest of unknowns in order to exercise this sacred right.

I have always been in awe of the courage of the Pilgrims and their devotion to God. A year after landing in the New World, the Pilgrims set aside time to express their gratitude to God for protecting them, and for preserving their community. Despite all of the hardships and agony they had endured, our

forefathers still set aside time to thank God for His goodness.

Two years later, in 1623, the Pilgrims made this Day of Thanks permanent. A proclamation attributed to Governor Bradford instructed his fellow Pilgrims to "render Thanksgiving to ye Almighty God for all His blessings."

Today, like the Pilgrims, we also live in a time of uncertainty and danger but, likewise, we have much for which to be thankful.

Too many young Americans will spend this holiday in harm's way, protecting our country and the values we hold dear. Yet, I am thankful that we have the best, the bravest, and the most determined armed forces in the world.

I am thankful to live in a country that can confront a crisis with strength and with moral certitude.

I am thankful that in the United States our form of government provides for the transfer of power peacefully.

Finally, I am thankful for those men and women who, 388 years ago, had the courage, the faith, and the devotion to God to undertake the most difficult and dangerous of journeys simply to be able to go to church.

An Economic Recovery Involves Helping Our Neighbors

When I was growing up in the coalfields of southern West Virginia, I remember listening to President Franklin Roosevelt's "fireside chats" and messages of hope during the dark days of the Great Depression and World War II. In one statement proposing aid to England in its war against Nazi Germany, President Roosevelt asked his listeners to suppose that their neighbor's house was on fire, and that the listeners had a length of garden hose. The good neighbor would certainly lend his hose because he would not want the fire to spread to his own house.

I have been thinking about that analogy as it relates to the auto industry's request for a \$25 billion loan. Like many West Virginians, I question the wisdom and fairness of such a loan, but I also must consider the consequences of inaction. The downfall of the auto industry would ignite a massive fire that would spread from house to house.

In the eastern panhandle, a General Motors Service Parts Operation employs 165 workers with a nearly \$12 million annual payroll. That facility services 65 auto dealerships in West Virginia, creates business for truckers, railroad workers, maintenance personnel, and groundskeepers. We know these hard-working men and women as our

neighbors and friends. We sit with them at church on Sunday and visit with them at the grocery store. Their houses are on fire and they need our help. To deny them a garden hose when we are able to lend one goes against the Christian principles I learned during those hard years of the Great Depression and World War II.

Helping our neighbors also means extending unemployment benefits for those who cannot find work. It means ensuring Medicaid coverage for the impoverished and elderly, and investing in our transportation and energy infrastructure so that West Virginians can continue to build their communities.

I have introduced legislation in the Senate that would help the millions of Americans hurt by the current economic recession. The legislation would also provide a loan to the auto industry with provisions that will allow us to replace our garden hose when the fire ceases. I believe this bill, which is crafted to protect taxpayers and jobs in West Virginia, is a step in the right direction.

The conditions of our economy have sparked a fire that is spreading to our neighbors' houses. Now is the time to heed President Roosevelt's call. We must lend our garden hose, not stand idly by watching the houses burn, hoping the embers blow away.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Yes, *West* Virginia, There is a Santa Claus!

Christmas is coming. I can feel it. There is no other feeling like it. As the song says, it is the "most wonderful time of the year."

And, as another song says, "it's beginning to look a lot like Christmas."

Everywhere we look we can see the signs of Christmas: Christmas trees, Christmas wreaths, silver bells on lamp posts, women wearing Christmas sweaters and men wearing Christmas ties. We see Christmas carolers and hear Christmas carols, "Joy to the world, the Lord is come."

And then, there is one of the most recognized and cherished symbols of Christmas -- Santa Claus. I just love the jolly old fat man. To me, Santa represents Christmas, happy children, sleigh bells, reindeer, and, of course, presents.

In some circles, nowadays, it is popular to be critical of Jolly Old Saint Nick. For one thing, he is often attacked for being overweight, which is unhealthy. No argument here; Santa would be a better role model for our children if he went on a diet, joined a health club, and got rid of a few pounds.

Santa is also denounced as the very symbol of the commercialization of Christmas. Perhaps. During the Christmas season, commercials saturate our television screens urging us to buy, buy, buy. Store windows feature Christmas displays that tantalize and taunt, and beckon us to come inside and spend money. These highly commercial aspects of Christmas always seem to feature, in one way or another, Santa Claus. But I prefer to see the glass as half full!

The commercialization of Christmas, though taken too far at times, is really an extension of

the tradition of giving, with roots that reach back to the wise men and a manger in Bethlehem, which means that gift giving can actually be viewed as a celebration of the birth of Jesus -- which is, of course, the reason for the Christmas season. In other words, all of those gaudy and tacky displays and commercials would not be there were it not for the birth of Jesus. Think about it. Gifts don't have to be expensive. They can be simple. They can be homemade. But, they are expressions of love. Enjoy them!

I believe that the spirit of Kris Kringle can also represent some of the best of American religious values, including love, justice, fairness, and forgiveness. Fanciful and exuberant, joyful, cheerful, and happy, Santa Claus symbolizes our highest ideals, including the innocence of childhood, selfless giving, and boundless affection. Regardless of whatever faults he may have, Santa also represents the best in all of us. Especially in bleak economic times, the joy which Santa and his reindeer bring to children and adults alike can be counted on to brighten home and hearth throughout the season.

A few years ago, an Associated Press poll found that nearly 90 percent of Americans believed in Santa Claus as a child, and almost two-thirds of Americans with children at home consider Santa an important part of their holiday celebrations. Political leaders should strive for such an approval rating!

The story of Jesus is a story of faith, love, optimism, wonder, goodness and the eternal life of the soul.

Santa is indeed the spirit of Christmas

Yes, *West* Virginia, there is a Santa Claus.

By U.S. Senator Robert C. Byrd

The Art of Giving

A personal expression of love or gratitude is joyous to give, especially when the gift is met with a radiant smile from the recipient. Perhaps no other time of the year is more symbolic of the pleasure of gift-giving than Christmas.

Each Christmas, many West Virginians recall the first gift of Christmas: God's love delivered to mankind as a newborn baby. Shepherds and Magi honored the Savior with gifts symbolizing Jesus' virtue, faith and empathy for human suffering. Centuries later, God's gift continues to bestow hope, respect, and purpose in our lives.

In modern times gift-giving has become more complicated. There is endless advice about the "perfect" gift, with plenty of opportunities to purchase it everywhere you turn. This year, I call to mind the guidance of the seventeenth-century author, Gracián, who offered this advice: *The great art of giving consists in this: the gift should cost very little and yet be greatly coveted, so that it may be the more highly appreciated.* So many of us can find solace in this advice whenever we are feeling overwhelmed by commercial advertising and the pressure to spend, spend, spend this holiday season.

Recently, I was deeply touched to learn about a Wheeling congregation whose good deeds truly

embody the Christmas spirit. The congregation sought and found a way to give the gift of mobility – in the form of a wheelchair – to those who are poor and physically disabled in countries around the world. Members of the church, along with their community, have partnered with a national organization to supply very low-cost wheelchairs (under \$50) to impoverished children and adults.

For the recipients, a wheelchair means the end of their isolation, and the hope of renewed productivity and self-esteem. The caregivers of the disabled benefit as well. Many have spent a lifetime carrying and transporting their children, grandmothers and neighbors, and now have relief from this tremendous burden.

It is estimated that more than 100 million people around the world – of all ages – are in need of a wheelchair but cannot afford one. The need is great, so that is why the recipients of this gift greet their wheelchair with a radiant smile and the anticipation of a more mobile and free lifestyle.

During this Christmas season, I encourage all West Virginians to seek other great stories of faith, compassion and humanity to guide us in our search for the "perfect" gift. May you share an abundance of God's blessing in this Holy Christmas season.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Frosty the Snowman Was a West Virginian!

One of my favorite sounds of the season is "Frosty the Snowman." This joyful song tells about a snowman who comes to life thanks to a magical hat that some children find and place on his head. Frosty plays with the children for a while before he is "hurried on his way"--that is, he melts under a hot sun. But he reassures the saddened children not to worry because, "I'll be back again someday."

I wonder how many West Virginians know that this Christmas classic was written by a West Virginian, Walter "Jack" Rollins! Mr. Rollins was born in Keyser on September 15, 1906. He left Mineral County to work in a glass factory in Pittsburgh, and eventually found his way to Hollywood where he lived for 30 years. He authored about 500 songs, including other classics like "Peter Cottontail" (1949) and "Smokey the Bear" (1952).

It was in 1950 that Rollins wrote "Frosty the Snowman" while Steve Nelson provided the music. The song was first recorded by Gene Autry that same year. Since then, it has been recorded by many famous artists including Nat King Cole, Ella Fitzgerald, Alvin and the Chipmunks, Jimmy Durante, and Johnny Mathis.

Mr. Rollins died January 1, 1972, and is

buried in Keyser.

So, this Christmas season, whenever you hear the wonderful, happy song that Mr. Rollins wrote about a frozen playmate, take pride in the fact that Frosty the Snowman was a West Virginian.

A few of the lyrics to this classic holiday song follow:

"Frosty the snowman
was a jolly happy soul,
With a corncob pipe
and a button nose,
And two eyes made
out of coal."

"Frosty the snowman
is a fairy tale, they say,
He was made of snow
but the children know how
he came to life one day."

"There must have been
some magic in that Old
silk hat they found. For
when they placed it on his
head,

He began to dance
around."

"Frosty the snowman
knew

The sun was hot that
day,

So he said, 'Let's run
and we'll have some fun
now before I melt away.'"

"Down to the village,
With a broomstick in
his hand,

Running here and
there all

Around the square
saying,

Catch me if you can."

Merry Christmas West
Virginia! May all your
Christmas wishes come
true.

2008 – A Year of Accomplishments for WV

2008 has marked the completion of many major federal construction projects that have been top priorities of mine for years in the U.S. Senate. The projects that have come to fruition this year include:

Infrastructure

- The new Marmet Lock on the Kanawha River is the culmination of a ten-year long effort. The finished product will allow West Virginia's products to get to market in a much more timely and safe manner.
- The Blennerhassett Bridge in Parkersburg; which also marked the completion of ADHS Corridor D and the beginning of enhanced safety, reduced commutes, and new economic development opportunities for West Virginians. Work on Corridor D in West Virginia began all the way back in 1965.

Medical and Research Facilities

- The new Biomedical Research Center at West Virginia University; which will allow WVU to recruit faculty scientists of national caliber, better compete for research funds, and make huge strides in helping those afflicted by life-threatening diseases. This project began in 2005.
- The Health Sciences Learning Center at WVU; which is serving students in the four health professions schools of the Robert C. Byrd Health Sciences Center. I have proudly supported this project since 1999.
- A new clinical center at Marshall University's Robert C. Byrd Center for Rural Health, which I have supported since 1993, will be the new home for clinical training for students/residents; primary and specialty care clinical services for the region; and a new heart institute.
- A new WVU clinical teaching center within the Charleston Area Medical Center (CAMC) Memorial Hospital campus that will improve health care education and services in the Kanawha Valley region. I funded this project in a 2004 Appropriations bill.

Expansion of Federal Facilities

- A new Firing Range Complex at the U.S. Customs and Border Protection Advanced Training Center in Harpers Ferry. The new complex is more important than ever for the law enforcement officers who guard the nation's borders because it allows them to receive specialized training to help them succeed in their critical homeland security mission. I have been supporting the CBP's efforts for over 8 years.
- Three new centers at the Allegany Ballistics Laboratory in Rocket Center. These investments will provide the Department of Defense with an improved capability to support U.S. military forces now and into the future. I have supported the ABL facility dating back to 1985.
- The Technology Support Facility in Morgantown, which will support the National Energy Technology Laboratory's (NETL) mission of advancing science and technology for a clean, secure energy future. Over several years, I have added over \$36 million for this project.

After years – in some cases, decades – of hard work, it is wonderful to see these projects become a reality. They will not only serve the public good, but also help to create jobs and strengthen West Virginia's economy for years to come. 2008 has been a banner year. Rest assured, in 2009, there is much more to come from this United States Senator!

WELCOMING A NEW YEAR

As the clock ticks its final hours towards the beginning of the New Year, I like to take time to recall the joys of the recent year and, like so many of you, to make those annual New Year's resolutions – many of which for better or worse I find hard to keep.

The celebration of the beginning of a New Year dates back about 4000 years to ancient Babylon. Under the old Roman calendar, the New Year began sometime in the month of March, anticipating the coming of spring – a season of rebirth – and a time for the planting of crops. The Roman senate in 153 BC declared January 1 to be the beginning of the new calendar year. According to Judeo-Christian tradition, New Year's Day is observed as the Feast of Christ's Circumcision, eight days after His birth. January 1 has been given the name of the Feast of the Solemnity of Mary, Mother of God, by the Catholic Church.

The celebration of the New Year was traditionally a religious feast and to this day many people believe that certain foods will bring them good luck, prosperity and good health throughout the coming year. In many regions throughout our country, the traditional meal of pork and black-eyed peas is eaten for good luck.

Others believe that cabbage – the leaves of which are considered a sign of prosperity – or rice bring good fortune in the New Year.

Celebrations on the eve of the New Year, now December 31, have become major events throughout the world. From Sydney to London to New York City, crowds gather to watch grandiose fireworks displays, parades, and the dropping of the crystal ball in Times Square as people cheer the outgoing year and welcome the new. At the stroke of midnight, many celebrants lock arms and join in singing, Auld Lang Syne, which translated means "times gone by."

As the new year unfolds throughout the world, millions attend religious services, watch parades and football games, or spend precious time with family and friends and, yes even a few brave souls actually take a swim in cold bodies of water to cleanse their spirits for the upcoming year.

However you choose to celebrate the New Year, please do so safely. My fellow West Virginians, as we welcome 2009, I resolve to continue to be the kind of United States Senator which our State deserves. Thank you for allowing me the privilege of serving you. Happy New Year West Virginia.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

The Blessings of Democracy

On January 20, 2009, the world will witness a rare political act - - the peaceful transfer of power from one world leader to the next. In a demonstration of the strength of our representative democracy, outgoing President Bush will travel with President-elect Obama from the White House to the Capitol. There, on the West Front of the Capitol, President Bush will witness the swearing-in and inaugural address of President Obama before quietly departing from the Capitol's East Front to resume life as a private citizen.

The basic elements of the inauguration are simple, but the symbolism of the day is momentous. Only one element is spelled out in the Constitution: the Presidential oath of office, in Article II, Section 1: "I do solemnly swear (or affirm) that I will faithfully execute the office of President of the United States, and will to the best of my ability, preserve, protect, and defend the Constitution of the United States."

Tradition dictates that the Chief Justice of the Supreme Court administers the oath of office to the President. The recitation of the oath may involve placing a hand on a Bible or other book, or no book at all. President-elect Obama will take his oath on the same Bible used by Abraham Lincoln for his swearing in on

March 4, 1861. The location may also vary: Presidents have been sworn in at ten different locations over the course of our nation's history - from Philadelphia to Love Field in Dallas in 1963, following the assassination of President John F. Kennedy. Some Presidents have held inaugural balls, but not all - President Franklin Pierce cancelled the balls in 1853 and they were suspended again from 1913 to 1949. Worship services, inaugural luncheons, parades and even inaugural addresses are but mere traditions that have existed or been added over the years.

Americans and others watching from around the world will see plenty of pageantry, pomp and circumstance on Inauguration Day. There may even be peaceful protests, affirming every American's right to freely express their views.

Our Constitution provides a stable and reliable way for citizens to effect the changes they seek in their government, through regular and fair elections and through a justice system designed to preserve and protect individual rights. As Americans gather to watch the stately unfolding of events that mark the Presidential inauguration, they will witness both the blessings of our Constitutional system and its promise to the world.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

From Reverend Martin Luther King, Jr. To President Barack Obama

In 1954, the Reverend Martin Luther King, Jr., began his pastorship at the Dexter Avenue Baptist Church, in Montgomery, Alabama. At that time, African Americans could not serve on juries in most areas in the south, nor could they drink from certain water fountains, or eat in certain restaurants. Black people could not live in many neighborhoods in the north as well as in the south. Although the U.S. Supreme Court had ordered the integration of schools, in many parts of our country, schools remained segregated. Incredibly, in too many parts of our country, African Americans could not exercise their basic American right to vote!

The next year, in Montgomery, Rosa Parks was arrested for refusing to give up her seat on a bus to a white man. Dr. King reacted to this event by organizing a movement to desegregate the city's bus system and a revolution began — it would be one of the most transforming movements in history, and the participants did it without firing a shot.

The effort to advance desegregation included sit-ins, boycotts, marches, and other forms of non-violent protests. While violence was often committed against the revolutionaries, they remained true to Reverend King's philosophy of non-violence. King's non-violent tactics often seemed strange to his followers as well as to his critics, but as King explained, the goal was not "to defeat" the adversary, but to "convert" him.

King's movement was dedicated

not only to eliminating segregation, but winning civil rights, equality, and equal opportunity for all Americans regardless of race or economic class. For that reason, labor unionists and other social activists joined in his march on Washington in August, 1963 which was officially titled the "March on Washington for Jobs and Freedom."

And now, on January 20, 2009, Barack Obama will become the first African American to become President of the United States.

It is appropriate that he will take the oath of office the day after the nation celebrates Martin Luther King, Jr. Day, because this will be the fulfillment of Dr. King's Dream. In his "I Have A Dream" address, King said that he dreamed that "one day" his children would "live in a nation where they would be judged not by the color of their skin but by the content of their character."

President Obama was elected because Americans listened to his ideas, and were attracted to his vision of America, as a "More Perfect Union." They took the measure of the content of Barack Obama's character, and used their right to vote to usher in a new era of governance.

I congratulate President Obama. But, I also want to salute the contributions of Dr. Martin Luther King, Jr. Dr. King raised the consciousness of the Nation. He established a new moral standard for how we, as Americans, should view and treat each other. He sowed the seed for the historic achievement of President Obama.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A Half Century of Senate Service

Thanks to the good people of West Virginia, and with God's blessings, I was able to mark a half century of service in the United States Senate when we convened for the 111th Congress on January 6th. I have been fortunate that the foster son of an impoverished coal miner from the hills of southern West Virginia has had the opportunity to not only serve the people of the Mountain State, but also to walk with Kings, meet with Prime Ministers, and debate Presidents.

During the past 50 years, I have had the unique opportunity to witness history and participate in many history-making events. From the apex of the Cold War to the collapse of the Soviet Union and the fall of the Berlin Wall; from my opposition to the 1964 Civil Rights Act to my role in securing the funds for the building of the memorial to Martin Luther King, Jr.; and from my support for the War in Vietnam to my opposition to Mr. Bush's War in Iraq, I have served in the Senate and I have relished every minute of it.

My half century has also allowed me to experience profound changes in the Senate itself, and, unfortunately, not all of them have been positive. During my tenure, especially in recent years, the Senate has become bitterly partisan. The costs of running for a Senate

seat have become astronomical. In 1958, Jennings Randolph and I spent a combined \$50,000 to win the two Senate seats in West Virginia. Today, Senators can expect to spend about \$7 million. Too much of a lawmaker's time and energy are now consumed in raising money for the next election.

But, I am pleased to say there have been many positive changes in the Senate. It has become more open and more constituent friendly and Americans across the country can watch their Senators debate the issues of the day live on C-Span.

The Senate has also become more diverse. When I started in 1959, there was only one female Senator. Today, there are 17. In the 50 years prior to my service, not a single African American was elected to the Senate. During my 50 years here, three African Americans have been elected to the Senate. While I know this is a small number, one of those three has now been elected to the highest office in our land -- President of the United States. We have come a very long way.

My beloved West Virginians, it has been a wonderful and privileged 50 years serving you in the Senate. I thank you from the bottom of my heart for this honor and I look forward to the next 50!!

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

Closing Guantanamo

President Obama, in one of his first official acts, has issued an executive order to close the U.S. military detention facility at Guantanamo Bay, Cuba, within twelve months and after a careful case-by-case review of each remaining detainee. It is an action long overdue, ending a dark period in American history that leaves a stain on our nation's faith in the rule of law and undermines our standing in the world.

Since October 7, 2001, when the current war in Afghanistan began, almost 800 individuals have been imprisoned at Guantanamo. Approximately 250 remain today. Captured abroad and suspected or accused of terrorist activities or connections, the detainees were taken to Guantanamo, outside U.S. territory, to minimize the application of legal constraints that might otherwise apply on U.S. soil.

A mere handful of these detainees, officially deemed unlawful "enemy combatants" outside the protections afforded by the Geneva Convention, have never even been charged with any crimes. The remainder have been held indefinitely, as long as seven years, without trial. More than a handful are believed to have been subjected to "enhanced interrogation techniques," a Bush Administration euphemism for torture. Of the more than 500 individuals transferred out of Guantanamo, most were released soon after their repatriation. In very few cases did the receiving countries

consider that the prosecution of the individuals was merited.

At home and abroad questions over what has happened at Guantanamo have been repeatedly raised from citizens to prominent legislators. The United Nations referred to the practices at Guantanamo as a "human rights scandal." One human rights organization referred to the Guantanamo Bay Detention Camp as "the gulag of our times." Many in Congress, myself among them, have pressed for the closure of the Guantanamo Bay Detention Camp and insisted that these individuals be treated as we would expect our soldiers to be treated if captured abroad and subjected to the rule of law – no more, and no less.

While I believe it is past time to close Guantanamo and bring those who remain to justice, if appropriate and within the jurisdiction of U.S. law, we must undertake this endeavor with extreme caution. There may be some detainees who, for national security reasons, may be too dangerous to be released. And questions have already arisen as to where to hold these individuals on U.S. shores as they await trial or deportation.

The Obama Administration has indicated that they will establish a number of Cabinet-level task forces to address many of the major issues surrounding the closure of the facility, the procedures to be followed, and the legalities involved. It is a welcome and long overdue action.

By U.S. Senator Robert C. Byrd

A Healthy Resolution

For many of us, the intention to lead a healthier lifestyle tops the list of New Year's resolutions for 2009. We are prepared to make up for the missed doctor's appointments from 2008, and dust off our gym shoes and get our bodies moving.

But as the year progresses and the responsibilities of work and family overwhelm our daily schedules, we have to recommit to our New Year's resolution. Taking care of our bodies should be a priority, and with minimal effort and some organization it can become a regular habit. When we tend to our health on a regular basis, with a combination of regular check-ups, screenings, and exercise, we can more easily prevent the onset of chronic disease.

During the last few years West Virginians have skyrocketed to the top of chronic health categories. Whether it is hypertension, diabetes, heart disease and stroke, or various cancers, West Virginians have found themselves dealing with the upswing of health problems in greater proportion to the national average. Although this is a troubling situation, there are some simple steps we can take together to begin reversing our state's health care downturn.

The steps to a healthier lifestyle begin with exercise and proper nutrition. It is equally important to incorporate regular doctors' visits

and preventative health care screenings into a health care routine. Research has shown that preventative screenings, which search for potential health complications, can save lives. Even the healthiest individuals, after a primary screening, can find themselves in need of treatment for a number of health problems.

West Virginians are fortunate to have several preventative medical facilities that I helped fund throughout the state. For example, Marshall University School of Medicine now has a virtual colonoscopy program that was established to fight the high rate of colon cancer. West Virginia University's Positron Emission Tomography (PET) Scanner is a powerful imaging technique that holds great promise in the diagnosis and treatment of many diseases, particularly cancer. Those are just a few of the great resources West Virginians can utilize to help prevent the onset of chronic or life-threatening disease.

This year, I encourage all West Virginians to make a commitment to their overall health and honor this important New Year's resolution. I cannot stress how beneficial a few visits to your doctor may be. Coupled with a few brisk walks each week, these small steps can lead to a longer and more productive lifestyle.

HAPPY 200TH BIRTHDAY PRESIDENT LINCOLN

On February 12, 2009, the nation will celebrate Abraham Lincoln's 200th birthday. In many ways Lincoln's presidency was symbolic. He was Father Abraham. He was the Great Emancipator. He was the Savior of the Union. He was, by almost any measure, one of our greatest presidents.

Lincoln was the president who led our country through its most severe crisis, the American Civil War. With his Emancipation Proclamation, Lincoln was the president who set our nation on course to finally abolish the institution of slavery.

Our country owes so much to the 16th president of the United States – and so does the State of West Virginia!

The creation of the State of West Virginia was a controversial matter, but President Lincoln's strong support for statehood led to the creation of our beloved state. In Article IV, Section 3, the Constitution stipulates that a state cannot be created from another state without the consent of the concerned states and Congress. The question of whether the State of Virginia had actually given the required consent was a concern. In both houses of Congress, the admission of West Virginia into the Union encountered fierce opposition. Lincoln's own Cabinet was evenly divided on the question. In other words, the admission

of West Virginia as a state may never have happened without Lincoln's support.

This great man who had so much influence on our state and nation often discussed the major influences in his own life. One was his religion. During a time of pain and mental anguish, for example, Lincoln wrote that he found reading the Bible to be "the best cure for the blues."

Another influence, he explained, was his mother. Lincoln was born in 1809 to Nancy Hanks and Thomas Lincoln. "God bless my mother;" Lincoln told his law partner, "all that I am or ever hope to be I owe to her." I am very proud to point out that his mother, Nancy Hanks, was a West Virginian!

Hanks is believed to have been born on February 5, 1784, in what is now Mineral County. A replica cabin and a stone memorial identify the reported site of her birth along Mike's Run at the foot of New Creek Mountain.

As we celebrate the bicentennial of Lincoln's birth, let a grateful state remember Lincoln's instrumental role in the creation of West Virginia. President's Lincoln faith in God, and reverence for the idea of one America make his greatness eternal. How proud our State should be that his mother, Nancy Hanks, is a daughter of Mineral County, West Virginia.

STIMULATING OUR ECONOMY

These are perilous times for our nation's economy. Companies are shedding jobs at an alarming rate. Nearly 2 million Americans have lost their jobs in the last three months, and job creation is the worst in 75 years. While in West Virginia our workforce has been buffered to some degree by the mining industry, we are now feeling the impact of this painful global recession. In December – in just one month – West Virginia lost 4,100 jobs.

Companies that have a long tradition in the Mountain State are reducing their workforce or closing doors altogether: Century Aluminum, Dow Chemical, AGC Flat Glass, Greenbrier Resort Hotel and Simonton Windows are just a few of the companies that have had to make hard decisions about their future and the future of hard-working West Virginians.

The recession to date has created a \$3.6 trillion economic gap over the next five years. This is coupled with the \$2.2 trillion deficit in infrastructure investments that the Bush Administration left to this nation. Highway and mass transit systems, airport and rail construction, energy and water projects, schools and public facilities were starved under the previous Administration. In West Virginia, I have seen how inadequate infrastructure can limit access to jobs, to health care, and to schools. It can strangle and suffocate local economies.

Last week Congress passed and the President has subsequently signed into law "The American Recovery and Reinvestment Act," which is expected to jumpstart our idling economy and help create up to 20,000 jobs in West Virginia. Money in this bill for West Virginia will immediately address needed infrastructure repairs, including the backlog of drinking and clean water infrastructure needs and over \$200 million in highway and mass transit funding for "shovel-ready" projects.

For those who are unemployed or facing job loss, the bill contains money to help match unemployed workers with new job opportunities and provide new job training programs. And the Department of Labor estimates that West Virginia could receive more than \$33 million in extended unemployment insurance benefits. And many Social Security beneficiaries, SSI recipients and disabled veterans will see a stimulus check in their mailboxes to help make ends meet.

"The American Recovery and Reinvestment Act" that was signed into law is what we need to be doing to help mitigate this economic downturn. It achieves the principle goals of creating and saving jobs, of cutting taxes for working families, of helping to aid those who are out of work, and of investing in the long-term growth of the U.S. economy.

RESCUE UNDER FIRE.... SO OTHERS MIGHT LIVE

Military medics on the ground and the medical evacuation flight teams who bring wounded soldiers to hospitals are true heroes. They are lifesavers who put their own lives on the line in order to give wounded comrades the chance to receive critical medical care.

Over the years, the valor of those who serve as field medics, Army Medivac crews and Air Force Combat Search and Rescue crews has often been overlooked. These brave men and women – pilots, aircraft crew chiefs and medical specialists – work in the heat of battle to evacuate the injured. They are frequently exposed to danger from which there is no protection. Undaunted, they do their lifesaving tasks without hesitation. Our forces deployed on the battlefield rely upon these angels of mercy. Such brave efforts save the lives and limbs of fellow soldiers. And they also provide comfort to the families of our brave troops, who can rest assured that their loved ones in uniform will have the very best medical care when and where they need it most.

I was shocked to learn several months ago that U.S. troops in Afghanistan were being asked to fight in remote areas, which could result in delays of two hours

or more until first-line surgical care became available. Subsequently, I learned that this deplorable situation was allowed to continue unremedied for an extended period of time.

I immediately urged Secretary of Defense Gates to improve the efficiency of medical evacuations in Afghanistan by deploying the necessary resources as quickly as possible. I was pleased to hear Secretary Gates address my concerns during his testimony before the Senate Armed Services Committee on January 27, 2009. Secretary Gates assured the Committee that he was working to significantly improve medivac capabilities in Afghanistan.

I have since learned that additional medivac assets and forward surgical teams will soon arrive in Afghanistan. The presence of these additional resources will shorten the time between actual injury and critical medical care. Our hearts go out to these brave crews along with our prayers for their own safety. A grateful nation thanks them for the courage that they display to keep their comrades in arms safe and sound.

I will continue to monitor the progress being made in getting these necessary forces to Afghanistan in the most rapid manner possible.

SUBSTANCE ABUSE AMONG OUR YOUTH CAUSE FOR ALARM

I recently met with Secretary of Education Arne Duncan, and expressed my grave concerns about drug and alcohol use and abuse by West Virginia's youth. Each year, more than 70,000 underage children in West Virginia consume alcohol. Forty-two percent of high-school students have admitted to drinking, and nearly thirty percent of these students are binge drinkers. Binge drinking is defined as the consumption of alcohol with the sole purpose of becoming intoxicated.

West Virginia exceeds the national rates for cocaine usage in age groups of twelve to seventeen and eighteen to twenty-five, and sixty percent of our high school students have said that drugs are kept, used, or sold at school. In fact, West Virginia is among the ten states with the highest rates of illegal use of prescription drugs and cocaine in the past year.

This substance use and abuse by our children can mean serious health issues, or even death. Think of the tragedy of these young lives wasted! But there are other costs as well. Providing police officers to enforce our drug laws, imprisoning offenders, and rehabilitating those who become addicted to substances all cost taxpayers money. In addition, substance abuse reduces one's chances of graduating from school or of landing and holding a steady job. In 2006 alone, substance abuse cost West Virginia \$1.8 billion in direct and indirect costs.

Curing substance abuse is not something that Secretary Duncan or I can solve with federal funding or legislation alone. The key to reducing youth substance abuse is parental involvement. Parents need to tend to their children and constantly reinforce the value of an education. They need to alert their children to the permanent damage that drugs and alcohol can do to young bodies. They need to concentrate on being good role models and on providing positive and productive examples of how to live a healthy, successful, responsible life. Parents need to talk to school officials about drugs and alcohol in our schools and about prevention efforts at the local level.

My meeting with Secretary Duncan was heartening because I believe that the new Secretary is well aware of the pervasiveness of substance abuse among our young people. It will take a lot of work and cooperation, but West Virginians must come to grips with the profound danger of substance abuse and join the fight to find solutions. There is a growing epidemic in our state which involves a long list of problems, including crime, disease, child abuse, domestic violence, teen pregnancy, welfare dependency, learning disabilities, and poor performance in school. My staff and I are learning all we can about this major problem in our state. For the sake of your children, perhaps you should too.

SAINT PATRICK'S DAY, 2009

"Top o' the mornin' to ye, my fellow West Virginians!" Or, better yet, "to my fellow Irish-West Virginians."

So many of us look forward to the one day each year – March 17, St. Patrick's Day – when we can all proclaim ourselves to be "Irish for a day."

Celebrated by the wearing of green clothing, the playing of Irish music and the eating of Irish foods like corn beef and cabbage, St. Patrick's Day is a most delightful annual observation.

The Irish have observed the day as a religious occasion for over a thousand years. It was on March 17, AD 461, that St. Patrick, the patron saint of Ireland, died.

As the people of Ireland traveled outside the Emerald Isle, the day came to be celebrated around the world in a number of different ways. The St. Patrick's Day custom came to America in 1737, when the day was celebrated in Boston. The first St. Patrick's Day parade was in New York City on March 17, 1762. Today, many cities in the United States celebrate the day with huge parades. Some paint their city streets green. The city of Chicago dyes the Chicago River green. And the community of Ireland, in Lewis County, annually hosts an all-out

multi-day festival, complete with harp-playing, road bowling, a King and Queen to rein over the festivities, and plenty of blarney.

On St. Patrick's Day, Irish themes and symbols abound. Everywhere, we see shamrocks – the three-leaved plant that St. Patrick was supposed to have used to explain the Holy Trinity to pre-Christian Irish. Also called the "seamroy" in Ireland, the shamrock was a sacred plant in ancient Ireland because it symbolized the rebirth of spring, just the way the ramp does in West Virginia. By the seventeenth century, the shamrock had become a symbol of emerging Irish nationalism.

At any rate, put on some green clothes, eat a bowl of Irish stew, hunt for a rainbow's end, and try to spot a Leprechaun or two because, as the song says, "It's a great day for the Irish!"

On this Saint Patrick's Day, I leave you with this old "Irish blessing":

May the road rise to meet you,

May the wind be always at your back.

May the sun shine warm upon your face,

The rains fall soft upon your fields.

And until we meet again,

May God hold you in the palm of his hand.

West Virginia Women Make History!

The women of West Virginia have played important roles not only in the history of our beloved state, but also in the history of our great nation. Therefore, with March being celebrated as "Women's History Month," I want to acknowledge some great West Virginia women and their contributions.

In the days before West Virginia was officially a state, women like Anne Bailey and Betty Zane served as scouts and messengers, and, at times, participated in the fighting of the colonial Indian Wars and the American Revolution.

During the Civil War, Nancy Hart and Belle Boyd carried on espionage work for the Confederates. Another West Virginian, Nancy Hanks of Mineral County, married Thomas Lincoln, and had a baby boy she named Abraham, who served as our 16th President during the Civil War.

When the industrial revolution swept the country, West Virginia women crusaded as union organizers. "Mother" Jones and Fannie Sellins, for example, both played crucial roles in organizing the miners of West Virginia.

In the twentieth century, West Virginia women made their marks as public servants. In 1928, Minnie Buckingham Harper of McDowell County took a seat in the West Virginia House of Delegates, making her the first African-American woman in the United States to serve in a legislative body. In 1969, Virginia

Mae Brown of Charleston became the first woman to chair a United States regulatory commission, the Interstate Commerce Commission.

The women of West Virginia have also enriched the cultural life of our country. In 1908, largely because of the efforts of Anna Jarvis, the first official Mother's Day service in the United States was held in St. Andrews Methodist Church in Grafton. Ida Reed of Barbour County published more than 2,000 Christian Hymns. Ellen King of Glenville, wrote "The West Virginia Hills," which became one of our official state songs.

Our mountains have produced several notable female authors. Pearl S. Buck, the author of 85 books, including *The Good Earth*, which was awarded the 1932 Pulitzer Prize, is certainly the best-known of these. In 1938, Pearl Buck became the first American woman to receive the Nobel Prize for Literature.

But, we must not forget all those unnamed women who have toiled in our coal camps, worked on our farms, labored in our factories, taught in our school rooms, and managed family life in the homes of our state. While their names may not be in history books, many women have played an important part in the economic and social life of our state. This month let us remember the contributions of all of our West Virginia women, past and present. They are the guardians of our West Virginia ways. God bless them all.

Whither Iraq and Afghanistan?

March 19, 2009, marked the sixth anniversary of the U.S. invasion and occupation of Iraq. Since March 2003, when -- despite my warnings -- President Bush initiated a pre-emptive war to destroy non-existent weapons of mass destruction, 4,260 American troops have lost their lives in Iraq, and more than \$700 billion in taxpayers dollars have been drained from the U.S. economy.

Today, the outcome is still in question. Difficult issues involving corruption, refugees, oil profits and Kurdish autonomy are unresolved. We have been told that the surge was a dramatic success, but nearly 150,000 troops remain in Iraq to maintain so-called "stability." Is this really success? The Pentagon continues to wear down active duty forces and rely on reserve and National Guard components and the practice of "stop loss." We have been training Iraqi soldiers for years. When will they be ready? Will Iraq be a stable force in the region and a reliable partner in the war on terror? These important questions underlie our presence in Iraq. The lack of answers is of grave concern.

The White House says that combat forces will remain in Iraq through August 2010, and up to 50,000

troops will be required until December 31, 2011, training Iraqis and protecting U.S. citizens and assets. We will be called upon to pour more billions of dollars into Iraq at a time when many Americans are hurting. Amid an economic crisis, the U.S. continues to shoulder the vast economic and military burden in Iraq, and there are no statutory guarantees that the President will adhere to the timelines.

Meanwhile, after over seven years of floundering policy and 671 American troops killed, stability in Afghanistan remains threatened. I await clarification from President Obama about a strategic policy for that region. Is the principal objective to capture Osama bin Laden and defeat al Qaeda, or to supplant the Taliban? Is our objective to turn Afghanistan into a successful state and develop a partner in the war on terrorism? How long will it take and what will it cost?

As for the brave men and women of our Armed Forces who served and are still serving in Iraq and Afghanistan, history has already judged them heroes. In the finest American tradition, they have served bravely and with great valor, and often with great sacrifice. To each of them, and to their families, we can only say, "Thank you."

The First Sign of Spring — The Mighty Ramp!

West Virginia is indeed the Land of the Mighty Ramp! This is a little best appreciated by actually taking part in the annual pursuit of this stinky, but delightfully tasty spring tonic.

Ramps are a member of the lily family, which includes garlic, leeks, and onions. While they grow wild in hardwood forests throughout North America, ramps thrive in the mountains and valleys of Appalachia. In our beloved state, eating ramps is an annual rite of spring and it is an honored tradition.

West Virginians know that ramps are among the first green things to emerge from the forest floor in spring; therefore, all "real" West Virginians consider the ramp, not the robin, to be the first sign of spring.

Ramps are such innocent looking things, with their broad, smooth light green leaves, and scallion-like bulbs, that newcomers to ramp culture will be surprised by the pungent odor they possess.

I am told that the popularity of these little stinkers has skyrocketed in recent years and ramps are now being eaten with gusto all over the United States. As usual, West Virginia was ahead of the rest of the country. The April issue of *Bon Appétit* food and cooking magazine even has a special feature on ramps. I have read that

in New York City, ramps are sold in gourmet shops and are eaten on pizza and in quiche.

Real men may or may not eat quiche, but "real" West Virginians know ramps go well with many different things, especially taters, eggs, ham, brown beans, and steak. And "real" West Virginians know ramps do not belong on pizzas or, heaven forbid, in quiche. And "real" ramp eaters do not buy ramps in gourmet shops. We dig them out of the ground ourselves, or we buy them from roadside stands, or we go to local ramp feeds.

Every spring, ramp festivals are celebrated all over West Virginia. The towns of Buckhannon, Chloe, Pickens, Big Otter, Helvetia, Elkins, Hacker Valley, Parkersburg, Roanoke, Mathias, Bomont, and Romney all sponsor ramp festivals. But, the King of Ramp Festivals has to be Richwood, which is also known as the "Ramp Capital of the World." A few years ago, public television aired a documentary entitled, "The King of Stink," a documentary on ramp festivals that featured the Richwood Ramp Festival.

A friend of mine once said to me that, "enjoying ramps in the springtime is what life is all about."

I say to one and all, spring is here. Go get a plate full of ramps and enjoy life!

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

"Easter's On Its Way!"

Easter's on its way! What a wonderful and joyous time of year this is. It is celebrated with Easter eggs and Easter baskets; Easter rabbits and chocolate bunnies; Easter dresses and Easter bonnets; and jelly beans and songs.

The people of our state can take special pride in knowing that it was a West Virginian, Mr. Jack Rollins of Keyser (1906-1973), who composed what has become one of the most popular and beloved Easter songs, "Peter Cottontail." I just love those happy, joyful lyrics that tell of the Easter Rabbit "hopping down the bunny trail." The beautiful lyrics of this happy Easter song give their attention to Peter Cottontail, who is "bringing every girl and boy, baskets full of Easter joy."

*"He's got jellybeans for
Tommy,
Colored eggs for sister Sue,
There's an orchid for your
Mommy
And an Easter bonnet, too."*

But the most important thing is that, wherever he goes, the Easter Bunny showers his blessings on all people.

I like to think that this is a happy, joyous time of year for all of West Virginia's children.

But we must never forget, as they say of Christmas, the "real reason for

the joy." For Christians, the resurrection of Jesus Christ is the essence of our religion. The birth, life, death, and resurrection of our Lord and Savior Jesus Christ are the premier events in world history. Christians all over the world celebrate this most sacred and holy Easter season.

But, I urge my fellow West Virginians who are of the Christian faith to think about the true meaning of the suffering and resurrection of Christ more often than just at Easter. I believe that Christians should try to take at least a few minutes of each day to meditate about what the resurrection event means to each of us personally, and what it has meant to mankind.

Let us read the powerful message found in Luke 24: 1-3 (KJV) often.

"Now upon the first day of the week, very early in the morning, they came unto the sepulchre, bringing the spices which they had prepared, and certain others with them. And they found the stone rolled away from the sepulchre. And they entered in, and found not the body of the Lord Jesus."

Happy Easter to all and may you enjoy God's holy blessings during this Easter season and throughout the year.

PROMISES TO KEEP

When members of the military ship out to Iraq, Afghanistan, and other dangerous duty stations, they take precautions. They train hard. They don heavy body armor and helmets. And they take comfort in the belief that, if the worst happens, their family members will be taken care of by the government for which they have made the ultimate sacrifice.

Service members who die in combat know that their families will receive a lump sum payment from the government that will help during the first, most difficult years after their death. They know that the Department of Veterans Affairs (VA) will provide a monthly stipend to their families from the Dependency and Indemnity Compensation (DIC) program for a service-connected death. And they believe that their families will receive income from the Department of Defense's (DOD) Survivor Benefit Program (SBP), a voluntary insurance program for which these prudent and caring service members pay premiums from their retired pay in order to protect their loved ones. DOD's SBP insurance provides a monthly payment based on what an eligible service member would have earned in retirement.

Sadly, however, these service members are wrong.

Current federal law requires a reduction in the

SBP insurance-based annuity equal to the benefits received from the Department of Veterans Affairs' DIC program. For most active duty enlisted deaths, this means the service members' insurance annuity is eliminated entirely, leaving survivors to subsist only on the veterans' benefit. That DIC benefit is typically just \$13,848 per year – substantially below the poverty level, according to the U.S. Census Bureau.

For active duty deaths since October 2001, Congress has authorized surviving spouses to assign the DOD insurance payment to their children so that the family would receive both payments while the children are dependents. However, that option means that neither the spouse nor the children will get any payments from DOD after the children reach age 18.

It is time to end this inequity and actually provide our service members and their families with all of the benefits that are promised to them. With that in mind, I have cosponsored S. 535, a bill to amend federal law to eliminate the so-called "SBP/DIC offset."

In his second inaugural address, Abraham Lincoln called upon our war-torn nation to "...care for him who shall have borne the battle, and for his widow, and his orphan...." It was the right thing to do then, and it is the right thing to do now.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

NEW HAPPENINGS IN WEST VIRGINIA

During the recent Congressional recess, I had the opportunity to visit three areas of our state to participate in ceremonies highlighting some new and exciting facilities that will improve health care, create new jobs, and help make the marvels of science more accessible to our young West Virginia students.

At Marshall University in Huntington, we dedicated a new teaching and clinical center at the medical school. With this center, the university will be able to accommodate more medical students, train more residents, and provide expanded health care services. It is my hope that this new \$23 million clinical center will provide the tools needed to make a significant difference in improving the quality of life for all West Virginians. Perhaps the elusive cure for cancer or the common cold, or other medical miracles not even conceived at this time will be discovered right here in West Virginia.

In Martinsburg, I joined in marking a significant milestone for the 167th Airlift Wing -- the designation of the 167th as a fully operational C-5 aircraft unit. This ten-year journey, which included a \$280 million investment that I helped secure through the appropriations process for infrastructure improvements, has resulted in the creation of more than 200 new full-time jobs and

increased economic development. With this transformation, we ensure the long-term stability and presence of the 167th Airlift Wing.

And in Green Bank, I was honored to join in dedicating the Erma Ora Byrd Green Bank Science Center and student dormitory. The two facilities are the newest additions to the Green Bank Observatory. The Observatory is the home of the 100-meter, 485-foot tall telescope -- the largest, fully steerable radio telescope in the world. In order to help ensure that the Green Bank Observatory could help stimulate the interest of young people and their teachers, I secured \$8 million in appropriations funding for the construction of these two facilities. These new facilities are helping to make the remotely located Observatory more accessible for students from West Virginia and other states to visit and more likely to spark their interest in the study of science. It is my hope that this will also prove the start of a broader understanding and appreciation by the public of all that science, radio astronomy, and Green Bank has to offer.

It was exciting to see firsthand the work of our efforts over the years and the enormous impact it is making on our beloved Mountain State. I look forward to many more visits such as these.

Byrd's-Eye View

HELPING BABY SEE

In these tough economic times, every family has to make difficult choices. Parents with newborn children find these decisions especially tough as they try to prioritize how to spend limited resources on the new little one in their family. One expense that I believe is critically important is eye and vision care, especially for newborn babies as they begin to learn and grow.

Experts agree that visual development in children is most dramatic between 6 months and 12 months of age and that early detection and treatment of potential eye and vision problems can help reduce the threat of serious vision impairments. That is why I have put my full support behind the InfantSEE program and have even helped to secure federal resources to expand the scope and impact of this worthwhile program in West Virginia and across the country.

Through the InfantSEE initiative, doctors of optometry provide a one-time, comprehensive eye and vision assessment to infant children, offering early detection of potential eye and vision problems at no-cost, regardless of insurance or ability to pay. Bringing your child in for an InfantSEE assessment can help determine whether that child is at risk for eye or vision problems later in life. And if there is an issue, such problems can

be more easily prevented or corrected if identified early on.

While the InfantSEE program runs year-round, May 4th begins two weeks of a heightened awareness InfantSEE outreach program throughout West Virginia. InfantSEE will traverse our state using a mobile eye clinic for the first time, and during these two weeks, there will be statewide tour stops in Beckley, Bridgeport, Charleston, Lewisburg, and Logan as well as Wheeling, Parkersburg and Martinsburg. At these stops, all infants, regardless of parental income or insurance, will have the opportunity to receive a no-cost comprehensive eye exam. Appointments are not necessary.

In addition to the mobile office stops, many optometrists throughout West Virginia are offering no-cost eye check-ups in their doctor's offices during these two weeks. To find the location most convenient to you, visit www.infantsee.org or call 1-888-396-3937. The phone numbers of each location are listed on the website, making it easy to call and make an appointment.

It is my hope that as many West Virginia families with young children will take advantage of this free program. Preventive action now may help preclude costly treatments and doctor visits later as your child gets older.

REMEMBERING MOM

Sunday, May 10th is Mother's Day. The second Sunday in May is the day of each year on which our country pauses to honor mothers everywhere. That wonderful woman made sure that you were fed, clothed, and protected. A mother's unselfish sacrifice certainly deserves to be acknowledged with a display of love and thanks.

So on this Mother's Day, take mom out to lunch, to dinner, or to a park. Better yet, make dinner for her. Even if you don't cook very well, she will appreciate the effort -- that's the way moms are.

Celebrate with her. Shower your mom with special attention. Give her your love as she gave it to you despite troubles or your bad behavior. Through good times and lean times, mother was always there. You are not that busy. Make a phone call if you are far away. Mom was never too busy or too far away to show her love for you.

The people of our state can take special pride in knowing that the founder of Mother's Day, Anna Jarvis, was a West Virginian! An-

na's mother, Anna Maria Jarvis had formed Mother's Day Work Clubs to promote sanitary conditions for children. Throughout her life, Anna Maria expressed the idea that one day should be set aside on which everyone could honor mothers. She stated: "I hope someone, sometime, establishes a Memorial Mother's Day, for mothers -- living and dead."

When she died, May 9, 1905, her daughter, Anna Jarvis, vowed to seek the fulfillment of her mother's wish. "By the grace of God, you shall have that day," she remarked at her mother's grave. Afterwards, she began an intensive and successful campaign for that cause.

The first Mother's Day celebration was held in Grafton, West Virginia on May 10, 1908. A few years later, President Woodrow Wilson signed the Congressional Resolution that officially established Mother's Day.

So on this Mother's Day pick up a phone and call your mother. Cook some food. Sing her a song. Let the celebration begin and enjoy the love. You can bet your mother will.

MEMORIAL DAY, 2009

Memorial Day is the day on which our grateful Nation honors the men and women who gave their lives in service to our country. All across the United States there will be visits to the grave sites of our fallen heroes. Among rows of tombstones, adorned with small American flags, families will pay their respects to loved ones who served our Nation.

Memorial Day is also a time to remember that, even when our world is beset with conflict, turmoil, and hatred, there is still honor, bravery and love.

I am reminded of one of the most memorable events of World War II -- the story of the "Immortal Chaplains:" Reverend George I. Fox, Reverend Clark V. Poling, Father John P. Washington, and Rabbi Alexander D. Goode. When the U.S. troopship Dorchester, was torpedoed by a Nazi submarine, with only minutes to live, these four men of God calmly handed out what life jackets were available to the panicking soldiers and sailors. When they ran short of these devices, the Chaplains took off their own life preservers and gave them to others. And then, as the Dorchester was sinking, the four locked arms and prayed as they went to watery graves.

These were men of different faiths -- two were Protestant Ministers, one

was a Jewish Rabbi, and the fourth was a Roman Catholic Priest -- but they were as one in their devotion to their God, and in their willingness to sacrifice so that others might live.

Memorials honoring the Chaplains' compassion have been built in several states. The U.S. War Department awarded them the Distinguished Service Cross. The Postal Service issued a stamp to commemorate their sacrifice. And the Congress honored them with a Resolution that designated a "Four Chaplains Day."

Along with all of the great military leaders like Generals Patton, MacArthur, and Eisenhower, and all of the historic political figures of World War II like Franklin Roosevelt and Winston Churchill, we revere the memory of these four humble men of God and their remarkable act of mercy.

As our Lord Jesus Christ said, "Greater love hath no man than this, that a man lay down his life for his friends."

This Memorial Day, let us give thanks for the servicemen and women who stand in harm's way all around the globe. Like the four Chaplains, these brave Americans are ready to sacrifice their lives for others and for the freedoms we enjoy.

CONGRATULATIONS CLASS OF '09

During the months of May and June, thousands of young men and women in West Virginia are graduating from high school and college. To the class of '09, I extend my heartiest congratulations on this momentous day in your lives and I wish for you much success in your future endeavors.

As you contemplate the paths that you may tread in the years ahead, I would like to offer a suggestion. Why not a career in public service?

Often, public opinion ranks politics at about the same level as sin and hay fever, with hay fever leading by a nose. Politicians are the favorite target of editorial writers and late night comedians. But after six decades in public office, I can tell you that the vast majority of public servants I have known have been good, honest, dedicated men and women.

In fact, the pages of American history books are filled with the names of our country's best and brightest who found a career in politics or government. Some, like George Washington and Theodore and Franklin Roosevelt, hailed from wealthy American families.

John Quincy Adams left his position as a Harvard professor to serve in the United States Congress and then became President of the United States. Dr. Woodrow Wilson was the author of a number of important books on government,

and president of Princeton University when he entered politics.

The political realm is where desire and determination can spur average citizens to accomplish extraordinary feats. Even a person with little governing experience, like George Washington, became one of the greatest presidents our country has experienced, helping to inspire our early Republic. A country lawyer named Abraham Lincoln, as president, became the Great Emancipator, the savior of the Union, and one of the most brilliant and eloquent American politicians. Franklin Roosevelt, as president, led our country through a Great Depression and a World War with such warmth, humanity, and sense of history that he became a universal symbol of resolve and strength. Obviously public service, more often than not, brings out the best, not the worst, in its participants.

Never has our country needed talented, committed leaders more than we do today. Government is only as good as the people who are willing to give their time and energies. That kind of service always means sacrifice, but few things can be more rewarding than helping your fellow citizens and serving our Constitution and our flag. To paraphrase President John F. Kennedy, perhaps your future lies in asking what you can do for your country? Politics and public service may be the answer.

AN EDUCATIONAL VISIT

Earlier this year during a meeting with the new Education Secretary, Arne Duncan, I asked him to visit schools in West Virginia. I was pleased that he not only took my advice, but chose to begin the Department of Education's nationwide 'Listening and Learning' tour in our great state. The purpose of this campaign is for the Secretary to gather information as the Congress moves forward in reauthorizing the 'Elementary and Secondary Education Act,' more commonly known as 'No Child Left Behind.' Beginning this venture in West Virginia was a great opportunity for our state to showcase our talents, and our need to ensure a better education for West Virginia's students.

When we met in my office, I discussed some of the problems West Virginia faces in education: teacher quality and pay; community and technical education; and substance abuse in our schools, to mention a few. Secretary Duncan appeared very willing to work with me to help resolve these threats to excellence in education.

I hope that Secretary Duncan saw first-hand the issues we explored during our meeting, including the difficult challenges facing

our teachers, parents, and administrators; and that many of our children who wish to further their education cannot always afford to go to college and need extra help through student financial loans or grants. We both agreed that the temptation of drugs and alcohol our children face every day is a severe problem all across our country.

I like to think that the issues we face in West Virginia are unique, and West Virginians solve them in unparalleled ways. While we are not a wealthy state, we know how to stretch a dollar. We know what it is like to have to tighten up our proverbial boot straps and dive into a problem. When I reflect on my days in a two-room schoolhouse, we did not have computers and high-technology amenities, but the students were disciplined and the teachers were serious about their work. I was afforded the opportunity to obtain a good education, and I believe we owe the same opportunities to our young people today. And after his visit to West Virginia, I stand ready to work with Secretary Duncan to help provide the necessary tools to build a brighter educational future for our children.

CHILD SAFETY BELTS = SUMMER FUN

With many families taking shorter vacation trips this year due to the economy, we can subsequently expect to see an increase in roadway traffic during the summer months. Sadly, we can also expect to see a corresponding increase in the number of traffic deaths on the nation's roads and highways, and some of these will be children, whose promise will never be realized.

According to the National Center for Health Statistics, motor vehicle crashes are the leading cause of death for children under 14 years old. In 2007, there were a total of 41,059 traffic fatalities in the United States, and of those deaths, 1,670 were children under 14. It is a somber fact that motor vehicle crashes kill five children and injure 548 every single day.

But there is something we can do. Research has shown that, when used, lap/shoulder seat belts reduce the risk of fatal injury to front seat occupants over age 5 by 45 percent in passenger cars, and lessen the risk of moderate-to-critical injury by 50 percent. For light truck occupants, the use of seat belts lowers the risk of fatal injury by 60 percent and the risk of moderate-to-critical injury by 65 percent in the same

age group.

Child safety seats further reduce the risk of fatal injury by 71 percent for infants under one year old and by 54 percent in toddlers (1 to 4 years old) in passenger cars. In light trucks, the risk for infants and toddlers is reduced by 58 percent and 59 percent, respectively. There is really no excuse to fail to use child safety seats or shoulder/seat belts to help protect our most precious cargo.

While they are vitally important, child safety seats must also be used correctly. Failure to read the child safety seat instructions, or to properly install the safety seat, undermines the protection that they can provide. Putting children in rear-facing safety seats in the front seat of vehicles with passenger air bags may injure the child if the air bags deploy.

Many local police departments and other safety organizations routinely offer to check the installation of child safety seats. I encourage parents and grandparents to have their safety seats checked by these experts wherever such services are offered. These safety professionals would much rather see you for a safety seat check than to see your injured child at the scene of an accident.

REMEMBERING DAD

Sunday, June 21 is Father's Day. Father's Day does not have quite the aura of Mother's Day, but it is certainly meaningful that our country also sets aside a day to pay tribute to fathers.

Although men might handle their parenting roles in many different ways, a good father, like a good mother, is basically a nurturer. Children need the warm and protective presence of a father figure in their growing years. In my Father's Day remarks in 1988, I pointed out: "A society without a strong sense of fatherhood is courting an increase in personal and social problems among its young people."

An English proverb says that "one father is worth more than 100 schoolmasters." When I think back on how much I learned from my coal-mining dad, I know that, despite the poverty and hardships of my youth, I was truly blessed by his presence in my life. The example of strength and wisdom, tempered by love, which the father provides in the home is extremely important to the development of a child.

The idea of making Father's Day a national day of recognition is credited to Mrs. Sonora Smart Dodd, of the state of Washington, who began to champion the idea of Father's Day in 1909 after listening to a Mother's Day sermon. It was in 1972 that President Nixon established the third Sunday of June as a permanent national observance

of Father's Day. But the people of West Virginia can take pride in knowing that the first observance of Father's Day took place in our own State.

On December 6, 1907, a horrible mine explosion at Monogah killed more than 360 coal miners. The explosion left more than 1,000 children fatherless. Soon after that tragedy Ms. Grace Clayton proposed to her minister, Dr. Robert Webb, the pastor of the Williams Memorial Methodist Episcopal Church South (now known as Central United Methodist Church) of Fairmont, that fathers be given a day to be honored and remembered. "It was partly the explosion that set me to think how important and loved most fathers are," she explained. As a result, on July 5, 1908, the church celebrated the first Father's Day. This was just two months after the first Mother's Day service had been held 20 miles away near Grafton on May 10, 1908. What a tribute to West Virginia family values - - that both Mother's and Father's Days were first celebrated in our state!

In 1985, the state of West Virginia erected a historical marker declaring Fairmont as the site where Father's Day was first observed.

This Father's Day, I encourage you to keep Ms. Clayton's words in mind. Show your dad "how important and loved" he is.

And to all West Virginia dads, let me personally wish you a happy Father's Day!

The Beauties of Vacationing at Home

June 20th is West Virginia Day. It was on this day, 146 years ago, that our beloved State was born.

This glorious day is a time to celebrate the natural beauties of our State! West Virginia has been blessed with unparalleled mountain views, cool green forests, sparkling lakes and rivers, and awe-inspiring geological wonders. And all of these glories are easily accessible because they are preserved in our magnificent State Parks.

This year, with our country in the midst of a recession and many families limiting their vacation plans, I would like to suggest that you enjoy your summer vacation in the state parks of wild and wonderful West Virginia!

If you do, you will be treated to some of the greatest natural beauty in the United States. And you will have a great time! Stay in a picturesque lodge or secluded cabin, or pitch a tent in a park campground. Set up camp, and cook dinner over an outdoor stove. Gather the family around the campfire at night and share some tall tales while roasting marshmallows. Spread a sleeping bag and fall asleep under the stars while pondering the Almighty's infinite majesty, and thanking Him for

creating such a magnificent State.

If it is exercise you crave, go hiking or biking in our lush hardwood forests. Or if a less energetic respite is sought, get on board the sternwheeler at Blennerhassett Island, or take a trip back in time on the Cass Scenic Railroad.

West Virginians are so lucky to have so much recreation available right at home. Thanks to our state parks and forests, West Virginia offers some of the greatest hunting and fishing in the eastern United States. You can catch dinner for the family by going bass or trout fishing in a beautiful mountain stream. Our lakes also offer great recreational opportunities for swimming, boating, and white water rafting.

If you are a history buff, our state parks, among other things, have preserved the colonial frontier as well as Civil War battle sites.

There is much to do to have a great time for you and your family, and think of the money you will save on gasoline or airline tickets.

Happy Birthday, West Virginia! May we continue to be blessed with natural beauty and the best people in the world.

July 4th: Reason for the Season

Independence Day is here. It is our nation's birthday! The Fourth of July is a celebration of the day, 233 years ago, when our forefathers threw off the yoke of tyranny and declared themselves to be free and independent people.

What courage they had. With the signing of the Declaration of Independence, they had committed an act of treason against the British crown, and the British government had a history of crushing colonial rebellions. Benjamin Franklin was quite sincere when he remarked at the signing of the Declaration: "We must all hang together, or assuredly we shall all hang separately."

Therefore, on Independence Day, we rightly celebrate and honor the incredible courage of these men as well as their tremendous vision.

What a collection of political talent they were. In addition to Franklin, there was Thomas Jefferson, John Adams, Sam Adams, and John Hancock. On July 4, 1776, these and 51 other determined, patriotic Americans adopted the final draft of the Declaration of Independence, thus beginning the world's greatest experiment in government. And with the signing, these men established that "Life, Liberty and the Pursuit of Happiness" are not only "unalienable Rights" of all people, but that "Governments are instituted among men" to secure these rights.

As we celebrate this glorious day, however, we should never forget, as we say of Christmas time, the "reason for the season!" In the last line of the Declaration of Independence, the signers acknowledged their "firm reliance on the protection of Divine Providence."

One of those signers, John Adams, wrote that the American Independence "ought to be solemnized with pomp, shows, games, sports, guns, bells, bonfires, illuminations." But he also pointed out "it ought to be commemorated as the day of deliverance, by solemn acts of devotion to God Almighty."

Therefore, on this Fourth of July, I urge you to enjoy the picnics, parades, ball games and fireworks. But I also urge you take time to remember our forefathers, those brave Americans who paved the way for the rights and liberties we have today. And, I ask you to take time to thank our Creator with "solemn acts of devotion."

Happy Birthday America! May God Almighty continue to smile upon you, and forever bless you. In the words one of America's greatest poets, Henry Wadsworth Longfellow:
Sail on, O Union, strong and great!
Humanity with all its fears,
With all the hopes of future years,
Is hanging breathless on thy fate!

Honoring Women Airforce Service Pilots

The Congressional Gold Medal is the highest and most distinguished award that Congress can bestow on civilians. On May 20, 2009, the Senate acted to allow the awarding of a Congressional Gold Medal to the Women Airforce Service Pilots, most commonly known by their acronym, WASPs. I was proud to cosponsor this legislation, which rightly, if belatedly, acknowledges the unheralded heroism of these brave pioneering women pilots of World War II.

WASPs were the first women in history to pilot America's military aircraft. As Eleanor Roosevelt noted in 1942, "This is not a time when women should be patient. We are in a war and we need to fight it with all our ability and every weapon possible. Women pilots, in this particular case, are a weapon waiting to be used."

The 1,102 women who wore the WASP wings flew over 60 million miles in every type of aircraft and on every type of mission flown by Army Air Force male pilots, except direct combat missions. They delivered aircraft to battle zones around the world during the war. They towed targets for live anti-aircraft artillery practice, simulated strafing missions, and hauled cargo. Some 300 WASP veterans still survive and are living throughout America. What stories they can tell!

Although these brave women took the military oath and were promised military status when they entered training, they were never afforded active duty military status and were never commissioned. Thirty-eight WASP fliers lost their lives serving their country during the war, but because they were not commissioned, their bodies were sent home at their family's expense without the traditional military honors. Then, when victory during World War II seemed certain, the WASPs were quietly disbanded, leaving the former WASP pilots to pay their own way home!

WASP records were classified and sealed for 35 years, so these women never received honors or recognition for their service to their country, never took part in a ticker-tape parade, never received a medal or any of the benefits offered to male veterans –but, in the true spirit of the citizen-warrior, they never complained.

The G.I. Bill Improvement Act of 1977 finally granted the WASP corps the distinction of full military status for their service, and in 1984, each WASP was awarded the WWII Victory Medal and other appropriate campaign medals. Now, Congress will, at last, have the opportunity to honor these brave women for their pioneering wartime service by awarding them the Congressional Gold Medal.

HELP FOR HOMEOWNERS

Home foreclosures are affecting West Virginians from every walk of life in nearly every county. Some borrowers made poor choices at the time of purchase, like purchasing homes they could not afford, or using equity from their homes to finance other expenses. However, many West Virginians facing foreclosure have experienced job loss, have been struggling to pay medical bills, or have been the victims of unscrupulous lending practices.

What follows is some information that may be of assistance to homeowners who are trying to make ends meet. If you are already at risk of delinquency on your mortgage or are already in foreclosure, you need to take immediate action. Gather financial documents and contact your mortgage lenders. Banks or mortgage lenders may provide the homeowner with specific information about possible options available.

In addition to contacting their lenders, homeowners may also wish to contact the Federal Housing Administration (FHA) at 1-(800)-CALL-FHA (225-5342). Officials of the FHA may be able to help in determining eligibility for assistance with individual mortgages. If homeowners would like to speak with housing counselors approved by the Department of Housing and Urban Development (HUD), they may visit the HUD website at <http://www.hud.gov> for a list of counselors in

HUD recommend that those in need of assistance call 1-888-995-HOPE (4673).

West Virginians seeking assistance with their mortgages may also contact the Federal National Mortgage Association, commonly known as Fannie Mae, at 1-800-7FANNIE. To determine if specific mortgages are owned by Fannie Mae, visit their website at www.fanniemae.com/loanlookup. Likewise, to determine if specific mortgages are owned by the Federal Home Loan Mortgage Corporation, commonly known as Freddie Mac, homeowners may call 1-800-FREDDIE, or visit the Freddie Mac website at www.freddiemac.com/mymortgage.

For general information and updates concerning housing assistance programs, you can also visit www.MakingHomeAffordable.gov, and www.FinancialStability.gov.

Information about mortgage assistance is free, and homeowners should beware of any organization that tries to charge fees for assistance with mortgages. Make sure never to sign your property deed over to any organization or individual promising to "save the home." In addition, never make your mortgage payments to anyone other than your mortgage company, unless the company has approved it.

Even when times are tough, I know that West Virginians will continue to work hard to help their friends and family over-

HEALTHCARE FOR CHEMICALLY EXPOSED SOLDIERS

War is always a dangerous, messy, dirty business. Although American troops in Iraq today do not face the imminent threat of chemical and biological warfare, as they did in the 1991 Persian Gulf War, there have been several serious incidents in which troops were likely exposed to toxic materials during their Iraq deployments. Military commanders sometimes fail to address such exposures with the immediacy that they merit, which can mean difficulties for soldiers who later need care for injuries caused by these exposures.

In 2003, members of the West Virginia National Guard were deployed to Basra, Iraq, where they may have been exposed to toxic materials, including sodium dichromate. According to the Army, this chemical, used by former Iraqi plant workers to prevent corrosion, was found on the ground and measured in the air. The chromium VI (six) in sodium dichromate is considered a serious health hazard. Members of an Indiana National Guard unit that were deployed nearby also attributed post-deployment illnesses to the same exposures in the same area. In July 2005, a senior Department of Defense official testified about

numerous other incidents involving hazardous materials.

To help remedy this critical situation, I joined with Senators Bayh, Wyden, Rockefeller and others to introduce S. 642, the "Health Care for Servicemembers Exposed to Chemical Hazards Act."

The bill establishes a registry of members and former members of the armed forces who have been exposed to occupational and environmental health hazards in the line of duty, and makes these veterans eligible for medical examinations and laboratory tests. It requires that the Department of Defense conduct a scientific review of the evidence linking medical conditions to hazardous substances, and makes veterans eligible for treatment at Veterans Administration hospitals for these conditions. The legislation also requires military commanders to promptly report hazardous material exposures to their non-deployed headquarters.

The hazards of war are many and often unavoidable. But we owe it to our troops, who risk so much for our nation, to provide the best possible health and medical care, whether they are injured by a bullet or by a cloud of toxic chemicals.

Music is Brain Food

Scholars have long praised the worth of music for the enrichment of human existence. The Greek philosopher Plato observed “Music and rhythm find their way into the secret places of the soul.” The English playwright, George Lillo wrote that, “There’s no sure passion in the human soul, but finds its food in music.”

All of us have experienced how music can influence our mood. Now, there is growing scientific evidence that music can be a “mega vitamin” for the developing brains of children and for adult brains as well—even for individuals whose brains have been damaged by injury or disease.

Music training is often greeted by students with about the same enthusiasm as getting a tooth pulled. However, a recent Harvard University study found that children who study a musical instrument for at least three years outperform children who lack such training, even on tests measuring verbal ability and visual pattern completion—skills not normally associated with musical training. Music students also scored better on tests involving auditory discrimination and finger dexterity.

The longer and more intensely a child studied his or her instrument, the better he or she scored on all tests. These findings highlight the importance of music instruction for our youth.

Whether it be singing or playing an instrument, music has also been found to help brains damaged by disease or injury to find re-routed neural pathways, influencing and improving motor function, communication and even cognition. In one Finnish study, something as simple as listening to music for several hours a day was found to enhance the recovery of stroke victims. Musical and rhythmic cues have also helped the movement and balance of people with degenerative disorders, as well as aphasia, a disorder resulting from damage to the portions of the brain responsible for language.

As much as I love music for its own sake, I am even more gratified to find out that music has benefits beyond the joy in its making and the beauty in hearing it played. It is clear that music is more than food for the soul—it is food for the brain as well. We would all do well to make it an integral part of our daily lives.

“MOVE”-ING TO INCREASE VOTER PARTICIPATION FOR MEMBERS OF ARMED SERVICES

Freedom is never free. For more than 230 years the brave men and women of our armed services have been defending the ideals and freedoms of our democracy that we take for granted.

One of the greatest responsibilities in our democratic society is the right to vote and actively participate in and influence government policies. In many instances, however, the men and women who are overseas in service to our country have not been afforded their full opportunities to vote in our elections.

The Election Assistance Commission has estimated that there are almost 43,000 West Virginia citizens abroad, many of whom are service members and their families, eligible to vote by absentee ballot. But in the 2006 general election, only 309 (less than one percent) of those West Virginians requested absentee ballots, and only 162 of those ballots were actually counted. The abysmal voting statistics from our citizens abroad exist due to lack of information about absentee balloting, the time it takes to receive and return absentee ballots, the difficulties involved in getting ballots to localities where mail services are limited, and the movement of troops between elections.

I have long been an advocate of encouraging our military and overseas citizens to fully participate

in the democratic process. With a voting participation percentage in this country which is far below that of other major democracies, it is imperative that we make it easy for those who are entitled to participate in our electoral process from abroad to do so.

Recently, the Senate adopted legislation that I cosponsored — the “Military and Overseas Voter Empowerment (MOVE) Act.” This legislation will provide further opportunities for members of our armed services and others to vote in elections through absentee balloting.

The legislation requires States to maintain an electronic system for sending election materials, to send ballots at least 45 days before an election, and to accept ballots post-marked on or before the election if received within 10 days of the election or before the State certifies the election.

Voting is much more than a civic duty. It is a sacred privilege. Our citizens, including those in the armed services, need to voice their opinions, and to fully participate in renewing the promise of America. West Virginians have always been at the head of the line when it comes to volunteering to be of service to our great country. They deserve nothing less than an extra effort to make sure that they can vote and that their vote counts.

By U.S. Senator Robert C. Byrd

REACHING OUT TO VETERANS

The wars in Iraq and Afghanistan combined with the U.S. military's increased reliance on National Guard and Reserve forces to serve in those missions, has created a growing population of combat veterans who hail from rural towns and communities across the United States.

West Virginia's current and former service members may not live on or near military bases, but they come back from tours of duty overseas with the same mental and physical injuries seen in active duty forces who receive immediate access to medical care. For many former service members, the fight does not end when they return home. They continue to struggle to readjust to civilian life or to cope with battlefield injuries and stress.

Studies have shown that veterans are more than twice as likely to commit suicide as non-veterans. The highest suicide rate among veterans is in the 20-24 year old age group of veterans who may have served multiple deployments in Iraq or Afghanistan. This group is 2-4 times more likely to commit suicide as civilians of the same age.

These shocking statistics underscore how important it is for our service members to have counseling services available to them. Unfortunately, many rural veterans must travel long distances to seek help at Veterans Administration (VA) medical facilities,

even when the services they need do not require expensive hospital-based medical technology.

To bring some VA services closer to the veteran population they serve, a fleet of 50 new mobile Veterans Centers has hit the road in the last year in an effort to bring counseling and therapy to veterans in rural areas.

Two of the new mobile centers are now roaming the roads of West Virginia. Based in Morgantown and Beckley, the 38-foot motor coaches have spaces for confidential non-medical readjustment counseling and psychological counseling for traumatic military-related experiences as well as family counseling when needed for a veteran's readjustment.

The new mobile vet centers are used to provide outreach and counseling at active-duty, reserve and National Guard activities, including post-deployment health reassessments for returning service members. They will also make appearances at events typically staffed by local VA Center staff, as the Beckley-based mobile vet center did at a "Welcome Home Celebration" for veterans held in Beckley on June 13th.

Hopefully, bringing urgently needed counseling and support services closer to rural veterans and their families will help our veterans and their families mend the lingering wounds of war.

A SUPREME CHOICE

August 8, 2009, marked yet another historic first in our nation's history. On that day, Chief Justice of the Supreme Court John Roberts administered the oath of office to Judge Sonia Sotomayor, who became the first Hispanic Justice to serve on the United States Supreme Court, and only the third woman in our Nation's history to serve on the highest court in the land. Judge Sotomayor, with my support, was confirmed by the United States Senate on August 6, replacing retiring Justice David Souter for the Court's upcoming term.

I take the Senate's role of providing advice and consent on nominations very seriously. In more than 50 years in the Senate, I have never missed a vote on a confirmation for a Supreme Court Justice. I submitted questions to Judge Sotomayor on matters of great importance to the preservation of Congressional power: the Constitutional grant of the purse strings to the Congress; the role and responsibility of the Legislative Branch to conduct oversight and investigation; and the deliberate restraints on the Executive Branch created by the Constitution's separation of powers.

I am not a member of the Senate Judiciary Committee, but I watched the hearings intently; and I studied Judge Sotomayor's words. What struck me about the Judiciary Committee's hearings was

the dearth of questioning by Senators about Judge Sotomayor's judicial record. Indeed, her record is certainly substantial; the most substantial record I have seen in some time. I was disappointed however, that instead of delving into her many opinions, or questioning her on Supreme Court jurisprudence, Judge Sotomayor was asked the same few questions over and over again, in my opinion, needlessly.

The Senate's ability to question a nominee is a precious gift from our Founding Fathers—a check on both the Judiciary and on the Executive Branches. While the President may nominate, under the Constitution, the advice and consent of the Senate is required for confirmation. But, in this particular instance, some of Judge Sotomayor's statements, taken out of context, were exhaustively examined, while volumes of her judicial record went unquestioned, and likely unread. Unfortunately, by not probing, the Senate shirked its responsibilities.

As I said in my remarks in support of Judge Sotomayor's nomination, I hope that the Senate will reflect on the nomination and confirmation processes as envisioned in the Constitution, and ask ourselves whether we can do a better job in living up to the spirit of the law in the future.

Byrd's-Eye View

LABOR DAY 2009

The first Monday in September is set aside each year to recognize the dignity of work and to thank American workers for their contributions to making our country better and stronger. It is a day when men and women from all vocations join in celebration and recreation.

Labor Day is an honorable American tradition. In 1893, legislation was introduced in Congress to establish Labor Day as a federal holiday. The next year, President Grover Cleveland signed the legislation into law, and 116 years later, we continue to honor those who earn their bread and butter by the sweat of their brow.

As the son of a coal miner and as a person who married a coal miner's daughter, I have always taken great pride in my coal miner background. And I have always considered the working people of West Virginia as my best friends.

When I think of all the great things that the labor movement has accomplished for the people of our state, from raising the standard of living for our workers to ensuring that they have better, safer, and cleaner places in which to work, my heart swells with pride in being able to represent the working men and women of West Virginia

in the United States Senate, and help them to achieve their goals.

The West Virginia AFL-CIO recently sponsored a "Turn America Around" rally at the West Virginia State Capitol in Charleston. It was well-attended and everyone had a great time.

But I especially liked the theme of it is time to "turn America around." We now have a young, dynamic president who understands working people, and who is striving to put Americans back to work. Although one may not agree with President Obama on every issue, he is a President who cares about workers and families. He is a President who listens.

Health care reform which insures quality, affordable care as the unalienable right of every American; fair trade policies which help stop the exporting of American jobs overseas; and labor law reform which means that every American worker has the opportunity to join a union—these and other causes are in the best traditions of the great American labor movement. I look forward to standing side-by-side with the working men and women of West Virginia to try to make the dreams reality.

FREEDOM OF SPEECH REQUIRES TOLERANCE OF OTHERS VIEWS

In September 1787 in Philadelphia, some of the brightest and bravest men came together to forge the document that to this day guides our great nation: the Constitution of the United States.

The Constitution's preamble established our government's purpose in one short paragraph, followed by a few pages which gave this nation direction and structure. And for almost 222 years, the Constitution has remained a living, breathing document – the foundation of our freedoms and the bedrock of our rights and liberties – that we all cherish.

One of the most sacred of the freedoms contained in our Constitution is the guarantee of freedom of speech. As I have said repeatedly over the years, no citizen should be a mere spectator in our government. We should express our opinions, petition our elected representatives, and engage in an open and civilized debate on the important issues that confront our country.

However, as I have watched the health care debate unfold in many areas and venues across this country during the past month, I have become increasingly concerned with the tone and tenor of a “civilized discourse” that I believe the Framers of the Constitution had in mind when they established the

right to free speech. In many town hall meetings logical and open discussion has been supplanted by disruptive shouting matches where no one is heard and no debate ensues. Members of Congress have been rudely interrupted during their responses and various attendees have engaged in physical confrontation with one another requiring law enforcement officials to remove them from the town meetings.

As a strong defender of our Constitution, I am in no way suggesting that free and open discussion on any topic should be limited. I am heartened by the amount of discussion that is taking place all across this country on the issue of health care and the desire by tens of millions of Americans to become fully informed on the many proposals under consideration in Congress.

But as we go into what will be a critical debate on the future of our nation's health care system, I encourage all of us to take a deep breath, exhale, and be tolerant of others views. Shrillness and violence will not move the debate forward – it will only attempt to undermine the type of freedom of speech that our Founding Fathers envisioned back in 1787 when they rose to that dramatic challenge of establishing what has become the greatest Republic in the world.

MY FRIEND TED

August 26, 2009 was a day I had hoped and prayed would never come. It was the day when the good Lord took my dear friend, Senator Ted Kennedy, away from us after a courageous and valiant fight against brain cancer. My heart weeps at the loss of my best friend in the Senate, and for Ted's wife, Vicki, his family, and the Senate that he served so ably.

President John F. Kennedy was fond of quoting the biblical passage that tells us: "For unto whomsoever much is given, of him shall be much required." (Luke 12:48, KJV) When I think of that passage, I think of the life, career, and accomplishments of my dear friend and colleague, Senator Edward Kennedy.

When Ted Kennedy came to the Senate in 1962, much had already been given to him. He had been born into a wealthy and remarkably talented family. His father had been an Ambassador to England. One of his brothers had been President of the United States. Another brother was the Attorney General of the United States.

Throughout his career, Senator Kennedy believed in a simple premise: that our society's greatness lies in its ability and willingness to provide for its less fortunate members. Whether striving to increase the minimum wage, ensuring that all children have medical insurance, or securing better access to higher education, Senator Kennedy always cared deeply for those whose needs exceeded their political clout. Unbowed by the terrible sorrows that had fallen upon his family, his spirit continued to soar, and he continued to work to make his dreams a reality. Neither years of age nor years of political combat, nor his illness, diminished the idealism and energy of this talented and intelligent man.

The institution that he served so ably will be diminished without his voice of eloquence and reason. I know that the people of the great State of West Virginia join me in expressing our heartfelt condolences to the Kennedy family and to the people of Massachusetts who have lost an extraordinary public servant. Ted, my dear friend, I will miss you dearly.

CELEBRATE OUR CONSTITUTION

Next week, our beloved U.S. Constitution turns 222 years old! On September 17, 1787, the Delegates to the Constitutional Convention met for the last time to sign the document they had created. It was signed by thirty-nine brave men who changed the course of history, and created a most unique form of government. Later ratified by the requisite nine states in 1788, this precious document was the blueprint for our system of government today.

While some may take for granted the existence of our national charter, it was the result of the toil and imagination of our Founding Fathers, including George Washington, who served as President of the Constitutional Convention, James Madison, known as the "Father of the Constitution," Alexander Hamilton, and Benjamin Franklin. The debate on the particular form the government should take was long and intense, but the Framers put aside their personal differences to create a national charter for the common good. Prepared in secret, locked behind doors guarded by sentries, the Framers struck the unique balance between a national government and the states, known as federalism, and established the three branches of government and its separation of powers.

In December 2004, I helped to enact the federal law that designates September 17th of each year as "Constitution and Citizenship Day." I did so because I care deeply about this precious document, and have made it my life's work to study it and let it guide my work in the U.S. Senate. Of the written national constitutions, the U.S. Constitution is the oldest and shortest, and has been in force longer than any other written constitution in the world today. Brilliant in its brevity, it remains extraordinary in its wisdom. It protects our individual liberties. It encapsulates the courage and creativity of our forefathers.

On September 17, I encourage all Americans to spend time reading the text of the Constitution. It is my hope that parents will discuss it with their children, and citizens everywhere will take note of the day's significance. There will be celebrations all across our great land dedicated to our founding document, and reflecting on its importance. I am so excited about the many events that are taking place this year all across our great country, and encourage everyone to use this opportunity to engage in civic discussion and pride. We make ourselves better citizens and patriots by studying and reflecting on the history of our Republic.

SLEEPING THROUGH SCHOOL

A new school year has begun and both students and parents are beginning a routine that entails getting up earlier and completing and overseeing homework assignments to ensure a successful school year. To really get ready for the academic year, however, parents may want to stress that their children get enough sleep. Staying up late and then sleeping in until noon is not a good option during the school year, because sleep deprivation has serious consequences for students of all ages.

A recent Columbia University Medical Center study of 15,659 teens found that middle- and high-school-aged teens whose parents did not require them to be in bed before midnight on school nights are 42 percent more likely to be depressed than teens whose parents enforce a 10 p.m. or earlier bedtime. The study also found that teens who are allowed to stay up late are 30 percent more likely to have had suicidal thoughts in the past year.

Other studies have shown that shortened sleep hours adversely affect student performance on learning and testing. Cutting back on sleep by an hour a night is equivalent to the loss of two years of cognitive maturation and development. Even staying up late only on Friday and

Saturday night can impair a child's I.Q. by as much as seven points.

New research is also exploring the link between sleep loss and obesity. Three studies of students in Japan, Canada and Australia show that children who get fewer than eight hours of sleep each night have about a 300 percent higher rate of obesity than those who get a full ten hours of sleep. A University of Houston study showed that the odds of adolescent obesity went up 80 percent for each hour of lost sleep.

Teens need approximately nine hours of sleep each night, but most get only about seven and a half hours of sleep; according to the National Institutes of Health. If a teen is an athlete as well as a student, they may need even more than nine hours of sleep.

A Stanford University study showed that when a small sample of student tennis players were asked to sleep for ten hours a night, their sprinting drills were faster, their strokes were more accurate and deep, and their outlook improved. Some experts suggest that natural hormones released into the brain during sleep aid in the physical recovery process. The bottom line is that more sleep equals better mental and physical fitness.

So, this school year, make time for sleep.

ADOPT A WILD MUSTANG OR BURRO DAY

September 26th marks the first National Adopt a Wild Horse or Burro Day, a combined effort by the Bureau of Land Management and non-profit groups including Wild Horses 4 Ever, the American Horse Protection Association, the Mustang Heritage Foundation and the Humane Society of the United States to find homes for 1,000 wild horses and burros.

The Bureau of Land Management, or BLM, is charged with maintaining America's wild, free-roaming horses and burros in harmony with the public lands they range. To keep herd sizes from growing too large for the land to support, BLM regularly conducts gathers to remove excess horses; the animals pulled off of the range are then offered for adoption to the general public.

On National Adoption Day, wild horses and burros will be available for public adoption at nineteen locations around the United States. Other adoption events are scheduled for other dates in September and October.

Achieving 1,000 adoptions is a very laudable goal, but still leaves more than 20,000 other wild mustangs in long-term holding facilities at taxpayer expense. BLM needs better options to manage America's wild horses in order to avoid using its authority to destroy wild horses over the age of ten or which have been

passed over for adoption three times.

That is why I have been proud to introduce S. 1579, a Senate bill that matches H.R. 1018, the Restore Our American Mustang Act, introduced by my West Virginia House colleague, Nick Rahall. S. 1579 and H.R. 1018 would provide BLM with additional authority necessary to maintain wild horses and burros living on federal lands in a thriving ecological balance while prohibiting the sale for slaughter of wild horses and burros. These bills would enhance adoption efforts and encourage modern contraceptive methods to limit reproduction, among other equine management methods.

Importantly, S. 1579 and H.R. 1018 would also give BLM the authority to begin restoring wild horse and burro ranges to the 53 million acres they roamed as recently as 1971. That vast rangeland has dwindled over time to just 35 million acres -- isolating herds and creating the need for more 'gathers' and more horses filling long-term holding facilities.

Americans value the nation's great Western heritage embodied in a wild horse running free.

While I hope that those up to the challenge will adopt a wild horse or burro, we also need to do more to ensure that this part of our unique American heritage will endure forever free.

MY CORRIDOR H CRUSADE

The ancient Romans understood that good roads are key to increasing commerce and facilitating trade. They built an empire that stretched across the globe based on that belief.

Of course, good highways remain essential to economic development today, and roads have always been an especially difficult challenge for West Virginia. What irony that the magnificent "summits bathed in glory" that virtually define us can also sometimes hinder economic prosperity.

In 1965, the Appalachian Development Act was authorized by Congress. That legislation was the federal government's promise to help us overcome barriers and promote the region's economic development. The ADA proposed a system of Corridor highways that would traverse some of the most rugged terrain in the eastern United States, opening commerce to the entire Appalachian region, stimulating growth, and alleviating poverty.

Corridor H remains the only unfinished Appalachian corridor highway in West Virginia's portion of the Appalachian Development Highway System (ADHS). Corridor H in West Virginia is planned to stretch from I-79 at Weston through the Potomac Highlands to the Virginia state line. Completing it has become my transportation crusade.

Nearly 66 miles of the corridor in West Virginia

have been completed and are open to traffic. An additional 23 miles are under construction and a 19-mile segment is under final design and awaiting funding. On September 17th, a ceremony marked the completion of a 7-mile segment of Corridor H which included a new bridge over the South Branch of the Potomac. This ceremony also included the groundbreaking for a new ten-mile segment of Corridor H, which will connect the western edge of the Moorefield Bridge to Patterson Creek Road and Forman, West Virginia.

Recently I secured \$4.5 million in the FY 2010 Transportation and HUD Appropriations bill which will be used primarily for work on the roadway between Bismarck and Forman. And to date I have secured over \$350 million in past appropriations bills for Corridor H construction. The State of West Virginia also receives annual ADHS funding to help in our construction efforts.

The good people of central and eastern West Virginia need Corridor H to be able to get to their jobs, their schools, their hospitals, and to get the products they manufacture to market. I am as ardent as ever in my intent to see that the promise made by the Federal Government to the people of Appalachia is kept. The people have been waiting for this system for 45 years, which is far too long. Corridor H -- Finish it!!

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

A BOOST TO OUR ECONOMY

Earlier this year, our Nation appeared to be on the precipice of a second Great Depression. The economy was losing, on average, nearly 700,000 jobs per month, and many feared what may lie ahead.

In response, the Congress acted boldly and swiftly by passing the American Recovery and Reinvestment Act (ARRA). And President Obama signed this legislation into law in mid-February. By providing assistance to working families, and incentives to businesses and state governments to hire and retain workers, the Recovery Act has played a leading role in stabilizing the U.S. economy.

In West Virginia, I am proud to report that, so far, nearly \$1.5 billion has been committed to our state, in the form of tax relief for working families, investments in state-based infrastructure like roads and water systems, and assistance for those directly hurt by the recession.

The Recovery Act has created or saved over 5,000 jobs in the state. It has provided one-time payments totaling \$118 million to nearly 474,000 West Virginia veterans, seniors, and railroad retirees. It is providing emergency unemployment benefits to 26,000 West Virginians who have lost their jobs and exhausted their regular unemployment benefits.

Stimulus dollars are being used for highway and bridge projects, like the Mon-Fayette Expressway to Morgantown, and

West Virginia Route 9 in Jefferson County. They are being used for mass transit in urban areas like Charleston and Wheeling, and to make improvements and upgrades at airports like Yeager and Greenbrier Valley.

West Virginia will be able to invest in law enforcement and first responders, like in Hinton, where stimulus funds are being used to build a new fire station.

In many counties, like McDowell, Calhoun, and Roane, stimulus funds will be used to extend and upgrade water and sewer lines. In Wheeling, stimulus funds will enable water improvements for commercial development at The Highlands shopping complex. In Wyoming and Mineral Counties, funds will be used for watershed and flood prevention.

The recovery legislation will enable upgrades for National Guard facilities in Bluefield, Charleston and Bridgeport, and Veterans facilities in Huntington and Martinsburg.

These are real benefits for West Virginians – for our families, for our communities, and for our state. Despite the hyperbole and rhetoric one may hear on the radio, see on the television or read on the Internet, over 5,000 West Virginians have jobs today that otherwise would not, thanks to the Recovery Act.

The stimulus package is working. The provisions which invest in our Nation's infrastructure and in the American worker are the right way to help our economy.

By U.S. Senator Robert C. Byrd

NATIONAL DISABILITY EMPLOYMENT MONTH

During my years in the United States Senate, I have been privileged to work with some very talented and inspiring individuals -- Senator Daniel Inouye, Senator John McCain and former Senators Bob Dole, Max Cleland and Bob Kerrey, all war veterans, have each been severely wounded. These men suffered grievous injuries, and some lost limbs in battle. After their recoveries, no one would have blamed them for taking it easy and spending the rest of their lives at home - but our nation is a better place because they each continued their lives of public service.

October may be designated as "National Disability Employment Month," but smart employers know that any time can be the right time to hire a worker with a disability. To attract and retain talented and dedicated employees, being inclusive of people with disabilities - in recruitment, retention, and advancement - can offer companies a competitive edge. People with disabilities are experienced problem solvers with a proven ability to adapt, like those Senators I have mentioned.

People with disabilities have many talents that should not be overlooked by employers. It is therefore distressing to learn that only 22 percent of people with disabilities are employed, and that the unemployment

rate for disabled workers is 16.2 percent, compared to 9.2 percent for workers who are not disabled, according to Department of Labor statistics.

The National Campaign for Disability Employment aims to improve the job prospects for disabled workers. Supported by West Virginia University with technical assistance from the Job Accommodation Network, the National Campaign for Disability Employment seeks to educate businesses and the public about the incentives available for employing disabled workers and the returns that a company could see from investing in disabled workers.

Advances in technology have made it easier for the disabled to perform at their best. For example, texting was originally developed as a means for deaf individuals to communicate over phone lines. Job accommodations for people with disabilities are usually low cost or no cost. Some 56 percent of workplace accommodations cost absolutely nothing. Of those accommodations that do have a cost, the typical one-time expenditure by employers was \$600, according to the Job Accommodation Network.

I encourage all employers to look beyond a prospective employee's disability to discover the talents and ambition that can help drive their company forward.

THE HEALTH CARE DEBATE

Congress is currently working on a plan to make good health care affordable for more Americans, while keeping the size of our deficits down. Five Congressional Committees have reported health care legislation and the negotiating between the White House and the Congressional Leadership has just begun. Because health care spending accounts for one-sixth of the U.S. economy the ramifications of reform are enormous. Health care reform is certainly a job in need of doing, but the question is, can we get it right?

What has been singularly unhelpful so far is the fevered pitch of the debate and the demonization of proponents and opponents by one side or the other. Constructive reform will never be accomplished unless the noise level is reduced. Let us hope for at least that much as Congress proceeds. The challenges are many and complex. Can we accomplish reform without creating a huge new bureaucracy? What do we do to restrain the actual costs of health care services? How do we encourage the insurance industry to provide better, more affordable

coverage? Should reform be accomplished through the tax code? What about real world problems, like the shortage of doctors in West Virginia, the distance from hospitals and clinics in rural America, or the fear of law suits which fuels expensive over testing by physicians? How do we encourage healthy life styles among our people, which could avoid major health problems in the first place?

This Senator has always believed that access to decent, affordable health care is the birthright of every citizen, and should not be just a privilege for the better off in our society. The challenges vary from state to state, but in West Virginia — with its difficult topography, large elderly population, low wages, air and water quality issues, occupational diseases, and higher rates of smoking, obesity, and drug and alcohol abuse — the task of crafting meaningful health care reform becomes especially difficult. An effective health care plan for the nation must be flexible enough to adequately accommodate states which have special needs. Anything else will not be fair and effective and should certainly not be enacted.

Recognizing the Last Remaining Veteran of the "Great War"

Veterans Day is the day we set aside to honor the men and women who have defended our country, our way of life, and our freedom. It is the day that allows us to thank our veterans for their patriotism and their willingness to serve our Nation. It is the day of the year that a grateful nation shows its gratitude to its bravest and finest citizens.

The origins of this day are both historic and symbolic. It began at the 11th hour on the 11th day of the 11th month, that is, 11/11/11 of 1918, when the Allied Powers signed a cease-fire agreement with the Central Powers, thus bringing to an end the bloody international nightmare known as World War I, the "Great War" as it was called. The next year, the United States set aside November 11th as Armistice Day to remember the sacrifices that men and women made during World War I. In 1954, Congress made November 11 a day to honor veterans of all wars, and, therefore, changed the name of the day to "Veterans Day."

Of the 4.7 million Americans who served in World War I, only one is still living — my good friend and our fellow West Virginian, Mr. Frank Woodruff Buckles of Charles Town, who has

become a national treasure and a West Virginia legend.

Mr. Buckles was only 16 years of age when the United States entered the war. As a dough boy, Private Buckles drove dignitaries around England, and an ambulance around France. Mr. Buckles downplays his wartime experience explaining, "There was nothing dramatic about it. Sometimes I was driving in Winchester, England, sometimes France." But his experience was indeed important. It was his willingness as well as that of 4.7 million brave Americans to enter the military and to serve our country that won that war.

While Mr. Buckles was actually born in Missouri in 1901, he became a West Virginian by choice in 1954, when he and his wife settled on a farm in the Eastern Panhandle of West Virginia, the same area where his ancestors had settled in 1732.

On November 11, 2009, Veterans Day, we need to remember Mr. Buckles, and all of our nation's veterans, as well as the men and women currently wearing our nation's uniforms. We must keep all of them in our hearts and prayers, and make sure that our country serves them well and honorably, just the way that they have served our country.

FLU PRECAUTIONS

As the first shipments of H1N1 flu vaccine make their way into the state of West Virginia, it is clear that the flu has spread much farther and faster than have the vaccines. Many people are concerned about getting vaccinated in time. The first doses must treat high priority patients first – health care providers, pregnant women, young children and their caregivers, and those with existing medical conditions which put them at higher risk.

In the rush to line up for a flu shot, however, we should not overlook the tried and true basics of flu prevention. The flu spreads primarily through person-to-person contact, so your mother's advice still applies: cover your nose and mouth with a tissue when you sneeze or cough; wash your hands often with soap and water or an alcohol-based hand rub; avoid touching your eyes, nose and mouth; avoid crowds and limit your exposure to flu victims as much as possible. Disinfect surfaces and clean toys and other objects which your children share. Don't share food or dishes. These simple precautions can help to reduce your and your family's chances of catching the seasonal flu as well as the H1N1 flu and other illnesses.

If you or someone in your family becomes

ill, try to isolate them or yourself as much as possible. Get plenty of rest and drink clear fluids. Stay home from work or school for at least 24 hours after the fever has broken. Children may remain infectious for a longer period of time. Following this simple plan will mean that you will recover faster, and that you will also reduce the chances of co-workers and their families becoming ill. Be careful about handling the dishes and laundry of those who have flu symptoms, and wash clothes and other items they use in warm, soapy water. Consider wearing a mask if you are sick and must interact with your family, or with an ill family member. If you or a sick family member has any special medical conditions or if the illness becomes severe, contact your doctor.

Plenty of helpful advice and information about the flu and vaccine status is available on the Internet at www.cdc.gov/h1n1flu/ or at www.wvflu.org, or you can call 1-800-CDC-INFO for more information about the H1N1 flu. You can even sign up to receive email updates or link to the Centers for Disease Control (CDC) for "Twitter" updates on the flu. The flu is here, but common sense precautions plus vaccinations can reduce the risk of catching it.

By U.S. Senator Robert C. Byrd

CELEBRATING ADOPTIVE FAMILIES

November 21 is the 10th anniversary of National Adoption Day. As an adopted child myself, I am happy to join in celebrating those families who open their hearts and their homes to children in need. Unfortunately, there are still many children in need.

In 2006, an estimated 510,000 children were in foster care in the United States. Many of these children are eventually reunited with their parents, but more than 100,000 need permanent foster homes. Of the estimated 289,000 children who left foster care in 2006, 17 percent, or 49,130, were actually adopted. That is 49,130 happy new beginnings for children who may someday return the favor by achieving great things and raising great families themselves. After all, John Hancock, author James Michener, Apple Computer founder Steven Jobs, Oracle Corporation founder Larry Ellison, Baseball Hall of Famer Jim Palmer, and singer Faith Hill were all adopted.

The children in foster care awaiting adoption are as varied as the families they will join. Their median age is 10.2 years old. Some 40 percent are Caucasian; 32 percent are African-American, and 19 percent are Latino. Just over half are boys. Some have special needs and some have siblings. How many will grow up to be great artists or athletes or

businessmen or U.S. Senators is anyone's guess, but we can be sure that without adoptive families to give these children a second chance, those numbers will be smaller.

National Adoption Day began in 2000 with events in nine cities. It has grown to include more than 300 events in all 50 states and Puerto Rico. More than 25,000 children's adoptions have been finalized on National Adoption Day since its inception, thanks to the collaboration among local adoption agencies, the courts and advocacy organizations like the Children's Home Society of West Virginia, the Alliance of Children's Rights, Casey Family Services, Children's Action Network, the Congressional Coalition on Adoption Institute, the Dave Thomas Foundation for Adoption, and the Freddie Mac Foundation. These groups and their efforts have raised public awareness of the many children in foster care who need a family to call their own.

Adoption, like all child-rearing, is not for the faint of heart. It is, instead, for the great of heart. I hope that more parents who may be considering adopting a child from foster care will take that leap of faith, and I applaud those who already have. Somewhere out there, a foster child is waiting.

THANKING GOD FOR OUR BLESSINGS

Thanksgiving is one of America's most beloved holidays. It is a day devoted to turkey, family gatherings, football games, parades, and the beginning of the Christmas-holiday season. But it also should be a day devoted to giving thanks to God for our many blessings. It always has been.

Most of us learned about the Pilgrims conducting the first Thanksgiving in 1621 in Plymouth Colony. To the Pilgrims, Thanksgiving was intended as a religious celebration to give thanks to God for helping them survive that first brutal year in the new world.

But before Thanksgiving became an annual tradition in 1863, and an official federal holiday in 1941, it was celebrated on a number of other occasions – and always as a day of giving thanks to God.

During the American Revolution, following the American victory at the Battle of Saratoga in October 1777 that marked a turning point in the war, the Continental Congress approved a resolution proclaiming a day of "Thanksgiving and praise." In his personal notes on the war, General George Washington wrote: "Tomorrow being the day set apart by the honorable Congress for Public Thanksgiving and praise, ... duty call[s] us devoutly to express our grateful acknowledgments to God for the manifold blessings he has granted us."

Following the establishment of the new government of the United States in 1789, President George Washington issued a "Thanksgiving Proclamation" designating a "day of public thanks-giving and prayer to be observed by acknowledging with grateful hearts the many favors of Almighty God, especially by affording them an opportunity peaceably to establish a form of government for their safety and happiness." At President Washington's request, Americans assembled in churches to thank God for his blessings.

During the American Civil War, following the Battle of Gettysburg, President Abraham Lincoln asked the people of the United States to set aside the last Thursday of November "as a day of thanksgiving and praise to our beneficent Father." "In the midst of a Civil War of unequal magnitude and severity," President Lincoln proclaimed, the country should take a day to acknowledge the "gracious gifts of the most high God, who, while dealing with us in anger for our sins, hath nevertheless remembered mercy."

On this Thanksgiving, I would like to thank God for the young American men and women who will spend this holiday in harm's way protecting our country and the values we hold dear. And I thank God for the privilege of representing our beloved State and our great people in the U.S. Senate.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

HOLIDAY GREETINGS FOR AMERICA'S HEROES

Spending the holidays away from family and friends is difficult for anyone, but it is even more stressful for individuals serving tours of duty in combat zones or hospitalized while recovering from battlefield injuries. Holidays are also difficult for the families lighting the candles, baking the cookies, or decorating the tree without the companionship of their uniformed family member. Kind words and warm wishes to let our military heroes, families, and veterans know that they are in our thoughts and prayers are always appreciated, but they mean even more during the Christmas season.

With that thought in mind, I hope that many West Virginians will join in the Red Cross's "Holiday Mail for Heroes" campaign. Begun in 2007, when the Walter Reed Army Medical Center in Washington, D.C., asked the Red Cross to distribute thousands of holiday cards to members of the military, the program grew to include more than 1.4 million holiday greetings sent from Americans to service members, veterans and their families around the world.

In 2009, the Red Cross, with logistical help from corporate partner Pitney Bowes, hopes to reach even more service members and veterans who may be spending the holidays away from home. The United States has 1.4 million active duty members, reservists

and guards on duty, and more than 24 million veterans.

If you and your family would like to warm the heart of a service member, their family, or a veteran this Christmas, send your card before December 7th to:

Holiday Mail for Heroes
P.O. Box 5456
Capitol Heights, MD 20791-5456

Be sure to affix adequate postage. The Red Cross has requested that you not include excessive glitter, inserts, money or "care packages," as these will cause your card to be discarded during processing. Address cards to "Dear Service Member, Family or Veteran," and sign them, but do not send letters or personal information such as home or email addresses.

Red Cross and Pitney Bowes volunteers will screen the cards for hazardous materials, sort, package, and deliver them to military bases and hospitals, veteran's hospitals and other locations in the United States and abroad during the holidays.

The thousands of hours offered by these volunteers and the support provided by Pitney Bowes demonstrate the generosity and caring that are in the true spirit of Christmas. Please consider joining them in sharing a bit of your Christmas spirit with our military service members, their families, and our Nation's veterans. It will mean so much.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

DIABETES AWARENESS

Last month was American Diabetes Month. Many of us know someone with diabetes, or suffer from it ourselves. More than 24 million Americans have been diagnosed with diabetes, and more than 57 million Americans are pre-diabetic. Every 20 seconds, someone is diagnosed with diabetes. If current trends continue, one out of every three children faces a future with diabetes, according to the Centers for Disease Control and Prevention.

For the individuals involved and their families, diabetes is a daily struggle that can involve the loss of eyesight, amputations, or dangerous drops in blood sugar that can lead to coma and even death. Every day, nearly 200 people with diabetes undergo an amputation. Another 55 people each day become blind because of diabetes. Another 120 people daily enter end-stage kidney disease programs.

For employers and for society as a whole, the increasing number of diabetics means higher health care costs and lost productivity. Diabetes is one of the leading causes of death and disability in the United States. It leads to heart complications, stroke, and kidney disease. The United States spends \$174 billion a year treating diabetes and its complications.

As devastating as diabetes can be, it is also an avoidable disease. During the month of November, the American Diabetes Association launched a movement called "Stop Diabetes," with the goal of inspiring millions of people to take action against diabetes.

I encourage you to visit the American Diabetes Association website, at www.diabetes.org, to learn more about steps you and your family can take to prevent diabetes or reduce the impact of a diabetes diagnosis. You can find out what researchers are doing to help prevent and treat diabetes, as well as how to make living with diabetes easier.

One can avoid becoming a diabetes statistic, by following that tried and true formula for healthy living – eat right, exercise, and get enough rest. The American Diabetes Association website has recipes and fitness advice that can make nutrition and exercise become a part of our daily lives.

The steps we take today to prevent or stop diabetes may be the best gift that we can give to ourselves, our families and our friends this holiday season. Good health makes every day a joy – just ask someone who lives with a chronic disease like diabetes.

LIGHTING UP THE CHRISTMAS SEASON

The Christmas season is here. It is that glorious time of the year when, everywhere we look, we will see celebrations of the birth of Jesus. There will be Christmas decorations, holly wreaths, Christmas carolers and Christmas trees. And there will be holiday lights – lots of them.

Holiday lights have become so popular that cities and organizations around the country now offer annual holiday festivals of lights. I am pleased to point out that one of the largest and oldest of these light festivals is here in West Virginia, at Oglebay Park in Wheeling.

Upon his death in 1926, Earl W. Oglebay willed his beautiful country estate to the people of Wheeling “for public operation.” Two years later, Oglebay Park was established. Over the years, the Park has been developed into a multi-purpose, all-season resort that features a swimming pool, championship golf courses, skiing and many other recreational activities. I am proud to have contributed to the growth of this magnificent park by obtaining federal monies for the expansion of Wilson Lodge and the National Training Center for Public Facility Managers.

In 1985, the Park added what has become one of its most popular features, the Winter Festival of Lights. This holiday light show has attracted

millions of visitors and is rated as one of the top 100 international events by the American Bus Association and one of the top 200 events in the country by Discover America.

The Oglebay Winter Festival of Lights covers more than 300 acres and features over a million lights. The Parade of the Wooden Soldiers spans 45 feet across and contains more than 3,000 lights. A giant Poinsettia Wreath with Candles stands 60 feet high and 50 feet in diameter. The delightful Dinosaur Dell presents an animated display of these extinct reptiles.

There is so much to see at what has become one of our State's top tourist attractions. A display featuring the “Twelve Days of Christmas” covers the length of a football field. You will find Charlie Brown, Lucy, and the rest of the Peanuts gang, as well as a rotund “Willard the Snowman,” a beautiful Nativity Scene, and a picturesque Candy Cane Wreath. When you drive through “Snowflake Tunnel” with its 36-foot arches containing 85 giant, twinkling snowflakes made of 6,000 bulbs, you feel that you are driving through a snowstorm.

This year marks the 25th anniversary of the Winter Festival of Lights. I congratulate Oglebay Park on this milestone anniversary and encourage all to visit this wonderful holiday extravaganza.

RETAINING "OLD VALUES" IN A NEW YEAR AND A NEW EPOCH

We will soon be crossing the threshold into a New Year, a New Decade, and what promises to be an exciting New Epoch for America.

Having the advantage of my many years on this earth and in political office, I am far from naive. I realize that we will continue to face many challenges, especially those that President Kennedy labeled, "the common enemies of man: tyranny, poverty, disease, and war."

But I am optimistic about the future because I have witnessed the wonders of science and the technological breakthroughs that have helped improve the quality of life over many generations. And I know that those accomplishments of the past are just the edge of the realm of possibilities that lie before us.

America will continue to develop the programs and state-of-the-art techniques needed to address our problems and concerns. This will require new visions as well as renewed energies, but, like Americans of the past, we will not deny these responsibilities, we will welcome them.

As we enter this New Epoch, I also urge my fellow West Virginians not

to forget the past! More than ever, we will need to hold onto those values that made this country great - what I call the "old values."

Religious faith, patriotism, family, respect for authority, hard work, and honesty were the building blocks of our communities, our state, and our nation. They must continue to be the building blocks of our future. The Bible says: "Remove not the ancient landmark, which thy fathers have set." (Proverbs 22:28)

These "old values" include our Divine duty to be good stewards of God's creation. The Scripture tells us: "The earth is the Lord's, and the fullness thereof..." (Psalm 24:1) And, one of my favorite passages reads: "[S]tand still, and consider the wondrous works of God." (Job 37:14)

When I look at our beautiful state, I see the "wondrous works of God."

And when I meet with the people of our state who still hold dear the "old values" — who are honest, hard-working, patriotic, loyal, humble, and generous — I know the future will be good.

Happy New Year, everyone!

Byrd's-Eye View

THE CENSUS: A CONSTITUTIONAL REQUIREMENT

Once again, it is time to stand up and be counted, because 2010 is a census year. Article 1, Section 2, of the Constitution of the United States mandates that, "The actual enumeration shall be made within three years after the first meeting of the Congress of the United States, and within every subsequent term of 10 years, in such manner as they shall by Law direct."

Many people may wonder why a census, or count, of the population is so important that it rates a direct order in the Constitution. The answer is that census data play an important role in determining how government resources are allocated. The number of seats that each state holds in the U.S. House of Representatives is based on state population. More than \$400 billion in taxpayer funds are allotted to states or within states each year based on formulas that use population or other census data. These funds are used for things like hospitals or job training centers, schools or senior centers, bridges and other public works projects, and emergency services.

For privacy and security reasons, the 2010 census forms cannot be completed on line, but will be mailed or delivered to primary residences in March. It will contain just ten questions, including

name, sex, age, birth date, race, household relationship, and whether you own or rent your residence. Neither the form nor actual live census takers will ask for your Social Security number or the legal status of respondents. It will take only a few minutes to complete and mail back in the postage-paid envelope provided. If you do not respond to the census, as required by April 1, expect to be visited by a census taker to obtain information in person.

The Census Bureau will protect personal information, and private information is never published. It is against the law to disclose or publish individual names; addresses, including GPS coordinates; Social Security numbers; or telephone numbers. All information collected is used to produce only aggregated statistical information.

In preparation for the census, the U.S. Census Bureau is now recruiting temporary, part-time census takers. These jobs offer good pay, flexible hours, and paid training. Hundreds of thousands of census workers will be needed across the United States to help locate households and conduct brief personal interviews with residents. Interested applicants can contact their local Census Office, or call 1-866-861-2010.

So stand up and be counted — It is the American thing to do.

HONORING DR. MARTIN LUTHER KING, JR.

In his pursuit of equality for African Americans and the social and economic rights of all people, the Reverend, Dr. Martin Luther King, Jr., was the supreme instigator of change. Because of his refusal to obey unjust laws, and his ability to stir things up, he was, as I said at the time, a "rabble rouser." No person could enter a town, stage an event, or create more upheaval than he could. Nothing he touched was ever the same again. And because of that America is a better country.

But Dr. King's incredible efforts came at an enormous personal price. Crosses were burned on his yard. His home was bombed. His phone lines were tapped by the U.S. government. He was kicked, punched, and stabbed. He was mocked and ridiculed, and thrown into jail.

What was truly inspirational was the way that this man of God answered his critics and their abuse. "Don't ever let anyone pull you so low as to hate them," he told his followers: "We must have compassion and understanding for those who hate us."

In his powerful "I Have A Dream" speech, he asked: "Let us not seek to satisfy our thirst for freedom by drinking from the cup of bitterness and hatred. We must forever conduct our struggle on the high plane of dignity and discipline."

Dr. King pursued his "Dream" by avoiding extreme or radical actions, especially violence. "The ultimate weakness of violence," he explained, "is that it is a descending spiral.... Instead of diminishing evil, it multiplies it." "Darkness cannot drive out darkness; only light can do that," he said.

Such an approach to the hostile opposition he was encountering might seem naive, or even foolish, but Dr. King was neither. While an idealist, he was an idealist without illusion. He knew the path he had chosen would be rough and tumultuous. But, as he said: "Even though we face difficulties of today and tomorrow, I still have a Dream."

Martin Luther King's efforts resulted in the most important and sweeping social transformations in American history, and he did it without firing a shot!

For his efforts, Dr. King was awarded the Nobel Peace Prize. A national holiday was established in his honor and soon a monument will be constructed on the National Mall in his honor.

We should all heed the wisdom of Dr. King to "conduct our struggle[s] on the high plane of dignity and discipline." Given the heated political climate of today, adhering to these words would be a true testament to the life of this great American.

By U.S. Senator Robert C. Byrd

A BOON FOR CLARKSBURG

Late last month, the City of Clarksburg got notice of an early \$328 million Christmas present as I had the pleasure to announce that a new Biometrics Technology Center is slated for construction on the campus of the Federal Bureau of Investigation's (FBI) Criminal Justice Information Services (CJIS) Division in Clarksburg.

This joint FBI and Department of Defense (DOD) facility will serve as a center of excellence for research, development, and application of biometrics in support of national security and law enforcement. The 360,000 square-foot, four-story building, will nearly double the space capacity of the existing 2,500-employee FBI CJIS Division campus. When completed in 2013, it will also enable the FBI to consolidate all of its biometrics operations, many of which are in satellite facilities in Fairmont, and will accommodate nearly 2,000 employees. The Center will greatly enhance our efforts in fighting the global war on terrorism.

It will allow the FBI CJIS Division and the Department of the Army to make advances into other identification technologies, such as DNA, iris, palm prints, and facial recognition. These enhancements will provide further opportunities to positively identify individuals and prevent terrorists, criminals, and other ineligible individuals from entering the United States, thus improving our

border security and making our homeland safer.

Dr. Myra Gray, Executive Manager, Department of Defense Biometrics Task Force, has pointed out that, "The Center will provide even greater collaboration for the research and use of biometric technologies across the federal government. The successes we have realized utilizing biometrics to aid war fighters in identifying known and suspected terrorists have significantly advanced our defense capabilities."

This new facility will be a major shot in the arm as we continue to seek ways to diversify West Virginia's economy. The economic spillover effect for the Clarksburg area could be enormous. There will be a significant influx of workers for the construction phases of the project. Once completed, the facility will provide the FBI with the opportunity to expand the employment base as new advances in biometrics research emerge.

One of my goals in bringing federal operations to West Virginia has been to provide our young people with the opportunity to land quality jobs in our state. I have worked with West Virginia University and Marshall University to establish forensic science and biometrics curriculums that have relevance to the work performed at the FBI CJIS. It is my expectation that our West Virginia graduates will be well poised for these future career opportunities.

By U.S. Senator Robert C. Byrd

DISASTER IN HAITI

On January 12, 2010, a near the surface 7.0 magnitude major earthquake shook the island nation of Haiti, causing still-untold casualties and massive destruction. The pictures we have seen on a daily basis have been gut-wrenching. Many buildings have collapsed or are unstable, including hospitals, police stations, and government buildings. Millions of people are without shelter, food, power or medical care.

The U.S. government, the United Nations, many other nations, and many non-governmental relief organizations are rushing to provide humanitarian relief to the people of Haiti as quickly as possible. Our military's U.S. Southern Command is coordinating the U.S. government response and is sending the aircraft carrier USS Carl Vinson, four amphibious landing ships with Marines from the 22nd Marine Expeditionary Unit, the USNS Comfort hospital ship, and additional ships, helicopter units, construction, security, civil affairs and logistical support. The Coast Guard and Air Force are also supporting the humanitarian relief efforts in Haiti.

Americans who are missing U.S. citizen family members in Haiti can call the Department of State at 1-888-407-4747 or provide information via email to Haiti-Earthquake@State.Gov. Please include the following information in your emails: full name, date of birth and passport information (if known) of the persons in Haiti you are trying to contact; contact information in Haiti; your name and contact

information; your relationship to the person in Haiti; and any special or emergency circumstances. Embassy personnel will attempt to locate U.S. citizens and report back on their status.

Disasters call forth a compassionate response from Americans, and many people are seeking ways to help. The destruction in Haiti has severely limited access to that nation, creating bottlenecks in the delivery of humanitarian assistance. Therefore, most relief organizations are requesting cash donations rather than food and material items. For those looking to make contributions to the relief efforts in Haiti, the White House has information and links at www.whitehouse.gov/haitiearthquake_embed. The web site www.interaction.org/crisis-list/earthquake-haiti provides information about non-governmental relief efforts. Visit these sites to learn more about the ways individuals can help.

Anyone with disaster response experience or other specialized technical training who wishes to volunteer his or her services should contact the Center for International Disaster Information (CIDI) at www.cidi.org/incident/haiti-10a to register.

Finally, the Federal Bureau of Investigation has issued a warning about scam artists who solicit funds in the name of bogus Haiti relief efforts. You can read the warning at www.fbi.gov/cyberinvest/escams.htm.

The American people have always responded to those in need. I encourage all to join in this humanitarian and life saving endeavor.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

MAINTAINING THAT NEW YEAR'S RESOLUTION

Every January, many Americans resolve to diet and exercise. Though few sustain these good intentions, our determination does seem to be making a difference. A recent report in the *Journal of the American Medical Association* delivered some rare good news – the obesity rate in the United States, which had been rising for twenty-five years, held steady from 2000 to 2008.

This plateau is encouraging, but U.S. obesity rates are still higher than any other nation. Some 67.2 percent of American adults qualify as obese. Children between the ages of 2 and 19, a group that had recorded the steepest increase in obesity, held steady at a rate of 16.9 percent. Sadly, West Virginia has the third highest percentage of obese adults in the U.S. in 2009 at 31.1 percent, and the eighth highest percentage of overweight children at 35.5 percent. So, we must take this new report as incentive to actually lower the obesity rate.

On a personal and societal level, obesity remains a concern. It has overtaken smoking as the greatest overall health threat facing the country. Obesity is a major risk factor for cardiovascular disease, stroke, high blood pressure, high cholesterol, joint disease, sleep apnea, asthma, certain types of cancer, and type-2 diabetes.

Studies have shown that obese individuals may face social and employment discrimination and lower average wages. Obese individuals and their families must deal with the pain, suffering, and medical costs of obesity related health conditions, and the possibility of dying or losing a loved one to death at a younger age. Employers must deal with increased absenteeism and lower productivity due to employees' ill health.

Health insurers also face increased expenditures due to obesity complications. A 2004 study cited by the Centers for Disease Control and Prevention estimated adult obesity expenditures by state, with West Virginia's costs estimated at \$588 million. With approximately half of all obesity related health care paid by Medicaid and Medicare, all taxpayers help to shoulder these costs.

Americans have done well to stem the rising tide of obesity in the United States. I have long supported the Nutrition, Physical Activity, and Obesity program at the CDC to provide funding for state and community programs to help prevent and control obesity and other chronic diseases.

For our health as well as our economic well-being, we need to further reduce the numbers on the scale and on the obesity chart.

GEORGE WASHINGTON SLEPT IN WEST VIRGINIA

In February, our Nation celebrates the birthdays of two of our greatest presidents, George Washington and Abraham Lincoln. West Virginia was born from the Civil War conflict during which Abraham Lincoln was President. However, George Washington made little known, but notable contributions to our state before it was a state.

In 1748, at the age of 16, George Washington ventured into the land that would become West Virginia for the first time to survey the Eastern Panhandle and Potomac Highlands.

By the time he was 20 years of age, Washington had purchased several tracts of land in what was to become the State of West Virginia, with Rock Hall Tract, just west of Charles Town, being the first. Within a few years, he had acquired extensive land holdings. As a result of his service in the French and Indian War, Washington was granted thousands of acres along the Ohio and Kanawha Rivers, and titles to land around Belle and Moundsville.

Washington became a promoter of the early development of our State. In 1775, he sent an expedition to colonize his holdings along the Kanawha River. The colonists cleared the land, planted orchards, and built houses. But after a few years, the colony mysteriously disappeared, becoming Washington's and West Virginia's "Lost Colony."

Washington also promoted our State's early infrastructure.

He proposed the building of various canals and roads, including the Staunton (Virginia)-to-Parkersburg turnpike. In 1785, Washington secured funding for a route from the Atlantic Ocean to Cedar Grove which was eventually designated Route 60, and became a part of one of America's first trans-continental highways. The Washington Heritage Trail is a 137-mile highway that was inspired by a trip Washington made through what is now the Eastern Panhandle.

George Washington was a regular visitor. In 1770, he made a trip that began in Wheeling and followed the Ohio and Kanawha Rivers, making camp and hunting along the way. He enjoyed the spas at Berkeley Springs, which still features Washington's bath tub. And he was also fond of visiting his brother Charles, the founder of Charles Town, at his house there, "Happy Retreat."

Washington also made West Virginia an integral part of our national security. As a Colonel of the Virginia Regiment (1755-1758), he ordered the construction of Fort Edwards (Hampshire County), Fort Ashby (Mineral County), and Forts Seybert and Upper Tract (Pendleton County). And, it was President Washington who selected Harpers Ferry as the site for the federal arsenal, thus setting the stage for John Brown's uprising.

Happy Birthday President Washington and thank you for your contributions to our great State.

February is African American History Month Part I. West Virginia History Made

West Virginians are aware that a number of nationally prominent African Americans like Carter G. Woodson and Booker T. Washington are from our State. And West Virginians are aware that many nationally significant events in African American history, like John Brown's Raid and the founding of the Niagra Movement, took place in West Virginia. This February, I want to recognize African Americans who have made and are making history on the State level.

Christopher Payne was the first African American to serve in the West Virginia Legislature. Born in 1848, Payne was educated by his mother, later attended night school in Charleston and became one of the first black teachers in Summers County. He was ordained as a Baptist minister, and organized the Second Baptist Church in Hinton. Payne also established three newspapers, *West Virginia Enterprise*, *The Pioneer*, and the *Mountain Eagle*. In 1896, this talented and accomplished man was elected to the State Legislature. In 1903, President Theodore Roosevelt named Mr. Payne as Consul General to the Danish West Indies (present day Virgin Islands). When the United States acquired the islands in 1917, Payne was named prosecuting attorney in St. Thomas.

Minnie Buckingham Harper was a housewife in McDowell County who was destined to make

history. Born in 1886, she married E. Howard Harper of Welch, who was elected to the West Virginia State Legislature. When Delegate Harper died in 1928, Governor Howard Gore appointed his wife to fill his unexpired term. When Mrs. Harper took her seat in the State Legislature, she became the first African American woman to serve in a legislative body in the United States!

Elizabeth Simpson Drewry was the first African American woman elected to the West Virginia State legislature. Born in 1893, Drewry graduated from Bluefield State College, and taught in the public schools of McDowell County. In 1950, she was elected to the State Legislature, where she served for 13 years. Delegate Drewry chaired both the Military Affairs and Health Committees, but established herself as an advocate for education, labor, and health care reform. She is credited with introducing important pieces of legislation, including a bill to compensate victims of pneumococcosis ("black lung") and legislation that led to the constitutional amendment that allowed women to serve on juries. In 1956, *Ebony* magazine honored her as one of the ten outstanding black women in government.

In my next column, I will focus on an outstanding West Virginia African American leader who is making history today.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

February is African American History Month Part II. West Virginian Making History

Last week, in my Byrd's-Eye View, I discussed three African Americans who had made history in our State Legislature. This week, as part of African American History Month, I want to highlight Judge Irene C. Berger, who is currently making history in the judicial branch of our government.

Judge Berger grew up in McDowell County, the youngest of nine children, and the proud daughter of a coal miner. After graduating from West Virginia University, she earned her Juris Doctor degree from the West Virginia University College of Law in 1979. Following law school, she worked for Legal Aid Society where, as a young attorney, she provided legal services to the needy. Next, she worked in the Office of Prosecuting Attorney in Kanawha County for twelve years, obtaining more than 40 felony convictions, dozens of which were high-profile cases.

In 1994, Governor Gaston Caperton appointed her circuit court judge for the 13th Judicial Circuit of West Virginia. During her 15 years on the bench, she developed a reputation as an outstanding and thoughtful jurist who was dedicated to the principles of fair and impartial justice. Her judicial temperament and professional conduct earned her superb ratings from the American Bar Association, and resulted in her

being honored by the NAACP, the West Virginia University Alumni Association, the American Bar Foundation, the Mountain State Bar Association, the West Virginia State Bar Foundation, and the West Virginia Women's Commission.

Therefore, it was an honor for me to join my colleague Senator Jay Rockefeller in recommending her to President Obama for appointment as a federal judge on the U.S. District Court for the Southern District of West Virginia. As I wrote to President Obama, she is "uncommonly qualified" for a seat on the federal bench. I pointed out how she had broken down barrier after barrier. She was the first in her family to attend an integrated school. She was the first in her family to attend college. And she was the first African-American woman to serve as a circuit judge in West Virginia.

In July, 2009, President Obama nominated Judge Berger for the federal judgeship and on October 11, 2009, the U.S. Senate confirmed Judge Berger by a vote of 96-0.

On December 11, Judge Berger was sworn in as Federal District judge for the Southern District of West Virginia, thus breaking down yet another barrier -- becoming the first African American to serve as a federal judge in West Virginia.

All of West Virginia can be proud of our history-making judge.

Byrd's-Eye View

By U.S. Senator Robert C. Byrd

PET ADOPTION

Most Americans are proud to proclaim that they are animal lovers, and many are loving and responsible pet owners. We are all disturbed and saddened when we see animals being starved or abused, or when we learn that animals must be destroyed because there are just not enough loving, responsible homes available.

But the sad fact is that, according to the Humane Society of the United States, more than 4 million pets are put down in U.S. shelters each year. Approximately 3.7 million of these are cats or dogs. A single cat can give birth to 18 kittens each year. One dog can produce 20 puppies each year. While kittens and puppies are cute, every unspayed or unneutered cat or dog that is allowed to roam free, or that is "set free" to fend for itself, contributes to the burgeoning overpopulation of dogs and cats that end up in shelters or dying of disease or starvation on the streets.

The only effective way to reduce the suffering of these loving companion animals is to limit their numbers to the amount of homes available. The best way to do this is to spay or neuter them, a relatively simple surgical procedure that can be performed in most veterinary clinics.

In February of each year, the Humane Society of the United

States sponsors "Spay Day," a day of action to promote the spaying and neutering of pets. Inaugurated by the Doris Day Animal League in 1995, the Humane Society joined in sponsoring "Spay Day" in 2006 to encourage pet owners to spay or neuter their pets as an effective and humane way of decreasing the euthanasia of homeless animals in shelters.

In its first 15 years, "Spay Day" participants spayed or neutered approximately 1.5 million animals, potentially sparing many millions of animals from euthanasia and saving hundreds of millions of dollars in shelter costs. The Humane Society's web site, at www.humanesociety.org, has information about "Spay Day" events.

On "Spay Day," many veterinary and humane society offices offer discounted spay/neuter clinics. Other reduced cost spay/neuter clinics may be available near you year round. Your local animal shelter may have recommendations from local veterinarians or other sources that can help cover the cost of spaying/neutering your pet.

I encourage everyone to be a responsible pet lover: look for your next pet at homeless animal shelters, and spay or neuter your animals to keep the population in the shelters and euthanasia down.

GOD'S GIFT TO WEST VIRGINIA

This year, 2010, is the fortieth anniversary of the premier of John Denver's musical tribute to West Virginia as "almost heaven."

When I think of Denver's classic song, "Take Me Home, Country Roads," (which was co-written with Bill Danoff and Taffy Nivert) I think about the things that make West Virginia so unique. First, of course, is the kind and generous nature of the people of our beloved state. Next, I picture the beauty and serenity of our mountains. They seem sacred, and, in fact, mountains are a frequent location for events in the Bible, in both the Old and New Testaments. It was on Mt. Sinai that God revealed himself to Moses and gave Him the Ten Commandments (Exodus 19:16 and 20:17). God allowed Moses to view the Promised Land from a mountain. It was on Mt. Carmel where Elijah challenged the false prophets of Baal, and, on Mt. Ararat that Noah's Ark came to rest (Genesis 8:4).

Some of the most important teachings of Jesus, as well as the critical events in His life took place in the mountains. The Transfiguration of Jesus, one of the most important Miracles, took place on a mountain, probably Mount Tabor (Luke 9:28-43). It was on Mount Olives that Jesus instructed His disciples (Matthew

24:3). The third temptation of Christ took place on a mountain, so that Jesus could see the kingdoms of the world. (Matthew 4:8-9). And, of course, Jesus delivered perhaps His most important Sermon, the "Sermon on the Mount," from a hillside, where he also gave us the Lord's Prayer (Matthew 5-7). Jesus gave His life for our salvation and was crucified on a hill, Golgotha (Calvary).

Throughout the Bible, examples of the powerful and mystical significance of mountains can be found. For example, Isaiah 25:6 tells us of the celestial banquet on Mount Zion that is a symbol of eternal happiness, and the coming of the Kingdom of God. And one of my favorite passages from the Bible, Psalm 121:1, reads: "I will lift up mine eyes unto the hills, from whence cometh my help."

Contemplating the use of mountains and hillsides as symbols in Holy Scripture, underscores what a special gift our mountains are for the people of West Virginia. Majestic, inspiring, and, at times, intimidating, our mountains remind us of the glory of the view after the challenge of the climb. Perhaps that is why West Virginians retain a stalwart and independent character, always inspired by possibilities and undaunted by difficulties.

PEARL S. BUCK Great Author, Great Humanitarian, Great West Virginian

March is Women's History Month, a time when we celebrate the contributions of women to American history and society. This year, I want to recognize a woman with whom every child in West Virginia should be familiar.

Pearl S. Buck was born in Hillsboro, West Virginia, on June 26, 1892, to Caroline Stulting and Absalom Sydenstricker. Her parents, who were missionaries, took their young daughter, Pearl Comfort Sydenstricker, to China, where she spent most of her youth.

Pearl returned to the United States to obtain a college degree from Randolph-Macon Women's College in Virginia (1914), and then returned to China. In 1917, she married Dr. John Lossing Buck, an agricultural expert who was working in China.

The couple lived for several years in the rural village of Nansuchou, the home of thousands of impoverished farmers. This was the village that served as the setting for many of her early works, including her most famous, *The Good Earth*, which was translated into more than thirty languages, sold nearly two million copies, and was awarded the Pulitzer Prize in 1932.

In 1938, Pearl Buck became the first American woman to be awarded the Nobel Prize in Literature. At the time, she was only the third American to win the Nobel Prize

for Literature, following Sinclair Lewis and Eugene O'Neill. Pearl Buck eventually wrote more than 100 books, and hundreds of short stories and magazine articles.

While best known for her writings, she was also a great humanitarian. Pearl Buck was an advocate for racial equality and women's rights, years before the issues became national movements. In 1949, she established the Welcome House which found homes for mixed-race children who had been fathered by American servicemen in Asia. In 1964, she launched the Pearl S. Buck Foundation to provide foster care for Asian-American children.

I am proud to point out that this world-renowned writer and humanitarian never forgot her roots. In the 1960s, she toured West Virginia to raise money to preserve her family home in Hillsboro. She expressed the hope that the house "would belong to everyone who cares to go there" and would serve as a "gateway to new thoughts and dreams and ways of life."

Today, the house, The Pearl S. Buck Birthplace, is a National Literary Landmark, a historic house museum, and cultural center. It is open for tours May 1 through November 1. For more information, the phone number is 304-653-4430. Its web site is <http://www.pearlsbuckbirthplace.com>.

Volunteers Saving Lives

Since 1943, when President Franklin D. Roosevelt first proclaimed it as "Red Cross Month," the month of March has been dedicated to the impressive humanitarian and volunteer spirit embodied in the international Red Cross and Red Crescent organization. In the wake of the massive disasters that have struck Chile, Haiti, China, Southeast Asia, and the United States in recent years, people around the globe have many reasons to thank the Red Cross and all of the volunteers who support its lifesaving work.

Since 1863, Red Cross volunteers have been helping the victims of wars, natural disasters, and everyday crises to recover and rebuild. The 700 locally supported chapters of the American Red Cross, manned by more than half a million volunteers and 30,000 employees, respond to more than 70,000 disasters nationwide each year, ranging from single-family and apartment home fires to major disasters like Hurricane Katrina or massive western wildfires.

The Red Cross is the nation's largest supplier of blood and blood products. Blood collected by the Red Cross meets the needs of accident victims, cancer patients, surgical candidates and children with blood disorders.

The Red Cross also supports active duty, National Guard and Reserve service members and their families before and during deployments and in the event that

a service member is wounded.

As well as responding to catastrophes, the Red Cross provides training and educational programs to help individuals and families prevent and respond to emergencies. More than 15 million Americans each year receive first aid training, instruction on CPR and the use of defibrillators, swimming lessons, and water safety classes from their local Red Cross chapters. This training, and the emergency planning preparations encouraged through the Red Cross's "Be Red Cross Ready" program, has undoubtedly saved countless lives.

The Red Cross provides all of these lifesaving services through the generosity of citizen donors, who provide donations of money, to be sure, but also of time and blood. The most lasting way to honor the many people who make up the Red Cross is to become a "Red Crosser," by donating blood or volunteering through a local Red Cross chapter. You can save lives by calling 1-800-GIVE-LIFE, or visiting www.givelife.org to schedule a blood donation appointment.

To locate the local Red Cross chapter closest to you, visit www.redcross.org/where. West Virginia has eight local Red Cross chapters, in Charleston, Kearneysville, Oak Hill, Lewisburg, Parkersburg, Clarksburg, Morgantown and Williamson. To all of these volunteers – thank you!

Easter The Hope and the Promise

The resurrection of Jesus Christ is the essence of Christianity. To Christians, it is the premier event in the world. The resurrection of Jesus not only established Jesus as the Son of God, it provided the basis for the belief that all Christians will triumph over death. The resurrection of Christ from the dead offers the opportunity of a new birth.

Therefore, Easter is a time of hope – the hope that those whom we loved and have lost will indeed live again. Therefore, Easter is a promise – the promise of eternal life and the forgiveness of sins.

It is just and proper that we recognize and celebrate this most sacred and holy of events once a year at Easter. We should, however, be thinking about the resurrection every day of the year. Therefore, this Easter, I want to urge all of my fellow West Virginians who are Christians to take a few minutes of each day to meditate about this miraculous event and what it means to us, and what it has meant to the world. I offer the following passages from the King James Version of the Bible that deal with the resurrection, which you might recite to yourself throughout the year.

“Now upon the first day of the week, very early in the morning, they came unto the sepulchre, bringing the spices which they had

prepared, and certain others with them. And they found the stone rolled away from the sepulchre. And they entered in, and found not the body of the Lord Jesus.” (Luke 24:1-3).

“Jesus said unto her, I am the resurrection, and the life: he that believeth in me, though he were dead, yet shall he live. And whosoever liveth and believeth in me shall never die. Believest thou this?” (John 11:25-26).

“Knowing that He which raised up the Lord Jesus shall raise up us also by Jesus, and shall present us with you.” (2 Corinthians 4:14).

“And the angel answered and said unto the women, Fear not ye: for I know that ye seek Jesus, which was crucified. He is not here: for He is risen, as He said. Come, see the place where the Lord lay.” (Matthew 28:5-6).

On this Easter Sunday, put on your new Easter clothes and bonnets, and enjoy your Easter eggs, jelly beans, and chocolate bunnies. But please remember “the reason for the season.”

Please remember that on that first Easter Sunday, so long ago, a wondrous gift was given to the world. It was a promise of life everlasting, of immortality.

Easter is a time to remember that the tomb was empty.

National Symphony Orchestra Is Coming To West Virginia

I am so pleased that this year the National Symphony Orchestra (NSO) of the John F. Kennedy Center for the Performing Arts has selected West Virginia as the host of its 2010 American Residency Program.

The NSO began the American Residency Program in 1992; it selects one state each year as the host for this unique project.

The goals of the Residency Program are 1) to share all elements of classical instrumental music throughout a given region, 2) to explore the diversity of musical influence within the state, and 3) to give the state a musical voice in the nation's center for the performing arts through training programs, career development opportunities, and commissions. NSO manager, Cynthia Steele explains: "The American Residency is one of the signature projects of the National Symphony Orchestra and our musicians are incredibly committed and generous with their time and talents."

The NSO will be in West Virginia from April 5 to April 13, and will participate in approximately 150 education and performance activities throughout the state. During its visit, NSO will conduct orchestral concerts in Morgantown, Wheeling, Glenville, Huntington, Princeton, and Charleston. There will also be a NSO Young People's Concert in Charleston.

After the orchestra finishes its residency, up to six West Virginia

students will be awarded full scholarships to attend the 2010 Summer Music Institute at the Kennedy Center in Washington, D.C. And a West Virginia music educator will receive a 2010 NSO Teacher Fellowship, and the Orchestra will commission a chamber work from a West Virginia composer.

Because of the generous support of many organizations, especially the Kennedy Center and the U.S. Department of Education, all proceeds from ticket sales resulting from the events remain in the state to support local arts organizations.

NSO is seeking a West Virginia composer to write a new piece of music. The symphony is partnering with the John F. Kennedy Center for the Performing Arts in Washington and the West Virginia Division of Culture and History to commission the work. A resident West Virginia composer will be commissioned to write a work of about 10 to 15 minutes.

A panel convened by the West Virginia Division of Culture and History and the Appalachian Education Initiative will narrow the applications to three finalists. A National Symphony Orchestra jury making the final selection will be overseen by principal conductor Ivan Fischer.

I welcome the NSO to the Mountain State, and encourage all of our people to try to take advantage of this unique and wonderful opportunity.

PLAY BALL! Baseball Season Arrives

Baseball season is here. We will be hearing the crack of the bat, the singing of "Take Me Out to the Ball Game," and the umpire's shout of "strike three, you're out."

Whenever I think about baseball, I like to think about the contributions that West Virginians have made to the history of our national pastime. The people of our State will always proudly remember the Hall of Fame career of George Brett of Glen Dale. I recall Hall of Famer Bill Mazeroski of Wheeling hitting that dramatic, ninth-inning home run during the seventh game of the 1960 World Series to make the Pittsburgh Pirates world champions. And Lew Burdett of Nitro who was named the MVP of the 1957 World Series for pitching three complete-game victories that made the Milwaukee Braves world champions.

Then there is John Milton "Jack" Warhop!

Who was Jack Warhop you may ask? I wonder how many of the folks in Hinton, where Warhop was born on July 4, 1884, can tell you who he was.

Warhop was working on the C&O railroad, when he began playing for the company's local baseball team. Eventually, his pitching took him to the major leagues, where, on September 19, 1908, he pitched his first game for

the New York Highlanders, later renamed the New York Yankees.

Warhop's date with baseball immortality came on May 6, 1915, while pitching for the Yankees. It was the third inning of a scoreless ball game, Warhop was pitching and the batter was a rookie pitcher for the Boston Red Sox. The 5,000 fans in attendance did not expect much from the batter because of the prevailing notion that pitchers couldn't hit. However, according to the Boston Globe, that rookie pitcher "impressed the onlookers as being a hitter of the first rank," because he "swatted a low ball [from Warhop] into the upper tier of the right-field grandstand" for a home run.

It was the very first home run ever hit by the legendary home run hitter Babe Ruth!

The Great Bambino, the Sultan of Swat, the King of Clout, as Ruth would also be called, went on to hit 713 more home runs.

The people of our State can take pride in knowing that it was a West Virginian who started Babe on his glorious, home-run hitting career. Someone had to do it, and it was a West Virginian who did it!

I have often pointed out that no sports event ever changed the course of history, but this one pitch was truly a great moment in baseball history.

GOD BLESS OUR MINERS

I am the son of a coal miner who married a coal miner's daughter, and I feel a special, familial relationship with our state's coal miners. I know about the grueling work that they do, the hardships they endure, and how they risk their safety every day to produce the energy that powers our country.

Tragedies such as the explosion at Upper Big Branch Mine-South in Raleigh County on April 5, are an outrage.

I mourn the loss of life. I am saddened when I think of the wives who will now face tomorrow without husbands, and the children who will grow up without fathers. I firmly believe that such a terrible loss of life in the mines can be avoided.

Growing up in the southern West Virginia coal fields, I saw the bodies of too many coal diggers pulled from the coal mines after an explosion. I helped carry the coffins of too many miners who perished in mine accidents. To this day I carry the memory of the faces of their grieving widows and children.

I have worked to improve the health and safety conditions of the men and women who work in our nation's coal mines. I have sponsored and supported legislation to expand and improve federal mine safety laws.

I am especially proud of my role in the formulation and passage of the groundbreaking, landmark Federal Coal Mine Health and Safety Act of 1969 which was enacted following the explosion at Farmington #9 that took the lives of 78 of our fellow West

Virginians. This is the most comprehensive legislation covering the mining industry in history, and to this day, the strongest worker protection law in the world. But clearly more is needed.

Following the Sago mine disaster of 2006, which took the lives of 11 miners, I helped formulate and Congress approved the MINER Act which provided for post-accident emergency response.

This and other pieces of legislation and increased funding resources should mean that tragedies on the scale of Upper Big Branch Mine-South no longer happen.

Once investigations are completed and we learn the cause of this disaster, action must be taken. But, laws only work if they are enforced. There must be stronger enforcement. Companies with dismal safety records and multiple violations must be punished. Companies with exemplary safety records should be rewarded for their efforts.

And attitudes have to change. The coal in our mountains belongs to the people of West Virginia. It is our birthright and our sons and daughters work hard to mine it. West Virginians must never feel beholden to a coal company. If a mining company disregards the safety of our miners, that company should not continue to enjoy the fruits of our citizens' labor or the profits from our "black gold." Make no mistake about it. Many other responsible companies will be lining up for the privilege of working in West Virginia.

NATIONAL POETRY MONTH

When I was a young boy, it was common for children to recite poetry in school and at assemblies before audiences of their parents and friends. Some of the poems told stories or taught lessons. Some were humorous, some were silly, and some were both beautiful and moving. Memorizing and reciting the poems inspired in me a love for words, cadence, meter and rhyme that has never left me. I can still recite from memory some of the poems I learned so long ago.

Although public recitation has fallen from favor, poetry has not lost its fascination for lovers of words. In 1996, the Academy of American Poets inaugurated National Poetry Month to celebrate the enduring beauty of verse. Now, each April is filled with events designed to introduce and share poetry with the public and to highlight the extraordinary legacy and ongoing achievement of American poets.

Poets have also utilized technology to reach out to new and established poetry readers. By visiting www.poets.org/m from any mobile device, one can browse more than 2,500 poems, poet biographies, and historical essays from the archives of the Academy of American Poets. Poetry lovers can also sign up to have great poems from new books e-mailed to

them, or visit the National Poetry Map to discover where poetry events are taking place.

One goal of National Poetry Month is to help teachers and librarians make poetry a more important part of the school curriculum. With that in mind, the Academy of American Poets creates and distributes posters announcing National Poetry Month as well as offering lesson plans and tip sheets for teachers and librarians. Their web site, at www.poets.org, offers a list of 30 ways to celebrate National Poetry Month – an idea for each day of the month.

Since 2002, New York City has celebrated each April 29th as National “Poem in Your Pocket” Day. Participants are encouraged to carry a favorite verse in their pocket, and to share it with friends and acquaintances.

I would be hard pressed to pick just one poem to carry on “Poem in Your Pocket” Day -- a few lines that capture the beauty of a spring morning? A poem that honors a loving mother or father? A stirring metaphor that teaches us a lesson for our times? There are so many wonderful poems, and new ones written every day. I hope that, this April, everyone can find beauty, wisdom or humor wrapped in the words of a poem.

HOMELESS HEROES

During a conflict, soldiers face many risks from gunfire, bombs, chemicals, and other battlefield dangers. However, once safely back at home, some veterans face a new risk—homelessness. The Department of Veterans Affairs estimates that approximately 107,000 veterans are homeless on any given night and more than 200,000 veterans are homeless at some time during the year.

These veterans have served in every war and military operation since World War II. More than 67 percent served in uniform for at least three years and 33 percent were stationed in a war zone.

What factors help to make our veterans vulnerable? The shortage of affordable housing, lack of jobs, and access to health care, in addition to homelessness, put our vets at risk. Displaced and at-risk veterans often struggle with Post Traumatic Stress Disorder and substance abuse, compounded by the absence of family and social support networks. Homelessness is directly linked to ones' ability to secure employment and health care, making it harder for homeless Americans, including veterans, to escape a cycle of despair. Unfortunately, existing federal homeless programs do not focus on veterans.

The Department of Veterans Affairs is working to reach homeless veterans, currently servicing an estimated 92,000 of those-in-

need, but that still leaves more than 100,000 veterans in need of help.

I recently cosponsored S. 1160, the Homes for Heroes Act of 2009. S. 1160 would direct the Department of Housing and Urban Development to expand homeless veterans' access to existing housing assistance programs. I have also cosponsored S. 1547, the Zero Tolerance for Veterans Homelessness Act of 2009, which would direct the Secretary of Veterans' Affairs to establish a program within the Veterans Benefits Administration to combat homelessness among veterans.

Veterans caring for children make up a small but growing percentage of homeless veterans. Therefore, I have also cosponsored S. 1237, the Homeless Women Veterans and Homeless Veterans with Children Act of 2009. S. 1237 would expand the existing grant program for veterans with special needs to include homeless veterans who care for minor children. It would also direct the Secretary of Labor to make grants to programs and facilities that provide services to homeless veterans with children that help reintegrate these veterans into the labor force.

America's veterans have given their best service to our country on the battlefield; we owe them our country's best efforts to help them deal with a return to civilian life.

MOTHER'S DAY

The origins of Mother's Day are rooted deep in the West Virginia hills. Anna Jarvis was born in Webster, West Virginia, on May 1, 1864. Her family moved to Grafton, West Virginia when she was a child. On May 12, 1907, two years after her mother's death, Anna Jarvis arranged a memorial service to honor her mother's memory. That event sparked her successful campaign to make "Mother's Day" a recognized holiday. That dream came true for Anna Jarvis in 1914.

Today, the International Mother's Day Shrine, located in Grafton, commemorates Anna Jarvis' accomplishment. However, I believe that the best Mother's Day shrine is the one which each of us builds in our hearts of the memories of our own mothers.

While Mother's Day will be joyful for many, it is heartbreaking to think of the mothers who will not receive cards or flowers, or enjoy a Mother's Day brunch with their husbands and children. In Montcoal, West Virginia, there are twenty-nine families who are grieving the loss of sons, husbands, brothers, and friends. The community, the state, and the nation grieve with them, but that is of little comfort for the mothers

who will wake on this Mother's Day to quiet houses and silent phones.

Mother's Day is lonely as well for the mothers, wives, and families of soldiers who have been lost in battle in Iraq and Afghanistan. Miner's mothers like soldier's mothers know well of the constant tension of having a beloved child in harm's way.

These "mother's fears" have not changed since I was a child growing up in the coalfields or during all the wars and conflicts since. Neither have the vigils outside of a mine disaster, nor the tearful memorials and funeral services that follow. The haunting bugle call of "Taps" brings a lump in my throat today just as it did the first time I watched a soldier be buried with military honors. During those services, often the most tragic figure of all was the mother.

Tragedy reminds us just how much mother's care means to children, and how much their children mean to mothers. This Mother's Day we have an opportunity to thank our mothers for that care, either in person or in our prayers, and to think about that great generosity of spirit that marks all mothers.

THE 1960 WEST VIRGINIA PRIMARY AND THE MAKING OF A PRESIDENT

May 10 was the fiftieth anniversary of the 1960 Democratic presidential primary in West Virginia. This was, perhaps, one of the most important presidential primaries in recent history. It was the election that made Senator John F. Kennedy the presidential nominee of the Democratic Party. "It was in West Virginia," wrote Kennedy's press secretary Pierre Salinger, "that Kennedy really sewed up the Democratic nomination for President." Speaking in Wheeling in 1962, President Kennedy declared, "West Virginia ... is the State which sent me out into the world, and you are the people who made me the Democratic candidate for President of the United States."

And the 1960 Democratic primary was the political contest that paved the way for America's first Catholic president. With West Virginia being an overwhelmingly Protestant state in 1960, religion was seen as the "burning issue" of the contest. Therefore, if Kennedy, who was Catholic, defeated his only opponent, Senator Hubert H. Humphrey, who was a Protestant, it would show that religion would no longer be a defeating handicap in a presidential contest.

For weeks, both national and international media swarmed our state as people, not only around the United States, but also around the world, closely followed the West Virginia primary to see if a Catholic had a chance of becoming president.

According to the media, the prospects did not look good for Kennedy. *Newsweek* noted that the "deck looks to be hopelessly stacked against Jack Kennedy in West Virginia.... This state is 95 percent Protestant." The *Wall Street Journal* predicted that Kennedy "would lose—perhaps heavily. The vote against him could go as high as 60% of the total." The *Baltimore Sun* predicted that Humphrey would take "two out of three [voters], solely because he is a Protestant and Kennedy is a Catholic."

On May 10, 1960, the people of West Virginia stunned the nation! Kennedy won a sweeping victory in the Mountain State. His victory was a 61-39 percent margin and he carried 50 of 55 counties.

It was an historical moment. The *Congressional Quarterly* reported: "The results were viewed by political observers as proof that Kennedy's Roman Catholicism would not bar him from winning the nomination or general election."

Journalist Theodore White, who was awarded a Pulitzer Prize for his book, *The Making of the President, 1960*, called the West Virginia Democratic presidential primary "a turning point in American history."

The best assessment came from Kennedy himself, who, the day after winning the primary, proclaimed: the religious issue was "buried here in the soil of West Virginia."

MEMORIAL DAY, 2010

In the United States, Memorial Day, the day on which we commemorate our fallen heroes, also marks the beginning of summer, and, therefore, it is happily celebrated with picnics, ball games, and family gatherings. But while we enjoy this special seasonal holiday, we should also bear in mind that this is a most solemn day. On Memorial Day, we remember the Americans who gave their lives in service to our country, and pay homage to their sacrifice. Their graves are a reminder of the high cost of maintaining freedom.

I once read of a small town in the Netherlands (Castricum), where the local schools pledged to care for the graves of the American servicemen who made the ultimate sacrifice to liberate the Netherlands from Nazi tyranny during World War II. Caring for a grave meant keeping the grave in "excellent" condition. The children in the Netherlands undertook this commitment because they understood what had been preserved for them by the Americans. Obviously, these children did not take their freedoms for granted.

I have always been proud to represent a state, in which freedom also is not taken for granted. In every American armed conflict, West Virginians

have been in the forefront of enlistments and casualties. Our State has one of the largest numbers of veterans per capita in the Nation. West Virginia's citizens have contributed greatly to the safety and welfare of our country. They are a shining example of the patriotism which is so characteristic of our State.

As we remember our heroes, it is appropriate that we also take time to reflect upon the courage and service of those Americans now serving in harm's way in Afghanistan, Iraq, and elsewhere around the globe. I join with you in praying for their safe return from faraway lands.

Writing about the thousands of soldiers who lost their lives during the battle at Antietam, Civil War historian Bruce Catton explained that those men did not die for a "few feet of a cornfield or a rocky hill." They died so that "this country might be permitted to go on," and that it might be permitted to fulfill the great hope of our Founding Fathers.

The same can be said of all the courageous men and women who fought and died in our Nation's wars. They served and they made the ultimate sacrifice to permit this country to carry on and to fulfill the great hope of our Founding Fathers.

By U.S. Senator Robert C. Byrd

A CALL TO (HEALTHY) ARMS

Generally speaking, Americans love "Ten Best" or "Ten Worst" lists, and we avidly scan the rankings to discover who or what occupies the top or bottom spot. But I, for one, am tired of seeing West Virginia at the top of the obesity and smoking lists. I know I am not alone in my concern about the health of West Virginians when I read the statistics on heart attacks, diabetes, and cancer.

There are many factors when it comes to the reasons for the generally poor health of West Virginians. Access to affordable health care, busy schedules and long commutes, the demands of work and family, education about proper nutrition and exercise, too much television, too much alcohol, too much tobacco use, poor eating habits, and obesity — all are contributing factors. But, all of these factors can be, in large part, overcome by characteristics that I know West Virginians have in abundance: grit, determination, and discipline.

Each one of us, no matter our age, has the means within us to improve our health and the quality of our lives. We cannot all become fitness gurus or Olympic

athletes, but we can take simple, low cost steps to become healthier and more fit. The steps are many, but none are hard, and the rewards for our families and ourselves are lasting. Improving our own health, and the health of our children, should be our highest priority.

Thanks to investments in health research made by the federal government and privately-funded nonprofit organizations, information about health, nutrition, exercise, smoking and alcohol cessation, dental health, and related topics is widely and publicly available over the internet and in many public libraries. Over the coming weeks, I will summarize some of the information that is available, and provide links to additional resources on nutrition, exercise, smoking and alcohol cessation, and dental health.

We must provide our children and grandchildren with the examples and the tools to live long and healthy lives. Children put no stock in "Do as I say, not as I do," so we must — must — begin to set the example we want them to follow. Mountaineers should not only be free, they should be healthy.

OUR HEARTS BEAT TRUE FOR THE RED, WHITE, AND BLUE

June 14 is Flag Day, the day that Americans celebrate and show respect for our great national emblem, the American flag. This is not a federal holiday, but, in my opinion, it is one of the most important days of the year. This is a day filled with much history and meaning.

It was on June 14, 1777, that the Continental Congress adopted the Flag Act that established the official flag of the United States. The thirteen colonies assembled in the Continental Congress took this action because they understood the need for a symbol of national unity.

Early in the American Revolution, the colonial armies were fighting under the banners of their individual colonies, or of their local militia units. The banner of New England, for example, was the Liberty Tree, which showed a pine tree on a field of white, with the words, "An Appeal to Heaven." The Minutemen from Culpepper County, Virginia, waved a flag with a coiled rattlesnake which carried the motto, "Liberty or Death."

This diversity of flags seemed to reflect a lack of unity among the colonies. Feeling the need to establish a symbol of national unity, the Congress resolved:

"That the flag of the thirteen United States be thirteen stripes, alternate red and white; that the

union be thirteen stars, white in a blue field, representing a new constellation."

I have always been impressed with the wisdom of the founders of our country, and here again we can see their brilliance and foresight. The simplicity of that pattern, alternating stripes and crisp white stars on a field of blue, allowed our flag to evolve along with the ever-changing map of the United States.

And the flag they chose has become the most visible symbol of our Nation, and our most beloved national icon. It symbolizes our strength, honor, ideals, and national purpose. It recognizes our glorious past, while it celebrates a more glorious future.

The flag symbolizes our values and ideals, as well as our power, our economic and military might. The flag rallies our courage as it inspires deeds of valor and sacrifice. When we think of the American flag, we think of the Marines heroically planting it on top of Iwo Jima during World War II, American astronauts planting it on the moon, and those valiant New York City firefighters hoisting the American flag in the rubble of the World Trade Towers on September 11, 2001.

Above everything else though, our flag is representative of our national unity – "one nation, under God, indivisible, with liberty and justice for all."

DENTAL HEALTH

A bright smile is an obvious asset for anyone, whether in a business or social setting. But, clean teeth mean more than pleasant breath and fewer cavities. A lifelong commitment to good dental health through the simple habits of twice-daily brushing and regular flossing can reap many other health benefits.

Good dental care may also prevent problems like gum disease or oral cancer. According to the American Dental Association, some studies have also linked gum disease with the development of heart disease, arterial blockages and stroke. Smoking and diabetes may increase one's risk of gum disease and resulting tooth loss, especially for those over age 45. Gum disease in pregnant women has been linked to low-birth weight babies. These dire outcomes make daily brushing and flossing, along with regular dental checkups, an easy first step to improving overall health.

Tooth care should begin early. Brush baby's gums and teeth gently with a wet washcloth, moving to water on a child's toothbrush until age two. Do not let an infant go to sleep with a bottle. Juice or milk on the teeth can lead to "baby-bottle tooth decay." Limit sugary snacks for tooth health in children as well as weight management. Initiate regular visits to the dentist starting with a child's first birthday.

As children grow, they should brush twice daily

with fluoride toothpaste, and get in the habit of flossing daily. Aside from other health considerations, teens should not smoke or chew tobacco, which can stain teeth, worsen bad breath or even cause mouth cancer. Wearing protective headgear while playing contact sports will help protect a teen's smile. Adults should continue to brush twice daily with fluoride toothpaste, and floss every day. In addition to not using tobacco products, adults should ask their doctor about any medications they use which may have side effects that could damage teeth. Older people or anyone with problems brushing effectively should consider investing in an electric or battery operated toothbrush. If sores in the mouth will not heal, or gums become irritated, see a doctor or dentist promptly.

These simple steps – brushing, flossing, and seeing a dentist regularly – are the cornerstones of a bright smile and a healthier life, and are easy to do. Limiting sugary and starchy snacks, including sodas and alcohol, and stopping smoking, are additional steps that offer life-style benefits far beyond healthy teeth.

For additional information you can go to: www.nlm.nih.gov/medlineplus/dentalhealth.html, or <http://familydoctor.org/online/famdocen/home/healthy/prevention>.

And make sure you smile a big healthy smile for me!!!

By U.S. Senator Robert C. Byrd

FATHER'S DAY

Sunday, June 20th, is Father's Day. Father's Day sparks memories of my two fathers and of all the lessons they taught me. My birth father had the faith in his wife, my mother, to heed her wish that I be raised by my aunt and uncle in West Virginia if she were to die while I was still an infant. After my mother's death in the influenza pandemic of 1918, my father did as she had asked, and I went to live with Vlurma and Titus Byrd, my aunt and uncle.

My second father, my "Pap," was the hardworking West Virginia coal miner, Titus Byrd, who reared me. His daily quiet example shaped my goals and my future outlook. I cannot thank him enough for his willingness to take on the lifelong task of parenting a child not his own. We never had an extra penny, but "Pap" always made me feel loved.

Jean Paul Richter observed that, "What a father says to his children is not heard by the world, but it will be heard for posterity." A father must

balance on a fine edge – pushing his children to be not just *their* best, but teaching them to strive to be *the* best. A father must teach his children an idealism that inspires them to make the impossible real, but he must also know when to back off and simply be proud of his children's effort. Fathers must set the example for their children to follow in respecting others and dealing with life's setbacks. Mixing elements of the tough taskmaster, hard-charging coach, protector and defender, mentor and teacher, hands-on or hands-off participant in family life – there are as many roles as there are fathers. The results of each father's work are on public display as his children grow and take their places in society.

This Father's Day, I will remember both my father and my "Pap", with great fondness. I hope all of us, whether grown or not, will remember their fathers with pride and love, and thank "Dad" for his caring example and his hard work.

WEST VIRGINIA DAY

June 20, in addition to being Father's Day this year, was also the 147th anniversary of the birth of West Virginia.

It was on June 20, 1863, that West Virginia, by an act of Congress and the signature of President Abraham Lincoln, became the thirty-fifth State of our Union. The official ceremonies to celebrate the event took place in Wheeling. The *Wheeling Intelligencer*, called it a "great gala day" -- and it was! Although our country was in the middle of a bitter, divisive, and bloody Civil War, the newspaper reported that, "thousands of people from abroad" as well as the new state officials and the "entire population" of Wheeling engaged in the festivities of the day.

Flags of all sizes were flown from every housetop and every business in the city. Ceremonies included bands playing patriotic songs, and the West Virginia militia parading through the town.

In the inaugural prayer at the ceremonies, the Reverend J.T. McClure proclaimed:

"We pray Thee, almighty God, that this State, born amidst tears and blood and fire and desolation, may long be preserved and from its little beginning may grow to be a might and a power that shall make those who come after us look upon *it with*

joy and gladness and pride of heart."

The man who is considered the "father of West Virginia," Francis H. Pierpont, declared: "May [West Virginia], from this small beginning today, grow to be the proudest state in all the glorious galaxy of States that form the Nation."

Waitman T. Willey, one of our State's first two U.S. Senators, proclaimed: "What we have longed for and labored for and prayed for is [now] a fixed fact. West Virginia is a fixed fact."

After the speeches, 35 children, representing the 35 States of the Union, sang more patriotic songs and a band played the "Star Spangled Banner."

The day closed with a brilliant display of fireworks over the Ohio River.

The next day, the *New York Post* reported: "born amid the turmoil of the Civil War and cradled by the storm ... the 35th State is now added to the American union."

The *New York Times* echoed the words of Senator Willey with the headline that read: "West Virginia is now a fixed fact."

A belated Happy Birthday, West Virginia! 147 years later, we can, as the Reverend Mr. McClure predicted, continue to look upon our State everyday "with joy and gladness and pride of heart."
